

Name Katsura Asano

Title Associate Professor

Publications

Katsura Asano, Akihiko Kato, Hiroko Moriwaki, Chihiro Hama, Kiyotaka Shiba, and Kiyoshi Mizobuchi. 1991. Positive and negative regulations of plasmid ColIb-P9 *repZ* gene expression at the translational level. *J. Biol. Chem.* 266:3774-3781.

Katsura Asano, Hiroko Moriwaki, and Kiyoshi Mizobuchi. 1991. An induced mRNA secondary structure enhances *repZ* translation in plasmid ColIb-P9. *J. Biol. Chem.* 266:24549-24556.

Katsura Asano. 1994. Control of copy number of plasmid ColIb-P9 by competition between inter- and intramolecular RNA-RNA interactions in *Escherichia coli* cells. Doctoral thesis, Graduate School of Science, University of Tokyo.

Katsura Asano, Terri G. Kinzy, William C. Merrick, and John W. B. Hershey. 1997. Conservation and diversity of eukaryotic translation initiation factor eIF3. *J. Biol. Chem.* 272:1101-1109.

Katsura Asano, William C. Merrick, and John W. B. Hershey. 1997. The translation initiation factor eIF3-p48 subunit is encoded by *int-6*, a site of frequent integration by the mouse mammary tumor virus genome. *J. Biol. Chem.* 272:23477-23480.

Katsura Asano, Hans-Peter Vornlocher, Nancy J. Richter-Cook, William C. Merrick, Alan G. Hinnebusch, and John W. B. Hershey. 1997. Structure of cDNAs encoding human eukaryotic initiation factor 3 subunits: Possible roles in RNA binding and macromolecular assembly. *J. Biol. Chem.* 272:27042-27052.

Katsura Asano and Kiyoshi Mizobuchi. 1998. An RNA pseudoknot as the molecular switch for translation of the *repZ* gene encoding the replication initiator of IncI α plasmid ColIb-P9. *J. Biol. Chem.* 273:11815-11825.

Katsura Asano, Tatsuya Niimi, Shigeyuki Yokoyama, and Kiyoshi Mizobuchi. 1998. Structural basis for binding of the plasmid ColIb-P9 antisense Inc RNA to its target RNA with the 5'-rUUGGCG-3' motif in the loop sequence. *J. Biol. Chem.* 273:11826-11838.

Katsura Asano, Lon Phan, James Anderson, and Alan G. Hinnebusch. 1998. Complex formation by all five homologues of mammalian translation initiation factor 3 subunits from yeast *Saccharomyces cerevisiae*. *J. Biol. Chem.* 273:18573-18585.

Lon Phan, Xialong Zhang, Katsura Asano, James Anderson, Hans-Peter Vornlocher, Jun Qin, and Alan G. Hinnebusch. 1998. Identification of a translation initiation factor 3 (eIF3) core complex, conserved between yeast and mammals, that interacts with eIF5. *Mol. Cell. Biol.* 18:4935-4946.

Katsura Asano and Kiyoshi Mizobuchi. 1998. Copy number control of IncI α plasmid ColIb-P9 by competition between pseudoknot formation and antisense RNA binding at a specific

RNA site. *EMBO J.* 17:5201-5213.

James Anderson, Marie Pak, Lon Phan, Rafael Cuesta, Katsura Asano, Mercedes Tamame, and Alan G. Hinnebusch. 1998. A nuclear complex containing Gcd10p and Gcd14p stimulates translation by promoting maturation of initiator methionyl-tRNA. *Genes Dev.* 12:3650-3662

Katsura Asano, Thanuja Krishnamoorthy, Lon Phan, Graham D. Pavitt, and Alan G. Hinnebusch 1999. Conserved bipartite motifs in yeast eIF5 and eIF2B ϵ , GTPase-activating and guanine-nucleotide exchange factors in translation initiation, mediate binding to their common substrate eIF2. *EMBO J.* 18:1673-1688.

Katsura Asano, Chihiro Hama, Shin-ichi Inoue, Hiroko Moriwaki, and Kiyoshi Mizobuchi 1999. The plasmid ColIb-P9 antisense Inc RNA controls expression of the RepZ replication protein and its positive regulator *repY* with different mechanisms. *J. Biol. Chem.* 274:17924-17933.

Katsura Asano and Kiyoshi Mizobuchi. 2000. Structural analysis of late intermediate complex formed between plasmid ColIb-P9 Inc RNA and its target RNA: How does a single antisense RNA repress translation of two genes at different rates? *J. Biol. Chem.* 275: 1269-1274.

Katsura Asano, Jason Clayton, Anath Shalev, and Alan G. Hinnebusch. 2000. A multifactor complex of eukaryotic initiation factors eIF1, eIF2, eIF3, eIF5, and initiator tRNA^{Met} is an important translation initiation intermediate in vivo. *Genes Dev.* 14:2534-2546.

