This course will examine critical water issues related to irrigation in urbanizing watersheds, with an emphasis on water quality and quantity. Factors impacting water scarcity and quality will be discussed. Successful completion of this course will help students understand the interrelatedness of incorrect irrigation practices and water quality/quantity, and will equip them to help protect water resources through application of science based irrigation practices.

Note
This is a distance education course.

Repeat for Credit
N

Requisites
Recommended Foundation: Junior standing or one year of experience in the lawn/landscape maintenance industry.

Typically Offered
Spring

K-State 8
Global Issues and Perspectives
K-State 8 Tag 2
Natural and Physical Sciences

HORT 410 - Floral Planning for Special Events

Credits 1

Operation of a successful event planning floral business for weddings and other special occasions with a focus on the consultation and proposal plan.

Note
Two hours lecture and two hours lab a week for first 5 weeks of the semester.

Repeat for Credit
N

Requisites
Prerequisite: HORT 210

Typically Offered
Spring-Even Years

HORT 415 - Wedding Flowers

Credits 1

Creation of custom wedding designs such as bridal bouquets, corsages/boutonnieres, altar arrangements, and centerpieces based on parameters established during consultations and present trends.

Note
Two hours lecture and two hours lab a week, second five weeks of the semester.

Repeat for Credit
N

Requisites
Prerequisite: HORT 210.

Typically Offered
Spring-Even Years

HORT 420 - Unique Floral Designs

Credits 1

Application of advanced principles and techniques of floral design in the creation of unique arrangements utilizing standard and nonstandard supplies in an artistic way.

Note

Two hours lecture and two hours lab a week, last five weeks of the semester.

Repeat for Credit

N

Requisites

Prerequisite: HORT 210.

Typically Offered

Spring-Even Years

HORT 490 - Horticulture Internship

Credits 3-6

Principles of commercial or public horticulture activity including exposure to multiple phases of the working horticulture operation.

Note

Students will be placed according to specific interest. Required for horticulture majors after having completed 60 hours.

Repeat for Credit

Y

Requisites

Recommended Foundation Courses: HORT 190, HORT 201, plus one horticulture commodity course level 300 or above.

Typically Offered

Fall, Spring, Summer

HORT 495 - Undergraduate Research in Horticulture

Credits 0-3

Undergraduate students work with faculty mentors on projects involving various elements of research in horticultural science including identifying a problem, designing and conducting experiments, interpreting and communicating the research results. The completed project must be presented at a professional forum, and students are required to write a final project report on completion of their project.

Note

Instructor permission

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 499 - The Horticultural Professional

Credits 0

Completion of horticulture program assessment tools. Completion of modules associated with professional development during careers in horticultural disciplines, including diversity and ethics in the workplace, job search skills, and providing leadership in the profession.

Repeat for Credit

N

Typically Offered

Fall, Spring

HORT 508 - Business of Sustainable Landscape Management

Credits 2

Understanding and implementing maintenance requirements for the care of young trees, shrubs and herbaceous plants that focus on practices that address environmental issues related to the management of residential and commercial landscapes. Students will learn how to analyze and apply landscape management practices while creating an attractive landscape in balance with the local climate that requires minimal resource inputs, such as human energy, fertilizers, pesticides and water.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 201

Typically Offered

Spring

HORT 510 - Horticultural Design II

Credits 3

Reinforcement of the horticultural design process as applied to the use of native and introduced plant materials.

Emphasis on functional and aesthetic arrangement of plants in small-scale design to meet site design objectives and adaptation to microclimates. Students expected to develop site adapted plant palettes and graphic ability to present their design.

Note

Two three hour studio periods a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 275 and two plant materials courses.

Typically Offered

Spring

HORT 515 - Basic Turfgrass Culture

Credits 3

Turfgrass identification and adaptation; establishment and maintenance of turf for golf courses, sports fields, home lawns, parks, and commercial/institutional grounds.

Note

Two hours recitation and two hours lab each week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 201 and AGRON 205.

Typically Offered

Spring

HORT 517 - Golf Course and Sports Turf Operations

Credits 3

Strategies involved in golf course and sports turf operation, including development of cultural practices, effective communication, personnel management, and budgeting.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 515.

Typically Offered

Fall

HORT 520 - Fruit Production

Credits 3

Principles and practices of cultivating fruit and nut crops commercially. Laboratory offers experiences in pomological practices.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 201 or equivalent. Recommended Foundation Course: HORT 350.

Typically Offered

Spring-Odd Years

HORT 525 - Horticulture for Special Populations

Credits 3

An intensive study of the concepts and methods of using plants and gardening as therapeutic activities with developmentally disabled, geriatric, economically and socially disadvantaged, emotionally disturbed, or educationally deprived clients.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

HORT 530 - Horticultural Therapy Case Management

Credits 1

Guest lecturer and student presentations of topics relating to professionalism, current issues, or goals of horticultural therapy. The course is intended to help students focus expectations and assumptions about a professional career in horticultural therapy and to give them practice in articulating their understanding of the field. Client case management is used as part of career practice.

Note

One hour recitation a week.

Repeat for Credit

N

Typically Offered

Spring

HORT 535 - Horticultural Therapy Field Techniques

Credits 3

Students under supervision will plan, conduct, and evaluate horticultural therapy activities at Manhattan institutional sites selected according to student's interest. A weekly discussion session addresses evaluation and issues of professionalism.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 525.

Typically Offered

Fall

HORT 540 - Horticultural Therapy Field Experiences

Credits 3-6

Supervised training at institutions with horticultural therapy programs to gain experience in the application and use of horticultural activities for special populations. Six months

(1,000) hours continuous internships required in psychiatric and correctional programs.

Note

Two 3-month (500 hours) internships may be completed at different sites. Students are required to complete six credits of field experience before graduation.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 545 - Computer Applications in Horticultural Design

Credits 3

Introduction to a variety of computer software packages which students may encounter in the nursery/garden center environment. These include planning, routing, and estimating packages. Students must provide their own laptop computer.

Note

One hour recitation and four hours lab per week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 510, or instructor permission.

Typically Offered

Fall

HORT 550 - Horticultural Irrigation Systems

Credits 3

Application of the principles and practices of horticultural irrigation which involve the various aspects of irrigation system installation, maintenance and scheduling, electrical troubleshooting, basic hydraulics, and drip irrigation as these topics pertain to residential and commercial landscapes, recreational turf areas, and greenhouse and field production systems.

Note

Two hour lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: MATH 100; HORT 201; and AGRON 205.

Typically Offered

Fall

HORT 551 - Landscape Contracting and Construction**Credits 2**

The study of contracts and specifications, and the bidding and estimating processes as applied to landscape contracting. The interpretation and implementation of small-scale landscape construction (hardscape) projects.

Note

1 hour lecture and 2 hours lab a week

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 275.

Typically Offered

Fall

HORT 552 - Horticultural Landscape Construction**Credits 1**

The interpretation and implementation of small-scale landscape construction (hardscape) projects.

Note

Three hours lab a week, for the last 11 weeks of the semester.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 275.

Typically Offered

Spring

HORT 560 - Vegetable Crop Production**Credits 3**

Study of production principles and cultural practices involved in the growing of vegetable crops.

Note

Two hours lecture and two hours lab or field trips a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 201.

Typically Offered

Spring-Even Years

HORT 570 - Greenhouse Operations Management**Credits 3**

Greenhouse systems operations and management including greenhouse layout; structures; glazing materials; heating, ventilation, irrigation, lighting, benching, growing medium handling, and fertilization systems; traffic flow; crop handling, processing and shipping.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 201.

Typically Offered

Fall

HORT 575 - Nursery Management**Credits 3**

A study of the various practices and methods of operating a commercial nursery for the production of woody ornamental plants for the landscape industry. Nursery layout, planting systems, nutrition management, plant maintenance and harvesting technologies will be discussed.

Note

Two hours recitation and three hours lab a week. Field trips may be required.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 350 and AGRON 205.

Typically Offered

Fall

HORT 580 - Advanced Horticultural Design**Credits 3**

Emphasis is on horticultural design projects with clients, working with the design process, design articulation and communication with the clients.

Repeat for Credit

N

Requisites

Prerequisite: HORT 510.

Typically Offered

Other

HORT 585 - Arboriculture**Credits 3**

Principles and practices of maintaining shade and ornamental trees under urban environments.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 201; and HORT 274 or FOR 330.

Typically Offered

Fall

K-State 8

Natural and Physical Sciences

HORT 587 - Turfgrass Diseases and Their Management**Credits 1**

Biology, diagnosis and integrated management of turfgrass diseases. Emphasis is on diseases of intensively maintained turfgrass.

Note

Two hours lecture and two hours lab a week, for the first five weeks of the semester.

Repeat for Credit

N

Requisites

Prerequisite: HORT 282

Typically Offered

Fall-Even Years

K-State 8

Natural and Physical Sciences

HORT 588 - Turfgrass Weeds and Their Management**Credits 1**

Biology, diagnosis and integrated management of turfgrass weeds.

Note

Two hours lecture and two hours lab a week, for the middle five weeks of the semester.

Repeat for Credit

N

Requisites

Corequisite or Prerequisite: HORT 282 and HORT 515

Typically Offered

Fall-Even Years

K-State 8

Natural and Physical Sciences

HORT 589 - Turfgrass Insects and Their Management**Credits 1**

Biology, diagnosis and integrated management of turfgrass insect pests.

Note

Two hours lecture and two hours lab a week, for the last five weeks of the semester.

Repeat for Credit

N

Requisites

Corequisite or Prerequisite: HORT 282 and HORT 515

Typically Offered

Fall-Even Years

K-State 8

Natural and Physical Sciences

HORT 591 - Small Farm Practicum**Credits 3**

Project-based practical experience in small-scale, diversified, agricultural production.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 520, or HORT 560 or HORT 570

Typically Offered

Fall, Spring, Summer

HORT 595 - Horticulture Study Abroad**Credits 3**

Seminar and travel course designed to prepare students before an international study abroad experience focused on horticulture. Upon completion of travel, students will analyze, critique, and report their experiences. Course will focus on appropriate oral and written documentation of the experience.

Note

Instructor permission

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 600 - Herbaceous Landscape Plant Production**Credits 3**

The principles and commercial practices for producing annual and herbaceous perennial plants from seed and cuttings, including vegetable and herb crops in controlled environments. Analysis of crop production costs and plant growth regulation will be emphasized.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 350 and HORT 570.

Typically Offered

Spring

HORT 625 - Floral Crops Production and Handling**Credits 2**

The principles and commercial practices for producing floral potted crops and fresh flower crops, emphasizing the physical responses of plants to their environment. Aspects of postharvest physiology of fresh flowers will be covered.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 201. Recommended Foundation Courses: HORT 350, BIOL 500, and HORT 570.

Typically Offered

Spring-Odd Years

HORT 630 - General Viticulture**Credits 3**

Focus is on aspects of grapes, from vine anatomy to final products produced from them. Includes cultivars,

propagation, canopy management, diseases, weed control, physiology, anatomy, irrigation, wine production, climates and soils.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 520.

Typically Offered

Spring-Odd Years

HORT 640 - Horticultural Problems

Credits 0-3

Problems and reports in floriculture, olericulture, ornamental horticulture, pomology, turfgrass and horticultural therapy.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 650 - Agrarian Traditions: Literature Shaping Modern Food Movements

Credits 3

Examines the Agrarian literary and philosophical traditions to better understand the drivers of food and agriculture movements in the United States and globally. Studies Virgil, Sir Albert Howard, Aldo Leopold, and Wendell Berry, among others. Analyzes texts both within their historical contexts and as they apply to modern food movements.

Repeat for Credit

Y

Requisites

Prerequisite or Corequisite: ENGL 200 and Junior standing.

Typically Offered

Fall-Even Years

K-State 8

Historical Perspectives

HORT 695 - Introduction to Permaculture

Credits 3

Exploration of a thinking/design methodology that seeks to provide for the physical needs of humans, including food, water, shelter, energy, etc. while doing so in an environmentally-friendly, sustainable manner.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 201 and HORT 275.

Typically Offered

Fall-Odd Years

HORT 705 - Hydroponic Food Production

Credits 3

This hands-on course explores hydroponic growing methods both regionally and internationally, incorporating production of tomatoes, cucumbers, peppers, leafy greens, herbs, microgreens, and berries into a variety of production systems used in controlled environment agriculture. Topics will also include sustainability of the systems and an introduction to safe food handling practices.

Repeat for Credit

N

Requisites

Requisite: Junior standing or consent of Instructor.
Recommended Foundation Course: HORT 570.

Typically Offered

Spring-Even Years

HORT 706 - Advanced Culture of Golf and Sports Turf

Credits 3

Advanced topics in golf and sports turf maintenance

focusing on construction methods and management of abiotic and biotic stresses.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: HORT 515.

Typically Offered

Fall

HORT 710 - Plant Cell, Tissue and Organ Culture.

Credits 3

Course will cover the principles and laboratory exercises that demonstrate major concepts and practical techniques in plant cell, tissue and organ culture. The history and use of plant cell-, tissue-, and organ-culture for crop improvement will be explained. The variety of tissue-culture techniques will be highlighted. Selected readings and practical tissue culture projects will be required.

Note

Two hours lecture and three hours lab per week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 350.

Typically Offered

Spring

HORT 715 - Advanced Interiorscaping

Credits 3

Focus is the physiological principles and industry practices in the production, moving, care, and maintenance of interior plants. This course will provide students the career tools to design, install and maintain interior landscapes through knowledge of interior plant physiology, care and maintenance.

Note

Two hours lecture and two hours lab a week

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 201 and BIOL 500.

Typically Offered

Spring-Even Years

HORT 720 - Environmental Nursery Production

Credits 3

Cultural practices used with nursery production will be presented with focus on the adoption of best management practices, conservation of resources, scientific research-based investigations related to nursery cultural practices, potential risks to nursery personnel, and off-site movement of air-borne materials and effluents to surrounding areas and public watersheds.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 575.

Typically Offered

Spring-Odd Years

HORT 725 - Postharvest Technology and Physiology of Horticultural Crops

Credits 3

A study of the principles and practices involved in the harvesting, handling and storage of horticultural products. The relationship of plant structure and physiology will be emphasized in discussing effects of postharvest handling and storage to maximize quality and shelf life of products.

Note

Three hours lecture a week.

Repeat for Credit

N

Typically Offered
Spring-Odd Years

HORT 751 - Human Issues in Horticultural Therapy

Credits 3

This course will explore human issues in horticulture generally, and human issues in horticultural therapy specifically. Consideration of selected topics and issues such as people/plant relationship theories, horticultural therapy as a specialized allied health field, health-care gardens and their use, societal impacts on horticultural therapy, and research issues. Provides students with a knowledge and understanding of the literature in horticultural therapy and develops an appreciation of the interrelationships involved in this multidisciplinary area.

Repeat for Credit
N

Requisites
Recommended Foundation Course: A course in research methods and a course in statistics.

Typically Offered
Fall

HORT 752 - Horticulture in Horticultural Therapy

Credits 3

Application of horticulture principles and practices in therapeutic settings; considerations for greenhouse systems operations and management in therapeutic settings; landscape maintenance, fruit and vegetable gardening, and production horticulture as part of a therapeutic program; and plant propagation for production and therapy.

Repeat for Credit
N

Typically Offered
Spring

HORT 753 - Clinical Skills in Horticulture Therapy

Credits 3

Development of horticultural therapy skills and methodology is facilitated through real-life case studies. Includes instruction, practice, and evaluation of clinical skills with population groups typically served through horticultural therapy.

Repeat for Credit
N

Typically Offered
Fall

HORT 755 - Practicum in Horticultural Therapy

Credits 3

The practicum is a means of demonstrating the interconnections between 'theory' and 'practice'. By conducting a practicum project, students demonstrate the ability to apply concepts and ideas from their study of horticultural therapy to a specific population or setting.

Repeat for Credit
N

Typically Offered
Fall, Spring

HORT 760 - Business Management for Horticultural Enterprises

Credits 3

Focus is on developing a detailed business plan for the service, design and production businesses in horticulture that incorporates considerations of start-up capitalization, insurance, investments, legal accounting and employee compensation. Strategic decision-making and aspects of a horticulture firms that are unique to its industries, such as product seasonality and perishability, will be discussed.

Note
Three hours lecture a week.

Repeat for Credit
N

Requisites
Recommended Foundation Course: HORT 500-level or above.

Typically Offered

Fall

HORT 775 - Plant Breeding Methods in Horticulture**Credits 3**

Focus is on introductory plant breeding principles with emphasis on traditional methods of developing improved cultivars of cross-pollinated, self-pollinated, and asexually-propagated horticultural crops, and the genetic principles on which breeding methods are based. The course provides a general background in all areas of plant breeding as a foundation for mastering more complex breeding principles.

Note

Three hours lecture a week

Repeat for Credit

N

Requisites

Recommended Foundation Courses: ASI 500 and STAT 300-level or above.

Typically Offered

Fall-Even Years

HORT 780 - Health-Promoting Phytochemicals: Fruits and Vegetables**Credits 2**

The course deals with various aspects of phytochemicals in plant-based foods including fruits and vegetables and their impact on human health and well-being. It includes potential effects of phytochemicals in promoting human health, preventing various diseases and fostering wellness. It also includes biosynthesis and metabolism of phytochemicals in plants. Emphasis is placed on developing strategies to improve the phytochemical content of food crops through approaches involving crop management, environmental and biotechnology tools. Two hours lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and CHM 110 or CHM 210.

Typically Offered

Fall-Odd Years

HORT 790 - Sustainable Agriculture**Credits 2**

Historical perspectives of the sustainable agriculture movement in the U.S. and world-wide will be examined and critiqued. Components of sustainable agriculture such as agroecosystem theory, permaculture, energy use efficiency, and organic standards will be compared and evaluated. Students will demonstrate their understanding and application of the material by conducting research on a topic within sustainable agriculture and presenting the topic to the rest of the class.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall-Odd Years

HORT 791 - Urban Agriculture**Credits 2**

Students will become familiar with a wide variety of urban agriculture types and production systems utilized in urban settings. The course will include background readings, case studies, guest speakers, student-facilitated class discussion and lectures.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

Crosslisted

UFS 791

HORT 792 - Urban Food Production Practicum**Credits 1**

Students will complete a practicum in an approved urban agriculture setting to gain exposure to a broad range of tasks facing the urban farmer. This includes planning, production and marketing of crops in high tunnels and open field.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: HORT 520 and HORT 560.

Typically Offered

Fall, Spring, Summer

HORT 793 - Farm to Fork Produce Safety

Credits 2

This course will cover all aspects of food safety for fresh produce grown in urban and rural environments, including pathogen ecology and production aspects as well as pre-harvest and postharvest factors that influence the risk of microbial contamination. More specifically, we will discuss ways to minimize the risk of human pathogens on fresh produce using strategies such as the implementation of Good Agricultural Practices (GAPs) and Good Handling Practices (GHPs). The course will cover postharvest interventions that are currently used (chemical sanitizers) as well as innovative technology applications like physical treatments, irradiation, and biological control techniques. Additionally, students will explore the impact of foodborne outbreaks on public health and the fresh produce industry in terms of economics, consumer acceptance, and legal aspects.

Repeat for Credit

N

Requisites

Recommended Foundation Course: A course in microbiology.

Typically Offered

Fall-Even Years

HORT 794 - Urban Food Systems

Credits 2

This course will cover all components of urban food systems through the lens of food security, food justice,

access, policy, and community planning. Students will gain skills in grant-writing, non-profit planning and management, and working with urban policy and planning boards.

Repeat for Credit

N

Typically Offered

Spring

Crosslisted

HORT/UFS 794

HORT 795 - Urban Agriculture Study Tour

Credits 1

Faculty-led trip for students to explore leading examples of urban agriculture. Each year, a trip will occur within North America, lasting approximately 7 days. The study tours will focus on urban food system development in major cities and will highlight examples of how food is being grown in urban areas and the impacts that it has on the community.

Note

Instructor permission

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

HORT 796 - Professional Development in Urban Food Systems

Credits 0-1

A team instructed seminar course that provides urban food systems students with a suite of skills complimentary to their research experience but still necessary for professional career success. Urban Food System students will be expected to enroll in this course 4 semesters.

Repeat for Credit

Y

Typically Offered

Fall, Spring

Crosslisted

HORT 796

HORT 800 - Horticultural Physiology

Credits 3

Discussions of recent advances in horticultural crop plant physiology, including improvements in horticultural crops resulting from applications of molecular biology and biotechnology.

Note

Three hours lecture a week.

Repeat for Credit

N

Typically Offered

Fall

HORT 815 - Plant Nutrition and Nutrient Management

Credits 3

Focuses on the macro and micronutrient elements and their function in the growth and development of plants. Emphasis will be placed on the roles of single elements, interactions/balances between elements, and nutrient deficiency/toxicity symptoms as they affect the physiology of the whole plant and management of nutrient applications. The relationships between crop nutrition and production and environmental considerations (yield, drought, temperature, pests) will be explored.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: AGRON 205 and BIOL 500.

Typically Offered

Spring-Even Years

HORT 846 - Plant Research Methods

Credits 3

Review of history and forms of plant science literature. Discussion on selecting experimental procedures, interpreting data, and reporting results.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: One statistics course or consent of instructor.

Typically Offered

Fall

HORT 880 - Topics in Horticulture

Credits 0-18

Discussion and lectures of important papers and contributions in this field.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 898 - Master's Report

Credits 1-18

Investigations in pomology, olericulture, floriculture, ornamental horticulture, turfgrass, or horticultural therapy for preparation of master's report.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 899 - Research-MS

Credits 1-18

Investigations in pomology, olericulture, floriculture, ornamental horticulture, turfgrass, or horticultural therapy for preparation of master's thesis.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 910 - Advances in Plant Cell Culture**Credits 2**

Course will cover current topics in plant cell culture, applications and commercial practices, with emphasis on plant genetic improvement. Research-level skills in this area will be taught.

Note

Two hours lecture a week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: HORT 710.

Typically Offered

Spring-Odd Years

HORT 940 - Plant Regulators in Horticulture**Credits 3**

A study of synthetic plant regulators used to initiate, induce, promote, inhibit, or alter characteristics of horticultural plants and crops. Included are kinds and types of exogenous plant regulators used on crops, their activity, plant responses, benefits and problems, and application technology.

Note

One hour lecture and two hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: BIOCH 510 or BIOL 500, and one graduate plant commodity course.

Typically Offered

Fall-Even Years

HORT 951 - Horticulture Graduate Seminar**Credits 1**

Student presentations and discussion of investigational works in the various disciplines of Horticulture and Natural Resources.

Repeat for Credit

Y

Typically Offered

Fall, Spring

HORT 960 - Environmental Plant Stress**Credits 3**

Physiological, biochemical and morphological factors involved in stress development and resistance will be discussed.

Repeat for Credit

N

Requisites

Prerequisite: HORT 800

Typically Offered

Spring

HORT 970 - Topics in Horticultural Therapy**Credits 0-18**

Discussion and lectures on important papers and contributions in horticultural therapy.

Note

Permission of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

HORT 999 - Research in Horticulture, PhD

Credits 1-18

Investigations in pomology, olericulture, floriculture, ornamental horticulture, and turfgrass. Data collected may form basis for a thesis or dissertation.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IAID 290 - Design and Material Culture**Credits 3**

This course examines contemporary topics within material culture and design across the three domains of practice and scales: Interior Architecture, Furniture Design, and Industrial Design. It serves as an introduction to the disciplinary topics that are shaping current and future design practice. The course begins with a chronological survey of design movements and their grounding theories which serves to frame a deeper thematic discussion around the three major course topics: environmental sustainability, health, and equity.

Repeat for Credit

N

Typically Offered

Fall, Spring

IAID 299 - History of Furniture**Credits 3**

Exploration of furniture history from prehistory to the present. Focus on socio-cultural, architectural, technological, material culture, manufacturing, spiritual, aesthetic, sustainable factors over the human timeline.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

IAID 407 - Design Workshop I**Credits 4**

An introduction to the principles of furniture design, with special emphasis on material properties, fabrication methods, tectonics, and structural considerations of furniture design. The course also serves as an introduction to best-practice techniques for safely using the tools and equipment within the Fabrication Lab. Through a series of initial exercises students will develop a versatile foundation in woodworking and metalworking skills that will be applied to the design and fabrication of small-scale furniture projects.

Repeat for Credit

N

Requisites

Prerequisite: IAID 290

Typically Offered

Fall, Spring, Summer

IAID 430 - Visual Communication I**Credits 3**

Seeks to provide a basic understanding of design visualization and presentation in both traditional and digital applications. A two and three-dimensional sensitivity is developed through a series of projects and lectures utilizing the principles of proportion, scale, hierarchy, balance, movement, line, plane, volume, texture, color and an introduction of vector and raster graphics software.

Repeat for Credit

N

Requisites

Prerequisite: ENVD 202.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

IAID 431 - Visual Communication II

Credits 3

Provides an advanced understanding of design visualization and presentation. Introduces a variety of 3D modeling and rendering software commonly used in the Industrial and Product Design field. Explores digital form development, materials representation, perceptual education and visual communication.

Repeat for Credit

N

Requisites

Prerequisite: IAID 430

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

IAID 432 - Visual Communication III**Credits 3**

Explores advanced techniques in design visualization and presentation. Advanced techniques in image generation and editing using raster and vector tools. Advanced topics in layout and typesetting. Introduction to time-based media, including audio and video editing and 2D animation. Introduction to web and interaction design.

Repeat for Credit

N

Requisites

Prerequisite: IAID 431

Typically Offered

Fall, Spring, Summer

IAID 456 - Introduction to Design**Credits 2**

Introduction to the Profession of Product/Industrial Design including history; major movements; key practitioners; socio-cultural, architectural and technological drivers; unique design/make processes and methodologies; materials and manufacturing techniques; and, contemporary issues.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

IAID 602 - Furniture Design II**Credits 4**

This course continues to enhance and increase the understanding of a human-centered approach to the design and prototyping of furniture, while focusing more deeply on function and context. Students will develop and practice intermediate woodworking and metalworking techniques and skills. The topics of the course may also include contextual and functional analysis for furniture design, sustainable practices, intermediate structural considerations, and an introduction to human factors as they relate to the design of furniture and accessories.

Repeat for Credit

N

Requisites

Prerequisite: IAID 407 and no grade lower than a C in any IARC or INDD studio course.

Typically Offered

Fall, Spring, Summer

IAID 605 - Problems in IAID**Credits 1-18**

Study of specific problems related to Interior Architecture, Industrial Design, or Furniture Design.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IAID 615 - Topics in Furniture Design**Credits 1-3**

Study of specific furniture design topics.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

IAID 680 - Production Furniture for the Contract Market Research

Credits 1

Introduction and implementation of market research; client end-user research; manufacturing implications; BIFMA and other testing requirements; and, competitive market analysis and implications to develop a complete "design brief" for a line of contract furniture within a major manufacturer's existing line.

Repeat for Credit
N

Typically Offered
Fall

IAID 681 - Production Furniture for the Contract Market Design

Credits 2

This course builds upon the knowledge gained and the design brief developed in IARC 680, Production Furniture for the Contract Market Research and develops the designers' understanding of intersecting forces affecting the design of a line of furniture, from conception to final production. Students work in teams with a manufacturer in the design and development of a line/family of products-expectations of design, prototyping, royalties and licensing-as well as the manufacturing processes and knowledge of effectively specifying furnishings.

Repeat for Credit
N

Requisites
Prerequisite: IAID 680.

Typically Offered
Spring

IAID 753 - Professional Practice: Professional Responsibility

Credits 1

Interdisciplinary course addresses the connections between

allied design professions and the larger community. It helps students to understand and appreciate their professional legal and ethical responsibilities.

Repeat for Credit
N

Typically Offered
Fall, Spring

IAID 754 - Professional Practice: Office Practices

Credits 1

Interdisciplinary course addresses practice-based issues concerning professional relationships in the design and delivery process, management of projects, communication practices, and fiscal concerns.

Repeat for Credit
N

Typically Offered
Fall, Spring

IAID 814 - Furniture Design III

Credits 4

Advanced exploration of contemporary topics in furniture design. Students explore innovative design solutions through an iterative, inclusive, and human-centered design process. There is a special emphasis on the generation of multiple mock-ups and prototypes to explore and test their design solutions.

Repeat for Credit
Y

Requisites
Prerequisite: IAID 602 and no grade lower than a C in any IARC or INDD studio course.

Typically Offered
Fall, Spring, Summer

IAID 824 - Advanced Furniture Design Studio

Credits 6

Advanced design, construction, and finishing of contemporary furniture. Students explore projects

programmed under the previous semester's Advanced Studio Programming. Projects must be relevant in a contemporary socio-cultural, architectural and technological context; employ rigorous design research processes and methodologies; identify user and usability needs/ desires; accommodate market opportunities and constraints; explore multiple conceptual solutions in a variety of hand and digital media; and demonstrate experimentation in the design of spatial components utilizing advanced construction techniques and materials through the development and documentation of models and prototypes. A book, oral and visual presentation and display materials for exhibition of the student's work will be required at the completion of the course.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 810 or INDD 810, IARC 815 or INDD 815.

Typically Offered

Fall, Spring, Summer

IAID 891 - Contemporary Design Seminar

Credits 3

Seminar on current interior architecture, product design and furniture design that illustrate principles and practical concerns that motivate design with readings, class discussion, student presentations, research papers or projects.

Note

Open to non-majors accepted in the College of Architecture, Planning and Design.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring, Summer

IAPD 821 - Advanced IAPD Design Studio

Credits 4

Advanced study of interior space planning, product design,

and interior design.

Repeat for Credit

Y

Typically Offered

Spring, Summer

IARC 248 - Fundamentals of Architectural Technology

Credits 3

Instruction in the fundamentals of architectural technology with emphasis on the concepts and principles necessary for developing an integrated approach to building design.

Note

Three hours of lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: Admission to a professional program in the college.

Typically Offered

Fall

Crosslisted

ARCH 248: Fundamentals of Architectural Technology

IARC 300 - Design and Material Culture

Credits 3

People's personal characteristics or social position can be expressed by the products they purchase, the possessions they own, and the physical environments they create. Design has become a major factor influencing one's final decision for purchasing these products. This course examines material culture which is created from the influences of human behavior, design, history, marketing, economics, politics, geography, the arts, and sociology.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Historical Perspectives

K-State 8 Tag 2

Human Diversity within the U.S.

IARC 307 - IARC Design Studio I

Credits 5

Introduction to the Interior Architecture design process. Generation of design concept and design alternatives for small-scale projects. Introduction to basic design theory, beginning design research, human scale, behavior, ergonomics and anthropometrics as they affect design decisions. Introduction of structure and environmental analysis as informants and determinants of design. Focus on multiple graphic representations and compositions, including diagramming, sketching, freehand drawing, and enhancing through digital means.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the professional program in interior architecture.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

IARC 310 - IARC Digital Applications

Credits 2

This course addresses current digital media as it is used by the profession to draft and visualize design projects. Survey a wide variety of contemporary design and visualization software. The intention is not mastery of any single software but instead to form an understanding of the interface and use of the tools and when they are appropriate. Enable the thoughtful discussion and understanding of design representation and process in both drafting and visualization. Enable and empower the student to comfortably engage design software as they continue to evolve.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the professional program in

interior architecture.

Typically Offered

Fall, Summer

K-State 8

Aesthetic Interpretation

IARC 320 - IARC Design Studio II

Credits 5

This studio introduces the principles of design, design terminology, and the values of a human centered design philosophy for the interior environment. Significant emphasis will be on the theoretical underpinnings of project ideation and development; and formal design processes and decision-making. Oral, graphic and visual communication skills and model making techniques will also be stressed to assist students in representing their design ideas.

Repeat for Credit

N

Requisites

Prerequisite: IARC 307; no grade lower than a C in any interior architecture and product design studio course.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

IARC 391 - Topics in Contemporary Design Seminar

Credits 3

Seminar on current interior architecture, industrial design, and furniture design that illustrate principles and practical concerns that motivate design with readings, class discussion, student presentations, research papers or projects.

Repeat for Credit

N

Requisites

Prerequisite: Open to non-majors accepted in the College of Architecture, Planning and Design; third-year standing.

Typically Offered
Fall, Spring

IARC 406 - Problems in IARC

Credits 1-18

Study of specific interior architectural problems under direct supervision of a member of the department.

Repeat for Credit
Y

Requisites
Prerequisite: ENVD 201.

Typically Offered
Fall, Spring, Summer

IARC 409 - Materials and Finishes

Credits 3

Introduction to materials, textiles, and finishes specific to interior applications. Criteria for evaluation, selection, and application of interior materials and finishes with the building fabric and their impact on building design. Preparation of written and graphic communications to illustrate and direct the construction process.

Note
Three hours lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: Admission to the professional program in interior architecture.

Typically Offered
Fall, Spring, Summer

IARC 412 - Design Workshop I Studio

Credits 1

Exploration of design alternatives; process, presentation and construction graphics communicating design.

Repeat for Credit
N

Requisites
Corequisite: IARC 407.

Typically Offered
Fall, Spring, Summer

IARC 435 - IARC Design Studio III

Credits 5

This studio builds on the knowledge and skills developed in IARC 320. It provides an in-depth understanding of the design methodologies and principles of interior architecture enhanced with an introduction to evidence-based design through the principles of environment-behavior, review and analysis of historic precedents, user needs, and the impact of shapes and forms, materials, lighting and color.

Repeat for Credit
N

Requisites
Prerequisite: IARC 320, no grade lower than a C in any interior architecture studio course.

Typically Offered
Fall, Spring, Summer

IARC 440 - IARC Design Studio IV

Credits 5

This course will build upon and extend the knowledge and skill base gained by students in previous studios, and will include the introduction of programming methodology and its relationship to the design and organization of interior space. Emphasis will be placed on an understanding of how human behavior affects the designed environment, including the elements and objects that shape it such as the appropriate selection of furniture, finishes, fixtures, and equipment within the context of their relationships to form, function, task and users' needs.

Repeat for Credit
N

Requisites
Prerequisite: IARC 435, no grade lower than a C in any interior architecture and industrial design studio course.

Typically Offered
Fall, Spring, Summer

IARC 603 - Design Workshop II Studio

Credits 1

Studio component of Design Workshop II. Exploration of design alternatives; process, presentation and construction graphics, students increase their proficiency at communicating ideas through working and presentation drawings for projects to be created in IARC 802: Design Workshop II.

Repeat for Credit

N

Requisites

Prerequisite: IARC 407, IARC 412 and no grade lower than a C in any IAPD or INDD studio course.

Corequisite: IARC 602.

Typically Offered

Fall, Spring, Summer

IARC 605 - Problems in IARC

Credits 1-18

Study of specific problems related to Interior Architecture.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

IARC 606 - IARC Design Studio VI

Credits 5

This semester of study provides an option for an interdisciplinary collaborative studio course oriented towards replicating the learning experience and interactive activities that takes place in the modern multidisciplinary professional office or a validated equivalent studio completed in an approved study program.

Repeat for Credit

N

Requisites

Prerequisite: ARCH 433 and IARC 801, and no grade

lower than a C in any interior architecture design studio course.

Typically Offered

Spring

IARC 625 - Lighting

Credits 3

An examination of design and technical issues related to luminous environments in building interiors. Topics include color and light, vision, light sources, luminaire selection and design, and the evaluation of lighting solutions.

Repeat for Credit

N

Requisites

Prerequisite: IARC 435

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

IARC 628 - Construction Documentation

Credits 3

A technical capstone course that explores the development of construction documentation for interior architecture projects includes demolition, partition, and reflected ceiling plans, power & communications plans, finish and furnishings plans, interior elevations, sections, details and schedules. Understanding of the mechanical, electrical, plumbing and structural systems, as well as building and life-safety codes, and the Americans with Disabilities Act will be demonstrated through completion of the set of drawings.

Repeat for Credit

N

Requisites

Prerequisite: IARC 435.

Typically Offered

Fall, Spring, Summer

IARC 644 - Internship

Credits 9

Fifteen week internship in a professional environment with a focus on interior architecture, product/industrial design and/or furniture design: office and field experience.

Repeat for Credit

N

Requisites

Prerequisite: IARC 440; Corequisite: IARC 645.

Typically Offered

Fall, Spring

IARC 645 - Internship Report**Credits 5**

Development of the student's analysis, observation and communication skills in relationship to the professional office and field environment. Detailed documentation, online and on-campus, of the experiences encountered during internship, allowing classmates to learn from their peer's varied experiences as well as provide a detailed documentation of the student's work during internship.

Repeat for Credit

N

Requisites

Corequisite: IARC 644.

Typically Offered

Fall, Spring

IARC 664 - Summer Internship**Credits 6**

Ten week internship in a professional environment with a focus on interior architecture, industrial/product design and/or furniture design: office and field experience.

Repeat for Credit

N

Requisites

Prerequisite: IARC 440 and IARC 628 and no grade lower than a C in any IARC or INDD studio course.

Corequisite: IARC 665.

Typically Offered

Summer

IARC 665 - Summer Internship Report**Credits 1**

Development of the student's analysis, observation and communication skills in relationship to the professional office and field environment. Detailed documentation, online and on-campus, of the experiences encountered during internship, allowing classmates to learn from their peer's varied experiences as well as provide a detailed documentation of the student's work during internship.

Repeat for Credit

N

Requisites

Corequisite: IARC 664.

Typically Offered

Summer

IARC 710 - Advanced 3-D Computer Modeling**Credits 3**

Lighting, materials, animation, advanced modeling techniques, sound, and storyboarding are methodologies required to successfully build a digital presentation for projection in a two dimensional, or 3-dimensional environment using the vision domes. Projects that utilize these topics will include an introduction to 3D modeling, animation, sound, titling, lighting, and a material editor.

Repeat for Credit

N

Requisites

Prerequisite: IARC 410.

Typically Offered

Fall

IARC 755 - Professional Practice: Discipline-Specific Topics**Credits 1**

Covers discipline-specific concerns, focusing on issues

specific to architecture, interior architecture and product design, landscape architecture or regional and community planning.

Repeat for Credit

N

Typically Offered

Fall, Spring

IARC 760 - IARC Seminar

Credits 0-18

Readings and discussion of contemporary thought and movements within the field of interior architecture and product design with special emphasis on the societal factors that produce and effect change.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring

IARC 801 - IARC Design Studio V

Credits 5

This semester of study provides an option for an interdisciplinary collaborative studio course oriented towards replicating the learning experience and interactive activities that take place in the modern multi-disciplinary professional office.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 440 and no grade lower than a C in any IARC studio course.

Typically Offered

Fall, Spring, Summer

IARC 802 - Design Workshop II

Credits 3

Design Workshop II is intended to further develop the

student's understanding of the three dimensional design process through research, design, prototype construction, evaluation and redesign. Enhance and increase the student's understanding of the structural characteristics of materials.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 407, IARC 412 and no grade lower than a C in any IARC or INDD studio course.

Corequisite: IARC 803.

Typically Offered

Fall, Spring, Summer

IARC 803 - Design Workshop II Studio

Credits 1

Studio component of Design Workshop II. Exploration of design alternatives, process, presentation and construction graphics, students increase their proficiency at communicating ideas through working and presentation drawings for projects to be created in IARC 802: Design Workshop II.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 407, IARC 412 and no grade lower than a C in any IARC or INDD studio course.

Corequisite: IARC 802.

Typically Offered

Fall, Spring, Summer

IARC 810 - IARC Capstone Studio

Credits 5-6

Students are to pursue design projects that encompass their previous educational experience validating their knowledge of the IARC program studies. The project will be based on extensive research and review. The project presentation will suggest unique and applicable solutions with clearly identified methodology of implementation.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 801 and IARC 811.

Typically Offered

Fall

IARC 811 - Design Research

Credits 2-3

Identify evaluation criteria appropriate for design research and problem solving, analysis of literature, construction of problem statements, development and documentation of design problem proposals and reports.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 440.

Typically Offered

Fall, Spring, Summer

IARC 813 - Furniture Design Workshop Studio

Credits 1

Studio component of IARC 814 Furniture Design Workshop. Exploration of contemporary design alternatives, students explore innovation and demonstrate knowledge through design processes and including process, presentation and construction graphics for projects to be created in IARC 814: Furniture Design Workshop.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 603. Corequisite: IARC 814.

Typically Offered

Fall, Spring, Summer

IARC 815 - Advanced Studio Programming

Credits 2-3

Research of programming methodologies culminating in a programmatic document used as the basis for the design project in IARC 822, IARC 823 or IARC 824.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 801.

Typically Offered

Fall, Summer

IARC 822 - Advanced Product Design Studio

Credits 6

Students explore projects programmed under the previous semester IARC 815 Advanced Studio Programming. Projects must be relevant in a contemporary socio-cultural, architectural and technological context; employ rigorous design research processes and methodologies; identify user and usability needs/desires; accommodate market opportunities and constraints; explore multiple conceptual solutions in a variety of hand and digital media; build and document models and prototypes; and estimate material and manufacturing costs. A book, oral and visual presentation, and display materials for exhibition of the student's work will be required at the completion of the course.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 810 and IARC 815.

Typically Offered

Fall, Spring, Summer

IARC 823 - Advanced Interior Architecture Design Studio

Credits 6

Students explore projects programmed under the previous semester IAPD 815 Advanced Studio Programming. Projects focus on interior architecture represent a suitable design relevancy and proper academic rigor on the level of graduate design study. Design solutions must be relevant in a contemporary socio-cultural and architectural context; employ rigorous design research processes and methodologies; respond to user needs and desires; explore multiple innovative conceptual solutions in a variety of hand and digital media; and illustrate advanced knowledge and application of materiality, understanding of structural and building environmental systems' implication on interior architecture, and the selection or design of furnishings that

enhance the goals for the spaces.

Repeat for Credit

Y

Requisites

Prerequisite: IARC 810 and IARC 815.

Typically Offered

Fall, Spring, Summer

IARC 830 - Problems in IARC

Credits 0-18

Study of specific interior architectural problems under direct supervision of the departmental staff.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring

IDFS 350 - Our Sustainable World

Credits 3

Sustainability has become one of the most pressing scientific and social challenges of the modern era. This course introduces students to the theory, principles, and practices of sustainability - by focusing on environmental, social, and economic sustainability perspectives, behaviors, policies, and customs on a global level. It includes discussions on creating ecological health, economic welfare, and social justice.

Repeat for Credit

N

Typically Offered

Spring, Summer

Crosslisted

ID 350

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

IDFS 650 - Resilient Systems for a Sustainable World

Credits 3

Study of resilience in environmental, economic, and social systems to foster human wellbeing from a human ecology perspective. Examines theories and approaches that create resilient systems resulting in ecological health, economic welfare, and social justice.

Repeat for Credit

N

Requisites

Prerequisite: IDFS 350 OR GEOG 360 OR FASH 700

Typically Offered

Fall, Spring

IDFS 670 - Problem Solving for a Sustainable World

Credits 3

Study of problem solving approaches with application to personal action, social systems, and the ecology of the planet from a human ecology perspective. The course will emphasize developing solutions to problems through the application of problem solving methods and thinking skills. Systems thinking, design thinking, critical thinking, and creative thinking will be employed as means to solve challenges to human wellbeing.

Repeat for Credit

N

Requisites

Prerequisite: IDFS 350 OR GEOG 360 OR FASH 700

Typically Offered

Fall, Spring

IDFS 750 - Leading Change for a Sustainable World

Credits 3

Study of skills, techniques, and methods of leading groups to overcome challenges to human wellbeing associated with the climate crisis from a human ecology perspective. Students in the course will learn and apply effective leadership approaches and processes and develop

individual skills of effective change leadership.

Repeat for Credit

N

Requisites

Prerequisite: IDFS 650 and IDFS 670

Typically Offered

Fall, Spring

IDSN 115 - First Year ID Student Seminar

Credits 1

First Year Seminar is structured to engage and support students during their first semester of study. The course is focused on learning strategies and resources that build toward successful outcomes for the remainder of their college studies.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the Interior Design Program.

Typically Offered

Fall

IDSN 210 - Design and Behavior in the Interior Environment

Credits 3

Developing awareness of aesthetic and behavioral relationships fundamental to interior design.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Social Sciences

IDSN 225 - Interior Design Studio 1

Credits 4

Introduction to two-dimensional and three-dimensional design fundamentals including design elements and

principles, the design process, interior design theory and its application, and fundamental design communication methods including drawing and model building.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the interior design program.

Typically Offered

Fall

IDSN 245 - Interior Design Studio 2

Credits 4

Exploration of two-dimensional and three-dimensional design fundamentals. Introduction to color theory in spatial design. Introduction to light, shade, and shadow. Introduction to rendering, constructed perspective, and paraline drawing.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 225 with a C or better.

Typically Offered

Spring

IDSN 300 - Global Experiences in Interior Design

Credits 0-6

An experiential learning course that prepares students for and immerses them in an international study tour designed to enhance their global and cultural awareness. Lectures and tours target important interior/architectural design, furniture, and objects of material culture.

Note

Instructor's permission.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IDSN 310 - Construction Methods and Materials for Interior Design

Credits 4

Introduction to theories, concepts, selection, and application of construction processes, materials, and finishes. Introduction to codes, regulations, representation of construction methods, and sustainability.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 245 and IDSN 350 with C or better.

Typically Offered

Fall

IDSN 315 - Digital Visualization I

Credits 2

Introduction to and application of digital technologies used by interior design professionals for 2D drafting and presentation layout.

Repeat for Credit

N

Requisites

Corequisite: IDSN 325

Typically Offered

Fall

IDSN 320 - History of Interior Design I

Credits 3

A historic survey of all aspects of the built environment, including architecture, furniture, textiles, and the minor arts from antiquity to 1850.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

IDSN 325 - Interior Design Studio 3

Credits 4

Advanced spatial design fundamentals. Application of human factors and theories of human behavior in the built environment. Selection of materials and colors. Emphasis on design conceptualization and creativity. Advanced visual communication methods including perspective drawing and rendering and other rapid visualization skills.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 245 with a C or better

Corequisite: IDSN 315

Typically Offered

Fall

IDSN 330 - Textiles for Interior Design

Credits 3

Introduction to textiles for interior environments, with a focus on the fabrication and application of materials designed specifically for use as upholstery, window coverings, soft floor coverings, wall coverings, panel systems, and other miscellaneous interior applications. Also includes the regulatory, environmental, and human health impacts of textile production, application, and maintenance.

Repeat for Credit

N

Typically Offered

Spring

IDSN 345 - Interior Design Studio 4

Credits 4

Application of interior design theory and evidence-based design in small scale projects. Introduction of project programming for interior design. Application of codes and regulations. Continued emphasis on design communication skills.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 310 and IDSN 325 with a C or better.

Typically Offered

Spring

IDSN 360 - History of Interior Design II**Credits 3**

A survey of design evolution of architecture, interiors, furniture, textiles, and the minor arts from 1850 to the present.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 320.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

IDSN 399 - Interior Design Practicum**Credits 0-2**

Off-campus professional experience in an appropriate design-related setting.

Repeat for Credit

Y

Requisites

Prerequisite: IDSN 345 and IDSN 415 with a C or better.

Typically Offered

Summer

IDSN 410 - Housing and Its Environment**Credits 3**

Socioeconomic, political-legal, and consumer overview of housing. Includes individual, family, and public decisions

related to residential alternatives, their acquisition, and housing and environmental standards.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall, Spring

IDSN 415 - Digital Visualization II**Credits 2**

Introduction to and application of digital technologies used by interior design professionals for 3D representation and rendering of design solutions.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 310 and IDSN 325 with a C or better.

Co-requisite: IDSN 345.

Typically Offered

Spring

IDSN 425 - Interior Design Studio 5**Credits 4**

Application of theory and research in medium scale projects. Focus on construction systems, materials, and methods. Continued emphasis on communication skills, programming, spatial design, and application of codes and regulations.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 345 and IDSN 415 with a C or better.

Co-requisite: IDSN 435.

Typically Offered

Fall

IDSN 435 - Systems and Technology for Interior Design I

Credits 3

Introduction to the principles of lighting, daylighting, acoustics, water supply, sanitation, thermal comfort, and indoor air quality to enhance human wellbeing.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 101 and PHYS 103 or PHYS 113 or PHYS 115 with a C or better

Typically Offered

Spring

IDSN 440 - Systems and Technology for Interior Design II**Credits 3**

Integration and application of all building systems with a focus on new technology and support of human wellbeing.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 425 and IDSN 435 with a C or better.

Typically Offered

Fall

IDSN 445 - Interior Design Studio 6**Credits 4**

Development of working drawings and specifications for projects integrating building systems and interior construction.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 425 and IDSN 435 with a C or better.
Co-requisite: IDSN 440.

Typically Offered

Spring

IDSN 499 - Problems in Interior Design**Credits 0-18**

Independent study.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

IDSN 530 - Interior Design Practices and Procedures**Credits 3**

Ethics, business procedures, and professional development; contract services and administration; and preparation for job market entry as applied to the practice of interior design.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 425 with a C or better and admission to the interior design program.

Typically Offered

Spring

IDSN 545 - Interior Design Studio 7**Credits 4**

Application of design theory to create solutions for complex, large-scale interior spaces. Projects require implementation of all phases of the design process. Students will gain greater understanding of the interior designer's responsibilities within the context of the design professions.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 445 and IDSN 530 with a C or better.

Typically Offered

Fall

IDSN 599 - Interior Design Internship

Credits 3-4

Supervised off-campus professional experience in appropriate design-related firms, government agencies, or the housing industry.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 445 and IDSN 530 with a C or better and admission to the interior design program and a 2.2 cumulative GPA and 2.5 GPA in professional areas.

Typically Offered

Fall, Spring, Summer

IDSN 600 - Interior Design Study Tour

Credits 1-3

Supervised off-campus tour to acquaint the student with rich artistic and cultural locations around the world and expand student's global perspectives of the design profession. Lectures and tours target important interior/architectural design and furniture collections.

Repeat for Credit

Y

Requisites

Prerequisite: Instructor's permission.

Typically Offered

Fall, Spring, Summer

IDSN 630 - Topics in Advanced Interior Design Theory

Credits 3

An examination of contemporary social and cultural influences on design theory and applications within the interior design profession.

Repeat for Credit

Y

Requisites

Prerequisite: IDSN 345 with a C or better.

Typically Offered

Fall, Spring

IDSN 645 - Interior Design Studio 8

Credits 4

Application of design theory to create solutions for complex, large-scale interior spaces. Projects will conform to professional standards regarding design process, protection of health, safety, and welfare, and construction methods.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 445 and IDSN 530 with a C or better.

Typically Offered

Spring

IDSN 650 - Advanced Design and Behavior in the Interior Environment

Credits 3

The design of interior environments explored in an ecological, behavioral, and cultural context.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 345 or consent of instructor.

Typically Offered

Fall, Spring

IDSN 651 - Design for Supportive Environments

Credits 4

Analysis of the age and ability related needs and challenges faced by children, older adults, and persons with disabilities. Team approaches to providing living and work environments that accommodate both universal and special human needs.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 345 with a C or better.

Typically Offered

Fall

K-State 8

Human Diversity within the U.S.

IDSN 660 - Advanced Kitchen and Bath Design**Credits 3**

Functional and research basis for planning and arranging based on activity analysis, equipment, materials, lighting, and ventilation.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 345 and IDSN 435 with a C or better and admission to the interior design program.

Typically Offered

Spring

IDSN 760 - Historic Preservation and Restoration of Interiors**Credits 3**

Principles, guidelines, and qualities of preservation and restoration of interiors. Research and application.

Repeat for Credit

N

Requisites

Prerequisite: IDSN 320 and IDSN 360; or ENVD 250 and ENVD 251.

Typically Offered

Fall, Spring

IHS 110 - Introduction to Integrative Human Sciences**Credits 1**

This course will provide the foundation for students in the IHS major. The course will introduce students to the framework that guides the discipline and the curriculum.

Repeat for Credit

N

Typically Offered

Fall

IHS 200 - Topics in Integrative Human Sciences I**Credits 0-3**

Exploration of topics in human science/family and consumer sciences.

Note

Consent of School

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IHS 310 - Foundations of Integrative Human Sciences**Credits 3**

Examination of the Family & Consumer Sciences Body of Knowledge Framework and application to professional practice and ethical decision-making.

Repeat for Credit

N

Requisites

Prerequisite: Sophomore standing or consent of instructor.

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

IHS 399 - Integrative Human Sciences Applied Learning Orientation

Credits 1

Provides support and guidance for students as they select an applied learning experience specific to their personal and professional goals.

Repeat for Credit

N

Requisites

Prerequisite: IHS 110 with a grade of C or better; IHS Majors only.

Typically Offered

Fall, Spring

IHS 400 - IHS Applied Learning Experience**Credits 1-3**

Learners will participate in applied learning experiences specific to their personal and professional goals. These experiences will be designed to meet the needs of the individual learner and provide an opportunity for application of skills and knowledge; reflection on professional practice and preparation for roles as future leaders and change agents.

Repeat for Credit

Y

Requisites

Prerequisites: IHS 110; IHS 399 with a grade of B or better; IHS majors only.

Typically Offered

Fall, Spring, Summer

IHS 410 - Integrative Human Sciences Seminar**Credits 2**

Application of career and professional skills relevant to students majoring in Integrated Human Sciences. Specific focus on the application of the FCS Body of Knowledge to professional practice.

Repeat for Credit

N

Requisites

Prerequisite: IHS 310

Typically Offered

Fall-Odd Years

IHS 420 - Family and Consumer Science Methods for Secondary and Middle Schools**Credits 3**

Principles of teaching applied to family and consumer sciences instruction in the secondary and middle schools including: motivation, organization of subject matter, lesson/unit planning, assessment and reporting, organization and management of the classroom, and methodology and materials of the secondary and middle schools.

Repeat for Credit

N

Requisites

Prerequisite: EDCI 315, EDSP 323, and EDCI 320.
Corequisite: EDSEC 455, EDSEC 477, EDSEC 525 and IHS 425.

Typically Offered

Fall

IHS 425 - Family and Consumer Science Education Practicum**Credits 2**

This field-based experience provides the opportunity for students to plan, teach, and evaluate family and consumer science education lessons within a placement at the middle or secondary level. This practicum also allows students to incorporate instructional strategies and application of materials from the methods course.

Repeat for Credit

N

Requisites

Prerequisite: EDCI 315, EDSP 323, and EDCI 320.
Corequisite: EDSEC 455, EDSEC 477, EDSEC 525, and IHS 420.

Typically Offered

Fall

IHS 500 - Topics in Integrative Human Sciences II

Credits 0-3

Advanced exploration of topics in human science/family and consumer sciences.

Note

Consent of School

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IMSE 015 - Engineering Assembly**Credits 0**

Assemblies are held once a month for practicing industrial engineers to make presentations to the students. Students are given an opportunity to interact with the visitors. The purpose is to provide an opportunity to learn about various companies and their products and operations.

Note

Required every semester.

Repeat for Credit

Y

Typically Offered

Fall, Spring

IMSE 050 - Industrial Plant Studies**Credits 0**

Trip to industrial centers for study of facilities of special interest to industrial engineering students.

Repeat for Credit

Y

Requisites

Prerequisite: Junior standing in industrial engineering.

Typically Offered

Spring

IMSE 201 - Introduction of Industrial Engineering**Credits 3**

Introduction to the core areas of industrial engineering including ergonomics, operations, research, quality control, management, engineering economics, resource management, production systems and inventory control. Both engineering ethics and careers in industrial engineering will be discussed.

Note

Two hours lecture and two hours lab week.

Repeat for Credit

N

Requisites

Corequisite: MATH 220.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

IMSE 250 - Introduction to Manufacturing Processes and Systems**Credits 2**

This course provides an introduction to manufacturing processes and systems. The history and impact of manufacturing on society will be explored. A review of manufacturing processes and the products to which they are best suited will be emphasized. The impact of product design on manufacturability will be introduced. The role of engineers in designing good manufacturing processes and systems will be discussed.

Note

Two hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: MATH 205 or MATH 220.

Typically Offered

Fall, Spring

IMSE 251 - Manufacturing Processes Laboratory

Credits 1

General introduction to foundry, welding, and machining. Includes safe manufacturing practices, metrology, and hands-on experience in foundry, welding, and machining operations.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: IMSE 250.

Typically Offered

Fall, Spring

IMSE 252 - Welding Laboratory**Credits 1**

Introduction to welding. Includes safe welding practices and lab experiments in gas, spot, and arc welding.

Note

Three hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

IMSE 255 - Computer Numerical Control Laboratory**Credits 1**

Introduction to computer numerical control. Part programming for CNC lathes and mills will be accomplished.

Note

Three hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

IMSE 441 - Introduction to Analytics**Credits 3**

This course covers an introduction to analytics, which includes computer programming, statistics and mathematical decision making. Topics include: arrays, loops, data structures, data visualization, hypothesis testing, confidence intervals, multidimensional linear regression, distribution fitting, and identifying objectives and constraints to recommend data driven solutions.

Repeat for Credit

N

Requisites

Prerequisite: At least 3 hours of STAT courses at the 300 level or above and at least 3 hours of CIS courses at the 200 level or above.

Typically Offered

Fall, Spring

IMSE 497 - Undergraduate Research Experience**Credits 0-3**

Open to students pursuing undergraduate research projects.

Repeat for Credit

Y

Typically Offered

Fall, Spring

IMSE 499 - Honors Research in Industrial Engineering**Credits 1-18**

Individual research problem selected with approval of faculty advisor. Open to students in the College of Engineering honors program. A report is presented orally and in writing during the last semester.

Repeat for Credit

Y

Typically Offered

Fall, Spring

IMSE 501 - Industrial Management

Credits 3

Basic functions in an industrial organization and their interrelationships; management considerations involving product, process, plant, and personnel.

Note

Three hours recitation a week.

Repeat for Credit

N

Typically Offered

On sufficient demand

IMSE 530 - Engineering Economic Analysis

Credits 2

The analysis of the economic aspects of engineering/industrial projects. Focus on decision making among competing alternatives, including replacement decisions. Includes: cost estimating, time-value of money and effects of depreciation and taxation. Methods of comparing alternatives are developed, including: equivalent worth, rate of return, break even analysis, and benefit-cost ratio. The course period lasts the first ten weeks of a semester.

Repeat for Credit

N

Requisites

Prerequisite: MATH 220.

Typically Offered

Fall, Spring

IMSE 532 - Industrial Project Evaluation

Credits 1

The analysis and selection of engineering/industrial projects. This course is a continuation of IMSE 530. Topics in addition to IMSE 530 includes: risk/uncertainty, impact of inflation, capital rationing, multiple criteria decision making, and determining the MARR. The course period lasts the last five weeks of a semester.

Repeat for Credit

N

Typically Offered

Fall, Spring

IMSE 541 - Statistical Quality Control

Credits 3

Normal, binomial, and frequency distributions. Seven process improvement tools. Control charts on means and variances for variables and attributes. Design of experiments for process and product design. Acceptance sampling plans.

Note

Two hours recitation and two hours laboratory a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 441 or STAT 511 or STAT 705

Typically Offered

Fall

IMSE 555 - Industrial Facilities Layout and Design

Credits 3

Design of industrial facilities with emphasis on manufacturing engineering and material handling.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 251 and corequisite or prerequisite: IMSE 530.

Typically Offered

Spring

IMSE 560 - Introduction to Operations Research I

Credits 3

A study of the methods of operations research including model formulation and optimization. Topics include: linear programming, sensitivity analysis, network flows, and graph optimization.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 222 and MATH 551.

Typically Offered

Fall

IMSE 562 - Materials and the Impact of Manufacturing Processes**Credits 3**

The categorization and analysis of materials used in manufacturing is introduced. Emphasis is placed on the electronic and mechanical properties of materials along with the impact that manufacturing processes have on these properties. Through laboratory work, the students will learn how to design and conduct manufacturing experiments to measure material properties and explore the interplay between processes and properties. 3 credit hours, 2 hours lecture, 1 hour lab per week [2 lab sections]. Offered spring semesters every year.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214, CHE 354.

Typically Offered

Spring

IMSE 563 - Manufacturing Processes Engineering**Credits 3**

The effects of operating variables on manufacturing processes such as machining, metal forming, casting, welding, plastics, etc. Emphases are on manufacturing process theory, process variables measurement, and the

technical inferences of collected data. Strength of materials, manufacturing process theory, instrumentation, computer data acquisition, and data analysis concepts are included. Laboratory testing of manufacturing processes and the engineering design of experiments for process variable measurements are used to develop efficient manufacturing processes.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 251, CHE 355, and CE 530 or CE 333 and ME 512.

Typically Offered

Fall-Odd Years

IMSE 564 - Product and Process Engineering**Credits 3**

A study of the interrelationships between product design and production process selection. Emphasis is on the development of economic production systems for discrete products in a competitive manufacturing environment. Concepts of design for manufacture and assembly, tool engineering, and manufacturing systems design are included.

Note

Two hours lecture and three hours lab per week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 250, IMSE 251, IMSE 530.

Typically Offered

Spring-Even Years

IMSE 580 - Manufacturing Systems Design and Analysis**Credits 4**

Comprehensive design and analysis of a manufacturing system: integration of the undergraduate industrial engineering and manufacturing engineering courses.

Note

Two hours recitation and four hours lab a week.

Repeat for Credit

N

Requisites

(Prerequisite or concurrent; IMSE 541, IMSE 555, IMSE 633, and IMSE 660) or (Prerequisite; ME 533)

Typically Offered

Fall

IMSE 591 - Senior Design Project I**Credits 2**

Students organize themselves in teams, not exceeding five students in each team. Each team is responsible to establish a client. The teams select a general subject agreeable to the client, formulate a specific design project, and gather data and resources needed to support the project.

Note

Two hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: 24 credit hours of IMSE 500 level and above courses.

Typically Offered

Fall, Spring

IMSE 592 - Senior Design Project II**Credits 2**

Continuation of IMSE 591 in which student teams complete engineering design projects formulated and approved in IMSE 591.

Note

Two hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 591.

Typically Offered

Fall, Spring

IMSE 602 - Topics in Industrial Engineering**Credits 1-18**

Lectures on recent topics in industrial engineering.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IMSE 604 - Independent Study of Industrial Engineering**Credits 1-18**

This course involves independent study at the introductory graduate level.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IMSE 605 - Advanced Industrial Management**Credits 3**

Contemporary management philosophies and their impact on engineers and engineering managers. Topics include: planning, organizing, leading, and controlling.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 501 or MANGT 220.

Typically Offered

Fall

IMSE 610 - Occupational Safety Engineering

Credits 3

An overview of factors affecting safety in organizations, emphasizing analysis techniques and design strategies. Topics include occupational safety, accidents, fire protection, industrial hygiene, hazardous waste, toxicology, radiation safety, product liability and federal standards. A project involving a hazard analysis and the design of a solution for a field location is required.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 251.

Typically Offered

Spring-Even Years

IMSE 623 - Industrial Ergonomics**Credits 3**

Process analysis and charting; principles of motion economy and ergonomics; work stations and environments; micromotion analysis and an introduction to standard data systems.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: STAT 510.

Typically Offered

Fall

IMSE 625 - Work Environments**Credits 3**

Basic structure and performance of the human, viewed as a component in information processing and control systems. Effect of visual, auditory, toxic, and thermal environments.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 251.

Typically Offered

Other

IMSE 633 - Production Planning and Inventory Control**Credits 3**

Principles, techniques, and applications of production planning and inventory control. The course covers strategic planning tools such as forecasting and aggregate planning as well as tactical tools such as inventory management and scheduling.

Note

Three hours recitation.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 250. Prerequisite or concurrent: IMSE 560.

Typically Offered

Spring

IMSE 641 - Quality Engineering**Credits 3**

An introduction to the modern practice of quality engineering concepts, systems, strategies, and tools to both manufacturing and service industries. Topics include advanced techniques related to statistical process control, international quality standards, quality data management, and automatic inspection.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 441 or STAT 511 or STAT 705

Typically Offered
Spring

IMSE 643 - Industrial Simulation

Credits 3

Basic concepts of computer simulation modeling of manufacturing, production, service and other stochastic systems. Use of a commercial simulation software environment to build, analyze, verify and validate models. Use of models as a system design tool through statistical and optimization techniques.

Note
Three hours recitation per week.

Repeat for Credit
N

Requisites
Prerequisite: CIS 200 or CIS 209 or ME 400
Prerequisite or concurrent: IMSE 441 or STAT 511 or STAT 705, and IMSE 660

Typically Offered
Fall, Spring

IMSE 660 - Operations Research II

Credits 3

Continuation of IMSE 560. Topics include: integer programming, nonlinear programming, Markov chains, and queuing theory.

Note
Three hours lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: IMSE 560 and STAT 510.

Typically Offered
Spring

IMSE 662 - Computer Aided Manufacturing

Credits 3

Concepts in CAM, integrated control of machine tools and transport devices with production control. Concepts of CAM and automated assembly in small lot production environment.

Note
Two hours lecture and three hours lab a week.

Repeat for Credit
N

Requisites
Prerequisite: IMSE 251 and CIS 209, or 200, or ME 400.

Typically Offered
Fall

IMSE 664 - Additive Manufacturing

Credits 3

A study of current 3D printing or additive manufacturing technologies that convert a digital file into a physical object. Emphasis is on rapid prototyping involving materials, processes, techniques, and 3D printing machines. Capabilities and limitations of 3D printing technologies are included.

Note
Two hours lecture and two hours lab.

Repeat for Credit
N

Requisites
Prerequisite: ME 212.

Typically Offered
Spring-Odd Years

IMSE 666 - Operations Research III

Credits 3

A continuation of IMSE 660. Covers more advanced aspects of LP and NLP. Introduces three new topics: normative theory of decision and games, dynamic programming and Markov decision systems.

Repeat for Credit
N

Requisites

Prerequisite: IMSE 660. Prerequisite or concurrent: IMSE 530.

Typically Offered
Spring

IMSE 680 - Quantitative Problem Solving Techniques

Credits 3

Survey of decision making techniques. Topics covered include: linear, integer and nonlinear programming; network flows and stochastic processes. A focus of the course will include modeling and the use of software to solve these problems.

Note
Three hours of lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: MATH 205.

Typically Offered
Summer

IMSE 685 - Principles of Manufacturing Information Systems

Credits 3

Introduction to the theory and concepts of information for manufacturing. Design of manufacturing systems such as MRP, SFRS, CAD/CAM, etc. Concerns of integration and man-machine interface in manufacturing systems.

Note
Three hours lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: IMSE computer programming elective from approved Departmental list.

Prerequisite or concurrent: IMSE 633.

Typically Offered
Spring

IMSE 710 - Transportation Logistics

Credits 3

This course provides comprehensive coverage of logistics system design, analysis, and management, with a particular emphasis on freight transportation and supply chain systems. It introduces key challenges arising in supply chain systems, quantitative models for addressing these challenges, and methods for solving the models. Emphasis is placed on analyzing model results and communicating their implications for decision-making.

Repeat for Credit
N

Requisites
Prerequisite: IMSE 660, IMSE 680 or IMSE 780.

Typically Offered
Spring-Odd Years

IMSE 730 - Data Engineering I – Time Series & Topological Data Analysis

Credits 3

Introduction to theories and concepts of data analytic and machine learning on time series and topological data. Data models and analysis systems include forecasting, predictive models, process change point detections, classification, clustering, stage-dependent decisions applying to high-dimensional time series data and topological data. Applications include data integration and data-to-decisions in real-world systems, such as supply chain, logistics, financial engineering, and advanced manufacturing processes.

Repeat for Credit
N

Requisites
Prerequisite: IMSE 441 (or (CIS 209 and STAT 511)), MATH 222, and MATH 551

Typically Offered
Spring

IMSE 751 - Normative Theory of Decisions and Games

Credits 3

Bayes theorem, Bayesian estimators, utility, loss function and risk, minimax strategies, elementary game theory.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: STAT 510.

Typically Offered

Fall-Odd Years

IMSE 752 - Multiple Criteria Decision Analysis

Credits 3

This course covers decision processes for problems involving multiple conflicting criteria, including individual and group decision making. Multiple approaches, including value function methods, goal/aspiration methods, and outranking methods, are considered.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 560

Typically Offered

Fall-Even Years

IMSE 760 - Stochastic Calculus Financial Engineering

Credits 3

This course will serve as an introduction to the basic concepts and computing techniques of financial engineering and its real-life applications. These basics can be applied in many other aspects of Industrial Engineering used throughout stochastic processes, probability theory, system simulation, portfolio/risk management, and supply chain optimization.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 530; IMSE 660; and CIS 209, or CIS

200, or ME 400.

Typically Offered

Spring-Odd Years

IMSE 780 - Methods of Operations Research

Credits 3

This course is intended to give an overview of OR at the graduate level. After this course, the student will have the general basic knowledge in OR and a better idea about the usefulness and interrelationships of the various subjects in O.R. Topics to be covered include the various optimization techniques, stochastic processes and optimization, and the various approaches in the treatment of uncertainty.

Note

Three hours recitation per week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 560 and STAT 510.

Typically Offered

Fall

IMSE 785 - Big Data Analytics

Credits 3

Topics include big data management, data architecture of hosting big data, big data retrieval languages, parallel computing methods, big data analytical methods, and data visualization.

Repeat for Credit

N

Requisites

Prerequisite: CIS 209; STAT 510 or STAT 250.

Typically Offered

Summer

IMSE 802 - Advanced Topics in Industrial Engineering

Credits 1-18

Lectures on recent advanced topics in industrial

engineering.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IMSE 804 - Advanced Independent Study in Industrial Engineering

Credits 1-18

This course involves independent study of recent advanced topics in industrial engineering.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

IMSE 805 - Management of Research and Engineering

Credits 3

Engineering administration; organization factors in decision-making.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 501 or MANGT 220

Typically Offered

On sufficient demand

IMSE 806 - Engineering Project Management

Credits 3

Planning, scheduling, and controlling engineering projects. Includes determination of appropriate project team, cost/benefit analysis, PERT and CPM scheduling techniques, reporting, and use of computerized project management tools.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 530 and IMSE 501 or MANGT 220.

Typically Offered

Spring

IMSE 808 - Systems Engineering Fundamentals

Credits 3

Systems engineering is an interdisciplinary engineering management process used to develop an integrated, life-cycle balanced set of system solutions that satisfy customer needs. This course provides the fundamentals of a systems engineering approach to solving complex engineering systems problems. This course will address systems engineering processes and tools as they relate to the development and life cycle management of complex systems. Topics included in the course are analyzing customer's needs, requirements development, systems design, development and integration, developing technical performance measures, system verification and managing cost, schedule, and risk in engineering tasks. This course will also introduce reliability, availability and maintainability concepts and their applicability with complex systems. This course is applicable to all engineering disciplines involved with complex engineering systems.

Repeat for Credit

N

Requisites

Prerequisite: 9 graduate credits from any engineering discipline, B.S. Engineering or Computer Science degree.

Typically Offered

On sufficient demand

IMSE 810 - Industrial Logistics Engineering

Credits 3

The course provides comprehensive coverage of supply chain logistics components and system issues, including control of the movement of goods and information,

coordination of supply and demand in creation and maximization of time and place utility. Emphasis is given to integrating workflow modeling, control, and design concepts and performance evaluation of logistic activities such as transportation, inventory, warehousing, and information technology. The systems viewpoint is explored at the individual firm level and from the perspective of inter-firm relationships among participants in logistics supply chains. Recognition is also given to important interrelationships between logistics and production, marketing, and financial management.

Note

Three hours recitation per week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 660, IMSE 680 or IMSE 780.

Typically Offered

On sufficient demand

IMSE 811 - Advanced Production and Inventory Control**Credits 3**

Analytical and mathematical methods of making decisions on production, inventories, human resources, and shipping in modern industrial plants.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 633.

Typically Offered

Spring

IMSE 822 - Advanced Engineering Economy**Credits 3**

This course expands on the principles of the fundamental engineering economics analysis. Emphasis is placed on quantification and evaluation of risk and uncertainty factors, effects of inflation and taxes, economic

consequences of estimating models, utility theory, engineering capital equipment replacement analysis and decision-tree and multi-attribute decision models.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 530, or ME 560, or CE 680.

Typically Offered

Fall-Odd Years

IMSE 825 - Tribology in Manufacturing**Credits 3**

An introduction to system approach to Tribology; Surface Topography; Physical, Chemical, and Geometric Nature of Surfaces; and the Mechanics of contact between surfaces. This course also investigates various theories of friction and wear; hydrodynamic; elastohydrodynamic, and boundary lubrication; frictional instabilities; rolling contact problems; and application of system methodology to tribological problems in engineering design and manufacturing.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 214 and IMSE 563.

