Habitat Restrictions

Comments

No usable habitat information

Found under rocks in prairie ledges in the early spring, but later they are most likely to be located in vegetation, especially in shrubs and trees (p 205). Distribution data included.

Green snakes are fairly common in Woodson County State Park area, and are usually found on the ground or in low bushes not far from the lake (p 218). Distribution data included.

Distribution only (p 451).
