

SPSS[®] Statistics for Windows[®] Installation Instructions (Single User)

The following instructions are for installing SPSS Statistics using a single-user license. A single-user license allows you to install SPSS Statistics on up to two computers, if those computers are used by one user.

System Requirements for SPSS Statistics

The minimum hardware and software requirements for SPSS Statistics are as follows:

Operating System

- Microsoft[®] Windows XP (32-bit version) or Vista (32-bit and 64-bit versions).

Configuration

- Intel or AMD x86 processor running at 1 gigahertz (GHz) or higher.
- 512 megabytes (MB) of RAM or more. At least 1 gigabyte (GB) is recommended.
- 650 MB of available hard-disk space. Installing help for all languages requires 1.1 gigabytes (GB).
- CD-ROM drive.
- Super VGA (800x600) or a higher-resolution monitor.
- For connecting with SPSS Statistics Server, a network adapter running the TCP/IP network protocol.

Software

- Internet Explorer 6.0 or higher

Authorization Code

You will also need your authorization code, which is delivered along with your software on a separate sheet of paper or on the inside cover of the *Brief Guide*. If you downloaded SPSS Statistics, your authorization code is available from your Asset Management Portal. The authorization code enables you to obtain a license for Base and any SPSS Statistics add-on modules that you have purchased. If you cannot find your authorization code, contact your sales representative. In some cases, you might have multiple codes. You will need all of them.

Note: You cannot run SPSS Statistics remotely via Windows Terminal Services or Citrix.

Installing SPSS Statistics

Note: To install SPSS Statistics, you must be logged on to your computer with administrator privileges.

Upgrading from a Previous Release

You do not need to uninstall an old version of SPSS Statistics before installing the new version. If you want to keep both versions, be sure to install the new version in a separate directory. If you install the new version in the same directory in which a previous version is installed, the previous version is automatically uninstalled.

Installing from a CD-ROM

Windows XP

- ▶ Insert the Disk 1 CD-ROM into your CD-ROM drive. The AutoPlay feature presents a menu.
- ▶ On the AutoPlay menu, click Install SPSS Statistics, and then follow the instructions that appear on the screen. See [Notes for Installation](#) for any special instructions.

Windows Vista

You must run the AutoPlay as administrator:

- ▶ Close the AutoPlay window that automatically appeared.
- ▶ Using Windows Explorer, browse to the CD-ROM.
- ▶ Right-click *setup.exe* at the root of the CD and choose Run as Administrator.
- ▶ On the AutoPlay menu, click Install SPSS Statistics, and then follow the instructions that appear on the screen. See [Notes for Installation](#) for any special instructions.

Installing from a Downloaded File

Windows XP

- ▶ Double-click the file that you downloaded, and then follow the instructions that appear on the screen. See [Notes for Installation](#) for any special instructions.

Windows Vista

You must run the installer as administrator:

- ▶ Using Windows Explorer, browse to folder where you downloaded the file.
- ▶ Right-click the downloaded file and choose Run as Administrator.

- ▶ Follow the instructions that appear on the screen. See [Notes for Installation](#) for any special instructions.

Notes for Installation

This section contains special instructions for this installation.

License type. Be sure to select Single-User License.

Serial number. If SPSS Inc. provided a serial number, enter the one delivered with your product.

Help language. SPSS Statistics provides the ability to change the user interface language. If you want the help language to always match the user interface language, select **Install Help** in all languages. Installing help for all languages significantly increases disk space requirements. For the exact difference in disk space requirements, see [System Requirements for SPSS Statistics](#) on p. 1 .

Licensing Your Product

After the main part of the installation is complete, click **OK** to launch the License Authorization Wizard. The License Authorization Wizard allows you to obtain a license for SPSS Statistics.

If you do not get a license now, you can enable a temporary trial license that allows SPSS Statistics to be used for a trial period. All add-on modules are enabled. After the trial period—which begins when the product is first used—SPSS Statistics will no longer run. Therefore, it is recommended that you obtain a license as soon as possible. You must either obtain a license or enable the temporary trial license to use SPSS Statistics.

Note: Licenses are tied to your computer's hardware with a **lock code**. If you replace your computer or its hardware, you will have a new lock code and will need to repeat the authorization process. If you find out that you exceeded the allowable number of authorizations specified in the license agreement, contact your sales representative.