Typically Offered

On sufficient demand

IMSE 830 - Applied Fuzzy Set Theory**Credits 3**

The emphasis will be on applicational aspects. Topics covered are elementary fuzzy set theory, fuzzy measure, possibility theory, fuzzy linear programming and other fuzzy optimization techniques, fuzzy linguistics and expert systems, fuzzy production and inventory control, and fuzzy operations research models.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 510.

Typically Offered

On sufficient demand

IMSE 841 - Advanced Topics in Quality Engineering**Credits 3**

A survey of current advances in quality engineering. Includes both off-line and on-line quality engineering.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 704, STAT 705; IMSE 641 and CIS 209, or CIS 200, or ME 400.

Typically Offered

Fall-Even Years

IMSE 842 - Reliability Theory**Credits 3**

The mathematics of reliability theory. The hazard function. Calculation of failure density and mean life for series, parallel systems, and various types of standby systems. Hypotheses tests on mean life. Life testing with censoring.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 511.

Typically Offered

On sufficient demand

IMSE 850 - Ergonomics (Human Factors) Engineering**Credits 3**

The design and analysis of applied experimental research on human behavior as applied to engineering systems. An experimental project.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 703.

Typically Offered

On sufficient demand

IMSE 865 - Simulation of Industrial Management Systems**Credits 3**

Simulating industrial management systems on computers utilizing Monte Carlo techniques and simulation languages. Numerical methods related to simulation.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 643.

Typically Offered

Summer-Odd Years

IMSE 866 - Applied Stochastic Processes**Credits 3**

Survey of stochastic processes. Topics covered include: discrete and continuous Markov chains, random walks, queuing theory and renewal theory.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: STAT 510.

Typically Offered

Fall-Even Years

IMSE 867 - Stochastic Programming**Credits 3**

Stochastic programming (SP) aims to determine optimal solutions in the presence of data uncertainty. The course covers two-stage stochastic linear programming, recourse, chance constraint optimization, multi-stage SP, stochastic integer programming, Benders decomposition, L-shaped method, heuristics, simulation-based (Monte Carlo simulation) methods, and bounds on optimal solutions. Numerous applications exist, and examples may be taken from agriculture planning, manufacturing, supply chain, reliability, cyber security, power grids or other systems.

Repeat for Credit

N

Requisites

IMSE 560 and STAT 510 or equivalent

Typically Offered

Fall-Odd Years

IMSE 868 - Manufacturing Processes for Semiconductor Materials and Devices**Credits 3**

Research topics on manufacturing processes for semiconductor materials and devices. Processes covered include; crystal growing, slicing, edge profiling, lapping, wafer grinding, wet etching, polishing, cleaning, oxidation, lithography, dry etching, diffusion, metallization, CMP (Chemical-Mechanical Planarization), backside thinning, dicing, bonding, packaging, final testing.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 250 and IMSE 563.

Typically Offered

Fall-Even Years

IMSE 871 - Advanced Topics in Computer Integrated Manufacturing**Credits 3**

Modern issues of computerized manufacturing considering both hardware and software approaches and methods. Advanced concepts in intelligent machine programming and applications, group technology, computer aided process planning, and scheduling will be discussed. Research issues will be presented.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 633, IMSE 662 or equivalents.

Typically Offered

On sufficient demand

IMSE 872 - Industrial Forecasting Techniques and Applications**Credits 3**

The problems of model construction for industrial forecasting. The application of least squares, regression, exponential smoothing, and adaptive fitting will be studied in solving industrial engineering problems.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: STAT 511 or STAT 705.

Typically Offered

On sufficient demand

IMSE 873 - Industrial Systems Analysis

Credits 1-18

Analysis and synthesis of automatic control systems with application to machines and processes and industrial management systems. A study of optimal control, stability, and sensibility of industrial management systems.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: Consent of instructor and IMSE 660.

Typically Offered

On sufficient demand

IMSE 881 - Linear Programming**Credits 3**

Development of the theory of linear programming and related topics including simplex methods, duality theory, integer programming, transportation methods, and stochastic linear programming. Application to industrial problems and the use of computer solutions are emphasized.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 560.

Typically Offered

Fall-Even Years

IMSE 882 - Network Flows and Graph Theory**Credits 3**

Survey of topics from Network Flows and Graph Theory with an emphasis on algorithmic analysis. The topics covered include: Complexity Analysis, Shortest Paths, Maximum Flows, Network Simplex, Minimum Spanning Trees, Matching, Planar Graphs, Colorings, Perfect Graphs and Heuristics.

Note

Three hours lecture a week.

Repeat for Credit

Y

Typically Offered

Spring-Even Years

IMSE 884 - Integer Programming and Combinatorial Optimization**Credits 3**

Solution techniques to optimization problems involving integer variables. The topics covered include: single-and multiple-branching, implicit enumeration, polyhedral theory and cutting planes, mixed integer programs, unimodular matrices and matroids.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 660.

Typically Offered

Spring-Odd Years

IMSE 885 - Advanced Manufacturing Information Systems**Credits 3**

Survey of topics in Computer Integrated Manufacturing. Issues such as the Manufacturing Automation Protocol (MAP), representation of solids in CAD, storage and retrieval of such information are considered.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: IMSE 685 or equivalent.

Typically Offered

On sufficient demand

IMSE 888 - Research Methods in Industrial Engineering

Credits 3

This course will provide students with effective methods to perform literature reviews, survey current solution methodologies, develop and evaluate research and present research results.

Repeat for Credit
Y

Requisites

Prerequisite or concurrent enrollment: IMSE 780 or IMSE 641 or IMSE 811.

Typically Offered
On sufficient demand

IMSE 889 - Applied Methods in Industrial Engineering

Credits 1

This class requires students to have at least 6 weeks of full-time work experience in a job related to Industrial Engineering.

Note
This course can be taken only once by a graduate student. Approval of major professor and department head.

Repeat for Credit
Y

Typically Offered
Summer

IMSE 890 - Applied Methods in Industrial Engineering II

Credits 2

This class requires students to have at least 12 weeks of full-time work experience in a job related to Industrial Engineering.

Note
This course can be taken only once by a graduate student. Approval of major professor and department head.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

IMSE 892 - Graduate Seminar in Industrial Engineering

Credits 0

Presentation and discussion of topics of contemporary interest in industrial or manufacturing engineering. M.S. and Ph.D. candidates make one presentation.

Note
One one-hour seminar meeting a week.

Repeat for Credit
Y

Typically Offered
Fall, Spring

IMSE 898 - Master's Report

Credits 1-18

Topics selected with approval of major professor and department head.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

IMSE 899 - Master's Thesis

Credits 1-18

Topics selected with approval of major professor and department head.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

IMSE 971 - Industrial Queuing Processes

Credits 3

Introduction to the queuing process and theory of queues; analysis of single and multistation queues; application to production, materials handling, inventory and maintenance systems.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 510.

Typically Offered

On sufficient demand

IMSE 976 - Scheduling Theory**Credits 3**

Project scheduling, assembly line balancing, shop scheduling, basic structure, measures of performance, combinatorial and statistical aspects. Various approaches to the analysis of shop scheduling.

Note

Three hours recitation a week. Consent of instructor.

Repeat for Credit

N

Typically Offered

On sufficient demand

IMSE 980 - Advanced Topics in Manufacturing Research**Credits 1-3**

Study of topics related to recent advances in manufacturing processes and manufacturing engineering. Selected topics vary by semester according to the interests and needs of students and faculty.

Repeat for Credit

Y

Typically Offered

On sufficient demand

IMSE 982 - Nonlinear Programming**Credits 3**

Study of nonlinear models and their solution. Topics covered are nonlinear programming including Kuhn-Tucker theory, quadratic programming, separable programming, geometric programming, gradient and search methods, quasilinearization, and invariant imbedding.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 510.

Typically Offered

Spring-Even Years

IMSE 990 - Advanced Topics in Operations Research**Credits 1-6**

Study of topics related to operations research not covered in other courses. Selected according to the interests and needs of graduate students.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

On sufficient demand

IMSE 991 - Advanced Topics in Decision Theory**Credits 3**

Decision processes for problems involving multiple conflicting criteria; multiple attribute decision making; multiple objective decision making, and group decision making under multiple criteria. Various methods/approaches for different problems are discussed.

Note

We are concurrently introducing IMSE 752 so that the

undergraduate student can take it. This 991 course will be for graduate students only.

Repeat for Credit

N

Requisites

Prerequisite: IMSE 751 or IMSE 752.

Typically Offered

On sufficient demand

IMSE 999 - Dissertation Research

Credits 1-18

Topics selected with approval of major professor and department head.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

INDD 292 - Design Thinking

Credits 3

Design Thinking is the process of analyzing the problem areas from a given project statement and generating a solution through observation, research, conceptualization, and iteration. Through this course, students will learn how to apply user-centered design approaches to a given design challenge. This course will cover selected design thinking tools and methods in four phases: 1) Explore, 2) Discover, 3) Develop, and 4) Deliver. Several case studies will demonstrate how Design Thinking can be applied to other fields, and students will share their reflections and experiences about how they can make use of the process, methods, and tools they have learned in their respective fields.

Repeat for Credit

N

Typically Offered

Summer

INDD 307 - INDD Design Studio I

Credits 5

Introduction to design research, user behavior, ergonomics, and human factors in the context of product design. Projects focus on iterative ideation and development through ink and marker sketching and physical model making. Students will learn to document and present designs including physical models, detailed renderings, and documentation of their design development process.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the professional program in industrial design.

Typically Offered

Fall

INDD 310 - INDD Digital Applications

Credits 2

Provides an advanced understanding of digital lighting, materials, animation, advanced modeling techniques, and renders. Explores parametric design uses and applications. Investigates strategies and techniques to create products using digital tools.

Repeat for Credit

N

Requisites

Prerequisite: IAID 431.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

INDD 320 - INDD Design Studio II

Credits 5

Basic principles of Product Design process through research, ideation, sketching, modeling, prototyping and presentation. Explores and analyzes complex social, cultural, and economical aspects of society for product design development.

Repeat for Credit

N

Requisites

Prerequisite: INDD 307.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

INDD 325 - Human Factors in Industrial Design**Credits 3**

Deals with an interdisciplinary science focusing on the interaction of human performance, capabilities, limitations and behavior with design factors in performance environments like workplaces and products with the emphasis on optimal safety, efficiency, productivity and comfort for diverse human populations.

Repeat for Credit

N

Requisites

Prerequisite: INDD 307

Typically Offered

Fall

INDD 350 - Product Semantics**Credits 3**

Explores visual and symbolic qualities of the man-made forms in the context of their use and application of this knowledge in order to understand the aspects of communication in Industrial Design. Course also focuses on the cognitive and social context of the products.

Repeat for Credit

N

Typically Offered

Spring

INDD 433 - User Interface and User Experience Design**Credits 3**

In-depth study of the development, strategy, and execution of interactive products and services to create meaningful experiences that enhance user engagement and satisfaction within the scope of industrial design. Applies user-centered design by conducting user research including surveys, interviews, and usability testing. Students will create prototypes with high fidelity mockups using industry standard tools.

Repeat for Credit

N

Requisites

Prerequisite: INDD 435 and INDD 310

Typically Offered

Spring

INDD 435 - INDD Design Studio III**Credits 5**

Advanced principles of the Industrial Design process. Explores different theories and techniques to develop products utilizing Human Centered Design, Design Thinking, and Universal Design. Holistic thinking in regard to ethical responsibility throughout the product's Life Cycle from decisions made in manufacturing processes, material choices and human factor design.

Repeat for Credit

N

Requisites

Prerequisite: INDD 320.

Typically Offered

Fall

INDD 440 - INDD Design Studio IV**Credits 5**

Exposes students to a deeper understanding about user experience, user interface and form development in the Industrial Design process. Provides an advance research and analysis of design problems and opportunities, using Human Centered Design, Universal Design and Design Thinking.

Repeat for Credit

N

Requisites

Prerequisite: INDD 435.

Typically Offered

Spring

INDD 500 - Materials and Manufacturing Processes

Credits 3

Seeks to provide an advanced understanding of materials and processes commonly used by Industrial Designers and manufacturers. The objective is to develop a more precise, professional and accurate approach to design while broadening the student's technical base.

Repeat for Credit

N

Typically Offered

Spring

INDD 520 - Materials and Manufacturing Processes II

Credits 3

Building upon the knowledge established in INDD 500, this course deepens comprehension of materials and processes. Emphasizing practical applications to a design development and expand student's technical proficiency.

Repeat for Credit

N

Requisites

Prerequisite: INDD 500

Typically Offered

Fall

INDD 600 - Professional Practice

Credits 3

Studies of conventional and newly developing modes of professional design practice. Presented are the relationships of Industrial Designers to users, clients, manufacturing industry, society, government, and one another. Provides an

overview of design services and principal structures for industrial designers including consultancy, in-house, freelance, and self-production.

Repeat for Credit

N

Requisites

Prerequisite: INDD 435

Typically Offered

Spring

INDD 605 - Problems in INDD

Credits 1-18

Study of specific Industrial Design problems under the direct supervision of a member of the department.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

INDD 606 - INDD Design Studio V

Credits 5

This semester of study provides an option for an interdisciplinary collaborative studio course oriented towards replicating the learning experience and interactive activities that take place in the modern multidisciplinary professional office or a validated equivalent studio completed in an approved study program.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440.

Typically Offered

Fall

INDD 644 - Internship

Credits 9

Fifteen-week internship in a professional environment with a focus on Industrial Design and/or Furniture Design: office and field experience.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440. Corequisite: INDD 645

Typically Offered

Fall, Spring, Summer

INDD 645 - Internship Report**Credits 5**

Development of the student's analysis; observation, and communication skills in relationship to the professional office and field environment. Detailed documentation, online and on-campus, of the experiences encountered during internship, allowing classmates to learn from their peer's varied experiences as well as provide detailed documentation of the student's work during internship.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440. Corequisite: INDD 644

Typically Offered

Fall, Spring, Summer

INDD 664 - Summer Internship**Credits 6**

Ten-week internship in a professional environment with a focus on Industrial Design and/or Furniture Design: office and field experience.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440. Corequisite: INDD 665

Typically Offered

Summer

INDD 665 - Summer Internship Report**Credits 1**

Development of the student's analysis; observation, and

communication skills in relationship to the professional office and field environment. Detailed documentation, online and on-campus, of the experiences encountered during internship, allowing classmates to learn from their peer's varied experiences as well as provide a detailed documentation of the student's work during internship.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440. Corequisite: INDD 664

Typically Offered

Fall, Spring, Summer

INDD 755 - Professional Practice: Discipline-Specific Topics**Credits 1**

Covers discipline-specific concerns, focusing on issues specific to architecture, interior architecture and product design, landscape architecture or regional and community planning.

Repeat for Credit

N

Typically Offered

Fall, Spring

INDD 800 - Professional Practice**Credits 3**

Studies of conventional and newly developing modes of professional design practice. Presented are the relationships of Industrial Designers to users, clients, manufacturing industry, society, government, and one another. Provides an overview of design services and principal structures for industrial designers including consultancy, in-house, freelance, and self-production.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing.

Typically Offered

Spring

INDD 801 - INDD Design Studio VI

Credits 5

Examines the interdisciplinary and collaborative design process with the aim of different formations in accordance with entrepreneurship studies, marketing, business, and engineering, as well as research and development. Focus areas vary from interdisciplinary practices to innovative technologies.

Repeat for Credit

N

Typically Offered

Spring

INDD 810 - INDD Capstone Studio

Credits 5-6

Students are to pursue design projects that encompass their previous educational experience validating their knowledge of the INDD program studies. The project will be based on extensive research and review. The project presentation will suggest unique and applicable solutions with clearly identified methodology of implementation.

Repeat for Credit

N

Requisites

Prerequisite: INDD 801, INDD 811.

Typically Offered

Fall, Spring, Summer

INDD 811 - Design Research

Credits 3

Identify evaluation criteria appropriate for design research and problem-solving; analysis of literature; construction of problem statements, development and documentation of design problem proposals and reports.

Repeat for Credit

N

Requisites

Prerequisite: INDD 440.

Typically Offered

Fall, Spring, Summer

INDD 815 - Advanced Studio Programming

Credits 2-3

Research of programming methodologies culminating in a programmatic document used as the basis for the design project in INDD 822 or IAID 824.

Repeat for Credit

N

Requisites

Prerequisite: INDD 801.

Typically Offered

Fall, Spring, Summer

INDD 822 - Advanced Industrial Design Studio

Credits 6

Students explore projects programmed under the previous semester INDD 815: Advanced Studio Programming. Projects must be relevant in a contemporary socio-cultural, architectural and technological context; employ rigorous design research processes and methodologies; identify user and usability needs/desires; accommodate market opportunities and constraints; explore multiple conceptual solutions in a variety of hand and digital media; build and document models and prototypes; and estimate material and manufacturing costs.

Note

A book, oral and visual presentation and display materials for an exhibition of the student's work will be required at the completion of the course.

Repeat for Credit

N

Requisites

Prerequisite: INDD 810, INDD 815.

Typically Offered

Fall, Spring, Summer

ITAL 101 - Italian I

Credits 4

Introduction to the structure of modern Italian.

Repeat for Credit

N

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

ITAL 102 - Italian II

Credits 4

Continuation and completion of the study of modern Italian grammar, using the facilities of the language laboratory for audiolingual practice.

Repeat for Credit

N

Requisites

Prerequisite: ITAL 101 or equivalent.

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

ITAL 105 - Italian for Travelers

Credits 1-8

Prepares students for everyday situations on a visit to Italy.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

ITAL 300 - Italian III

Credits 4

Grammar review and reading selections from Italian literature.

Repeat for Credit

N

Requisites

Prerequisite: ITAL 102 or equivalent.

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

ITAL 301 - Italian IV

Credits 4

Selective review of grammar and reading of examples of modern Italian literature.

Repeat for Credit

N

Requisites

Prerequisite: ITAL 300.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

ITAL 520 - Special Studies in Italian

Credits 1-18

Special Studies in Italian

Note

Consent of department head and instructor involved.

Repeat for Credit

N

Typically Offered

Other

JAPAN 101 - Japanese I**Credits 4**

Introduction to the fundamental linguistics and cultural characteristics of the Japanese language and its writing systems (Hiragana, Katakana, and Kanji).

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 200 - Japanese II**Credits 4**

Continuation of Japanese I. Development of functional skills for familiar situations.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 101 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 201 - Japanese III**Credits 4**

Continuation of Japanese II with emphasis on building and applying basic language knowledge in communicative tasks; exercises in oral interactions and interactions involving text; weekly language lab; approx. 1-- new kanji in text.

Note

Not open to native speakers of Japanese.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 200 or equivalent.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 299 - Special Studies in Japanese**Credits 1-8**

Special Studies in Japanese

Repeat for Credit

Y

Requisites

Prerequisite: Permission of the instructor.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 301 - Japanese IV**Credits 4**

Continuation of Japanese III. Enhancement of speaking and writing skills, and reading and listening comprehension.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 201 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 391 - Culture of Japanese Communication**Credits 3**

Introduction to verbal and nonverbal cultural aspects of Japanese discourse. Includes comparative study, followed by discussion on application of knowledge in cross-cultural context.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 191.

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 501 - Japanese V**Credits 3**

Development of communication skills through application activities such as problem-solving tasks and role plays. Enhancement of vocabulary, structures, and their usage. Emphasis on extended discourse.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 301 or equivalent.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 502 - Japanese VI**Credits 3**

Continuation of Japanese V. Development of functional skills for general situations.

Repeat for Credit

N

Requisites

Prerequisite: JAPAN 501 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

JAPAN 599 - Special Studies in Japanese**Credits 0-18**

Special Studies in Japanese

Note

Consent of department head and instructor.

Repeat for Credit

Y

Typically Offered

Other

KIN 100 - Adaptive Physical Activities**Credits 1**

Exercise programs adapted to the needs of the special student.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 101 - Topics in Strength and Conditioning**Credits 1**

Discussion of topics and participation in activities of

importance in strength and conditioning.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 102 - Topics in Aerobic Exercise

Credits 1

Discussion of topics and participation in activities of importance in aerobic exercise.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 104 - Swimming I

Credits 1

Beginning instruction for students who have no previous experience with swimming.

Repeat for Credit

N

Typically Offered

Fall, Spring

KIN 105 - Swimming II

Credits 1

For the beginning swimmer who has had some previous swimming experience.

Repeat for Credit

N

Typically Offered

Other

KIN 106 - Swimming III

Credits 1

Swimming III

Note

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

N

Requisites

Prerequisite: KIN 105 or consent of instructor.

Typically Offered

Other

KIN 107 - Fitness Swimming

Credits 1

Fitness Swimming

Note

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

N

Requisites

Prerequisite: KIN 106 or consent of instructor.

Typically Offered

Other

KIN 108 - Strength and Conditioning Specialist

Credits 2

Course prepares students for completion of exam required for Certified Strength and Conditioning Specialist (CSCS) credential from the National Strength and Conditioning Association.

Note

Online lecture/lab.

Repeat for Credit

N

Requisites

Prerequisite: KIN 220, KIN 335, Junior standing and

above.

Typically Offered

Summer

KIN 109 - Professional Development for Coaches

Credits 2

Principles of improving relationships, enhancing engagement and gaining trust of athletes through targeted communication.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 111 - Adaptive Training

Credits 2

Course covers techniques related to functional fitness classes for Adaptive Athletes including veterans, active duty personnel, and civilians alike.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 112 - Electrocardiography Technician Certification Preparation

Credits 2

Course presents an introductory overview related to the anatomy and physiology of the heart and explores normal electrical conduction as well as common variations as evidenced by changes in the waveform on the cardiac monitoring device. Focus on the student's ability to perform cardiac monitoring via 3, 5 and 12 lead monitoring devices and prepare students certification as an electrocardiography technician through the National Healthcareer Association.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 114 - Phlebotomy Certification Preparation

Credits 2

This course is designed to present students with an introduction to phlebotomy & infection control, legal issues, human anatomy & physiology, phlebotomy equipment & supplies, phlebotomy procedures, and phlebotomy fundamental essentials. Allows for preparation for the Certified Phlebotomy Technician certification exam offered by the National Healthcareer Association.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 160 - Aerobic Dancing and Exercise

Credits 1

Aerobic Dancing and Exercise

Note

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

N

Typically Offered

Other

KIN 161 - Fitness and Conditioning

Credits 1

Fitness and Conditioning

Note

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

Y

Typically Offered

Other

KIN 162 - Jogging**Credits 1**

Jogging

Note

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

N

Typically Offered

Other

KIN 163 - Weight Training**Credits 1**

For students in the College of Health and Human Sciences, no more than 4 credit hours in lifetime sports and exercise activity classes may be applied toward a degree.

Repeat for Credit

Y

Typically Offered

Other

KIN 220 - Biobehavioral Bases of Physical Activity**Credits 4**

Current perspectives from the biological and behavioral domains of kinesiology will be used to explore the significance of physical activity for optimal health. Topics include physiology of physical activity, social and behavioral epidemiology of physical activity and health, control and biomechanics of human movement.

Note

Three hours of lecture and two hours of lab experiences.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Natural and Physical Sciences

KIN 230 - Introduction to Public Health**Credits 3**

An introductory survey course designed to provide a history of public health, an overview of the five core disciplines (epidemiology, biostatistics, environmental health, social and behavioral health, and health policy and management), and information about career options in public health. Investigation and analysis of contemporary issues in public health such as bioterrorism, threats to the nation's food supply, the importance of health promoting behaviors in the prevention of disease, distribution of infectious diseases on a global population, and the role of public health in disaster preparedness and management.

Repeat for Credit

N

Typically Offered

Fall, Spring

Crosslisted

FNDH 110

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

KIN 310 - Measurement and Research Techniques in Kinesiology**Credits 4**

Theory and techniques of measurement and research in the biological and behavioral aspects of kinesiology.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

KIN 312 - Methods and Analysis of Public Health

Credits 3

Introductory course on conducting and critiquing research in public health through fundamental principles of public health research methodologies. Skills developed include understanding ethical approaches to research and working with humans, and critically appraising data from scientific studies, understand materials and issues associated with the logic of the scientific method, research design, and qualitative and quantitative analysis.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230.

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

KIN 318 - Rural Community Health

Credits 3

Study of social, economic, political, and cultural influences that impact the health of individuals and families in rural communities with special focus on Kansas and the Midwest. Focuses on theories and concepts relevant to rural community health and their utility in designing rural public health interventions.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230.

Typically Offered

Fall, Spring

KIN 320 - Motor Learning and Development

Credits 3

Issues of motor learning and development as they relate to the application of instructional techniques.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

On sufficient demand

K-State 8

Natural and Physical Sciences

KIN 330 - Biomechanics

Credits 3

Mechanical and anatomical aspects of human movement. Kinematic and kinetic principles applied to the analysis of human movement.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: C or better in KIN 220; and a C or better in either KIN 360, or BIOL 441 and BIOL 442, or 8 hours of Anatomy and Physiology transfer credit.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

KIN 335 - Physiology of Exercise

Credits 4

The responses of the human body to exercise. Emphasis will be placed on understanding the structure-function relationships of the respiratory, cardiovascular, and muscular systems and how their function is integrated to support the dynamics of muscular contraction. Limitations to exercise performance will be examined in health and disease and the adaptability of the human body to physiological (i.e., exercise training) and environmental (e.g., hypoxia) stressors will be examined.

Note

Four hours lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: C or better in either KIN 360, or BIOL 441 and BIOL 442, or 8 hours of Anatomy and Physiology transfer credit.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

KIN 336 - Physiology of Exercise Lab**Credits 1**

A laboratory course to supplement the material of KIN 335.

Note

Two hours lab per week.

Repeat for Credit

N

Requisites

Prerequisite: KIN 335 or concurrent enrollment.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

KIN 345 - Exercise Behavioral Science**Credits 5**

Examination of the social and behavioral determinants of physical activity using a social ecological framework. Social ecological levels include individual, interpersonal, community, institutional and societal/policy factors.

Repeat for Credit

N

Requisites

Prerequisite: KIN 220, PSYCH 110; SOCIO 211 with a grade of C or better.

Typically Offered

Fall, Spring

K-State 8

Social Sciences

KIN 346 - Laboratory Experience for Social and Behavioral Epidemiology of Public Health Physical Activity**Credits 1**

A laboratory experience for KIN 345.

Note

Two hours of contact time per week.

Repeat for Credit

N

Requisites

Prerequisite: Concurrent enrollment in KIN 345.

Typically Offered

Other

K-State 8

Social Sciences

KIN 360 - Anatomy and Physiology**Credits 8**

Anatomy and Physiology of the organ systems of the human body. Laboratory includes physiology experiments, study of anatomy from computer simulation, dissection demonstrations, X-rays, and slide work.

Note

Five hours lecture and two three-hour lab sessions a week.

Repeat for Credit

N

Requisites

Prerequisite: C or better in either BIOL 198 or transferred introductory Biology credit.

Typically Offered

Fall, Spring

K-State 8

Natural and Physical Sciences

KIN 361 - Anatomy and Physiology I**Credits 4**

Rigorous, comprehensive study of human anatomy and physiology at the cellular, tissue, and organ systems level with an emphasis on the structure/function relationships of the integumentary, skeletal, muscular, and nervous systems.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 198 or equivalent with a grade of C or better.

Typically Offered

Fall, Spring, Summer

KIN 362 - Anatomy and Physiology II**Credits 4**

Rigorous, comprehensive study of human anatomy and physiology at the cellular, tissue, and organ systems level with an emphasis on the structure/function relationships of the endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 198 or equivalent with grade of C or better and KIN 361.

Typically Offered

Fall, Spring, Summer

KIN 380 - Principles of Exercise Training**Credits 3**

This course is designed to cover the application of current scientific research on program design for healthy athletes competing in any sport or physically active individuals.

Contributing science include anatomy, biochemistry, biomechanics, endocrinology, nutrition, exercise physiology and psychology. Emphasis will be placed on adaptations to resistance training, plyometric training, speed/agility/speed endurance training and aerobic endurance training. Exercise Techniques, Testing and Evaluation and Program Design will also be major components of the course. Students should be prepared for strenuous physical activity.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 381 - Exercise and Chronic Disease**Credits 3**

Focus on the epidemic of chronic disease impacting society and the benefits/use of exercise as a therapy for selected diseases.

Repeat for Credit

N

Requisites

Prerequisite: KIN 335 with a grade of C or better.

Typically Offered

Fall, Spring, Summer

KIN 382 - Strength and Conditioning for Performance**Credits 3**

Examine relationship of imposed physical demands (stress) on physiological adaptation. Both the mechanisms of adaptation and the methods used to impose desired adaptations will be investigated. Focus on performance outcomes including strength training, power training (RFD), speed training, and endurance training.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 383 - Exercise and Older Adults

Credits 3

Examines the relationship between exercise and the aging process. Specific focus will be on the impacts of aging on the organ systems of the human body, the extent to which exercise may beneficially impact this process, and methodology for assessment of fitness and prescription of exercise in the older adult population

Repeat for Credit

N

Requisites

Prerequisite: KIN 220 with a C or better.

Typically Offered

Fall, Spring, Summer

KIN 384 - Certifications in Health and Fitness**Credits 3**

Examine careers and certifications available within the field of Kinesiology/Applied Fitness.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 385 - Fundamentals of Health and Fitness**Credits 3**

Examine human behavior and exercise as the forefront of discussions about health. Examine relationship between health behavior, exercise, inactivity, and fitness adaptations.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 386 - Pediatric Physical Activity, Exercise & Sport**Credits 3**

Introduction to physiological and behavioral exercise considerations for a holistic approach to increasing activity levels effectively and safely in the pediatric population. Prepares students planning to work with healthy to obese 3-17 year olds in physical activity, exercise, and sport to encourage lifelong physical activity adherence and obesity reduction.

Repeat for Credit

N

Requisites

Prerequisite: KIN 220

Typically Offered

Summer

KIN 387 - Introduction to Integrative Human Pathophysiology**Credits 3**

Focus on the main mechanisms that lead to organ and system dysfunction. The basic processes covered will highlight some common diseases, rather than covering an exhaustive list of known diseases

Repeat for Credit

N

Requisites

Prerequisite: C or better in either KIN 360 or BIOL 441 and BIOL 442; or 8 hours of Anatomy and Physiology transfer credit at C or better.

Typically Offered

Fall, Spring, Summer

KIN 398 - Topics in Kinesiology**Credits 1-3**

Study of a selected topic in an area not covered in the curriculum or involving application of theory presented in a related subject core course.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 418 - Social Determinants and Diversity in Public Health

Credits 3

Examination of social determinants of health such as class, race, and gender, and an exploration of how social inequalities have contributed to differences in health among certain population groups. Topics addressed include immigration patterns, social justice, health equity, and promoting cultural competency.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230; SOCIO 211.

Typically Offered

Fall, Spring

KIN 419 - Health Policy and Administration

Credits 3

Provides understanding of health policy issues at the local, state, federal, and global levels, with focus on U.S. health policy-making and law including health insurance, health economics, legal system, health policy and law including health insurance, health economics, individual rights in health care, and health care access and quality.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230.

Typically Offered

Fall, Spring

KIN 430 - Practicum in Lifetime Sports

Credits 2

Supervised students assist in lifetime sports classes.

Note

Four hours lab a week.

Repeat for Credit

Y

Requisites

Prerequisite: Junior standing and consent of Undergraduate Coordinator.

Typically Offered

Fall, Spring

KIN 463 - Laboratory Practicum in Kinesiology

Credits 1-2

Supervised students assist in laboratory.

Note

Four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing and successful completion of lab experience, consent of undergraduate coordinator.

Typically Offered

Fall, Spring

KIN 498 - Honors Tutorial in Kinesiology

Credits 1-3

Individually directed research in kinesiology, normally as a preliminary to writing a senior honors thesis.

Repeat for Credit

Y

Requisites

Prerequisite: Sophomore standing, membership in the honors Program of the College of Health and Human Sciences, and permission of instructor.

Typically Offered

Fall, Spring

KIN 499 - Honors Project

Credits 3

Open only to Health and Human Sciences students who are active members of the University Honors Program.

Repeat for Credit

N

Requisites

Prerequisite: Membership in Human Ecology Honors Program.

Typically Offered

Fall, Spring, Summer

KIN 520 - Practicum in Fitness Settings**Credits 1-3**

Practical experiences in the fitness setting such as observation and participation in exercise testing and prescription, exercise leadership, and record keeping and program management.

Note

Consent of School required

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 521 - Practical Experiences in Public Health Physical Activity**Credits 1-3**

Practical experiences in the public health setting, such as observation and participation in public health physical activity program planning and evaluation.

Repeat for Credit

N

Requisites

Prerequisite: C or better in both KIN 310 and KIN 345 and instructor consent.

Typically Offered

Fall, Spring, Summer

KIN 550 - Health Promotion Practice Methods**Credits 4**

A health promotion course in which the role of a public health professional in community-based program planning

will be discussed including the steps of a needs assessment. Additionally, students will learn various intervention strategies that can be used in the public health field to promote health. Major concepts, theories, and principles of health promotion/education and intervention strategies will form the foundation of this class. Cultural, social, and developmental influences on health behavior will also be explored.

Repeat for Credit

N

Requisites

Prerequisite: KIN 418

Typically Offered

Fall

KIN 580 - Internship in Kinesiology**Credits 3-8**

Supervised field experience in approved fitness, strength and conditioning, clinical, public health, or healthcare setting 3-8 credit hours, 50 hours required at the internship site per credit.

Note

May be completed with half-time assignment for 12-16 weeks or full-time assignment for 6-8 weeks. Consent of School required.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 591 - Psychology of Exercise and Sport Injury**Credits 3**

Underlying effects, treatment of psychological consequences, and physical trauma of exercise and sport injury. Topics include the impact of injury on exercise behavior, the athlete at risk, behavioral risk factors, injury assessment, treatment of injury, and psychological factors addressed by the sports medicine team.

Repeat for Credit

N

Typically Offered

Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

KIN 592 - Sport and Exercise Personality**Credits 3**

Intersession only The role of personality in sport, sport performance and exercise behavior. Theories relevant to sport and exercise personality will be examined to provide a theoretical framework for understanding and applying research. Assessment instruments and relevant research will be examined and critiqued.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 310 and KIN 345.

Typically Offered

Intersession

KIN 594 - Sport and Exercise Psychology**Credits 3**

This course is designed to introduce the student to the basic psychological principles related to sport and exercise behavior and performance. Factors that influence sport performance will be examined as will the principles related to exercise and exercise behavior.

Repeat for Credit

N

Typically Offered

Spring, Summer

KIN 596 - Teaching Experience in Kinesiology**Credits 3**

This course will be a learning experience for students supporting a faculty course. Objectives include identifying and discussing learning and teaching, leading discussions,

and providing assistance and direction to students in the course.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

KIN 597 - Research Experience in Kinesiology**Credits 0-3**

Exposure to and assisting with current research projects in a laboratory setting in Kinesiology.

Note

Consent of School required. Maximum of 3 credit hours applicable toward a degree.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 598 - Topics in Kinesiology**Credits 1-3**

Study of a selected topic in Kinesiology involving either an in-depth study or application of theory presented in a related core course.

Repeat for Credit

Y

Requisites

Prerequisite: Related core course.

Typically Offered

On sufficient demand

KIN 599 - Independent Studies in Kinesiology**Credits 1-3**

Selected topics in kinesiology. Maximum of 3 hours applicable towards a degree.

Note

Consent of School

Repeat for Credit

Y

Typically Offered

Fall, Spring

KIN 600 - Interpersonal Aspects of Physical Activity**Credits 3**

Examination of theory and research related to interpersonal aspects of physical activity. Topics include: social networks, social support, social influence, cohesion and intervention strategies that target interpersonal factors to increase and maintain physical activity participation.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in KIN 310 and KIN 312; and a grade of C or better in KIN 345.

Typically Offered

Fall, Spring

KIN 601 - Cardiorespiratory Physiology**Credits 3**

An examination of the structure and function of the respiratory system and the manner in which oxygen passes from the atmosphere to its site of utilization in the mitochondria. Exercise, disease, and environmental stresses will form the basis for examining the capacity, plasticity, and limitations to respiratory function.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in both KIN 310 and KIN 335.

Typically Offered

Spring-Odd Years

KIN 602 - Social Structural Determinants of Physical Activity**Credits 3**

An examination of how social structural determinants impact participation in physical activity. Topics include: social class, race and ethnicity, gender, sexual orientation, family, education and work. Promising physical activity intervention strategies are also discussed.

Repeat for Credit

N

Requisites

Prerequisite: grade of C or better in KIN 310 or Kin 312; and a grade of C or better in KIN 345.

Typically Offered

Fall

KIN 603 - Cardiovascular Physiology**Credits 3**

Study of the structure and function of the cardiovascular system as it pertains to health and disease. Topics include the control of blood pressure, vascular volume, and blood flow during orthostasis, aging and disease.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in both KIN 310 and KIN 335.

Typically Offered

Spring

KIN 605 - Topics in the Biological Basis of Kinesiology**Credits 1-3**

Study of a selected topic in the biological basis of kinesiology involving either an in-depth study or application of theory presented in a related course area.

Repeat for Credit

Y

Requisites

Prerequisite: A grade of C or higher in KIN 310 and KIN 335.

Typically Offered
On sufficient demand

KIN 606 - Topics in the Behavioral Basis of Kinesiology

Credits 1-3

Study of a selected topic in the behavioral basis of kinesiology involving either an in-depth study or application of theory presented in a related course area.

Repeat for Credit
Y

Requisites
Prerequisite: A grade of C or higher in KIN 310 and KIN 345.

Typically Offered
On sufficient demand

KIN 607 - Muscle Physiology

Credits 3

Subcellular, cellular, and tissue structure of skeletal muscle and the relationship of these structural characteristics to the functioning of the muscle. Examines energy pathways available to the muscle to support the various functions, and mechanisms underlying changes in exercise tolerance that accompany exercise training and detraining, aging, and diseases that affect skeletal muscle.

Repeat for Credit
N

Requisites
Prerequisite: A grade of C or higher in both KIN 310 and KIN 335.

Typically Offered
Fall

KIN 609 - Environmental Physiology

Credits 3

Study of the physiological adaptations to acute and chronic challenges imposed by the environment. Topics will focus on how different physiological systems respond to different environmental stressors (heat, cold, deep sea diving, high altitude).

Repeat for Credit
N

Requisites
Prerequisite: C or better in both KIN 310 and KIN 335.

Typically Offered
Spring

KIN 610 - Program Planning and Evaluation

Credits 3

Theories and models and the stages and activities of planning, implementing, and evaluating health promotion programs.

Repeat for Credit
N

Requisites
Prerequisite: grade of C or better in KIN 310 or KIN 312; and a grade of C or better in KIN 345.

Typically Offered
Spring

KIN 611 - Autonomic Neurophysiology

Credits 3

Study of the structure and function of the autonomic nervous system primarily as it pertains to physical stress. Particular emphasis is placed on the mechanisms evoking changes in the autonomic nervous system during physical stress including feed-forward and feedback autonomic control signals. The effects of disease and exercise training on those neural control signals are discussed

Repeat for Credit
N

Requisites
Prerequisite: C or better in both KIN 310 and KIN 335

Typically Offered
Fall, Summer

KIN 612 - Policy, Built Environment and Physical Activity

Credits 3

Examination of the characteristics of active living policies and neighborhood/community design that contribute to improved health.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in KIN 310 or KIN 312; and a grade of C or better in KIN 345.

Typically Offered

Fall, Summer

**KIN 614 - Physical Activity Behavior
Settings: Youth Sport to Senior Centers****Credits 3**

The course is a study of key physical activity behavior settings across life-span development. Topics include observation of social and physical environmental variables, surveillance of physical activity in behavior settings, motivational theory and responses, setting interventions and developmental outcomes, and intervention evaluation methods.

Repeat for Credit

N

Requisites

Prerequisite: KIN 310 and KIN 345 with grades of C or higher.

Typically Offered

Spring

**KIN 615 - Cardiorespiratory/Comparative
Physiology in Health and Disease****Credits 3**

This course seeks to fulfill the following objectives: (1) To provide the student with an awareness and mechanistic understanding of the effects of physical activity on humans and animals and the concept of homeostasis. (2) Foster an understanding of the integrative nature of kinesiology/physiology by considering the relationships among different systems and their response to stress in humans and animal species in health and disease. Focus is brought to bear in particular on the pulmonary,

cardiovascular and muscle systems. Chronic and acute adaptations to special environments and physical stress are considered and the students are asked to consider how the different systems are controlled in health and disease. This course is recommended for pre-med students, biology and physiology majors, aspiring scientists in physiology and/or medicine and those interested in a career in health and human services.

Repeat for Credit

N

Requisites

Prerequisite: C or better in both KIN 310 and KIN 335

Typically Offered

Fall, Spring, Summer

**KIN 616 - Obesity and Physical Activity:
Behavioral, Environment, and Policy
Influences****Credits 3**

Examines the contributing factors to obesity, especially through the lens of physical activity/inactivity. Attention is paid to the environment and policy influences on behaviors that contribute to weight gain.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in KIN 310 or KIN 312 and a Grade of C or better in KIN 345.

Typically Offered

Fall, Spring

KIN 617 - Signaling Pathways in Physiology**Credits 3**

Current concepts of biological signaling transduction and its role in controlling genes expression and protein synthesis involved in exercise adaptation, including resistance and endurance exercise, and disease states, including cardiovascular disease and cancer. This course seeks to fulfill the following objectives: (1) To train students to understand the molecular and cellular signaling mechanisms associated with changes in skeletal and cardiac muscle mass, cardiac function, and endothelial function change in response to exercise and disease. (2) Foster an

understanding of the correlation of 'macro-level' concepts like muscle hypertrophy to 'micro-level' concepts such as mTOR signaling with the goal of understanding the role cell signaling plays in mediating chronic adaptation. This course is recommended for pre-med students, pre-physical therapy students, biology and physiology majors, and those interested in a career in health and human services. This course will cover concepts that are of emphasis of the MCAT exam.

Repeat for Credit

N

Requisites

Prerequisite: C or better in both KIN 310 and KIN 335; or Instructor Permission

Typically Offered

Fall, Spring

KIN 618 - Seminar Public Health Practice**Credits 1**

Pre-practicum course of field-based observations and experiences to connect academic concepts to practice in public health culminating in a portfolio to showcase accomplishments to prospective employers and peers.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230.

Typically Offered

Fall, Spring

KIN 619 - Public Health Practicum**Credits 3**

Course provides students with an opportunity to synthesize, integrate, and apply practical skills, knowledge, and training learned in courses, to gain professional experience in a public health work environment, and to work on public health practice projects that are of particular interest.

Repeat for Credit

N

Requisites

Prerequisite: KIN 230, KIN 312, and KIN 618 with a grade

of C or higher; and permission of public health-coordinator.

Typically Offered

Fall, Spring

KIN 622 - Capstone Project in Public Health**Credits 2**

Focuses on integrating public health knowledge, skills, and practice acquired during coursework and the practicum experience, and culminating in a paper and presentation demonstrating critical thinking on public health topics and further understanding in an area of public health practice. This course is typically completed in the last semester of the undergraduate public health program.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in KIN 230; KIN 618, and KIN 619.

Typically Offered

Fall, Spring, Summer

KIN 625 - Exercise Testing and Prescription**Credits 3**

Benefits and risks of exercise testing and prescription with healthy populations, individuals at risk, and patients with cardiovascular and metabolic diseases. Includes experiences with exercise test technology and methods of exercise prescription.

Note

Two hours recitation and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: C or better in both KIN 310 and KIN 335, CPR, and First Aid.

Typically Offered

Fall, Spring

KIN 635 - Nutrition and Exercise

Credits 3

The interrelationships between diet, nutrition, and exercise. Topics covered include physical fitness, weight control, nutrient metabolism during exercise, and athletic performance.

Repeat for Credit

N

Requisites

Prerequisite: FNDH 132 or FNDH 400 and a grade of C or higher in KIN 310 and KIN 335

Typically Offered

Fall

KIN 650 - Development of Motor Control**Credits 3**

A multi-level analysis of the neurophysiological activation of muscle, reflexes, sensory integration during movement, and theories of voluntary movement.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: C or better in both KIN 310 and either BIOL 340, KIN 360 or 8 hours of transfer anatomy and physiology.

Typically Offered

On sufficient demand

KIN 655 - Individual Physical Activity Promotion**Credits 3**

An in-depth study of individual-level influences on physical activity and strategies to promote physical activity among individuals.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in KIN 310 or KIN 312;

and a grade of C or better in KIN 345.

Typically Offered

Fall, Spring

KIN 657 - Integrative Human Pathophysiology**Credits 3**

This course is designed to introduce the student to the mechanistic pathways of prominent chronic diseases (e.g., cardiovascular, respiratory, renal, cancer) and the mechanistic basis for current recommended treatments. This course will focus on the vertical integration of cardiovascular, renal, respiratory, and neural physiological pathways as they relate to pathogenesis, diagnosis, and treatment of these chronic diseases. A large emphasis will be placed on the cellular and molecular response, how they manifest in histological analysis and subsequent organ system dysfunction with the role of exercise therapy (example: cardiac/respiratory therapy) and pharmacology in mitigating these physiological changes.

Repeat for Credit

N

Requisites

Prerequisite: A grade of C or higher in both KIN 310 and KIN 335.

Typically Offered

Fall, Spring

KIN 700 - Interpersonal Aspects of Physical Activity**Credits 3**

Examination of theory and research related to interpersonal aspects of physical activity. Topics include: social networks, social support, social influence, cohesion, and intervention strategies that target interpersonal factors to increase and maintain physical activity participation.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission

Typically Offered

Spring

KIN 701 - Cardiorespiratory Physiology**Credits 3**

An examination of the structure and function of the respiratory system and the manner in which oxygen passes from the atmosphere to its site of utilization in the mitochondria. Exercise, disease, and environmental stresses will form the basis for examining the capacity, plasticity, and limitations to respiratory function.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 335 with a grade of C or better

Typically Offered

Spring

KIN 703 - Cardiovascular Physiology**Credits 3**

Study of the structure and function of the cardiovascular system as it pertains to health and disease. Topics include the control of blood pressure, vascular volume, and blood flow during orthostasis, aging and disease.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 335 with a grade of C or better

Typically Offered

Fall, Spring

KIN 707 - Muscle Physiology**Credits 3**

Subcellular, cellular, and tissue structure of skeletal muscle and the relationship of these structural characteristics to the functioning of the muscle. Examines energy pathways available to the muscle to support the various functions, and mechanisms underlying changes in exercise tolerance that accompany exercise training and detraining, aging, and diseases that affect skeletal muscle.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 335 or equivalent with a grade of C or better

Typically Offered

Fall, Spring, Summer

KIN 709 - Environmental Physiology**Credits 3**

Study of the physiological adaptations to acute and chronic challenges imposed by the environment. Topics will focus on how different physiological systems respond to different environmental stressors (heat, cold, deep sea diving, high altitude).

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 335 with a grade of C or better

Typically Offered

Fall, Spring

KIN 710 - Program Planning and Evaluation**Credits 3**

Theories and models and the stages and activities of planning, implementing, and evaluating health promotion programs.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 345 with a grade of C or better

Typically Offered

Spring

KIN 711 - Autonomic Neurophysiology

Credits 3

Study of the structure and function of the autonomic nervous system primarily as it pertains to physical stress. Particular emphasis is placed on the mechanisms evoking changes in the autonomic nervous system during physical stress including feed-forward and feedback autonomic control signals. The effects of disease and exercise training on those neural control signals are discussed.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 335 with a grade of C or better

Typically Offered

Fall, Summer

KIN 712 - Policy, Built Environment and Physical Activity

Credits 3

Examination of the characteristics of active living policies and neighborhood/community design that contribute to improved health.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission OR KIN 345 with a grade of C or better

Typically Offered

Fall, Summer

KIN 715 - Cardiorespiratory/Comparative Physiology in Health and Disease

Credits 3

This course seeks to fulfill the following objectives: (1) To provide the student with an awareness and mechanistic understanding of the effects of physical activity on humans and animals and the concept of homeostasis. (2) Foster an understanding of the integrative nature of kinesiology/physiology by considering the relationships among different systems and their response to stress in humans and animal species in health and disease. Focus is brought to bear in particular on the pulmonary, cardiovascular and muscle systems. Chronic and acute adaptations to special environments and physical stress are considered and the students are asked to consider the the different systems are controlled in health and disease. This course is recommended for pre-med students, biology and physiology majors, aspiring scientists in physiology and/or medicine and those interested in a career in health and human services.

Typically Offered

Fall

KIN 716 - Obesity and Physical Activity: Behavioral, Environment, and Policy Influences

Credits 3

Examines the contributing factors to obesity, especially through the lens of physical activity/inactivity. Attention is paid to the environment and policy influences on behaviors that contribute to weight gain.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission

Typically Offered

Fall, Summer

KIN 755 - Individual Physical Activity Promotion**Credits 3**

An in-depth study of individual-level influences on physical activity and strategies to promote physical activity among individuals.

Note

Intended for graduate students only

Repeat for Credit

N

Requisites

Prerequisite: Graduate student status OR instructor permission

Typically Offered

Fall, Spring

KIN 780 - Graduate Internship in Kinesiology**Credits 3-6**

Supervised field experience in approved fitness, strength and conditioning, clinical, public health, or healthcare setting 3-8 credit hours, 50 hours required at the internship site per credit.

Note

Consent of School required.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

KIN 793 - Internship/Public Health Physical Activity**Credits 1-8**

Supervised field experience in settings such as public health departments, foundations, government offices, or research programs.

Repeat for Credit

N

Requisites

Prerequisite: KIN 345, KIN 346, KIN 521, KIN 655.

Typically Offered

Fall, Spring, Summer

KIN 796 - Topics in Exercise Physiology**Credits 3**

Selected topics in exercise physiology involving either greater in-depth study or application of theory presented in a related course.

Repeat for Credit

Y

Requisites

Prerequisite: C or better in both KIN 310 and KIN 335 and consent of instructor.

Typically Offered

On sufficient demand

Crosslisted

AP 796

KIN 797 - Topics in Public Health Physical Activity Behavior**Credits 3**

Selected topics in public health physical activity behavior

involving either greater in-depth study or application of theory presented in a related course.

Repeat for Credit

Y

Requisites

Prerequisite: C or better in both KIN 310 and KIN 345 and consent of instructor.

Typically Offered

On sufficient demand

KIN 800 - Advanced Physiology of Exercise

Credits 3

An in-depth study of the physiological responses of the human body during exercise, the adaptations that occur with exercise training, and the laboratory techniques to assess these responses and adaptations.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 335.

Typically Offered

Fall

Crosslisted

Anatomy and Physiology See AP 800

KIN 801 - Physical Activity: Physiology to Public Health Impact

Credits 3

This graduate seminar covers the study of physical activity and its impact on public health across levels of analysis from basic exercise physiology to social ecology.

Repeat for Credit

N

Typically Offered

Fall

KIN 805 - Physical Activity and Human Behavior

Credits 3

An examination of the theory and research related to the psychological antecedents and outcomes of participation in physical activity and exercise. Topics include models of exercise motivation, social cognitive theory of exercise and social ecological models of physical activity.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 655.

Typically Offered

Fall

KIN 807 - Motor Learning and Control

Credits 3

Application of learning principles to skill acquisition in sport and human domain; and practical applications.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 320 or 9 hours of graduate credit in psychology (500 level or above).

Typically Offered

Fall

KIN 808 - Social Epidemiology of Physical Activity

Credits 3

An examination of the social factors that contribute to an understanding of why people participate in physical activity. Topics include the consideration of individual social and demographic factors such as gender, race, socioeconomic status, education, and social support as well as social structural factors such as the role of the social institutions (e.g. family, work and school environments).

Repeat for Credit

Y

Requisites

Prerequisite: KIN 655.

Typically Offered

Fall

KIN 815 - Research Methods in Kinesiology**Credits 3**

A study of techniques of the research process including the identification of a research problem, the design of experimental and non-experimental strategies, and the presentation of written research.

Repeat for Credit

Y

Typically Offered

Spring

KIN 818 - Social and Behavioral Bases of Public Health**Credits 3**

The role of behavioral, social, psychological, economic, environmental, and social structural factors in both the occurrence of health problems in groups and populations, and in the development of the risk factors that contribute to these problems. Principles of health behavior change and the application of these principles to a variety of health issues as well as an emphasis on how social structural factors impact health are examined to better understand health behavior and health inequities in contemporary society.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate status in public health or kinesiology program.

Typically Offered

Fall

Crosslisted

MPH 818

KIN 822 - Advanced Muscle Physiology**Credits 3**

Course will examine current topics in muscle physiology. Format to include discussion of scientific

papers, oral presentations, and debate of controversial topics.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 335 or permission of instructor

Typically Offered

Spring

KIN 824 - Physiology of Oxygen Transport**Credits 3**

This course is designed to promote critical reading of the literature, particularly with respect to the understanding of exercise physiology and cardiorespiratory, vascular and muscle energetics responses. Activities will include presenting papers, debate and discussion regarding all aspects of science and scientific philosophy.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 335 or permission of instructor

Typically Offered

Spring

KIN 825 - Mechanical Analysis of Human Movement**Credits 3**

Mechanical principles and analysis procedures for the study of overt human movement. Applications to movements in exercise, sport, occupational, and daily living activities will be emphasized.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 330.

Typically Offered

Spring

KIN 826 - Advanced Cardiovascular Physiology

Credits 3

Discussion and critical examination of cardiovascular control mechanisms, with specific emphasis on regulation of blood pressure during severe challenges such as exercise, heat stress, and upright posture.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 335 or permission of instructor

Typically Offered

Fall

KIN 830 - Advanced Public Health Physical Activity**Credits 3**

Exploration of the social and behavioral epidemiology of physical activity in public health: outcomes, influences, and promotion in individuals, settings, and communities.

Repeat for Credit

Y

Typically Offered

Spring

KIN 835 - Group Dynamics and Physical Activity**Credits 3**

Examines the principles of group development and maintenance in physical activity environments. Topics include the nature of groups, group environment, important member attributes, group structure, group cohesion, group processes and tactics of group development.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 655.

Typically Offered

Spring

KIN 840 - Public Health Practice**Credits 3-6**

Supervised field experience in an international, state, local, or district health agency or other appropriate health agency.

Repeat for Credit

N

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

KIN 845 - Exercise Adherence**Credits 3**

Study and discussion of empirical research and theory as it relates to exercise adherence from psychological, behavioral, and public health perspectives. Topics addressed are epidemiological trends, conceptual issues of measurement, research design, statistical analysis, and interventions focusing on settings and populations.

Repeat for Credit

N

Requisites

Prerequisite: KIN 600 or KIN 805.

Typically Offered

Spring

KIN 851 - Topics in the Physiological Basis of Kinesiology**Credits 1-3**

Study of a selected topic in the physiological basis of kinesiology involving either an in-depth study or application of theory presented in a related course area.

Repeat for Credit

Y

Typically Offered

On sufficient demand

KIN 852 - Topics in the Behavioral Basis of Kinesiology

Credits 1-3

Study of a selected topic in the behavioral basis of kinesiology involving either an in-depth study or application of theory presented in a related course area.

Repeat for Credit

Y

Typically Offered

On sufficient demand

KIN 855 - Exercise Psychology in Special Populations**Credits 3**

A study of the psychological determinants and outcomes of exercise participation in special populations (e.g. arthritic, obese, cardiovascular disease). Emphasis in understanding the motive underlying involvement in exercise and physical activity and the situational and personal determinants associated with failure to initiate and/or adhere to exercise and physical activity programs.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 655.

Typically Offered

Fall

KIN 890 - Graduate Seminar in Kinesiology**Credits 1**

Designed to provide students opportunities to improve oral and written communication skills and to expose them to the breadth of research topics within the Kinesiology department.

Repeat for Credit

Y

Requisites

Prerequisites: Current graduate student status (MS, PhD, MPH). Undergraduate students by instructor permission only.

Typically Offered

Fall, Spring

KIN 896 - Independent Study in Kinesiology**Credits 1-4**

Intensive independent study in a topic or problem involving the integration, application, and synthesis of theory presented in a related course. The course culminates in the preparation of an original paper.

Repeat for Credit

Y

Requisites

Prerequisite: KIN 815 and related graduate subject core courses.

Typically Offered

Fall, Spring, Summer

KIN 897 - Research in Kinesiology**Credits 1-4**

Independent study in one or more of the research processes involved in the scientific method.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 702 or STAT 703, KIN 815, and related graduate subject core course.

Typically Offered

Fall, Spring, Summer

KIN 898 - Master's Report**Credits 1-4**

Master's Report

Repeat for Credit

Y

Typically Offered

Other

KIN 899 - Master's Thesis**Credits 1-6**

Master's Thesis

Repeat for Credit

Y

Typically Offered

Other

KIN 999 - Dissertation Research

Credits 1-15

Dissertation Research

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

LAR 010 - Travel: Regional 1

Credits 0

Multi-day regional field trip experience. Students will study existing natural and/or built environments to develop landscape architecture knowledge base and apply findings to other courses.

Repeat for Credit

Y

Requisites

Prerequisite: LAR 220.

Typically Offered

Spring, Summer

LAR 020 - Travel: Regional 2

Credits 0

Multi-day field trip experience in an urban environment. Students will study notable works of landscape architecture, and visit professional offices to develop landscape architecture knowledge base and apply findings to other courses.

Repeat for Credit

N

Requisites

Prerequisite: LAR 010.

Corequisite: LAR 433.

Typically Offered

Spring

LAR 030 - Travel: Narratives and Placemaking

Credits 0

Immersive field trip experience that supports the Narrative and Placemaking Studio.

Repeat for Credit

N

Requisites

Prerequisite: LAR 020.

Corequisites: LAR 425, LAR 430, LAR 352.

Typically Offered

Summer

LAR 040 - Travel: Major City 1

Credits 0

Multi-day field trip experience in a major city. Students will study notable works of landscape architecture, and visit professional offices to develop landscape architecture knowledge base and apply findings to other courses.

Repeat for Credit

N

Requisites

Prerequisite: LAR 030.

Corequisite: LAR 442.

Typically Offered

Fall

LAR 050 - Travel: Major City 2

Credits 0

Multi-day field trip experience in a major city. Students will study notable works of landscape architecture, and visit professional offices to develop landscape architecture knowledge base and apply findings to other courses.

Repeat for Credit

N

Requisites

Prerequisite: LAR 040.

Typically Offered

Spring

LAR 101 - Introduction to Landscape Architecture**Credits 3**

Exploratory lecture course open to students in all majors providing an overview of landscape architecture which focuses on innovations in natural and built environments. Students will learn about a wide variety of global issues and perspectives, types of planning and design projects, and professional aspects of the discipline.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Aesthetic Interpretation

LAR 211 - Unlocking Creativity**Credits 3**

Do you want to become creative? Good news, you already are! For students in all majors, this course is designed to help you access your creative potential and become more imaginative, innovative, and courageous. Learning outcomes include overcoming blocks, refining your creative process, practicing activities to enhance creativity, and effectively communicating ideas.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Empirical and Quantitative Reasoning

LAR 220 - Drawing Landscapes Studio**Credits 5**

Foundational aspects of 2D analog and digital medium. Students will learn how to view, analyze, represent and design through the lens of landscape architecture.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the LA professional program.

Corequisite: LAR 350.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Ethical Reasoning and Responsibility

LAR 230 - Modeling Landscapes Studio**Credits 5**

Foundational aspects of 3D modeling using both analog and digital medium. Students will learn how to view, analyze, represent and design through creation and fabrication of 3D models.

Repeat for Credit

N

Requisites

Prerequisite: LAR 220.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

LAR 248 - Landscape Architecture Materials and Methods**Credits 3**

To provide the student a basic understanding of materials and methods commonly utilized in the practice of landscape architecture as a basis to pursue subsequent land design and land construction course work.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 113, PHYS 115 or PHYS 213.

Prerequisite or co-requisite: LAR 520.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

LAR 298 - Ethics and Environmental Dilemmas**Credits 3**

Introduction to environmental ethics and significant local and global dilemmas. Students will learn about how humans have impacted the environment through time and the implications of those actions, and environmental/social movements and justice.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

LAR 310 - Design Graphics and Visual Thinking**Credits 2**

A study of graphic communication techniques for the exploration and presentation of landscape architecture design ideas.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the LA professional program.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

LAR 320 - Site Design Studio II**Credits 5**

Small- to medium-scale site design studies with emphasis placed on design process, response to cultural and natural conditions, detailed articulation of space including definition and use of materials, and design communication.

Repeat for Credit

N

Requisites

Prerequisite: LAR 220. Prerequisite or corequisite: LAR 520.

Typically Offered

Spring

K-State 8

Historical Perspectives

LAR 350 - Plants and Design**Credits 3**

Introduction to plant morphology, forms of classification, and a basic understanding of plant habitat. Students will learn to identify a palette of plants in the field and understand their application for design.

Repeat for Credit

N

Requisites

Corequisite: LAR 220.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Natural and Physical Sciences

LAR 351 - Plant Patterns and Use

Credits 1

Introduction to the patterns and use of plants in cultural and natural contexts. Students will identify plant palettes and communities in historical and contemporary landscapes.

Repeat for Credit

N

Requisites

Prerequisite: LAR 350.

Corequisite: LAR 433.

Typically Offered

Spring

LAR 352 - Landscape Performance Lab**Credits 3**

Introduction to the scientific process as well as methods for assessing landscape performance. Students will learn how to acquire, organize and analyze information using qualitative and quantitative methods.

Repeat for Credit

N

Requisites

Prerequisite: LAR 298, LAR 420

Typically Offered

Fall

K-State 8

Natural and Physical Sciences

K-State 8 Tag 2

Empirical and Quantitative Reasoning

LAR 353 - Plant Selection**Credits 1**

Selection of plants for specific site requirements. Students learn how to anticipate plant performance and identify plants to achieve design goals in associated courses.

Repeat for Credit

N

Requisites

Prerequisite: LAR 352.

Typically Offered

Fall

LAR 354 - Landscape Restoration**Credits 3**

Development of landscape restoration plans. Students will learn the principles, methods, and plants of ecological restoration at local and regional scales.

Repeat for Credit

N

Typically Offered

Spring

LAR 410 - Planting Design Studio**Credits 5**

Design studies emphasizing functional, aesthetic, and ecological uses of plants. Projects emphasize design process and the relationship between plants and the built environment; elements and principles of planting design; plant selection; preparation of planting plans; specification writing; and design implementation.

Repeat for Credit

N

Requisites

Prerequisite: LAR 320. Prerequisite or corequisite: LAR 520, HORT 274.

Typically Offered

Fall

LAR 420 - Socio-Ecological Systems Studio**Credits 5**

Introduction to key principles of ecology as related to ecological planning and design. Students will learn how to connect theoretical knowledge of socio-ecological systems and processes to address multi-scale problems in urban and rural contexts.

Repeat for Credit

N

Requisites

Prerequisite: LAR 230.

Typically Offered
Fall

LAR 425 - Narratives and Placemaking Seminar

Credits 2

Immersive exploration into fundamentals of landscape narratives, place theory and placemaking. Students will examine and engage in a variety of locations, create expressions of narrative using a variety of representational techniques, and apply knowledge gained in site design.

Repeat for Credit
N

Requisites
Prerequisite: LAR 420.
Corequisite: LAR 030, LAR 352.

Typically Offered
Summer

LAR 430 - Narratives and Placemaking Studio

Credits 4

Immersive exploration into fundamentals of landscape narratives, place theory and placemaking. Students will examine and engage in a variety of locations, create expressions of narrative using a variety of representational techniques, and apply knowledge gained in site design.

Repeat for Credit
N

Requisites
Prerequisite: LAR 420.
Corequisite: LAR 030, LAR 352, LAR 425.

Typically Offered
Summer

LAR 433 - Landscape History and Design Studio

Credits 5

Introduction to the history and theory of landscape

architecture materials and design from the Middle Ages to the present with a focus on Europe and North America. Students will gain competency in landscape architecture vocabulary, the ability to recognize notable works and practitioners, and apply historical precedents to site design projects.

Repeat for Credit
N

Requisites
Prerequisite: LAR 230.
Corequisite: LAR 351.

Typically Offered
Fall

LAR 438 - Site Design Implementation

Credits 5

Introduction to construction materials, methods, and documentation appropriate for design implementation at the site scale. Focus on producing a set of construction documents including grading, stormwater management, plants and materials.

Repeat for Credit
N

Requisites
Prerequisite: LAR 425, LAR 430.
Corequisite: LAR 353.

Typically Offered
Fall

LAR 439 - Master Plan Design and Implementation

Credits 5

Design implementation at the master plan and regional scales. Focus on suitability analyses and systems supporting community services such as pedestrian and vehicular transportation, land use, hydrology and other natural systems.

Repeat for Credit
N

Requisites
Prerequisite: LAR 438.

Corequisite: LAR 354.

Typically Offered

Spring

LAR 442 - Site Research and Design Studio

Credits 5

Iterative development of site plans and designs. Students will research and share precedent studies to expand knowledge base, and will apply findings to multiple design projects.

Repeat for Credit

N

Requisites

Prerequisite: LAR 352, LAR 425, LAR 430.

Corequisite: LAR 040.

Typically Offered

Fall

LAR 444 - Career and Academic Planning

Credits 3

Exploration and identification of career paths and development of academic plans for reaching personal and professional goals including specific coursework, internships, study abroad and extracurricular activities.

Repeat for Credit

N

Requisites

Prerequisite: LAR 430.

Typically Offered

Fall

LAR 445 - Career Development Communications

Credits 1

Development of visual, written and oral communication skills for career development. Students will prepare materials for internship application, job search, or career advancement.

Repeat for Credit

N

Requisites

Prerequisite: LAR 444.

Typically Offered

Spring

Crosslisted

PLAN 444

LAR 500 - Site Planning and Design

Credits 3

Theory, principles, and elements of site planning and design. Lectures, readings, short problems, and site visits dealing with site analysis, ecological consideration, grading drainage, circulation and parking, lighting, planting design, materials and details, management and maintenance, and cost factors.

Repeat for Credit

N

Requisites

Prerequisite: ARCH 403 or concurrent enrollment with ARCH 403, or admission to RCP professional program.

Typically Offered

Fall, Spring

LAR 501 - Landscape Architecture Seminar I

Credits 2

Discussion of current trends in landscape architecture and related fields by students, faculty, and invited speakers.

Repeat for Credit

Y

Typically Offered

Fall, Spring

LAR 510 - Landscape Architecture Tech Module I

Credits 1

Introductory theory, methods, and application of technological skills and support of concurrent landscape architecture studios and courses. Emphasis is on data

collection and management and mapping and analysis.

Repeat for Credit

N

Requisites

Prerequisite: Admission to LA professional program.

Typically Offered

Fall

**LAR 520 - Landscape Architecture Tech
Module II**

Credits 1

Introductory theory, methods, and application of technological skills and support of concurrent landscape architecture studios and courses. Emphasis is on CAD and 3-D modeling.

Repeat for Credit

N

Requisites

Prerequisite: LAR 510.

Typically Offered

Spring

**LAR 530 - Landscape Architecture Tech
Module III**

Credits 2

Intermediate theory, methods, and application of technological skills and support of concurrent landscape architecture studios and courses. Emphasis is on CAD and 3-D modeling and surveying.

Repeat for Credit

N

Requisites

Prerequisite: LAR 520.

Typically Offered

Fall

**LAR 540 - Landscape Architecture Tech
Module IV**

Credits 1

Intermediate theory, methods, and application of technological skills and support of concurrent landscape architecture studios and courses. Emphasis is on CAD and 3-D modeling and presentation graphics.

Repeat for Credit

N

Requisites

Prerequisite: LAR 530.

Typically Offered

Spring

**LAR 550 - Landscape Architecture Tech
Module V**

Credits 2

Advanced application of technological skills and support of concurrent landscape architecture studios and courses. Emphasis is on CAD and 3-D modeling, thematic mapping, and geoprocessing.

Repeat for Credit

N

Requisites

Prerequisite: LAR 540.

Typically Offered

Fall

**LAR 560 - Landscape Architecture Tech
Module VI**

Credits 1

Advanced project specific applications in data collection and management, CAD modeling, thematic mapping, and GIS, and presentation graphics.

Repeat for Credit

N

Requisites

Corequisite: LAR 705.

Typically Offered

Spring

LAR 580 - Planning and Design Intro to GIS

Credits 2

This course will provide students with the essential background in geospatial analysis and information systems for the design and planning fields. Students will learn basics about data models and management, vector and raster analysis and cartography. Students will learn how to use these skills to develop suitability analyses to evaluate the performance of plans and designs or to identify which location would be best for a particular purpose.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

LAR 635 - Golf Course Planning and Design

Credits 1-4

Fundamentals of golf course planning and design, including: history, management, design, facilities, aesthetics, and technical development.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

LAR 645 - Professional Internship Report

Credits 1

Oral and graphic presentation of work completed in LAR 702 and LAR 703.

Repeat for Credit

N

Requisites

Prerequisite: LAR 702 or LAR 703.

Typically Offered

Fall

LAR 646 - Community Engagement Studio

Credits 5

Engagement with communities and stakeholders through service learning projects. Focus on engagement methods and visualization, representation and communication to general audiences. Utilizes planning and design techniques and knowledge gained in previous semesters.

Repeat for Credit

N

Requisites

Prerequisite: LAR 442. Corequisite: LAR 050.

Typically Offered

Spring

LAR 647 - Design Implementation III

Credits 5

Continuation of LAR 439 to include large scale site design, road alignment, large area grading, soils and excavation methods, storm drainage, and utilities routing.

Repeat for Credit

N

Requisites

Prerequisite: LAR 439.

Typically Offered

Fall

LAR 650 - Landscape Architecture Seminar II

Credits 2

Literature review and discussion of current issues and trends in community planning and design. Readings and discussion in preparation for field trip.

Repeat for Credit

N

Typically Offered

Summer

LAR 655 - Landscape Architecture Professional Internship

Credits 6-9

Confirmed internship with a professional sponsor subject to departmental approval.

Repeat for Credit

N

Requisites

Corequisite: LAR 703.

Typically Offered

Spring

LAR 700 - Project Programming**Credits 3**

Research and the development of a program directed toward the advancement of a capstone project for LAR 705 Master's Project and Report.

Repeat for Credit

N

Requisites

Prerequisite: LAR 725, LAR 740, LAR 750 or corequisite: LAR 750.

Typically Offered

Fall

LAR 702 - Landscape Architecture Practicum**Credits 0**

Off-campus design studies fulfilled in an approved professional design office or international studies program.

Repeat for Credit

N

Requisites

Prerequisite: LAR 439, LAR 445 and LAR 646

Typically Offered

Spring, Summer

LAR 703 - Landscape Architecture Off-Campus Studio**Credits 5**

Off campus design studies fulfilled in an approved professional design office or in an approved international studies program.

Repeat for Credit

N

Requisites

Prerequisite: LAR 439, LAR 445 and LAR 646.

Typically Offered

Spring

LAR 704 - Environmental Landscape Planning and Design**Credits 3**

Introduction to and understanding of environmental planning, design and management of natural and social landscape systems beyond site scale. The course focuses on theories, techniques and processes for designing sustainable landscapes and urban environments. Students will develop a final project starting with the conceptualization, through inventory, analysis and simulation, in order to develop a final design proposal.

Repeat for Credit

N

Requisites

Prerequisite: LAR 580, or GEOG 508 or equivalent, or instructor permission.

Typically Offered

Fall, Spring

LAR 705 - Master's Project Studio 1**Credits 5**

In-depth exploration of a specific landscape architecture topic through research and design supervised by a major professor in accordance with Graduate School guidelines.

Repeat for Credit

N

Requisites

Prerequisite: LAR 725, LAR 740, LAR 750.

Corequisite: LAR 897. This course must be successfully taken in tandem with LAR 897, with a concurrent professor; the failure of either requires a retake (in tandem)

of both with a concurrent instructor.

Typically Offered

Fall

LAR 710 - Master's Project Studio 2

Credits 3

In-depth exploration of a specific landscape architecture topic through research and design supervised by a major professor in accordance with Graduate School guidelines.

Repeat for Credit

N

Requisites

Prerequisite: LAR 705 and LAR 897.

Corequisite: LAR 898. This course must be successfully taken in tandem with LAR 898, with a concurrent professor; the failure of either requires a retake (in tandem) of both with a concurrent instructor.

Typically Offered

Spring

LAR 720 - Public Lands and Natural Resources Law

Credits 3

Legal aspects of land use and natural resource management on the federal public lands. A brief history of the acquisition and disposition of the public domain and a review of legal authority on the public lands are followed by an examination of key legal issues concerning the resources of water, minerals, timber, range, wildlife, recreation and wilderness.

Repeat for Credit

N

Requisites

Prerequisite: Advanced standing.