Yuji Akiyoshi, Jason Clayton, Lon Phan, Masayuki Yamamoto, Alan G. Hinnebusch, Yoshinori Watanabe, and Katsura Asano. 2001. Fission yeast homolog of murine Int-6 protein, encoded by mouse mammary tumor virus integration site, is associated with the conserved core subunits of eukaryotic translation initiation factor 3. *J. Biol. Chem.* 276: 10056-10062.

Katsura Asano, Anath Shalev, Lon Phan, Klaus Nielsen, Jason Clayton, Leos Valasek, Thomas F. Donahue, and Alan G. Hinnebusch. 2001. Multiple roles for the carboxyl terminal domain of eIF5 in translation initiation complex assembly and GTPase activation. *EMBO J.* 20:2326-2337.

Anath Shalev, Leos Valasek, Cynthia A. Masison, Michael Radonovich, Lon Phan, Jason Clayton, Hui He, John N. Brady, Alan G. Hinnebusch and Katsura Asano. 2001. *Saccharomyces cerevisiae* protein Pci8p and human protein Int-6 interact with the eIF3 core complex by binding to the cognate eIF3b subunits. *J. Biol. Chem.* 276:34948-34957.

Mikkel A. Algire, David Maag, Peter Savio, Michael G. Acker, Salvador Z. Tarun, Jr., Alan Sachs, Katsura Asano, Klaus H. Nielsen, DeAnne S. Olsen, Lon Phan, Alan G. Hinnebusch, and Jon R. Lorsch. 2002. Development and characterization of a reconstituted yeast translation initiation system. *RNA* 8:382-397.

Hui He, Tobias Von Der Haar, C. Ranjit Singh, Miki Ii, Bin Li, Alan G. Hinnebusch, John E.G. McCarthy, and Katsura Asano. 2003. The yeast eIF4G HEAT domain interacts with eIF1 and eIF5 and is involved in stringent AUG selection. *Mol. Cell. Biol.* 23:5431-5445.

Chingakham Ranjit Singh, Hui He, Miki Ii, Yasufumi Yamamoto, and Katsura Asano. 2004. Efficient incorporation of eIF1 into the multifactor complex is critical for formation of functional ribosomal pre-initiation complexes in vivo. *J. Biol. Chem.* 279:31910-31920.

Chingakham Ranjit Singh, Yasufumi Yamamoto, and Katsura Asano. 2004. Physical Association of eukaryotic initiation factor 5 (eIF5) carboxyl terminal domain with the Lysine-rich eIF2 β segment strongly enhances its binding to eIF3. *J. Biol. Chem.* 279: 49644-49655.

Chingakham Ranjit Singh, Cynthia Curtis, Yasufumi Yamamoto, Nathan S. Hall, Dustin S. Kruse, Hui He, Ernst M. Hannig, and Katsura Asano. 2005. eIF5 is critical for the integrity of scanning ribosomal preinitiation complex and accurate control of *GCN4* Translation. *Mol. Cell. Biol.* 25:5480-5491.

Yasufumi Yamamoto, Chingakham Ranjit Singh, Assen Marintchev, Nathan S. Hall, Ernest M. Hannig, Gerhard Wagner, and Katsura Asano. The C-terminal HEAT domain of eIF5 Mediates multifactor assembly and scanning with distinct interfaces to eIF1, eIF2, eIF3 and eIF4G. *Proc. Acad. Natl. Sci. USA.* 102, 16164-16169.

Chingakham Ranjit Singh, Bumjun Lee, Tsuyoshi Udagawa, Sarah S. Mohammad-Qureshi, Yasufumi Yamamoto, Graham D. Pavitt, and Katsura Asano. An eIF5/eIF2 complex antagonizes guanine nucleotide exchange by eIF2B during translation initiation. *EMBO J.* 25, 4537-4546.

Chingakham Ranjit Singh, Tsuyoshi Udagawa, Bumjun Lee, Sarah Wassink, Hui He, Yasufumi Yamamoto, James T. Anderson, Graham D. Pavitt, and Katsura Asano (2007). Change in nutritional status modulates the abundance of critical pre-initiation intermediate complexes during translation initiation in vivo. *J Mol Biol* **370**, 315-330.

Mikheil Reibarkh, Yasufumi Yamamoto, Chingakham Ranjit Singh, Federico del Rio, Bumjun Lee, Rafael Luna, Miki Ii, Gerhard Wagner, and Katsura Asano (2008). Eukaryotic initiation factor (eIF) 1 carries two distinct eIF5-binding faces important for multifactor assembly and AUG selection. *J Biol Chem* **283** 1094-1103.

Tsuyoshi Udagawa, Naoki Nemoto, Caroline R. M. Wilkinson, Jana Narashimhan, Li Jiang, Stephan Watt, Aaron Zook, Nic Jones, Ronald C Wek, Jürg Bähler, and Katsura Asano (2008). Int6/eIF3e promotes general translation and Atf1 abundance to modulate Sty1 MAP kinase-dependent stress response in fission yeast. *J Biol Chem* **283** 22063-22075.