Warning: The license is sensitive to time changes. If you must change the system time and then cannot run the product, contact SPSS Inc. Technical Support.

Using the License Authorization Wizard

Note: If you are running Windows Vista, you may be prompted for administrator credentials. Without the correct credentials, you will not be able to run the License Authorization Wizard.

- ▶ If you don't launch the License Authorization Wizard during installation or cancel the License Authorization Wizard before obtaining a license, you can launch it by choosing **License Authorization Wizard** in the Windows Start menu program group for SPSS Statistics.
- ▶ When prompted, choose **License my product now**. If you want to enable the trial license instead, refer to [Enabling a Trial License](#) on p. 4 .
- ▶ When prompted, enter one or more authorization codes. Authorization codes are delivered along with your software on a separate sheet of paper or on the inside cover of the *Brief Guide*. If you

downloaded SPSS Statistics, your authorization code is available in your Asset Management Portal.

The License Authorization Wizard sends your authorization code over the Internet to SPSS Inc. and automatically retrieves your license. If your computer is behind a proxy, click Configure proxy settings and enter the appropriate settings.

If the authorization process fails, you will be prompted to send an e-mail message. Choose whether you want to send the e-mail message through your desktop e-mail program or through a Web-based e-mail application.

- If you choose the desktop option, a new message with the appropriate information will be created automatically.
- If you choose the Web-based option, you must first create a new message in your Web-based e-mail program. Then copy the message text from the License Authorization Wizard and paste it into your e-mail application.

Send the e-mail message and respond to the prompt in the License Authorization Wizard. The e-mail message will be processed almost instantaneously. You can click Enter License Code(s) to enter any license code(s) that you receive. If you already closed the License Authorization Wizard, restart it and select License my product now. On the Enter Codes panel, add the license code that you received and click Next to complete the process.

Enabling a Trial License

You can enable a trial license instead of installing the regular license.

- ▶ Launch the License Authorization Wizard.
- ▶ When prompted, choose Enable a temporary trial period.
- ▶ When prompted, enter the trial license code in the Trial License box. Instead of typing or pasting the code, you can click the browse button to locate the trial license file in the product installation directory (typically *trial.txt*). The Trial License Wizard will read the license from the file and automatically fill in the box.

Viewing Your License

You can view the license by relaunching the License Authorization Wizard. The first panel displays the licensing information. Click Cancel when done, and click Yes when prompted about cancelling.

Note: You can also view the license by running the `SHOW LIC SPSS Statistics` syntax command.

Installing Support for Dimensions Data Model and OLE DB Access

To access OLE DB data sources, you must have the following installed on the same computer on which SPSS Statistics is installed:

- .NET Framework, version 2.0 or later
- Dimensions Data Model and OLE DB Access

An option to install the Dimensions Data Model and OLE DB Access is available on the Disk 2 Autoplay menu, or, if you downloaded SPSS Statistics, it is available from your Asset Management Portal by clicking the Installation Instructions link for your product. The .NET Framework is available as a download from <http://www.microsoft.com/net>. If you are not sure whether you have the .NET Framework, try installing the Dimensions Data Model first. The installation will check for the .NET Framework.

Note: All Dimensions products installed on one computer must be at the same version level. The version of the Dimensions Data Model on the CD-ROM is 4.5. If you have an older version of a Dimensions product installed, you will be prompted to uninstall it.

Enabling Programmability

You can enable programming SPSS Statistics with the following.

- **Python.** For more information about installation, refer to *SPSS Statistics-Python Integration Plug-in Installation Instructions.pdf* in the *Installation Documents* folder on the Disk 1 CD-ROM. If you downloaded SPSS Statistics, installation instructions are available from your Asset Management Portal by clicking the Installation Instructions link for your product.
- **R.** For more information, visit [Developer Central \(http://www.spss.com/devcentral/\)](http://www.spss.com/devcentral/).
- **VB.NET.** For more information, visit [Developer Central \(http://www.spss.com/devcentral/\)](http://www.spss.com/devcentral/).

Uninstalling SPSS Statistics

To completely uninstall SPSS Statistics:

- ▶ Use the Windows Control Panel to remove SPSS Statistics.

Updating, Modifying, and Renewing SPSS Statistics

If you purchase additional add-on modules or renew your license, you will receive a new authorization code (or codes). For instructions on using the authorization code(s), see *Licensing Your Product* on p. 3.