Typically Offered

Fall, Spring

LAR 725 - Research Methods

Credits 3

Development of the research design process. Students will

learn to employ appropriate methods and strategies to answer research questions, and to effectively and clearly communicate research-based information to peers and the public.

Repeat for Credit

N

Typically Offered

Fall, Spring

Crosslisted

PLAN 803

LAR 734 - Rivers: Processes & Forms

Credits 3

This course addresses key aspects of hydrology such as precipitation and movement of water from uplands to channels. This movement, generally referred to as "runoff processes," is responsible for shaping the watershed. It then focuses upon fluvial geomorphology, the science of riverscapes, to examine processes and resultant landforms. This course teaches field observation skills and field survey procedures that allow the classification of natural rivers and streams. Finally, it previews methods of prediction and monitoring of river channel stability parameters.

Repeat for Credit

N

Typically Offered

Fall

LAR 735 - Advanced Golf Course Planning and Design

Credits 1-4

Advanced methods and strategies of golf course and resort planning and design.

Repeat for Credit

N

Requisites

Prerequisite: LAR 635.

Typically Offered

Fall, Spring, Summer

LAR 740 - Advanced Studio

Credits 5

In-depth exploration of a specific landscape architecture topic.

Repeat for Credit

N

Requisites

Prerequisite: LAR 354, LAR 439, LAR 444, LAR 646.

Corequisite: LAR 750.

Typically Offered

Fall

LAR 741 - Problems in Landscape Architecture

Credits 1-18

Specific problems and/or reports in the area of landscape architecture.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

LAR 742 - Topics in Italian Landscape Architecture

Credits 3

Investigation of Italian culture, landscape and communities through analytical readings and/or drawings.

Repeat for Credit

Y

Typically Offered

Spring

LAR 744 - Community Planning and Design

Credits 4

Study of the relationships between planning and design in the growth and development of cities and towns.

Note

Two hours lecture and six hours studio a week.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 315.

Typically Offered

Fall

LAR 745 - Professional Practice

Credits 3

Studies of conventional and newly developing methods of professional design practice. Instruction in the relationships of architects, landscape architects, interior architects, and other professionals to users, clients, construction industry, society, government, and one another.

Repeat for Credit

N

Typically Offered

Fall

LAR 746 - Urban Design Studio I

Credits 4

An interdisciplinary design studio involving large-scale design; projects with extensive time implementation sequence; responses to socioeconomic, cultural, environmental, and technical needs; and implementation strategies. Design methods are applied to selected urban areas of the Midwest.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 315 or equivalent and concurrent enrollment in PLAN 745.

Typically Offered

Fall

LAR 750 - Advanced Seminar

Credits 3

Studies and discussion of topics related to specialization studio.

Repeat for Credit
Y

Typically Offered
Fall

LAR 751 - Comprehensive Studio 1

Credits 5

Culminating experience in landscape architecture design studio.

Repeat for Credit
N

Requisites
LA program students are required to obtain a "C" or better in this course.

Typically Offered
Fall, Spring

LAR 752 - Comprehensive Studio 2

Credits 5

Culminating experience in landscape architecture studio.

Repeat for Credit
N

Requisites
LA program students are required to obtain a "C" or better in this course.

Typically Offered
Fall, Spring

LAR 753 - Professional Practice: Professional Responsibility

Credits 1

Interdisciplinary course addresses the connections between allied design professions and the larger community. It helps students to understand and appreciate their professional legal and ethical responsibilities.

Repeat for Credit

N

Requisites
Prerequisite: LAR 442.

Typically Offered
Fall, Spring

LAR 754 - Professional Practice: Office Practices

Credits 1

Interdisciplinary course addresses practice-based issues concerning professional relationships in the design and delivery process, management of projects, communication practices, and fiscal concerns.

Repeat for Credit
N

Requisites
Prerequisite: LAR 442.

Typically Offered
Fall, Spring

LAR 755 - Professional Practice: Discipline-Specific Topics

Credits 1

Covers discipline-specific concerns, focusing on issues specific to architecture, interior architecture and product design, landscape architecture or regional and community planning.

Repeat for Credit
N

Requisites
Prerequisite: LAR 442.

Typically Offered
Fall, Spring

LAR 756 - Design of Parks and Recreation Areas

Credits 3

Site planning of national, state, municipal, and private

parks, and specialized recreation areas.

Repeat for Credit

N

Typically Offered

Fall

LAR 759 - Landscape Resource Evaluation

Credits 3

The determination of the impact of physical project design upon the natural and manmade environment. Studies of existing site conditions and projections of the effect of such projects upon the site and vicinity.

Repeat for Credit

N

Requisites

Prerequisite: Senior or graduate standing.

Typically Offered

Spring

LAR 761 - Comprehensive Seminar 1

Credits 2

Culminating experience in landscape architecture seminar.

Repeat for Credit

N

Requisites

LA program students are required to obtain a "C" or better in this course.

Typically Offered

Fall, Spring

LAR 762 - Comprehensive Seminar 2

Credits 2

Culminating experience in landscape architecture design seminar.

Repeat for Credit

N

Requisites

LA program students are required to obtain a "C" or better in this course.

Typically Offered

Fall, Spring

LAR 806 - Portfolio Design

Credits 3

The Portfolio Design course guides students in development of a professional portfolio of work, with the goal of producing a product that can be used for internship application, job search, or career advancement. Students explore visual thinking and visual communication with a culminating goal of producing a final portfolio.

Repeat for Credit

N

Requisites

Prerequisite: Graduate student standing and familiarity with Adobe Creative Suite or Creative Cloud software.

Typically Offered

Fall, Spring, Summer

LAR 811 - Unlocking Creativity

Credits 3

Do you want to become creative? Good news, you already are! For students in all majors, this course is designed to help you access your creative potential and become more imaginative, innovative, and courageous. Learning outcomes include overcoming blocks, refining your creative process, practicing activities to enhance creativity, and effectively communicating ideas.

Repeat for Credit

N

Typically Offered

Fall, Spring

LAR 860 - Advanced Planting Design

Credits 1-4

Special studies in advanced planting design.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

LAR 870 - Advanced Landscape Architecture

Credits 1-4

Special studies and design in advanced landscape architecture.

Repeat for Credit
Y

Requisites
Prerequisite: LAR 702.

Typically Offered
Fall, Spring, Summer

LAR 880 - Advanced Landscape Architecture Construction

Credits 1-4

Specialized study of large-scale landscape planning involving landscape construction and grading.

Repeat for Credit
Y

Requisites
Prerequisite: LAR 439.

Typically Offered
Fall, Spring, Summer

LAR 897 - Proposal Writing

Credits 2

Development of a master's thesis proposal.

Repeat for Credit
Y

Requisites
Prerequisite: LAR 725 and LAR 740
LA program students are required to obtain a "C" or better in this course.

Typically Offered
Fall, Spring

LAR 898 - Master's Report

Credits 2

Comprehensive application of research and design study through individual studies approved by the department faculty.

Repeat for Credit
N

Requisites
Prerequisite: LAR 705 and LAR 897.
Corequisite: LAR 710. This course must be successfully taken in tandem with LAR 710, with a concurrent instructor; the failure of either requires a retake (in tandem) of both with a concurrent instructor.

Typically Offered
Spring

LAR 899 - Research in Landscape Architecture

Credits 1-18

Investigations in landscape architecture and related areas, of such caliber as to form the basis for a graduate thesis.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing in landscape architecture.

Typically Offered
Fall, Spring, Summer

LATIN 101 - Latin I

Credits 4

An introductory study of the structure of Latin.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

K-State 8
Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

LATIN 102 - Latin II**Credits 4**

Continuation and completion of the study of the structure of Latin.

Repeat for Credit

N

Requisites

Recommended Prerequisite: LATIN 101 or equivalent.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

LATIN 301 - Intermediate Latin - Prose**Credits 3**

Continuation of the study of Latin syntax and grammar, based upon reading of Roman prose. Topics may include Caesar, Cicero, or Sallust.

Repeat for Credit

Y

Requisites

Prerequisite: LATIN 102.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

LATIN 302 - Intermediate Latin - Poetry**Credits 3**

The reading of Latin poetry in the original at an intermediate level. Topics may include Virgil, Ovid, and Lucretius.

Repeat for Credit

Y

Requisites

Prerequisite: LATIN 301.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

Ethical Reasoning and Responsibility

LEAD 225 - Fundamentals of Global Food Systems Leadership

Credits 3

An interdisciplinary approach to the fundamental roles people, policies, and cultures play in the global food system enterprise as it relates to sustainable food production, processing, distribution, and availability. Students will explore complexities within self, others, and community related to leadership in the context of a rapidly increasing global population.

Note

Course Description

An interdisciplinary approach to the fundamental roles people, policies, and cultures play in the global food system enterprise as it relates to sustainable food production, processing, distribution, accessibility, and availability.

Students will explore complexities within self, others, and community related to leadership in the context of an increasing global population.

Course Objectives

At the conclusion of the course, students will be able to:

Identify the fundamental systems, levels, stakeholders, and complexities of the global food system and explore their codependent nature

Provide examples of successes and limitations of governmental and non-governmental organizations in implementing change in global food systems

Examine the challenges of food abundance, food insecurity, nutrition, obesity, and poverty in global food systems

Distinguish between low-income and high-income countries and domestic and international food systems challenges

Critically reflect on leadership processes, practice, and purpose

Distinguish between the roles of authority and leadership

Recognize the necessity of working across disciplines

Name the possible multiple interpretations that exist around global food challenges

Summarize the cultural views of gender roles within food production and processing systems and the impact these values play in global food systems development efforts

Recognize different narratives about food

Describe the social, political, and economic dimensions of global food systems

Consistently articulate a broad, integrated food systems perspective focused on health, humans, agriculture, environments, communities, and economies

Examine the various global food systems through the lens of nutrition, vulnerable populations, food waste, post-harvest loss, climate change, and sustainable intensification.

LEAD 310 - Strengths Peer Coach Practicum

Credits 0-3

This course is designed to help students develop the skill of coaching within the context of strengths-based leadership while serving as a strengths peer coach. Additional frameworks will include research on employee engagement, well-being, and positive psychology. Students will participate in training, peer observations, weekly seminars, reflections, and debriefs around the peer coaching experience. Students will also apply their coaching skills by holding weekly peer coaching sessions.

Repeat for Credit

N

Typically Offered

Fall or Spring

LEAD 312 - Peer Leader Practicum

Credits 0-3

This course uses experiential learning to prepare students with the personal, relational, planning, and facilitation skills needed to effectively lead a team or organization. Weekly LEAD 212 facilitation, class preparation seminars, and peer feedback will allow for experience, reflection, meaning-making, and experimentation.

Repeat for Credit

Y

Requisites

Prerequisite: LEAD 212 - Introduction to Leadership Concepts.

Corequisite: Junior standing.

Typically Offered

Fall, Spring

LEAD 320 - Theories of Leadership

Credits 3

This course provides an overview of the major theories of leadership and the empirical and theoretical evidence supporting those theories. Students will demonstrate an understanding of the theories and the empirical evidence supporting them as well as develop their ability to critically assess the theoretical and empirical work surrounding leadership theories and models.

Repeat for Credit

N

Requisites

Prerequisite: LEAD 350, LEAD 420.

Typically Offered

Other

LEAD 502 - Independent Study in Leadership Studies**Credits 0-3**

Selected topics in leadership studies.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of department chair.

Typically Offered

Fall, Spring, Summer

LEAD 510 - Foundations of Community-Engaged Leadership**Credits 3**

This course integrates leadership theory and practice exploring principles, purposes, and processes of community engagement and democratic practice. Utilizing service-learning methods, students will partner with community to consider and examine foundational forms of civic and public life. Community paradigms will be explored and deconstructed in relation to course themes.

Repeat for Credit

N

Typically Offered

Fall

LEAD 515 - Teaching Leadership**Credits 0-3**

Preparing people for leadership in a diverse and changing world requires new thinking and approaches to leadership learning and development. Learners will explore philosophies, frameworks, and strategies for designing, delivering, and assessing leadership courses and programs in educational (curricular and co-curricular), workplace, and civic contexts. Learners will develop a philosophy of leadership teaching statement and create a contextually and culturally relevant curricular design document (e.g., class syllabus or program outline). We will serve and attract learners who are working in the field of leadership studies and programs, or aspiring leadership educators.

Note

This course will be listed as 715 at the graduate level.

Repeat for Credit

Y

Typically Offered
Fall, Spring

LEAD 520 - Approaches to Community-Engaged Leadership

Credits 3

Through theory and practice, students consider the ethical dimensions of leadership in relation to community systems, organizations, and institutions. Students will deconstruct concepts of community-engaged leadership including race, class, gender, justice, and power. Through service-learning, students will work with partners to understand community systems, organizations, and institutions.

Repeat for Credit
N

Requisites
Prerequisite: LEAD 510.

Typically Offered
Spring

LEAD 560 - Experiences in Community-Engaged Leadership

Credits 6

In this capstone experience students design, plan, execute, and evaluate a community-engaged research project. The project will be consistent with the principles of community engagement and the purposes and process of democratic practice. Students will exercise leadership with community partners to build capacity for systemic change.

Repeat for Credit
N

Requisites
Prerequisites: LEAD 510 and LEAD 520.

Typically Offered
Spring

LEAD 700 - Nonprofit Leadership Concepts

Credits 3

Explores the unique facets of nonprofits and how to

establish vision, mission, and practices that best position organizations to build leadership capacity for community change. Leadership within the nonprofit sector has unique considerations separate from those in governmental or business organizations including democratic governance, championing a cause, volunteer leadership, and mission-driven organizational design.

Repeat for Credit
N

Typically Offered
Fall or Spring

LEAD 701 - Foundations of Leadership

Credits 3

Study of the key issues in the theory, research, and application of leadership in organizations. This includes defining leadership, understanding situational characteristics that facilitate / hinder effective leadership, understanding effective / dysfunctional leadership, and gaining greater insight into one's own leadership style and functioning.

Repeat for Credit
Y

Typically Offered
Fall, Spring

LEAD 708 - Facilitating Leadership in Complex Adaptive Systems

Credits 3

This course surveys the theory and practice of facilitating leadership activity in Complex Adaptive Systems through various process models and approaches to practice.

MANGT 566 - Computer Systems for Finance and Investment Management**Credits 3**

An integrated course examining the interrelationship between finance/investment management and information technology taught using a mixture of theory/concepts and hands-on activities. Topics include spreadsheet design and use in finance and investments, decision support systems and artificial intelligence used in risk analysis, financial database design, and information technologies used to transmit financial and investment information.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 and FINAN 450.

Typically Offered

On Sufficient Demand

MANGT 580 - K-State MIS: Health Info Sys Portfolio I**Credits 9**

This course serves a mechanism to indicate students have completed a series of Health Information Systems courses at Johnson County Community College in the process of completing their Associate's Degree. It is used solely for transfer credit tracking and fulfills the thematic sequence

requirement in the College of Business. Students cannot enroll in this class nor can this course be transferred into programs other than Management Information Systems in the College of Business Administration.

Repeat for Credit

N

Requisites

Prerequisite: Associates Degree in Health Information Systems from JCCC.

Typically Offered

Fall, Spring, Summer

MANGT 581 - K-State MIS: Health Info Sys Portfolio II**Credits 15**

This course serves a mechanism to indicate students have completed a series of Health Information Systems courses at Johnson County Community College in the process of completing their Associate's Degree. It is used solely for transfer credit tracking and fulfills the unrestricted electives requirement in the College of Business. Students cannot enroll in this class nor can this course be transferred into programs other than Management Information Systems in the College of Business Administration.

Repeat for Credit

N

Requisites

Prerequisite: Associates Degree in Health Information Systems from JCCC.

Typically Offered

Fall, Spring, Summer

MANGT 590 - International Management**Credits 3**

Analysis of the political, legal, economic, and sociocultural environments and how they influence international management decisions such as timing and place of foreign market entry, mode of entry, and formulations and implementation of international strategies. Students develop the knowledge and skills necessary for managing international operations including cross-cultural communication, negotiations, ethical decision making, leadership, staffing, and workforce motivation.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 220 or Junior standing.

Typically Offered

Fall, Spring

MANGT 595 - Strategic Management**Credits 3**

Undergraduate capstone course that requires integration of knowledge gained in prior functional coursework and application of strategic management concepts to develop value-creating solutions to business challenges. Students develop the knowledge and skills necessary to identify and analyze strategic issues, formulate strategic plans, and implement strategic initiatives within organizations.

Note

Open only to students with 75 credit hours or non-business graduate students.

Repeat for Credit

N

Requisites

Prerequisite: FINAN 450 and MANGT 220 and MKTG 250 and 75 credit hours and admitted in a College of Business Administration major (ACCTG, ENTRP, FINAN, GENBA, MANGT, MIS, MKTG, PSS).

Typically Offered

Fall, Spring, Summer

MANGT 596 - Business Ethics and Corporate Citizenship**Credits 3**

Delivers a managerial perspective on how corporations can fulfill their economic, legal, ethical, and philanthropic responsibilities to a broad array of business stakeholders.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 220, MKTG 250, and senior-level students admitted in a College of Business Administration

degree track (major).

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

MANGT 610 - Managing for Sustainability: Strategy, Investing, and Impact**Credits 3**

Examines how organizations create long-term value for stakeholders and society through environmental, social, and governance (ESG) strategy, investment, and impact. Students explore the concept of business sustainability from an applied perspective, to understand better how economic, human, and natural environmental systems are interlinked. Specific topics include the formulation and implementation of ESG strategies within organizations, managing relationships with stakeholders, and the measurement and disclosure of ESG impact.

Repeat for Credit

N

Typically Offered

On sufficient demand

MANGT 623 - Compensation and Performance Management**Credits 3**

An in-depth analysis of compensation system design and performance management strategies needed to attract, retain, develop and motivate the human capital required for organizational effectiveness and strategic success.

Repeat for Credit

N

Requisites

Corequisite: MANGT 531.

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility
K-State 8 Tag 2
Social Sciences

MANGT 630 - Sports Management

Credits 3

An exploration into management issues associated with professional and amateur sports. Major topics include strategic planning, operational planning, human resource management, team management, leadership, communication, and diversity all in the context of sports.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 220 or MKTG 250 or Junior standing.

Typically Offered

Fall, Spring

MANGT 633 - Advanced Human Resource Management

Credits 3

An in-depth analysis of selected topics in human resource management including study of current research and literature.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 531.

Typically Offered

On sufficient demand

MANGT 643 - Organizational Staffing

Credits 3

Focuses on recruitment, selection, and retention issues, including an in-depth consideration of legal and practical issues involved in the acquisition and retention of human resources. Detailed coverage of job analysis, criterion development, recruitment strategies, and techniques and procedures for ensuring valid and effective selection of employees.

Repeat for Credit

N

Requisites

Corequisite: MANGT 531.

Typically Offered

Fall, Spring

MANGT 652 - Constraint Management and Continuous Improvement

Credits 3

The intent of this course is to provide an overview of the application of Theory of Constraints (TOC). TOC suggests that every process or system has at least one constraint that prevents the operation from being more efficient. TOC offers methodologies that are specifically developed to identify and manage constraints to enable the operation to achieve its goals. Students will be taught the skills required for the identification and management of constraints within an operation system.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 220, MANGT 421, MANGT 521.

Typically Offered

On Sufficient Demand

MANGT 660 - Supply Chain Planning and Control

Credits 3

Provides a framework of how the demand side of the supply chain should interface with supply side in the context of global manufacturing and service. Topics include: layout/process design and control, capacity planning, master scheduling, materials requirement, coordination, and revenue management.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 421 or graduate school status

Typically Offered

Fall

MANGT 662 - Procurement, Logistics and Supply Chain Design**Credits 3**

Addresses the interrelationship between operations and other functions required to deliver value to the end customer of a supply chain. Topics include: strategic procurement and purchasing operations and process, sourcing decisions, location strategies, distribution network design, global supply chain network design, and supply chain risk management.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 421 or graduate school status.

Typically Offered

Fall

MANGT 663 - Supply Chain Analytics**Credits 3**

The objective of this course is to introduce models and tools to effectively manage a supply chain that purchase, produce, and distribute products. Topics include: forecasting, production and logistics, and inventory management. We illustrate the effectiveness of these models and tools using real-life cases and examples drawn from diverse industries.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 421 or graduate school status

Typically Offered

On sufficient demand

MANGT 710 - Operations and Supply Chain Management**Credits 3**

The study of the role of operations systems in the provision

of value for the customer. Operations systems design, capacity determination, resource requirements planning and control, theory of constraints, supply chain management, quality management and control and project management are discussed and analyzed.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 351 or STAT 702.

Typically Offered

Spring

MANGT 720 - Managing Organizational Behavior**Credits 3**

An in-depth analysis of the development of the behavioral bases of individual and group behavior in business, governmental, educational, and other organizations with emphasis on current research literature and applications.

Repeat for Credit

Y

Requisites

Prerequisite: Open only to students in graduate business degree or certificate programs or with permission of the instructor.

Typically Offered

Fall, Summer

MANGT 725 - Organizational Management and Data Analytics**Credits 3**

This course exposes students to a diverse set of research methods and data analytic techniques used to address organizational management problems. Students engage in experiential learning to develop their capabilities in collecting, organizing, analyzing, and visualizing data, making inferences from data analytic processes, and communicating solutions to organizational stakeholders through storytelling.

Repeat for Credit

N

Typically Offered
Spring

MANGT 815 - Advanced Managerial Consulting

Credits 3

This course provides an overview of the management consulting process. Students will learn how to apply consulting tools and frameworks to engage clients, analyze organizational problems, formulate and present recommendations, and implement change initiatives. The content is relevant to anyone interested in analyzing internal business opportunities, tasked with managing organizational change, or those pursuing traditional consulting careers.

Repeat for Credit
N

Typically Offered
Spring

MANGT 825 - Advanced Business Law

Credits 3

A study of civil law as it affects commercial transactions, including corporations, partnerships, property, commercial paper, and secured transactions.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate student standing.

Typically Offered
Spring

MANGT 840 - Advanced Entrepreneurship

Credits 3

An in-depth examination of the nature of entrepreneurship including success factors, the requirements of successful new venture planning and implementation, and researching the current literature in the field. The study of new product identification, the assessment of commercial potential, and the elements of an effective business plan will be examined in detail, culminating in the preparation of a comprehensive plan for the development and marketing of a new product

or service.

Repeat for Credit
Y

Requisites
Prerequisite: FINAN 715, MANGT 720, and MKTG 890.

Typically Offered
On sufficient demand

MANGT 845 - Technology Entrepreneurship and Strategy

Credits 3

In this course the student will learn how to recognize and screen technology opportunities in diverse areas such as telecommunications to biotechnology; learn the intricacies of intellectual property creation, protection and acquisition; effectively implement the commercialization process. A major objective of the course is to help students realize that technology may be the most under-utilized asset in either the private or public sector yet, in the form of licenses or rights to use, can be sold repeated with a relatively low cost of goods sold, resulting in a continual stream of income.

Repeat for Credit
Y

Typically Offered
On sufficient demand

MANGT 853 - Business Project Management

Credits 3

Provides an in-depth coverage of project management concepts and methodologies required for service and manufacturing operations. Topics to be covered include, but are not limited to: project selection and evaluation, project dynamics, motivation and evaluation of project team members, project scheduling, project budgeting, and project closure.

Note
This course is restricted to students in graduate business degree. Students from other programs must receive permission from the College of Business Graduate Program Coordinator.

Repeat for Credit
N

Requisites

Prerequisites: Open only to students in graduate business degree.

Typically Offered

Fall, Spring

MANGT 860 - Managing the Triple Bottom Line Business**Credits 3**

Examines how organizations can deliver sustainable social, environmental, and economic benefits to a plurality of stakeholders. Topics include best practices for business ethics, corporate social responsibility, and triple bottom line management.

Repeat for Credit

Y

Requisites

Prerequisite: ACCTG 710, FINAN 715, MKTG 705, MANGT 710, MANGT 720, MIS 830, ECON 815 and STAT 703.

Typically Offered

Fall, Spring

MANGT 867 - Enterprise Information Systems Management**Credits 3**

Concepts and information resource management techniques are integrated into a conceptual framework of enterprise information systems. The impact of current issues and new technologies on business is emphasized through discussion and application.

Repeat for Credit

Y

Typically Offered

Spring

MANGT 870 - Managing Animal Health Organizations**Credits 3**

Relevant theoretical concepts will be drawn from strategic management, management of change, human resource management, and the management of innovation to provide and intellectual grounding for understanding industry dynamics and the analysis of contemporary managerial challenges and issues for organizations in the animal health industry. Special emphasis will be given to proposing strategic solutions to solve major problems that companies face in the animal health corridor.

Repeat for Credit

N

Typically Offered

Other

MANGT 880 - Strategic Management**Credits 3**

Graduate capstone course that requires integration of knowledge gained in prior functional coursework and application of strategic management concepts to develop value-creating solutions to business challenges. Students develop the knowledge and skills necessary to identify and analyze strategic issues, formulate strategic plans, and implement strategic initiatives within organizations.

Repeat for Credit

Y

Requisites

Prerequisite: ACCTG 710, FINAN 715, MKTG 705, MANGT 710, MANGT 720, MIS 830, ECON 815, and STAT 703.

Typically Offered

Fall

MANGT 890 - International Management**Credits 3**

Analysis of the political, legal, economic, and sociocultural environments and how they influence international management decisions such as timing and place of foreign market entry, mode of entry, and formulation and implementation of international strategies. Students develop the knowledge and skills necessary to more effectively manage the international operations of organizations.

Repeat for Credit

N

Typically Offered

Fall, Spring

MANGT 892 - International Operations Management

Credits 3

Explores the global market context and the environment for multinational operations. Examines important tools, concepts, theories, models, and structures as defined and applied to manufacturing and service operations in other countries. Emphasis is placed on Japanese technology and practices. It draws upon those aspects of manufacturing and service operations that can help U.S. firms become increasingly competitive worldwide.

Repeat for Credit

Y

Requisites

Prerequisite: MANGT 590 and MANGT 710.

Typically Offered

On sufficient demand

MANGT 893 - Management Science

Credits 3

The application of management science methods to business problems to provide a basis for rational decision making. Includes mathematical programming, inventory theory, simulation, model building, and heuristics.

Repeat for Credit

Y

Requisites

Corequisite: MATH 205, STAT 351 or STAT 702

Typically Offered

On sufficient demand

MANGT 897 - Topics in Management Contemporary Issues in Management

Credits 3

Discussion and analysis of contemporary issues in

management, including applications, development and study of relevant literature and research findings.

Repeat for Credit

Y

Requisites

Prerequisite: MANGT 720, MANGT 710 and MANGT 830.

Typically Offered

Spring

MANGT 898 - Special Problems in Management

Credits 1-18

As scheduled. An in-depth study of specified topics.

Note

Consent of the instructor

Repeat for Credit

Y

Typically Offered

Other

MATH 010 - Intermediate Algebra

Credits 3

Preparatory course for MATH 100. Includes arithmetic (signed numbers, polynomials, algebraic fractions, exponents, and roots), solutions to equations (linear, quadratic, polynomial, root, and fractional), graphs (linear and quadratic), and geometry (area, perimeter, and the Pythagorean Theorem).

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MATH 011 - Intermediate Algebra Review

Credits 2

Supplemental algebra lab that is required to be taken in conjunction with MATH 010.

Note

Two hours recitation a week. The student will receive 2 hours credit which will not count toward graduation.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MATH 020 - College Algebra Review**Credits 2**

Supplemental algebra lab to be taken in conjunction with MATH 100 for students who need additional instruction in algebra.

Note

Two hours recitation a week.

Students are placed in this course on the basis of their score on the placement exam. The student will receive 2 hours credit which will not count toward graduation.

Repeat for Credit

N

Typically Offered

Fall, Spring

MATH 100 - College Algebra**Credits 3**

Fundamental concepts of algebra; algebraic equations and inequalities; functions and graphs; zeros of polynomial functions; exponential and logarithmic functions; systems of equations and inequalities.

Repeat for Credit

N

Requisites

Prerequisite: A test score equal to or greater than, Math ACT 22 OR Math SAT 540 OR ALEKS PPL 46 OR Accuplacer QAS 326; OR (HS GPA 3.25 AND grade of B- or better in Algebra 2 or Integrated Math 3).

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 101 - College Algebra Support**Credits 2**

Note: College Algebra Support credits cannot count towards the 120 credits of the degree program. This course was designed through the Kansas Board of Regents Math Pathways initiative. Students who do not meet one of the multiple placement measures must enroll concurrently in MATH 101 and MATH 100.

College Algebra Support is the corequisite support course for MATH 100 - College Algebra. The support course provides additional review of the background knowledge and foundational skills which promote student success in MATH 100. The content of MATH 101 is directly aligned with the course objectives of MATH 100.

Note

MATH 101 is the KBOR math pathways corequisite course for the college algebra course. Students that do not meet any of the KBOR multiple placement measures must also enroll in MATH 101 as the corequisite course to MATH 100.

Repeat for Credit

N

Requisites

Corequisite: MATH 100

Typically Offered

Fall, Spring, Summer

MATH 150 - Plane Trigonometry**Credits 3**

Trigonometric and inverse trigonometric functions; trigonometric identities and equations; applications involving right triangles and applications illustrating the laws of sines and cosines.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 100; OR a test score equal to or greater than, MATH ACT 24 OR MATH SAT 590 OR ALEKS PPL 61 OR Accuplacer QAS 270,

OR (HS GPA 3.5 AND grade of A- or better in Algebra 2).

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 151 - Applied Plane Trigonometry

Credits 2-3

Trigonometry and inverse trigonometric functions, trigonometric identities and equations; applications involving right triangles and applications illustrating the laws of sines and cosines. Emphasis is placed on applications to engineering technology, tool and machine design.

Note

Two hours recitation a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 160 - Introduction to Contemporary Mathematics

Credits 3

Mathematics as used in the contemporary world. Combinatorics and probability; descriptions of data; graph theory; and various additional topics selected by the individual instructors.

Repeat for Credit

N

Requisites

Prerequisite: A test score equal to or greater than, Math ACT 19 OR Math SAT 510 OR ALEKS PPL 30 OR Accuplacer QAS 255, OR (HS GPA 3.00 AND grade of C- or better in Algebra 2 or Integrated Math 3) OR MATH 100.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 161 - Contemporary Mathematics Support

Credits 1

Note: Contemporary Mathematics Support credits cannot count towards the 120 credits of the degree program. This course was designed through the Kansas Board of Regents Math Pathways initiative. Students who do not meet one of the multiple placement measures must enroll concurrently in MATH 161 and MATH 160.

Contemporary Mathematics Support is the corequisite support course for MATH 160 - Contemporary Mathematics. The support course provides additional review of the background knowledge and foundational skills which promote student success in MATH 160. The content of MATH 161 is directly aligned with the course objectives of MATH 160.

Note

MATH 161 is the KBOR math pathways corequisite course for the contemporary math course. Students that do not meet any of the KBOR multiple placement measures must also enroll in MATH 161 as the corequisite course to MATH 160.

Repeat for Credit

N

Requisites

Corequisite: MATH 160

Typically Offered

Fall or Spring

MATH 199 - Undergraduate Mathematics Seminar

Credits 1-5

Topics of special interest to undergraduates in mathematics, including orientation to the mathematics curriculum, possible careers in mathematics, and cultural and professional aspects of mathematics.

Repeat for Credit

Y

Typically Offered

Fall

MATH 205 - General Calculus**Credits 3**

Introduction to calculus concepts that are particularly useful to the study of economics and business administration with special emphasis on working problems.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 100 OR MATH 120 OR MATH 150; OR a test score equal to or greater than MATH ACT 24 OR MATH SAT 590 OR ALEKS PPL 61 OR Accuplacer QAS 270, OR (HS 3.5 AND grade of A- or better in Algebra 2).

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 210 - Technical Calculus I**Credits 3**

A condensed course in analytic geometry and differential calculus with an emphasis on applications.

Repeat for Credit

N

Typically Offered

Fall

MATH 211 - Technical Calculus II**Credits 3**

A continuation of MATH 210 to include integral calculus with an emphasis on application.

Repeat for Credit

N

Typically Offered

Spring

MATH 215 - Calculus I**Credits 5**

Course content includes a brief review of pre-calculus materials of algebra and trigonometry, functions, limits, differentiation, applications of differentiation, integration, and applications of the definite integral. Theory is presented in a style tailored for first-semester students of mathematics.

Note

Five hours recitation a week.

Repeat for Credit

N

Typically Offered

Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 216 - Calculus II**Credits 5**

An extension of MATH 215, Calculus I, to include integration, differentiation, and applications of transcendent functions.

Note

Five hours recitation a week.

Repeat for Credit

N

Typically Offered

Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 220 - Analytic Geometry and Calculus I**Credits 4**

Analytic geometry, differential and integral calculus of algebraic and trigonometric functions.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 120 OR MATH 150; OR a test score equal to or greater than MATH ACT 28 OR MATH SAT 660 OR ALEKS PPL 76 OR Accuplacer QAS 280, OR HS Precalc grade of A- or better OR HS Calc grade of B- or better.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 221 - Analytic Geometry and Calculus II**Credits 4**

Continuation of MATH 220 to include transcendental functions, techniques of integration, and infinite series.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 220 OR MATH 250 OR Calculus AB AP score of 3 or above.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 222 - Analytic Geometry and Calculus III**Credits 4**

Continuation of MATH 221 to include functions of more than one variable.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251 OR Calculus BC AP score of 3 or above.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MATH 250 - Mathematical Scholars Calculus 1**Credits 4**

A rigorous introduction to the central ideas and techniques of calculus where students will be exposed to both the computational and conceptual underpinnings of calculus including functions, graphs, limits, continuity, derivatives and integrals. Enrollment is not restricted to students in the Mathematical Scholars Program.

Note

Cannot be taken for credit if credit has been received for MATH 220. Permission of the Mathematical Scholars Director or Enrollment in the Program

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

MATH 251 - Mathematical Scholars Calculus 2**Credits 4**

A continuation of MATH 250 where students will be trained in both the computational and conceptual underpinnings of calculus including techniques of integration, transcendental functions, infinite sequences and infinite series.

Note

Cannot be taken for credit if credit has been received for MATH 221.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 250.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 312 - Finite Applications of Mathematics**Credits 3**

Systems of equations, vector operations, linear algebra, and linear programming. Practice in setting up, solving, and interpreting mathematical models which arise in social sciences and business.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 100 OR MATH 120 OR MATH 150 OR MATH 205 OR MATH 220.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 313 - Computational Number Theory**Credits 3**

Topics in number theory selected from: divisibility, primes, modular arithmetic and special types of numbers. Emphasis is on computations. Primarily for prospective elementary school teachers of mathematics.

Repeat for Credit

N

Requisites

Prerequisite: Sophomore standing, MATH 100.

Typically Offered

Spring

MATH 320 - Mathematics for Elementary School Teachers I**Credits 3**

Mathematical problem solving and reasoning, development of whole number concepts and the whole number system,

computation and estimation with whole numbers, number patterns and number theory, integers, fractions and rational numbers, decimals and real numbers, geometry and measurement.

Note

For education majors only.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 100.

Typically Offered

Fall, Spring

MATH 330 - Intuitive Geometry**Credits 3**

Geometric figures and patterns, properties of geometric figures, transformation and coordinate geometry, measurement.

Repeat for Credit

N

Requisites

Prerequisite: MATH 320.

Typically Offered

Spring

MATH 340 - Elementary Differential Equations**Credits 4**

Elementary techniques for solving ordinary differential equations and applications to solutions of problems in science and engineering.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

**MATH 350 - Mathematical Scholars Calculus
3****Credits 5**

A continuation in the sequence of courses focused on Calculus. Provides the first semester of an integrated approach to linear algebra, multivariable calculus, and ordinary differential equations with specific topics including vector spaces, linear transformations, solutions to matrix equations, dimension, rank, eigenvalues, inner products, Sylvester's Theorem, multi-linear algebra, vector valued functions, vector fields and general ordinary differential equations.

Note

Cannot be taken for credit if credit has been received for MATH 551.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 251 OR
Permission of the Mathematical Scholars Director

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

**MATH 351 - Mathematical Scholars Calculus
4****Credits 5**

A continuation in the sequence of courses focused on Calculus. Provides the second semester of an integrated approach to linear algebra, multivariable calculus, and ordinary differential equations. Students will apply knowledge from one variable calculus and linear algebra to the higher dimensional setting, but many computations will take place in the low 2 and 3 variable cases. Topics include linear ordinary differential equations, Picard's Theorem, limits and continuity in many variables, partial derivatives, optimization problems, integration of functions of several variables, Fubini's Theorem, integration of differential forms and Generalized Stokes' Theorem.

Note

Cannot be taken for credit if credit has been received for MATH 222 or 340.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 350.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MATH 395 - Academic Excellence Workshop**Credits 1-2**

This course provides enriched supplementary instruction to selected students enrolled in selected lower-division courses.

Repeat for Credit

Y

Requisites

Prerequisite: Concurrent enrollment in qualifying lower-division mathematics course and written permission of instructor.

Typically Offered

Other

MATH 399 - Honors Seminar in Mathematics**Credits 1-3**

Honors Seminar in Mathematics

Repeat for Credit

Y

Requisites

Prerequisite: Membership in honors program.

Typically Offered

Other

MATH 498 - Honors Project

Credits 3

Open only to Arts and Sciences students who are active members of the University Honors Program.

Repeat for Credit

Y

Typically Offered

Other

MATH 499 - Undergraduate Topics in Mathematics**Credits 1-18**

Reading courses in advanced undergraduate mathematics.

Repeat for Credit

Y

Requisites

Prerequisite: Background of courses needed for topic undertaken and consent of instructor.

Typically Offered

Fall, Spring, Summer

MATH 500 - Mathematical Theory of Interest**Credits 3**

Extensive introduction to the mathematical theory of interest with applications to the field of actuarial science. Prepares students to take the second professional examination administered by the Society of Actuaries and the Casualty Actuarial Society.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered

Fall

MATH 501 - Mathematical Foundations of Actuarial Science**Credits 3**

Introduction to calculus-based applications and models with an emphasis on applications to insurance. Prepares students to take the first professional examination administered by the Society of Actuaries and Casualty Actuarial Society.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 222 OR MATH 351 AND corequisite STAT 510 OR STAT 610.

Typically Offered

Spring

MATH 506 - Introduction to Number Theory**Credits 3**

Divisibility properties of integers, prime numbers, congruences, multiplicative functions.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered

Spring

MATH 510 - Discrete Mathematics**Credits 3**

Combinatorics and graph theory. Topics selected from counting principles, permutations and combinations, the inclusion-exclusion principle, recurrence relations, trees, graph coloring, Eulerian and Hamiltonian circuits, block designs, and Ramsey Theory.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered
Fall, Spring, Summer

MATH 511 - Introduction to Algebraic Systems

Credits 3

Properties of groups, rings, domains and fields. Examples selected from subsystems of the complex numbers, elementary number theory, and solving equations.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered
Fall, Spring

MATH 512 - Introduction to Modern Algebra

Credits 3

Introduction to the basic algebraic systems, viz., groups, rings, integral domains, and fields, often drawing from elementary number theory. Special emphasis will be given to methods of theorem proving.

Repeat for Credit
N

Requisites
Prerequisite: MATH 222.

Typically Offered
Fall

MATH 515 - Introduction to Linear Algebra

Credits 3

Finite-dimensional vector spaces, linear transformations and their matrix representations, dual spaces, invariant subspaces, Euclidean and unitary spaces, solution spaces for systems of linear equations.

Repeat for Credit
N

Requisites

Prerequisite: MATH 222.

Typically Offered
Spring

MATH 520 - Foundations of Analysis

Credits 3

A study of sets and sequences, neighborhoods, limit points, convergence, open and closed sets in the real line and in the plane, the concept of a continuous function.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 222 OR MATH 351.

Typically Offered
Spring

MATH 521 - The Real Number System

Credits 3

An extensive development of number systems, with emphasis upon structure. Includes systems of natural numbers, integers, rational numbers, and real numbers.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered
Fall

MATH 540 - Advanced Ordinary Differential Equations

Credits 3

First-order scalar equations: geometry of integral curves, symmetries and exactly soluble equations; existence, uniqueness and dependence on parameters with examples. Systems of first-order equations, Hamilton's equations and classical mechanics, completely integrable systems. Higher-order equations. Initial value problems for second order linear equations, series solutions and special

functions. Boundary value problems with applications.
Introduction to perturbation theory and stability.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 340 OR
MATH 351.

Typically Offered

Spring

MATH 551 - Applied Matrix Theory

Credits 3

Matrix algebra, solutions to systems of linear equations,
determinants, vector spaces, linear transformations,
eigenvalues, linear programming, approximation
techniques.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 205 OR
MATH 220 OR MATH 250.

Typically Offered

Fall, Spring, Summer

MATH 560 - Introduction to Topology

Credits 3

An introduction to the basic topological concepts.
Topological spaces, metric spaces, closure, interior, and
frontier operators, subspaces, separation and countability
properties, bases, subbases, convergence, continuity,
homeomorphisms, compactness, connectedness, quotients
and products. The course will include a brief introduction
to proof techniques and set theory. Other topics in topology
also may be included.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 222 OR
MATH 351.

Typically Offered

Spring

MATH 570 - History of Mathematics

Credits 3

A survey of the development of mathematics from ancient
to modern times.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 220 OR
MATH 250.

Typically Offered

Spring

MATH 572 - Foundations of Geometry

Credits 3

Euclidean, non-Euclidean, and finite geometries; role of
axioms; practice proving theorems in a formal system;
synthetic, metric, and transformation approaches to
Euclidean geometry.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR
MATH 251.

Typically Offered

Fall

**MATH 591 - Topics in Mathematics for
Teachers**

Credits 1-3

Topics of importance for teachers of mathematics.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

MATH 599 - Topics in Mathematics

Credits 1-3

Courses on special topics.

Repeat for Credit
Y

Typically Offered
On sufficient demand

MATH 615 - Introduction to Digital Image Processing

Credits 3

The basic ideas and techniques in digital image processing stem from mathematics, engineering, and computer science. This course focuses on ideas and techniques such as spatial filtering, frequency filtering (Fast Fourier Transform), scale filtering (Fast Wavelet Transform), and their applications to image compression standards and image recognition. This course will place equal emphasis on the mathematical ideas and their applications.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 220 OR MATH 250.

Typically Offered
Spring

MATH 620 - Convex Optimization for Data Science

Credits 3

Convex optimization is an essential tool in data science and underlies many machine learning algorithms. This course provides students with the necessary tools, skills, vocabulary, and techniques, that will allow them to become life-long users of convex optimization in the context of data analysis.

Repeat for Credit

N

Requisites
Prerequisite: Grade of C or better in MATH 222 OR MATH 351.

Typically Offered
On sufficient demand

MATH 630 - Introduction to Complex Analysis

Credits 3

Complex analytic functions and power series, complex integrals. Taylor and Laurent expansions, residues, Laplace transformations, and the inversion integral.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 222 OR MATH 351.

Typically Offered
Fall

MATH 632 - Elementary Partial Differential Equations

Credits 3

Orthogonal functions, Fourier series, boundary value problems in partial differential equations.

Repeat for Credit
N

Requisites
Prerequisite: Grade of C or better in MATH 222 AND MATH 340; OR grade of C or better in MATH 351.

Typically Offered
Spring

MATH 633 - Advanced Calculus I

Credits 3

Functions of one variable; limits, continuity, differentiability, Riemann-Stieltjes integral, sequences,

series, power series, improper integrals.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 222 OR MATH 351.

Typically Offered

Fall

MATH 634 - Advanced Calculus II

Credits 3

Functions of several variables; partial differentiation and implicit function theorems, curvilinear coordinates, differential geometry of curves and surfaces, vectors and vector fields, line and surface integrals, double and triple integrals, Green's Theorem, Stokes' Theorem, and Divergence Theorem.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 633.

Typically Offered

Spring

MATH 635 - Dynamics, Chaos, and Fractals

Credits 3

An introduction to one dimensional real and complex dynamics: attracting and repelling cycles, iterations of quadratic polynomials, bifurcation theory, chaos, Hausdorff measures and Hausdorff dimension, fractals, Julia and Fatou sets, and Mandelbrot sets.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251.

Typically Offered

Fall

MATH 655 - Elementary Numerical Analysis I

Credits 3

Error analysis, root finding, interpolation, approximation of functions, numerical integration and differentiation, systems of linear equations.

Note

Knowledge of a Programming Language

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 221 OR MATH 251; AND grade of C or better in MATH 350 OR MATH 515 OR MATH 551.

Typically Offered

Fall, Spring

MATH 656 - Elementary Numerical Analysis II

Credits 3

A continuation of MATH 655. Linear programming, numerical solutions of differential equations, and the use of standard packages for the solutions of applied problems.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or better in MATH 340 OR MATH 351; AND grade of C or better in MATH 655.

Typically Offered

Spring

MATH 670 - Mathematical Modeling

Credits 3

Introduction of modeling procedures. Case studies in mathematical modeling projects from physical, biological, and social sciences.

Repeat for Credit

N

Requisites

Prerequisite: 12 Credit hours of MATH courses level 500 or higher.

Typically Offered

Other

MATH 700 - Set Theory and Logic**Credits 3**

An introduction to logic, mathematical proof, and elementary set theory. Topics include elementary logic, relations, partitions, functions, cartesian products, disjoint unions, orders, construction of the natural numbers, ordinal and cardinal numbers, the Axiom of Choice, and transfinite induction. Special emphasis will be given to proving theorems.

Repeat for Credit

N

Requisites

Prerequisite: MATH 511 or MATH 512.

Typically Offered

Other

MATH 704 - Introduction to the Theory of Groups**Credits 3**

Introduction to abstract group theory, permutation groups, homomorphisms, direct products, Abelian groups. Jordan-Hölder and Sylow theorems.

Repeat for Credit

N

Requisites

Prerequisite: MATH 512.

Typically Offered

Other

MATH 705 - Computational Math**Credits 3**

Topics from complex analysis, vector calculus, higher-dimensional calculus, ordinary differential equations, linear algebra, and geometry of curves.

Repeat for Credit

N

Requisites

Prerequisite: MATH 222.

Typically Offered

Fall

MATH 706 - Theory of Numbers**Credits 3**

Divisibility, congruences, multiplicative functions, number theory from an algebraic viewpoint, quadratic reciprocity, Diophantine equations, prime numbers.

Repeat for Credit

N

Requisites

Prerequisite: MATH 221 and either MATH 511 or MATH 512.

Typically Offered

Fall

MATH 707 - Theory of Numbers II**Credits 3**

Continuation of MATH 706, including p-adic numbers, basic analytic number theory, geometry of numbers, and diophantine approximation.

Repeat for Credit

N

Typically Offered

Spring

MATH 710 - Introduction to Category Theory**Credits 3**

Categories, duality, special morphisms, functors, natural transformations, limits and colimits, adjoint situations, and applications.

Repeat for Credit

N

Requisites

Prerequisite: MATH 730 and MATH 770.

Typically Offered

Other

MATH 711 - Category Theory**Credits 3**

Set-valued functors and concrete categories, factorization structures, algebraic and topological functors, categorical completions, Abelian categories.

Repeat for Credit

N

Requisites

Prerequisite: MATH 710.

Typically Offered

Other

MATH 713 - Advanced Applied Matrix Theory**Credits 3**

A development of the concepts of eigenvalues by considering applications in differential equations, quadratic forms and estimation problems. Supporting topics include the Jordan canonical form, functions of matrices, vector and matrix norms, convex sets, with selected topics from the theory and application of the simplex algorithm, Markov chains, Leslie population models, Leontieff input-output model.

Repeat for Credit

N

Requisites

Prerequisite: MATH 551 or MATH 630.

Typically Offered

Summer

MATH 715 - Applied Mathematics I**Credits 3**

Analysis of numerical methods for linear algebra. Perturbation theory and error analysis, matrix factorizations, solutions to linear systems, least-squares problems, techniques for special matrix structures, symmetric and nonsymmetric eigenvalue problems, iterative and direct methods.

Note

Three hours recitation.

Repeat for Credit

N

Requisites

Prerequisite: MATH 515 or MATH 551 or equivalent.

Typically Offered

Fall

MATH 716 - Applied Mathematics II**Credits 3**

Linear operator theory applied to matrix, integral and differential equations. Spectral theory, the Fredholm Alternative, least-squares and pseudo-inverses, Banach and Hilbert space techniques, Fourier series and wavelets, theory of distributions, Green's functions.

Note

Three hours recitation.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340 and MATH 515 or MATH 551; or equivalent.

Typically Offered

Spring

MATH 721 - Introduction to Real Analysis**Credits 3**

Limits, continuity, uniform convergence, completeness, differentiation, Riemann integration.

Repeat for Credit

N

Requisites

Prerequisite: MATH 634 or graduate standing.

Typically Offered

Fall

MATH 722 - Introduction to Functions of Several Variables

Credits 3

Analysis of functions of several variables, including differentiability, partial differentiability, maxima and minima, inverse function theorem, implicit function theorem, integration, Fubini's theorem.

Repeat for Credit

N

Requisites

Prerequisite: MATH 634 or graduate standing.

Typically Offered

Spring

MATH 723 - Complex Functions**Credits 3**

Introduction to the theory of analytic functions, designed to prepare students for the qualifying exams. Holomorphic functions, contour integrals, residue theory, conformal mapping and other topics.

Note

3 hours lecture each week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 721 is recommended

Typically Offered

Spring

MATH 725 - The Mathematics of Data and Networks I**Credits 3**

Develops the mathematical tools necessary for studying and handling large datasets and networks. Includes matrix, graph, and probability theory, dimensionality reduction, clustering, maximum likelihood, Bayesian networks, sparsification, modularity, information theory, hidden Markov chains, branching processes, electrical networks, internet mathematics, random walks, random graphs, random matrices, and search algorithms.

Repeat for Credit

N

Requisites

Recommended prerequisite: Math 551, MATH 222.

Typically Offered

Fall

MATH 726 - The Mathematics of Data and Networks II**Credits 3**

II. Continuation of MATH 725. Develops the mathematical tools necessary for studying and handling large data-sets and networks. Includes matrix, graph, and probability theory, dimensionality reduction, clustering, maximum likelihood, Bayesian networks, sparsification, modularity, information theory, hidden Markov chains, branching processes, electrical networks, internet mathematics, random walks, random graphs, random matrices, and search algorithms.

Repeat for Credit

N

Requisites

Recommended prerequisite: MATH 551, MATH 222.

Typically Offered

Spring

MATH 730 - Abstract Algebra I**Credits 3**

Groups, rings, fields, vector spaces and their homomorphisms. Elementary Galois theory and decomposition theorems for linear transformations on a finite dimensional vector space.

Repeat for Credit

N

Requisites

Prerequisite: MATH 512 or consent of instructor.

Typically Offered

Fall

MATH 731 - Abstract Algebra II**Credits 3**

Continuation of MATH 730.

Repeat for Credit

N

Requisites

Prerequisite: MATH 730 or consent of instructor.

Typically Offered

Spring

MATH 740 - Calculus of Variation

Credits 3

Necessary conditions and the Euler-Lagrange equations. Hamilton-Jacobi theory, Noether's theorems, direct methods, applications to geometry and physics.

Repeat for Credit

N

Requisites

Prerequisite: MATH 722 or equivalent.

Typically Offered

On sufficient demand

MATH 745 - Ordinary Differential Equations

Credits 3

First-order equations and applications, second-order equations and oscillation theorems, series solutions and special functions, Sturm Liouville problems, linear systems, autonomous systems and phase plane analysis, stability, Liapunov's method, periodic solutions, perturbation and asymptotic methods, existence and uniqueness theorems.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340.

Typically Offered

Fall

MATH 755 - Dynamic Modeling Processes

Credits 3

Topics to include equilibrium and stability, limit circles, reaction-diffusion, and shock phenomena, Hopf bifurcation and cusp catastrophes, chaos and strange attractors, bang-bang principle. Applications from physical and biological sciences and engineering.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340 and MATH 551.

Typically Offered

Other

MATH 760 - Introduction to Probability Theory

Credits 3

An introduction to the mathematical theory of probability. Material covered includes combinatorial probability, random variables, independence, expectations, limit theorems. Markov chains, random walks, and martingales.

Repeat for Credit

N

Requisites

Prerequisite: MATH 633 and STAT 510.

Typically Offered

On sufficient demand

MATH 770 - Introduction to Topology/Geometry I

Credits 3

This is the first course of a two course sequence including definitions and examples of topological spaces, simplicial complexes, topological and smooth manifolds, quotient spaces, CW complexes, projective spaces and knots. Topological properties including elementary separation, compactness, connectedness. Homotopy, the fundamental group, Covering spaces, Euler characteristics, classification of closed surfaces, differential forms, integration, Stokes' theorem, de Rham cohomology.

Repeat for Credit

N

Requisites

Prerequisite: MATH 633.

Typically Offered

Fall

**MATH 771 - Introduction to Topology/
Geometry II**

Credits 3

The second course in a two class introduction to topology at a graduate level. Second term topics include: covering spaces, Euler characteristic, classification of closed surfaces, differential forms, integration, Stokes' theorem, and de Rham cohomology.

Repeat for Credit

N

Requisites

Prerequisite: MATH 770.

Typically Offered

Spring

MATH 772 - Elementary Differential Geometry

Credits 3

Curves and surfaces in Euclidean spaces, differential forms and exterior differentiation, differential invariants and frame fields, uniqueness theorems for curves and surfaces, geodesics, introduction to Riemannian geometry, some global theorems, minimal surfaces.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340.

Typically Offered

Other

MATH 789 - Combinatorial Analysis

Credits 3

Permutations, combinations, inversion formulas, generating functions, partitions, finite geometries, difference sets, and other topics.

Repeat for Credit

N

Requisites

Prerequisite: MATH 512.

Typically Offered

Other

**MATH 791 - Topics in Mathematics for
Secondary School Teachers**

Credits 3

Topics of importance in the preparation of secondary school teachers to teach modern mathematics.

Repeat for Credit

Y

Typically Offered

Other

MATH 799 - Topics in Mathematics

Credits .5-3

Courses on special topics to be taught on sufficient demand.

Repeat for Credit

Y

Typically Offered

On sufficient demand

**MATH 801 - Numerical Solution of Differential
Equations I**

Credits 3

Single and multistep methods for initial-value problems for ordinary differential equations; discretization and round-off error; consistency, convergence, and stability of these methods; stiff equations and implicit methods; two-point boundary value problems; initial and boundary-value problems for partial differential equations; finite difference methods; marching schemes for parabolic and hyperbolic problems; consistency, stability, convergence, and the Lax equivalence theorem; treatment of boundary conditions; boundary-value problems for elliptic equations; relaxation, alternating direction, and strongly-implicit iterative methods; nonlinear problems; finite element method.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 655 and knowledge of a programming language.

Typically Offered

Fall

MATH 802 - Numerical Solution of Differential Equations II**Credits 3**

Continuation of MATH 801.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 801.

Typically Offered

Spring

MATH 810 - Higher Algebra I**Credits 3**

Theory of groups, theory of rings and ideals, polynomial domains, theory of fields and their extensions.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 731.

Typically Offered

Fall

MATH 811 - Higher Algebra II**Credits 3**

Continuation of MATH 810.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 810.

Typically Offered

Spring

MATH 812 - Homological Algebra I**Credits 3**

Introduction to the basics of homological and cohomological delta functors with applications to specific categories. Topics include Abelian categories, functors, exactness, chain complexes and maps, cochain complexes and maps, projective and injective resolutions, left and right derived functors, homological dimension, double complexes, spectral sequences, Tor and Ext functors, cohomology of groups, Lie algebras, and Hochschild homology.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall

MATH 813 - Homological Algebra II**Credits 3**

Introduction to special homology and cohomology theories. Topics include Galois cohomology, cyclic homology, local cohomology theories, localization, derived categories, and the calculus of fractions in Abelian categories.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 812.

Typically Offered

Spring

MATH 814 - Lie Algebras and Representations I**Credits 3**

Introduction to Lie algebras. Topics include ideals, homomorphisms, nilpotent and solvable algebras, radicals,

killing forms, Cartan subalgebras, semisimple Lie algebras and root systems, classification of semisimple Lie algebras, conjugacy theorems, enveloping algebras and PBW theorems, Serre relations, and constructions of semisimple Lie algebras and their enveloping algebras.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall-Odd Years

MATH 815 - Lie Algebras and Representations II

Credits 3

Introduction to Kac-Moody algebras and their representations, Verma modules and BGG categories, and the Kac-Weyl character formula. In addition, special topics include quantum groups and their representations.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 814.

Typically Offered

Spring-Odd Years

MATH 816 - Algebraic Geometry I

Credits 3

Introduction to affine algebraic varieties over algebraically closed fields. Topics include Hilbert Nullstellensatz, Zariski topology, morphisms, differentials, smoothness, separability, and normality, algebraic and projective varieties, sheaf theory, sheaf cohomology, and vector bundles.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall

MATH 817 - Algebraic Geometry II

Credits 3

Introduction to schemes. Topics include categories, representable functors, prime spectra, algebraic schemes, separable schemes, normal schemes, proper schemes, schemes with bases, completions, formal schemes, Zariski's Theorem, Frobenius morphisms, and etale morphisms.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 816.

Typically Offered

Spring

MATH 818 - Introduction to Algebraic Groups I

Credits 3

Introduction to algebraic groups. Topics include a review of algebraic geometry on varieties and morphisms, Lie algebras of algebraic groups, actions of algebraic groups over algebraic varieties, Jordan-Chevalley decompositions, solvable and unipotent algebraic groups, radicals and unipotent radicals, Borel subgroups, and parabolic subgroups.

Repeat for Credit

N

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall-Even Years

MATH 819 - Introduction to Algebraic Groups II

Credits 3

Introduction to reductive and semisimple algebraic groups, Bruhat decompositions, flag varieties, cohomology groups of line bundles over flag manifolds, Chevalley groups and their representations, Weyl modules and classification of irreducible modules, group functors and schemes, Hopf algebras and their representations.

Repeat for Credit

N

Requisites

Prerequisite: MATH 818.

Typically Offered

Spring-Even Years

MATH 821 - Real Analysis**Credits 3**

Measure theory and integration, Lebesgue integration, L_p -spaces, Hilbert spaces, integration on product spaces, Fubini's theorem.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 721 and MATH 722.

Typically Offered

Fall

MATH 822 - Real Analysis II**Credits 3**

Measure and integration on locally compact spaces: Radon measures, the Riesz Representation Theorem. Signed measures and differentiation: Lebesgue decomposition, Radon-Nikodym theorem, Differentiation of measures. Some topics on Probability (e.g., probability measures, the Central Limit Theorem, the Law of Large Numbers) or on Harmonic analysis groups, depending on the interests of students in class

Repeat for Credit

N

Requisites

Prerequisite: MATH 821.

Typically Offered

Spring

MATH 823 - Geometric Function and Measure Theory I**Credits 3**

Topics include general measure theory, covering theorems, Hausdorff measure, area and coarea formulas, distributions, Sobolev spaces, Poincaré inequalities, embeddings theorem, changes of variables, extensions, and capacity. Applications include quasiconformal and quasiregular maps in $\mathbb{R}^n$ and analysis on fractals.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 821.

Typically Offered

Fall

MATH 824 - Geometric Function and Measure Theory II**Credits 3**

Continuation of Geometric Function and Measure Theory I.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 823.

Typically Offered

Spring

MATH 825 - Complex Analysis I**Credits 3**

Holomorphic functions, harmonic functions, the Cauchy integral theorem, normal families and the Riemann mapping theorem, and the Mittag-Leffler theorem.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 822 or consent of department.

Typically Offered

Fall

MATH 826 - Complex Analysis II**Credits 3**

Analytic continuation, the Picard theorem, H_p -spaces, elementary theory of Banach algebra, the theory of Fourier transforms, and the Paley-Wiener theorems.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 825.

Typically Offered

Spring

MATH 827 - Classical and Modern Fourier Analysis I

Credits 3

Topics include Fourier analysis on the circle, singular integrals of convolution type, Littlewood-Paley theory and multipliers, BMO and Carleson Measures, and boundedness and convergence of Fourier integrals (or singular integrals of nonconvolution type).

Repeat for Credit

Y

Requisites

Prerequisite: MATH 821.

Typically Offered

Fall

MATH 828 - Classical and Modern Fourier Analysis II

Credits 3

Continuation of Classical and Modern Fourier Analysis I.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 827.

Typically Offered

Spring

MATH 830 - Algebraic Number Theory

Credits 3

Topics include lattice theory, geometry of numbers, algebraic number fields, Dedekind domains, discrete valuation rings, ideal class group, group units, cyclotomic fields, Galois extensions.

Repeat for Credit

N

Requisites

Prerequisite: MATH 706, MATH 730.

Corequisite: MATH 731.

Typically Offered

Spring

MATH 831 - Analytic Number Theory

Credits 3

Potential topics include; prime number theorem characters, L-functions, Diophantine problems, exponential sums, p-adic analysis, Diophantine approximations, Sieve Methods, Circle method.

Repeat for Credit

N

Requisites

Prerequisite: MATH 630, MATH 633, MATH 706.

Typically Offered

Spring

MATH 840 - Differential Equations I

Credits 3

Basic ordinary and partial differential equations. First-order ordinary differential equations: symmetries and solutions in quadratures; existence, uniqueness and dependence on parameters, systems of first order equations, analysis of equilibria. Second order equations: series solutions and special functions, initial- and boundary-value problems for second-order equations. Elements of integral equations. First-order partial differential equations. Basic second-order partial differential equations: wave equations, heat equations, Poisson equation, Schrodinger equation.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 634 or MATH 745 or consent of instructor.

Typically Offered

Fall

MATH 841 - Differential Equations II**Credits 3**

Where PDEs come from. Initial and boundary-value problems. A crash course in distribution theory: different spaces of distributions, Fourier and Laplace transformations of distributions, Sobolev spaces. The Poisson equation in bounded and in exterior domains; properties of solutions of elliptic equations. The classical evolution equations revisited. Energy estimates, existence and uniqueness theorems, regularity and other properties of solutions. Simple examples of nonlinear PDEs.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 840.

Typically Offered

Spring

MATH 842 - Differential Equations III**Credits 3**

Continuation of MATH 841.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 841.

Typically Offered

Spring

MATH 843 - Advanced Probability I**Credits 3**

Review of measure theory notions specific to probability, including classical limit theorems, constructions of Brownian motion, Stochastic integration, the martingale representation theorem and martingale-based function

spaces.

Repeat for Credit

N

Requisites

Prerequisite: STAT 510 and MATH 821.

Typically Offered

Fall

MATH 844 - Advanced Probability II**Credits 3**

Topics may include stochastic processes, random matrix theory, free probability, random fractals and random analytic maps.

Repeat for Credit

N

Requisites

Prerequisite: MATH 843.

Typically Offered

Spring

MATH 852 - Functional Analysis I**Credits 3**

Topological vector spaces; locally convex spaces (Hahn-Banach Theorem, weak topology, dual pairs, Krein-Milman Theorem, theory of distributions); Banach spaces (Uniform Boundedness Principle, Open Mapping Theorem and applications, Alaoglu's Theorem, analytic vector-valued functions, Krein-Smulian Theorem); $C(X)$ as a Banach space (Stone-Weierstrass Theorem, Riesz Theorem); L_p spaces.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 821.

Typically Offered

Other

MATH 853 - Functional Analysis II

Credits 3

Banach Algebras (spectrum, Gelfand Fourier transform, holomorphic functional calculus); Hilbert spaces (geometric properties, Riesz's Theorem, projections, the adjoint); functional calculus for normal operators; compact operators (spectral properties, Min-Max Theorem, Schatten-vol Neumann classes); Fredholm operators; other operator topologies on $B(H)$; unbounded self-adjoint operators. Other topics.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 852.

Typically Offered

Other

MATH 855 - Methods of Applied Mathematics I**Credits 3**

An introduction to the mathematical techniques of problem solving in the sciences and engineering. Construction of mathematical models; problem formulation, dimensional analysis and scaling; solution methods for differential equations and difference equations; methods for obtaining approximate solutions; regular and singular perturbations methods, asymptotic series, applications to specific equations and scientific problems.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 630, MATH 633 and MATH 551.

Typically Offered

Fall

MATH 856 - Methods of Applied Mathematics II**Credits 3**

A continuation of MATH 855. Asymptotic expansion of integrals; the methods of stationary phase and steepest descent; summations of series, the Shanks transformation and the Pade fractions; boundary layer theory; the WKB and Langer approximations; the method of averaging and

the method of multiple scales.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 855.

Typically Offered

Spring

MATH 857 - Nonlinear Analysis I**Credits 3**

The course deals with studies of nonlinear operator equations, existence of their solutions, uniqueness of the solutions, numerical methods for finding solutions. Fixed point theorems, topological principles, nonlinear elliptic equations and evolution equations, ill-posed and inverse problems are discussed.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 821, MATH 822, MATH 852, MATH 853 and MATH 840 is recommended.

Typically Offered

Fall

MATH 861 - Numerical Analysis I**Credits 3**

Topics covered may include elementary functional analysis relevant to numerical analysis; numerical solution of differential or integral equations; analysis of stability and convergence; numerical linear algebra including large-scale systems; approximation theory.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 634 and MATH 655.

Typically Offered

Fall

MATH 862 - Numerical Analysis II

Credits 3

Continuation of MATH 861.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 861.

Typically Offered

Spring

MATH 864 - Theory of Ordinary Differential Equations I

Credits 3

The modern theory of ordinary differential equations including general theory and the theory of linear differential equations.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 722 and MATH 731.

Typically Offered

Fall

MATH 865 - Theory of Ordinary Differential Equations II

Credits 3

Continuation of MATH 864 to include nonlinear equations and differential equations in Banach spaces.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 864.

Typically Offered

Spring

MATH 875 - Algebraic Topology I

Credits 3

Homology and cohomology; simplicial, singular, cellular, and axiomatic theories; cup products; universal coefficient and Kunneth theorems; Hurewicz theorem in dimension one; orientation of manifolds; degree of maps spectral sequences, Whitehead's theorem.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 771, MATH 731.

Typically Offered

Fall-Even Years

MATH 876 - Algebraic Topology II

Credits 3

Continuation of MATH 875. Fibrations, cofibrations, higher homotopy groups, characteristic classes, sheaves, rational homotopy theory, simplicial objects, spectra, K-theory.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 875.

Typically Offered

Spring-Odd Years

MATH 877 - Classical and Quantum General Relativity

Credits 3

A self contained introduction to general Relativity, followed by a mathematical introduction to quantum mechanics and quantum field theory. Course culminates in review of current approaches to quantizing general Relativity.

Repeat for Credit

N

Typically Offered

Fall

MATH 881 - Differential Topology

Credits 3

Tangent spaces and tensor bundles; derivatives; inverse function theorem, Sard's theorem and applications; vector fields and flows; Morse functions; handle decompositions; embedding theorems; orientations and orientability via tangent bundles; intersection theory; cobordism theory.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 771, MATH 722.

Typically Offered

Fall-Odd Years

MATH 882 - Differential Geometry

Credits 3

Riemannian metrics, covariant derivatives, Gauss curvature, Riemann curvature; Gauss-Bonnet theorem; Exponential map and normal coordinates; The Hopf-Rinow Theorem; Jacobi fields; The Cartan-Hadamard Theorem; Ricci curvature and Myers' and Bonnet's Theorems; selected topics and Kähler geometry; symplectic topology; gauge theory.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 881.

Typically Offered

Other

MATH 890 - Riemann Surfaces

Credits 3

Introduction to Riemann Surfaces. Topics will include complex charts, complex structures, holomorphic and meromorphic maps (and functions), order of poles and zeros, covering spaces, monodromy of holomorphic maps, differential forms, DeRham cohomology groups, integration on Riemann surfaces, Čech cohomology of sheaves, compact Riemann surfaces, finite theorems, divisors and sheaves of meromorphic forms, and the Riemann-Roch Theorem.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811, and MATH 822.

Typically Offered

Spring

MATH 896 - Topics in Mathematics

Credits .5-18

Topics in Mathematics

Repeat for Credit

Y

Requisites

Prerequisite: Background of courses needed for topic undertaken and consent of instructor.

Typically Offered

Fall, Spring, Summer

MATH 897 - Seminar in Mathematics Education

Credits 1-3

Seminar in Mathematics Education

Repeat for Credit

Y

Typically Offered

Spring, Summer

MATH 898 - Master's Research

Credits 1-18

Master's Research

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MATH 899 - Thesis Topics

Credits 1-18

Thesis Topics

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MATH 920 - Theory of Groups

Credits 3

Group representations and group characters, transfer, signalizer functors, theory of pushing-up, groups of Lie type, (B, N) -pairs, chamber systems and buildings, sporadic simple groups, amalgam methods, Bass-Serre theory.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall

MATH 924 - Several Complex Variables

Credits 3

An introduction to the theory and analytic functions of several variables, domains of homomorphy and pseudoconvexity, the Levi problem, delta bar equations, Cousin problems, zeros of analytic functions, integral formulas, holomorphic mappings.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 826.

Typically Offered

Other

MATH 925 - Group Representations and Character Theory I

Credits 3

The basic topics in representation theory are covered: Schur's Lemma, irreducibility, class functions, characters, orthogonality relations, Frobenius-Schur theorem, induced characters and Frobenius reciprocity, Mackey's theorem, Clifford's theorem, exceptional characters and applications to group orders, generalized characters and Brauer's characterizations of characters.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 811.

Typically Offered

Fall

MATH 926 - Group Representations and Character Theory II

Credits 3

Depending on the interests of the students, topics may be chosen from the following: modular representations, Brauer's theory of blocks, characters of the linear groups, homologically induced representations, representations of complex Lie algebras.

Repeat for Credit

Y

Requisites

Prerequisite: MATH 925.

Typically Offered

Other

MATH 991 - Topics in Algebra

Credits 3

Selected topics in modern algebra.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 992 - Topics in Analysis

Credits 3

Selected topics in modern analysis.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 993 - Topics in Harmonic Analysis

Credits 3

Selected topics in harmonic analysis.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 994 - Topics in Applied Mathematics

Credits 3

Selected topics in applied mathematics.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 995 - Topics in Geometry

Credits 3

Selected topics in geometry.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 996 - Topics in Topology

Credits 3

Selected topics in topology.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 997 - Topics in Number Theory

Credits 3

Selected topics in number theory.

Note

Automorphic Forms and L-Functions. Consent of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MATH 999 - Research in Mathematics

Credits 1-18

Research in Mathematics

Repeat for Credit

Y

Requisites

Prerequisite: Sufficient training to carry on the line or research undertaken and consent of instructor.

Typically Offered

Fall, Spring, Summer

MC 100 - SMC Orientation

Credits 1

An overview of the curriculum electives, extracurricular activities in mass communications, the advising process, career options, and ways to improve student success.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 110 - Mass Communication in Society

Credits 3

A historical, social, legal, economic, and technological study of mass communication and its role and impact in society.

Note

Open to majors and non-majors.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Historical Perspectives

MC 120 - Principles of Advertising

Credits 3

An examination of the advertising field and its relationship to marketing and journalism.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Social Sciences

MC 130 - Writing Conventions and Mechanics

Credits 1

Reorientation to basic rules of grammar, spelling and punctuation, and assessment of student writing skills prior to admission to the A.Q. Miller School. Students must receive a "C" or better to advance in JMC curriculum.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MC 131 - Elements of Media Writing

Credits 1

The basics of Associated Press writing style and writing across media platforms. Students must receive a "C" or better to advance in JMC curriculum.

Repeat for Credit

N

Requisites

Prerequisite: MC 130 with a grade of "C" or better.

Typically Offered

Fall, Spring, Summer

MC 132 - Writing Styles and Audiences

Credits 1

Basic exposure to writing across platforms for target audiences in journalism and strategic communications. Students must receive a "C" or better to advance in JMC curriculum.

Repeat for Credit

N

Requisites

Prerequisite: MC 131 with a grade of "C" or better.

