Accessibility DOs and DON'Ts

Have questions about this flyer? Please email us at idteam@ksu.edu.

Don't

Don't use large amounts of text on images.

Headings Don't just use bold text or change font size.

Don't just manually type with numbers/symbols and spaces.

Don't use "Click Here" or https://k-state.instructure.com/.

Don't merge cells. Don't leave cells blank.

Don't use color alone to convey meaning.

Audio and Video Transcripts are essential for audio only content, but don't use just a transcript for videos. Avoid using gifs in Canvas.

Do (Beginner)

Keep it accurate and brief.

Add headings in Canvas, Microsoft, everywhere!

Use the built in list feature: numbered when order matters, bulleted when it doesn't.

Create a readable link to make screen readers happy, like this article on how to write accessible web content.

Define header rows and columns.

Check your colors for accessibility and contrast.

Use Mediasite to add captions, and always edit for accuracy, grammar, and mechanics.

Do (Intermediate)

Try dividing complex images into multiple images.

If you don't have a title option, use only H1.

Nested lists that use a mix of bullets and numbers are okay to use.

Links have a distinct style; avoid underlining other text and use italics for emphasis instead.

Consider if your content would work better as a list!

Consider adding a pattern or symbols where color is necessary.

Add audio descriptions in Mediasite for those with vision impairment.

Why it matters

It's like a rollercoaster you can't get off. Make it easy to listen to.

Headings provide visual signposting for all users.

Lists, headings, and tables that are properly formatted help those who rely on keyboards to navigate web content.

Adding strong descriptive text and links helps everyone know how they are expected to interact with content.

Proper formatting enables screen readers to correctly navigate and interpret table data.

Text and elements need sufficient contrast for people with low vision or colorblindness.

Missing captions and audio descriptions leave out those who need this information.
