Student Learning Outcomes
Secondary Major
Natural Resources and Environmental Sciences Secondary Major
Kansas State University

Graduates of the Natural Resources and Environmental Sciences (NRES) Secondary Major will:

1. be able to apply broadly-based knowledge to the use, management, sustainability, and quality of soil, air, water, mineral, biological, and energy resources
2. develop a broad perspective in addressing natural resource and environmental issues
3. be exposed to a variety of perspectives on environmental and natural resource issues through interactions with faculty professionals and students outside of their primary major
4. understand that resource and environmental issues often exceed the scope of any one discipline and are best addressed through an interdisciplinary approach
5. understand the complexity of many natural resource and environmental issues
6. recognize that natural science, applied science and technology, and social science and humanities perspectives all contribute to the solution of natural resource and environmental issues
7. be able to work in a multi-disciplinary environment on environmental and natural resource issues
8. be able to communicate in writing and orally about environmental and natural resource issues