Typically Offered

Fall, Spring, Summer

MC 160 - Principles of Journalism

Credits 3

An overview of the current news industry, including legacy

media and newer platforms. Introduction to news gathering and reporting, including hands-on work on the multi-platform JMC NewsDesk.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Social Sciences

MC 165 - KSDB-FM Participation

Credits 0

Students participate in various music, news, sports, program production and other operational roles on student radio station KSDB-FM.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 166 - KKSU-TV Participation

Credits 0

Exposure to basic video production roles and participation in producing a television program for KKSU-TV.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MC 180 - Principles of Public Relations

Credits 3

Contemporary persuasive social science principles, processes, and issues involved in the management of communications between an organization and its publics.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Social Sciences

MC 190 - Topics in Journalism and Mass Communications

Credits 1-3

Selected topics in the study of mass communication practices and principles.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 191 - Audio Essentials

Credits 1

Basic audio production concepts and techniques.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MC 192 - Photography Essentials

Credits 1

Builds a working knowledge of photographic theory and practical application of photo composition, editing and production using DSLR cameras and professional photo editing software. Part of the Content Creator Studio.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 193 - Video Production Essentials

Credits 1

Basic video production practices with a focus on editing concepts.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MC 194 - Social Media Essentials**Credits 1**

Introduction to basic concepts and uses of social media for business and industry. Provides foundational knowledge of today's dynamic social media environment so that students may analyze successful social media programs within their future professions.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 195 - Creative Design**Credits 1**

Introduction to essential concepts and skills needed to create effective online visual content. Examines creative strategies, identifies content design techniques that attract attention, and builds skills in developing engaging copy and visuals. Part of the Content Creator Studio.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MC 196 - Content Management for Distribution**Credits 1**

Introduction to basic knowledge and skills needed to manage, structure, and distribute online content and measure content impact. Explores various content types to be used across multiple digital platforms and content strategies such as SEO and paid promotion to maximize visibility. Part of the Content Creator Studio.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 197 - Podcasting Essentials**Credits 1**

Introduces students to podcasting and uses hands-on instruction to teach foundational skills and principles in audio, content creation, audience understanding and podcast management.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 200 - News Reporting and Writing Across Platforms**Credits 3**

Instruction in news reporting and writing for publication across various media platforms.

Repeat for Credit

N

Requisites

Prerequisite: MC 130, MC 131, and MC 132, and MC 160 with a grade of C or better; OR MC 130, AGCOM 110 and MC 160 with a grade of C or better.

Typically Offered

Fall, Spring, Summer

MC 265 - Innovations in Media and Communication**Credits 3**

Examines new technological innovations and explores how technology in historical, legal, economic and social contexts combine to enable the changes thought of as innovations in media and communication.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 280 - Writing for Advertising & Public Relations

Credits 3

Examines various forms of advertising and public relations writing techniques, with special emphasis on creation of tactical messages for different media and audiences utilizing persuasion, engagement and professionalism.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 290 - Topics in Mass Communications

Credits 1-3

Selected topics in the study of mass communication principles and practices.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MC 301 - Photo & Video Storytelling

Credits 3

Explores the power of journalistic storytelling through professional still and moving images. Develops skills in shooting and retouching photographs for a wide range of genres, creating videos for commercial and journalistic applications, and developing a workflow while building your storytelling portfolio.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 306 - Photographic Storytelling

Credits 3

Equips students with the skills necessary to excel in the modern journalism landscape. Students will delve into

theoretical concepts and practical applications related to digital photography composition, editing, and workflow for convergent media. Through a blend of classroom study and hands-on experience, students will learn fundamental principles and techniques in photography, photographic copy style writing, photo editing, workflow, software, and camera operations.

Repeat for Credit

N

Typically Offered

Fall or Spring

MC 310 - What's the Score? Sports Media in Society

Credits 3

Considers the role of sports and how the way they are covered and portrayed in the media plays a role in society. Examines how gender, race and other identities are reflected in sports coverage and fandom.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Social Sciences

MC 316 - Interactive Journalism Design

Credits 3

Fosters AI literacy and the understanding of its potential and implications for the media industry and news production. Builds on the foundations of news storytelling, data analytics and adds interactivity techniques to help students tell dynamic journalistic stories.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MC 331 - Photography Commercial Imaging

Credits 3

Introduces advanced photography and commercial imaging techniques. Builds skill in producing professional images in commercial settings. Examines principles of lighting, photo/video editing, workflow, and monetization of work and portfolio.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 332 - Photography and Digital Storytelling Abroad**Credits 3**

Participants in this study abroad program will learn basic digital photography and profile writing techniques through the experience of meeting and telling the stories of those who live and work in Orvieto, Italy. Students will create an online platform to share their stories with the rest of the world. They will come away with a professional style portfolio piece, as well as a deeper understanding of the stories and customs of a different country.

Note

This course is targeted specifically for study abroad students.

Repeat for Credit

N

Typically Offered

Summer

MC 340 - Editing for Print and Online Media**Credits 3**

Fundamentals of micro and macro journalistic editing for print and digital media including industry standards, practices, and ethics.

Repeat for Credit

N

Requisites

Prerequisite: MC 200, or MC 221, or MC 280 with a grade of C or better.

Typically Offered

Fall

MC 341 - Immersive Digital Storytelling**Credits 3**

Builds on theories and concepts of visual communication. Uses special equipment and software programs to introduce concepts and build skills in brainstorming, sketching, filming, modeling, editing, producing visual effects and immersive experiences, and distributing extended reality (XR) stories for both traditional and emerging media platforms.

Repeat for Credit

N

Requisites

Recommended Foundation Course: MC 316

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MC 345 - Application of Layout and Printing techniques in Agriculture and Natural Resources**Credits 3**

Advances students' understanding of how industry-adopted software and hardware are used to develop print media, from individual use to integrating a variety of software and hardware in production.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: AGCOM 210 or MC 341

Typically Offered

Fall

Crosslisted

AGCOM 345

MC 360 - Theories in Strategic Communication

Credits 3

An examination of persuasion and behavior change theories as applied to advertising and public relations messages.

Repeat for Credit

N

Requisites

Prerequisites: MC 120 or MC 180 with a C or better, or instructor permission.

Typically Offered

Fall, Spring, Summer

MC 365 - Writing in the Digital Economy

Credits 3

Examines writing in an information and attention economy from a globalized digital perspective. Along with brief introductions to economic theory, the course will discuss and debate the role of writers and content producers within the context of digital delivery and distribution. No prior experience with economic theory is needed.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 370 - Social Media in Strategic Communications

Credits 3

Strategic methods and approaches for messaging via social media platforms.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MC 374 - Social Media Content Development

Credits 3

Builds skills in translating ideas into authentic, interactive and meaningful social media content through compelling imagery, video, design, and writing. Covers tools and techniques needed to develop a social media content roadmap for creating engaging content across multiple platforms.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 375 - Social Media Influencing & Personal Branding

Credits 3

Develops skills in working with social media influencers and building personal influence. Examines concepts related to building and analyzing personal brands, creatively designing influencer campaigns, engaging and persuading online audiences, and understanding the legalities of influencing.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 390 - Topics in Journalism and Mass Communications

Credits 1-3

Selected topics in the study of mass communications practices and principles.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 396 - Research for Advertising and Public Relations

Credits 3

Examines how research data and insights inform successful advertising and public relations strategy. Explores concepts and skills in research methods, database analysis, results communication and visualization, and research-strategy connection.

Repeat for Credit

N

Typically Offered

Fall, Spring

MC 399 - Honors Seminar in Mass Communications

Credits 3

Honors Seminar in Mass Communications

Repeat for Credit

N

Requisites

Prerequisite: Honors students only.

Typically Offered

Other

MC 403 - Advanced Reporting and Writing Across Platforms

Credits 3

Intensive course emphasizing advanced reportorial principles and practices for multiple media platforms.

Repeat for Credit

N

Requisites

Prerequisite: MC 200 with grade of C or better; majors have priority, others by department consent.

Typically Offered

Fall, Spring

MC 405 - Perfect Podcasting

Credits 3

Focuses on the history, form, and functions of podcasting as a mass communication tool that is increasingly replacing

broadcast radio as America's audio delivery system of choice.

Note

Nonfictional and fictional narratives, spoken word content, public service, current events-based reports, music, and a variety of "chum casts"—just a few of podcasting's ever-developing art forms—will be unpacked, demonstrated, and practiced.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 406 - Multiplatform News Reporting

Credits 3

Advanced techniques of reporting, writing, and producing news for audio, video, and Web-related media.

Repeat for Credit

N

Requisites

Prerequisite: MC 301 with grade of C or better; majors have priority, others by department consent.

Typically Offered

Fall, Spring

MC 409 - Advanced Strategic Communications Writing

Credits 3

Strategic aspects of public relations writing and messaging through advanced types of client communications projects.

Repeat for Credit

N

Requisites

Recommended Prerequisite: MC 280 with a C or better.

Typically Offered

Fall, Spring, Summer

MC 410 - Sports Reporting

Credits 3

The study of today's sports media environment with an emphasis on reporting, writing, and producing sports stories for audio, video, print, Internet, and other platforms.

Repeat for Credit

N

Requisites

Prerequisite: MC 301 with a grade of C or better.

Typically Offered

Fall, Spring

MC 416 - Photojournalism**Credits 3**

The materials, principles, and processes of photography directed toward visual reporting in newspapers, magazines and other media.

Note

Lectures, demonstrations and laboratory.

Repeat for Credit

N

Requisites

Prerequisite: MC 331 with grades of C or better; majors have priority, others by department consent.

Typically Offered

Fall, Spring

MC 426 - Magazine Writing, Editing and Design**Credits 3**

Preparation of feature stories and articles for *Update* magazines and other publications; techniques of market analysis, and marketing of articles written in course.

Repeat for Credit

N

Requisites

Prerequisite: MC 200 with a grade of C or better; majors have priority, others by department consent.

Typically Offered

Fall, Spring

MC 436 - Magazine Production**Credits 3**

The practical application of theory to writing, editing, graphic reproduction, layout and management of magazines.

Repeat for Credit

N

Requisites

Prerequisite: MC 403.

Typically Offered

Spring

MC 445 - Digital Brand Strategy**Credits 3**

Exploration of modern digital brand strategy, focusing on the latest approaches to digital advertising, the influence of AI, implementation, and evaluation.

Repeat for Credit

N

Typically Offered

Spring

MC 446 - Media Planning**Credits 3**

Builds skills in creating and executing a media plan according to advertising/public relations business goals. Develops skills in multi-media strategy - digital, mobile, social media, tv, audio streaming, radio and print media - based on research and industry trends. Uses simulation software and covers up-to-date digital tools in media planning.

Repeat for Credit

N

Requisites

Prerequisite: MC 120 or MC 180 with a grade of C or better

Typically Offered
Fall, Spring, Summer

MC 451 - Health Communication

Credits 3

Developing strategy and messages in health communication campaigns.

Repeat for Credit
N

Requisites
Recommended Prerequisite: Sophomore standing or consent of instructor.

Typically Offered
Fall, Spring, Summer

MC 466 - Media Law and Ethics

Credits 3

A study of the legal and ethical issues relating to media, strategic communications and personal media use. Emphasis on defamation, privacy, copyright, administrative controls and other legal areas. Includes a study of ethics in the media, perfect and imperfect ethical duties, and situational ethical decision making.

Repeat for Credit
N

Requisites
Prerequisite: Junior or instructor permission.

Typically Offered
Fall, Spring

K-State 8
Ethical Reasoning and Responsibility

MC 469 - Drone Photography and Video

Credits 3

Techniques and procedures to use a Small Unmanned Aerial System (Drone) to acquire and produce video and photographic data that can be used for storytelling, advertising, short film, public relation and other media related analyses.

Repeat for Credit
N

Requisites
Prerequisite or Corequisite: UAS 115, Junior standing.

Typically Offered
Fall, Spring, Summer

MC 470 - Account Management

Credits 3

Examines the role of account managers in modern advertising agencies.

Repeat for Credit
N

Requisites
Prerequisite: MC 221 or MC 280 with a C or better is recommended.

Typically Offered
Fall, Spring, Summer

MC 471 - Advanced Production

Credits 3

Emphasis on aesthetics of audio and video writing, producing, directing, sound recording, lighting, camera work, editing, mixing, and distribution.

Note
Field and studio assignments.

Repeat for Credit
N

Requisites
Prerequisite: MC 331 or MC 406 with grade of C or better; majors have priority, others by department consent.

Typically Offered
Fall, Spring

MC 472 - Multiplatform News Production

Credits 3

An advanced production course that emphasizes producing and directing techniques for news and other information-

oriented programming.

Repeat for Credit

N

Requisites

Prerequisite: MC 406 with a grade of C or better or instructor permission. Majors have priority, others by department consent.

Typically Offered

Other

MC 474 - Social Media Management Simulation Lab

Credits 2

Uses simulation software to build experience in running a social media campaign for a business. Develops skills in multiple areas of campaign management, including content creation, budget management, impact analysis, and decision-making.

Repeat for Credit

N

Requisites

Prerequisite: MC 370 Social Media Management & Strategy

Typically Offered

Fall, Spring

MC 475 - Military Strategic Communications

Credits 3

An examination of the U.S. military in terms of operational and communication issues and its overall relationship with the media.

Repeat for Credit

N

Requisites

Prerequisite: MC 482 with a C or better or instructor consent.

Typically Offered

Fall

MC 477 - Travel and Tourism Strategic Communications

Credits 3

The role and function of advertising and public relations in travel and tourism, focusing on the development of communication strategies and tactics.

Repeat for Credit

N

Requisites

Prerequisites: MC 120 or MC 180, or instructor consent.

Typically Offered

Fall

MC 478 - Entertainment and Strategic Communications

Credits 3

Strategic communications in the entertainment industry and the role that practitioners play in the development of strategies, message development, and management

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Social Sciences

MC 479 - Strategic Communications and Sports

Credits 3

Understanding the role public relations and strategic communication play in sports. Defining strategic communication, developing communication strategy, evaluating communication channels and messages. Provides students with public relations management tools.

Repeat for Credit

N

Typically Offered

Fall

MC 482 - Ideation, Strategy and Planning for Advertising and Public Relations

Credits 3

Develops advertising and public relations skills in long-term planning, strategy, creativity, research, and meaningful evaluation and measurement. Examines concepts such as strategic planning, effective message creation, and project management.

Repeat for Credit

N

Requisites

Prerequisite: MC 280 with a grade of C or better.

Typically Offered

Fall, Spring

MC 485 - Media Practicum

Credits 1

Practical work in student media operations of the school under supervision of an instructor, preparing students for work in the various media industries. Topics include newspaper, radio, yearbook, and video.

Note

One hour of credit per semester, which equals a total of 120 work hours supervised by the instructor. Enrollment requires a study and work plan approved by the instructor of record.

Repeat for Credit

Y

Requisites

Prerequisite: Instructor permission. Recommended Foundation Course: MC 200, MC 301, or MC 406

Typically Offered

Fall, Spring, Summer

MC 490 - Topics in Journalism and Mass Communications

Credits 1-3

Selected topics in the study of mass communications practices and principles.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 491 - Mass Communication Internship

Credits 1-3

Supervised professional experience; reports from student and supervisor required.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor and specified MC courses. Journalism: MC 301; Strategic Communications: MC 221 or MC 280; majors have priority, others by department consent.

Typically Offered

Fall, Spring, Summer

MC 498 - Media Portfolio

Credits 3

Emphasis on enhancement of creative concepts, personal branding and portfolio development.

Repeat for Credit

N

Requisites

Prerequisite: MC 341 or instructor consent.

Typically Offered

Fall

MC 499 - Honors Project

Credits 3

Open only to Arts & Sciences students who are active members on the University Honors Program.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MC 506 - Social Media News Strategies

Credits 3

Social media is an ever-changing and important part of journalism today. Learn strategies, tips and techniques to be job-ready for to maximize social media strategies, from both sides of the communications pathway, journalism and strategic communications.

Repeat for Credit

N

Typically Offered

Intersession

MC 541 - Media Audiences

Credits 3

Explores the meaning of the term "audience" and how it has undergone significant historical shifts, evolving from simply viewers to now consumers, producers, participants and performers. Topics covered include audience history and theory, audience measurement, media fandom and audience subcultures.

Note

Retake rules apply when student reenrolls.

Repeat for Credit

N

Typically Offered

Spring

MC 564 - History of Mass Communication

Credits 3

Growth and development of media and media technology in the United States and their economic, political and social significance.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall, Spring

MC 565 - Going Mobile!

Credits 3

Builds knowledge of the rapidly increasing mobile media ecosystem; techniques to attract, engage and monetize mobile consumers; and ways to create learning platforms for community and organizational advocacy. Develop skills in campaign development, content creation, and impact evaluation in a mobile media context.

Repeat for Credit

N

Requisites

Prerequisite: CC 410

Typically Offered

Fall, Spring

MC 573 - Ethics in Mass Communication

Credits 3

Making ethical decisions in mass media fields and the principles on which those decisions are based.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall, Spring

MC 576 - Mass Communications and Political Campaigns

Credits 3

The roles of journalism, advertising and public relations in political campaigns. Examines campaign communication strategies, staffing, and the role of political consultants. Analyzes how voter decision making is affected by mass communications and how voters develop attitudes about candidates and issues.

Repeat for Credit

N

Requisites

Prerequisite: Either MC 200, MC 211, MC 221, or MC

280.

Typically Offered

Other

Crosslisted

POLSC 576

K-State 8

Social Sciences

MC 580 - Storytelling Across Platforms

Credits 3

Reporting, writing, and production across multiple platforms. Critical analysis of media and engagement strategies for reporting in a digital world.

Repeat for Credit

N

Requisites

Prerequisite: MC 403, MC 406, MC 416 or MC 426 and senior standing.

Typically Offered

Fall, Spring

MC 581 - Campaigns in Advertising and Public Relations

Credits 3

Implements skills learned in coursework, internships, job experiences, and elsewhere to experience all aspects of strategic communications planning in an applied environment with a client. Capstone course for the Advertising and Public Relations degree.

Repeat for Credit

N

Requisites

MC 396 and MC 482 with a grade of C or better.

Typically Offered

Fall, Spring

MC 585 - Media Management

Credits 3

Issues, ethics and practices in managing media companies, with special emphasis on problems and practices in converged media operations.

Note

100% Lecture

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

MC 589 - Issues in Mass Communication

Credits 1-3

Advanced topics in mass communication practices and principles.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MC 605 - Supervision of School Publications

Credits 3

A methods course for those planning to teach secondary or community college journalism courses and advise high school or community college publications.

Repeat for Credit

N

Typically Offered

Summer

MC 612 - Diversity in Media

Credits 3

Explores diversity issues in the media, including the nature of mass media's portrayal of gender, race, ethnicity, sexuality, sexual orientation and class in entertainment, news, advertising, public relations, and other media.

Repeat for Credit

N

Typically Offered

Spring

MC 623 - Communicating in Global Markets**Credits 3**

Issues associated with advertising in a global environment, including cultural impact, international media, regulation, ethics and digital media technologies.

Repeat for Credit

N

Requisites

Prerequisite: MC 120 OR MC 180, with a grade of C or better.

Typically Offered

Fall, Spring

K-State 8

Global Issues and Perspectives

MC 680 - Readings in Mass Communications**Credits 1-3**

Investigation of the literature of mass communications.

Note

Three significant books per credit hour with written analysis and oral presentation.

Repeat for Credit

Y

Requisites

Prerequisite: Senior or graduate standing and consent of supervisory instructor.

Typically Offered

Other

MC 682 - Seminar in Public Relations**Credits 3**

Contemporary topics in public relations practice, theory,

and research.

Repeat for Credit

Y

Requisites

Prerequisite: MC 280, MC 482, MC 502 with grades of C or better.

Typically Offered

Other

MC 683 - Reputation Management**Credits 3**

Managing the public perception of organizations from the standpoint of preparing for issues and unforeseen emergencies that can potentially disrupt the relationship between organizations and the publics they serve.

Repeat for Credit

N

Requisites

Recommended Prerequisites: MC 482.

Typically Offered

Fall, Spring, Summer

MC 690 - Problems in Mass Communications**Credits 1-4**

Problems in Mass Communications

Repeat for Credit

Y

Requisites

Prerequisite: Background of courses needed for problem undertaken.

Typically Offered

Other

MC 701 - Proseminar in Mass Communication**Credits 1**

Introduction to advanced study in mass communication with special emphasis on requirements for obtaining the

master of science degree.

Repeat for Credit

N

Typically Offered

Fall

MC 710 - History of Mass Communications

Credits 3

Growth and development of the news media and mass communication media and systems in the United States and their economic, political, and social significance.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission with a 2.5 GPA and completion of a United States history course.

Typically Offered

Fall

MC 712 - Environmental Communications

Credits 3

Combines theoretical discussions with practical experience regarding communications about environmental issues and provides introduction to natural and applied science topics related to the communications plan.

Note

Three hours lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing.

Typically Offered

Spring-Even Years

Crosslisted

AGCOM 712

MC 720 - Ethics in Mass Communications

Credits 3

Moral analysis, argument, and decision making by the mass communicator.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission with a 2.5 GPA and completion of a philosophy course.

Typically Offered

Fall, Spring

MC 725 - International Communications

Credits 3

Comparative study of world media systems and the role of mass communications in national development.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission with a 2.5 GPA.

Typically Offered

Fall

MC 730 - Seminar in Issues of the Media

Credits 3

A study of philosophical and technological advances in mass communications with emphasis on projected patterns of future growth and development.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing or instructor permission with a 2.5 GPA.

Typically Offered

Other

MC 740 - Colloquium in Mass Communications

Credits 1-3

Discussion of selected topics in mass communications research and practice.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing or instructor permission.

Typically Offered

Other

MC 745 - Seminar in Mass Communication Law**Credits 3**

Analysis of mass communication freedoms and limitations in such areas as defamation, privacy, copyright, censorship, obscenity, and advertising and electronic media regulation.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Spring

MC 750 - Strategic Health Communication**Credits 3**

The role of effective communication through mass media and other communication strategies in health promotion and behavior change. Includes the theories and strategies used to promote public health messages, services or products for multicultural audiences, with a focus on human, environment and animal health. Legal, ethical issues and gender issues in health communication will be given special attention.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission with a 2.5 GPA.

Typically Offered

Spring

MC 760 - Issues, Risk, and Reputation**Credits 3**

Promotes understanding of strategic communication and media as tools to prepare for, respond to, and recover from threats to organizational and brand reputation.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission.

Typically Offered

Fall

MC 765 - Communication Theory**Credits 3**

An examination of major communication theories as they relate to mass communications.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing, or instructor permission with 2.5 GPA.

Typically Offered

Fall

MC 770 - Mass Communication Practicum**Credits 1-4**

Supervised practical work in professional mass communications settings, including laboratory investigation, field work, internships, and applied workplace research.

Note

Instructor consent required.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

MC 780 - Research Methods in Mass Communications

Credits 3

Survey of research methods used in the study of the mass media.

Repeat for Credit
N

Requisites
Prerequisite: For graduate students.

Typically Offered
Other

MC 782 - Strategic Communications Management

Credits 3

Study of various forms of communication management and strategies that further the objectives of an organization, including organizational communication, marketing communication, and public relations.

Repeat for Credit
N

Typically Offered
Fall

MC 799 - Independent Study in Mass Communication

Credits 1-3

Supervised independent study in mass communication. Requires contractual agreement between student and professor, specifying content, meeting times, and credits to be awarded.

Repeat for Credit
N

Requisites
Prerequisite: Graduate standing, instructor consent.

Typically Offered
Fall, Spring, Summer

MC 801 - Advanced Research Methods: Qualitative

Credits 3

Introduction to qualitative methods, analysis, interpretation, and writing in media-related fields, and how qualitative inquiry contributes to theory construction in mass communication.

Repeat for Credit
N

Requisites
Prerequisite: Graduate Standing.

Typically Offered
Fall

MC 820 - Digital Media Audiences and Analytics

Credits 3

Theories and concepts related to digital audiences in mass communication, content strategies, and how media audiences are formed, analyzed, and measured in the digital age.

Repeat for Credit
N

Typically Offered
Spring

MC 830 - Media and Community Engagement

Credits 3

Explores the role of media in increasing civic engagement and public participation, enabling the exchange of useful information, and fostering social connectivity to strengthen citizen agency and the overall democratic process.

Repeat for Credit
N

Typically Offered
Spring

MC 840 - Social Media Data Visualization

Credits 3

Familiarizes students with social-scientific methods for large-scale social-media data analysis and visualization, including the application of relevant user and concept networks, content categorizations, and sentiment analysis. In addition, the use of germane software in emerging and digital media research is developed.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing or instructor permission.

Typically Offered

Fall

MC 850 - Applied Research in Mass Media

Credits 3

Study and application of mass media research, its literature, and methodology.

Repeat for Credit

Y

Requisites

Prerequisite: MC 780.

Typically Offered

Other

MC 899 - Research in Mass Communications

Credits 1-18

Research in Mass Communications

Note

Thesis/report credit.

Repeat for Credit

Y

Requisites

Prerequisite: Sufficient training to carry on the line of research undertaken.

Typically Offered

Other

ME 101 - Introduction to Mechanical Engineering

Credits 2

Introduction to the mechanical engineering curriculum and profession. Orientation for successful transition of new students to college life. Engineering approach to problem solving and computer use in all areas of mechanical engineering. Exchange of information regarding academic, technical, social, ethical, and professional matters between students, faculty, and practicing professionals.

Note

Must be taken during the student's first eligible fall or spring semester in mechanical engineering.

Two hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent enrollment: MATH 220.

Typically Offered

Fall, Spring

ME 212 - Engineering Graphics

Credits 2

Technical sketching, study of basic principles of projective geometry, multiview drawings, pictorials, reading and interpreting drawings, CAD, sectioning, dimensioning.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Pre/Corequisite: MATH 220 - Calculus I OR MATH 205 - General Calculus Recommended Prerequisite: Plane geometry.

Typically Offered

Fall, Spring

ME 310 - Elements of Thermodynamics

Credits 2

Properties of pure substances. The first law of thermodynamics for open and closed systems. A brief introduction to the second law of thermodynamics.

Note

For Civil and Environmental Engineering Majors

Repeat for Credit

N

Requisites

Prerequisite: PHYS 213, MATH 221

Typically Offered

Fall, Spring

ME 312 - Advanced Engineering Graphics

Credits 3

Advanced 3D CAD features and solid modeling techniques including an introduction to sheet metals, multi-body parts, weldments, etc. Advanced SolidWorks features such as creating configurations from other configurations, deformed features, surfacing and Macros will be introduced.

Repeat for Credit

N

Requisites

Prerequisite: ME 212

Typically Offered

Summer

ME 390 - Topics in Mechanical Engineering

Credits 1-18

Topics selected in consultation with instructor. Intended for interdisciplinary studies or innovative studies in mechanical engineering.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

ME 400 - Computer Applications in Mechanical Engineering

Credits 3

The development and application of computer techniques to the problems of design and analysis in mechanical engineering, including computer programming (abstraction and problem solving; algorithms; control structures; input/output; functions; arrays and array processing).

Note

Two hours lecture a week and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: MATH 340.

Typically Offered

Fall, Spring

ME 497 - Undergraduate Research Experience

Credits 0-3

Open to students pursuing undergraduate research projects.

Repeat for Credit

Y

Typically Offered

Fall, Spring

ME 499 - Honors Research in Mechanical Engineering

Credits 1-18

Individual research problem selected with approval of faculty advisor. Open to students in the College of Engineering honors program. A report is presented orally and in writing during the last semester.

Repeat for Credit

Y

Typically Offered

Fall, Spring

ME 500 - Robotics Programming and Design**Credits 3**

Application of mechanical engineering design and embedded programming techniques to design, build, and control a robotic system. Focus on robotic kinematics, differential motion, and trajectory planning to support the programming and design of a 3-axis pick and place machine. Robotic theory will be implemented using C++ deployed on an embedded system with the goal of implementing a complete and functional pick and place system.

Repeat for Credit

N

Requisites

Prerequisite: (ME 400 or ECE 241)

Typically Offered

Fall

ME 512 - Dynamics**Credits 3**

Vector treatment of kinematics, Newton's Laws, work and energy, impulse and momentum, with applications to problems of particle and rigid body motion.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: CE 333. Prerequisite or concurrent: MATH 340.

Typically Offered

Fall, Spring, Summer

ME 513 - Thermodynamics I**Credits 3**

Properties of the pure substance. The first and second laws

of thermodynamics. Gas mixtures and psychrometry.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 213; MATH 221.

Typically Offered

Fall, Spring, Summer

ME 519 - Electrical Circuits for Mechanical and Nuclear Engineering**Credits 3**

Analysis, design, construction, and application of electric and electronic circuits using analytic tools, fundamentals of common components, instrumentation, and computer-based tools.

Note

Three hour of lecture per week ending after week 10. Three hours of lab per week for the entire semester.

Repeat for Credit

N

Requisites

Prerequisites: PHYS 214, MATH 340, and MATH 551.

Typically Offered

Fall, Spring

ME 523 - Thermodynamics II**Credits 3**

Continuation of Thermodynamics I. Energy analysis, thermodynamic cycles, generalized thermodynamic relations, and reactive systems.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 513.

Typically Offered

Fall, Spring

ME 532 - Experimental Strength of Materials**Credits 3**

The experimental investigation of engineering materials used in the fabrication of products including metals, polymers, ceramics, composites, and elastomers. Provides basic knowledge in material science and inherit material properties such as elastic modulus, yield strength, toughness, etc., so students can solve real engineering problems and design engineering structures/systems.

Note

Two hours of lecture per week. One three hour lab per week.

Repeat for Credit

N

Requisites

Prerequisite: CHE 354, CHE 355, CE 533

Typically Offered

Spring

ME 533 - Machine Design I**Credits 3**

Introduction to the design and analysis of machine elements. Emphasis on materials, loads, stress, strain, deflection, failure theories, and finite element analysis. Applications include design and analysis of shafts, gears, and fasteners, weldments, springs, bearings.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: CE 533, ME 212 and ME 512.

Typically Offered

Fall, Spring

ME 535 - Measurement and Instrumentation Laboratory**Credits 3**

Theory and application of mechanical engineering measurements, instrumentation, and computer-based data acquisition.

Note

One hour recitation and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 513 and (ECE 519 or ME 519)

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

ME 543 - Intermediate Mechanics of Materials**Credits 3**

Fundamental principles of mechanics and its application to design and analysis of engineering structures. Topics covered include stress and strain, elastic and inelastic properties of materials, composite structures, unsymmetric bending, thin-walled structures and energy methods in structural analysis.

Repeat for Credit

N

Requisites

Prerequisite: CE 533

Typically Offered

Fall

ME 563 - Machine Design II**Credits 3**

Design and analysis of machine elements. Applications include design and analysis of bearings, gears, shafts, clutches, brakes, belt and chain drives, and hydraulic fluid power.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 533.

Typically Offered

Fall, Spring

ME 570 - Control of Mechanical Systems I**Credits 4**

Introduction to modeling and control of dynamic systems encountered by Mechanical Engineers. Topics include basic linear systems modeling and analysis; feedback control; time response and stability of dynamic systems; introduction to root locus and frequency response design.

Note

Three hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340, ME 400, and ME 512.

Prerequisite or concurrent enrollment: ME 535.

Typically Offered

Fall, Spring

ME 571 - Fluid Mechanics**Credits 3**

Physical properties; fluid statics; dynamics of ideal and real fluids (for incompressible and compressible flow); impulse and momentum; laws of similitude; dimensional analysis; flow in pipes; flow in open channels; flow about immersed objects.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 512 or CE 530, and MATH 222.

Prerequisite or concurrent: ME 513 or ME 310

Typically Offered

Fall, Spring, Summer

ME 573 - Heat Transfer**Credits 3**

Fundamentals of conduction, convection, and radiation; principles of heat exchanger design and dimensional analysis.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 400, ME 571, MATH 340.

Typically Offered

Fall, Spring

ME 574 - Interdisciplinary Industrial Design Projects I**Credits 3**

Introduction to design theory, project management, team dynamics and socio-economic context of design, etc.; Application of design principles, engineering analysis and experimental methods to an interdisciplinary design project involving design, analysis, fabrication and testing. Discussion of ethics, technical/professional societies, and engineering licensing.

Repeat for Credit

N

Requisites

Prerequisite: ME 535, ME 533, ME 571.

Prerequisite or concurrent enrollment: ENGL 200, or instructor approval.

Typically Offered

Fall, Spring

ME 575 - Mechanical Engineering Capstone Design**Credits 3**

In-depth application of design principles, engineering analyses and experimental methods to an industrial project addressing design, analysis, constraints, standards, fabrication, and testing.

Repeat for Credit

N

Requisites

Prerequisite: ME 574 or instructor permission.

Typically Offered

Fall, Spring

ME 610 - Finite Element Applications in Mechanical Engineering

Credits 3

The application of the finite element method to the solution of engineering problems. Topics include introductions to the methods, linear elastic stress analysis, thermal analysis, and modeling limitations and errors. Commercial computer codes are used in the applications.

Repeat for Credit

N

Requisites

Prerequisite: CE 533.

Typically Offered

Fall, Spring

ME 615 - Applications in Mechatronics

Credits 3

Application of Mechanical and Electronic engineering to design. Microcontrollers; sensors; analog-to-digital signal conversion; DC motor operation and pulse width modulation; drive train configuration; embedded C programming; competition at Engineering Open House.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 400 or ECE 431. Corequisite: ME 535 (not required if ECE 431 is taken).

Typically Offered

Spring

ME 620 - Internal Combustion Engines

Credits 3

Application of principles of thermodynamics, fluid mechanics, chemistry, kinematics, and heat transfer to internal combustion engine processes. Performance and design characteristics of internal combustion engines.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 523.

Typically Offered

Fall

ME 622 - Indoor Environmental Engineering

Credits 3

Ventilation, heating and cooling system design for buildings. Application of thermodynamic, heat transfer, and fluid mechanics principles for determination of building heating and cooling loads. Determination of ventilation requirements. Sizing, design and integration of environmental control systems.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 571.

Typically Offered

Spring

ME 626 - Introduction to Micro-Electromechanical Systems

Credits 3

MEMS (micro-electromechanical systems) adapt the fabrication techniques and materials of semiconductor IC (integrated circuits) chips to make mechanical components, like cantilever beams, hinges, micromotors, micromirrors and microfluidic chips. In this course, the fabrication, design, and application of MEMS will be covered. Students will gain the knowledge of MEMS that combines interdisciplinary subjects of mechanical, electrical, and chemical engineering and material sciences.

Note

A student may take either ME 626 or ME 826 for credit, but not both.

Repeat for Credit

N

Typically Offered

Fall

ME 627 - Introduction to Biomedical Micro-Electromechanical Systems

Credits 3

BioMEMS and microfluidics handle minute amount of liquids (microliter to picoliter) and bio-objects (DNA, protein, and cell). The course will cover (1) unique sciences of microfluidics, (2) liquid and bio-object manipulating principles, (3) design and manufacturing of microfluidic and biosensing devices, and (4) application in in vitro (out of body) diagnosis, 3D bioprinting, origami, and tissue engineering.

Note

A student may take either ME 627 or ME 827 for credit, but not both.

Repeat for Credit

N

Typically Offered

Spring

ME 628 - Aerodynamics

Credits 3

A general introduction to aerodynamics including the analysis of lift, drag, thrust, and performance for subsonic aircraft, and the application of aerodynamic principles to design.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 571, MATH 340.

Typically Offered

Fall

ME 631 - Aircraft Propulsion

Credits 3

Mechanics and thermodynamics of aircraft propulsion systems; gas turbine aircraft engines; applied compressible flow; performance and design of propulsion systems.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 523, 571, MATH 340.

Typically Offered

Spring

ME 633 - Thermodynamics of Modern Power Production

Credits 3

The first and second law analysis of modern stationary power systems using fossil, nuclear, and renewable energy sources. Component and system design, such as cycle design, load factor, and auxiliaries are considered in conjunction with their costs.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 523.

Typically Offered

Fall

ME 640 - Control of Mechanical Systems II**Credits 3**

Design and analysis of control systems. Topics include linear and nonlinear systems modeling; parameter estimation/system identification; steady state errors; advanced root locus and frequency response design; controller implementation.

Note

Two hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 570 and MATH 551.

Typically Offered

Fall

ME 651 - Introduction to Composites**Credits 3**

Design, fabrication and testing of various composite materials. Analyses of mechanical properties of laminated composites.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: CE 533 and senior standing in engineering.

Typically Offered

Fall

ME 656 - Mechanical Vibrations**Credits 3**

A general consideration for the formation and analysis of free and forced vibration of mechanical systems of single and multiple degrees of freedom.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 512 and MATH 340.

Typically Offered

Spring

ME 661 - Introduction to Nanoscience and Nanotechnology**Credits 3**

This interdisciplinary course will cover basic areas of nanotechnology, which includes synthesis of various nanomaterials (0D, 1D and 2D nanostructure), mechanical property assessment (hardness, modulus, yield strength measurements), energy generation (solar energy, thermoelectrics and energy generation from vibrations), 3-D printing of nanocomposites and energy storage.

Note

This course is designed for final year senior and/ or graduate students interested in the areas of experimental nanoscale science and engineering.

Repeat for Credit

N

Requisites

Prerequisite: CHE354, CHE355, ME 533, ME 573

Typically Offered

Spring

ME 699 - Problems in Mechanical Engineering**Credits 1-18**

Problems in Mechanical Engineering

Repeat for Credit

Y

Requisites

Prerequisite: Approval of department head.

Typically Offered
Fall, Spring, Summer

ME 701 - Development of Computer Applications In Mechanical Engineering

Credits 3

Nature of design, graphical user interface development to support computer-aided design, algorithms and computer graphics in computer applications, feature-based design, applications to design problems.

Repeat for Credit
N

Requisites
Prerequisite: ME 400.

Typically Offered
Fall

ME 710 - Intermediate Topics in Interdisciplinary Systems Analysis

Credits 1-3

Analyze complex, interdisciplinary systems using the systems thinking framework. Model the systems using narrative and visual tools for systems thinking. Systems analyzed include engineering systems and may include economic, and/or social elements.

Repeat for Credit
Y

Requisites
Co- Req: Senior or graduate standing

Typically Offered
On sufficient demand

ME 711 - Interdisciplinary Seminar

Credits 0-3

The interdisciplinary seminar creates an opportunity to learn from other interdisciplinary researchers, form interdisciplinary research teams, and engage in interdisciplinary discussions. Topics include interdisciplinary research and collaboration, and professional development.

Repeat for Credit
Y

Requisites
Co-Req: Senior or graduate standing, or instructor permission

Typically Offered
On sufficient demand

ME 716 - Intermediate Dynamics

Credits 3

General vector principles of the dynamics of particles and rigid bodies; applications to orbital calculations, gyro dynamics, and rocket performance; introduction to the energy methods of advanced dynamics.

Note
Three hours recitation a week.

Repeat for Credit
N

Requisites
Prerequisite: ME 512, MATH 340.

Typically Offered
Spring

ME 720 - Intermediate Fluid Mechanics

Credits 3

A continuation of ME 571 in the study of general topics in fluid mechanics. Conservation of mass and momentum principles with particular emphasis on analysis of inviscid (potential) flows, compressible flows, and more advanced viscous flows including boundary layers. Numerous applications utilizing numerical methods.

Repeat for Credit
N

Requisites
Prerequisite: ME 571, MATH 340.

Typically Offered
Fall

ME 721 - Thermal Systems Design

Credits 3

Thermal systems design including economics, simulation, and optimization. Includes heating, ventilating and air conditioning design and control.

Repeat for Credit

N

Requisites

Prerequisite: ME 573.

Typically Offered

Fall

ME 722 - Human Thermal Engineering**Credits 3**

Application of thermodynamic, heat transfer, and fluid mechanics principles of the thermal analysis of the human body. Mathematical analysis and computer modeling of human response to the thermal environment. Evaluation of heat stress and cold stress. Protection from heat and cold. Requirements for thermal comfort and impact on human performance.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 573.

Typically Offered

Fall-Odd Years

ME 728 - Computer Control of Electro Mechanical Systems**Credits 3**

Discrete modeling and analysis of dynamic physical systems in Mechanical Engineering. Sampling and data conversion and reconstruction. Real time implementation of control on a computer. Digital controller design and implementation. Laboratory exercises in control applications and design.

Note

Two hours of recitation and three hours of laboratory per

week.

Repeat for Credit

N

Requisites

Prerequisite: ME 570.

Typically Offered

Spring

ME 730 - Control Systems Analysis and Design**Credits 3**

Use of classical analysis techniques for control system compensation. State space-control theory fundamentals are presented in addition to an introductory treatment of several major systems areas.

Repeat for Credit

N

Requisites

Prerequisite: ECE 530 or ME 640.

Typically Offered

Spring

Crosslisted

ECE 730

ME 738 - Experimental Stress Analysis**Credits 3**

Experimental methods of investigating stress distributions. Photoelastic models, photoelastic coatings, brittle coatings, and resistance strain gauges applied to static and dynamic problems.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: CE 533.

Typically Offered

Fall-Even Years

ME 760 - Engineering Analysis I

Credits 3

Methods of analysis and solution of problems selected from various branches of engineering. Topics typically include vector algebra, vector spaces, linear algebra and matrices, vector calculus, line, surface and volume integrals, and ordinary differential equations for engineering applications.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340 and senior standing.

Typically Offered

Fall

ME 773 - Intermediate Heat Transfer

Credits 3

Conduction, convection and radiation, mass transfer, phase change, heat exchangers, introductory numerical methods.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: ME 573.

Typically Offered

Spring

ME 777 - Monte Carlo Methods

Credits 3

The objective of this course is to explore various methods of Monte Carlo for solving direct and inverse problems in engineering. The course covers probability distributions; laws of large numbers and Central Limit Theorem; pseudorandom number generation; sampling, scoring, and precision; variance reduction procedures; Markov chain Monte Carlo; inverse Monte Carlo; solution of linear operator equations; particle transport simulation.

Repeat for Credit

N

Requisites

Prerequisite: Math 340 or equivalent and knowledge of a programming language.

Typically Offered

Spring-Even Years

ME 800 - MNE Graduate Seminar/Research Paper

Credits 0-18

Presentation(oral and written) and discussion of progress in research. Credit hours can be earned by preparing and/or presenting publication quality papers. Topics may be drawn from any current research area in mechanical and nuclear engineering.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing in mechanical and nuclear engineering.

Typically Offered

Fall, Spring

ME 802 - Advanced Mechanics of Materials and Applied Elasticity

Credits 3

Two- and three-dimensional deformation analysis, equilibrium, and elastic constitutive laws. Stress-strain transformations between coordinate systems. Governing equations of elasticity. Advanced topics in bending, shearing, torsion and combined loads, with applications to engineering problems.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: CE 533.

Typically Offered

Fall-Even Years

Crosslisted

CE 802

ME 811 - Thermodynamic Analysis**Credits 3**

Basic considerations of the three laws of equilibrium thermodynamics. Availability analysis with applications including multicomponent systems.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 523, ME 571, MATH 240.

Typically Offered

Spring-Even Years

ME 820 - Intermediate Topics in Thermal and Fluid Mechanics**Credits 0-18**

Topics may include combustion, direct energy conversion, modeling and design of internal combustion engines, nonequilibrium multiphase and multicomponent systems, refrigeration, cryogenics, stability and turbulence.

Repeat for Credit

Y

Requisites

Prerequisite: ME 720 or ME 773.

Typically Offered

On sufficient demand

ME 824 - Computational Fluid Dynamics**Credits 3**

The course introduces basic theories and algorithms for numerical simulations, and uses them to solve both model problems and classical fluid mechanics problems computationally.

Repeat for Credit

N

Requisites

Prerequisite: ME 720

Typically Offered

Spring

ME 826 - Intermediate Micro-Electromechanical Systems**Credits 3**

MEMS (micro-electromechanical systems) adapt the fabrication techniques and materials of semiconductor IC (integrated circuits) chips to make mechanical components, like cantilever beams, hinges, micromotors, micromirrors and microfluidic chips. In this course, the fabrication, design, and application of MEMS will be covered. Students will gain the knowledge of MEMS that combines interdisciplinary subjects of mechanical, electrical, and chemical engineering and material sciences. Advanced applications of MEMS are covered.

Note

A student may take either ME 626 or ME 826 for credit, but not both.

Repeat for Credit

N

Typically Offered

Fall

ME 827 - Intermediate Biomedical Micro-Electromechanical Systems**Credits 3**

BioMEMS and microfluidics handle minute amount of liquids (microliter to picoliter) and bio-objects (DNA, protein, and cell). The course will cover (1) unique sciences of microfluidics, (2) liquid and bio-object manipulating principles, (3) design and manufacturing of microfluidic and biosensing devices, and (4) application in in vitro (out of body) diagnosis, 3D bioprinting, origami, and tissue engineering. Advanced applications of BioMEMS are covered.

Note

A student may take either ME 627 or ME 827 for credit,

but not both.

Repeat for Credit

N

Typically Offered

Spring

ME 830 - Intermediate Topics in Automatic Controls

Credits 1-18

Topics may include analysis and design of nonlinear, adaptive, optimal, digitals or stochastic control systems and the applications of intermediate control and stability theory.

Repeat for Credit

Y

Requisites

Prerequisite: ME 730 or ECE 730 or consent of instructor.

Typically Offered

On sufficient demand

ME 831 - Boundary Layer Theory

Credits 3

The development and solution of various laminar boundary layer problems involving momentum, heat, and mass transfer for a compressible viscous fluid.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 573.

Typically Offered

Fall-Even Years

ME 836 - Introduction to Fracture Mechanics

Credits 3

This course provides an introduction to fracture mechanics concepts and applications. Topics include the asymptotic solution for stress at a crack tip, energy balance and crack

propagation, computing stress intensity factors, fatigue crack growth, fracture of concrete, applications and current topics.

Repeat for Credit

Y

Requisites

Prerequisite: ME 802 or CE 802.

Typically Offered

Fall-Odd Years

ME 840 - Intermediate Topics in Solid Mechanics and Machine Design

Credits 1-18

Topics may include intermediate elasticity, plasticity, tribology, probabilistic machine design, robotics, computational dynamics and nonlinear mechanics.

Repeat for Credit

Y

Requisites

Prerequisite: ME 716 or ME 802 or CE 802.

Typically Offered

On sufficient demand

ME 846 - Vibrations of Continuous Media

Credits 3

Basic mathematical and physical descriptions for wave phenomena in continuous media, with emphasis on propagations of mechanical disturbance in linearly elastic solids. Other selected topics in wave dynamics, including acoustics, water waves, nonlinear phenomena, will be discussed depending on students' interest.

Note

Three hours of recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 802 or CE 802.

Typically Offered

Fall-Odd Years

ME 860 - Engineering Analysis II

Credits 3

Continuation of Engineering Analysis I to cover more methods of analysis and solution important for engineering applications. Topics typically include complex variable theory, differential operators and orthogonal functions, Sturm-Liouville theory, Fourier series and Fourier transforms, and partial differential equations for engineering applications.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 760 or consent of instructor.

Typically Offered

Spring

ME 862 - Finite Elements

Credits 3

The foundations of the finite element method using weighted residuals and variational methods. Element formulation, assembly and solution are covered in detail. Formulation for dynamic and nonlinear problems. Discussion of advanced topics. The student will develop a complete finite element program.

Repeat for Credit

Y

Requisites

Prerequisite: ME 760. Prerequisite or concurrent enrollment: ME 802 or CE 802.

Typically Offered

Spring

ME 871 - Mechanics of Composite Materials

Credits 3

Topics include classification of composite materials, elasticity theory for anisotropic and in homogeneous materials, basic model for characterization of composite properties, laminated plate theory, textile composites,

strength and criteria for composite failure, and fracture modes in composites.

Repeat for Credit

Y

Requisites

Prerequisite: ME 802 or CE 802.

Typically Offered

Spring-Odd Years

ME 898 - Master's Report

Credits 1-18

Topics selected with approval of major professor and department head.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

ME 899 - Master's Thesis

Credits 1-18

Topics selected with approval of major professor and department head.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

ME 902 - Theory of Plasticity

Credits 3

Foundations of plasticity. Vectorial and sensorial analysis. Coverage of pressure-dependent and pressure-independent materials. Hyper elasticity-Green elasticity. Deformation theory of plasticity. Flow theory of plasticity. Plastic work rate-equivalent strain. Classical yield criteria. Closed form solution of simple cases. Numerical solutions of more complex cases.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 802 or CE 802.

Typically Offered

Spring-Even Years

ME 910 - Computational Methods in Design**Credits** 0-18

Selected topics from optimal design, geometric modeling, and multi-physics finite element methods.

Repeat for Credit

Y

Typically Offered

Spring-Even Years

ME 920 - Advanced Topics in Thermal and Fluid Mechanics - Boltzmann Transport**Credits** 3

Non-Fourier heat transfer models used for microscale transport phenomena. Boltzmann integral methods for determining ion/neutron effects on metal material temperature.

Repeat for Credit

Y

Requisites

Prerequisite: ME 720 or ME 773.

Typically Offered

On sufficient demand

ME 921 - Thermal System Analysis**Credits** 3

Advanced study of steady-state and dynamic simulation of thermal systems; thermal systems optimization. Thermodynamic availability and probabilistics in thermal system design.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 721.

Typically Offered

Spring-Odd Years

ME 930 - Advanced Topics in Automatic Controls**Credits** 1-18

Topics may include analysis and design of nonlinear, adaptive, optimal, digital, or stochastic control systems and the application of advanced control and stability theory.

Repeat for Credit

Y

Requisites

Prerequisite: ME 640.

Typically Offered

Fall, Spring

ME 935 - Heat Conduction in Solids**Credits** 3

General differential equation of heat conduction and methods of solution for steady-state and transient heat conduction, periodic heat flow, and internal heat sources.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 573.

Typically Offered

Fall-Odd Years

ME 940 - Advanced Topics in Solid Mechanics and Machine Design**Credits** 1-18

Topics may include advanced elasticity, plasticity, tribology, probabilistic machine design, robotics, advanced and computational dynamics and nonlinear mechanics.

Repeat for Credit

Y

Requisites

Prerequisite: ME 802 or CE 802 or ME 716 or ME 846.

Typically Offered

On sufficient demand

ME 942 - Convection Heat Transfer

Credits 3

Energy and momentum equations in convective heat transfer, laminar and turbulent thermal boundary layers, steady and nonsteady convection problems.

Note

Three hours recitation a week.

Requisites

Prerequisite: ME 573.

Typically Offered

Spring-Odd Years

ME 943 - Radiation Heat Transfer

Credits 3

Basic theories of thermal radiation, shape factors; exact and approximate solutions of integral equations of radiation heat transfer between solid surfaces with absorbing or nonabsorbing medium.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 573.

Typically Offered

Fall-Even Years

ME 947 - Boiling Heat Transfer

Credits 3

Principles of boiling heat transfer and thermal hydraulics of two-phase flow; computational methods; design and analysis applications.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: ME 942

Typically Offered

Fall-Odd Years

ME 999 - Dissertation Research in Mechanical Engineering PhD Level

Credits 1-18

Dissertation Research in Mechanical Engineering PhD Level

Repeat for Credit

Y

Requisites

Prerequisite: Approval of department head and major professor.

Typically Offered

Fall, Spring, Summer

MET 111 - Technical Graphics

Credits 3

Introduction to applications in sketching and 2D computer-aided design applied to geometric development and engineering communication. Techniques are applied to produce finished drawings and schematics to National and international standards. Theory and applications of orthographic and auxiliary projection and pictorial drawing. Standards for symbols, section views, and dimensioning included.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MET 117 - Mechanical Modeling and Detailing

Credits 3

Professional practices in the development and application of 3D part and assembly modeling for design and manufacturing. Preparation of 3D model for manufacturing data or production drawing. Development of tolerances versus cost, fit tolerances, and introductory geometric dimensioning and tolerancing (GD&T) specifications. Application of handbook data and spreadsheet computation to design detail development.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MET 121 - Manufacturing Methods

Credits 3

Introduction to contemporary manufacturing processes and practices, including precision measurement and inspection, machining, forming, casting, and welding processes. Recitation and laboratory experience in manufacturing practices, including metrology and basic setup and operation of manufacturing equipment. Observation of applications in local industry.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MET 125 - Computer-Numerical-Controlled Machine Processes

Credits 2

Study and practice of basic CNC programming and machining operations.

Note

Six hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MET 211 - Statics

Credits 3

A study of forces and their effects on the bodies upon which they act.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Corequisite: PHYS 113.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 230 - Automated Manufacturing Systems I

Credits 3

A general survey of the various components and systems in automated manufacturing, including material handling, electropneumatic control, programmable logic control, robotics, tooling, inspection and quality control, CNC, and other production processes.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 100.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MET 231 - Physical Materials and Metallurgy**Credits 3**

A broad view of materials used in industry, including structures of materials, how they react to stress and temperature, how the polyphase structures form, and how they are controlled to produce optimum properties. Students will examine through study and laboratory experimentation ferrous and nonferrous metals, polymers, composites, and ceramics.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MET 240 - Industrial Robotics Laboratory**Credits 2**

An introduction to industrial robots emphasizing robot operation, programming, and integration with

programmable logic controllers and other automation equipment.

Note

Four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 335 or MET 230.

Typically Offered

Fall

MET 245 - Material Strength and Testing**Credits 3**

Calculations of material strength and deformation are complemented with principles and practice of mechanical testing including instrumentation and measurement in the areas of loads, stresses, deformations, thermal stresses, and other quantities.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 211.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

MET 252 - Fluid Power Technology**Credits 3**

Study, design, analysis, operation, maintenance, and applications of hydraulic and pneumatic power systems and components.

Note

Two hours lecture and two hours labs a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 150.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 264 - Machine Design Technology I**Credits 4**

Introduction to application and selection of machine elements to design mechanical systems. Covers primary machine elements such as shafts and shaft components, screws and fasteners, welded joints, springs, bearings, gears, clutches and brakes.

Note

Three hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: MET 245.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Historical Perspectives

MET 299 - Topics in Mechanical Engineering Technology**Credits 1-18**

Provides an opportunity for faculty to present mechanical engineering technology topics.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MET 314 - Finite Element Analysis and Design Modeling**Credits 3**

Introduction to finite element analysis applied to mechanical design. Study and application of advanced computer-aided modeling techniques.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 117 and MET 245.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MET 325 - Additive Manufacturing**Credits 3**

The course develops an understanding of additive manufacturing (AM) principles and applications combined with a problem-based learning project which develops design, manufacturing and maintenance skill sets for AM practitioners.

Note

Two hours lecture and three hours lab per week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MET 333 - Advanced Material Science

Credits 3

A continuation of MET 231 Physical Materials and Metallurgy. Emphasizes the understanding of material properties used to give various materials their function. Theory and laboratory work focus on controlling and testing material properties. Ferrous and non-ferrous metals, polymers and adhesives, composites, smart materials, effects of corrosion, failure analysis, and selection techniques for design.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: CHM 110 and CHM 111 and MET 231.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 336 - Dynamics of Machines

Credits 3

Velocities, accelerations, and forces in existing mechanisms to produce motions. Work, energy, impulse and momentum concepts in kinetics. Vibrations in machine parts.

Note

Three hour lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 220 and PHYS 113.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 346 - Elements of Mechanisms

Credits 3

Fundamental motion concepts of displacement, velocity, and acceleration are studied, as well as analytical and graphical analysis and synthesis of linkages, gear trains, cams, pulleys, and combinations of these elements.

Repeat for Credit

N

Requisites

Prerequisite: MET 117 and MET 246.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 353 - Fluid Mechanics

Credits 3

Fundamental concepts of fluid mechanics. Study of buoyancy, energy equation, viscosity, and flow measurement. Selected applications of fluid mechanics in civil and mechanical technologies. Computer-aided solution of problems in fluid mechanics.

Note

Two hours lecture and two hours labs a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 220, MET 252, and PHYS 113.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 365 - Machine Design Technology II

Credits 3

Continued study of design of mechanical elements and systems including engineering mechanics and materials, investigation of failure theories under static and variable loading, stress analysis, stress concentration, and deflections.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 264.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MET 381 - Quality Control

Credits 3

An introductory course in quality concepts and techniques used in industry. Topics include fundamentals of statistics and probability, statistical process control charts, and quality improvement tools.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing or consent of instructor.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MET 382 - Industrial Instrumentation and Controls

Credits 3

An introduction to process control systems for industrial applications. Course topics include concepts and terminology, first- and second-order systems, measurement of motion, gauges and transducers, signal processing, and measurement of properties.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 304 or ECET 201.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 410 - Managerial and Project Economics

Credits 3

Economic analysis of problems as applied to managerial decision making. Students consider the economic viability of solutions in engineering and a variety of other kinds of projects common in technology-oriented businesses.

Repeat for Credit

N

Requisites

Prerequisite: MATH 100.

Typically Offered

Fall

Crosslisted

BUS 410

K-State 8

Social Sciences

MET 460 - Tool Design for Manufacturing

Credits 3

Principles and practices involved in tool drawing and design concepts necessary for the manufacture of products. Emphasis on design of jigs and fixtures, gauging devices, dies, ease of operation, and methods of assembly. Production cost related to selection of parts and methods of production is stressed. Applied laboratory exercises illustrated through specific case studies.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 117 and MET 125, and MET 346.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 462 - Senior Design Project I

Credits 1

Selection, definition, and analysis of a project supervised by faculty. Includes consideration of project parameters, trade-off studies, alternative solutions, and justification of selected solution. Completion and presentation of a written project proposal included.

Note

Two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing.

Corequisite: MET 365

Typically Offered

Fall

MET 464 - Senior Design Project II

Credits 2

Development and implementation of project proposal

submitted in MET 462. Construction, packaging, and testing of project culminating in a senior design project report which may include full documentation and performance specifications, functional description, theoretical analysis, schematics, cost analysis, parts list, drawings, etc. Project results will be presented orally to a select committee at the end of the course.

Note

Four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 462 and senior standing.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

MET 471 - Thermodynamics and Heat Transfer

Credits 4

This course emphasizes thermodynamic laws and equations and the use of tables and charts for properties of important fluids. Applications to systems used for producing, transforming, and applying heat and mechanical energy are also studied. Conduction, convection, and radiation heat transfer processes are investigated.

Note

Three hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 220, MET 252, and PHYS 113.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

MET 481 - Automated Manufacturing Systems II

Credits 3

Covers systems for manufacturing operations including facilities, supplies, materials, procedures, and control. Topics include design, programming, feedback for manufacturing, production set-up, automated work cells, and decision issues.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 230 or MET 382.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Global Issues and Perspectives

MET 490 - Industrial Work Internship

Credits 1-18

The student will work as an intern with business and industry in mechanical engineering technology field. A report detailing duties performed and tasks accomplished is required at the end of the internship period.

Repeat for Credit

N

Requisites

Prerequisite: Sophomore standing and consent of MET program coordinator.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MET 499 - Advanced Topics in Mechanical Engineering Technology

Credits 1-18

Provides an opportunity for faculty to present advanced mechanical engineering technology topics.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

MIS 366 - Introduction to Business Analytics and Information Systems

Credits 3

A comprehensive view of organizational information systems required for obtaining and transforming data into business analytics and intelligence. Cases and hands-on exercises emphasize information systems usage in data acquisition, analysis, and presentation leading to effective organizational decision-making.

Note

Special section of MANGT 366 open to students considering a Management Information Systems (MIS) Major.

Demonstrate competence in use of computer spreadsheets.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MIS 411 - Business Programming Applications

Credits 3

Business-related object-oriented programming fundamentals used to enhance skills for problem solving and logical thinking. Focuses on class diagrams, and the

utilization of programming languages for understanding and applying software development concepts.

Note

Prerequisite or consent of department head.

Repeat for Credit

N

Requisites

Prerequisite or concurrent: MANGT 366 or MIS 366

Typically Offered

Fall

MIS 422 - Business Database and SQL

Credits 3

Examination of database theory, design, implementation and the value of data to an organization. Study of structured query languages (SQL) including the definition and creation of database objects, manipulation of data stores including entry, modification, removal and extraction, and database programming fundamentals relevant to business and data analytics.

Note

Prerequisite or consent of department head.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MIS 433 - ERP Project Planning and Implementation

Credits 3

Applications of enterprise systems with emphasis on ERP systems configuration, business process integration and hands-on project management.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366.

Typically Offered

Spring

MIS 444 - Business Networks and Security

Credits 3

Study of digital networks and security considering impact and value to business organizations. Coverage includes communications protocols and standards, hardware, software, network implementation and configuration; and security. Emphasis on hands-on network setup, configuration and testing.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MIS 490 - Undergraduate Research Experience

Credits 0-3

Open to students pursuing undergraduate research projects.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MIS 495 - MIS Internship

Credits 0-3

Eight weeks of applied Management Information Systems (MIS) experience designed to coordinate the interests of students and firms.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MIS 496 - Special Topics in MIS and Data Analytics**Credits 1-6**

Discussion and analysis of current and emerging issues in management information systems or data analytics, including topics related to new theory, new applications, and technology or data analytics practice.

Note

Permission of instructor

Repeat for Credit

Y

Typically Offered

On sufficient demand

MIS 555 - Cloud Computing with Business Programming Applications**Credits 3**

Advanced application of business-related programming fundamentals in cloud environments. Focuses on utilization of programming languages and mobile software development for creating solutions to data-intensive business problems in cloud environments.

Repeat for Credit

N

Requisites

Prerequisite: MIS 411 and either MIS 422 or MIS 667.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MIS 566 - Systems Analysis and Design**Credits 3**

An in-depth study of systems analysis and design techniques viewing information systems as an integral component of organizational strategic planning. Emphasis on systems planning, project management, use of CASE tools, process and data modeling, quality and systems reengineering.

Repeat for Credit

N

Requisites

Prerequisite: MIS 411 and either MIS 422 or MIS 667.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

MIS 665 - Business Analytics and Data Mining**Credits 3**

In-depth study of a broad range of topics and techniques in business intelligence (BI), data mining, and database marketing (DM). Emphasis on fundamentals of relational database management, data warehousing as a business practice, customer relationship management (CRM), customer segmentation, various data mining techniques, data visualization, business performance management, use of scorecard/dashboard, and advanced BI and data mining software tools.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366 or an equivalent introductory computing course.

Typically Offered

Fall, Spring

MIS 667 - Applications of Data Models in Business**Credits 3**

Implementation and management of extract, transform, load (ETL) processing and automation from a business perspective. Topics include design of data migration approaches, data cleaning techniques, and technologies used to move and distribute data between various database types including relational, non-relational, on-site and cloud. SQL, NoSQL and other technologies provide context and hands-on practice in data pipelines implementation and management.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366, an equivalent introductory computing course, or permission of instructor.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MIS 670 - Social Media Analytics and Web Mining

Credits 3

This course is an in-depth study of a broad range of topics and techniques in the areas of social media analytics, web mining and social network analysis. Emphasis is on fundamentals of data acquisition from the web and social media platforms, transformation of these unstructured data into structured format, advanced data processing techniques for analysis, business intelligence through web crawling, analysis of web and social media data using classification, clustering, and association techniques, sentiment analysis (or opinion mining) for business decisions, visualization of unstructured data, and social network analysis.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366 or an equivalent introductory computing course.

Typically Offered

Spring, Summer

MIS 677 - Senior MIS Project

Credits 3

Senior project. Students must demonstrate proficiency in the analysis, design and implementation of a business or data analytics project by creating a working prototype of a business application.

Note

Management Information Systems (MIS) Majors Only or consent of department head.

Repeat for Credit

N

Requisites

Prerequisite: MIS 555 and MIS 566.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MIS 756 - Business Data Pipelines

Credits 3

Implementation and management of extract, transform, load (ETL) processing and automation from a business perspective. Topics include design of data migration approaches, data cleaning techniques, and technologies used to move and distribute data between various database types including relational, non-relational, on-site and cloud. SQL, NoSQL and other technologies provide context and hands-on practice in data pipelines implementation and management.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 366 or MIS 366, an equivalent introductory computing course, or permission of instructor.

Typically Offered

On sufficient demand

K-State 8

Empirical and Quantitative Reasoning

MIS 797 - Topics: Information Technology and Data Analytics

Credits 1-3

Discussion and analysis of contemporary issues in information technology, business analytics, trends, and emerging technology. Can include applications, relevant literature and research.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

**MIS 830 - Business Intelligence and
Storytelling in Cloud Environments****Credits 3**

A practical exposure to information technology as it applies to business. Emphasis will be placed on problem-solving using spreadsheets, databases, and HTML based information systems.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate student standing.

Typically Offered

Fall

MKTG 250 - Introduction to Marketing**Credits 3**

A general study of marketing principles which lead to the development of marketing strategy. A review of environmental influences and key analytical tools used in formulating marketing plans. Product or service design, distribution, pricing, and promotional programs.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Social Sciences

MKTG 300 - Introduction to Digital Marketing**Credits 3**

Designed to teach students the basic fundamentals of digital marketing. Topics include digital marketing terminology, search engine marketing, search engine optimization, mobile digital marketing, social media marketing, technology integration, and marketing analytics.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250

Typically Offered

Fall, Spring, Summer

MKTG 302 - Brand Marketing**Credits 3**

Focuses on building and measuring brands as business strategy, as well as personal branding.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Social Sciences

MKTG 305 - Socially Responsible Marketing**Credits 3**

Ethical marketing practices in the U.S. and global economy. There is a brief introduction to business ethics, ethics within the marketing mix, ethics and the promotional mix and special topics in marketing ethics. It will include case studies to help build experience with real world domestic and global situations and increase critical thinking and problem-solving skills.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250

Typically Offered

Fall or Spring

MKTG 306 - Business to Business Marketing

Credits 3

A study of the nature of the industrial marketplace, concentrating on those aspects that differentiate it from the consumer markets. The major topics include analysis of market needs, market segments, estimating market demand, organizational buying behavior, marketing channels, marketing strategy and mix for institutional customers, global marketing strategies, managing products and new product development, buyer/seller relationships, pricing strategies, and business marketing communications.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250.

Typically Offered

On sufficient demand

K-State 8

Social Sciences

MKTG 311 - Services Marketing

Credits 3

An analysis of the unique marketing challenges faced by service organizations. Major topics include the unique characteristics of services, creating and positioning a service in the marketplace, distributing, promoting and pricing services. An evaluation of marketing strategies from the perspective of a service firm.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250.

Typically Offered

On sufficient demand

K-State 8

Social Sciences

MKTG 325 - International Marketing

Credits 3

This course deals with the problems and perspectives of marketing across national boundaries. It also focuses on the tools and practices for structuring and controlling marketing programs related to overseas business. Emphasis is on the management of marketing functions in a global context. Topics include international trade organizations, international economic factors, foreign business customs, and the international marketing mix.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

MKTG 326 - International Business

Credits 3

This course provides students with an appreciation of the opportunities and unique challenges in international business, an understanding of the strategic and operational options available to an international firm, and managerial decision making abilities required to be successful abroad. The course examines strategic and operational issues involved in international business activity and how to best manage these issues.

Repeat for Credit

N

Requisites

Prerequisite: MANGT 220, MKTG 250.

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

MKTG 440 - Entertainment Marketing

Credits 3

Examines the entertainment industry using strategic marketing approaches to assess market opportunities, develop marketing strategies, and design implementation tactics.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250.

Typically Offered

Spring

K-State 8

Social Sciences

MKTG 450 - Consumer Behavior**Credits 3**

A study of the concepts, principles, and theories to understand, evaluate and predict consumer behavior. Explaining the behavior of consumers provides insight into ambiguous marketing situations. The course focuses on applying scientific methods to aid in marketing decision making. In addition, this course integrates current consumer research and theory, as well as current topics.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250.

Typically Offered

Fall, Spring, Summer

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

MKTG 480 - Marketing Analytics Fundamentals**Credits 3**

Students will develop an understanding of data collection, data analysis and data visualization in order to make strategic business decisions.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, STAT 250 or equivalent.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MKTG 490 - Undergraduate Research Experience**Credits 0-3**

Open to students pursuing undergraduate research projects.

Repeat for Credit

Y

Requisites

Prerequisite: MKTG 250, Consent of instructor.

Typically Offered

On sufficient demand

MKTG 495 - Marketing Internship**Credits 0-3**

Eight weeks of applied marketing business experience between junior and senior years designed to coordinate the interests of students and firms.

Repeat for Credit

Y

Requisites

Prerequisite: FINAN 450, MANGT 220, MKTG 250, and consent of Marketing department head.

Typically Offered

Fall, Spring, Summer

MKTG 496 - Special Topics in Marketing**Credits 3**

Discussion and analysis of current and emerging issues in marketing, including topics related to new theory, new

applications, and the practice of marketing.

Repeat for Credit

Y

Typically Offered

Fall or Spring

MKTG 498 - Independent Study in Marketing

Credits 0-18

Selected topics in marketing.

Repeat for Credit

Y

Requisites

Prerequisite: MKTG 250, Consent of instructor.

Typically Offered

On sufficient demand

MKTG 510 - Corporate Marketing Practicum

Credits 3

For high GPA marketing students to gain additional marketing insight by working with a company in applying marketing concepts.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, MKTG 300, consent of instructor

Typically Offered

Fall or Spring

MKTG 540 - Digital Content Strategy and Development

Credits 3

Development of strategic communications plans for digital marketing, including content structure and development. Students will have the opportunity to incorporate industry certifications as the course will instruct students on the skills needed for the certification exams.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, MKTG 300

Typically Offered

Fall, Spring

K-State 8

Social Sciences

MKTG 551 - Data Narratives and Visualization

Credits 3

Students learn to interpret complex datasets and effectively communicate the analysis through visualization and storytelling. They learn these techniques with and without the use of dashboards and/or presentation software.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, MKTG 300

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

MKTG 630 - Sports Marketing

Credits 3

Covers the concepts, metrics, and techniques used to address the opportunities and challenges faced by marketers in the context of sports.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250.

Typically Offered

Fall, Spring

K-State 8

Social Sciences

MKTG 650 - Digital Marketing Analysis and Strategy

Credits 3

Examines aspects of tracking, analyzing, and optimizing marketing efforts to achieve strategic objectives. It provides learners with an understanding of search engine marketing (SEM) and search engine optimization (SEO), web analysis and tools, and social media platforms and analytics. Learners have an opportunity to earn industry certifications.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, MKTG 300.

Typically Offered

Fall, Spring

K-State 8

Social Sciences

MKTG 653 - Applications of Marketing Analytics**Credits 3**

Marketing analytics focuses on applications of quantitative analysis to understand dynamic marketing phenomena. This course is a mixture of lectures on essential marketing concepts/econometrics/text mining, instructions on software program (Stata and R), and discussions of marketing cases to facilitate students' critical thinking and decision making leveraged by analytical ability. To facilitate learning statistical software programs, students will practice hands-on projects in the computer lab.

Learning outcomes are that students will be able to do the following:

- Choose correct quantitative analysis methodologies
- Learn data analysis software programs (Stata and R)
- Make strategic decisions based on data analysis and communicate marketing strategies

Repeat for Credit

Y

Requisites

Prerequisite: MKTG 250, STAT 250 or equivalent.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

MKTG 654 - Marketing Research**Credits 3**

Learn the essential techniques and tools for data collection, analysis, and interpretation, including survey and experimental design (A/B testing). Students will explore qualitative and quantitative methods, learn to utilize statistical software, and engage in hands-on projects to apply concepts in marketing contexts to make strategic data-driven decisions.

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, STAT 351.

Typically Offered

Fall or Spring

K-State 8

Empirical and Quantitative Reasoning

MKTG 690 - Marketing Strategy**Credits 3**

Analysis of marketing situations which lead to appropriate management of the marketing program's objectives. Capstone course integrates knowledge of marketing and other business management principles into marketing strategy, development, implementation, and control.

Note

Undergraduates must be business students admitted in a College Business Administration degree track (major).

Repeat for Credit

N

Requisites

Prerequisite: MKTG 250, MKTG 300, SALES 300 and senior standing.

Typically Offered
Fall, Spring, Summer

K-State 8
Social Sciences

MKTG 705 - Marketing Concepts and Research

Credits 3

Presents marketing concepts and marketing research concepts at the graduate level. Emphasis is directed toward managerial strategy development using marketing theories and applied marketing research techniques.

Repeat for Credit
Y

Requisites
Prerequisite: Three hours of economics, three hours of statistics, and MATH 205 or MATH 220.

Typically Offered
Fall

MKTG 842 - Advanced Marketing Research

Credits 3

Application of advanced research methods to help solve marketing problems. Intensive examination of experimental and survey designs, data collection methods, and selected multivariate analysis techniques are covered.

Repeat for Credit
Y

Requisites
Prerequisite: STAT 351, MKTG 640, and MKTG 654.

Typically Offered
On sufficient demand

MKTG 844 - Advanced International Marketing

Credits 3

This course is designed to develop the students' managerial decision making ability in international marketing. The

course will focus on the internationalization process of firms, the unique issues in international marketing, and international marketing strategy. The course will integrate short lectures, class discussions, and case analysis to achieve its objectives.

Repeat for Credit
Y

Requisites
Prerequisite: MKTG 710.

Typically Offered
On sufficient demand

MKTG 860 - Advanced International Business

Credits 3

This course is designed to introduce the student to the nature and scope of fundamental business skills requisite for a career in international business. A unified survey of the international aspects of accounting, finance, management, marketing and related subjects will be made that is useful to a manager in a global business enterprise. Emphasis will be placed on the identification, articulation and implementation of successful global strategies.

Repeat for Credit
N

Requisites
Prerequisite: ACCTG 710, ECON 815, FINAN 715, MANGT 720, MANGT 710, MIS 830, MKTG 705, and STAT 702 or enrollment in the MAcc program.

Typically Offered
On sufficient demand

MKTG 880 - Applied Marketing Analytics

Credits 3

Business Intelligence is a systematic approach to harnessing customer data and competitive information to drive strategic business decision making. This course deals with how to collect and analyze business data to enhance quality of decision making in modern enterprises. Unlike courses based on data mining (inductive approach), this course will be largely based on regression techniques (deductive approach). The course will be based on lectures, case analysis, and hands on exercises to make students comfortable with powerful computing tools used for data

analysis. The cases and exercises will be bundled with data which will be used to apply concepts learned in class to real business situations.

Repeat for Credit

N

Requisites

Prerequisite: Graduate student standing.

Typically Offered

Spring

MKTG 881 - Advanced Marketing Analytics

Credits 3

Students will gain an understanding of econometric and statistical methods of analysis and their application to business problems. Through lectures and exercises, student will use software tools often used in business for data analysis. Students will also learn how to interpret and apply the results from the software in data analyses. Emphasis will be placed on the application of econometric and statistical methods of data analyses. Topics will include customer choice analysis, customer segmentation and targeting, customer lifetime value calculation, and forecasting.

Repeat for Credit

N

Requisites

Prerequisite: Graduate student standing.

Typically Offered

Fall

MKTG 891 - Special Topics in Marketing

Credits 3

Investigation and discussion of a selected topic in marketing. One of the following five topics will be chosen for intensive study: (1) industrial marketing management, (2) advanced consumer behavior, (3) product policy, (4) financial aspects of marketing management, (5) marketing in the service sector.

Repeat for Credit

Y

Requisites

Prerequisite: MKTG 705 or 6 hours of marketing.

Typically Offered

On sufficient demand

MLANG 001 - Study Abroad

Credits 0

Study Abroad

Repeat for Credit

Y

Typically Offered

Fall, Spring

MLANG 100 - Beginner Studies in Foreign Language

Credits 1-5

Course used to transfer credit for first and second semester language courses not offered at K-State. Consultation for approval is expected.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

MLANG 106 - Legal Terminology: Latin and French for Law Professions

Credits 2

Designed to familiarize students with vocabulary at use in the American legal system. Teaches basic French and Latin components used in legal terminology.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MLANG 110 - Hebrew for Beginners

Credits 2

An introduction to the Hebrew language and the culture of the people who speak the language. This general introduction includes skill development in reading, writing, and speaking basic Hebrew.

Note

Designed specifically for English-speaking students.

Repeat for Credit

N

Typically Offered

Intersession

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 120 - Multilingualism in the U.S.**Credits 3**

Examines the sociolinguistic and sociocultural coexistence among English and varied minority languages (e.g., French, Chinese, Spanish, and German) through different blocks or content units. Students will gain an appreciation for multiculturalism and multilingualism in the U.S. while expanding their awareness concerning global issues. To this end, the students will learn and engage in discussions about race, identity, migration, acculturation, syncretical views and practices, language variation, and linguistic adaptability as experienced by multilingual communities with diverse ethnic backgrounds.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Human Diversity within the U.S.

MLANG 200 - Intermediate Studies in Foreign Language I**Credits 1-5**

Course used to transfer credit for third semester language courses not offered at K-State.

Note

Prior consultation for approval is expected.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

MLANG 280 - Studies in World Literature and Culture**Credits 1-5**

Provides the students the opportunity to investigate in detail a particular theme or genre in World literature or culture. Taught in English.

Note

Topics will vary.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

ENGL 280

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 297 - Honors Introduction to the Humanities I**Credits 3**

Study of selected major works of history, literature, and philosophy which have been of central importance in the Western cultural tradition. Considerable emphasis is placed on classroom discussion and writing interpretive essays.

Note

Limited to entering freshman students. Consent of instructor.

Repeat for Credit

N

Typically Offered

Interession

Crosslisted

ENGL 297, HIST 297, PHILO 297

K-State 8

MLANG 298 - Honors Introduction to the Humanities II**Credits 3**

Continuation of MLANG 297.

Repeat for Credit

N

Requisites

Prerequisite: MLANG 297 or consent of instructor.

Typically Offered

Fall

Crosslisted

ENGL 298, HIST 298, PHILO 298.

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 300 - Intermediate Studies in Foreign Language II**Credits 1-4**

Course used to transfer credit for fourth semester language course not offered at K-State.

Note

Prior consultation for approval is expected.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

MLANG 301 - Languages and Your Future**Credits 1**

Investigation and application of resources for developing language and culture skills, as well as a knowledge base about related fields and careers. Taught in English.

Note

Recommended for Modern Languages majors and minors.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Global Issues and Perspectives

MLANG 398 - Intermediate Studies in Foreign Language**Credits 1-6**

Offered only to participants in study abroad programs. Prior consultation for approval is expected.

Repeat for Credit

Y

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 399 - Honors Seminar in Modern Languages**Credits 1-3**

Reading and discussion of selected masterpieces of European literature in English translation.

Note

Open to non-language majors in the honors program.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 499 - Honors Project**Credits 3**

Open only to Arts and Sciences students who are active members of the University Honors Program.

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MLANG 500 - K-State in Berlin**Credits 3**

K-State in Berlin

Repeat for Credit

N

Typically Offered

Other

MLANG 507 - European Literature in Translation**Credits 3**

Selected readings in English from the major authors of Europe and the Spanish-speaking world.

Note

Courses taught in English.

Repeat for Credit

N

Typically Offered

Other

MLANG 600 - Principles of Linguistics: Language Structure and Language Use**Credits 3**

Introduction to the fundamentals of linguistic analysis, including the sound system (phonetics and phonology), word formation (morphology), sentence formation (syntax), meaning (semantics and pragmatics). Formal and functional (usagebased) perspectives. Application of linguistics to language acquisition theory and to pedagogy.

Repeat for Credit

N

Requisites

Prerequisite: For ML majors & minors: GRMN 523 or GRMN 527, or FREN 513 or FREN 518 or one 700-level class, or SPAN 410 or SPAN 420 or SPAN 510; For other majors: ENGL 200.

Typically Offered

Fall

MLANG 710 - Foreign Language Pedagogy**Credits 3**

Second and foreign language pedagogical theory is combined with the examination of practical concerns in the teaching of languages, in order to provide future and current instructors with the necessary background for making informed decisions concerning classroom practices. Taught in English.

Note

Instructor approval required.

Repeat for Credit

N

Typically Offered

Fall

MLANG 711 - Teaching Language Online

Credits 3

Online education pedagogical theory is combined with the examination of practical concerns in the teaching of languages (second and foreign) in an online environment. Students explore various ways to adapt second and foreign language teaching practices for various online environments, such as synchronous and asynchronous learning, hybrid and hyflex course design, and self-paced formats. Provides future and current instructors with the tools that they need to create and teach in online environments. Taught in English.

Repeat for Credit
N

Typically Offered
Fall or Spring

MLANG 720 - Introduction to Literary Theory and Research Methodology**Credits 3**

An overview of theoretical approaches and classical texts that inform current trends in literary research in the modern languages.

Repeat for Credit
N

Typically Offered
On sufficient demand

MLANG 770 - Theories of 2nd Language Acquisition**Credits 3**

Introduction to the major theoretical frameworks of second language acquisition (SLA). Reading, discussion, and analysis of SLA research on a variety of linguistic and learning issues. Of interest to students of both language acquisition and literature. Taught in English.

Note
Instructor approval required.

Repeat for Credit
N

Typically Offered
Spring

MLANG 779 - Seminar in Modern Languages**Credits 3**

Variable topics.

Repeat for Credit
N

Typically Offered
Fall

MLANG 799 - Problems in Modern Languages**Credits 1-18**

Problems in Modern Languages

Repeat for Credit
N

Typically Offered
Other

MLANG 800 - Colloquium in Modern Languages**Credits 2**

A graduate colloquium for M. A. candidates in French, German, and Spanish. Variable topics in literary and cultural fields appropriate to study in common by students in these languages.

Repeat for Credit
Y

Typically Offered
Other

MLANG 803 - Practicum in Adult TESL/TEFL: Written and Oral Communication**Credits 3**

Overview of current issues and methodology in TES/FL and foundation for further exploration of teaching techniques used in skill specific areas of oral and written communication (including listening, speaking, reading, and writing). Provides students with training in TES/FL for adult learners. Students will acquire specific content and

practice in defined skill areas.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring, Summer

MLANG 804 - Seminar/Topics in TESL/TEFL

Credits 3

Variable topics on different aspects /areas of TEFL, e.g., pragmatics, assessment, and writing, etc. Overview of key concepts for each topic, issues, and methodology, discussion of its applications in TEFL. Equip students with the necessary knowledge and skills to competently teach different areas in TEFL.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring, Summer

MLANG 805 - Second Language Assessment

Credits 3

Explores the basic concepts, principles, and methodology of second language assessment.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall, Spring, Summer

MLANG 899 - Research in Modern Languages

Credits 1-18

Research in Modern Languages

Repeat for Credit

Y

Typically Offered

Fall

MLAS 100 - Survey of Machine Learning and Autonomous Systems

Credits 3

Rapid progress has been made in the development of autonomous systems. Terrestrial robotics, interplanetary systems, planetary robotics, uncrewed aerial systems, remote sensing platforms, and autonomous automobiles have all made great advances. These technologies have been enhanced by advances in artificial intelligence (AI). A non-programming perspective, this course will survey the current state-of-the-art perspective on artificial intelligence technologies used in autonomous systems. We start by presenting both ML-based and AI-based architectures that form the basis of perception, path planning, cognitive arbitration, and motion control.

Repeat for Credit

N

Typically Offered

Fall

MLAS 200 - Introduction to Automata and Cybernetic Systems Theory

Credits 3

This introductory course is a survey of the most common machine learning approaches used in creating descriptive and predictive analytical solutions. Students will be introduced to both the theoretical concepts and practical applications of machine learning and autonomous system. The course material introduces the probabilistic programming paradigm. Case studies will be used to illustrate the application of probabilistic programming frameworks in an applied industrial perspective.

Repeat for Credit

N

Requisites

Corequisite: MLAS 100

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MLAS 350 - Data Structures for Machine Learning

Credits 3

This course will cover the design, development, and employment of data structures and algorithms with an emphasis on time-space complexity. Data structure processing and computational processing problems related to the following time-space problems will be explored: constant, logarithmic, cubic, quadratic, polynomial, and exponential. Additionally, students will leverage Bachmann-Landau notation to describe time-space complexity.

Repeat for Credit

N

Requisites

Prerequisite: MLAS 200 and CYBR 335

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MLAS 390 - Unsupervised Learning in Autonomous Systems

Credits 3

Unsupervised learning is a type of machine learning that looks for previously undetected patterns in a data set with no pre-existing labels and with a minimum of human supervision. Using probabilistic programming languages, students will learn how to develop, interpret and deploy unsupervised machine learning models within autonomous systems. Common machine learning algorithms for unsupervised learning will be leveraged: k-means clustering, principal component analysis, non-negative matrix factorization, singular decomposition, and density-based spatial clustering of application with noise.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 and MLAS 350 or CC 315

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

MLAS 400 - Supervised learning in Autonomous Systems

Credits 3

Supervised learning is the machine learning task of learning a function that maps an input to an output based on example input-output pairs. Using probabilistic programming languages, this course will illustrate supervised machine learning concepts via data preparation, training data, model evaluation, and operationalization. Common machine learning algorithms for supervised learning such as K-nearest neighbors, logistic regression, decision trees and random forests will be explored and operationalized within an autonomous system.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 and MLAS 350 or CC 315

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

MLAS 410 - Natural Language Processing

Credits 3

This course gives an overview of modern data-driven techniques for natural language processing. We will discuss all the steps that are required for NLP such as text classification, neural nets for text classification, language modeling, word embedding, sequence labeling, context free grammar, constituency parsing, dependency parsing syntax, computational ethics, information extraction, conversational agents, machine translation and computational social science.

Repeat for Credit

N

Requisites

Prerequisite: MLAS 350

Typically Offered

Fall or Spring

MLAS 412 - Deep Learning**Credits 3**

This advanced deep learning course is designed to provide students with a comprehensive understanding of deep learning techniques, their applications, and the practical skills needed to work with deep neural networks. By the end of this course, students will have the knowledge and skills to design, implement, and evaluate advanced deep learning models for a wide range of applications.

Repeat for Credit

N

Requisites

Prerequisite: MLAS 350

Typically Offered

Fall or Spring

MLAS 500 - Reinforcement Learning in Autonomous Systems**Credits 3**

This course will guide students through the development and operationalization of reinforcement learning frameworks. Reinforcement learning architectures such as Markov decision processes, Q-Learning, artificial neural networks, recurrent neural networks, and generative adversarial networks will be explored. This course is a guide to the complexities of reinforcement learning, their respective architectures and implementations within an autonomous system.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 and MLAS 350 or CC 315

Typically Offered

Fall

MLAS 501 - Artificial Intelligence Studio**Credits 3-6**

Students are expected to develop and operationalize an artificially intelligent framework using applied statistical methods, techniques in probabilistic programming, and principles of artificial intelligence. Students will be required to document underlying AI theories and demonstrate an operationalized AI framework.

Repeat for Credit

Y

Requisites

Corequisite: MLAS 390 or MLAS 400 or MLAS 500

Typically Offered

Fall, Spring, Summer

MLAS 502 - Autonomous Systems Senior Capstone**Credits 6**

Students are expected to develop and operationalize an autonomous system using cybernetic principles of learning, computational frameworks, quantitative methods, and principles of engineering. Students will develop project documentation as needed to describe their autonomous systems project. Lastly, students will be required to successfully defend their project via a final oral presentation to associated faculty members. Whenever feasible, real-world projects are solicited from businesses.

Repeat for Credit

N

Requisites

Prerequisite: MLAS 390, MLAS 400, and MLAS 500

Typically Offered

Spring

MLAS 650 - Autonomous Systems Architecture Studio**Credits 3**

This course introduces the conceptualization and architectural development of cognitive processing engines within an autonomous system that also includes the architecture of autonomous systems, design of agents, models and knowledge representations, control of robotic manipulators, machine vision, the dynamics of wheeled,

air, space and underwater robots, navigation and localization.

Repeat for Credit

N

Requisites

Prerequisite: Experience with computer programming.

Typically Offered

Fall, Spring

MLAS 700 - Advanced Cybernetic Systems Development

Credits 3

This course is focused on the design and development of cognitive processing engines within the context of the larger autonomous system. General cybernetic theories will be used in specific example where students will gain experience designing and implementing computerized feedback control systems. The principles of cybernetics are universal so that students will be able to transfer their understanding and skills to other industrial domains.

Repeat for Credit

N

Requisites

Prerequisite: MLAS 650

Typically Offered

Fall, Spring

MLAS 750 - Autonomous Networking within Cyber-Physical Systems

Credits 3

Students will design and develop communication frameworks for cognitive processing engines within autonomous systems connected to CPS frameworks. The development of communication infrastructures that connect bodied (and unbodied) autonomous entities will also be explored. Current literature, techniques, theories, and methodologies will be reviewed and discussed. Industry-base projects will help students creatively apply cutting-edge CPS research to their autonomous systems research problems.

Repeat for Credit

N

Typically Offered

Fall, Spring

MLAS 800 - Integrated Machine Learning and Autonomous Systems

Credits 3

Students will study and develop an intelligent autonomous system, integrating perception, manipulation, learning, planning, and interaction. The autonomous system will be capable of learning and performing a variety of tasks in real-world environments while collaborating with humans. Additional artificial intelligence topics include: contextual reasoning, knowledge representation, perception and control, deep learning, and transfer learning.

Repeat for Credit

N

Requisites

Prerequisite: MLAS/CYBR 750

Typically Offered

Fall, Spring

MPH 701 - Fundamental Methods of Biostatistics

Credits 3

A course emphasizing concepts and practice of statistical data analysis for the health sciences. Basic techniques of descriptive and inferential statistical methods applied to health related surveys and designed experiments. Populations and samples, parameters and statistics; sampling distributions for hypothesis testing and confidence intervals for means and proportions involving one sample, paired samples and multiple independent samples; odds ratios, risk ratios, simple linear regression. Use of statistical software to facilitate the collection, manipulation, analysis and interpretation of health related data.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

STAT 701

MPH 708 - Veterinary Epidemiology

Credits 2

Introduction to the principles and methods of veterinary epidemiology: emphasizing how diseases affect populations (and associated implications for individuals), and application to disease diagnosis, treatment, prevention, and control.

Repeat for Credit

N

Typically Offered

Spring

Crosslisted

DMP 708

MPH 720 - Administration of Health Care Organizations

Credits 3

Comprehensive review of current health care institutions and their response to the economic, social/ethical, political/legal, technological, and ecological environments.

Note

Three hours lecture

Repeat for Credit

N

Typically Offered

Spring

Crosslisted

FNDH 720

MPH 754 - Introduction to Epidemiology

Credits 3

The purpose of this course is to introduce students to the basic principles and methods of epidemiology in order to recognize and understand how disease affects populations (and the associated implications for individuals). This course will prepare students to use epidemiologic methods to solve current and future challenges to diagnose, treat, prevent, and control disease during their professional training and throughout their career.

Repeat for Credit

N

Typically Offered

Fall

Crosslisted

DMP 754

MPH 802 - Environmental Health

Credits 3

This is a three-credit graduate-level course. Students will be exposed to professional practice of environmental sciences, epidemiology, toxicology, occupational health and industrial hygiene, and consumer health and safety. Topics include the methods for defining environmental contamination; identifying contaminants, pathogens and toxins; assessing risks and causality; determining health impact; ameliorating hazards; and protecting the population through waste management, regulatory programs, environmental inspections, food and product safety, and environmental policy. Participation is required.

Repeat for Credit

N

Typically Offered

Spring, Summer

Crosslisted

DMP - 802 Environmental Health

MPH 806 - Environmental Toxicology

Credits 2

An advanced toxicology course concerned with the occurrence, biological effect, detection, and control of foreign chemicals in the environment.

Repeat for Credit

N

Requisites

Prerequisite: Consent of staff.

Typically Offered

Spring

Crosslisted

DMP 806

MPH 818 - Social and Behavioral Bases of Public Health

Credits 3

The role of behavioral, social, psychological, economic, environmental, and social structural factors in both the occurrence of health problems in groups and populations, and in the development of the risk factors that contribute to these problems. Principles of health behavior change and the application of these principles to a variety of health issues as well as an emphasis on how social structural factors impact health are examined to better understand health behavior and health inequities in contemporary society.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate status in public health or kinesiology program.

Typically Offered
Fall

Crosslisted
KIN 818

MPH 840 - Public Health Practice

Credits 1-6

Supervised field experience in an international, state, local, or district health agency or other appropriate health agency.

Repeat for Credit
Y

Requisites
Prerequisite: Consent of instructor. FDSCI 840, DMP 840, FNDH 840, and KIN 840.

Typically Offered
Fall, Spring, Summer

Crosslisted
FDSCI 840, DMP 840, FNDH 840, KIN 840

MPH 854 - Intermediate Epidemiology

Credits 3

Epidemiologic principles of disease with a focus on measures of disease occurrence, association and impact, determinants of disease diagnostic test evaluation, study design and critical literature evaluation.

Repeat for Credit
N

Requisites
Prerequisite: DMP 708 or DMP 754 or equivalent AND STAT 701 or STAT 703 or DMP 830 or equivalent.

Typically Offered
Spring

Crosslisted
DMP 854

MSCI 100 - Introduction to Military Science and ROTC

Credits 1-18

Basic drill, physical fitness, rappelling, army values, military presentations and basic marksmanship.

Note
Two classroom hours, a required leadership lab, and three one-hour sessions of physical fitness per week. Participation in a weekend exercise is optional, but highly encouraged.

Repeat for Credit
N

Typically Offered
Fall

K-State 8
Ethical Reasoning and Responsibility

MSCI 101 - Introduction to Military Leadership

Credits 1-18

Principles of effective leading. Communication skills to improve individual performance and group interaction. Relation of military organizational ethical values to the effectiveness of a leader, incorporating perspectives of the evolution of the U.S. Military from colonial times through the modern era.

Note

Two classroom hours, a required leadership lab, and three one-hour sessions of physical fitness per week. Participation in a weekend exercise is optional, but highly encouraged.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Human Diversity within the U.S.

MSCI 200 - Self/Team Development**Credits 1-18**

Ethics-based military leadership skills that develop individual abilities and contribute to building effective teams. Oral presentations, leadership, land navigation, and basic military tactics.

Note

Two classroom hours; a required leadership lab; participation in three one-hour physical fitness sessions. Participation in a weekend exercise.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

MSCI 202 - Individual/Team Military Tactics**Credits 1-18**

Introduction to individual and team aspects of military tactics in small unit operations. Safety assessments, movement techniques, military orders process, rifle marksmanship, rappelling.

Note

Two classroom hours; a required leadership lab; participation in three one-hour physical fitness sessions. Participation in a weekend exercise is optional, but highly encouraged.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Human Diversity within the U.S.

MSCI 206 - Leaders Training Course**Credits 0-4**

A five-week summer camp conducted at Fort Knox, Kentucky. The United States Army provides pay, travel, lodging and meal costs. No military obligation incurred.

Note

Open only to students who have not completed all four of MSCI 101, MSCI 102, MSCI 201, and MSCI 202, and who pass a physical examination (paid for by ROTC).

This course is a summer camp and the student receives their grade in the Fall semester.

Typically Offered

Fall, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

MSCI 301 - Leading Small Military Organizations I**Credits 1-18**

Series of practical opportunities to lead small groups in situations of increasing complexity. Uses small unit defensive tactics and opportunities to plan and conduct training.

Note

Three classroom hours, a leadership lab, participation in three one-hour physical fitness sessions. Participation in one weekend exercise is required, and one or two additional weekend exercises are offered for optional participation.

Repeat for Credit

N

Requisites

Prerequisite: Completion of the basic course. Instructor permission required for enrollment.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

MSCI 302 - Leading Small Military Organizations II

Credits 1-18

Continues methodology of MSCI 301. Military missions and task analysis. Ethical decision making and lessons from leadership case studies.

Note

Three classroom hours, a leadership lab, participation in three one hour physical fitness sessions. Participation in one weekend exercise is required; two other weekend exercises optional.

Repeat for Credit

N

Requisites

Prerequisite: Completion of MSCI 301 and instructor permission.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

MSCI 306 - Leaders Development and Assessment Course

Credits 0-4

A five-week camp conducted at Fort Lewis, Washington, by members of Kansas State University and other university Army ROTC faculty. The U.S. Army provides pay, travel, lodging and most meal costs. Highly structured and demanding, stressing leadership at small unit levels under varying, challenging conditions.

Repeat for Credit

N

Requisites

Prerequisite: MSCI 301 and MSCI 302.

Typically Offered

Fall, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

MSCI 351 - Military Leadership Studies and Practical Applications

Credits 1-18

Independent research, analysis and monthly discussion on related military topics. Small unit tactics and practical application of leadership skills and individual research projects.

Note

Three classroom hours per week, a leadership lab, participation in three one-hour physical fitness sessions. Participation in one weekend exercise is required; two other weekend exercises optional.

Repeat for Credit

N

Requisites

Prerequisite: MSCI 301 or MSCI 302. Instructor permission.

Typically Offered

Fall, Spring

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

**MUSIC 171 - Inventing the Future:
Underground Rock: 1968-1993****Credits 3**

An introduction to the underground rock music, musicians, and scenes from the 1960's to the 1990's that have proven most influential on modern popular music and culture.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Historical Perspectives

K-State 8 Tag 2

Human Diversity within the U.S.

MUSIC 172 - History of Country Music**Credits 3**

History of country music's identity in American culture.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

**MUSIC 173 - Music as Protest and
Propaganda in the United States****Credits 3**

Explores music's transformative role in protest movements and as propaganda in the United States from 1775-present. Curated playlists from Jazz, Country, Soul, Hip Hop, Rock, Spirituals, and more encourage students to analyze sociopolitical issues through historical and contemporary music. Emphasis on musical responses to racial and ethnic inequities.

Note

Ability to read or perform music NOT required.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Human Diversity within the U.S.

MUSIC 174 - History of Hip Hop**Credits 3**

Students will explore a basic body of knowledge about the

history and emergence of rap music, components to its evolution, influences and representation of hip hop culture.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MUSIC 203 - Vocal Techniques I

Credits 1

A beginning course in the basics of singing and teaching skills.

Note

For music education majors whose emphasis is instrumental music.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 204 - Vocal Techniques II

Credits 1

Singing and teaching skills beyond the basics and presentation of materials suitable for private and public school instruction at the secondary level.

Note

For music education majors whose emphasis is instrumental music.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 203.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 205 - Music for Elementary Teachers

Credits 3

The contribution of music to child development in elementary schools. A study of music literature suited to children through the development of purposive listening and the expressive phases of music including rhythmic response, singing, playing, reading, and writing.

Repeat for Credit

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

MUSIC 208 - Guitar Class I

Credits 1

Beginning-level group instruction in guitar performance.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 210 - Music Theory I

Credits 3

An introduction to the basic language of music; scales, triads and seventh chords, and all simple intervals. Written and aural skills reinforce concepts of melody, rhythm, and harmony.

Repeat for Credit

N

Requisites

Prerequisite: Tested knowledge of basic music reading and aural skills.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 211 - Piano Class I

Credits 1

For students with no piano background. Topics covered will include notation, intervals, accompaniment patterns, major scales, triads, basic progressions, and musicianship.

Note

Sections also available for non-music majors and non-degree students.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

MUSIC 212 - Piano Class II

Credits 1

Covers minor scales and arpeggios, minor chords, black-key major and minor scales, seventh chords, and harmonization.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 211.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

MUSIC 213 - Piano Class III

Credits 1

Reinforces and expands the skills introduced in the previous levels: harmonization, transposition, sight-

reading, improvisation, and technical exercises continue to be at the core of the curriculum, while introducing new concepts such as transposing instruments, secondary chords, and both instrumental and vocal accompanying.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 212.

Typically Offered

Fall

MUSIC 214 - Piano Class IV

Credits 1

Reinforces and expands the skills introduced in previous levels: harmonization, transposition, sight-reading, improvisation, and technical exercises continue to be at the core of the curriculum, while introducing new concepts such as modulations, alto clef reading, augmented and Neapolitan sixth chords, and vocal warm-ups. Passing the final exam for this course fulfills the piano Proficiency requirements (MUSIC 060).

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 213.

Typically Offered

Spring

MUSIC 220 - Topics in Music

Credits 1-3

Exploration of the musical dimensions of a particular topic or theme. Topics vary.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

MUSIC 230 - Music Theory II

Credits 3

Continued experience with the language of music. Part-writing, analysis, composition.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or higher in MUSIC 210 or tested knowledge of basic music theory and concurrent enrollment in MUSIC 231.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

MUSIC 231 - Aural Skills I

Credits 1

Development of aural skills through sight singing, rhythmic training, and ear-training; melodic, rhythmic, and harmonic dictation to reinforce concepts in Music Theory II.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or higher in MUSIC 210 or tested knowledge of music.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 232 - Fundamentals of Teaching Music

Credits 2

Techniques, materials, and experiences for a variety of music classes will be examined through discovery. Furthermore, lesson plan development, writing, and implementation will be examined in detail.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 233 - English Diction

Credits 1

Focuses on enunciation and transcription of the English language as it applies to lyric (sung) diction using the international Phonetic Alphabet (IPA). Familiarity with proper pronunciation is gained through listening, singing, and transcription assignments.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 234 - String Techniques and Materials

Credits 1

A beginning course in the fundamentals of playing and methods for teaching stringed instruments.

Note

For music majors only, and not open to string majors.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 235 - Percussion Techniques and Materials

Credits 1

The fundamentals of playing and methods of teaching percussion instruments.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 236 - Clarinet & Saxophone Woodwind Techniques and Materials

Credits 1

A course in the fundamentals of playing and methods for teaching single reed woodwind instruments.

Note

For music majors only.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 237 - Double Reed and Flute Woodwind Techniques and Materials

Credits 1

A course in the fundamentals of playing and methods for teaching double reed and flute woodwind instruments.

Note

For music majors only.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 238 - High Brass Techniques and Materials

Credits 1

A course in the fundamentals of playing and methods for teaching high brass instruments.

Note

For music majors only.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 239 - Low Brass Techniques and Materials

Credits 1

A course in the fundamentals of playing and methods for teaching low brass instruments.

Note

For music majors only.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 240 - Advanced String Techniques and Materials

Credits 1

Playing and teaching skills beyond fundamentals and presentation of materials suitable for private and public school instruction at the secondary level.

Note

Required of all instrumental majors in music education.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 234.

Typically Offered

Spring

MUSIC 241 - Italian Diction

Credits 1

Rules for pronouncing and translating Italian vocal texts.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 242 - French Diction

Credits 1

Rules for pronouncing and translating French vocal texts.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 243 - German Diction

Credits 1

Rules for pronouncing and translating German vocal texts.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

MUSIC 244 - West African Drumming and Percussion

Credits 2

Explores several styles of drumming and African Xylophone playing from the Ga, Dagara, and Ewe traditions from Ghana and other parts of West Africa. Instruction, includes but it is not limited to playing techniques and musical structure for drumming and Xylophone playing as associated with common recreational dances. No prior experience is necessary.

Note

All musical instruments are supplied for class. Students may use their own instruments.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MUSIC 246 - Drumset Techniques

Credits 1

Develops and refines skills, vocabulary, and rhetoric necessary to performing as a functional drummer in a variety of settings and styles. Topics of focus will include building a groove vocabulary, expanding listening to a wide variety of drummers, developing physical coordination at the kit, and reading drum charts for maximum musicality.

Repeat for Credit

N

Requisites

Recommended Foundation: Previous percussion experience

Typically Offered

Fall, Spring

MUSIC 248 - Songwriting

Credits 3

Basic music theory pertaining to the creation of a melody and the harmonization of that melody; how to craft creative lyrics, identify song form, and write a song using the most common and relevant forms in popular music.

Repeat for Credit

Y

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

MUSIC 250 - Introduction to Music

Credits 3

An overview of music from chant to jazz, incorporating listening skills, elements of music, and music history. Designed to heighten the perception and enjoyment of music for the student listener.

Note

For non-music majors only.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

MUSIC 251 - Applied Study for Non-Music Majors

Credits 1-2

Applied study for non-music majors.

Note

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 254 - Secondary Performance

Credits 1-2

For students who wish to study an instrument or voice other than the major performance area. Instruction is offered every semester in voice and each of the following instruments: baritone, bassoon, clarinet, double bass, early winds, flute, French horn, guitar, harp, harpsichord, oboe, organ, percussion, piano, saxophone, trombone, trumpet, tuba, viola, viola da gamba, violin, and violoncello.

Note

Students may enroll in more than one instrument simultaneously and may earn 1-2 hours per semester in each instrument.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 255 - Lower-Division Performance

Credits 1-4

Instruction and experience in solo performance is offered every semester in voice and each of the following instruments: baritone, bassoon, clarinet, double bass, early winds, flute, French horn, guitar, harp, harpsichord, oboe, organ, percussion, piano, saxophone, trombone, trumpet, tuba, viola, viola da gamba, violin, and violoncello.

Note

Students may enroll in more than one instrument simultaneously and may earn 1 to 4 hours per semester in each instrument. Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 266 - Marching Band Techniques for School Music Educators

Credits 2

Practical techniques of marching band in school music programs and the skills necessary to design, organize, instruct, and evaluate a marching band show.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 267 - String Orchestra Pedagogy

Credits 2

This course is designed to prepare undergraduate students to be successful string educators. Students in this course will discuss and demonstrate knowledge of key topics including advanced string teaching strategies for both right and left-hand skills, string orchestra lesson plan design, program curricular development, recruitment and retention of students, the merging of supplemental pedagogical materials within the lesson plan, alternative performance styles, and administrative tasks specific to string teaching.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 268 - Vocal Pedagogy

Credits 2

Study of vocal production, exploring the scientific principles of breathing, resonance, timbre, and other vocal features. Discussion of vocal health and teaching styles will be included.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 280 - Lower-Division Ensemble Performance

Credits 1

Instruction is offered each semester in the following areas: brass, chamber music, concert jazz, jazz combo, strings, winds, percussion, and vocal ensemble.

Note

Admission is by audition and students may enroll in more than one ensemble simultaneously.

Repeat for Credit

Y

Typically Offered

On sufficient demand

K-State 8

Aesthetic Interpretation

MUSIC 320 - Music Theory III

Credits 3

Theoretical concepts of eighteenth-century music. Modulations, secondary function chords, counterpoint, and some chromatic harmony. Identify and work with elements of musical structure through exercises, analysis and composition.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 230 with grade of C or higher and concurrent enrollment in MUSIC 321.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 321 - Aural Skills II

Credits 1

Sight singing, rhythmic training, and ear-training through drills and dictation to reinforce concepts in Music Theory III.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 231 with grade of C or higher.
Corequisite: MUSIC 320.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 323 - Lower-Division Composition

Credits 1-18

Composition instruction through individual lessons and group seminar instruction.

Note

Instructor permission.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 350 - Collaborative Piano-Studio

Credits 1

Piano student assigned to studio instructor.

Note

Accompanies lessons for at least two hours a week. Ensemble credit for pianists. Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 351 - Collaborative Piano-Recital

Credits 1

Piano student assigned to a music major preparing for graduation recital.

Note

Pianist accompanies student in lessons and presents the formal public program as course requirement. Consent of instructor.

Credits 0

Required for graduation of all music majors.

Repeat for Credit

Y

Requisites

Prerequisite: MUSIC 320 or concurrent enrollment.

Typically Offered

Fall, Spring

MUSIC 365 - Conducting**Credits 1**

Techniques of the baton gestures, signs, and cues as generally used in conducting choral and instrumental organizations.

Note

For music majors only.

Repeat for Credit

N

Requisites

Prerequisite: COMM 106 or 109 and a grade of C or higher in MUSIC 320 and MUSIC 321.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

MUSIC 373 - Jazz Guitar Seminar**Credits 1**

Listening to jazz guitar literature, performing, and offering meaningful critique.

Repeat for Credit

N

Requisites

Prerequisite: Audition. Corequisite: MUSIC 696, MUSIC 698.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 391 - Keyboard Pedagogy**Credits 2**

A systematic study of pedagogy which examines effective teaching methods and aids in the development of a philosophy of professional teaching.

Repeat for Credit

N

Requisites

Prerequisite: Keyboard majors with concurrent enrollment in MUSIC 455.

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 400 - Concert Choir**Credits 0-1**

Admission by audition.

Repeat for Credit

Y

Typically Offered

On sufficient demand

K-State 8

Aesthetic Interpretation

MUSIC 401 - Concert Band**Credits 0-1**

Open to all interested wind and percussion performers without audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 402 - Wind Ensemble

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 403 - Collegiate Chorale

Credits 0-1

Open to all interested singers. Audition determines membership in other choral organizations.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 404 - Symphony Orchestra

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 406 - Collegiate Jazz Ensemble

Credits 0-1

An advanced level college jazz ensemble. Examines and preforms various jazz ensemble pieces selected from extant literature which may include cool, swing, hard bop, bossa, Latin, samba, funk/rock, and other styles.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 408 - University Tenor/Bass Choir-Upper Division

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 409 - University Treble Chorus-Upper Division

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 411 - Marching Band

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

MUSIC 412 - University Band

Credits 0-1

Open to all interested wind and percussion performers by audition.

Repeat for Credit

Y

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

MUSIC 414 - Theatre Orchestra

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

MUSIC 416 - Cat Band Upper Division

Credits 0-1

Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 418 - Wind Symphony

Credits 0-1

Using a player-pool concept, the ensemble will explore outstanding and varied wind literature. Repertoire may range from a classical octet to a one-on-a-part performance of a major large band work. Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 431 - Music Business 1

Credits 2

Provides students with the tools for a career in music. Topics covered include: resumes, curriculum vitas, developing music websites, creating an on-line presence, tax protocol for musicians, goal-setting strategies, and meeting short and long-term music business goals.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing

Typically Offered

Fall, Spring

MUSIC 432 - Music Business 2

Credits 2

Explores elements of the music industry including business frameworks, legal topics, and interpersonal relations. Projects are individualized to the student's specialty area within the music industry.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 431

Typically Offered

Fall, Spring

MUSIC 441 - Pop Music Icons

Credits 3

An exploration of the musical decisions that define the world's leading pop musicians and songwriters. Using directed listening and curated playlists, students will engage with musical offerings and develop an understanding of influences for each artist studied. Individual artists or collected groups of artists are examined in detail.

Note

No previous training is necessary, but prior work with the elements of music, songwriting, or a broad popular music course may be helpful.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 454 - Upper Division Secondary Performance

Credits 1-4

For students who wish to study an instrument or voice other than the major performance area. Instruction is offered every semester in voice and each of the following instruments: baritone, bassoon, clarinet, double bass, early winds, flute, French horn, guitar, harp, harpsichord, oboe, organ, percussion, piano, saxophone, trombone, trumpet, tuba, viola, viola da gamba, violin, and violoncello. This course allows for upper-division study within their secondary instruments.

Note

This course is aligned with upper division performance courses (MUSIC 455) but is offered to students who are achieving at the upper-division level on their secondary instrument. Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 455 - Upper-Division Performance

Credits 0-4

Instruction and experience in solo performance is offered every semester in voice and each of the following instruments: baritone, bassoon, clarinet, double bass, early winds, flute, French horn, guitar, harp, harpsichord, oboe, organ, percussion, piano, saxophone, trombone, trumpet, tuba, viola, viola da gamba, violin, and violoncello.

Note

Students may enroll in more than one instrument simultaneously and may earn 1 to 4 hours per semester in each instrument. Admission by audition.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 456 - Choral Conducting

Credits 1

Continued mastery of the skills in Conducting I while emphasizing essential techniques and interpretation for choral ensembles.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 365.

Typically Offered

Spring

MUSIC 457 - Instrumental Conducting

Credits 1

Continued mastery of the skills in Conducting while emphasizing essential techniques and interpretation for instrumental ensembles.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 365.

Typically Offered

Spring

MUSIC 458 - Music in the Schools, PK-6

Credits 3

The study of the musical characteristics of children and development of appropriate curriculum, instructional materials and techniques, and related technology for teaching musical understanding, literacy, multi-cultural connections, and creative improvisation in grades PK-6 instrumental, vocal, and general music.

Note

This course includes supervised field experiences.

Repeat for Credit

N

Requisites

Prerequisite: EDCI 315, EDCI 318, EDCI 320, and EDSP 323.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

MUSIC 459 - Music Programs in Middle School/High School

Credits 3

Organization and administration of the comprehensive music program in junior and senior high schools; including the study of vocal and instrumental ensemble development, as well as techniques and materials for other types of music classes.

Note

This course includes a supervised field experience.

Repeat for Credit

N

Requisites

Prerequisite: EDCI 315, EDCI 318, EDCI 320, and EDSP 323.

Typically Offered

Fall

MUSIC 460 - Teaching Beginning Instruments

Credits 1

Students will learn and employ techniques and strategies for teaching beginning band and orchestra instruments.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 234, EDCEP 315, EDCI 320, EDSP 323.

Typically Offered

Spring

MUSIC 461 - Advanced Studies in Music Education

Credits 2

Advanced instructional methods and technologies related to the teaching of music in grades pre-K-12 implemented through investigation of current trends in the field, advanced unit design, and field experience.

Repeat for Credit

Y

Requisites

Prerequisite: EDCI 315, EDCI 318, EDCI 320, EDSP 323, and MUSIC 458 with grade of C or higher or MUSIC 459 with a grade of C or higher.

Typically Offered

Fall, Spring

MUSIC 462 - Instrumental Jazz Instruction

Credits 1

Guides future instrumental teachers on techniques to teach jazz including beginning improvisation, combo, big band techniques, and school jazz literature.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 463 - Vocal Jazz Instruction

Credits 1

Guides future choral teachers on techniques to teach jazz including beginning improvisation, jazz choir, and school jazz literature.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 464 - Methods and Materials for the Studio**Credits 2**

Methods of teaching fundamental techniques; selection of teaching materials outlining courses of study. For undergraduate students in performance curricula. Taught in divisions according to the major. Practical application through supervised studio teaching.

Repeat for Credit

N

Requisites

Corequisite: MUSIC 455

Typically Offered

Fall, Spring, Summer

MUSIC 466 - Music History I: Ancient Greece to Beethoven**Credits 3**

An overview of stylistic trends, major composers, repertoire of ancient Greece, the Middle Ages, Renaissance and early Baroque periods.

Repeat for Credit

N

Requisites

Prerequisite: ENGL 100, ENGL 200, and a grade of C or higher in MUSIC 320.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

MUSIC 467 - Music History II: Beethoven to Present**Credits 3**

An overview of stylistic trends, major composers, repertoire of the late Classical period to present day.

Repeat for Credit

N

Requisites

Prerequisite: ENGL 100, ENGL 200, and a grade of C or higher in MUSIC 360 and MUSIC 361.

Typically Offered

Spring

MUSIC 468 - Music History III: 1850 to the Present**Credits 3**

An overview of the development of stylistic and cultural trends, major composers, and repertoire of the late Romantic period through the present.

Repeat for Credit

N

Requisites

Prerequisite: Grade of C or higher in Music 320.

Typically Offered

Fall

MUSIC 469 - Instrumentation and Arranging**Credits 2**

Study of writing and arranging for the strings, woodwinds, brass and percussion as well as choral ensembles. Functional ranges and practical applications through score study and projects.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 360, MUSIC 361

Typically Offered

Fall

MUSIC 475 - Opera Workshop

Credits 1-18

Principles and techniques of operatic and musical theatre production, with emphasis on class rehearsal and performance of selected scenes from opera and musical drama; brief survey of the history of opera.

Note

Offered jointly by the Departments of Music and Communication Studies. Vocal ensemble credit may be earned in this course.

Repeat for Credit

Y

Typically Offered

On sufficient demand

Crosslisted

THTRE 475

K-State 8

Aesthetic Interpretation

MUSIC 480 - Upper-Division Ensemble Performance

Credits 1

Instruction is offered each semester in the following areas: brass, chamber music, concert jazz, jazz combo, strings, winds, percussion, and vocal ensemble.

Note

Admission is by audition and students may enroll in more than one ensemble simultaneously.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

MUSIC 490 - Collegium Musicum

Credits 0-1

A vocal and instrumental ensemble devoted to the historically-informed performance of music written primarily during the Medieval, Renaissance, and Baroque periods (c. 1100-1750. Instruments of the historical period used when possible.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

MUSIC 500 - Applied Recital

Credits 0

Public performance; vocal or instrumental with a suggested performing time of 25 minutes. Intended for performances in addition to required recital performances (MUSIC 502 and/or 501).

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 255

Corequisite: MUSIC 255 or MUSIC 455

Typically Offered

Fall, Spring

MUSIC 501 - Half Recital

Credits 1

Public performance; vocal or instrumental with suggested performing time of 25 minutes.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MUSIC 502 - Full Recital

Credits 2

Public performance; vocal or instrumental with suggested performing time of 50 minutes.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MUSIC 523 - Upper-Division Composition

Credits 0-18

Composition instruction through individual lessons and group seminar instruction. Emphasis on meeting professional standards of composition and score/part preparation and creation of a varied portfolio of works.

Note

Submission of a portfolio of pieces for faculty review and approval.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 599 - Special Studies in Music

Credits 1-3

Special Studies in Music

Repeat for Credit

Y

Requisites

Prerequisite: Background of courses needed for studies undertaken.

Typically Offered

Fall, Spring, Summer

MUSIC 696 - Jazz Theory I

Credits 1

Basic fundamentals of jazz theory to develop critical thinking and performing skills.

Note

Instructor permission.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 697 - Jazz Theory II

Credits 1

Intermediate level fundamentals of jazz theory to develop critical thinking and performing skills.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 696, MUSIC 298.

Typically Offered

Fall

MUSIC 698 - Jazz Improvisation I

Credits 1

Develop skills in the area of jazz improvisation in a performance lab setting.

Note

Instructor consent.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 699 - Jazz Improvisation II

Credits 1

Continued development of jazz improvisational skills in a performance lab setting.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 697 or consent of instructor.

Typically Offered

Fall

MUSIC 700 - Literature Analysis**Credits 3**

Explore, evaluate, and analyze the masterworks of the wind, choral, and orchestral genres. This course will alternate annually between Instrumental and Choral literature.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 701 - Graduate Theory Review**Credits 2**

For graduate students in music for whom additional work in the harmonic and formal aspects of tonal and chromatic music is needed.

Note

This course does not fulfill degree requirements.

Repeat for Credit

N

Typically Offered

Fall, Summer

MUSIC 702 - Style Analysis**Credits 3**

Training in a comprehensive, systematic analytical approach to all style periods, and in verbalizing analytical perceptions.

Repeat for Credit

N

Typically Offered

Fall, Summer

MUSIC 703 - Graduate History Review**Credits 2**

For graduate students in music for whom additional work in music history is needed based on their performance on the Graduate Music History Entrance Exam. This course does not fulfill graduate degree requirements. A grade of an A or B is required to enroll in graduate level music history courses.

Repeat for Credit

N

Typically Offered

Fall, Summer

MUSIC 704 - Symphonic Literature**Credits 3**

The development of orchestral music from the late Baroque to the present, with emphasis on selected symphonies of the late eighteenth and nineteenth centuries.

Repeat for Credit

N

Typically Offered

Other

MUSIC 705 - Chamber Music Literature**Credits 3**

A selected survey of masterpieces of small ensemble music from 1750 to the present. Special emphasis on the string quartet.

Repeat for Credit

N

Typically Offered

Other

MUSIC 706 - Song Literature**Credits 3**

Survey, by historical period and national styles, of major solo vocal works.

Repeat for Credit

N

Typically Offered

Other

MUSIC 707 - History of Wind Bands**Credits 3**

Development of the wind band medium from the Renaissance to the present, with focus on the composers and literature.

Repeat for Credit

N

Typically Offered

Spring-Even Years

MUSIC 708 - Choral Literature**Credits 3**

A study of standard choral masterpieces in both large and small forms from 1450 to the present.

Repeat for Credit

N

Typically Offered

Other

MUSIC 709 - History of School Choral Music**Credits 3**

Development of choral music in schools with focus on composers and literature.

Repeat for Credit

N

Typically Offered

Other

MUSIC 710 - Percussion Pedagogy**Credits 2-3**

Advanced study of percussion instruments and related performance techniques, teaching methods and

responsibilities, organization, and literature.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 711 - Concert and Ethnic Percussion Techniques**Credits 2-3**

Advanced study of percussion performance techniques commonly associated with concert band and percussion ensemble, as well as percussion techniques associated with music of other cultures.

Note

The three credit-hour option includes additional assignments.

Repeat for Credit

N

Typically Offered

Other

MUSIC 712 - Jazz and Marching Percussion Techniques**Credits 2-3**

Advanced study of percussion performance techniques commonly associated with marching percussion and jazz idioms.

Note

The three credit-hour option includes additional assignments.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 713 - Survey of Vocal Solos for Adolescents**Credits 3**

An in-depth study of appropriate solo literature for adolescent singers.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 714 - Advanced Orchestration

Credits 2

The study of orchestra and band scores. Exercises in orchestrating this type of music for different choirs of instruments, as well as scoring for full orchestra and symphonic band.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 469.

Typically Offered

Spring

MUSIC 715 - Advanced Woodwind Techniques

Credits 2

Advanced techniques in the teaching of all woodwind instruments for music teachers.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 716 - Advanced Brass Techniques

Credits 2

Advanced techniques in the teaching of all brass instruments for music teachers.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 717 - Lower String Pedagogy

Credits 2

Study of low string technique and related teaching methods. Intended for teachers of string, concert/jazz bands and vocal music if they use a bass with accompaniment combos for pit orchestras or swing choirs.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 718 - Upper String Pedagogy

Credits 2

Study of violin technique and related teaching methods, also applicable to other bowed string instruments.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 719 - Marching Band Techniques

Credits 2

Philosophical and practical purposes of the marching band, and the skills necessary to design, organize, instruct, and evaluate a marching band show.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 720 - Choral Ensemble Techniques

Credits 2

Philosophical and practical study of the choral ensemble, and the skills necessary to design, organize, instruct and evaluate the choral program.

Repeat for Credit

N

Typically Offered
Summer

MUSIC 721 - Jazz Techniques

Credits 2

Basic practices found in jazz education, including literature, teaching techniques, and resource materials.

Repeat for Credit
N

Typically Offered
Summer

MUSIC 722 - Arranging for Bands

Credits 2

Assessing, evaluating, and applying the basic issues, techniques, and possibilities inherent in scoring and arranging for various windband media. Primary attention will be given to concert and marching bands, but students will also spend time learning about various jazz ensembles and other possible combinations of wind and percussion instruments.

Repeat for Credit
N

Typically Offered
Summer

MUSIC 723 - Arranging Choral Music

Credits 2

Application of basic compositional issues, techniques, and possibilities inherent in scoring and arranging for various choral ensembles.

Repeat for Credit
N

Typically Offered
Summer

MUSIC 724 - 18th Century Counterpoint

Credits 2

Contrapuntal compositional techniques from the late Baroque to Classical periods, including compositional procedures for the canon and fugue.

Repeat for Credit
N

Requisites
Prerequisite: MUSIC 360, MUSIC 361.

Typically Offered
Fall, Summer

MUSIC 725 - Theories of Contemporary Music

Credits 2

Introduction to analytical and compositional techniques applicable to the predominately non-tonal music of the 20th and 21st centuries.

Repeat for Credit
N

Requisites
Prerequisite: MUSIC 360, MUSIC 361.

Typically Offered
Spring, Summer

MUSIC 726 - History of the Opera

Credits 3

A study of selected masterpieces of musical drama, with emphasis on the relationship of music and drama, and on the unique qualities of opera as a collective artwork.

Repeat for Credit
N

Requisites
Prerequisite: MUSIC 320.

Typically Offered
Other

MUSIC 727 - Introduction to Historical Performance Practice

Credits 3

Studies the changing performance styles in music from the Middle Ages to the 18th century. Examines problems in the field of historical performance practices. Interpretation of musical performances (ornamentation, articulation, tuning, temperament, rhythmic elements, and tempo) based on contemporaneous sources. Students will perform short selections and prepare musical editions based on their findings.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 360

Typically Offered

Spring

MUSIC 728 - Advanced Instrumental Rehearsal Techniques**Credits 2**

Explore, evaluate, and develop the musical understanding and skills necessary in leading instrumental ensembles toward significant musical expression through effective rehearsal techniques.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 729 - Advanced Choral Rehearsal Techniques**Credits 2**

Explore, evaluate, and develop the musical understanding and skills necessary in leading choral ensembles toward significant musical expression through effective rehearsal techniques.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 730 - Organization and Administration of School Music Programs**Credits 2**

Provides models and ideas on organizing program/teaching to enable the teacher and students to succeed and enjoy the music making process. Present strategies and philosophies on dealing with administrators, parents, peers, and students will be discussed, as well as motivation of self and student.

Repeat for Credit

N

Typically Offered

Fall-Odd Years

MUSIC 731 - Music Business 1**Credits 2**

Provides students with the entrepreneurial tools for a career in music. Topics covered include: resumes, curriculum vitas, developing music websites, creating an on-line presence, tax protocol for musicians, goal-setting strategies, and meeting short and long-term music business goals

Repeat for Credit

N

Requisites

Prerequisite: Junior Standing

Typically Offered

Fall, Spring

MUSIC 732 - Music Business 2**Credits 2**

Explores elements of the music industry including business frameworks, legal topics, and interpersonal relations. Projects are individualized to the student's specialty area within the music industry.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 731

Typically Offered

Fall, Spring

MUSIC 733 - Music Marketing and Management Internship

Credits 2

Students engage directly with the music industry through established internships in the area. Opportunities will vary by specialty and availability.

Note

Music 733 is the opportunity to engage in components of the music industry through various faculty facilitated internships or projects. The student will gain field experience, network, engage in large- and small-scale marketing structures, participate in career building projects, gain experience in administration, and audio-visual elements, and learn about management roles in both academic and professional situations. It will culminate in a data driven presentation or paper based on their cumulative internship experiences. Student internship types can vary based on specialty area and availability. Efforts will be made to match students with the best possible internship.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 731 and MUSIC 732

Typically Offered

Fall, Spring

MUSIC 734 - Technology of the Electronic Music Studio

Credits 2

Instrumentation and systematic procedures as applied to the construction of electronic music. Principles of voltage-controlled systems, synchronous tape machines, and audio mixing. Individual and team projects.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 323 or instructor consent.

Typically Offered

Fall, Summer

MUSIC 735 - Digital Sound Synthesis

Credits 2

Exploration of real-time interactive systems. Theory and application pertaining to the creation of instruments and scores using additive and FM techniques. Team projects.

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 734.

Typically Offered

On sufficient demand

MUSIC 737 - Organ Literature

Credits 3

A survey of significant compositions from the Renaissance to the present with emphasis on performance practice.

Repeat for Credit

N

Typically Offered

Other

MUSIC 738 - Piano Literature

Credits 3

Selective survey of music for piano from 1750 to the present.

Repeat for Credit

N

Typically Offered

Other

MUSIC 740 - Studies in Music Literature

Credits 3

Study of the repertory of a selected musical genre or medium of performance.

Repeat for Credit

N

Typically Offered

Other

MUSIC 759 - Techniques of Music Technology

Credits 2

Students develop skills of notation, scanning, manipulating, sequencing, and recording necessary to integrate digital technologies into the practice of music making and teaching.

Repeat for Credit

N

Typically Offered

Summer

MUSIC 766 - Seminar in the Life and Works of an Individual Composer

Credits 3

Study of the career and achievements of a selected composer of major stature.

Repeat for Credit

Y

Typically Offered

Fall, Summer

MUSIC 767 - Topics in American Music

Credits 3

Studies of the various genres of American music.

Repeat for Credit

Y

Typically Offered

On sufficient demand

MUSIC 791 - Advanced Vocal Pedagogy

Credits 2

Advanced study of vocal production, exploring the scientific principles of breathing, resonance, timbre, and other vocal features. Discussion of vocal health and teaching styles.

Repeat for Credit

N

Typically Offered

Other

MUSIC 799 - Problems in Music

Credits 1-18

Individual guided work in a selected area.

Note

No more than three hours of Problems in Music may be applied to the master's degree.

Repeat for Credit

Y

Requisites

Prerequisite: 6 hours graduate credit in music.

Typically Offered

Fall, Spring, Summer

MUSIC 801 - Introduction to Graduate Study in Music

Credits 2

Library procedures, bibliography, research methods, and practice in preparing scholarly papers.

Note

Required of all graduate students in music.

Repeat for Credit

Y

Requisites

Prerequisite: At least 30 hours of music theory and music history.

Typically Offered

Other

MUSIC 802 - Seminar in Music Theory

Credits 3

Comparison of major theoretical treatises and historical compositional practices; practical application for the

modern musician.

Repeat for Credit

Y

Requisites

Prerequisite: Twenty hours of music theory.

Typically Offered

Other

MUSIC 803 - Seminar in Music History

Credits 2

The history of music with emphasis on the correlation of stylistic factors and man's cultural environment.

Repeat for Credit

Y

Typically Offered

Summer

MUSIC 804 - Advanced Analysis

Credits 3

An in-depth study of works by later Romantic and modern composers: techniques and styles in relation to form.

Repeat for Credit

N

Requisites

Prerequisite: Twenty hours music theory.

Typically Offered

Other

MUSIC 805 - Theories of Music Education

Credits 3

A survey of the history of music teaching in the United States, with emphasis on the relationship of various theories of music, musical perception, and musical cognition to current practices in teaching music at all levels.

Repeat for Credit

N

Typically Offered

Fall-Even Years

MUSIC 806 - Psychology of Music

Credits 3

Acquaints students with musical acoustics, perception and cognition of music, music learning, nature and testing of musical aptitude and achievement, affective response to music, musical preference, and the functionality of music.

Repeat for Credit

N

Typically Offered

Other

MUSIC 807 - History and Philosophy of Music Education

Credits 3

The study of history and philosophy of music education in the U.S.

Repeat for Credit

N

Typically Offered

Spring-Even Years

MUSIC 808 - Research in Music Education

Credits 3

An introduction to historical, descriptive, and experimental research in music education, including a study of techniques for the evaluation of music teaching and learning.

Repeat for Credit

Y

Typically Offered

Fall-Odd Years

MUSIC 809 - Seminar in Music Education

Credits 3

Advanced studies of various topics related to the music.

Repeat for Credit
Y

Typically Offered
Other

MUSIC 810 - Curriculum Development and Learning Assessment

Credits 3

MUSIC 810 focuses on development and implementation of comprehensive music education in K-12 public schools. Attention is given to sequential scaffolding of content within and across developmental levels, measuring student outcomes, and options for dissemination. Among factors studied will be evaluation materials, techniques, and design of reliable and valid measures.

Repeat for Credit
N

Typically Offered
Fall-Odd Years

MUSIC 811 - Symposium in Music

Credits 2

Intensive short-term studies of various topics in music, featuring presentations by nationally known scholars in the field.

Repeat for Credit
Y

Typically Offered
Summer

MUSIC 813 - Improvisation and Composition in Elementary Curriculum

Credits 3

Development of pedagogical practices in the areas of improvisation and composition as appropriate for the elementary music classroom.

Repeat for Credit
N

Typically Offered
Other

MUSIC 814 - World Music Pedagogy, Culturally Relevant Pedagogy, and Special Populations in Music Education

Credits 3

Explores current issues facing music education, including culturally relevant pedagogy, world music pedagogy, special learners in music education, and popular music.

Repeat for Credit
N

Typically Offered
Summer

MUSIC 815 - The Undergraduate Music Curriculum

Credits 1

Provides foundational understanding and developing skills in designing, administering, and assessing learning in an undergraduate music education curriculum. Focuses on preparing future music teacher educators for success in their future profession.

Repeat for Credit
N

Typically Offered
Fall

MUSIC 816 - Field Experiences in an Undergraduate Music Curriculum

Credits 1

Prepares future music education professors to design, administer, and guide undergraduate music education field experiences.

Repeat for Credit
N

Typically Offered
Spring

MUSIC 821 - Piano Pedagogy I

Credits 3

Piano Pedagogy I focuses on how to teach and perform a broad spectrum of intermediate piano repertoire.

Repeat for Credit

N

Typically Offered

Fall

MUSIC 822 - Piano Pedagogy II**Credits 3**

Piano Pedagogy II teaches students how to teach and perform selected advances-level piano repertoire by notable composers for the instrument.

Repeat for Credit

N

Typically Offered

Spring

MUSIC 823 - Supervised Teaching in Piano**Credits 2**

Students will be observed by the instructor and classmates teaching lessons and provide feedback and commentary in a masterclass format.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 824 - Half Recital in Piano**Credits 1**

Students will present a 30 minute recital demonstrating proficiencies as defined by the instructor.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 825 - Lecture Recital in Piano**Credits 1**

Students will present a lecture-recital that will be a musically-illustrated presentation on some aspect of piano pedagogy.

Repeat for Credit

N

Typically Offered

Fall, Spring

MUSIC 828 - Methods and Materials for the Studio**Credits 1-3**

Methods of teaching fundamental techniques; selection of teaching materials outlining courses of study. For graduate students in performance curricula. Taught in divisions according to the major. Practical application through supervised studio teaching.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 830 - Seminar in Medieval and Renaissance Music**Credits 3**

In-depth investigation of a selected area or problem in medieval or Renaissance music. Emphasis on individual research.

Repeat for Credit

Y

Typically Offered

Other

MUSIC 832 - Seminar in Baroque Music**Credits 3**

In-depth investigation of a selected area or problem in Baroque music. Emphasis on individual research.

Repeat for Credit

Y

Typically Offered

Other

MUSIC 834 - Seminar in Classical Music**Credits 3**

In-depth investigation of a selected area or problem in classical music. Emphasis on individual research.

Repeat for Credit

Y

Typically Offered

Other

MUSIC 836 - Seminar in Romantic Music**Credits 3**

In-depth investigation of a selected area or problem in Romantic music. Emphasis on individual research.

Repeat for Credit

Y

Typically Offered

Other

MUSIC 837 - Seminar in 20th-Century Music**Credits 3**

In-depth investigation of a selected area or problem in twentieth-century music. Emphasis on individual research.

Repeat for Credit

Y

Typically Offered

Other

MUSIC 838 - Opera Theatre**Credits 0-18**

Opera workshop for graduates.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 839 - Vocal Ensemble**Credits 0-1**

Performance and study with established University vocal organization or small ensemble.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 840 - Instrumental Ensemble**Credits 0-1**

Performance and study with an established University instrumental organization or a small ensemble.

Note

Students may enroll in more than one instrument simultaneously and may earn 1 to 4 hours per semester in each instrument.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 841 - Collegium Musicum Early Music Ensemble**Credits 0-1**

A vocal and instrumental ensemble devoted to the historically-informed performance of music written primarily during the Medieval, Renaissance, and Baroque periods (c. 1100-1750). Instruments of the historical period used when possible.

Repeat for Credit

Y

Typically Offered

Fall, Spring

MUSIC 842 - Concert Choir

Credits 0-1

Concert Choir

Repeat for Credit
Y

Typically Offered
Fall, Spring

MUSIC 843 - Symphony Orchestra

Credits 0-1

Symphony Orchestra

Repeat for Credit
Y

Typically Offered
Fall, Spring

MUSIC 844 - Concert Jazz Ensemble

Credits 0-1

Concert Jazz Ensemble

Repeat for Credit
Y

Typically Offered
Fall, Spring

MUSIC 845 - Wind Ensemble-Wind Symphony

Credits 0-1

Performing Ensemble for Graduate Instrumentalists.
Audition Required.

Repeat for Credit
Y

Typically Offered
Fall, Spring

MUSIC 846 - Marching Band - Graduate Level

Credits 0-1

Athletic Band Performing at Football Events.

Repeat for Credit
Y

Typically Offered
Fall

MUSIC 847 - Cat Band - Graduate Level

Credits 0-1

Athletic Band Performing at Volleyball and Basketball Events.

Repeat for Credit
Y

Typically Offered
Spring

MUSIC 848 - Concert Band

Credits 0-1

Using a player-pool concept, the ensemble will explore outstanding and varied wind literature. Repertoire may range from a classical octet to a one-on-a-part performance of a major large band work. Admission by audition.

Repeat for Credit
Y

Typically Offered
Fall, Spring

MUSIC 854 - Graduate Secondary Applied Performance

Credits 1-3

For graduate students who wish to study an instrument (or voice) other than the major performance area. Pedagogical methods and fundamentals are stressed.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

MUSIC 855 - Graduate-Level Performance

Credits 1-18

Instruction is offered every semester in voice and each of the following instruments: baritone, bassoon, clarinet, double bass, early winds, flute, french horn, guitar, harpsichord, oboe, organ, percussion, piano, saxophone, trombone, trumpet, tuba, viola, viola da gamba, violin, and violoncello.

Note

Students may enroll in more than one instrument simultaneously and may earn 1 to 4 hours per semester in each instrument.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 857 - Advanced Composition

Credits 1-2

Advanced Composition

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

MUSIC 858 - Advanced Choral Conducting

Credits 1-2

Exercises and techniques to refine the conducting gesture; techniques of noted choral conductors; and score study.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

MUSIC 859 - Advanced Instrumental Conducting

Credits 1-2

Advanced Instrumental Conducting

Repeat for Credit

N

Requisites

Prerequisite: MUSIC 365 and consent of instructor.

Typically Offered

Fall, Spring, Summer

MUSIC 885 - Advanced Diction

Credits 1

Concentrated study of Italian, German, and French diction for singing. Materials are related to work in the voice studio, and concurrent registration in MUSIC 855 is required.

Repeat for Credit

N

Typically Offered

On sufficient demand

MUSIC 898 - Master's Report in Music

Credits 0-18

Independent directed research leading to master's report.

Repeat for Credit

Y

Requisites

Prerequisite: sixteen hours graduate credit in music.

Typically Offered

Fall, Spring, Summer

MUSIC 899 - Research in Music

Credits 1-18

Independent research that may lead to master's thesis.

Repeat for Credit

Y

Requisites

Prerequisite: sixteen hours graduate credit in music.

Typically Offered
Fall, Spring, Summer

NE 350 - Reactor Operations Laboratory

Credits 3

A basic course in reactor operator licensing, nuclear safety, and reactor operations with structured laboratory exercises.

Note
Two hours lecture and one three-hour lab per week.

Repeat for Credit
N

Requisites
Prerequisite: PHYS 214.

Typically Offered
Fall, Spring, Summer

NE 415 - Introduction to Engineering Analysis

Credits 3

Introduction to analytical, statistical, and numerical analysis, including computer programming, as applied to engineering.

Note
Three hours recitation a week.

Repeat for Credit
N

Requisites
Prerequisite: MATH 211 or 221.

Typically Offered
Fall

NE 495 - Elements of Nuclear Engineering

Credits 3

Survey of nuclear engineering concepts and applications. Nuclear reactions, radioactivity, radiation interaction with matter, reactor physics, risk and dose assessment, applications in medicine, industry, agriculture, and research.

Note
Three hours lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: MATH 221, PHYS 213.

Typically Offered
Fall, Spring

K-State 8
Global Issues and Perspectives

NE 497 - Undergraduate Research Experience

Credits 0-3

Open to students pursuing undergraduate research projects.

Repeat for Credit
Y

Typically Offered
Fall, Spring

NE 585 - Nuclear Engineering Design Projects

Credits 3

In-depth application of design principles, engineering analyses, and experimental methods to a nuclear engineering design project addressing design, analysis, constraints, standards, fabrication, and testing.

Note
Majors only

Repeat for Credit
N

Requisites
Prerequisite: ME 574 and NE 690 and NE 612 and NE 630 and NE 650

Typically Offered
Spring

NE 602 - Radiation Transport Simulation and Modeling

Credits 3

Become proficient in solving nuclear radiation transport problems using common Monte Carlo simulation software, including an open-source interface package called TOPAS for the Geant4 toolkit. Obtain capability to simulate shielding problems, dose rate problems, and radiation sensing problems students will encounter in required nuclear engineering courses and in research.

Note

A student may take either NE 602 or NE 802 for credit, but not both.

Repeat for Credit

N

Requisites

Prerequisite: NE495

Typically Offered

Fall

NE 612 - Principles of Radiation Detection**Credits 3**

Operating principles and general properties of devices used in the detection and characterization of ionizing radiation. Fundamental methods of data interpretation and presentation.

Note

Two hours recitation and three hours lab. a week.

Repeat for Credit

N

Requisites

Prerequisite: NE 495.

Typically Offered

Spring

NE 620 - Problems in Nuclear Engineering**Credits 1-18**

Engage the student in theory, design, characterization, and applications of neutron beams from fission reactors.

Note

Consult program director.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

NE 630 - Nuclear Reactor Theory**Credits 3**

Theory of neutron diffusion and thermalization with application to steady-state nuclear reactors.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340, NE 495.

Typically Offered

Fall

NE 635 - Generation IV Reactor Design**Credits 3**

Introduction to the complex field of nuclear reactor design, with emphasis on Gen IV reactor technology. Discussion topics include nuclear power cycles, the nuclear fuel cycle, the reactor design process, and reactor safety. The conceptual design of an advanced nuclear reactor based on a candidate Generation IV technology.

Note

3 hours lecture

Repeat for Credit

N

Requisites

Prerequisite: NE 630.

Typically Offered

Spring

NE 640 - Nuclear Reactor Thermal Hydraulics**Credits 3**

Engineering principles underlying the design and operation of nuclear power plant components and systems. Fundamentals of nuclear energy generation, heat transport, and single- and two-phase flows.

Repeat for Credit

N

Requisites

Prerequisite: NE 495

Corequisite: ME 573

Typically Offered

Spring

NE 648 - Nuclear Reactor Laboratory

Credits 3

Theory and measurement of nuclear and reactor parameters of fundamental importance to nuclear reactors and their operation.

Note

Two hour lecture and three hours lab. a week.

Repeat for Credit

N

Requisites

Prerequisite: NE 612 and NE 630.

Typically Offered

Spring

NE 650 - Nuclear Fuel Cycles

Credits 3

Examines the various aspects of the processing of nuclear fuel including mining, milling, conversion, enrichment, fabrication, irradiation, shipping, reprocessing, and waste disposal. Compares in-core and out-of-core nuclear fuel management. Presents nuclear fuel cycle economics.

Repeat for Credit

N

Requisites

Prerequisite: MATH 340 and NE 415

Typically Offered

Spring

NE 690 - Radiation Protection and Shielding

Credits 3

Basic concepts of radiation protection, doses, associated risks, and exposure limits. Properties of natural and other radiation sources, and evaluation of internal and external doses. Techniques for shield design including ray, point kernel, and transport theories for both neutrons and gamma rays.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: NE 495, PHYS 214, MATH 340.

Typically Offered

Fall

NE 691 - Principles of Radiation and Human Health

Credits 3

Explores characterization of human health effects due to ionizing and nonionizing radiation exposure. Includes radiation health effects; radiation sources; radiation interactions with biological material; computational methods for exposure assessment; limits and safety guidelines; and risk analysis.

Note

A student may take either NE 691 or NE 891 for credit, but not both.

Repeat for Credit

N

Requisites

Prerequisite: ME 400 or CIS 200; NE 690

Typically Offered

Spring-Even Years

NE 730 - Applied Reactor Physics

Credits 3

Principles of reactor physics as used in practice. Topics

include the fundamentals of nuclear data processing, pin- and lattice-level analysis for generation of multigroup constants, and full-core models of nuclear reactors based on multigroup diffusion theory. Throughout, students will use commercial-grade software, including CASMO 4 and SIMULATE 3, to complete computational laboratory assignments.

Repeat for Credit

N

Requisites

Prerequisite: NE 630 and ME 400.

Typically Offered

Spring-Even Years

NE 737 - Intermediate Radiation Measurement Applications

Credits 3

The course will cover physical principles and mathematical modeling of radiation-based measurement systems used in medical and non-medical applications. Topics include measurement principles and inverse methods, radio-gauging, radio-tracing, quantitative analysis methods, imaging with ionizing radiation, and radiation scanning.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: NE 612, NE 690.

Typically Offered

Spring-Odd Years

NE 740 - Nuclear Systems and Design

Credits 3

Principles underlying the design and operation of nuclear systems with emphasis on nuclear power reactors. Energy

generation and removal in heat transfer fluids, reactor and component control systems and nuclear fuel reloading patterns. Design philosophy of existing, advanced and passively safe nuclear reactors will be covered.

Repeat for Credit

N

Requisites

Prerequisite: ME 573.

Typically Offered

Fall

NE 761 - Radiation Measurement Systems

Credits 3

Execute methods and techniques to acquire, process, display, and interpret electrical signals from the most common types of radiation sensors with focus on the complexity of gamma-ray spectroscopy and the sensing applications of detection, localization, and isotope identification.

Note

A student may take either NE 761 or NE 861 for credit, but not both.

Repeat for Credit

N

Requisites

Prerequisite: NE 612.

Typically Offered

Fall-Odd Years

NE 799 - Special Topics in Nuclear Engineering

Credits 0-18

Topical material of importance in nuclear engineering, such as controlled thermonuclear reactions, numerical analysis, Monte Carlo methods in radiation transport, effects of nuclear explosions, etc.

Note

Consent of program director.

Repeat for Credit

Y

Typically Offered

On sufficient demand

NE 802 - Radiation Transport Simulation and Modeling**Credits 3**

Become proficient in solving nuclear radiation transport problems using and developing common Monte Carlo simulation software, including a new interface package called TOPAS for the Geant4 toolkit. Obtain capability to simulate shielding problems, dose rate problems, and radiation sensing problems to support experiments and analysis in research.

Note

A student may take either NE 602 or NE 802 for credit, but not both.

Repeat for Credit

N

Requisites

Grad bypass.

Typically Offered

Fall

NE 806 - Neutronics**Credits 3**

Particle transport, theories of diffusion, numerical analysis of diffusion, transient core analysis.

Note

Three hours recitation a week.

Repeat for Credit

Y

Requisites

Prerequisite: NE 630.

Typically Offered

Fall

NE 810 - Graduate Problems in Nuclear Engineering**Credits 1-18**

Specific studies in advanced problems in various phases of nuclear engineering.

Note

Consent of program director.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing

Typically Offered

Fall, Spring, Summer

NE 851 - Nuclear Engineering Laboratory**Credits 2**

Design of experiments for the TRIGA nuclear reactor.

Note

Six hours lab a week.

Repeat for Credit

Y

Requisites

Prerequisite: NE 630 and NE 648.

Typically Offered

On sufficient demand

NE 860 - Advanced Topics in Nuclear Engineering**Credits 1-18**

A presentation of various special topics covering advanced nuclear engineering specialties.

Note

Consent of program director.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing

Typically Offered
Fall, Spring, Summer

NE 861 - Advanced Radiation Measurement Systems

Credits 3

Execute methods and techniques to acquire, process, display, and interpret electrical signals from the most common types of radiation sensors with focus on the complexity of gamma-ray spectroscopy and the sensing applications of detection, localization, and isotope identification.

Note

A student may take either NE 761 or NE 861 for credit, but not both.

Repeat for Credit

N

Requisites

Prerequisite: NE 612.

Typically Offered

Fall-Odd Years

NE 891 - Advanced Radiation and Human Health

Credits 3

Explores characterization of human health effects due to ionizing and nonionizing radiation exposure. Includes radiation health effects; radiation sources; radiation interactions with biological material; computational methods for exposure assessment; limits and safety guidelines; and risk analysis. Application of state-of-the-art exposure and risk assessment.

Note

A student may take either NE 691 or NE 891 for credit, but not both.

Repeat for Credit

N

Requisites

Prerequisite: ME 400 or CIS 200; NE 690.

Typically Offered

Spring-Even Years

NE 898 - Master's Report

Credits 0-18

Topics selected with approval of major professor and department head.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

NE 899 - Master's Thesis

Credits 1-18

Topics selected with approval of major professor and program director.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

NE 998 - Selected Advanced Topics in Nuclear Engineering

Credits 0-18

Current topics of interest in nuclear engineering at an advanced level, such as controlled thermonuclear reactions, numerical analysis, Monte Carlo methods in radiation transport, etc.

Note

Consent of program director.

Repeat for Credit

Y

Typically Offered

Spring

NE 999 - Dissertation Research

Credits 1-18

Topics selected with approval of major professor and program director.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PAS 700 - Applied Anatomy and Physiology I**Credits 4**

Intensive study of human anatomy and physiology with clinical application of medical terminology. Designed to develop the PA student's working knowledge and understanding of the general structures and functional principles of the human body. Clinically relevant areas of radiographic imaging, surface anatomy, and clinical case correlations are integrated in course. Students will acquire anatomic knowledge with clinical application through cadaveric laboratory experience to include human and/or virtual dissection. Develops a strong foundation for the study of pathophysiology and disease states.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA Program

Typically Offered

Spring

PAS 710 - PA Profession**Credits 1**

Explores the history of the Physician Assistant (PA) profession, the role of the PA in today's health care system, and the factors affecting the PA. Designed to aid the student's transition into the medical profession, and serve as an introduction to multiple professional practice issues.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Spring

PAS 711 - Applied Anatomy and Physiology

II

Credits 4

The second of two intensive human anatomy and physiology courses. Designed to develop the PA student's working knowledge and understanding of the human body's general structures and functional principles. Clinically relevant areas of radiographic imaging, surface anatomy, and clinical case correlations are integrated. Students will acquire anatomic knowledge with clinical application through the virtual dissection experience. Develops a strong foundation for the study of pathophysiology and disease states.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA Program and PAS 700

Typically Offered

Summer

PAS 720 - Evidence Based Medicine**Credits 1**

Intensive study in evidence based medicine and critical thinking about the information and evidence needed to produce clinical decisions. The student will be prepared to cope with the vast amount of medical literature produced every year. The course is structured to equip the student to effectively evaluate medical literature, and apply the information acquired to clinical decision making in the provision of individualized patient care.

Note

Intended for Master of Science in Physician Assistant Studies (MPAS) program or Athletic Training M.S. (MATHR) program students.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the Master of Science in Physician Assistant Studies (MPAS) program or Athletic Training (M.S.) (MATHR) program.

Typically Offered

Fall

PAS 721 - Medical Genetics

Credits 1

Will review the basic principles of medical genetics and its application to clinical practice. Students will learn to obtain a detailed family history, and assess possible modes of inheritance. This involves the ability to understand the medical genetics literature, as well as the clinical application of genetic knowledge in the care of individual patients. Ethical principles related to genetic evaluation, testing, and diagnosis will be discussed. The underlying etiology, clinical presentation, evaluation, diagnosis, prognosis, and treatment options of specific genetic disorders will be reviewed.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Summer

PAS 722 - Clinical Geriatrics**Credits 2**

Designed to provide an overview of the aging population and age-related disorders, and correlates theory and clinical practice in providing care to the geriatric population. The adjustment of older adults to degenerative changes, nursing home placement, and alternatives to placement in long term care facilities are discussed. Concepts relevant to pathophysiology, nutrition, pharmacology, psychosocial development, and ethical/legal responsibilities are emphasized using an evidence-based and functional approach.

Repeat for Credit

N

Requisites

Prerequisite: PAS 780.

Typically Offered

Fall

PAS 731 - Clinical Pediatrics**Credits 2**

Course introduces the PA student to pediatric medicine. Focuses on the physiological and psychological

fundamentals of child development, major common pediatric illnesses, various immunizations and medications used in pediatrics, pediatric emergencies, and the management of both healthy and ill infants, children and adolescents.

Repeat for Credit

N

Requisites

Prerequisite: PAS 780.

Typically Offered

Summer

PAS 732 - Psychiatry & Behavioral Medicine**Credits 2**

Course will present an introduction to the neurobiological, psychobiological, emotional, social, and cultural influences on mental health and illness of diverse patient populations with acute and chronic conditions across the lifespan, including end-of-life care, and will integrate human physical and psychological development, human sexuality, and responses to stress, injury, illness and death. Also incorporated is the training in substance use, abuse, addiction, and treatment adherence issues. Principles of violence identification and prevention will be examined, and basic counseling skills and instruments for the evaluation and management of psychiatric disorders will be presented.

Repeat for Credit

N

Requisites

Prerequisite: PAS 780.

Typically Offered

Fall

PAS 740 - Clinical Procedures I**Credits 2**

Designed to allow students to become competent in a variety of patient care skills. Skills are sequenced to the body systems being covered in the physical diagnosis course. Allows students to safely apply the medical-decision making process, and learn the procedural skills in a simulated environment. Course will utilize simulators, task trainers and standardized patient experiences.

Repeat for Credit

N

Requisites

Prerequisite: Admission to PA program.

Typically Offered

Spring

PAS 741 - Clinical Procedures II**Credits 2**

Designed to allow students to become competent in a variety of patient care skills. Skills are sequenced to the body systems being covered in the physical diagnosis course. Allows students to safely apply the medical-decision making process, and learn the procedural skills in a simulated environment. Course will utilize simulators, task trainers and standardized patient experiences.

Repeat for Credit

N

Requisites

Prerequisite: PAS 740.

Typically Offered

Summer

PAS 742 - Clinical Procedures III**Credits 2**

Designed to allow students to become competent in a variety of patient care skills. Skills are sequenced to the body systems being covered in the physical diagnosis course. Allows students to safely apply the medical-decision making process, and learn the procedural skills in a simulated environment. Course will utilize simulators, task trainers and standardized patient experiences.

Repeat for Credit

N

Requisites

Prerequisite: PAS 741.

Typically Offered

Fall

PAS 750 - Physical Diagnosis I**Credits 2**

Designed to provide training on the skills and competencies necessary for obtaining a patient's medical history, and performing a physical examination. Includes an approach to patient interviewing, acquiring clinical information, organizing and processing this information, and presenting it in a clear and concise manner. This will be achieved by learning examination techniques through lectures, small group settings, faculty mentoring, practicum examinations, and select body system specialty exams.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Spring

PAS 751 - Physical Diagnosis II**Credits 2**

Designed to provide training on the skills and competencies necessary for obtaining a patient's medical history, and performing a physical examination. Includes an approach to patient interviewing, acquiring clinical information, organizing and processing this information, and presenting it in a clear and concise manner. This will be achieved by learning examination techniques through lectures, small group settings, faculty mentoring, practicum examinations, and select body system specialty exams.

Repeat for Credit

N

Requisites

Prerequisite: PAS 750.

Typically Offered

Summer

PAS 752 - Physical Diagnosis III**Credits 2**

Designed to provide training on the skills and competencies necessary for obtaining a patient's medical history, and performing a physical examination. Includes an approach to patient interviewing, acquiring clinical information, organizing and processing this information, and presenting

it in a clear and concise manner. This will be achieved by learning examination techniques through lectures, small group settings, faculty mentoring, practicum examinations, and select body system specialty exams.

Repeat for Credit

N

Requisites

Prerequisite: PAS 751.

Typically Offered

Fall

PAS 760 - Diagnostics I - Laboratory

Credits 2

First of a three-part series designed to introduce the student to clinical diagnostics in medicine. Presents a foundation for understanding the appropriate use and interpretation of diagnostic testing. Various diagnostic tests will be reviewed to allow the student to differentiate normal from abnormal values, and provide the basis for selection, utilization, and interpretation of the tests used to evaluate principal functions of body systems, and their correlation to clinical conditions.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Spring

PAS 761 - Diagnostics II - EKG

Credits 2

Second of a three-part series designed to introduce the student to clinical diagnostics in medicine. Presents a foundation for understanding the appropriate use and interpretation of diagnostic testing. Various diagnostic tests will be reviewed to allow the student to differentiate normal from abnormal values, and provide the basis for selection, utilization, and interpretation of the tests used to evaluate principal functions of body systems, and their correlation to clinical conditions.

Repeat for Credit

N

Requisites

Prerequisite: PAS 760.

Typically Offered

Summer

PAS 762 - Diagnostics III- Radiology

Credits 2

Third of a three-part series designed to introduce the student to clinical diagnostics in medicine. Presents a foundation for understanding the appropriate use and interpretation of diagnostic testing. Various diagnostic tests will be reviewed to allow the student to differentiate normal from abnormal values, and provide the basis for selection, utilization, and interpretation of the tests used to evaluate principal functions of body systems, and their correlation to clinical conditions.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Fall

PAS 770 - Applied Pathophysiology I

Credits 2

Designed to develop the PA student's working knowledge and comprehensive understanding of the pathophysiological principles of the human body. An intensive study of pathology of the human body, which explores the etiology of organic and systemic disease, providing an insight into the disordered physiological changes resulting from specific disease processes. Provides the necessary linkage between the basic sciences and the clinical presentation of disease states.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Spring

PAS 771 - Applied Pathophysiology II

Credits 2

Designed to develop the PA student's working knowledge and comprehensive understanding of the pathophysiological principles of the human body. An intensive study of pathology of the human body, which explores the etiology of organic and systemic disease, providing an insight into the disordered physiological changes resulting from specific disease processes. Provides the necessary linkage between the basic sciences and the clinical presentation of disease states.

Repeat for Credit

N

Requisites

Prerequisite: PAS 770.

Typically Offered

Summer

PAS 772 - Applied Pathophysiology III

Credits 2

Designed to develop the PA student's working knowledge and comprehensive understanding of the pathophysiological principles of the human body. An intensive study of pathology of the human body, which explores the etiology of organic and systemic disease, providing an insight into the disordered physiological changes resulting from specific disease processes. Provides the necessary linkage between the basic sciences and the clinical presentation of disease states.

Repeat for Credit

N

Requisites

Prerequisite: PAS 771.

Typically Offered

Fall

PAS 780 - Clinical Medicine I

Credits 6

The first in a series of three courses designed to guide the development of problem-solving skills in the medical decision-making process. This course uses a body systems

approach to thoroughly study diseases/disorders encountered in primary care practice. Medical knowledge includes the epidemiology, etiology, pathophysiology, clinical manifestations, diagnosis, management and patient education of diseases/disorders. Instruction includes providing care to preventive, emergent, acute, chronic, adolescent, adult, and elderly populations as it applies to disease processes. Instruction will consist of lectures, problem/case-based learning, and small group collaboration.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA Program

Typically Offered

Spring

PAS 781 - Clinical Medicine II

Credits 6

Repeat for Credit

N

Requisites

Prerequisite: PAS 781, Clinical Medicine II

Typically Offered

Fall

PAS 790 - Pharmacology I**Credits 2**

Designed as a survey of pharmacology, course emphasizes the fundamentals of drug absorption, distribution, metabolism, and elimination. Course focuses on the relationship between drugs and receptors, adverse drug reactions, toxicity, and drug indications and contraindications. Utilizing evidence-based medicine, pharmacotherapeutics with application to patient care is also incorporated.

Repeat for Credit

N

Requisites

Prerequisite: Admission to the PA program.

Typically Offered

Spring

PAS 791 - Pharmacology II**Credits 2**

Designed as a survey of pharmacology, course emphasizes the fundamentals of drug absorption, distribution, metabolism, and elimination. Course focuses on the relationship between drugs and receptors, adverse drug reactions, toxicity, and drug indications and contraindications. Utilizing evidence-based medicine,

pharmacotherapeutics with application to patient care is also incorporated.

Repeat for Credit

N

Requisites

Prerequisite: PAS 790.

Typically Offered

Summer

PAS 792 - Pharmacology III**Credits 2**

Course focuses on the relationship between drugs and receptors, adverse drug reactions, toxicity, and drug indications and contraindications. Utilizing evidence-based medicine, pharmacotherapeutics with application to patient care is also incorporated.

Repeat for Credit

N

Requisites

Prerequisite: PAS 791.

Typically Offered

Fall

PAS 800 - Family Medicine I - SCPE**Credits 4**

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision-making process while developing the appropriate knowledge, skills, and abilities to provide care in the ambulatory outpatient family medicine clinic. The course will deliver education on providing comprehensive evidence-based, gender/age specific individualized care, addressing acute and chronic diseases, health promotion and disease prevention in the context of each patient's social, economic, cultural and religious background. Students will engage with the interprofessional team, and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Spring

PAS 810 - Family Medicine II - SCPE**Credits 4**

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision-making process while developing the appropriate knowledge, skills, and abilities to provide care in the ambulatory outpatient family medicine clinic. The course will deliver education on providing comprehensive evidence-based, gender/age specific individualized care, addressing acute and chronic diseases, health promotion and disease prevention in the context of each patient's social, economic, cultural and religious background. Students will engage with the interprofessional team, and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 820 - Internal Medicine - SCPE**Credits 4**

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing the appropriate knowledge, skills and abilities to provide care in the in/outpatient internal medicine practice. Students will encounter a full range of experiences to include, preventative care, acute and chronic illness, and palliative/end of life care in the context of each patient's social, economic, cultural and religious background. Students will have the opportunity to work as part of the primary team while coordinating with subspecialist, and interdisciplinary allied health professionals.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 830 - Emergency Medicine - SCPE**Credits 4**

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing the appropriate knowledge, skills and abilities to provide care in the emergency medicine practice. The rotation will take place in emergency departments. This rotation allows students to establish triage skills, learn to recognize and manage conditions that need immediate attention and prioritize care for conditions that are less urgent. Students will engage with the interprofessional team and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 840 - Pediatric Medicine - SCPE**Credits 4**

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing the appropriate knowledge, skills and abilities to provide care in a pediatric medicine practice. The course provides education in comprehensive, evidence-based, gender/age specific individualized care, addressing acute and chronic diseases (sick child), health promotion (well child) and disease prevention in the context of each patient's social, economic, cultural and religious background. Students will engage with the interprofessional team and behave as a medical

professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 850 - Surgery - SCPE

Credits 4

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing the appropriate knowledge, skills and abilities to provide care in the surgical practice. The experiences in this rotation will include pre-operative, intra-operative (assisting) and post-operative surgical care. Students will engage with the interprofessional team and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

Y

Requisites

Successful completion of the PA program's clinical orientation and didactic phase (C or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 860 - Behavioral Medicine - SCPE

Credits 4

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing appropriate knowledge, skills and abilities to recognize and provide care for various behavioral/mental health problems. In settings such as in/outpatient behavioral/mental health facilities and multiservice centers, students will participate in behavioral/mental health evaluations, observe behavioral/mental therapy/interventions, and discuss management plans. Emphasis is on applying skills learned

to treatment of behavioral/mental health issues in primary care. Students will engage with the interprofessional team, and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 870 - Women's Health - SCPE

Credits 4

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision making process while developing the appropriate knowledge, skills and abilities to provide care in a women's health medicine practice. Experiences include prenatal care, obstetric/gynecologic health histories, OB/GYN exams, evaluation and management planning. Emphasis is on applying skills learned to the treatment of OB/GYN health issues in primary care in the context of each patient's social, economic, cultural and religious background. Students will engage with the interprofessional team and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 890 - Geriatric Medicine - SCPE

Credits 4

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision-making process while developing the appropriate knowledge, skills, and abilities to provide care to the geriatric population. Students will be exposed to a variety of experiences including ambulatory practice, nursing

facilities, assisted living centers, and hospice. The course will deliver education on providing comprehensive evidence-based, geriatric specific individualized care, addressing acute and chronic conditions, health promotion and disease prevention in the context of the elderly patient's social, economic, cultural and religious background. Students will engage with the interprofessional team and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 891 - Orthopedics - SCPE

Credits 4

A supervised clinical practice experience designed to give students the opportunity to participate in the medical decision-making process while developing the appropriate knowledge, skills, and abilities to provide care in orthopedics. The course will deliver education on providing comprehensive evidence-based, gender/age specific individualized care, addressing acute and chronic musculoskeletal conditions with and without surgical intervention, health promotion and disease prevention in the context of each patient's social, economic, cultural and religious background. Students will engage with the interprofessional team and behave as a medical professional with patients, families and other members of the medical team.

Repeat for Credit

N

Requisites

Successful completion of clinical orientation and didactic phase of the PA program (B or better in PAS 700-792).

Typically Offered

Fall, Spring, Summer

PAS 892 - Elective Experience I

Credits 4

A supervised clinical practice experience selected by the student designed to give students the opportunity to develop appropriate knowledge, skills, and abilities in patient care, medical knowledge, practice based learning, communication, professionalism, interprofessional collaboration, system based practice and/or professional development. Options for students to achieve this include but are not limited to, additional experience in a required rotation; medical discipline of interest not encountered in the previous rotations; public health service; administration; and health policy.

Repeat for Credit

N

Requisites

Successful completion of all prior clinical rotations (B or better in PAS 800-891).

Typically Offered

Spring

PAS 895 - Summative

Credits 2

Designed to prepare students for the final transition from student to medical provider. Didactic and clinical year grades, preceptor evaluations, and assignments specific to the Summative assessment will be reviewed to ascertain the student's ability to function as a successful graduate Physician Assistant. Physician Assistant practice topics will be covered, including certifying examination review, certification process, professional licensure, malpractice, professional career planning, contract negotiations, credentialing process and financial planning. Content will be delivered in lecture, lab and small groups.

Repeat for Credit

N

Requisites

Successful completion of Clinical Year Rotations (B or better is PAS 800-892).

Typically Offered

Spring

PAV 101 - Private Pilot

Credits 5

Awards academic credit for the Federal Aviation

Administration Private Pilot certificate.

Note

This may be used as a substitute for PPIL 111 and 113 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 102 - Instrument Pilot

Credits 4

This course is offered to give academic credit for the Federal Aviation Administration Instrument Pilot rating.

Note

This may be used as a substitute for PPIL 112 and 114 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 201 - Commercial Pilot

Credits 7

This course is offered to give academic credit for the Federal Aviation Administration Commercial Pilot certificate.

Note

This may be used as a substitute for PPIL 211, 212, and 213 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 202 - Additional Aircraft Category, Class, and/or Type Rating

Credits 1-5

This course is offered to give academic credit for the Federal Aviation Administration additional aircraft category, class and/or type ratings. Credit will be given for one type rating only.

Note

This may not be used as a substitute for PPIL 262 and PPIL 263 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 217 - Airframe A

Credits 9

This course is offered to give partial academic credit for the Federal Aviation Administration Airframe certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 318

Typically Offered

Fall, Spring, Summer

PAV 227 - Powerplant A

Credits 9

This course is offered to give partial academic credit for the Federal Aviation Administration Powerplant certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 328

Typically Offered

Fall, Spring, Summer

PAV 301 - Instructor Pilot

Credits 8

This course is offered to give academic credit for the Federal Aviation Administration Flight Instructor certificate.

Note

This may not be used as a substitute for PPIL 310, PPIL 311, PPIL 312 or PPIL 314 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 302 - Airline Transport Pilot

Credits 2

This course is offered to give academic credit for the Federal Aviation Administration Airline Transport Pilot certificate.

Note

This may not be used as a substitute for PPIL 385 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 318 - Airframe B

Credits 6

This course is offered to give partial academic credit for the Federal Aviation Administration Airframe certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 217

Typically Offered

Fall, Spring, Summer

PAV 328 - Powerplant B

Credits 6

This course is offered to give partial academic credit for the Federal Aviation Administration Powerplant certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 227

Typically Offered

Fall, Spring, Summer

PAV 401 - Additional Flight Instructor Ratings**Credits 1-4**

This course is offered to give academic credit for the Federal Aviation Administration Instrument Flight Instructor certificate.

Note

This may not be used as a substitute for PPIL 482, PPIL 483, PPIL 492, or PPIL 493 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 497 - Senior Capstone**Credits 3**

This is a culminating experience for the Professional Aviation option. Students will integrate the intellectual, creative, and expressive skills/knowledge they have cultivated in their undergraduate curriculum. Additionally, students will combine discipline-specific knowledge with communication and inquiry methods to solve problems and communicate mastery of their respective area of interest.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and instructor consent.

Typically Offered

Fall, Spring

PFP 101 - Money 101**Credits 1**

This course provides an introduction to resources and tools available to assist students in developing beginning personal finance skills that will assist them throughout their lifetime. Application exercises will allow students to apply personal finance knowledge in solving real-life problems.

Note

This course has an online format.

Repeat for Credit

N

Typically Offered

Fall, Spring

Fall, Spring

PFP 889 - Theories and Models in Personal Financial Planning

Credits 3

This course is designed to provide a broad exposure to common theoretical frameworks in the field of personal finance.

Repeat for Credit

N

Requisites

Prerequisite: PFP 806, PFP 888, PFP 890, PFP 906 or equivalent graduate level research or statistics courses.

Typically Offered

Fall

PFP 890 - Research Methods in Personal Financial Planning II

Credits 3

Intermediate research methods course with a focus on the dissertation proposal process.

Repeat for Credit

N

Requisites

Prerequisite: PFP 888 and PFP 806

Typically Offered

Spring

PFP 894 - Professional Issues in Personal Financial Planning

Credits 1

Implications of research findings in preparation for professional work in teaching, research, and practice of personal financial planning.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PFP 900 - Research Seminar

Credits 1-2

In this course, students will attend a research seminar during which a scholar will present current research on topics relevant to Personal Financial Planning. Speakers may include KSU faculty, advanced PFP graduate students, and researchers from other institutions. Students and faculty not only listen to learn from the speaker's expertise but also actively engage with the presentation by asking questions. Asking questions is critical for scientific inquiry and advancement. Questions should be asked to (1) allow the speaker to clarify or expand on material, (2) constructively criticize the methods, research design, or findings, and (3) suggest ways the scholar might improve the analysis.

Repeat for Credit

Y

Typically Offered

Other

PFP 906 - Statistical Methods in Personal Financial Planning II

Credits 3

Advanced applied statistics course designed for graduate students with a foundation and understanding of basic and multivariable statistics. Examines panel data analyses, such as random-effects and fixed-effects regression, as well as issues involved using these techniques in personal financial planning datasets.

Repeat for Credit

N

Requisites

Prerequisite: PFP 806

Typically Offered

Spring

PFP 909 - Topics in Personal Financial Planning

Credits 0-3

Recent research, theory construction, and program development in personal financial planning, which will focus on selected relevant topics. Designed for doctoral students in personal financial planning.

Repeat for Credit

Y

Typically Offered

On sufficient demand

PFP 956 - Clinical Research and Applications in Financial Counseling and Planning

Credits 3

An overview of client relationship building strategies and the design and application of clinical research methods. Designed for doctoral students in personal financial planning.

Repeat for Credit

N

Requisites

Prerequisite: Doctoral Student in Personal Financial Planning.

Typically Offered

Summer

PFP 979 - Global Issues in Personal Financial Planning

Credits 3

This course study will give students the opportunity to examine cross cultural differences in defining and practicing personal financial planning. This course will allow students to gain experiences familiarizing them with different cultural views. Students are expected to present research related to the areas of financial planning and counseling to their international counterparts. Students will have the opportunity to learn from guest lecturers and students as well as to experience local culture through sight visits.

Repeat for Credit

N

Requisites

Prerequisite: Completed at least 24 graduate credits.

Typically Offered

Spring-Even Years

PFP 990 - Dissertation Proposal Seminar

Credits 1

Presentation and discussion of proposals for dissertation research.

Repeat for Credit

N

Requisites

Prerequisite: Six hours of statistics, three hours of research design or methods, and consent of major professor.

Typically Offered

Other

PFP 999 - Dissertation Research

Credits 1-21

Presentation and discussion of final dissertation research.

Note

Consent of School

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PHILO 100 - Introduction to Philosophical Problems

Credits 3

An introduction to some of the main problems of philosophy, such as the nature of morality, knowledge, mind and body, political authority, and the existence of God.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PHILO 105 - Introduction to Critical Thinking

Credits 3

A basic introduction to both deductive and inductive reasoning. Emphasis is placed on constructing, analyzing, and evaluating arguments.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

PHILO 110 - Introduction to Formal Logic

Credits 3

Systematic study of deductive reasoning (and possibly inductive reasoning) using the techniques of modern logic. Examines different types of valid inference, the logical structure of English sentences, and the validity of arguments generally. Involves the development and use of

a symbolic system which models logical relations among sentences.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

PHILO 112 - Causal and Statistical Reasoning

Credits 3

This course introduces students to some ideas about causation, and also to some elementary tools for thinking both critically and constructively about causal claims. The treatment is broadly formal, and introduces ideas from statistics, computer science, and philosophy, but requires no mathematical background beyond high school algebra. Some sections are taught using web-based course-ware.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

PHILO 115 - Introduction to Philosophy of Religion

Credits 3

Arguments pertaining to the existence of God, the nature of religious experience, the problem of evil, the proper relation between reason and faith, and religious diversity.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PHILO 120 - Introduction to Philosophy of Art

Credits 3

Philosophical problems concerning the concepts of art and aesthetic value, patterns of reasoning in art appreciation and criticism, and writing histories of art and artistic movements.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

PHILO 125 - Introduction to Philosophy of Science**Credits 3**

Examines the nature of science and how it differs from pseudo-sciences such as astrology, and raises questions about the nature of reality and social value of science.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PHILO 130 - Introduction to Moral Philosophy**Credits 3**

Philosophical issues arising in and about morality, such as the nature of moral judgments, moral knowledge, moral justification, and the relation of morality to religion. Topics might be approached by a study of contemporary moral Problems, by reading of classical texts, or by both methods.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PHILO 131 - Introduction to the Philosophy of Gender**Credits 3**

Introduction to philosophy focusing on the concept of gender and its effects in the world, including the metaphysics, language, ethics and the social-political implications of gendered concepts and language.

Repeat for Credit

N

Typically Offered

Fall, Spring

PHILO 132 - Introduction to the Philosophy of Sex and Love**Credits 3**

An introduction to philosophy that focuses on philosophical issues pertaining to intimate human relationships, including the concept of love, the ethics of sexuality, and the role of biology and culture in shaping our intimate lives.

Repeat for Credit

N

Typically Offered

Fall or Spring

PHILO 135 - Introduction to Social and Political Philosophy**Credits 3**

Examines rival theories of justice and applies them to current debates about economic inequality, gender, race, and sexual orientation. Combines some influential historical texts with contemporary philosophical literature on current political issues.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PHILO 137 - Introduction to Religious Freedom and Democracy**Credits 3**

Religious freedom and religious toleration. Consider this topic in a variety of contexts, including Western democracies and Muslim majority states.

Repeat for Credit

N

Typically Offered

Fall or Spring

PHILO 138 - Ethics and Social Media**Credits 3**

Introduces ethical theories, concepts and methods, e.g. utility, rights and perfect obligations in deontic and consequentialist theories, and applies them to ethical issues in social media, e.g. privacy, bullying, hate speech, doxing, bots and preferences in dating apps. Students learn to evaluate and apply competing ethical systems, and to defend the resulting analysis in written form.

Note

Rationale: The 2030 plan for KSU highlights the need to increase recruiting efforts, train students in ways relevant to their future careers and post-university lives, while maintaining credible academic standards. The Philosophy Department has been offering 100 level courses in ethics (e.g., Introduction to Moral Philosophy) as part of the general education requirement for students in A&S. This proposal has several aims: 1) to create a course in the ethics of social media developing the analytic skills common to philosophical courses in ethics while applying those skills to issues of social importance and interest to students, which course should be 2) available to on-campus students, 3) appropriate for offerings through Global Campus, and 4) made accessible in the near term to high school students in addition to all KSU students.

Repeat for Credit

N

Typically Offered

Fall or Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 140 - Introduction to Philosophy of Mind**Credits 3**

Philosophical problems concerning the nature of human beings, including the relation between mind and body, the existence of the soul, the nature of consciousness, the possibility of artificial intelligence, human freedom and personal identity.

Repeat for Credit

N

Typically Offered

Fall, Spring

PHILO 145 - Historical Introduction to Philosophy**Credits 3**

Introduction to philosophy through the study of major thinkers in the history of philosophy, such as Plato, Descartes, Hume. Topics may include the immortality of the soul, the existence of God, skepticism, reasons for being moral.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Historical Perspectives

PHILO 150 - Introduction to Philosophy of Feminism**Credits 3**

Philosophical examination of issues such as femininity and masculinity, the social conditions of gender equality, multiculturalism and gender, affirmative action, sexual harassment, and welfare policy.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 160 - Introduction to Philosophy of Law**Credits 3**

Examines fundamental issues concerning the nature and justification of legal institutions. Topics selected from: the nature of law and its relations to morality, criminal justice and punishment, responsibility and liberty, and legal interpretation.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

PHILO 175 - Philosophical Composition**Credits 4**

The purpose of this course is to provide students an introduction to philosophy while assisting them to further develop writing skills in preparation for Expository Writing II. Topics covered vary, but typically are related to understanding ourselves and our moral practices.

Repeat for Credit

N

Requisites

Prerequisite: ENGL 100 and open only to freshmen and sophomores.

Typically Offered

Spring

PHILO 180 - Introduction to Philosophy of Race**Credits 3**

Introduction to concepts of race and racial identity; contemporary controversies about the nature of racism and social justice are examined through theories of ethics and political philosophy using various sources, including movies, music, social media.

Repeat for Credit

N

Typically Offered

Fall or Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 185 - Engineering Ethics**Credits 3**

An examination of the principles of ethics as applied to cases arising in the practice of the various branches of engineering.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 215 - Honors Introduction to Philosophy**Credits 3**

Central problems of philosophy, such as skepticism and knowledge, the nature of human minds, freedom, the nature of morality, justice and the existence of God.

Note

For students in an honors program.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 230 - Honors Introduction to Moral Philosophy

Credits 3

Philosophical issues arising in and about morality. Topics selected from: the nature of moral judgments, moral knowledge, moral justification, and the relation of morality to religion.

Note

For students in an honors program.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 295 - Introduction to Environmental Ethics

Credits 3

Introduces and compares ethical theories applying to issues arising from the use and exploitation of the environment, such as the value of biodiversity, obligations to future generations, obligations to non-humans, and the ethics of environmental risk management.

Repeat for Credit

N

Typically Offered

Fall or Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 297 - Honors Introduction to the Humanities I

Credits 3

Study of selected major works of history, literature, and philosophy which have been of central importance in the Western cultural tradition. Considerable emphasis is placed on classroom discussion and writing interpretive essays.

Note

For students in an honors program. Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall

Crosslisted

ENGL 297, HIST 297, MLANG 297

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

PHILO 298 - Honors Introduction to the Humanities II

Credits 3

Continuation of PHILO 297.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 297 or consent of instructor.

Typically Offered

Spring

Crosslisted

ENGL 298, HIST 298, MLANG 298

PHILO 300 - History of Ancient Philosophy

Credits 3

Ancient Greek Philosophy, particularly in the writings of Plato and Aristotle. Pre-Socratic and/or Hellenistic philosophers may be represented as well.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy, major standing, or consent of instructor.

Typically Offered

Fall

K-State 8

Historical Perspectives

PHILO 301 - History of Philosophy**Credits 3**

This course introduces students to the development of philosophical ideas from ancient Greece to the modern era, and develops skills in the critical interpretation of original texts.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Historical Perspectives

PHILO 303 - Writing Philosophy**Credits 3**

Introduction to philosophical composition to develop skills necessary to succinctly explicate single arguments, dialectics relating several arguments, and critical analyses of arguments. Philosophical topics covered vary, but typically are related to understanding ourselves and our moral practices.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

PHILO 305 - Introduction to Decision Theory**Credits 3**

Introduction to decision and social choice theory emphasizing theories of utility, equilibria, and aggregation.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 320 - Symbolic Logic I**Credits 3**

First order logic, covering truth tables and truth functions, and derivations in both propositional and predicate logic.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

**PHILO 326 - Philosophy of Science:
Evidence, Evolution and Intelligent Design****Credits 3**

This course is an introduction to philosophy of science using the controversy over evolutionary theory and creation science/intelligent design to explore ideas about evidence, explanation and tests of scientific theories.

Repeat for Credit

N

Typically Offered

Fall or Spring

PHILO 330 - Moral Philosophy**Credits 3**

An introduction to ethics, surveying central issues in normative ethical theory with an emphasis on consequentialism, virtue theory, and deontology.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 331 - Philosophy of Gender

Credits 3

The concept of gender and its effects in the world, including the metaphysical nature of gender, the potentially gendered nature of many areas of "traditional" philosophy, the nature of structural injustice, and the way in which gender influences life choices in areas such as career, family life, and sexuality.

Repeat for Credit

N

Typically Offered

On sufficient demand

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

PHILO 332 - Philosophy of Sex and Love

Credits 3

Engages philosophical issues pertaining to intimate human relationships, including the concept of love, the ethics of sexuality, and the role of biology and culture in shaping our intimate lives.

Repeat for Credit

N

Typically Offered

On sufficient demand

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

PHILO 335 - Introduction to Social and Political Philosophy

Credits 3

Introduction to modern social and political philosophy, examining questions about central political values, such as equal citizenship, property rights, distributive justice, fairness, and democratic social and political institutions.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

PHILO 336 - Global Justice

Credits 3

Addresses philosophical and ethical issues of global and international justice, including responsibility to help the poor, human rights, cosmopolitanism and global equality, the moral dimensions of immigration, just war, global health, and responsibility for combatting climate change.

Repeat for Credit

N

Requisites

Prerequisite: One philosophy course or consent of instructor.

Typically Offered

On sufficient demand

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

PHILO 337 - Religious Freedom and Democracy

Credits 3

Religious freedom and religious toleration. Consider this topic in a variety of contexts, including Western democracies and Muslim majority states.

Repeat for Credit

N

Typically Offered

On sufficient demand

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

PHILO 340 - Justification and Reliable Knowledge

Credits 3

This course offers an introduction to epistemology, surveying the historical development of important theories of knowledge, alternative conceptions of justification, and differing ideas about evidence and reliable inference.

Repeat for Credit

N

Requisites

Prerequisite: One philosophy course, major standing, or consent of instructor.

Typically Offered

Fall

PHILO 345 - Worlds, Things and Properties

Credits 3

Introduction to metaphysics, surveying the historical development of different metaphysical theories, including alternative conceptions of causation and of identity through time, and alternative theories about the relationship between physical and non-physical (e.g. mental) properties.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy, major standing, or consent of instructor.

Typically Offered

Spring

PHILO 346 - Grasping Reality: The Art of Analysis

Credits 3

Introduction to the formal and informal methods of philosophical analysis. Topics include thought experiments, reflective equilibrium, counterfactual analysis, conceptions of 'knowledge' and 'evidence', notions of proof, causation and causal inference, supervenience, natural laws and other dependence relations.

Repeat for Credit

N

Typically Offered

Fall

PHILO 352 - Philosophy of Horror

Credits 3

Explores philosophical themes in horror films, including the nature of fear and why humans enjoy feeling afraid; the relationship between fear and humor; existentialism and attitudes towards death; the nature of justice; and the horror genre as a medium for social commentary on race, gender, and animal welfare.

Repeat for Credit

N

Typically Offered

Spring-Even Years

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PHILO 360 - Topics in Continental Philosophy

Credits 3

A study of selected figures (such as Kierkegaard, Fichte, Marx, Nietzsche, Beauvoir, Hegel, Schopenhauer, Sartre, Heidegger, Husserl, Wittgenstein, Gadamer, Ricoeur, Foucault, Lacan), or movements (such as Transcendental Idealism, Existentialism, Marxism, Phenomenology, Post-Modernism), or issues in continental philosophy (such as humanity's relation to God, free will, the state, irrationalism, gender, philosophical methodology).

Repeat for Credit

N

Typically Offered

On sufficient demand

PHILO 365 - Medical Ethics

Credits 3

Selected moral issues which confront the medical professional, including experimentation on human subjects,

informed consent, abortion, euthanasia, conflict of interest, and confidentiality.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 380 - Philosophy and Race

Credits 3

The concept of race and racial identity, and contemporary controversies about the nature of racism and social justice, examined through fiction, movies, and readings in biology, anthropology, history, and philosophy.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

PHILO 386 - Philosophy of Computer Science and Software Engineering

Credits 3

Explores conceptual, ethical, and practical questions about computers and software including the nature of computer science, digital rights, special and general AI, and the ethical responsibilities of software engineers.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

PHILO 390 - Business Ethics

Credits 3

An examination of the principles of ethics as applied to situations and practices in modern American business.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PHILO 399 - Honors Seminar in Philosophy

Credits 3

Honors Seminar in Philosophy

Repeat for Credit

N

Typically Offered

Fall

PHILO 492 - Computers and Society

Credits 1-2

A study of ethical issues raised by the impact of computers and associated technologies on society, including such topics as ethics of computer use, computer fraud, protection of privacy; legal, moral, and public policy-making responsibilities of computer professionals.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing plus concurrent enrollment in CIS 415; CIS 520.

Typically Offered

Spring

PHILO 499 - Honors Project

Credits 3

Open only to Arts & Sciences students who are active members of the University Honors Program.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PHILO 501 - Perspectives on Science

Credits 3

Provides historical, philosophical, and sociological perspectives on science, its methods and products, the social processes by which its methods are deployed and its products used, and the ways in which its results become imbued with cultural meaning.

Repeat for Credit

N

Typically Offered

Fall, Spring

PHILO 510 - Symbolic Logic II

Credits 3

An advanced study of logical systems and problems in logical theory.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 220 or PHILO 110.

Typically Offered

On sufficient demand

PHILO 525 - Social-Political Philosophy

Credits 3

Examines key developments in contemporary political philosophy in such areas as liberalism, libertarianism, communitarianism, Marxism, and feminism, and on topics of special interest where these theories are applied.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 305, or PHILO 330, or PHILO 335 or consent of instructor.

Typically Offered

Spring

PHILO 535 - Philosophy of Law

Credits 3

Philosophical issues arising in the legal context, such as the nature of legal reasoning, the nature and scope of constitutional protections, the justification of punishment, affirmative action, and civil disobedience.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy (PHILO 135, PHILO 160, or PHILO 330 recommended), or consent of instructor.

Typically Offered

Fall

PHILO 550 - Philosophy of Social Sciences

Credits 3

Epistemic methods and metaphysical presuppositions in the social sciences. Topics selected from: models, measurement, reduction, explanation, theories of function, theories of ideal types, and rational choice theory.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy, one of which must be PHILO 100 or PHILO 320.

Typically Offered

Fall, Spring

PHILO 565 - Advanced Topics in Medical Ethics

Credits 3

An advanced, focused discussion of special topics in the biomedical sciences. Topics vary and include the ethics

governing human experimentation, stopping rules for CRTs, justice in funding medical research, justice in the distribution of access to medical care, decision rules for choice of treatment, definitions of disease, medicalization of behavioral patterns, and other related topics.

Repeat for Credit

Y

Requisites

Prerequisite: PHILO 365

Typically Offered

On sufficient demand

PHILO 570 - Aesthetics

Credits 3

A study of selected topics in aesthetics and the philosophy of art.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy or consent of instructor.

Typically Offered

On sufficient demand

PHILO 585 - Ethics

Credits 3

Examines key developments in moral philosophy. May focus on issues in metaethics, ethical theory, or history of ethics.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 330.

Typically Offered

Fall, Spring

PHILO 590 - Topics in Philosophy

Credits 3

A study of selected topics in applied ethics, applied philosophy, or the continental tradition.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy.

Typically Offered

On sufficient demand

PHILO 595 - Environmental Ethics

Credits 3

Ethical issues that arise from the use and exploitation of the environment, such as the value of biodiversity, obligations to future generations, obligations to non-humans, and the ethics of environmental risk management.

Repeat for Credit

N

Requisites

Prerequisite: One course in philosophy, or one course in the natural sciences.

Recommended Pre-requisite: Philo 330.

Typically Offered

Fall, Spring

PHILO 601 - Advanced Issues in the History of Philosophy

Credits 3

Particular sets of issues in the history of philosophy or in-depth examination of the thought of a particular philosopher. Emphasis on issues in metaphysics and epistemology.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy and consent of instructor. Depending on topic, PHILO 300 or PHILO 301 required.

Typically Offered

Fall, Spring

PHILO 610 - Special Topics in Logic

Credits 3

Examination of one or more advanced topics in mathematical or philosophical logic, such as: modal, temporal, and epistemic logics; counterfactuals; intuitionistic and other sub-classical logics; higher-order and other super-classical logics; formal semantics of natural language; or theories of truth.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 110 or PHILO 320, or consent of instructor.

Typically Offered

On sufficient demand

PHILO 615 - Philosophy of Religion

Credits 3

Concepts of religion, including truth and faith, God and atheism, reason and revelation, morality and religion, evil, humanity, sin, salvation, eschatology.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy. PHILO 305, PHILO 320, or PHILO 340 recommended.

Typically Offered

Fall, Spring

PHILO 620 - The Development of Analytical Philosophy

Credits 3

The history of analytic philosophy from 1870 to 1960, examining the works of most of the following philosophers: Frege, Russell, Wittgenstein, Moore, the logical positivists, and Quine.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy, one of which must be PHILO 110 or PHILO 320.

Typically Offered

Fall, Spring

PHILO 625 - The Philosophy of Language

Credits 3

Philosophical problems concerning the nature of language and such concepts as meaning and truth.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy, one of which must be PHILO 110 or PHILO 320.

Typically Offered

Fall, Spring

PHILO 635 - Metaphysics

Credits 3

A critical examination of theories about objects and their qualities, causality, space, and time. Both traditional and contemporary sources may be used, but emphasis will be placed on the latter.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy. PHILO 305, PHILO 320, or PHILO 340 recommended.

Typically Offered

Fall, Spring

PHILO 640 - Epistemology

Credits 3

Philosophical issues relating to human knowledge. Issues selected from: the difference between knowledge and belief, whether knowledge is really attainable, whether we have epistemic duties and what they might be, what counts as justification for belief. Special topics may include self-knowledge, a priori knowledge, inductive knowledge, and naturalism.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy. PHILO 305, PHILO 320, or PHILO 340 recommended.

Typically Offered

Fall, Spring

PHILO 645 - The Philosophy of Science**Credits 3**

Philosophical problems concerning science, its methods. Topics selected from: qualitative and quantitative confirmation theories and the nature of scientific theories, laws, and explanation in the physical and biological sciences.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy, one of which must be PHILO 110 or PHILO 320.

Typically Offered

Fall, Spring

PHILO 646 - Philosophy of Physics**Credits 3**

This course offers an exploration of the conceptual foundations of modern physics, including topics from relativistic space-time theories, quantum mechanics and gauge theories, and related topics in the philosophy of science, including the nature of physical laws, reduction, the measurement problem and non-locality.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy.

Typically Offered

Other

PHILO 647 - Philosophy of Biology**Credits 3**

This course will introduce a range of topics in the philosophy of biology, including: the conceptual foundations of evolutionary theory, interpretations of fitness and selection, group selection, definitions of species, epistemological problems in phylogenetic inference, design arguments, explanation in biological sciences and reliable modeling in ecology and evolutionary biology.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy.

Typically Offered

Other

PHILO 650 - Rationality and Action**Credits 3**

Philosophical issues connected with human action and reasons for action, such as the existence of objective reasons to act one way rather than another, the existence of reasons to act that do not stem from desires, the difference between reasoning about how to act and reasoning about what is true, the nature of intention and desire and their specific roles in action.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy.

Typically Offered

Fall, Spring

PHILO 655 - Philosophy of Mind**Credits 3**

A philosophical examination of major theories about the nature of the mind, mental causation, consciousness, intentionality, cognition and psychological explanation.

Repeat for Credit

N

Requisites

Prerequisite: two courses in philosophy. PHILO 305,

PHILO 320 or PHILO 340 recommended.

Typically Offered

Other

PHILO 660 - Advanced Ethics

Credits 3

Selected topics in contemporary ethical theory.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 330 and one other philosophy course.

Typically Offered

Fall, Spring

PHILO 665 - Philosophy of Economics

Credits 3

Moral and conceptual foundations of modern economic systems. Topics selected from: the relations between "economics rationality" and the quality of life, the just distribution of wealth, the nature of property rights, and the value of technology in society.

Repeat for Credit

N

Requisites

Prerequisite: Two courses in philosophy.

Typically Offered

Fall, Spring

PHILO 670 - Advanced Social-Political Philosophy

Credits 3

A study of a single topic in contemporary philosophical literature, with application to current political issues. Topic selected from: multiculturalism, minority rights, nationalism, justification of democracy.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 525 and one other philosophy course.

Typically Offered

Fall, Spring

PHILO 680 - Independent Study in Philosophy

Credits 1-18

Independent Study in Philosophy

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PHILO 685 - Current Topics in Metaphysics and Epistemology

Credits 3

Selected philosophical issues of current interest in analytic metaphysics and epistemology.

Repeat for Credit

Y

Requisites

Prerequisite: PHILO 340 and two additional philosophy courses.

Typically Offered

Fall, Spring

PHILO 690 - Special Topics in Philosophy

Credits 3

Selected topics in metaphysics, epistemology, philosophy of science, philosophy of language, or philosophy of mind.

Repeat for Credit

N

Requisites

Prerequisite: PHILO 320 and additional background courses required for topic.

Typically Offered
On sufficient demand

PHILO 701 - Topics in Metalogic

Credits 3

Selected topics in the analysis of first-order theories and the foundations of mathematics.

Repeat for Credit
Y

Requisites
Prerequisite: PHILO 510 or MATH 511.

Typically Offered
On sufficient demand

PHILO 801 - Topics in Philosophy and Methodology of Science

Credits 1-3

This course explores philosophical problems concerning sciences and its methods. Topics selected from: conceptual foundations of modern science, qualitative and quantitative confirmation theories, and the nature of theories, laws, and explanation in the sciences.

Note
Instructor permission.

Repeat for Credit
Y

Typically Offered
On sufficient demand

PHYS 017 - Colloquium in Physics

Credits 0

Weekly lectures on topics of current interest in physics by faculty and visiting scientists.

Repeat for Credit
N

Typically Offered
Fall, Spring

PHYS 101 - The Physical World

Credits 3

Presents an overview of physics for students who have little or no physics background. The Physical World is principally classical physics with some discussion of modern physics. The observations and phenomena are simple and basic.

Note
Three hours lecture a week. Not available for credit to students who have credit in PHYS 106.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

K-State 8
Empirical and Quantitative Reasoning
K-State 8 Tag 2
Natural and Physical Sciences

PHYS 102 - Current Topics in the Physical World

Credits 3

May include nuclear physics, atomic theory, quantum mechanics, chemistry, geology, molecular biology, astronomy, and other topics of current interest.

Repeat for Credit
N

Typically Offered
Fall

K-State 8
Empirical and Quantitative Reasoning
K-State 8 Tag 2
Natural and Physical Sciences

PHYS 103 - The Physical World Laboratory

Credits 1

This laboratory is designed to introduce students to the scientific method with an emphasis on basic physics experiments in mechanics, thermal physics, electricity and magnetism.

Note

Two hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PHYS 101.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 106 - Concepts of Physics**Credits 4**

An introductory course in physics which emphasizes the topics of physics normally presented to elementary school children. A qualitative approach with integrated laboratory, this course is recommended for students preparing for careers as elementary school teachers.

Note

Not available for credit to students who have completed PHYS 101.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 109 - Astronomy**Credits 3**

A qualitative study of the earth, sun, planets, stars, galaxies and the universe; a survey of what is known about the universe and how we know it.

Note

2 hours lecture and one 2-hour lab per week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 113 - General Physics I**Credits 4**

A basic development of the principles of mechanics, heat, fluids, oscillations, waves and sound. Emphasis is on conceptual development and numerical problem solving.

Note

Two hours lecture, one hour recitation, one hour quiz, and two hours lab week.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 114 - General Physics II**Credits 4**

The continued treatment of the fundamentals of electricity and magnetism, light and optics, atomic and nuclear physics. These concepts are used to understand D.C. and A.C. circuits, motors, and generators. Emphasis is placed on conceptual development and problem solving.

Note

Two hours lecture, one hour recitation, one hour quiz, and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 113.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 115 - Descriptive Physics

Credits 5

Covers mechanics, electricity, heat, light, sound, and atomic theory. Surveys of the major fields of physics concentrating on how physicists work to understand and describe physical phenomena.

Note

Two hours lecture, one hour quiz, and four hours studio a week. High school algebra.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 122 - Physics Today I

Credits 1

The first of a two-semester study of problem solving in physics. Introductory physics problems as well as problems encountered in research will be discussed. Introductory problems will focus on mechanics and thermodynamics. Research discussions will center on topics of current interest at K-State and elsewhere.

Note

One class of two hours per week.

Repeat for Credit

N

Requisites

Prerequisite: Physics major OR consent of instructor.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

PHYS 123 - Physics Today II

Credits 1

Second of a two-semester study of problem solving in physics. Introductory physics problems as well as problems encountered in research will be discussed. Introductory problems will focus on electricity, magnetism, and optics. Research discussions will center on topics of current interest at K-State and elsewhere.

Note

One class of two hours per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 122 AND (physics major OR consent of instructor).

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

PHYS 213 - Engineering Physics I

Credits 5

Mechanics and heat; for students of science and engineering.

Note

Two hours lecture, one hour quiz, and four hours studio a week.

Repeat for Credit

N

Requisites

Corequisite: MATH 220.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 214 - Engineering Physics II**Credits 5**

Sound, electricity, magnetism, light, and modern physics; for students of science and engineering.

Note

Two hours lecture, two hours recitation, one hour quiz, and four hours studio a week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 213 AND corequisite MATH 221.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 223 - Physics I, Mechanics, and Thermodynamics**Credits 5**

For physics majors. Lecture and quiz in common with PHYS 213. Special studio.

Repeat for Credit

N

Requisites

Corequisite: (PHYS 122 OR consent of instructor) AND MATH 220.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 224 - Physics II, Electromagnetism, and Sound**Credits 5**

For physics majors. Lecture and quiz in common with PHYS 214. Special studio.

Repeat for Credit

N

Requisites

Corequisite: (PHYS 123 OR consent of instructor) AND PHYS 223 AND MATH 221.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 300 - Physics in Relation to Other Disciplines**Credits 1-3**

Variable content, offered only by prearrangement with the physics department and with the instructor. A brief syllabus will be available for each offering of PHYS 300 outlining the objectives and organization of the course for the semester in which offered.

Note

Consent of instructor.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 325 - Physics III, Relativity, and Quantum Physics**Credits 4**

An introduction to modern physics as exemplified by atomic, nuclear, condensed matter, and particle phenomena.

Note

Three hours of lecture and one two-hour lab per week.
A working knowledge of spreadsheets and use of computers as data analysis tools.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 399 - Physics Honors Seminar

Credits 1-3

Discussions of topics of current interest in physics.

Note

Students must be enrolled in the arts and sciences honors program or have permission of the instructor. Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 400 - Independent Study in Physics

Credits 1-3

Independent theoretical or experimental investigation of a topic for physics majors or for a senior honors thesis.

Repeat for Credit

Y

Requisites

Prerequisite: Junior standing AND consent of instructor.

Typically Offered

On sufficient demand

K-State 8

Empirical and Quantitative Reasoning

PHYS 451 - Principles of Contemporary Physics

Credits 3

A non mathematical introduction to twentieth century physics: relativity, quantum mechanics, the physics of solids, and fundamental particles.

Note

Not open to physics majors. Credit is not granted for both PHYS 451 and PHYS 452.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 101.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 452 - Contemporary Physics: Problems and Principles

Credits 4

An introduction to twentieth century physics; relativity, quantum mechanics, the physics of solids, and fundamental particles. The lectures are in common with PHYS 451.

Note

Three hours lecture and two hour lab each week. The laboratory will include the quantitative aspects of the subject matter.

Not open to physics majors. Credit is not granted for both PHYS 451 and PHYS 452.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 114.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 460 - Undergraduate Topics in Physics**Credits 1-6**

Special topics in physics not completely treated in other courses.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 114.

Typically Offered

Other

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 495 - Astronomy**Credits 3**

Topics in modern astronomy. Use of a telescope for observational astronomy will be emphasized.

Note

Two hours lecture and two hours independent observational astronomy a week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 109.

Typically Offered

Other

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 497 - Senior Research in Physics**Credits 1-3**

Individually directed research in atomic physics, condensed matter, particle physics or physics education.

Repeat for Credit

Y

Requisites

Prerequisite: Senior in physics AND consent of instructor.

Typically Offered

Other

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 498 - Honors Tutorial in Physics**Credits 1-3**

Individually directed research in physics, normally taken as a preparation for writing an honors thesis.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 499 - Honors Project

Credits 3

Open only to Arts & Sciences students who are active members of the University Honors Program.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 506 - Advanced Physics Laboratory**Credits 4**

The completion of experiments of current and/or historical interest in contemporary physics. Students develop skills in and knowledge of measurement techniques using digital and analog instruments. Various data analysis techniques are used.

Note

Four (4) class hours per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325.

Typically Offered

Spring

PHYS 515 - Physics for Science Teachers**Credits 1-4**

Study of current topics in physics, with laboratory experience and demonstration of the processes or phenomena under consideration. Topics and activities will be directed toward providing teachers with material for demonstrations and student experiments or projects. Examples of topics are: solar power, laser applications, holography, and subnuclear particles, relativity, or the historical development of some physical concept.

Repeat for Credit

Y

Requisites

Prerequisite: Two semesters of college physics.

Typically Offered

Other

PHYS 522 - Mechanics**Credits 4**

Principles of statistics and dynamics of systems of particles and rigid bodies. Topics include Newton's laws for one particle, non-inertial reference frames, central forces, system of particles, rigid body statics and motion in a plane and in three dimensions, Lagrangian mechanics and Hamilton's equations, oscillating systems and normal coordinates.

Note

Three hours of lecture and one hour recitation per week
The recitation will focus on mathematical methods and techniques applied to problem solving.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PHYS 532 - Electromagnetic Fields I**Credits 4**

An introduction to electricity and magnetism. The first of a two semester study of Maxwell's equations in both integral and differential forms. Topics include electrostatics with vector calculus; electrostatic potential solutions in rectangular, cylindrical, and spherical coordinates; dielectrics; electrostatic energy and capacitance; magnetostatics with vector calculus; Biot-Savart law; vector and scalar potentials for magnetisml magnetic

permeability; Faraday's law in integral and differential form; magnetic energy and inductance; displacement current; lumped oscillations and LCR systems; impedance.

Note

Three hours of lecture and one hour recitation per week. The recitation will focus on mathematical methods and techniques applied to problem solving.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214.

Typically Offered

Fall

PHYS 620 - Teaching University Physics

Credits 3

A discussion of techniques which will aid in the development of understanding the concepts in physics. Emphasis is placed on models of learning and teaching techniques which can be applied to the teaching of contemporary physics to university students. These models and techniques are used to analyze a teaching approach of topics, such as quantum mechanics, which is important to today's physicist.

Note

Three class hours per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Other

PHYS 633 - Electromagnetic Fields II

Credits 3

Second of a two semester study of Maxwell's equations in both integral and differential forms. Special relativity; Lorentz transformations; relativistic invariants; transformation properties of electric and magnetic fields and potentials; Lorentz force and electrodynamics; electromagnetic fields of a point charge; electromagnetic

waves; solutions to the wave equation in rectangular, cylindrical, and spherical geometries; wave propagation in matter; reflection, refraction, and transmission; wave guides and fiber optics; Fresnel equations; polarization; dipole radiation.

Note

Three lectures per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 532 OR graduate standing.

Typically Offered

Spring

PHYS 636 - Physical Measurements Instrumentation

Credits 4

A laboratory-oriented course to acquaint students with electrical circuits, their interfacing with measuring instruments, and their use in making physical measurements.

Note

Four class hours per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214 OR (PHYS 114 AND MATH 220) OR graduate standing.

Typically Offered

Spring

PHYS 639 - Computations in Physics

Credits 3

An introduction to applying computational and numerical techniques to solve problems of interest to physicists. Topics include the application of computational analysis and solution to physical problems in both classical, and quantum physics including particle structure and motion, interaction of particles with fields, and model building for simulation of physical phenomena. A practicum is an integral part of the course. Students will use both personal

computers and advanced workstations.

Note

One hour lecture, two hours of computer lab per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Other

PHYS 642 - Nuclear Physics

Credits 3

An introduction to the structure of the nucleus, radioactivity, and nuclear energy; the application of quantum mechanics to describe nuclear physics.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

On sufficient demand

PHYS 651 - Introduction to Optics

Credits 4

Introduction to modern concepts in optics: electromagnetic waves, propagation of light through media, geometrical optics of lenses, mirrors and simple optical instruments, polarization, interference, coherence, and diffractions.

Note

Taught in a studio format; three hours of lecture and two hours of laboratory per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 214 OR graduate standing.

Typically Offered

Other

PHYS 652 - Applied Optics and Optical Measurement

Credits 3

Topical approach oriented toward measurements including coherence, Fourier Optics, holography, light scattering, interferometry, laser technology.

Note

Three hours of lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 651 OR graduate standing.

Typically Offered

Other

PHYS 655 - Physics of Solids

Credits 3

An introduction to the physics of solids with an emphasis on energy band structures, electrical and optical properties of solids and solid state devices.

Note

Three hours of lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 662 OR graduate standing.

Typically Offered

Other

PHYS 662 - Introduction to Quantum Mechanics

Credits 4

Concepts and mathematical models of quantum physics. Solutions to the time independent Schrödinger equation, descriptions of one-electron and multi-electron atoms, electron spin and magnetic moments.

Note

Three hours lecture and one hour recitation per week. The

recitation will focus on mathematical methods and techniques applied to problem solving.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Spring

PHYS 664 - Thermodynamics and Statistical Physics

Credits 3

An introduction to thermodynamics developed from the concepts of statistical physics. Applications include the gas laws, concepts of heat and work, phase transitions, and kinetic theory with applications to statistical physics.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Fall

PHYS 691 - Introduction to Astrophysics

Credits 3

An introduction to the application of physical principles to understanding astronomical objects. Topics include properties of stars, stellar evolution, galaxies, and cosmology.

Note

Three hours of lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Other

PHYS 692 - Introduction to Cosmology

Credits 3

An introduction to the physics and astrophysics of the hot big bang model to the Universe.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Spring-Even Years

PHYS 694 - Particle Physics

Credits 3

An experimental and phenomenological introduction to high energy physics. The course will emphasize understanding the experimental basis of what is known about the subnuclear domain. Students will be asked to design simple conceptual experiments in addition to solving problems.

Note

Three hours of lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 325 OR graduate standing.

Typically Offered

Other

PHYS 701 - Cosmology

Credits 3

A general-relativity-based discussion of the physics of the hot big bang model of the Universe.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 692 OR graduate standing.

Typically Offered
Fall-Even Years

PHYS 707 - Topics in Physics

Credits 1-18

Special topics courses. Topics and credits announced for the semester in which offered. May be given in conjunction with lecture series by visiting scientists.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate OR senior standing, AND consent of instructor.

Typically Offered
Fall, Spring, Summer

PHYS 709 - Applied Quantum Mechanics

Credits 3

A study of Schrödinger's theory of quantum mechanics and its application to one electron atoms, multielectron atoms, quantum statistics, spectra of molecules and selected topics in quantum excitations of solids, nuclear physics, and elementary particles.

Note
Three hours of lecture per week.

Repeat for Credit
N

Requisites
Prerequisite: PHYS 662 OR graduate standing.

Typically Offered
Fall

PHYS 741 - The Physics of Lasers

Credits 3

The theory of lasers including Light-matter interactions, atomic rate equations, threshold and oscillation; resonators and cavity modes; and laser dynamics including Q-switching and mode-locking.

Repeat for Credit

N

Requisites
Prerequisite: PHYS 652 OR graduate standing.

Typically Offered
On sufficient demand

PHYS 775 - Biological Physics

Credits 3

This lecture course introduces basic cellular biology for students lacking a biological background and established connections between molecular and cellular phenomena (such as photosynthesis, cellular foraging, and nerve stimulation) and experimentally verifiable models built from physical (classical, statistical, and quantum mechanical, as well as electromagnetic) considerations.

Repeat for Credit
N

Requisites
Prerequisite: PHYS 214 OR (PHYS 114 AND MATH 220) OR graduate standing.

Typically Offered
On sufficient demand

PHYS 800 - Problems in Physics I

Credits 1

Independent study of the solution of advanced problems in physics at a level appropriate to the M.S. Degree.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing AND consent of instructor.

Typically Offered
Spring

PHYS 801 - Mathematical Methods of Physics

Credits 3

Mathematical techniques for the solution of physical problems. Mathematical topics employed include vector and tensor analysis, matrices, group theory, complex

variable theory, differential equations, Sturm-Liouville theory, orthogonal functions, special functions, Fourier series, integral transforms, and the calculus of variations.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Fall

PHYS 802 - Computational Methods in Physics

Credits 4

Methods of solving physical problems using digital computers including numerical differentiation and integration, error analysis and curve fitting, interpolation, ordinary and partial differential equations, matrix operations, eigenvalues, special functions of mathematical physics. Monte Carlo simulations, and stability of solutions.

Note

Two hours lecture each week and a self-paced practicum.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Spring

PHYS 806 - Journal Club

Credits 1-18

Seminar in current topics in physics.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Fall

PHYS 807 - Graduate Physics Seminar

Credits 1

Lecture by faculty and graduate students on topics of current research interest.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Fall, Spring

PHYS 808 - Advanced Problems

Credits 1-18

Independent study in a special problem in physics at the graduate level chosen with the advice of a faculty mentor.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing AND consent of instructor.

Typically Offered

Fall, Spring, Summer

PHYS 811 - Quantum Mechanics I

Credits 3

Fundamental concepts and general formalisms of quantum theory and its applications to bound states, scattering or few state systems. Introduction to quantum applications of operators and state vectors.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 801.

Typically Offered

Spring

PHYS 821 - Advanced Dynamics

Credits 3

Study of Lagrangian and Hamiltonian mechanics. Includes canonical transformations, the Hamilton-Jacobi equation, and elements of classical chaos theory.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 801.

Typically Offered

Spring

PHYS 831 - Electrodynamics I**Credits 3**

The interaction of electrical charges with each other and radiation as described by the theory of Maxwell and Lorentz. Topics include Coulomb's law and vector fields, Ampere's law and magnetic fields. Faraday's law and inductive fields, continuity relations and conservation laws.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 801.

Typically Offered

Fall

PHYS 850 - Theory of Atomic Structure and Atomic Interactions**Credits 3**

The quantum mechanics of atomic structure and spectra: one and two electron atoms, many electron atoms, molecular structure and spectra, atomic collision theory for electron-atom and ion-atom collisions.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Other

PHYS 860 - Electron and Ion Impact Phenomena**Credits 3**

Atomic collision phenomena; experimental techniques in accelerator-based atomic physics; charged particle and photon spectroscopy; elastic, inelastic, and rearrangement collisions; and applications.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Other

PHYS 870 - Nonlinear and Quantum Optics**Credits 3**

Theory and applications of nonlinear optics: difference and sum frequency generation; ultrashort pulse characterizations; third order effects; Raman scattering; and higher harmonic generation. Fundamentals of quantum optics including field quantization; coherent state; nonclassical light; and optical tests of quantum mechanics.

Repeat for Credit

N

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

On sufficient demand

PHYS 881 - Introduction to Solid State Physics**Credits 3**

Introduction to the physics of condensed matter: crystal lattices; lattice dynamics; electron energy bands; fermi surfaces; optical, magnetic, and transport properties of insulators, semiconductors, and metals.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing OR consent of instructor.

Typically Offered

Other

PHYS 899 - Research in Physics

Credits 1-18

Master's level research.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing AND consent of instructor.

Typically Offered

Fall, Spring, Summer

PHYS 907 - Advanced Topics in Physics

Credits 0-18

Critical studies of selected advanced topics.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing AND consent of instructor.

Typically Offered

Other

PHYS 910 - Problems in Physics II

Credits 1

Independent study of the solution of advanced problems in physics at a level appropriate to the Ph.D. Degree.

Repeat for Credit

Y

Typically Offered

Other

PHYS 911 - Quantum Mechanics II

Credits 3

Formalisms and applications of quantum theory, including symmetry in quantum systems, space-time symmetries, the rotation group, many body systems, and an introduction to relativistic quantum mechanics.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 811.

Typically Offered

Fall

PHYS 912 - Advanced Quantum Mechanics

Credits 3

Relativistic quantum mechanics; scattering theory; second quantization and the many-body problem. Introduction to quantum electrodynamics.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 911.

Typically Offered

On sufficient demand

PHYS 913 - Advanced Topics in Mathematical Physics

Credits 3

Critical studies of selected advanced topics.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 801.

Typically Offered

Other

PHYS 914 - Quantum Field Theory

Credits 3

Topics may include second quantization, quantization of the free scalar and Dirac fields, quantum electrodynamics,

quantization of the electromagnetic field, propagators and Feynman rules, or other contemporary topics in quantum field theory.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 911.

Typically Offered

On sufficient demand

PHYS 915 - Quantum Field Theory II

Credits 3

Topics may include: Radiative Corrections of QED; Gauge Theories; Weak Interactions, Gauge Theory of Weak Interactions, Spontaneous Symmetry Breaking, and the Standard Electroweak Theory; Field Theory Methods, and Path Integrals; Quantum Chromodynamics; Regularization; Asymptotic Freedom.

Repeat for Credit

N

Requisites

Prerequisite: PHYS 914.

Typically Offered

Fall-Even Years

PHYS 931 - Electrodynamics II

Credits 3

The interaction of electrical charges with each other and radiation as described by the theory Maxwell and Lorentz. Topics include the propagation and production of radiation, Lorentz transformations and relativistic dynamics.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 831.

Typically Offered

Spring

PHYS 953 - Advanced Topics in Atomic Interactions

Credits 1-18

Critical studies of advanced topics in atomic interactions.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing AND consent of instructor.

Typically Offered

Other

PHYS 971 - Statistical Mechanics

Credits 3

The study of equilibrium states of physical systems involving many particles. Introduces basic concepts of statistical ensembles and presents applications to non-interacting systems for both classical and quantum-mechanical particles. Discusses aspects of interacting classical systems, including a brief introduction to phase transitions and critical phenomena.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 821.

Typically Offered

Fall

PHYS 981 - Solid State Physics

Credits 3

Quantized lattice vibrations, methods of band structure calculations, effective mass formulations, applications to optical absorption, excitons, magnetism, and superconductivity.

Note

Continuation of PHYS 881.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 811.

Typically Offered

Other

PHYS 982 - Advanced Topics in Solid State Physics**Credits 3**

Critical studies of selected advanced topics.

Repeat for Credit

Y

Requisites

Prerequisite: PHYS 881.

Typically Offered

Other

PHYS 999 - Research in Physics**Credits 1-18**

Doctoral level research.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing AND consent of instructor.

Typically Offered

Fall, Spring, Summer

PLAN 010 - Planning Field Trip 1**Credits 0**

Multi-day field trip experience in a location of planning significance. Students will learn about professional planning practice in location to develop planning knowledge base and apply findings to other courses.

Repeat for Credit

Y

Typically Offered

Spring

PLAN 020 - Planning Field Trip**Credits 0**

Multi-day field trip experience in a location of planning significance. Students will learn about professional planning practice in location to develop planning knowledge base and apply findings to other courses.

Repeat for Credit

N

Typically Offered

Spring

PLAN 115 - Introduction to Regional and Community Planning**Credits 3**

The origins and evolution of planning in response to economic, social, political, physical, and environmental issues. The planning process and its relationship to the design professions and the social and behavioral sciences.

Repeat for Credit

N

Typically Offered

Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

PLAN 215 - World Cities**Credits 3**

This course introduces undergraduates from a variety of disciplines to some of the major urban areas in the world, how and why they developed, what makes them unique, what it might be like to live there, and what issues they may face in achieving a sustainable future. This course gives students a way of thinking about cities in a global context that highlights both their differences and their similarities. Through lectures, text and other multi-media formats, students explore some of the main opportunities and challenges facing the inhabitants of large cities in today's world.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

PLAN 316 - Planning Principles Seminar**Credits 2**

Discussion of the principles and process of regional and community planning as practiced by the profession. The tools, skills and knowledge of the planning professions are presented in a focused introduction to the profession.

Repeat for Credit

N

Requisites

Corequisite: PLAN 315, admission to the Regional and Community Planning program.

Typically Offered

Fall

PLAN 320 - Community Development Field Workshop**Credits 3**

This course integrates meaningful field experiences with in-class instruction and reflection to introduce students to community assets. Coursework focuses on critical thinking, cultural literacy, and applied classroom knowledge of community assets to encourage shared civic engagement.

Repeat for Credit

N

Requisites

Prerequisite or co-requisite: PLAN 315.

Typically Offered

Fall

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PLAN 444 - Career Planning Seminar**Credits 2**

Exploration and identification of career paths and development of academic plans for reaching personal and professional goals including specific coursework internships, study abroad and extracurricular activities.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 315.

Typically Offered

Fall

PLAN 510 - Graphic Composition and Representation for Planning**Credits 2**

A hands on, introductory course that prepares built environment professionals to meet the varying challenges of the practice world by making them familiar with digital graphic tools, representation and composition rules and skills, and color theory.

Repeat for Credit

N

Requisites

Corequisite: PLAN 215 or PLAN 315 and PLAN 640.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

PLAN 640 - Urban Design and Development**Credits 3**

Review of recent and historical developments of urban form and space, presented through lecture and discussion. Criteria and methodology for urban design and planning as well as the role of historic preservation.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 215 and PLAN 115.

Typically Offered
Fall

K-State 8
Historical Perspectives

PLAN 641 - Special Studies in Planning

Credits 1-18

Special Studies in the area of regional and community planning.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

PLAN 645 - Professional Internship Report

Credits 1

Oral and graphic presentation of work completed in PLAN 703.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 703

Typically Offered
Fall

PLAN 650 - Housing and Development Programs

Credits 3

Review and evaluation of historical and current housing issues, production, and financial systems, including consideration of racial, ethnic, income, and gender issues as they relate to the role of housing developments and programs in community development.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 315; ENGL 200.

Typically Offered
Spring

PLAN 655 - Land Development Planning

Credits 3

Examination of the process of land development in the United States, and its impacts from the perspective of developers, financial institutions, community planners, and city administrators. Focus is on the understanding of the land development process in meeting community goals and shaping land development to meet community expectations for the improvement of the community. Conflict resolution and negotiation skills represent a communication emphasis.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 315.

Typically Offered
Spring-Odd Years

PLAN 660 - Community Development Planning

Credits 3

Examination of past and present approaches to community development planning in the United States. Review and assessment of community development planning policies, programs and practices.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 315.

Typically Offered
Spring

PLAN 661 - Community Development Workshop

Credits 3

The organization, planning, design, development, and evaluation of community development projects with real clients and actual locations.

Repeat for Credit

N

Typically Offered

Fall

PLAN 665 - Professional Internship**Credits 1-9**

Internship with an approved planning sponsor subject to the approval of the departmental faculty.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 444.

Typically Offered

Fall, Spring, Summer

PLAN 667 - Transportation Planning**Credits 3**

The background, framing theories, professional activities and policy debates of transportation planning regarding transit, roads, non-motorized travel, energy use and climate change, land use, congestion, finance, economic development, health, safety, politics, asset management, politics, emerging technologies and the sharing economy.

Repeat for Credit

N

Typically Offered

Fall, Spring

PLAN 668 - Travel Demand Modeling**Credits 3**

The history, evolving theory, application, and debates surrounding travel demand modeling. Instruction in one of the main travel demand modeling software packages. Practical use of that software.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PLAN 670 - Planning in POP Culture**Credits 3**

Planning in POP Culture is an exploratory educational adventure of regional and community planning issues through the cultural media of song, literature, visual art, and film.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PLAN 672 - Collective Decisions**Credits 3**

Provides an introduction to planning as a collective decision-making tool; examines how planners work within a decision-making environment to move from regional and community planning concepts to implementing plans.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 315 or instructor permission.

Typically Offered

Fall, Spring

PLAN 674 - Regional Economic Development Policy**Credits 3**

Introduce students to the theory & practice of economic development at the sub-national level. Evaluate the design and implementation

of economic development activities.

Repeat for Credit
N

Typically Offered
Fall, Spring

PLAN 703 - Off-Campus Studies

Credits 5

Off campus studies fulfilled in an approved professional office, in an approved international studies program, or at the Kansas City Design Center (KCDC).

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

PLAN 704 - Report Preparation

Credits 3

Comprehensive data collection and analysis based on an approved research proposal.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 897

Typically Offered
Fall

PLAN 705 - Master's Project

Credits 3

Comprehensive application of research and planning through individual studies approved by the department faculty.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 897

Typically Offered
Spring

PLAN 707 - Writing and Thinking the City

Credits 3

Hands-on discussion and writing course focused on building an in-depth understanding of the growth, development and social dimensions of cities, and critical thinking and writing skills for built environment scholars and professionals.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 215 or PLAN 115.

Typically Offered
Fall

PLAN 718 - Principles and Strategies of Community Change

Credits 3

This course prepares built environment professionals to address the field of community development through application of community development principles and strategies.

Repeat for Credit
N

Typically Offered
Fall

PLAN 720 - Infrastructure and Plan Implementation

Credits 3

Examination of infrastructure systems, the transportation process, land-use, and development standards; consideration of policy options and strategies; review of financing options and regulatory requirements associated with the various infrastructure elements. The course also reviews social and other issues that affect and are affected by infrastructure related decisions.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 115 or PLAN 215.

Typically Offered

Fall

PLAN 730 - Planning Professional Practice**Credits 3**

Students will learn the functions of public and private sector professional practice including organizational structures, administration and management, and professional ethics.

Repeat for Credit

N

Typically Offered

Fall

PLAN 740 - Small Community and Rural Area Planning**Credits 3**

Synthesis of small community and rural area change, including socio-economic-political determinants as bases for community design and planning.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 115.

Typically Offered

Fall

PLAN 741 - Special Studies in Planning**Credits 1-18**

Special Studies in the area of regional and community planning.

Repeat for Credit

Y

Requisites

Prerequisite: PLAN 115.

Typically Offered

Fall, Spring, Summer

PLAN 749 - Metropolitan Planning and Design**Credits 3**

Examination of urban form and the making of livable and sustainable metropolitan regions from an urban design perspective. Introduction to public and private roles in the creation of urban form at regional, city, neighborhood, and site scales; consideration of regional and global consequences of local decisions; examination of design tools and methods used to shape decision making in urban development. Mixed lecture/seminar/workshop format. Interdisciplinary course open to students in architecture, landscape architecture, regional and community planning and related disciplines.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 115.

Typically Offered

Spring

PLAN 753 - Planning Law**Credits 3**

Examination of the evolution and current state of land use regulation within constitutional limits. Introduction to zoning, subdivision, and other police power controls within the comprehensive planning process.

Repeat for Credit

N

Typically Offered

Fall

PLAN 755 - Professional Practice: Discipline-Specific Topics**Credits 1**

Covers discipline-specific concerns, focusing on issues specific to architecture, interior architecture and product

design, landscape architecture or regional and community planning.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 316.

Typically Offered

Fall, Spring

PLAN 765 - Growth Management

Credits 3

Study of the process of city growth and change in relation to planning techniques and socio-economic-political determinants. Criteria and methodology for the growth management are reviewed and applied to the contemporary city.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 315, PLAN 720.

Typically Offered

Spring

PLAN 801 - Knowledge Methods

Credits 3

A course on quantitative analytical methods for planners. The students will learn problem solving and data analysis in the planning profession such as population project, economic analysis and introductory statistics.

Repeat for Credit

N

Typically Offered

Fall

PLAN 802 - Planning Methods II

Credits 3

The application of computer concepts to problem solving and data analysis in the planning profession for community demographic analysis, economic analysis, and market

analysis. Included are elements of professional report preparation and visual graphic presentations of planning projects for use in public meetings and for public viewing. Material developed in PLAN 801 form the subject matter of the presentations.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 801.

Typically Offered

Spring

PLAN 803 - Community Research Methods

Credits 3

Focus is on the analytical tools for the selection, collection, analysis, and interpretation of regional and community policy planning activities. Included is the development of survey instruments and interpretation, work flow and work measurement skills, performance standards and program evaluation techniques for policy planning and analysis at the local governmental level.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 225, STAT 250, STAT 702, or STAT 703.

Typically Offered

Fall

PLAN 805 - Internship in Planning

Credits 1-4

Assignment to a planning staff for a period of at least 10 weeks; supervision by a professional planner with periodic reports of activities to planning faculty.

Repeat for Credit

Y

Requisites

Prerequisite: Completion of two semesters of graduate study in planning.

Typically Offered
Fall, Spring, Summer

PLAN 812 - Planning Theory & Law

Credits 3

A course on planning theory and planning law. Students will learn about the procedural theories and legal frameworks that support planning practice.

Repeat for Credit
N

Requisites
Prerequisite: PLAN 115.

Typically Offered
Spring

PLAN 815 - Planning Theory, Ethics and Practice

Credits 3

Review of the basic theories of regional and community growth and change, analysis of the process of urbanization in relation to societal determinants and environmental constraints, and the study of a process of planning for professional practice. Exploration of societal and human values in relation to issues of equity, social justice, economic welfare, and efficient use of resources, as well as ethical approaches to these issues.

Repeat for Credit
Y

Requisites
Prerequisite: PLAN 115.

Typically Offered
Spring

PLAN 836 - Plan Making

Credits 5

This course is about plan-making. Students will learn criteria, standards, and methodology for community and/or regional analysis and planning, and apply them to the practice of planning.

Repeat for Credit

N

Requisites
Prerequisite: PLAN 315, PLAN 720 and GEOG 508 or equivalent.

Typically Offered
Spring

PLAN 880 - Topics in Planning

Credits 1-18

Independent study of selected concepts and trends in regional and community planning and development.

Repeat for Credit
Y

Requisites
Prerequisite: PLAN 803.

Typically Offered
Fall, Spring, Summer

PLAN 897 - Proposal Writing

Credits 2-3

Exploration of procedures of planning, design, scheduling, organization, and management of a regional and community planning research project.

Note
Thesis students enroll for 2 credit hours. Master's Project and Report students enroll for 3 credit hours.

Repeat for Credit
Y

Requisites
Prerequisite: PLAN 707 and PLAN 801.

Typically Offered
Fall, Spring

Crosslisted
PLAN/LAR 897: Proposal Writing

PLAN 898 - Master's Report

Credits 2

Comprehensive application of research and planning through individual studies approved by the department faculty.

Repeat for Credit

N

Requisites

Prerequisite: PLAN 704.

Corequisite: PLAN 705.

Typically Offered

Spring

PLAN 899 - Research in Planning

Credits 0-18

Original research and advanced study in regional and community planning, urban design, and related fields for the master's report/thesis.

Repeat for Credit

Y

Requisites

Prerequisite: PLAN 803 or LAR 725 or ARCH 725 and completion of two semesters of graduate study in planning.

Typically Offered

Fall, Spring, Summer

PLPTH 495 - Undergraduate Research in Plant Pathology

Credits 0-3

Research experience is offered in classical and molecular plant pathology and biotechnology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Natural and Physical Sciences

PLPTH 500 - Principles of Plant Pathology

Credits 3

An introductory class in the nature of plant pathogens and the cause, effect, and control of plant diseases. Diseases of field and horticultural crops will be addressed.

Note

Two hours lecture, one 2-hr. lab a week.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 198.

Typically Offered

Spring

PLPTH 575 - Topics in Plant Pathology

Credits 1-3

Discussions and lectures on important areas and contributions in the field of plant pathology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 576 - Special Topics in Plant Pathology

Credits 1-3

Discussions and lectures on important areas and contributions in the field of plant pathology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 585 - Crop Diseases

Credits 2

An overview of plant diseases associated with Kansas crops, with an emphasis on identification and management strategies.

Note

Two hours lecture and four hours lab a week. To meet first half of the semester.

Repeat for Credit

N

Requisites

Prerequisite: PLPTH 500.

Typically Offered

Fall

PLPTH 587 - Turfgrass Diseases and Their Management**Credits 1**

Biology, diagnosis and integrated management of turfgrass diseases. Emphasis is on diseases of intensively maintained turfgrass.

Note

Two hours lecture and two hours lab a week, for the first five weeks of the semester.

Repeat for Credit

N

Requisites

Corequisite: HORT 582 and HORT 515

Typically Offered

Fall-Even Years

Crosslisted

HORT 587

PLPTH 590 - Landscape Diseases**Credits 2**

An overview of plant diseases associated with Kansas greenhouse and nursery production systems as well as landscape settings, with an emphasis on identification and management strategies.

Note

One hour lecture and one lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PLPTH 500 or concurrent enrollment.

Typically Offered

Spring

PLPTH 610 - Biotechnology**Credits 3**

The use of biotechnology and molecular genetic approaches in plant and animal sciences. Emphasis is on the use of molecular techniques for plant and animal improvement.

Note

Three hours lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: ASI 500 or BIOL 398.

Typically Offered

Fall

Crosslisted

AGRON 610

PLPTH 676 - Fusarium Laboratory Workshop**Credits 1**

A one-week laboratory/lecture course on the identification, systematics, physiology, mycotoxicology, genetics, and molecular biology of fungi in the genus *Fusarium*. Students should not be enrolled in any other class while attending this workshop.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 255 or BIOL 604; and consent of instructor.

Typically Offered
Summer-Odd Years

PLPTH 730 - Plant Nematology

Credits 3

An introduction to the morphology, taxonomy, and ecology of phytoparasitic and free-living nematodes found in plants, soil, and fresh water. Emphasis is on the identification and control of plant parasitic nematodes and on lab techniques used in their study.

Note
Two hours lecture, one 2-hr lab a week.

Repeat for Credit
N

Requisites
Prerequisite: PLPTH 500.

Typically Offered
Spring-Even Years

PLPTH 732 - Introduction to Plant Resistance to Pests

Credits 2

Basic concepts of the biology, ecology, genetics and breeding for pest resistance in plants.

Note
Four hours lecture and discussion a week. Meets first half of term.

Repeat for Credit
N

Requisites
Prerequisite: ENTOM 300 or PLPTH 500 or ENTOM 312 and ENTOM 313, and one course in plant or animal genetics.

Typically Offered
Fall-Even Years

Crosslisted
ENTOM 732 and AGRON 732

PLPTH 750 - Problems in Plant Pathology

Credits 1-3

Work is offered in general plant pathology, plant virology, plant nematology, disease physiology, epidemiology, and disease diagnosis.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

PLPTH 755 - Plant Resistance to Diseases

Credits 2

To meet second half of semester for four hours per week. Survey of recent literature on conventional and novel strategies for obtaining durable resistance to plant diseases. Several well-characterized host/pathogen systems will be selected for in-depth analysis.

Repeat for Credit
N

Requisites
Prerequisite: ENTOM 732 or PLPTH 732.

Typically Offered
Fall-Even Years

PLPTH 765 - Integrated Plant Disease Management

Credits 2

Advanced topics in integrated plant disease management will be examined, including: epidemiological concepts, disease loss assessment, fungicides, resistance traits, on-farm research trials and utilization of precision agriculture technologies to measure disease impacts.

Note
The course will meet the second eight weeks of the semester.

Repeat for Credit
N

Requisites

Prerequisite: PLPTH 590 or concurrent enrollment with PLPTH 585.

Typically Offered
Fall

PLPTH 812 - Introduction to Integrative Genome Analysis

Credits 3

An introduction to genomics technologies genomics technologies, methods and approaches and their integration to the study of genome biology.

Note
Three hours lecture per week.

Repeat for Credit
N

Requisites
Prerequisite: BIOL 398 or ASI 500. Recommended Foundation Course: 700 level statistics course.

Typically Offered
Fall-Even Years

PLPTH 813 - Bioinformatics Applications

Credits 3

This course will cover the basic principles of regular bioinformatics applications and emphasize the practice of bioinformatics in biological research. The course will introduce the use of computation skills in data analysis focused on the application of bioinformatics in next-generation sequencing (NGS). The goal of this course is to help students be prepared for the next-generation biological research that often generates large data and requires researchers to have the capability in data management and data mining.

Note
Two hour lecture and two hours lab per week.

Repeat for Credit
N

Requisites
Recommended Foundation Courses: BIOL 398 or ASI 500 and a 700 level statistics course.

Typically Offered
Spring-Odd Years

PLPTH 820 - Population Genetics

Credits 3

Theoretical basis for and applications of population genetic principles to populations of humans, domesticated plants and animals, and natural ecosystems.

Note
Three hours lecture/discussion per week.

Repeat for Credit
N

Requisites
Prerequisite: ASI 500, BIOCH 521, MATH 220, and STAT 510 or STAT 703.

Typically Offered
Spring-Odd Years

PLPTH 835 - Plant Virology

Credits 3

A study of the composition, symptomatology, diagnosis, isolation, replications, molecular biology, genetics, and evolution of plant-infecting viruses.

Note
Two hours lecture a week plus one hour of recitation.

Repeat for Credit
N

Requisites
Prerequisite: ASI 500, BIOCH 521, BIOCH 522, and PLPTH 500.

Typically Offered
Fall-Odd Years

PLPTH 840 - Plant Pathogenic Bacteria

Credits 2

Emphasizes the diversity, mechanisms of pathogenicity, host-parasite relations, control measures, and the principles and methods of identifying plant pathogenic bacteria.

Note

The course will meet for half of the semester. Four hours lec/ week.

Repeat for Credit

N

Requisites

Prerequisite: BIOCH 521, PLPTH 500.

Typically Offered

Spring-Odd Years

PLPTH 845 - Plant Pathogenic Fungi**Credits 3**

The isolation, handling, storage, inoculation, terminology and taxonomy of fungal pathogens of plants. Particular attention will be given to techniques used to study fungi and to the genus and species concepts for important plant pathogenic fungal genera.

Note

Two hr lecture, and one 3-hr lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PLPTH 500 and BIOL 604.

Typically Offered

Fall-Even Years

PLPTH 850 - Introduction to R Programming for Biologists**Credits 1**

An introduction to the R programming environment for biological applications, including an overview of data management, graphics, introductory statistics, phylogenetic analyses, biomathematical modeling, and bioinformatics.

Note

Lec/recitation Four half days.

Repeat for Credit

N

Requisites

Prerequisite: One course in introductory statistics or

quantitative biology.

Typically Offered

Summer

PLPTH 870 - Thesis/ Dissertation Proposal Seminar**Credits 1**

Theory and practice of research proposal development.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Spring

PLPTH 871 - Professional Communications in Plant Pathology**Credits 1**

Theory and practice of effective communication of plant pathology research and concepts to scientific and non-scientific audiences.

Note

Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall

PLPTH 880 - Plant Molecular Biology**Credits 3**

A study of plant genes and genome organization, plant gene expression and regulation, and functional analysis of plant genes.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: BIOCH 521, PLPTH 610, or BIOL 541.

Typically Offered

Fall-Even Years

Crosslisted

AGRON 880

PLPTH 885 - Genomic Technologies Workshop**Credits 2**

Lecture and laboratory on the modern techniques to study genes and genomes.

Repeat for Credit

Y

Requisites

Recommended Foundation Course: One of the following courses: PLPTH 610, AGRON 610, BIOCH 521, BIOCH 522, BIOL 675, BIOL 676, PLPTH 680, AGRON 680

Typically Offered

Summer

PLPTH 898 - Master's Report**Credits 1-2**

Master's Report

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 899 - Research in Plant Pathology for the MS Degree**Credits 1-18**

Work is offered in each of the major pathogen groups, genetics of plant-microbe interactions, disease physiology, ecology, and epidemiology.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 905 - Ecology and Epidemiology of Plant Pathogens**Credits 3**

Experimental and theoretical approaches to the study of plant disease ecology in agricultural and natural systems.

Note

Three hours lecture a week.

Repeat for Credit

Y

Requisites

Prerequisite: A course in Statistics, a course in Calculus, and one of the following: PLPTH 500, PLPTH 730, PLPTH 835, PLPTH 840, PLPTH 845, or a course in Ecology.

Typically Offered

Spring-Even Years

PLPTH 910 - Molecular Plant-Microbe Interactions**Credits 3**

Discussions of molecular and genetic perspectives of resistant and susceptible interactions between plants and bacterial, viral and fungal pathogens. Evaluation of current hypotheses on the nature of disease resistance.

Repeat for Credit

N

Requisites

Prerequisite: PLPTH 500, BIOCH 521, and BIOL 500; BIOL 450 or ASI 500; PLPTH 835, PLPTH 840, or PLPTH 845.

Typically Offered

Fall-Odd Years

PLPTH 915 - Advanced Plant Genetics**Credits 3**

In-depth treatment of advanced concepts in molecular, quantitative, and cytogenetics of plants.

Note

Three hrs. lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: AGRON 680.

Typically Offered

Fall-Odd Years

Crosslisted

AGRON 915

PLPTH 916 - Cytogenetics Laboratory

Credits 1

An advanced laboratory course in classical and molecular cytogenetic techniques, C-banding and fluorescence in situ hybridization techniques.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PLPTH 915

Typically Offered

Fall-Odd Years

PLPTH 920 - Topics in Plant Pathology

Credits 1-18

Discussions and lectures on important areas and contributions in the field of plant pathology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 921 - Special Topics in Plant Pathology

Credits 1-18

Discussions and lectures on important areas and contributions in the field of plant pathology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 922 - Teaching Practicum in Plant Pathology

Credits 1-2

Practical training in teaching courses offered in the Department of Plant Pathology. Most students will serve as Teaching Assistants.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PLPTH 927 - Fungal Genetics

Credits 3

A study of the classical, molecular, and population aspects of fungal genetics in both model and commercially important systems. Topics to be discussed include genetic analysis via mitosis and meiosis, models of recombination, genetic control of fungal development, basic molecular genetics of fungi, and genetic factors affecting fungal population structure and stability.

Note

Three hours lecture discussion a week.

Repeat for Credit

N

Requisites

Prerequisite: BIOCH 521, ASI 500; Recommended Foundation Courses: BIOL 604 and a 600-level or higher course in genetics.

Typically Offered

Spring-Even Years

PLPTH 999 - Research in Plant Pathology for the PhD Degree**Credits 1-18**

Work is offered in each of the major pathogen groups, genetics of plant-microbe interactions, disease physiology, ecology, and epidemiology.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 110 - Environmental Education and Leadership**Credits 1**

This course will help students develop and understand the value of outcome based outdoor recreation/environmental education experiences for youth. Students will gain experience in group dynamics and a variety of leadership approaches involving nationally recognized environmental education programs.

Note

Some local field trips are required.

Schedule by appointment.

Repeat for Credit

N

Requisites

Prerequisite: Park Management and Conservation majors only.

Typically Offered

Fall

K-State 8

Human Diversity within the U.S.

PMC 115 - Topics in Park Management and Conservation**Credits 1-3**

Discussion of topics and activities of importance in park management and conservation.

Note

Instructor permission required.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 120 - Outdoor Recreation Certification**Credits 0**

This course is designed to provide the PMC major ability to obtain outdoor recreation certifications not directly taught by Kansas State University. Examples are numerous, and include Wilderness First Responder, Archery in Schools Instructor, Aquatic Facility Operator, Playground Inspector Certification, Leave No Trace. Certifications being accepted must involve a minimum of 16 hours of contact, exercise and assessment hours; or additional requirements can be added by PMC faculty to meet 16 hours of content.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 210 - Intro to Outdoor Recreation**Credits 3**

Overview of the outdoor recreation industry and profession with emphasis on history of outdoor recreation in the U.S., current trends, public/private delivery systems, and associated individual and societal benefits. Highlights the breadth and diversity of the outdoor recreation industry and emphasizes the contributions and outcomes associated with outdoor recreation participation.

Note

Three hours lecture a week.

Repeat for Credit

N

Typically Offered

Fall

PMC 275 - Introduction to Natural Resource Management

Credits 3

A survey of historic and present-day uses, problems, and basic management approaches associated with our renewable and nonrenewable natural resources. The impact of society, economics, law, politics, and philosophy on the management and use of our natural resources will also be examined.

Note

Three hours lecture a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Natural and Physical Sciences

PMC 350 - Parks and Outdoor Recreation Practicum

Credits 1-2

Required professional work experience (paid or volunteer), 120 hours minimum for 1 hour of credit; 240 hours minimum for 2 credit hours of credit. Designed to provide the future park and recreation professional an opportunity to apply acquired professional knowledge, skills and abilities in a supervised setting. A special problem allows the student to explore a topic/issue of professional interest.

Repeat for Credit

N

Requisites

Prerequisite: Completion of at least 12 PMC (prefixed) core hours.

Typically Offered

Fall, Spring, Summer

PMC 410 - Natural Resource Based Tourism

Credits 3

This course will explore the obstacles and opportunities of using ecotourism and agritourism to contribute to rural economic development. Examples of successful ecotourism projects both domestically and internationally will be presented with an emphasis on the role of National Parks as tourism destinations. Agritourism efforts in Kansas will be highlighted and compared to similar efforts in other states and countries. Principles of attracting and managing tourists and park visitors in a sustainable manner also will be covered.

Repeat for Credit

N

Requisites

Prerequisite: PMC 275 Recommended Foundation Courses: PMC 210 and PMC 620.

Typically Offered

Fall

PMC 441 - Topics in Park Management and Conservation

Credits 0-18

Discussion of topics and activities of importance in park management and conservation.

Note

Instructor permission required.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 475 - Natural History for Park Professionals

Credits 3

This course will introduce students to the vertebrate fauna

of Kansas. Specifically, students will learn to identify the amphibians, reptiles, birds and mammals found regularly in Kansas parks and wildlife areas. The course will prepare students to take the Kansas Conservation Officer wildlife identification test as well as prepare park interpreters and managers to identify species found in their parks and educate the public about them.

Note

One hour lecture and one three-hour lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PMC 275

Typically Offered

Fall

K-State 8

Natural and Physical Sciences

PMC 489 - Outdoor Recreation Program and Event Development

Credits 3

A focused study of the design, supply, and marketing of specific outdoor recreation programs and events. The course will focus on tools and techniques of both the direct supply and facilitation of planned outdoor activities and events.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: PMC 275, Recommended Foundation Course: PMC 210

Typically Offered

Spring

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

PMC 492 - Internship in Parks and Recreation

Credits 6

An intensive, paid practical experience with an approved agency, extending over a 10-week, 400-hour span.

Note

For seniors only.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 495 - Undergraduate Research in Park Management and Conservation

Credits 0-3

Undergraduate students work with faculty mentors on projects involving various elements of research in PMC including identifying a problem, designing and conducting experiments, interpreting and communicating the research results. The completed project must be presented at a professional forum, and students are required to write a final project report on completion of their project.

Note

Instructor permission

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PMC 510 - Forestry for Park Professionals

Credits 3

Principles and practices of managing forest resources in the park setting. Special emphasis will be given to tree management in high use areas such as parks where human visitors present special problems for tree survival and development.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Recommended Foundation Course: PMC 330.

Typically Offered

Fall

PMC 575 - Water Management for Natural Resource Managers

Credits 3

A study of the management of water resources for public and commercial uses. The course investigates the use of rivers, lakes, reservoirs, and marine resources. Management considerations, including agency policy formation, legal rights, use conflicts, and use valuation are covered.

Note

Three hours lecture a week.

Repeat for Credit

N

Typically Offered

Fall

PMC 580 - Park Operations and Maintenance Management

Credits 4

A focus on the principles and practices of operating and maintaining park and recreation areas and facilities. The focus of the course will be on the daily operation and related issues of various public parks (e.g federal, state, county and municipal) and specific park features, including: campgrounds, trails and OHV areas, marinas, zoos, shooting ranges, aquatic facilities, and multipurpose sports complexes and limited facilities.

Note

Two hours lecture and two hours lab a week, with an extended 8 hr on-site lab experience.

Repeat for Credit

N

Typically Offered

Fall

PMC 620 - Park Planning and Design

Credits 3

Analyzes park and protected area planning, its importance, the planning process from beginning to implementation, barriers to successful implementation, and problem-based solutions. Understanding the planning process, related planning policy and the importance of public involvement in the process are the main focus of this course.

Repeat for Credit

N

Requisites

Recommended Foundation Courses: PMC 210, PMC 275

Typically Offered

Spring

PMC 635 - Methods of Environmental Interpretation

Credits 3

This course focuses on principles and techniques necessary to communicate environmental and cultural values to visitors in park areas. The philosophy, theory, design, and application of interpretive media to communicate information about the environment is studied.

Note

Two hours recitation and three hours lab a week. Field trips required.

Repeat for Credit

N

Requisites

Prerequisite: PMC 210 and PMC 275

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

PMC 690 - Parks and Recreation Administration

Credits 4

This course will introduce students to the use of specific practices to effectively manage a contemporary leisure service enterprise. Special emphasis is placed on financial

management, human resource management, policy development, risk management and general administrative operations.

Note

Four hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: PMC 275 and Junior standing or Senior standing

Typically Offered

Spring

PMC 740 - Advanced Environmental Interpretation

Credits 3

This course builds on the principles and interpretive techniques which are introduced in RRES 635. Specifically, labs emphasize development of personal interpretive skills and students are introduced to interpretive media not covered in RRES 635 (e.g., video equipment, computers, etc.). The lecture and readings focus on the philosophy of interpretation and the theoretical framework for designing and evaluating interpretive strategies.

Note

One hour lecture and four hours lab a week. Field trips required.

Repeat for Credit

N

Requisites

Prerequisite: PMC 635.

Typically Offered

Spring

PMC 810 - Quantitative Research Methods in Park Management and Conservation

Credits 3

An overview of quantitative research design and methods in park management and conservation settings, focusing on survey design, scale development, and associated statistical

analyses.

Repeat for Credit

N

Typically Offered

Fall

PMC 820 - Outdoor Recreation Behavior

Credits 3

The practical and theoretical basis of recreational use of public and private lands is examined in the context of ecosystem management. The statutory and regulatory policies and current issues regarding the management and use of lands in wilderness systems, wild and scenic river corridors, parks, and protected areas are discussed in detail. The impacts of recreational uses on the environment and conflicts with other uses of land and resources are discussed. Land use planning policies and decisions, which respond to recreation, wilderness and protected area issues will be examined.

Repeat for Credit

N

Typically Offered

Fall

PMC 830 - Conservation Attitudes and Behaviors

Credits 3

Explores the development of the field, psychological constructs that influence behaviors, theories that explain the relationship of these constructs to conservation outcomes, strategies to foster a connection to nature, influencing responses to the natural and built environments, and how to cultivate sustainability through the adoption of conservation behaviors. The main focus is to understand the relationship of humans to nature and how this influences conservation.

Repeat for Credit

N

Typically Offered

Fall

POLSC 101 - Political Science First Year Orientation

Credits 1

Each meeting of Political Science Freshman Seminar covers a topic related to student success, including student help sources such as tutoring and academic coaching, the Career Center, student involvement opportunities within the Political Science Department (such as research), the university, and community. In addition, students develop a graduation plan after going over degree requirements and gain competency in navigating KSU online resources.

Repeat for Credit

N

Typically Offered

Fall, Spring

POLSC 107 - Political Science Colloquium**Credits 2**

Topics in political science chosen to illustrate current research of political scientists and approaches to the study of politics. Each time the course is offered, a syllabus will outline the topics to be studied and the way the course will be administered.

Note

Not open to political science majors.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

POLSC 110 - Introduction to Political Science**Credits 3**

Introduction to politics, public policy, and governmental processes from a political science perspective, studying political power, political thought, public opinion, groups, parties, institutions, public law, careers in politics, and related topics.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

POLSC 111 - Introduction to Political Science, Honors**Credits 4**

Introduction to politics, public policy, and governmental processes. Distribution and use of political power, political thought, public opinion, groups, parties, institutions, public law, careers in politics, and related topics.

Repeat for Credit

N

Requisites

Prerequisite: Membership in arts and sciences honors program.

Typically Offered

Fall, Spring, Summer

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

POLSC 115 - U.S. Politics**Credits 3**

The national government with emphasis on constitutional principles, basic structure, functions, and the political process.

Repeat for Credit

N

The roles of journalism, advertising and public relations in political campaigns. Examines campaign communication strategies, staffing, and the roles of political consultants. Analyzes how voter decision making is affected by mass communications and how voters develop attitudes about candidates and issues.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 115.

Typically Offered

Other

POLSC 601 - Topics in Political Science**Credits 3**

Extensive exploration of a specific problem in political thought. American government, comparative politics, international relations, or public administration.

Repeat for Credit

Y

Requisites

Prerequisite: POLSC 400.

Typically Offered
Fall, Spring, Summer

POLSC 603 - Political Parties and Elections

Credits 3

Origins, structure and function of political parties.
Dynamics of the two-party system. Roles of third parties.
Analysis of election results and voting behavior.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 110, POLSC 115 or junior standing.

Typically Offered
Fall

POLSC 604 - Interest Groups and Public Opinion

Credits 3

Group theory and politics. Structure, internal politics, and techniques of interest groups and their impact on public policy. Formation and measurement of public opinion.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 110 or POLSC 115.

Typically Offered
Spring

POLSC 605 - The American Presidency

Credits 3

The presidency as an institution, its evolution, congressional relationships, executive organization.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 110, POLSC 115 or junior standing.

Typically Offered
Other

POLSC 606 - Gender and Politics

Credits 3

Analysis of the role of gender in political behavior, including gender differences in voting and political participation, legal and cultural restrictions on women's rights and political activity, and women's liberation and other gender-based political movements.

Repeat for Credit
N

Requisites
Prerequisite: SOCIO 545 or POLSC 115.

Typically Offered
Spring

POLSC 607 - Administrative Law

Credits 3

Legal analysis of the rule-making, adjudicatory, and enforcement functions of administrative agencies, with emphasis on constitutional framework, judicial review, requirements of procedural fairness, and rights of public employees.

Repeat for Credit
N

Requisites
Prerequisite: One course in political science, United States history, or legal or political philosophy.

Typically Offered
Spring

POLSC 608 - Political Participation in the United States

Credits 3

A broad overview of the various tools of democracy: public opinion, political parties, interest groups, and elections.

Repeat for Credit
N

Requisites

Prerequisite: POLSC 110 or POLSC 115 or junior standing.

Typically Offered

Spring

POLSC 610 - Local Government Law**Credits 3**

Explores the dynamic relationship between states and cities. Major issues may include budget shortfalls, social issues, and sprawl. Focus on the legal framework of state and city powers, including the forms of government, state preemption, and home rule theory and practice.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110 or POLSC 115 or junior standing.

Typically Offered

Fall

POLSC 611 - The Legislative Process**Credits 3**

Legislative decision-making in modern democracy with emphasis on the United States, the concept of representation, and political behavior of participants in the legislative process.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 115, or junior standing.

Typically Offered

Spring

POLSC 612 - The Judicial Process**Credits 3**

The structure, process, and politics of the American judicial system. Analysis of important issues concerning law and courts.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 115 or junior standing.

Typically Offered

Other

POLSC 614 - Constitutional Law**Credits 3**

Principles of the American political system as prescribed by the Constitution and interpreted by Supreme Court decisions, with emphasis on the institutions and powers of the national government, federalism, and property rights.

Repeat for Credit

N

Requisites

Prerequisite: One course in political science, United States history, or legal or political philosophy.

Typically Offered

Fall

POLSC 615 - The Constitution, Civil Rights and Civil Liberties**Credits 3**

The Constitution as a limitation on governmental power, with emphasis on Supreme Court decisions defining fundamental civil rights and liberties.

Repeat for Credit

N

Requisites

Prerequisite: One course in political science, United States history, or legal or political philosophy.

Typically Offered

Spring

POLSC 618 - Urban Politics**Credits 3**

Fundamental problems of political power and decision making in urban suburban governmental settings.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110 or POLSC 115.

Typically Offered

Fall

**POLSC 619 - Comparative Agriculture
Politics and Policy**

Credits 3

Comparative examination of agricultural politics and policy with emphasis on decision making processes and the socio-political impacts of agricultural policy.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 135, or junior standing.

Typically Offered

Fall-Even Years

POLSC 620 - State and Local Government

Credits 3

The United States system of federalism with emphasis on a comparative analysis of the government and politics of the fifty states and their subdivisions.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110 or POLSC 115.

Typically Offered

Spring

POLSC 621 - West European Politics

Credits 3

Comparative analysis of British, French, German, and Italian democracies, political systems.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135.

Typically Offered

Fall

POLSC 623 - South Asian Politics

Credits 3

Analysis of selected political systems of South Asia.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135, POLSC 505, or junior standing.

Typically Offered

Fall-Odd Years

POLSC 625 - East Asian Politics

Credits 3

Comparative analysis of selected political systems in East Asia, including consideration of the democratization process in the region.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 135, or junior standing.

Typically Offered

Spring

POLSC 626 - African Politics

Credits 3

Comparative analysis of selected political systems of sub-Saharan Africa, including consideration of problems of nationalism and development.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 135, or junior standing.

Typically Offered

Other

POLSC 627 - Eastern and Central European Politics

Credits 3

Examination of comparative politics and policy in the countries of Eastern and Central Europe.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135.

Typically Offered

Spring

POLSC 628 - Civic Engagement

Credits 3

Seminar on the role of voluntary organizations and civic groups in American political life and the factors that lead citizens to participate in both electoral and non-electoral activities.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 115 and junior standing.

Typically Offered

Fall, Spring, Summer

POLSC 629 - Development Policy and Administration

Credits 3

Comparative examination of development policy, politics, and administration.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 135, POLSC 307, or POLSC 377.

Typically Offered

Fall-Odd Years

POLSC 630 - Politics of Russia and the Former Soviet Union

Credits 3

An overview of the major factors influencing the evolution of politics in Russia and the Soviet Union. Special emphasis is placed on the problems associated with the transition from a communist to a non-communist more democratic policy.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135.

Typically Offered

Spring

POLSC 638 - Ethnic Conflict

Credits 3

Ethnic Conflict in Comparative Perspective. Comparative examination of ethnic conflicts across regions with the emphasis on Africa.

Repeat for Credit

N

Requisites

Prerequisite: Sophomore standing.

Typically Offered

Spring

POLSC 642 - International Conflict

Credits 3

Examines the nature of international political conflicts and the types of such conflicts.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145.

Typically Offered

Fall, Spring, Summer

POLSC 643 - Global Human Rights**Credits 3**

Introduction to human rights in the global system with a focus on the philosophical foundations, historical evolution, institutional development, and important actors in global human rights.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145, POLSC 400.

Typically Offered

Fall, Spring, Summer

POLSC 645 - International Politics of Europe**Credits 3**

Relationships among the countries of Europe since World War II. With emphasis on efforts to create a more unified European Community. Among the organizations that will be studied are the former Warsaw Pact, NATO, the European Parliament, and the European Union.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145.

Typically Offered

Spring

POLSC 647 - International Law**Credits 3**

Theories of international law, and general problems, such as: recognition, responsibility, war crimes, sources, evidence, codification, and settlement of disputes.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145, POLSC 341, or junior standing.

Typically Offered

Other

POLSC 651 - International Organization**Credits 3**

Structure, functions, values, and effectiveness of international organizations with emphasis on the United Nations, European Union, and other regional arrangements.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145, POLSC 341, or junior standing.

Other

POLSC 652 - International Politics of South Asia**Credits 3**

Study of regional problems of South Asia and of international roles and foreign policies of South Asian states.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135 or POLSC 623.

Typically Offered

Fall

POLSC 653 - International Politics of the Middle East**Credits 3**

Consideration of the Arab-Israeli conflict, inter-Arab relations, foreign policies of Middle Eastern states, and the impact of the major foreign powers on the area.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145, POLSC 135, or three hours of other social sciences.

Typically Offered

Fall

POLSC 654 - International Politics of Africa**Credits 3**

The course analyzes contemporary relations among African countries including economic and political security, border claims, formal and informal economic relations, and regional groupings. The course also examines the relations between African countries, the United States and the former Soviet Union, and between African countries and the former colonial rulers.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 135, or junior standing.

Typically Offered

Other

POLSC 655 - International Politics of Latin America**Credits 3**

Analysis of international relations of Latin America. Examining theoretical approaches to the study of Latin America's relations, U.S. Latin American relations, and comparative foreign policies of Latin American states. This course also explores special topics such as regional integration and geopolitics.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 145 or POLSC 341.

Typically Offered

Spring

POLSC 661 - Ancient and Medieval Political Thought**Credits 3**

Systematic study of ideas about law, politics, and government of great philosophers of Western civilization from Greek antiquity to the sixteenth century.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 155, or junior standing.

Typically Offered

Fall

POLSC 663 - Early Modern Political Thought**Credits 3**

Study of the development of Western political thought from the sixteenth century to the twentieth century.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 155, or POLSC 115 or junior standing.

Typically Offered

Fall

POLSC 667 - American Political Thought**Credits 3**

Political ideas underlying the American union, including the doctrine of rights, the nature of union, liberty, property, and democracy.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 155, POLSC 115 or three hours in other social sciences.

Typically Offered

Fall

POLSC 670 - Law, Politics, and Literature

Credits 3

Classic and contemporary works of literature, including novels, plays, short stories, and poems, are used to explore themes in law and politics.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 155 or junior standing.

Typically Offered

Fall, Spring, Summer

POLSC 671 - Late Modern Political Thought**Credits 3**

Study of contemporary political ideas and social thought.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 155, POLSC 115, or junior standing.

Typically Offered

Other

POLSC 675 - Religion and Politics**Credits 3**

Focuses on religious life in America and its changing relationship to politics and government. Examination of the American founding as it relates to church/ state issues, the controversy over meaning of the First Amendment's establishment and free exercise clauses, and contemporary political agendas of mainline and evangelical churches.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 115, POLSC 155 or 3 hours in other social sciences.

Typically Offered

Spring

POLSC 700 - Research Methods in Political Science**Credits 3**

Principles of research design, of measurement of political phenomena, and of methods for collecting and analyzing political data.

Repeat for Credit

N

Requisites

POLSC 115 or POLSC 400 or graduate standing, or consent of the instructor

Typically Offered

Fall

POLSC 701 - Computer and Quantitative Analysis in Political Science**Credits 3**

Advanced data management, data analysis, and computing skills involved in conducting political science and public policy research.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 400 or POLSC 700.

Typically Offered

Spring

POLSC 702 - Public Administration and Society**Credits 3**

Introduction to the discipline and profession of public administration, which may include the cultural, constitutional, institutional, organizational, and ethical context of public administration. Introduction to central issues facing public administrators, using the related perspectives of management, politics, and law.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 115 or POLSC 307 or graduate standing, or consent of the instructor

Typically Offered
Fall

POLSC 707 - Comparative Administrative Systems

Credits 3

Comparative analysis of public administration concepts and the morphology of administrative systems. Included are U.S., British, and French models and attempts by Third World countries to adapt these to their local cultures.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 135 or POLSC 307.

Typically Offered
Fall

POLSC 708 - Public Personnel Administration

Credits 3

Personnel aspects of administration at all levels of government, including recruitment, selection, discrimination law, pay, and motivation. Emphasis on those features unique to the public sector, e.g. civil service systems, public unions, and public sector ethics law.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 115, or POLSC 307 or graduate standing, or consent of the instructor

Typically Offered
Fall

POLSC 710 - Policy Analysis and Evaluation

Credits 3

Methods of policy analysis and evaluation. Includes a discussion of the relationship between public policy and the

distribution of values in society. Students analyze policies in an area of their choice; e.g., agriculture, business, health, income, trade.

Repeat for Credit
N

Requisites
Prerequisites: POLSC 115 or POLSC 400 or graduate standing, or consent of the instructor

Typically Offered
Spring

POLSC 711 - Administrative Ethics

Credits 3

Ethical issues, approaches, and strategies in public service.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 115 or POLSC 307 or graduate standing, or consent of the instructor.

Typically Offered
Fall

POLSC 712 - Game Theory for Political Scientists

Credits 3

Introduction to game theoretic models as applied to problems in American politics, international relations and comparative politics.

Repeat for Credit
N

Requisites
Prerequisite: POLSC 115, POLSC 135, POLSC 155, POLSC 145.

Typically Offered
Fall, Spring, Summer

POLSC 731 - Comparative Civil-Military Relations

Credits 3

A look at civil-military relations in the U. S., Russia, Germany, and Spain. Primary focus will be on understanding the political role of the military in totalitarian, authoritarian, and democratic states.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 110, POLSC 135, or junior standing.

Typically Offered

Fall

POLSC 734 - State and Local Government Management**Credits 3**

Examines the main operations and important issues in administering governments at the state and local levels and the similarities and differences of their environment, institutions, organizations, and processes.

Repeat for Credit

N

Requisites

Prerequisite: Graduate Student Standing

Typically Offered

Summer

POLSC 735 - Public Organization Theory**Credits 3**

Theories of the structure and mission of public organizations. Explores the use of analytical questioning of various theories, to solve organizational problems.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 115 or POLSC 307.

Typically Offered

Fall

POLSC 736 - Strategic Management of Public and Nonprofit Organizations**Credits 3**

Strategic management in the public sector of democratic societies. Provides a set of tools and research skills to focus thinking, judgment and decision making in order to act strategically.

Repeat for Credit

N

Requisites

Prerequisite: Graduate Student Standing

Typically Offered

Spring

POLSC 737 - Public Budgeting**Credits 3**

Budgeting as apart of our political system and as a fiscal process assists in allocating scarce resources. Overview of the budgetary decision-making process and the various budgetary approaches.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 307 or MANGT 220.

Typically Offered

Fall

POLSC 738 - Public Finance**Credits 3**

Economics of the public sector, addressing the fundamental issue of the appropriate role of government activity in a market economy. Behavioral consequences of government policy. Model construction to explain real world government policymaking.

Repeat for Credit

N

Requisites

Prerequisite: POLSC 737.

Typically Offered
Fall

POLSC 739 - Intergovernmental Relations

Credits 3

Evolution of the intergovernmental system in the United States and internationally. Emphasis on federal, state, and local interrelationships.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

POLSC 740 - Nonprofit Financial Management

Credits 3

Introduction to the major issues in nonprofit management. Highlights the unique nature of the nonprofit sector with government (public) and business (for-profit) sectors. Issues may include governance roles and responsibilities, ethics and risk management, financial management and resource generation, managing staff and volunteers, performance measurements, and the emerging trends that threaten nonprofits' tax-exempt status.

Repeat for Credit
N

Requisites
Prerequisite: Graduate student standing.

Typically Offered
Fall

POLSC 754 - The Professional Diplomat and Foreign Policy Formulation

Credits 3

Present day foreign policy formulation in the United States government, including the role of professional diplomats and foreign affairs specialists in the State Department and embassies abroad, as well as within other U.S. Government agencies.

Repeat for Credit

N

Requisites
Prerequisite: POLSC 145.

Typically Offered
Fall

POLSC 756 - International Political Economy

Credits 3

The course introduces students to the political and historical dimensions of the international economy, dimensions that include trade, monetary systems, foreign investment, aid, dependency, and global interdependence. This course also examines various theories and practices of the international system, the state, bureaucracies, interest groups, international organizations, bargaining processes, and distributive norms.

Repeat for Credit
N

Requisites
Prerequisite: ECON 110 and ECON 120, POLSC 145, POLSC 135, and POLSC 341, or junior standing.

Typically Offered
Other

POLSC 775 - Teaching the Bill of Rights

Credits 1

Examines the rights protected by the United States Constitution and the ways that rights protected by the United States Constitution and the ways that rights empower citizens, limit government, and contribute to constitutional government. Explores how to teach effectively about rights.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

Crosslisted
EDCI 785

POLSC 780 - Engaged Citizens: Public Policy Issues and Processes

Credits 3

Examines the teaching of the workings of constitutional government through the lens of the public policymaking processes and the roles of individual voters, organized publics, the media, and state and local governments in that process.

Repeat for Credit

N

Typically Offered

Summer

Crosslisted

EDCI 790

POLSC 781 - Teaching the Theoretical Foundations of Constitutional Government**Credits 1**

Examines the theories (e.g., natural rights, classical republicanism, and constitutionalism) and theorists (e.g., Aristotle, Locke, Hobbes, and Montesquieu) that most influenced constitutional thinking in the United States. Explores how to teach effectively about these theories and theorists.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

EDCI 781

POLSC 782 - Teaching the Historical Origins of Constitutional Government**Credits 1**

Examines seminal ideas, documents, and events in the creation of the United States Constitution such as problems with the Articles of Confederation, the characteristics of good government, the debates at the Philadelphia Convention, the Federalist Papers, and the Antifederalist Papers. Explores how to teach effectively these ideas, document, and events.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

EDCI 782

POLSC 783 - Teaching the Development of Constitutional Principals**Credits 1**

Examines the development of political ideas and constitutional thinking since the Founding. Focuses on how the Bill of Rights, the amendment process, judicial review, and the Fourteenth Amendment are used to empower and limit government. Explores how to teach effectively about developments in constitutional thought.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

EDCI 783

POLSC 784 - Teaching the Institutions of Government**Credits 1**

Examines the powers, limits, and development of political institutions such as Congress, the President, the Supreme Court, and political parties. Explores how to teach effectively about these institutions.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

EDCI 784

POLSC 785 - Readings in Political Science**Credits 3**

Directed reading and discussion of a selected topic in political science.

Repeat for Credit
Y

Typically Offered
Fall, Spring

POLSC 787 - Teaching Citizenship

Credits 1

Examines development of the rights, responsibilities, and challenges of citizenship in the United States. Explores how to teach effectively about citizenship.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

Crosslisted
EDCI 787

POLSC 788 - Teaching the Constitutional Principles of America's Founders

Credits 3

Develops constitutional principles; explores perspectives of constitutional interpretation, change, and preservation; raises questions about the immediate and enduring significance of America's founding principles and documents; and introduces sound pedagogical practices to teach about them.

Repeat for Credit
N

Typically Offered
Fall

Crosslisted
EDCI 788

POLSC 789 - Methods and Materials in Civic Education

Credits 3

Focuses on the pedagogical aspects of civic education and engagement such as research-based approaches to concept attainment, skill development, discussion, and deliberation as well as analysis of curriculum materials and programs that apply these pedagogies.

Repeat for Credit
N

Typically Offered
Spring

Crosslisted
EDCI 789

POLSC 790 - Problems in Political Science

Credits 3

Students will complete a research project and prepare an original paper under the supervision of a faculty member.

Repeat for Credit
Y

Typically Offered
Fall, Spring

POLSC 791 - Topics in Political Science

Credits 3

Extensive exploration of a specific problem in political thought. American government, comparative politics, international relations, and public administration.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

POLSC 799 - Pro-Seminar in Political Science

Credits 3

Study and analysis in various areas of the discipline with emphasis on critical evaluation of political conflicts and issues.

Repeat for Credit

Y

Typically Offered

Fall, Spring

POLSC 800 - Seminar: Scope and Methodology of Political Science

Credits 3

Exploration of theoretical foundations of political science, and critique of various analytical models in the study of political phenomena; construction and application of research designs and techniques.

Repeat for Credit

Y

Typically Offered

Other

POLSC 805 - Seminar in American Government

Credits 3

This seminar introduces students to the methods and the theories used to study American politics. Topics to be addressed include the constitution and the American founding, political and electoral processes, institutional structure and function, and public policy. Exams and a seminar paper are required.

Repeat for Credit

Y

Typically Offered

Fall

POLSC 810 - Security Studies Methodology

Credits 2

An exploration of commonly used research methods in history and political science. Students will investigate quantitative and qualitative humanities and social sciences methodology through selected readings and limited research exercises.

Repeat for Credit

N

Typically Offered

Fall, Spring

Crosslisted

HIST 810.

POLSC 811 - Seminar in International Politics

Credits 3

The seminar introduces students to the different school of thought in international relations as well as the different methods used to study the subject. It also analyzes middle range theories on subjects such as the causes of interstate conflict, the democratic peace, and foreign policy decision-making. Exams and a seminar paper are required.

Repeat for Credit

Y

Typically Offered

Spring

POLSC 812 - Foundations of Security Studies

Credits 3

An interdisciplinary introduction to the major historical developments and scholarly approaches in the fields of military history, international relations, and security studies.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

POLSC 813 - International Security

Credits 3

Surveys traditional issues in the study of international security such as the causes of war, the utility of deterrence, coercion, and engagement, international intervention, and the proliferation of weapons of mass destruction. Attention will also be placed on security and conflict in important regional settings, such as East Asia and the Middle East.

Repeat for Credit

Y

Typically Offered

Fall

POLSC 814 - Terrorism and Transnational Security Issues**Credits 3**

Introduction to the general aspects of terrorism and counter-terrorism in order to build transnational security. The course examines these issues in terms of forms, causal factors, goals, and consequences. The main objective is to understand terrorism as part of new international security issues such as failed states, environmental degradation, demographic explosion and poverty, conflict in developing world, post-conflict reconstruction, income distribution, humanitarian emergencies, and globalization.

Repeat for Credit

Y

Typically Offered

Fall

POLSC 815 - Research Design in Security Studies**Credits 1**

An exploration of research methods in history and political science culminating in a piece of original research in Security Studies.

Repeat for Credit

Y

Requisites

Prerequisite: POLSC 810

Typically Offered

Fall, Spring

Crosslisted

HIST 815

POLSC 821 - Seminar: Political Thought**Credits 3**

A study of the history of political philosophy as well as contemporary scholarship. Political philosophy as a subdiscipline of political science and its relevance for other

subdisciplines as well as for leadership and administration. Class discussion and research training will focus on textual analysis, or exegesis. Course requirements include a major research paper.

Repeat for Credit

Y

Typically Offered

Spring

POLSC 831 - Public Administration Capstone**Credits 3**

Students integrate previous classroom learning with practical experience. Operation of a government agency on a day-to-day basis. The meaning of public service and communication in the public sector.

Repeat for Credit

N

Requisites

Prerequisite: Graduate student standing.

Typically Offered

Spring

POLSC 841 - Seminar: Comparative Politics**Credits 3**

The seminar introduces students to the methods and theories of comparative politics as well as critical analysis of various topics in political science such as institution and institutional change, social movements and state building, regime and development, political parties and electoral processes, policy making and political performance. Course requirements include two exams, book reviews, research design, and a major research paper.

Repeat for Credit

Y

Typically Offered

Fall

POLSC 842 - Seminar in Comparative Ideologies**Credits 3**

This seminar provides a graduate level exploration of ideologies such as liberalism, conservatism, socialism, communism, and fascism. The tension between ideology and philosophy is also examined.

Repeat for Credit

Y

Typically Offered

Other

POLSC 897 - Internship

Credits 1-6

Directed off-campus employment experience.

Note

Must be taken for a total of 3 hours.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

POLSC 898 - Master's Report

Credits 0-18

Master's Report

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

POLSC 899 - Master's Thesis

Credits 6

Master's Thesis

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

POLSC 900 - Advanced Research Methods I

Credits 3

The first of a two course methods sequence in security studies. Surveys the role of theory, hypotheses testing, operationalization and measurement, and research design in social science. Case study and historical methods will be given particular attention. Students will also be provided with a brief introduction to quantitative social science analysis.

Repeat for Credit

Y

Typically Offered

Fall

POLSC 901 - Advanced Research Methods II

Credits 3

The course is the second in the sequence of two method courses in security studies. It emphasized quantitative analysis in political science and covers regression analysis, violation of regression assumptions, and logit models. The course also introduces students to time series, decision theory, and game theory.

Repeat for Credit

Y

Requisites

Prerequisite: POLSC 900.

Typically Offered

Spring

POLSC 985 - Readings in Security Studies

Credits 1-6

Directed reading and discussion of a selected topic in international security.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

POLSC 991 - Topics in Security Studies

Credits 3

Exploration of a specific issue in one of the fields or areas of international security.

Note

Specific topics will be listed in the class schedule for the semester in which they are offered.

Repeat for Credit

Y

Requisites

Prerequisite: POLSC 900 and POLSC 901.

Typically Offered

Fall, Spring, Summer

POLSC 999 - PhD Research in Security Studies

Credits 1-15

PhD research culminating in completed PhD dissertation.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PORT 572 - Special Studies in Portuguese

Credits 1-3

Special Studies in Portuguese

Repeat for Credit

N

Requisites

Prerequisite: 15 hours of Portuguese and consent of instructor.

Typically Offered

Other

PPIL 101 - FAA Pilot Certificate Validation

Credits 1-4

Flight and knowledge validation of FAA pilot certificates.

Repeat for Credit

N

Requisites

Prerequisite: Instructor permission.

Typically Offered

Fall, Spring, Summer

PPIL 108 - Private Pilot Flight Lab Solo

Credits 0.5

This course provides students with basic flight knowledge and fundamentals for solo flight as outlined by the Federal Aviation Administration (FAA). The successful completion of this course is the solo stage check.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 111

Typically Offered

Fall, Spring, Summer

PPIL 110 - Private Pilot Flight Lab Certification

Credits 0.5

A continuation of PPIL 108 after solo flight and stage check. Upon completion of the course, students will meet the requirements for the FAA Private Pilot Certificate.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 108

Corequisite: PPIL 111

Typically Offered

Fall, Spring, Summer

PPIL 111 - Private Pilot

Credits 4

The subject areas necessary for completion and passing of the FAA Private Pilot Knowledge Test are presented.

Note

Four hours recitation a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 112 - Professional Instrument Pilot**Credits 3**

A study of the procedures, regulations, and techniques required to safely fly in instrument meteorological conditions within our national airspace system. The course will prepare the student to pass the FAA Instrument Airplane Knowledge Test.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111

Corequisite: MATH 100.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 113 - Private Pilot Flight Lab**Credits 1**

An introduction of the fundamentals of flight. Solo flights to include all flight operations and maneuvers necessary for meeting the aeronautical experience for the FAA Private Pilot Certificate.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 111.

Typically Offered

Fall, Spring, Summer

PPIL 114 - Professional Instrument Pilot Flight Lab**Credits 1**

Instructional flight training necessary to maneuver the aircraft safely in actual or simulated instrument meteorological conditions within the national airspace system.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111, PPIL 113. Corequisite: PPIL 112.

Typically Offered

Fall, Spring, Summer

PPIL 196 - VFR Pilot Proficiency Lab**Credits 1**

Instruction and flight training necessary to safely operate an aircraft to meet the Federal Aviation Regulations. This course provides the student the opportunity to review and demonstrate proficiency to satisfactorily meet the FAA regulations for the current ratings held.

Note: Successful completion will result in a flight review required by FAR 61.56.

Note

Please add to description: Successful completion will result in a flight review required by FAR 61.56.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PPIL 197 - IFR Pilot Proficiency Lab

Credits 1

Instruction, simulator, and flight training necessary to safely operate an aircraft, to meet and maintain the Federal Aviation Regulations currency requirement of Instrument Competency, and maintain instrument currency and proficiency.

Note: Successful completion will result in an Instrument Proficiency Check (IPC) required by FAR 61.57d.

Note

Catalog change only

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PPIL 210 - Aviation Safety

Credits 3

This course provides an introduction to the field of aviation safety with an emphasis on promoting a safety culture. Various safety programs and their relevance in the field of aviation are discussed. Students will examine numerous accident reports and discuss safety issues facing the aviation industry today.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PPIL 211 - Professional Commercial Pilot

Credits 3

The subject areas necessary for passing the FAA Commercial Pilot Knowledge Test.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 112, PPIL 114.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 212 - Professional Commercial Pilot Flight Lab I

Credits 2

Instructional cross country flight training necessary to maneuver the aircraft safely in actual or simulated instrument meteorological conditions within the national airspace system.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 112, PPIL 114. Corequisite: PPIL 211.

Typically Offered

Fall, Spring, Summer

PPIL 213 - Professional Commercial Pilot Flight Lab II

Credits 2

An introduction to complex airplane operations and a review of those operations required of a commercial pilot. The completion of this course readies the student to take the commercial FAA Practical test.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 212.

Typically Offered
Fall, Spring, Summer

PPIL 214 - Extended Cross Country

Credits 1

A characteristic of aviation is that aircraft can cover a large geographic area. Aircraft operations in other geographic areas may differ greatly from a student's training base. The experience of long-range navigation can be a great learning experience as well as a confidence booster. Selection of a destination that allows the student to increase their knowledge of aviation also aids in producing a more well-rounded, responsible professional.

Repeat for Credit
N

Requisites
Prerequisite: PPIL 113.

Typically Offered
Other

PPIL 215 - Mountain Flying

Credits 1

A characteristic of aviation is that aircraft can cover a large geographic area. Aircraft operations in mountainous areas may differ greatly from a student's training. The experience of reduced aircraft performance caused by high-density altitudes can be a great training into operations with aircraft exhibiting marginal performance. Learning of weather patterns, hypoxia, and survival allows the student to increase their knowledge of aviation and also aids in producing a more well-rounded, responsible professional.

Repeat for Credit
N

Requisites
Prerequisite: PPIL 114 and instructor consent.

Typically Offered
On sufficient demand

PPIL 216 - Altitude Chamber

Credits 1

This course offers a 1-day aviation physiology course for civil aviation pilots through the CAMI's Aeromedical Education Division in Oklahoma City, OK. In addition to the basic academic contents, this course offers practical demonstrations of rapid decompression and hypoxia in a hypobaric chamber, as well as a practical demonstration of spatial disorientation. Upon completion of the course students will receive a certificate noting that they have completed the FAA's Physiological Training course. The FFA requires a current Aviation Medical Certificate.

Repeat for Credit
N

Typically Offered
Fall, Spring

PPIL 217 - Glider Towing

Credits 1

Instruction and flight training necessary to obtain a logbook endorsement in the techniques and procedures for the safe towing of gliders.

Repeat for Credit
N

Requisites
Prerequisite: PPIL 113.

Typically Offered
Fall

PPIL 219 - Single Engine Seaplane Transition

Credits 1

Instruction and flight training necessary to add the seaplane rating to the commercial pilot certificate. Course requires a one-week trip to a specified contract training location.

Note
One hour lecture a week.

Repeat for Credit
N

Requisites
Prerequisite: PPIL 213.

Typically Offered
Spring

PPIL 221 - Preventive Maintenance

Credits 2

This course will give the student hands-on experience with the maintenance tasks allowed under FAR 43 entitled preventive maintenance.

Note

One hour lecture and two hours lab a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PPIL 230 - Private Pilot Glider Transition

Credits 1

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of glider aircraft that will lead to an Private Pilot Glider certificate. This course provides students the opportunity to enhance and develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 231 - Commercial Pilot Glider Transition

Credits 1

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of glider aircraft that will lead to a commercial pilot glider certificate. This course provides students the opportunity to enhance and develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213 and PPIL 230.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 262 - Multi-Engine Ground School

Credits 1

Ground instruction covering multi-engine aircraft to develop the aeronautical knowledge to meet the ground school requirements for a multi-engine land class rating.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211.

Typically Offered

Fall, Spring, Summer

PPIL 263 - Multi-Engine Flight Lab

Credits 1

Flight instruction and experience in a multi-engine aircraft to develop the aeronautical skills to meet the requirements to add a multi-engine land class rating to the student's existing pilot certificate.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 262.

Typically Offered

Fall, Spring, Summer

K-State 8

Natural and Physical Sciences

PPIL 290 - Multi-Engine Crew Coordination

Credits 1

Instruction, simulator and flight training necessary to operate a multi-engine aircraft as a member of a crew. Enhances multi-engine, instrument and cross country skills.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211, PPIL 263.

Typically Offered

Other

PPIL 295 - Tailwheel Transition

Credits 1

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of conventional-gear (tailwheel) aircraft that will lead to an endorsement allowing the student to act as pilot-in-command. This course provides students the opportunity to enhance and develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 296 - Complex/High Performance Transition

Credits 1

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of complex/high performance aircraft that will lead to endorsements allowing the student to act as pilot-in-command. This course provides students the opportunity to enhance and develop their skills.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211

Typically Offered

Fall, Spring, Summer

PPIL 310 - Fundamentals of Instruction/Advanced Ground Instructor Ground School

Credits 3

This course will prepare the student for the Federal Aviation Administration (FAA) Fundamentals of Instruction (FOI) and Advanced Ground Instructor (AGI) Knowledge Tests.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211

Typically Offered

Fall, Spring

PPIL 311 - Certificated Flight Instructor-Airplane Ground School

Credits 3

Instruction techniques, practices, and procedures necessary to provide skill in organizing and presenting lessons. This course will prepare the student for the FAA Certificated Flight Instructor-Airplane practical test and the Flight Instructor Airplane (FIA) Knowledge Test.

Repeat for Credit

N

Requisites

Co-requisite: PPIL 213 and PPIL 310

Typically Offered

Fall, Spring

PPIL 312 - Certified Flight Instructor Ground School

Credits 6

Instruction techniques, practices, and procedures necessary to provide skill in organizing and presenting lessons. This course will prepare the student for the FAA Certified Instructor Knowledge Test.

Note

Six hours recitation a week.

Repeat for Credit

N

Requisites

Co-requisite: PPIL 213.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 314 - Certified Flight Instructor Flight Lab**Credits 2**

The needed flight skills and proper display of teaching ability will be emphasized. The demonstration of flight maneuvers with recognition of common errors in students performing the demonstrated maneuvers is stressed.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213. Concurrent enrollment: PPIL 311 or PPIL 312.

Typically Offered

Fall, Spring, Summer

PPIL 325 - Advanced Aircraft Systems**Credits 3**

Electrical, environmental, hydraulic, fuel, ignition, and lubrication systems, including theory of operation and

calculations. Principles, systems, analysis, operation, and limitations of advanced electronic navigation, flight director, and automatic flight control systems, including Inertial Navigation Systems and GPS.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PPIL 379 - Turbine Transition**Credits 3**

To provide required knowledge to meet FAA requirements to operate as second-in-command in KSU transportation aircraft. Covers systems performance and emergency procedures for turbine aircraft. In conjunction with simulator training, students will be qualified to operate as co-pilots on university transportation trips.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PPIL 385 - Airline Transport Pilot Rating**Credits 2**

Provides the student with the aeronautical knowledge necessary to prepare for the FAA Airline Transport Pilot Knowledge Test. The demonstration of flight maneuvers, with recognition of proper control of emergencies in compliance of the Airline Transport Pilot Practical Test

Standards will be stressed.

Note

One hour lecture and three hours lab a week.

Repeat for Credit

N

Typically Offered

Other

PPIL 387 - Crew Resource Management I

Credits 3

This course involves using all available resources for a safe and efficient flight. Aircraft crew performance is reviewed to include the background and philosophy of Crew Resource Management (CRM) communication, decision behavior, team building, workload management, and situational awareness. Students accomplish two flight scenarios using modern advanced jet aircraft training device.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 262, PPIL 325.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

PPIL 389 - Problems in Aviation

Credits 1-18

To provide the student an opportunity to apply aviation education to the improvement of skills previously learned as designated by the instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PPIL 396 - Introduction to Upset Training and Recovery

Credits 1

Instruction and flight training necessary to develop an understanding and flight proficiency in basic upset flight attitudes. This course provides the student the opportunity to develop a better understanding of aircraft and safety of flight in other than normal flight attitudes.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 114.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 416 - Crew Resource Management II

Credits 3

Utilizing a modern advanced jet aircraft training device, special emphasis is placed on systems knowledge, Flight Management Systems (FMS) programming, flight profiles and cockpit flows. Students fly Line Orientated Flight Training (LOFT) missions and self-critique their performance.

Note

One hour lecture and five hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 387 and AVT 340.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

PPIL 482 - Certified Instrument Flight Instructor Ground School

Credits 1

Instrument instruction techniques, practices, and procedures necessary to provide skills in organizing and presenting lessons in instrument flying procedures. This course will prepare the student for the FAA Certified Instrument Flight Instructor knowledge test.

Note

One hour recitation per week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 311 or PPIL 312.

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PPIL 483 - Certified Instrument Flight Instructor Lab

Credits 1

Instrument instruction techniques, practices, and procedures necessary to provide skills in organizing and presenting lessons in instrument flying procedures. This course will prepare the student for the FAA Certified Instrument Flight Instructor practical test.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 314. Prerequisite or corequisite: PPIL 482.

Typically Offered

Fall, Spring, Summer

PPIL 492 - Certified Multi-Engine Flight Instructor Ground School

Credits 1

Provides the student with the aeronautical knowledge necessary to meet the requirements for the addition of an airplane, multi-engine rating to the flight instructor certificate.

Note

One hour recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 311 or PPIL 312, PPIL 314.

Typically Offered

Fall, Spring

PPIL 493 - Certified Multi-Engine Flight Instructor Lab

Credits 1

Provides the student with the aeronautical skills and experience necessary to meet the requirements for the addition of an airplane, multi-engine rating to the flight instructor certificate.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 314. Prerequisite or corequisite: PPIL 492.

Typically Offered

Fall, Spring, Summer

PSYCH 110 - General Psychology

Credits 3

An introductory survey of the general content areas of psychology, including methods, data and principles.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 115 - General Psychology (Honors)

Credits 4

An introductory survey of the general content areas of psychology, including methods, data and principles.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 120 - Psychology of College Success

Credits 3

Apply psychological techniques to succeed in college. Psychological theories and techniques related to cognition, social behavior and emotional well-being are covered. Students will discuss the science behind topics that are relevant to academic performance, belonging, and well-being, such as learning, motivation, self-control, culture, relationships, health, and happiness.

Repeat for Credit

N

Typically Offered

Fall or Spring

K-State 8

Social Sciences

PSYCH 202 - Drugs and Behavior

Credits 3

Effects of drugs on human performance, cognition, and physiological processes will be discussed and the empirical evidence surveyed and critically evaluated in relation to

both use and abuse of drugs in society.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

K-State 8

Natural and Physical Sciences

K-State 8 Tag 2

Social Sciences

PSYCH 270 - Brain Myths: Fact or Fiction?

Credits 3

Introduction to the basic principles of brain function and neuroscience methodology. Popular press and peer reviewed scientific literature will be critically evaluated to develop scientific literacy skills.

Repeat for Credit

N

Requisites

PSYCH 110 or instructor permission

Typically Offered

Fall, Spring

PSYCH 280 - Psychology of Childhood and Adolescence

Credits 3

Survey of behavioral development from birth through adolescence.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 290 - Innovative Studies in Psychology

Credits 1-6

Topics selected in consultation with the instructor. To be used for interdisciplinary and innovative approaches to psychological topics.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Social Sciences

PSYCH 310 - Controversial Issues in Psychology Research

Credits 3

Covers selected topics across areas of physiological psychology, human development, cognitive and social psychology, and mental health disorders and their treatment. Students will explore in greater depth several controversial ideas and concepts in contemporary psychology.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

K-State 8

Social Sciences

PSYCH 350 - Experimental Methods in Psychology

Credits 3

Introduction to basic principles of research design and scientific methodology as applied to psychological sciences.

Repeat for Credit

N

Requisites

Prerequisite: Psych 110, Psych Major or Minor, Sophomore standing

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PSYCH 351 - Experimental Methods Laboratory

Credits 2

Application of experimental design and data analysis emphasized in the psychological literature, procedures, and reporting of research findings.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350.

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PSYCH 370 - Introduction to Behavioral Neuroscience

Credits 3

A general overview of human brain function using case studies as a primary means for understanding the relationship between behavior and brain mechanisms.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring, Summer

K-State 8

Natural and Physical Sciences

K-State 8 Tag 2

Social Sciences

PSYCH 399 - Honors Seminar in Psychology**Credits 3**

Selected topics.

Note

Open to non-majors in the honors program.

Repeat for Credit

Y

Typically Offered

Fall, Spring

K-State 8

Social Sciences

PSYCH 400 - Practicum in Teaching Psychology**Credits 1-4**

Supervised experience in presentation of psychological concepts in various classes. May be taken only with approval of the instructor of a psychology class under whose supervision the student will obtain this experience.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor; nine hours of psychology including PSYCH 110; junior standing.

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

PSYCH 425 - Judgment and Decision Making**Credits 3**

Covers the academic field of judgment and decision making, its major methods, results, and controversies. Examines the generality of experimental results across various domains including gambling, clinical prediction, perception of randomness, and legal and medical decision making. Focus on practical analytical skills for decision making that are useful in everyday life and work.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 430 - Forensic Psychology**Credits 3**

Survey of psychological principles and facts in areas such as perception, cognition, neuropsychology, social psychology, personality, and decision making, as they apply to forensic psychology. Topics include: polygraph (lie detection), eyewitness testimony, jury decision making, and profiling.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 450 - Applications of Memory

Credits 3

Examination of the applications of memory in such diverse areas as courtroom testimony, expert performance, mnemonic procedures, and advertising. Relevant theories and research in each area are examined.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

K-State 8

Social Sciences

PSYCH 460 - Cognitive Psychology

Credits 3

A survey of the manner in which people extract and use relevant information from their environment as a basis for behavior. Topics may include memory storage and retrieval, attention, imagery, mnemonic devices, decision making, and other cognitive processes.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 (Psychology majors only).

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 465 - Cognitive Neuroscience

Credits 3

The foundations of the neural bases of cognition and human behavior. A focus on neuroanatomy, hemispheric specialization, brain development, and higher-order cognitive functions, such as language, executive functions,

attention, learning, and memory. Additional topics include cutting-edge brain imaging techniques (e.g., electroencephalography, functional MRI, and brain stimulation), lesion studies and examinations of brain injuries and other neurological disorders.

Repeat for Credit

N

Requisites

PSYCH 110 or instructor permission

Typically Offered

Fall, Spring, Summer

PSYCH 470 - Principles of Neuroscience

Credits 3

A more in-depth course on brain-behavior interactions. Topics include: neuroanatomy, neuron transmission, sensory systems, emotions and stress, learning and memory, sleep, language and neural disorders.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 101 or BIOL 198, PSYCH 110.

Typically Offered

Fall, Spring, Summer

K-State 8

Natural and Physical Sciences

K-State 8 Tag 2

Social Sciences

PSYCH 475 - Principles of Learning

Credits 3

Introduction to the principles of learning and their relevance to the understanding of the behavior of animals and humans.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 (Psychology majors only).

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PSYCH 480 - Fundamentals of Perception and Sensation

Credits 3

Empirical and theoretical approaches to phenomena of sensation and perception.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 (Psychology majors only).

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PSYCH 490 - Honors Tutorial in Psychology

Credits 1-3

Individual directed research and study of a topic in psychology, normally as a preliminary to writing a senior honors thesis.

Repeat for Credit

Y

Requisites

Prerequisite: Sophomore standing, membership in the honors program of the College of Arts and Sciences, and permission of instructor.

Typically Offered

Fall, Spring

K-State 8

Social Sciences

PSYCH 499 - Honors Project

Credits 3

Open only to Arts & Sciences students who are active members of the University Honors Program.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Social Sciences

PSYCH 500 - Junior Seminar in Psychology

Credits 1

Discussion of professional, research, and educational methods and objectives in psychology. Acquaints psychology majors with psychology as a profession, and with the various options available to them at various levels of training.

Repeat for Credit

N

Requisites

Prerequisite: Psych/Pre-Psych Major; Junior standing.

Typically Offered

Fall

PSYCH 505 - Introduction to Psychopathology

Credits 3

An introductory study of behavior pathologies, with emphasis on their etiology and treatment.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing; PSYCH 110.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 510 - Introduction to Behavior Modification**Credits 3**

Study of the principles of behavior modification and applications to human behavior. Emphasis on the learning principles and research in behavior modification.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 505.

Typically Offered

Spring

PSYCH 515 - Introduction to Psychology Applied to Work**Credits 3**

Introduction to the basic theories and practices used by industrial and organizational psychologists to enhance individual and organizational effectiveness and well-being. Topics include personnel selection, training, performance management, job attitudes, work motivation, leadership, occupational health, and group processes at work.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

PSYCH 518 - Introduction to Health Psychology**Credits 3**

Psychosocial factors relevant to general health maintenance, recovery from disease or injury, and the achievement of health. Topics include stress-management techniques, personality characteristics associated with disease, cognitive-emotional effects of diet and exercise, and theories of pain and pain management. Concepts of prevention and behavioral medicine are also included.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

PSYCH 520 - Life Span Personality Development**Credits 3**

Theories and research in the development of personality from infancy through old age. Origins of personality in heredity and early experience, socialization practices, life crises and choices at various stages throughout life, and problems of aging.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110; sophomore standing.

Typically Offered

Fall, Spring, Summer

PSYCH 530 - Psychology of Mass Communications

Credits 3

The psychological effects of mass communication on behavior and thought, including advertising, stereotyping of women and minorities, effects on children, violence and sex in the media, effects of news on behavior, and the promotion of prosocial behavior through the media.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

PSYCH 535 - Social Psychology**Credits 3**

Psychology of the individual in society. Survey of empirical studies and theoretical models of social perception, attitudes, and social behavior (e.g., attribution, ethnic and gender prejudice, conformity). Relationship of these topics to personal and media influence, social mores, and social systems is also included.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

PSYCH 538 - Cross-Culture Psychology**Credits 3**

Introduction to general theories and methods related to understanding the role of culture in human psychology. Focus is on how human psychology and behaviors both differ and are consistent across cultures, and

sometimes within subcultures. Topics may include perception, cognitive processes, development, emotions and nonverbal behavior, personality and gender, social relationships, judgments of morality, and mental illness.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PSYCH 540 - Psychology of Gender**Credits 3**

Investigation of psychological processes involved in gender with emphasis on development and major life events.

Topics include physiology, early socialization into sex/gender roles, friendship, achievement, motivation, sexuality, romantic relationships, family development, work, and mental health.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

PSYCH 545 - Consumer Psychology**Credits 3**

Survey of psychological principles and facts in perception, learning, attitude formation, personality, etc., as they apply to behavior of consumers.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall

PSYCH 550 - Advanced Psychological Research Methods**Credits 4**

Students will read primary literature, design research studies, employ the instruments and technology currently used in psychological research.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350, STAT 225 or equivalent.

Corequisite: Majors only, Grade of B or better in PSYCH 350.

Typically Offered

Fall, Spring

PSYCH 556 - Multicultural Psychology**Credits 3**

Introduce and familiarize students with the concept of multicultural psychology.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

PSYCH 557 - The Psychology of Ethnic Humor**Credits 3**

Reviews the structure, dynamics, and social functions of ethnic humor.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110 or SOCIO 211.

Typically Offered

Summer

PSYCH 559 - Psychological Testing**Credits 3**

Principles of psychological testing in industrial, clinical/ counseling, and research environments. Topics include technical issues such as reliability, validity, norming, selection, placement, discrimination, etc. Also covers procedures for selecting, administering, and interpreting psychological tests.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

PSYCH 560 - Personnel Psychology**Credits 3**

An exploration of the industrial aspect of the industrial/organizational psychology discipline and provides an overview of human behaviors and psychological principles in personnel and selection contexts. Topics include recruiting, selecting, assessing, and training personnel; evaluating job performance; conducting job analyses; and implementing human capital strategies.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Summer

K-State 8

Social Sciences

K-State 8 Tag 2

Empirical and Quantitative Reasoning

PSYCH 563 - Gender Issues in the Workplace**Credits 3**

Psychological experiences of women and men in the world of work, with emphasis on traditional and nontraditional sex-role behavior, sexual discrimination and harassment, and relevant socialization experiences.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall

PSYCH 564 - Psychology of the Workplace**Credits 3**

An exploration of organizational aspect of the industrial/organizational psychology discipline and provides coverage of relationships between individuals, groups, and organizations; how organizational factors contribute to individual behavior; and how individuals affect groups and organizational functioning. Emphasis on traditional topics such as work motivation, job satisfaction and other attitudes, leadership, communication, socialization, and organization and job design.

Note

500-level psychology courses cannot be taken for graduate

credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Spring

K-State 8

Social Sciences

K-State 8 Tag 2

Empirical and Quantitative Reasoning

PSYCH 565 - Occupational Health Psychology**Credits 3**

Survey of occupational health issues for juniors and seniors. Provides students with a background in psychologically related health issues occurring at work. The basic processes for identification, prevention, treatment, and well being of workers will be identified and explored.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110.

Typically Offered

Fall, Spring

PSYCH 570 - Psychopharmacology**Credits 3**

Survey of basic principles of neural communication and pharmacology, the etiology and bio-behavioral bases of substance abuse, and chemical treatments of psychiatric disorders.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 202, PSYCH 470.

Typically Offered

Spring

PSYCH 575 - History of Psychology**Credits 3**

A survey of the people and intellectual movements that shaped the emergence and growth of modern psychology. Topics covered include early philosophy and founders of psychology, Gestalt movement, Behaviorism, applied psychology, and clinical/counseling psychology.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110 or permission of instructor

Typically Offered

Spring

PSYCH 580 - Psychology of Sexual Behavior**Credits 3**

Study of psychological determinants and consequences of human sexual behavior; roles of personality, attitudinal and emotional factors will be emphasized.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110, sophomore standing.

Typically Offered

Fall, Spring

PSYCH 584 - Group Psychotherapy**Credits 3**

Principles of psychoeducational training, strategies, and group norms. The group experience is practiced within the classroom, offering experience as both a group member and a group leader through role-playing and experiential exercises. Research and program planning are conducted to create and guide a psychoeducational group.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110

Typically Offered

Fall, Spring

PSYCH 585 - Basic Concepts of Clinical Psychology**Credits 3**

Critical analysis of the profession. Review of theoretical and empirical bases of such areas as intelligence and its measurement, personality and diagnosis, psychotherapy, and other modes of behavioral change.

Note

500-level psychology courses cannot be taken for graduate credit by students in psychology graduate programs.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110, PSYCH 505, and 3 additional hours of psychology.

Typically Offered

Spring

PSYCH 586 - Psychology Internship Readiness**Credits 1**

Exploration of the efficacy of decisions and actions within a professional internship. The topics of professional communication, dress, engagement, timeliness, and conflict resolution will prepare the student for an internship. Additionally, ethics, confidentiality, the duty to warn and self-care impacting the delivery of human services will be explained.

Note

This course must be taken in preparation for PSYCH 587.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110

Typically Offered

Fall, Spring, Summer

PSYCH 587 - Psychology Internship in Mental Health**Credits 1-6**

Supervised internship in an agency or institutional setting in the application of psychological techniques to individuals, groups, or organizations. Regular supervision emphasizes relationship between theory and application and the evaluation of outcomes.

Repeat for Credit

Y

Requisites

Prerequisite: PSYCH 585 and PSYCH 586 and consent of PSYCH 586 instructor

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PSYCH 590 - Interdisciplinary Topics in Psychology**Credits 1-3**

Topics selected in consultation with the instructor, covering interdisciplinary and innovative approaches to psychological topics. Topics selected in consultation with the instructor, covering interdisciplinary and innovative approaches to psychological topics.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PSYCH 595 - Behavioral Neuroscience Lab Skills**Credits 3**

Provides practical training in the foundations of Behavioral Neuroscience, which is the study of the biological basis of behavior in animals. Students will engage in theoretical work and practical experiments addressing behavioral and physiological processes as well as relationships between different biological and behavioral processes in various species.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110; PSYCH 370 or PSYCH 470

Typically Offered

Fall, Spring, Summer

PSYCH 596 - Cognitive Neuroscience Lab Skills**Credits 3**

Provides practical training in the foundations of Cognitive Neuroscience, which is the science of the human brain and behavior. Students will engage in theoretical work and practical experiments addressing behavioral, cognitive, and physiological processes as well as relationships between different biological and behavioral processes.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110; PSYCH 465

Typically Offered

Fall, Spring, Summer

PSYCH 598 - Research in Neuroscience**Credits 0-18**

Investigation of selected problems within the area of neuroscience.

Note

May be repeated. Consent of instructor.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

PSYCH 599 - Research in Psychology

Credits 0-18

Investigation of selected problems.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Fall, Spring, Summer

PSYCH 605 - Advanced Social Psychology

Credits 3

An advanced look at some of the core topics in social psychology (e.g. the self, social influence, personal relationships, prejudice and discrimination, group processes) with a strong emphasis on applying the theory in these areas to current social problems and students' daily lives.

Repeat for Credit
N

Requisites
Prerequisite: PSYCH 350 (Psychology majors only).

Typically Offered
Spring

PSYCH 620 - Psychology of Personality

Credits 3

Discussion of different approaches to the study of personality.

Repeat for Credit
N

Requisites
Prerequisite: PSYCH 350.

Typically Offered
Fall

PSYCH 625 - Human Factors Psychology

Credits 3

The application of psychological principles to the design and operation of machines, products, and systems, including human-computer interactions, automation, and training.

Repeat for Credit
N

Requisites
Prerequisite: PSYCH 110; STAT 225-799

Typically Offered
Fall

K-State 8
Empirical and Quantitative Reasoning
K-State 8 Tag 2
Social Sciences

PSYCH 630 - Human Neuropsychology

Credits 3

Study of brain-behavior relationships in humans. Brief review of human neuroanatomy followed by a major emphasis on brain function in learning, memory, language, and other cognitive behaviors. Also includes an examination of behavioral alterations following brain damage.

Repeat for Credit
N

Requisites
Prerequisite: BIOL 198 and PSYCH 110, or BIOL 101 and PSYCH 110.

Typically Offered
Spring

PSYCH 650 - Psychology of Language

Credits 3

Experimental study of language, including sentence comprehension and memory, language acquisition and development, speech perception, and effects of context, perception, reasoning, and linguistic structure on processing of language.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110 and junior standing.

Typically Offered

Fall

PSYCH 670 - Neural Mechanisms of Learning and Memory

Credits 3

Survey of topics on the neurobiology of learning and memory including memory formation and maintenance, long term potentiation, and the role of various brain areas involved in memory such as the hippocampus and corticostriatal circuits. Discussions of relevant research articles and current topics in the neuroscience of learning and memory.

Repeat for Credit

N

Requisites

Prerequisites: PSYCH 110, BIOL 101 or BIOL 198

Typically Offered

Fall, Spring, Summer

PSYCH 715 - Psychology of Aging

Credits 3

The psychological aspects of human aging. An analysis of the contributions of experimental, developmental, and personality-social psychology to the study of aging. The psychopathology of aging and psychological intervention strategies are also covered.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110 and junior standing.

Typically Offered

Spring

PSYCH 790 - Topics in Psychology

Credits 1-18

Topics in Psychology

Repeat for Credit

Y

Requisites

Prerequisite: PSYCH 110 and consent of instructor.

Typically Offered

Fall, Spring, Summer

PSYCH 799 - Problems in Psychology

Credits 1-18

Problems in Psychology

Repeat for Credit

Y

Requisites

Prerequisite: PSYCH 110 and consent of instructor.

Typically Offered

Fall, Spring, Summer

PSYCH 802 - Psychological Research Design and Analysis I

Credits 3

Introduction to techniques of research planning and design, including critical evaluation of psychological research practices and selected research studies.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 or equivalent, and Psychology major or consent of instructor.

Typically Offered

Fall

PSYCH 803 - Physiological Psychology

Credits 3

An advanced survey of basic technique, theory, and research in the field of behavioral neuroscience, including

memory and learning, sensory and motor processes, motivation, and sexual behavior.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 198 and PSYCH 110.

Typically Offered

Fall

PSYCH 804 - Industrial/Organizational Psychology

Credits 3

Advanced survey of theory and research pertaining to human behavior in work organizations. Topics include selection, training, and evaluation of employees, job analysis and evaluation, work motivation and satisfaction, organizational structure and development, and working conditions.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 560 or PSYCH 564.

Typically Offered

Fall

PSYCH 805 - Psychological Research Design and Analysis II

Credits 3

Extensive coverage of repeated measures designs, advanced experimental design, and the treatment of common psychological measures.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 802 with a grade of B or better.

Typically Offered

Spring

PSYCH 806 - Psychological Measurement

Credits 3

The logic and methodology underlying the construction of psychological measuring instruments from the psychophysical estimate of threshold to the scaling of complex psychological variables.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 110 and STAT 225.

Typically Offered

Fall

PSYCH 807 - Research Methods in Occupational Health Psychology

Credits 3

Reviews research methods used in social science with emphasis on occupational health psychology issues.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225.

Typically Offered

Fall

PSYCH 808 - Applied Research Methods

Credits 3

Examines research methods and analyses that are used in the applied psychology literature. Focuses on planning and conducting program evaluation.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225.

Typically Offered

Spring-Even Years

PSYCH 809 - Applied Research Methods II

Credits 3

Provides students with a detailed knowledge of human resource management research methods and analyses. Focuses on how to plan and conduct research in industrial/organizational psychology. Preparation for the M.S. practicum.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 808.

Typically Offered

Summer

PSYCH 810 - Learning**Credits 3**

In-depth study of empirical and theoretical research on basic learning principles and their effects on behavior.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 or equivalent.

Typically Offered

Spring

PSYCH 812 - Perception**Credits 3**

Various systematic approaches to perception, with emphasis on experimental and quantitative data. The role of perception in affectivity, motivation, and personality theory is stressed.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 or equivalent.

Typically Offered

Spring

PSYCH 814 - Advanced Cognitive Psychology**Credits 3**

Study of contemporary trends and research in cognition, including memory, language, problem solving, decision making, and human learning.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 or equivalent.

Typically Offered

Fall

PSYCH 816 - Psychology of Health**Credits 3**

Presents psychological research investigating illness and related dysfunction, as well as the promotion and maintenance of health. Provides students with the theoretical, empirical and clinical aspects of health psychology from a number of perspectives, discusses leading research and explores personal and practical implications of this information.

Repeat for Credit

N

Typically Offered

Fall

PSYCH 820 - Personality Theory and Research**Credits 3**

A comparative examination of contemporary theories of personality as well as research findings relevant to such theories.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 620 or equivalent.

Typically Offered

Spring

PSYCH 822 - Developmental Psychology

Credits 3

Human psychological development throughout the lifespan.
Examination of major theoretical systems relevant to
Developmental Psychology.

Note

Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall, Spring

PSYCH 825 - Judgmental Processes**Credits 3**

Examination of empirical findings and theoretical
approaches to decision making and judgment with
emphasis on higher cognitive processes.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 and PSYCH 802.

Typically Offered

Fall

**PSYCH 830 - Pro-Seminar in Social
Psychology****Credits 3**

Discussion of empirical findings and theoretical approaches
to selected problem areas, such as attitude change,
personality and social structure, person perception, small
group processes.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 535.

Typically Offered

Fall

**PSYCH 840 - Proseminar in Occupational
Health Psychology****Credits 3**

Survey of occupational health issues for first or second year
graduate students in health and related fields.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225.

Typically Offered

Fall-Odd Years

**PSYCH 841 - Seminar in Occupational Health
Behaviors****Credits 3**

Focuses on organizational and individual prevention and
coping behaviors relevant to work-related health problems.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 840.

Typically Offered

Fall-Even Years

**PSYCH 842 - Practicum in Occupational
Health Psychology****Credits 3**

Provides supervised practical experience with occupational
health problems in various business, manufacturing and
government settings. Students will prepare evaluative
analyses of their assigned sites.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 840 and PSYCH 841.

Typically Offered

Spring-Odd Years

**PSYCH 850 - Current Issues in Health
Psychology**

Credits 1

Introduction to current issues in health psychology research.

Note

Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall, Spring

PSYCH 851 - Practicum in Health Psych**Credits 3**

Independent health research designed in conjunction with major faculty advisor plus another faculty member to produce a journal submission and departmental presentation.

Note

Consent of instructor.

Repeat for Credit

N

Typically Offered

Fall, Spring

PSYCH 853 - Seminar in Psychopharmacology**Credits 3**

Surveys basic principles of neural communication and pharmacology, the etiology and bio-behavioral bases of substance abuse, and chemical treatment of psychiatric disorders.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring

PSYCH 860 - Practicum in Psychology**Credits 1-18**

Supervised practical experience in applied psychology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PSYCH 870 - Practicum in Teaching Psychology**Credits 1-4**

Supervised experience regularly teaching a college psychology course.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing in Department of Psychology.

Typically Offered

Fall, Spring

PSYCH 875 - Industrial Psychology: Personnel Training**Credits 3**

An examination of the training of personnel in an organization. Topics include: determination of an organization's training needs, selection and motivation of trainees, design and evaluation of training programs, and examination of several specific strategies for accomplishing the training function.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 560 or equivalent.

Typically Offered

Spring

PSYCH 876 - Industrial Psychology: Work Motivation

Credits 3

An examination of empirical findings and theoretical approaches to understanding the relationship between worker motivation and job outcomes.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 564 or GENBA 520.

Typically Offered

Fall

PSYCH 877 - Industrial Psychology: Leadership

Credits 3

Examination of current leadership theories, research, and practice in the work setting, focusing on situational approaches to leadership, leadership styles, and interactions between personal characteristics and organizational factors.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 564 or equivalent.

Typically Offered

Fall

PSYCH 878 - Industrial Psychology: Personnel Selection

Credits 3

Examination of theoretical and practical issues in staffing industrial organizations, including recruitment, test validation, and other equal employment opportunity issues (test fairness, adverse impact, etc.).

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 560 or equivalent.

Typically Offered

Spring

PSYCH 879 - Organizational Psychology

Credits 3

An examination of the individual's role in industrial organizations and the effects of organizational variables on the individual worker. Topics include organizational communication, employee socialization, psychological climates of organizations, psychological stress in organizations, group processes and employee performance, and organizational change.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 564.

Typically Offered

Fall

PSYCH 880 - Industrial Psychology: Performance Appraisal

Credits 3

Examination of data sources, rating procedures, psychometric criteria for evaluating performance appraisal systems, and models/theories of the performance evaluation process.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 560 or equivalent.

Typically Offered

Spring

PSYCH 885 - History and Trends in Psychology

Credits 3

A review of the contributions of individuals and intellectual movements to the development of modern psychology. A survey of theoretical systems currently of influence.

Repeat for Credit

N

Requisites

Prerequisite: PSYCH 350 or equivalent.

Typically Offered

Spring

PSYCH 899 - Master's Research in Psychology

Credits 1-18

Master's Research in Psychology

Note

Consent of supervisory committee.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PSYCH 951 - Seminar in Physiological Psychology

Credits 1-3

Selected topics in physiological psychology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Other

PSYCH 952 - Seminar in Sensory Processes

Credits 1-3

Selected topics in sensory psychology.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Other

PSYCH 953 - Seminar in Personality

Credits 1-3

Intensive discussion of current problems of theoretical and empirical interest in the field of personality.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered

Other

PSYCH 954 - Seminar in Experimental Psychology

Credits 1-18

Intensive discussion of a problem of current interest based on the class's study of the pertinent original literature.

Repeat for Credit

Y

Requisites

Prerequisite: PSYCH 810 or consent of instructor.

Typically Offered

Other

PSYCH 956 - Seminar in Psychological Measurement

Credits 1-18

Intensive discussion of a problem of current interest, based on the class's study of the pertinent original literature.

Note

Consent of instructor.

Repeat for Credit

Y

Typically Offered
Other

PSYCH 957 - Seminar in Cognitive Processes

Credits 1-3

Selected topics in the study of human thinking and cognition.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Other

PSYCH 958 - Seminar in Mathematical Models of Behavior

Credits 1-3

Selected topics in mathematical psychology, and applications of mathematical models to behavior.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Other

PSYCH 959 - Seminar in Social Psychology

Credits 1-3

Emphasis on discussion of advanced topics of current interest in social psychology.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Other

PSYCH 960 - Seminar in Industrial Psychology

Credits 3

Intensive examination of current empirical and theoretical issues in industrial and organizational psychology.

Repeat for Credit
Y

Requisites
Prerequisite: PSYCH 560 or equivalent.

Typically Offered
Fall

PSYCH 961 - Multivariate Analyses of Behavioral Data

Credits 3

Methods of working with behavioral sciences multivariate data, including screen data for compliance with assumption and addressing violations of assumptions. Coverage of common multivariate analyses used, with specific application to behavioral research content and topics.

Repeat for Credit
N

Requisites
Prerequisite: PSYCH 805 or consent of instructor.

Typically Offered
Fall

PSYCH 968 - Seminar in Professional Problems

Credits 1-3

Intensive study and discussion of current professional problems in psychology.

Note
Consent of instructor.

Repeat for Credit
Y

Typically Offered
Other

PSYCH 990 - Internship in Psychology

Credits 1-18

Internship in Psychology

Note

Consent of the supervisory committee.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PSYCH 999 - PhD Research in Psychology

Credits 1-18

PhD Research in Psychology

Note

Consent of the supervisory committee.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

RA 305 - Robotics Programming

Credits 3

Concepts and practices related to programming robotic systems emphasizing the unique input/output (I/O) and concurrency requirements of robotics. Students learn about sensors, actuators, kinematics, control systems, teleoperated operation and autonomous algorithms. Students write programs that run on a robot as well as a drive station computer with network communication to a robot.

Repeat for Credit

N

Requisites

Prerequisite: ETB 310 or CYBR 247 or CMST 302.
Corequisite: MATH 150 or MATH 151.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

RA 342 - Industrial Robotics Lab 2

Credits 1

A project-based robotics and automation laboratory course focused on industrial robots emphasizing robot operation, programming, and integration with programmable logic controllers, machine vision systems, and other automation equipment.

Repeat for Credit

N

Requisites

Prerequisite: MET 240

Typically Offered

Fall

RA 343 - Industrial Robotics Lab 3

Credits 1

A project-based robotics and automation laboratory course focused on industrial robots emphasizing robot operation, programming, and integration with programmable logic controllers, machine vision systems, and other automation equipment.

Repeat for Credit

N

Requisites

Prerequisite: MET 342

Typically Offered

Spring

RA 357 - Machine Vision

Credits 3

Introduction to practical concepts and techniques for image processing and computer vision emphasizing the fundamental algorithms applicable to robotics, automation and unmanned aerial systems. Major topics covered include: MATLAB programming, image acquisition, geometric and intensity transformations, spatial and

frequency domain filtering, image enhancement and restoration, morphological transformations, edge detection, segmentation, compression, feature extraction, and pattern recognition.

Repeat for Credit

N

Requisites

Prerequisite: ETB 310, or CMST 302, or CYBR 247.

Typically Offered

Spring

RA 444 - Integrated Robotics Studio

Credits 0-2

Students complete self-directed projects that bring together and extend applications from previous and concurrent courses toward integrated robotics solutions. Expected topics of focus draw from industrial robot programming and implementation, programmable logic control, machine vision, human-machine interfaces, other automated systems equipment, data integration, and other aspects of contemporary and emerging automation. Collaborative projects with industry partners are encouraged.

Repeat for Credit

Y

Requisites

Prerequisite: MET 240

Typically Offered

Fall or Spring

RAS 212 - Introduction to Robot Operating System (ROS)

Credits 3

A foundational understanding of the current ROS distribution and its application in robotics, preparing students for more advanced topics and practical robotics projects.

Repeat for Credit

N

Typically Offered

Fall

RAS 225 - Robot Power Systems

Credits 3

A comprehensive study of power systems for robotics, focusing on the design, implementation, and management of energy sources for mobile and stationary robots.

Repeat for Credit

N

Requisites

Prerequisite: ECET 100

Typically Offered

Spring

RAS 260 - Path Planning and Navigation

Credits 3

Gain hands-on experience controlling robots using various sensors while exploring advanced techniques for guiding mobile robots. Develop and implement algorithms for efficient path planning and navigation in various environments including both virtual and real-world applications.

Repeat for Credit

N

Requisites

Prerequisite: RAS 212

Typically Offered

Fall

RAS 268 - Mobile Robotics Navigation Studio

Credits 1

A practical, project-based course that focuses on the development and implementation of navigation systems for mobile robots.

Repeat for Credit

N

Requisites

Prerequisite: RAS 360

Typically Offered

Spring

RAS 320 - Sensors and Perception for Robotics

Credits 3

Explore a wide range of sensors used in robotics along with the algorithms needed to interpret sensor data. Learn to select the right sensors for various applications, apply perception algorithms, and resolve sensor-related challenges.

Repeat for Credit

N

Requisites

Prerequisite: ECET 100

Typically Offered

Fall

RAS 335 - Digital Manufacturing

Credits 3

Discover the cutting-edge world of digital manufacturing, where traditional fabrication methods merge with advanced technology to create precise and complex components. Explore the fundamentals and applications of key digital manufacturing tools.

Repeat for Credit

N

Requisites

Prerequisites: MET 117 and MET121.

Typically Offered

Fall

RAS 348 - Mobile Robotics Fabrication Studio

Credits 1

A hands-on, project-based course where students design, build, and test mobile robot systems from the ground up.

Repeat for Credit

N

Requisites

RAS 335 and ECET 340

Typically Offered

Spring

RAS 358 - Industrial Inspection Systems

Credits 2

Explore inspection systems used in industrial processes. Primary focus on vision inspection equipment including cameras, lenses, sensors, and lighting.

Repeat for Credit

N

Typically Offered

Fall

RAS 385 - Advanced Programmable Logic Controllers

Credits 3

Study of the applications of programmable logic controllers (PLCs) in industrial environments. Topics include hardware, wiring, configurations, programming, documentation, troubleshooting, and maintenance of PLC systems.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 335 or MET 230 or AIT 335.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

RAS 387 - Data Acquisition and Monitoring

Credits 2

An in-depth exploration of data acquisition systems and monitoring techniques, focusing on their application in modern engineering and robotics systems.

Repeat for Credit

N

Requisites

Prerequisite: MET 382

Typically Offered

Fall

RAS 415 - Robot Design and Kinematics**Credits 3**

Gain a broad understanding of robot systems, focusing on both physical and mathematical models. Design and analyze mobile robots, explore the dynamics of mobile platforms, and assess various mobility solutions to optimize robot designs for specific tasks.

Repeat for Credit

N

Requisites

Prerequisites: ETB 310 and MATH 220

Typically Offered

Spring

RAS 455 - Robot Embedded Systems**Credits 3**

Delve into the application of embedded systems in robotics. Develop skills in extending robot capabilities to resource-limited embedded platforms, exploring microcontroller architecture, real-time operating systems (RTOS), and embedded hardware.

Repeat for Credit

N

Requisites

Prerequisite: RAS 212 and ECET 354

Typically Offered

Fall

RAS 458 - Mobile Robotics Embedded Development Studio**Credits 1**

An advanced, hands-on course focused on the design and programming of embedded systems within mobile robot platforms.

Repeat for Credit

N

Requisites

Prerequisite: RAS 455

Typically Offered

Spring

RAS 480 - Robotics Capstone I**Credits 1**

Application of robotic principles and design methodology to solve a significant design problem in a team context. Includes determining customer requirements, exploring and choosing design alternatives, scheduling, and project management.

Repeat for Credit

N

Requisites

Senior-level standing

Typically Offered

Fall

RAS 481 - Robotics Capstone II**Credits 2**

A continuation of RAS 480 including the implementation, testing, and delivery of the proposed project.

Repeat for Credit

N

Requisites

Prerequisite: RAS 480

Typically Offered

Spring

RRES 200 - Topics in Recreation Resources**Credits 1-3**

Discussion of topics and activities of importance in recreation resources.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

RUSSN 101 - Russian I

Credits 5

Introduction to the structure of modern Russian. Emphasis on the sounds of Russian, the use of the Cyrillic alphabet, and oral drills with added practice in the language laboratory.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

RUSSN 102 - Russian II

Credits 5

Continuation of the study of Russian grammar and oral communication.

Repeat for Credit

N

Requisites

Prerequisite: RUSSN 101 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

RUSSN 250 - Russian Culture and Civilization

Credits 3

Russia's past and present in the light of principal ideologies with emphasis upon fine art, literature, music, religion,

politics, and education. Equal time will be devoted to the Tsarist and Soviet periods.

Note

Knowledge of Russian is not required.

Repeat for Credit

N

Typically Offered

Other

Crosslisted

HIST 250

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

RUSSN 300 - Russian III

Credits 4

Completion of the study of Russian grammar. Reading of selected prose on the intermediate level.

Repeat for Credit

N

Requisites

Prerequisite: RUSSN 102 or equivalent.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

RUSSN 301 - Russian IV

Credits 3

Intensive review of Russian grammar. Exercises in reading selected modern Russian texts in the original.

Repeat for Credit

N

Requisites

Prerequisite: RUSSN 301 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

RUSSN 398 - Intermediate Studies in Russian**Credits 1-18**

Offered only to participants in study abroad programs.
Prior consultation for approval is expected.

Repeat for Credit

Y

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

**RUSSN 504 - Russian Literature in
Translation: The Nineteenth Century****Credits 3**

Survey of principal writers of Tsarist Russia with emphasis
upon Turgenev, Dostoevsky, Tolstoy, and Chekhov.

Note

Courses taught in English.

Repeat for Credit

N

Typically Offered

Other

**RUSSN 508 - Russian Literature in
Translation: The Soviet Period****Credits 3**

The development of Russian literature since the
Revolution, with emphasis upon Mayakovsky, Sholokov,
Pasternak, and Solzhenitsyn.

Note

Courses taught in English.

Repeat for Credit

N

Typically Offered

Other

RUSSN 551 - Russian V**Credits 3**

Reading of Russian short stories of the nineteenth and
twentieth centuries, including works by Pushkin,
Lermontov, Dostoevsky, and Chekhov.

Repeat for Credit

N

Typically Offered

Other

**RUSSN 553 - Russian Conversation and
Composition****Credits 3**

Discussion in Russian. Extensive practice in writing
Russian compositions.

Repeat for Credit

N

Typically Offered

Other

RUSSN 559 - Special Studies in Russian**Credits 1-18**

Special Studies in Russian

Note

Consent of department head and instructor involved.

Repeat for Credit

Y

Typically Offered

Other

SALES 300 - Fundamentals of Professional Selling

Credits 3

Focuses on interpersonal communications between buyers and sellers, both oral and written. The mechanics and intricacies of the sales process will be explored in detail. Sales skills will be further developed via sales role plays.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Social Sciences

SALES 326 - International Sales Experience

Credits 3

Embark on an immersive education abroad experience that takes learning beyond the classroom and into the heart of global communities. This course offers students the unique opportunity to explore a foreign country through academic study, cultural engagement, and hands-on experiences.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300

Typically Offered

On sufficient demand

SALES 450 - Sales Technology

Credits 3

This course reviews sales technology and examines the application of sales technologies to the sales process. Course projects will include role plays, along with the active use of technology systems. Content will include managing leads, prospects, and the sales pipeline using technology.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300, must be admitted to Professional Strategic Selling major (BPSS) or certificate (CPSS).

Typically Offered

Fall, Spring

SALES 451 - Sales Force Leadership

Credits 3

Management of the sales force in non-retail settings including coaching, supervising, providing feedback, training, and other sales management frameworks and techniques.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300, must be admitted to Professional Strategic Selling major (BPSS) or certificate (CPSS)..

Typically Offered

Fall, Spring

K-State 8

Social Sciences

SALES 452 - Customer Relationship Management

Credits 3

This course introduces students to the strategies, methodology and technology used to manage customer relationships; and support and enhance the sales and marketing functions.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

SALES 453 - Advanced Selling

Credits 3

Students apply their professional selling skills through advanced instruction and skill development. Course projects include role plays, along with real-time use of CRM systems, as part of a live sales experience. Content includes prospecting, sales pipeline management, effective sales conversations, and adaptive selling in a real-world sales context.

Repeat for Credit

N

Requisites

Prerequisite: SALES 450, must be admitted to Professional Strategic Selling major (BPSS) or certificate (CPSS)..

Typically Offered

Spring

K-State 8

Social Sciences

SALES 454 - Sales Practicum**Credits 3**

The student will work as a sales intern in a business environment as a means to gain applied sales experience. A report detailing duties performed and tasks accomplished is required at the end of the internship period, along with an evaluation by the supervisor and a self-assessment. Additionally, the student will complete required reading and assignments related to the reading.

Note

Restricted to students who have completed at least their sophomore year.

Need to have been accepted into the Certificate or Major in Professional Strategic Selling Program.

Cannot be taken concurrently with another internship class.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300, must be accepted into the Certificate or Major in Professional Strategic Selling Program, must be sophomore or higher level.

Typically Offered

Summer

SALES 455 - Sales Negotiation**Credits 3**

Students learn the fundamentals of negotiation, and how those fundamentals are used during the sales process, with the goal of improving understanding of negotiation theory and practical application. Students are expected to participate in role playing exercises.

Repeat for Credit

N

Typically Offered

Spring

SALES 456 - Key Account Management**Credits 3**

Students are introduced to the complex strategies and tactics used in identifying and managing key customer accounts, including those with large multi-national footprints.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300.

Typically Offered

Fall

SALES 457 - Cooperation Selling**Credits 3**

Students learn how to successfully synchronize their selling process with the decision maker's buying process in order to completely satisfy customers and generate more sales. Students are expected to participate in role playing exercises.

Repeat for Credit

N

Requisites

Prerequisite: SALES 300.

Typically Offered

Fall

SALES 496 - Special Topics in Sales

Credits 3

Discussion and analysis of current and emerging issues in sales, including topics related to new sales models, new technologies, and the practice of sales.

Repeat for Credit

Y

Requisites

Prerequisite: SALES 300

Typically Offered

On sufficient demand

SALES 498 - Independent Study in Sales

Credits 0-3

Independent Study in sales.

Repeat for Credit

Y

Requisites

Prerequisite: SALES 300, must be admitted to Professional Strategic Selling major (BPSS) or certificate (CPSS)..

Typically Offered

On sufficient demand

SALES 891 - Special Topics in Sales

Credits 3

Investigation and discussion of a selected topic or group of topics in sales.

Repeat for Credit

Y

Typically Offered

Fall, Spring

SENS 701 - Sensory Analysis

Credits 3

Sensory analysis of appearance, texture, aroma, flavor; physiology of sensory receptors; laboratory and consumer panels; and interpretation of data.

Note

Two hour recitation and three to six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: One course in statistics required.

Typically Offered

Fall-Odd Years

SENS 711 - Pet Food Sensory Analysis

Credits 2

Sensory analysis of food and other products for non-food animals (e.g. dogs and cats with mention of other species) with an emphasis on methods (descriptive, discrimination, consumer, sensory-related instrumental) used in the laboratory and in the field.

Note

Two hours of lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 or STAT 702 or STAT 703 or equivalent.

Typically Offered

Spring-Odd Years

SENS 833 - Descriptive Sensory Analysis: Methods

Credits 1

Specification and application of descriptive sensory analysis methods for use in product development, research, and quality control. Practical experiences in conducting these tests.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701

Typically Offered

Spring

**SENS 834 - Descriptive Sensory Analysis:
Food and Fragrance**

Credits 1

Identification and use of descriptive sensory attributes as they relate to food and fragrance for product development, research, and quality control. Practical experiences in identifying, describing, and application of food and fragrance attributes.

Repeat for Credit

N

Requisites

Prerequisite: FNDH 833 or co-requisite.

Typically Offered

Spring

**SENS 835 - Descriptive Sensory Analysis:
Non-Food**

Credits 1

Identification and use of descriptive sensory methods and attributes as they relate to non-food product development, research, and quality control. Practical experiences and case studies in identifying, describing, and application methods and attributes for research using products such as textiles, cosmetics, and personal goods.

Repeat for Credit

N

Requisites

Prerequisite: FNDH 833 or co-requisite.

Typically Offered

Spring

**SENS 836 - Descriptive Sensory Analysis:
Panel Training**

Credits 1

Techniques for training and evaluating sensory descriptive

panels for use in product development, research, and quality control.

Repeat for Credit

N

Requisites

Co-requisite: SENS 833.

Typically Offered

Spring

**SENS 837 - Descriptive Sensory Analysis:
Rapid Methods**

Credits 1

Use and understanding of rapid sensory techniques to descriptively evaluate products.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 OR SENS 833

Typically Offered

Summer-Odd Years

**SENS 841 - Consumer Research -
Fundamentals**

Credits 1

Fundamentals of consumer research in terms of organizing and executing studies. Planning studies, selecting products, recruiting target consumers, and organizing study execution are included.

Repeat for Credit

N

Requisites

Prerequisite: Needs one course in Statistics

Typically Offered

Fall

SENS 843 - Consumer Research - Qualitative

Credits 1

This course provides a deep dive into qualitative research, including the design, application, execution, and reporting. This course will educate the student on the appropriate tools for qualitative data collection based on the objective, with a particular emphasis on interviews and focus groups.

Repeat for Credit

N

Requisites

Prerequisites-SENS 701 OR SENS 841

Typically Offered

Fall

**SENS 845 - Consumer Research –
Observational and Behavioral**

Credits 1

Study of observational and behavioral research methods as they are applied to consumer product research, including ethics and techniques for such research. Methods and analysis for both qualitative and quantitative methods for such data collection will be covered.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 OR SENS 841

Typically Offered

Spring

**SENS 846 - Consumer Research –
International and Special Populations**

Credits 1

Study of consumer product research with international and special populations including children and other special populations.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 OR SENS 841

Typically Offered

Spring

SENS 847 - Consumer Research – Attitudinal

Credits 1

Study of attitudinal research methods, including questionnaires and facial recognition, for product understanding. Techniques including emotion, mood, and psychographic research methods will be covered. Methods for consumer segmentation beyond traditional demographical segmentation will be discussed.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 OR SENS 841

Typically Offered

Spring

**SENS 848 - Consumer Research –
Quantitative**

Credits 1

Methods and issues associated with measuring consumer responses to products including preference testing, preference ranking, acceptance testing, hedonic scales, and consumption testing.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 or SENS 841.

Typically Offered

Fall

**SENS 851 - Sensory Analysis Applications of
Statistics**

Credits 2

Application of statistics to sensory data. Emphasis on appropriate analyses, software use, interpretation of data, and reporting.

Repeat for Credit

Y

Requisites

Prerequisite: Prerequisite: SENS 701 AND (STAT 730 or

STAT 720 or STAT 722)

Typically Offered

Fall-Even Years

SENS 852 - Practicum in Sensory Analysis

Credits 3

Application of statistics to sensory data. Emphasis on appropriate analyses, software use, interpretation of data, and reporting.

Note

Consent of School

Repeat for Credit

Y

Requisites

Prerequisite: SENS 841 or SENS 833

Typically Offered

Fall, Spring, Summer

SENS 853 - International Research Experience

Credits 2

International experience in conducting research. Development of strong collaboration and pre-planning, actual conduct, and reporting of results. International travel is required for this course. One hour of lecture per week and 1-2 week in-country practicum.

Note

Consent of School Required.

Repeat for Credit

N

Requisites

Prerequisite: SENS 701 AND (SENS 833 OR SENS 841)

Typically Offered

On sufficient demand

SENS 856 - Sensory and Instrumental Volatile Analysis and their Relationship

Credits 2

Use and relationship of methods for measuring and relating volatiles including sensory and instrumental methods such as gas chromatography mass-spectrometry (GC-MS) and gas chromatography olfactometry (GC-O).

Repeat for Credit

N

Requisites

Prerequisite: SENS 701.

Typically Offered

On sufficient demand

SENS 881 - Seminar in Sensory Analysis and Consumer Behavior

Credits 1

Student experiences for professional development including developing and delivering a presentation and navigating the workplace.

Repeat for Credit

Y

Requisites

Prerequisite: SENS 701

Typically Offered

Spring

SENS 958 - Critical Experiences in Industry Research

Credits 3-6

Practicum in professional communication in the disciplines including proposal writing, networking and collaborating with professional colleagues, and developing and/or presenting project results.

Note

Student may re-enroll to accumulate additional credit. Consent of school.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SOCIO 211 - Introduction to Sociology

Credits 3

Development, structure, and functioning of human groups; social and cultural patterns; and the principal social processes.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

SOCIO 214 - Introduction to Sociology, Honors

Credits 4

Development, structure, and functioning of human groups; societal and cultural patterns; the nature of sociological inquiry. Lecture, discussion, and independent study.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

SOCIO 260 - Social Problems

Credits 3

Analysis of social problems such as drug use, crime, juvenile delinquency, mental illness, unemployment, and family instability.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

SOCIO 301 - Topics in Sociology

Credits 1-18

Supervised independent and/or interdisciplinary study projects.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 211 and consent of instructor.

Typically Offered

Fall, Spring

SOCIO 363 - Global Problems

Credits 3

Analysis of globalization and contemporary social problems around the world. Emphasis on non-Western, low-income countries. Examines food and hunger, global warming, debt crisis, democratization, ethnic conflict, and structures of economic and political inequality.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211

Typically Offered

Spring

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

SOCIO 399 - Honors Seminar in Sociology

Credits 1-3

Readings and discussion of selected topics.

Note

Open to non-majors in the honors program.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211

Typically Offered

On sufficient demand

SOCIO 423 - Methods of Social Research I**Credits 4**

Treatment of the logic and procedures involved in the formulation of a research problem and the difficulties encountered in conducting research. Examines problems of explanation and prediction, the process of inquiry, elements of the scientific method, the design of research, and analysis in the social sciences.

Note

To include 1 credit hour of lab and field research experience.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211, STAT 225.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Social Sciences

SOCIO 431 - Comparative Social Theories**Credits 3**

A systematic survey of major theoretical approaches in sociology. The works of Marx, Weber, Durkheim, and other classical theorists are examined, along with selections from major contemporary perspectives such as functionalism, symbolic interactionism, structuralism, critical theory, and feminist theory. Current debates over structure versus agency, postmodernism, and other

controversies are considered.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring

K-State 8

Global Issues and Perspectives

K-State 8 Tag 2

Social Sciences

SOCIO 435 - Sport and Contemporary Society**Credits 3**

An analysis of sport and its role in contemporary society. Course creates a greater awareness of the social significance of sport in society and fosters the capacity to use critical thinking in the analysis of significant sport issues.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

Crosslisted

KIN 435

SOCIO 440 - Social Organization**Credits 3**

Principles and processes of the organization and structure of human societies. Examines how people create social institutions and how these organizations and structures shape human relations and experience. Analysis of capitalism and other forms of social organization.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

SOCIO 450 - Introduction to Social Interaction

Credits 3

A survey of theories of social interaction and social psychology with special attention to research on principles of interpersonal relations in social situations, group formation, maintenance, and change.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Social Sciences

SOCIO 499 - Honors Project

Credits 3

Open only to Arts & Sciences students who are active members of the University Honors Program.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SOCIO 500 - Sociological Perspectives on Contemporary Issues

Credits 1-3

Analysis of a selected topic of contemporary interest. Topics vary from semester to semester and might include: impact of public policy on rural life; white collar crime; student-athlete education; social change in the Third World.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring, Summer

SOCIO 501 - Proficiency Development

Credits 1-3

Integrative review of sociological concepts and skills under faculty supervision.

Note

For single students or groups of students. Not applicable to major field requirements. For undergraduate credit only. Consent of instructor and superior performance in relevant course.

Repeat for Credit

N

Typically Offered

On sufficient demand

SOCIO 504 - Political Sociology

Credits 3

An introduction to the principles of political sociology. Processes of political socialization, participation within and outside established organizational channels, recruitment of elites, communication and influence, power, decision making, and policy outputs. Data are presented from a cross-national perspective.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211, POLSC 110.

Typically Offered

Spring-Even Years

SOCIO 505 - South Asian Civilizations

Credits 3

Interdisciplinary survey of the development of civilizations

in India, Pakistan, Sri Lanka, Bangladesh, Nepal, Bhutan, and Afghanistan, including geography, philosophy, social, economic, political institutions, and historical movements.

Repeat for Credit

N

Requisites

Prerequisite: 3 hours of social science or junior standing.

Typically Offered

Fall-Even Years

Crosslisted

GEOG 505, HIST 505, POLSC 505, ECON 505, ANTH 505

SOCIO 507 - International Development and Social Change

Credits 3

A survey of the socioeconomic and political dimensions of international development, with attention focused on developing world contexts. Special attention is given to understanding post-war development trends, including the debt crisis, globalization and neoliberalism, and movements for social change, such as the anti-globalization and the fair trade movements.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211 or consent of instructor.

Typically Offered

Other

SOCIO 510 - Social Welfare as a Social Institution

Credits 3

The development and present status of social welfare in meeting changing human needs and the requirements in other parts of our social system; the analysis of present-day philosophy and functions of social welfare.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring

SOCIO 522 - Community Engaged Research and Evaluation

Credits 3-6

Introduction to partnering with community organizations and applying observation, surveys, interviews, governmental resources, secondary data identification and analysis, and basic program and policy evaluation. Students practice notetaking, report writing, and ethical standards that protect the well-being of study participants.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 423.

Typically Offered

Fall, Spring

SOCIO 531 - Urban Sociology

Credits 3

Growth, development, and structure of the city as determined by geographical, ecological, and social factors; relation of rural and urban communities; problems of the city and various approaches to their solution.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

SOCIO 532 - Our Communities, Our Futures

Credits 3

Combines real-world experience and sociological knowledge about community organization. Explores organizational ties, social interaction, social capital, and leadership in communities.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring

SOCIO 533 - Society, Food, and Agriculture**Credits 3**

Examines the relationships between agriculture, food, and society. Topics to be examined include the changing structure of agriculture, food system resilience, the globalization of food and agriculture, issues of distribution, access, and food security, and related social movements. Examines implications for both rural and urban societies in the US and around the world.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

SOCIO 535 - Population Dynamics**Credits 3**

World population trends and their implications for economic development, public policy, and social and cultural change. The interaction of fertility, mortality, and migration with the size, distribution, and structure of populations in nations and world regions.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring-Odd Years

SOCIO 536 - Society and Natural Resources**Credits 3**

The interrelations among human societies, social institutions, and the biophysical environment. Emphasis on the reciprocal links among technological change, economic structure, and the ecological basis of human societies.

Repeat for Credit

N

Typically Offered

Fall, Spring

SOCIO 537 - Sociology of Emotions**Credits 3**

Examines different sociological perspectives on the role of emotions in social life, from the level of self and identity, through social interaction, to the macro level of social structure, social order, and social change. Emotions as both social products, and as factors constitutive of social life.

Repeat for Credit

N

Typically Offered

Spring

SOCIO 538 - Sociology of Culture**Credits 3**

Introduction to the concept of "culture" and the role of culture and collective meaning in social life and social change. How we make sense of the world, and how this affects our responses and actions in the world. Relationship between cultural change and social change.

Repeat for Credit

N

Typically Offered

Fall

SOCIO 540 - Sexuality and Society**Credits 3**

Overview of key concepts related to sexuality studies and examination of social and cultural constructions of sexuality. Discussion of issues of power, inequalities, and

social control.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Summer

SOCIO 541 - Wealth, Power, and Privilege

Credits 3

Analysis of social inequality, particularly within the contemporary U.S. Competing explanations for unequal wealth, status, power, etc. Emphasis on explanations related to class, occupational structure, gender, and ethnicity.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

SOCIO 544 - Social Gerontology: An Introduction to the Sociology of Aging

Credits 3

Analysis of the phenomenon of human aging in its individual, social, and cultural aspects with special attention to the problems of aging populations in Western societies.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

SOCIO 545 - The Sociology of Women

Credits 3

Examines patterns of gender in contemporary society and corresponding experiences of women. The course emphasizes both interactional and structural approaches and provides an overview of theoretical work in the field. Particular attention is paid to how gender interacts with ethnicity, class, and sexuality.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Other

SOCIO 546 - Bureaucracy in Modern Societies

Credits 3

The nature and types of bureaucratic organizations in modern societies. Selected aspects of their internal structure, such as peer group and hierarchical relations in organizations, processes of communication, management, and impersonal mechanisms of control.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall

SOCIO 565 - Program and Policy Formulation and Analysis

Credits 3

Examination of policies and programs developed to cope with various social problems. Emphasis will be on analysis of existing programs and policies and the formulation of alternative policies. Attention will be given to policy change through legislative action.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 510.

Typically Offered

Fall, Spring

Crosslisted

SOCWK 565

SOCIO 567 - Pre-Internship Orientation**Credits 1**

This course prepares students for internship placements. Resumes are written, interview procedures discussed, agency interviews conducted, internships selected, and agency orientation completed.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 520.

Typically Offered

Fall, Spring

SOCIO 568 - Criminology and Sociology Internship**Credits 6-9**

Supervised field experience in various agencies within the criminal justice systems or other public or private organizations in areas involving applied sociological analysis or practice. Criminology majors wishing to pursue careers in the field of criminal justice are strongly encouraged to complete an internship. General sociology students may take this course under the direction of a faculty member who agrees to serve as their internship advisor. Does not fulfill sociology or criminology elective requirements.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 567.

Typically Offered

Fall, Spring, Summer

SOCIO 569 - Criminology and Sociology Professional Seminar**Credits 3**

Integrates field experience and everyday practices with relevant bodies of sociological and criminological theory and research.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 567.

Typically Offered

Fall, Spring, Summer

SOCIO 570 - Race and Ethnic Relations in the USA**Credits 3**

This survey of racial and ethnic relations focuses on discrimination and conflict now as well as on background factors of the past to enlarge understanding of dominant and minority groups.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall, Spring

SOCIO 599 - Senior Thesis in Sociology**Credits 3-6**

Independent research in sociology. Students conduct original research and produce a senior thesis in sociology.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 423; SOCIO 431, and instructor consent.

Typically Offered

Fall, Spring

SOCIO 618 - Religion in Culture

Credits 3

The nature of religion and its manifestations in different cultural systems.

Repeat for Credit

N

Requisites

Prerequisite: ANTH 200 or SOCIO 211.

Typically Offered

Spring-Odd Years

Crosslisted

ANTH 618

SOCIO 633 - Gender, Power, and Development**Credits 3**

Examination of various models of development and their impact on roles of women and men in various cultures. Emphasis upon Africa, Asia, and Latin America. Comparisons of public, service, and economic sectors, including agriculture, marketing, and industry. Examination of policy issues.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211 or ANTH 200 and 3 additional hours in sociology or cultural anthropology.

Typically Offered

On sufficient demand

Crosslisted

ANTH 633

SOCIO 635 - Sociology of Human Trafficking**Credits 3**

The course explores a range of topics related to human trafficking, anti-trafficking institutions, and legislation in the context of globalization. Analysis of contemporary forms of slavery-like practices (forced labor, child trafficking, domestic servitude, and others), with primary focus on sex trafficking of women.

Repeat for Credit

N

Typically Offered

Summer

SOCIO 640 - Sociology of the Family**Credits 3**

Origin and development of marriage customs and systems of family organization; the preparation for family life under present conditions.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall

SOCIO 643 - Sociology of Religion**Credits 3**

The role of religion as an institution in American society. An assessment of the functions of religion and an exploration of contemporary trends and movements, including information on traditional denominations and emerging sects and cults.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Fall

SOCIO 645 - Post-Communist Societies**Credits 3**

Analysis of divergent scenarios of post-communist social transformation, primarily in the countries of Eastern Europe and Eurasia. Discussion of the history of communist societies, changing social institutions, and social stratification in the post-communist contexts. Examines post-communist space and mobility, class and gender inequalities, political democratization, youth culture and

prospects, crime, global connections of the transformation, human rights and civil society, security and conflict, religion and ethnicity, and the changing family.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211.

Typically Offered

Spring

SOCIO 647 - Sociology of Work

Credits 3

Analysis of the world of work, both paid and unpaid. Examines changes that affect the organization of work and the distribution of income, and examines how change alters class, gender, and ethnic relations.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211 and junior standing.

Typically Offered

Other

SOCIO 670 - Diversity and Social Interaction in the Workplace

Credits 3

Examines changes in the world of work; examines various contexts of work, such as business, the professions, education, and home; analyzes the social organization of work, both in terms of formal arrangements, such as authority and hierarchy, and in terms of informal structure, such as gender, race, class, and other categories of social difference; provides hands-on experience in dealing with interpersonal relations, management styles, communication, diversity issues, and conflict and stress management.

Repeat for Credit

N

Requisites

Prerequisite: 6 hours of social science.

Typically Offered

Intersession

SOCIO 701 - Problems in Sociology

Credits 1-18

Problems in Sociology

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 211 and junior standing.

Typically Offered

Fall, Spring, Summer

SOCIO 738 - International Migration

Credits 3

A comprehensive examination of international migration dynamics with a focus on immigration to the U.S. Introduces current theoretical debate on migration and examines global migration trends, integration and community formation of immigrants, construction of immigration policies, and impacts on U.S. society.

Repeat for Credit

N

Typically Offered

Other

SOCIO 742 - Society and Change in South Asia

Credits 3

Examines recent studies of family and community, population, mobility, urbanization, and modernization in the India-Pakistan region, with focus on social change.

Repeat for Credit

N

Requisites

Prerequisite: SOCIO 211 or ANTH 200 and either a 500-level course in South Asian studies or one in social change and development.

Typically Offered
Spring-Even Years

SOCIO 801 - Introductory Proseminar

Credits 1

Discussions designed to introduce entering graduate students to the discipline of sociology as a profession and to the members of the sociology graduate faculty.

Note

Required during the first fall semester on campus.

Repeat for Credit
Y

Requisites

Prerequisite: Admission to the graduate program in sociology.

Typically Offered
Fall

SOCIO 802 - Teaching Proseminar

Credits 1

Designed to aid new graduate teaching assistants. Includes such topics as planning a sociology course, handling sensitive issues, leading discussions in large and small classes, use of audiovisuals, special projects, classroom deportment, designing and grading examinations.

Note

Required of first-semester GTAs.

Repeat for Credit
Y

Requisites

Prerequisite: Interest in teaching sociology and enrollment in the sociology graduate program.

Typically Offered
Fall

SOCIO 809 - Classical Social Theory

Credits 3

Intensive seminar in classical sociological theory. Examines the theoretical frameworks and methodologies of

Karl Marx, Max Weber, and Emile Durkheim, along with selections from the works of other major classical theorists. Analysis of primary texts will be emphasized.

Repeat for Credit
Y

Requisites

Prerequisite: SOCIO 511 or equivalent.

Typically Offered
Fall

SOCIO 810 - Contemporary Sociological Theory

Credits 3

Comparative analysis of contemporary schools of sociological thought showing their development, current status, and possible future trends. Emphasis on structural functionalism, Marxism and neo-Marxism, symbolic interactionism, phenomenology and ethnomethodology, and exchange theory. A working knowledge of classical sociological theory is assumed.

Repeat for Credit
Y

Requisites

Prerequisite: SOCIO 710 or equivalent.

Typically Offered
Spring

SOCIO 822 - Introduction to Methods of Social Analysis

Credits 3

Provides an introduction to the methods and techniques utilized in sociological research. Includes such topics as basic collecting and analyzing sociological data.

Repeat for Credit
Y

Requisites

Prerequisite: STAT 702 or equivalent.

Typically Offered
Fall

SOCIO 823 - Intermediate Methods of Social Research

Credits 3

Current sociological research techniques, strategies of research design, construction of research instruments, logic of sociological inquiry, conceptualization, problem formation, and preparation of research proposals.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing.

Typically Offered
Spring

SOCIO 824 - Qualitative Methodology

Credits 3

Collection, analysis, and presentation of sociological data using such methods as participant observation, ethnomethodology, community analysis, documentary research and historiography, case study, and life history. Emphasis upon formulation of problems and the execution of research.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing.

Typically Offered
On sufficient demand

SOCIO 825 - Quantitative Methods

Credits 3

Provides instruction for advanced techniques in the quantitative analysis of sociological data. Includes regression analysis and estimation of models with categorical data. A working knowledge of basic statistical concepts is assumed.

Repeat for Credit
Y

Requisites

Prerequisite: STAT 702 or equivalent.

Typically Offered
Fall

SOCIO 830 - Social Demography

Credits 3

The study of human population, including the social, economic, political, ecological, and cultural determinants and consequences of changes in fertility, mortality, and migration.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing.

Typically Offered
Fall

SOCIO 831 - Sociology of Agriculture

Credits 3

Provides a survey of the subfield of sociology of agriculture, including an examination of its roots, growth and current theoretical and substantive directions. Explores the linkages between agriculture, commodity systems, food and the environment.

Repeat for Credit
Y

Requisites
Prerequisite: Graduate standing.

Typically Offered
Spring-Odd Years

SOCIO 832 - Sociology of Community

Credits 3

A survey of theoretical perspectives and current research on the sociology of community in the U.S. and other countries. Examples of issues covered include community growth and decline, social inequality, community power and politics, social implications of community economic change, urbanization, and the global context of local change.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Spring-Odd Years

SOCIO 833 - Gender Differentiation and Inequality**Credits 3**

Offers an analysis of the social construction and reproduction of gender identities. Focuses on current feminist theory and research on the links between gender identities and gender inequality.

Repeat for Credit

Y

Typically Offered

Spring-Even Years

SOCIO 835 - Environment and Society**Credits 3**

The interrelationships among population, technology, environment, and social organization. An examination of the origins and development of human ecology in sociology, and recent attempts to redefine the area. Special emphasis on current theoretical and research efforts focusing on the history and uses of ecological ideas.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Spring-Even Years

SOCIO 838 - Sociology of Culture**Credits 3**

Intensive reading and discussion of classical and contemporary works relating to the study of culture, all those things that render the world around us comprehensible, communicable, and meaningful. The

Focus on collective meaning, the process through which meaning is generated, and the roles collective meanings play in social life.

Repeat for Credit

N

Typically Offered

Fall

SOCIO 840 - Comparative Social Systems**Credits 3**

Compares social systems in different regions of the world. Examines models of comparative and historical sociology. Provides students with a background for conducting and evaluating comparative research. Treats such issues as socioeconomic development, group relations, and age and sex roles from a cross-cultural perspective.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall-Even Years

SOCIO 841 - Social Stratification**Credits 3**

Survey of major sociological theories and research on inequality in modern societies. Examines the distribution of wealth, status, political power, and other valued resources; the effects of class, race, gender, and other modes of social differentiation; social mobility and the reproduction of inequality.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Fall

SOCIO 842 - Technology and Society

Credits 3

Technology has contributed to significant changes in our social, cultural, and economic landscape. Provides a survey of theoretical perspectives and current research on the role of technology in society.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Spring-Even Years

SOCIO 850 - Criminal Justice in Context**Credits 3**

Examines various institutions of contemporary criminal justice operations, focusing primarily on the "three C's"-cops, courts, and corrections-and adjacent subjects such as law. Emphasis will be given to foundational works that emphasize history, theory, policy, and empirical research.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Other

SOCIO 851 - Sociology of Development**Credits 3**

Introduction to the sociology of development. Focus is comparative-historical, involving theoretical and empirical analysis of development dynamics over time and across places, both within the U.S. and abroad. Significant attention to the interdisciplinary aspects of the sociology of development, including economic, geographic-spatial, and political analyses.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing.

Typically Offered

Spring-Odd Years

SOCIO 853 - International Development**Credits 3**

Comparative analysis of competing theories and experiences of development in post-WWII Asian, African, and Latin American societies. Topics include how core theories of development have changed over time and how well they explain related and changing patterns of finance and production, class struggle, state society-relations, labor rights, gender relations, and migration.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 809.

Typically Offered

Fall

SOCIO 861 - Sociology of Deviance**Credits 1**

A critical examination of the nature, types, and societal reactions to deviant behavior. Special emphasis will be given to the process of stigmatization, the social construction of deviance as a social problem, and the effect of inequalities such as race, gender, class, and sexuality on the process of creating and applying deviant labels to individuals and groups.

Repeat for Credit

Y

Requisites

Prerequisite: 9 hours social science credit.

Typically Offered

Fall-Odd Years

SOCIO 862 - Criminological Theory**Credits 3**

Focuses on traditional and contemporary criminological theories with secondary emphasis on presentation of empirical studies employing the theories under study. Theoretical integration will be stressed.

Repeat for Credit

Y

Requisites

Prerequisite: Twelve hours of social science.

Typically Offered

Spring-Odd Years

SOCIO 863 - Sociology of Victimology**Credits 3**

Focuses on the unique area of Victimology. Examines recent scholarship, methodological issues, and theoretical perspectives. Requires research paper and peer criticism.

Repeat for Credit

N

Typically Offered

Fall, Spring

SOCIO 880 - Social Movements**Credits 3**

Examines sociological theories about social movements and their organizational structures and strategies, with an analysis of historical and contemporary nationalist, socialist, labor, womens, civil rights, and environmental movements in the United States and around the world.

Repeat for Credit

N

Typically Offered

Fall-Odd Years

SOCIO 897 - Practicum in Social Analysis**Credits 3-6**

Provides professional field experience for students enrolled in the Master's in Social Analysis program in an approved public agency, organization, or private firm, under direction of a faculty member. Requires participation in a quarterly seminar.

Repeat for Credit

Y

Requisites

Prerequisite: One semester in the MSA program and SOCIO 822.

Typically Offered

Spring

SOCIO 898 - Master's Report Research**Credits 1-18**

Master's Report Research

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SOCIO 899 - Master's Thesis Research**Credits 1-18**

Master's Thesis Research

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SOCIO 901 - Research Problems in Sociology**Credits 1-18**

Individual study and research for students admitted to doctoral standing in the Graduate School.

Repeat for Credit

Y

Requisites

Prerequisite: M.A., consent of instructor.

Typically Offered

Fall, Spring, Summer

SOCIO 911 - Seminar in Sociological Theory**Credits 3**

Selected topics in sociological theory. May be repeated with consent of supervisory committee.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 710 and SOCIO 810.

Typically Offered
Spring

SOCIO 923 - Methods of Social Policy Research

Credits 3

Examination of principles, techniques, and design of retrospective and prospective social policy research.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 823 or equivalent.

Typically Offered
Fall-Even Years

SOCIO 925 - Specialized Approaches to Sociological Research

Credits 3

Intensive examination of methodological approaches developed for analysis of sociological problems. The approaches to be examined will depend on faculty and student interests. Likely foci include estimation procedures for structural equation models, advanced techniques for quantitative analysis of categorical data, techniques for social network analysis and methods for comparative and historical analysis.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 823 and instructor's permission.

Typically Offered
Spring-Odd Years

SOCIO 931 - Seminar in Demographic Methods

Credits 3

Demographic processes such as fertility, mortality, and migration, with emphasis on measurements, methods, and analytical techniques. Includes the construction of life tables and population estimates and projections.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 823 and SOCIO 830.

Typically Offered
Spring-Even Years

SOCIO 932 - Seminar in Comparative Community Organization

Credits 3

Recent developments in theory and research on processes affecting community organization. Topics will vary. Possible emphases include world urbanization, community linkages to regional and global systems, technology and local economic development, rural community development, and community-based collective action.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 832 or SOCIO 834 or equivalent.

Typically Offered
Fall-Odd Years

SOCIO 933 - Gender and Society

Credits 3

Exploration of feminist theorizing of gender relations in constructing and maintaining social institutions. Objective is to acquaint students with the strengths and weaknesses of current theories of gender, and to analyze social structures as both constituting and constitutive of gender relations at the macro/meso level of society.

Repeat for Credit
Y

Requisites

Prerequisite: SOCIO 841.

Typically Offered

Spring-Odd Years

SOCIO 934 - Sociology of Rural Development**Credits 3**

Consideration of selected topics and issues in the social organization of rural areas, both international and in the U.S.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 851 or consent of instructor.

Typically Offered

Fall-Odd Years

SOCIO 935 - Seminar in Demography**Credits 3**

Consideration of selected topical areas in demography such as fertility and family planning, migration, population and development, and regional demography.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 830 or equivalent.

Typically Offered

On sufficient demand

SOCIO 940 - Seminar in Work and Organizations**Credits 3**

Topics and issues in the social structure of industries, firms, and labor processes.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 841.

Typically Offered

Fall-Odd Years

SOCIO 944 - Seminar in the Sociology of Aging**Credits 3**

Consideration of selected topics and issues in the sociology of aging such as retirement and institutional change, societal reactions to aging, population structure and socioeconomic consequences of aging populations, the social organization of leisure, the impact on social organization of services for older people, the structural and organizational consequences of widowhood, age-grading and stratification in aging populations, analysis of the impact on community structure, and organization of special institutions for older people.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 744.

Typically Offered

Other

SOCIO 950 - Seminar in Social Interaction**Credits 3**

Examination of current theoretical, methodological, and research issues and topics.

Repeat for Credit

Y

Requisites

Prerequisite: SOCIO 852, or equivalent.

Typically Offered

Spring-Even Years

SOCIO 951 - Political Sociology**Credits 3**

A survey of core readings in the subfield of political sociology. Covers classical sociological

and political theory followed by current debates and research agendas, including world systems theory, post-colonial theory, neo-marxism, resource mobilization theory, game theory, and cultural theories of political action.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 809

Typically Offered
Spring-Even Years

SOCIO 953 - States and Civil Society

Credits 3

Examines the relationship between the modern nation-state and powerful non-state institutions and social forces. Introduces prominent theories on the rise of the nation-state and its global transmission as the dominant form of governance. Addresses the role of social capital, social movements, NGOs, religious organizations, and educational institutions in upholding or challenging nation-state legitimacy.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 809; SOCIO 851.

Typically Offered
Spring-Even Years

SOCIO 961 - Methods Seminar in Criminology/Deviance

Credits 3

Examination of principles, techniques, and design of research in criminology, deviance, and corrections.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 824 or SOCIO 825.

Typically Offered
Fall-Even Years

SOCIO 962 - Topics Seminar in Criminology/Deviance

Credits 3

Selected topical areas in criminology/deviance such as gender, race and/or class and crime; social control; domestic violence; lethal violence; victimology; issues in corrections; and issues in law.

Repeat for Credit
Y

Requisites
Prerequisite: SOCIO 850 or consent of instructor.

Typically Offered
Spring-Odd Years

SOCIO 999 - PhD Dissertation Research

Credits 1-18

PhD Dissertation Research

Repeat for Credit
Y

Typically Offered
Other

SOCWK 100 - Social Work: The Helping Profession

Credits 3

An introduction to the profession of social work and the various fields of social service by observing, experiencing, and analyzing social work and its place in society. An opportunity for the student to test social work as a possible career choice.

Repeat for Credit
N

Typically Offered
Fall, Spring

K-State 8

Historical Perspectives
K-State 8 Tag 2
Social Sciences

SOCWK 141 - First Year Orientation

Credits 1

Orients first year students to the social work major and on-campus resources that will enable them to be successful. Engages students in discussion groups and community engagement activities to meet social work faculty members and students within the major. Develops student relationships and practices that allow them to effectively utilize college resources and become members of a community of learners.

Repeat for Credit
N

Typically Offered
Fall or Spring

SOCWK 151 - Social Work Career Development

Credits 1

Develops career goals of social work majors. Exposes students to the breadth of career options in social work. Connects students with practicing social workers and faculty members.

Repeat for Credit
N

Typically Offered
Fall or Spring

SOCWK 200 - Basic Skills for Working with People

Credits 3

Course develops basic skill components for the helping professions. Students learn fundamentals of interpersonal communication.

Repeat for Credit
N

Typically Offered

Fall, Spring

K-State 8
Ethical Reasoning and Responsibility

SOCWK 240 - Self-care for the Helping Professional

Credits 1

Explores personal health and self-care of the helping professional. Discusses importance of self-care and best practices for maintaining personal and professional well-being across the physical, mental, social, and spiritual self.

Repeat for Credit
N

Typically Offered
Spring

SOCWK 261 - Client Perspectives in Social Work

Credits 1

Develops student critical thinking skills and understanding of client experiences through memoirs and first-person accounts of living within different at-risk populations. Explores client experiences and needed policies to address social problems.

Repeat for Credit
Y

Typically Offered
Fall or Spring

SOCWK 300 - Diversity, Equity, Inclusion, and Belonging in Social Work Practice

Credits 3

Provides foundational knowledge of diversity, equity, inclusion, and belonging within social work practice in the United States. Examines theoretical, conceptual, and policy-based knowledge of systems of oppression, and the ways in which power and privilege are manifested within them.

Repeat for Credit
N

Typically Offered
Fall or Spring

K-State 8
Social Sciences
K-State 8 Tag 2
Human Diversity within the U.S.

SOCWK 310 - Topics in Social Work

Credits 1-3

Supervised independent study projects.

Note
Consent of the instructor.

Repeat for Credit
Y

Typically Offered
Fall, Spring

SOCWK 312 - Fundamentals of Communication for the Agriculture and Food Science Community

Credits 3

This course develops communication skills among the scientific community to improve discourse with lay persons. Fundamentals of active listening as well as techniques to diffuse tense situations are addressed.

Repeat for Credit
N

Typically Offered
Fall, Spring

SOCWK 315 - Human Behavior in the Social Environment I

Credits 3

An introduction to the relationship among biological, social, psychological, and cultural systems as they affect or are affected by human behavior as it relates to social world models of practice. Emphasis on social systems understanding of human development.

Repeat for Credit
N

Requisites
Prerequisite: Two courses in the social sciences and sophomore standing.

Typically Offered
Fall, Spring

K-State 8
Human Diversity within the U.S.
K-State 8 Tag 2
Social Sciences

SOCWK 320 - Dynamics of Working with Older Adults

Credits 3

Provide students in all fields a unique foundation upon which successful interaction with older adults is built. Specific communication techniques will be taught along with the knowledge, skills and values necessary to understand working with, or on the behalf of, older consumers, clients, patients and family members.

Repeat for Credit
N

Typically Offered
Fall, Spring

K-State 8
Human Diversity within the U.S.
K-State 8 Tag 2
Social Sciences

SOCWK 340 - Global Social Work

Credits 3

Explores the underlying theories, concepts, and practice skills related to international social work.

Repeat for Credit
N

Typically Offered
Fall-Odd Years

K-State 8
Global Issues and Perspectives

SOCWK 350 - Social Work with Criminal Offenders and Victims

Credits 3

This course offers an overview of social work practice and professional helping skills in the criminal justice and legal systems.

Repeat for Credit

N

Requisites

Prerequisites: SOCWK 100 or SOCIO 211 and SOCIO 361.

Typically Offered

Fall-Even Years

K-State 8

Social Sciences

K-State 8 Tag 2

Human Diversity within the U.S.

SOCWK 360 - Substance Abuse Case Management and Holistic Recovery

Credits 3

Introduction to the concept of case management and the role case managers play in helping persons with substance use disorders obtain and maintain recovery.

Repeat for Credit

N

Typically Offered

Spring, Summer

SOCWK 370 - Child Welfare

Credits 3

Provides students with an understanding of the dynamics of child maltreatment and the role of the child welfare system in responding to maltreatment. Explores maltreatment across generations, the role of societal norms in perpetuating maltreatment, and culturally competent services for ending the intergenerational cycle of abuse. Examines government policies over time to promote child welfare and the effect of these policies on child safety, permanency, and family reunification.

Repeat for Credit

Y

Requisites

Recommended Prerequisite or Corequisite: SOCWK 100

Typically Offered

Fall, Spring

K-State 8

Social Sciences

SOCWK 380 - Social Work and Intimate Partner Violence

Credits 3

This course will provide students an understanding of the knowledge and skills necessary to respond to intimate partner violence in an ethical, victim-centered and trauma informed manner.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 100 or SOCIO 211.

Typically Offered

Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

SOCWK 468 - Community Activism and Social Change

Credits 3

Examines how social workers and citizens, individually and collectively, can achieve social progress through nonviolent social change.

Repeat for Credit

Y

Requisites

Prerequisite: SOCWK 100 or SOCIO 211.

Typically Offered

Spring-Even Years

Y

Requisites

Prerequisite: MATH 100 OR STAT 225

Social Work and Addiction Counseling majors only

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

SOCWK 550 - Field Practicum Preparation**Credits 1-3**

Social work majors take this course in the semester before enrollment in SOCWK 562 Field Experience, in preparation for the field practice experience. Students explore various fields of practice and social work settings and work with the instructor to plan their practicum for the following semester.

Note

Social work majors only.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and instructor permission.

Typically Offered

Fall, Spring

SOCWK 560 - Social Work Practice I

Credits 3

Continued development of social work practice skills. The social systems perspective is used to guide the development of a problem-solving methodology with attention to information gathering, assessment, and problem identification. Values clarification and self awareness are emphasized and the skills needed for intervention, termination, and evaluation are introduced.

Note

Social Work majors only.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 100, SOCWK 200, SOCWK 315, and SOCWK 510; junior standing; and permission of the instructor.

Social Work majors only.

Typically Offered

Fall, Spring

SOCWK 561 - Social Work Practice II

Credits 3

Continuation of SOCWK 560 with emphasis on skill development in intervention techniques, and practice evaluation from a social systems perspective. A variety of intervention strategies and techniques is presented with emphasis on the development of a social work frame of reference.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 560 and senior standing and permission of the instructor.

Must be taken concurrently with SOCWK 571 or by instructor permission.

Typically Offered

Fall, Spring

SOCWK 562 - Field Experience

Credits 1-10

Supervised field experience in community agencies and programs as a practical application of social work knowledge and skills gained from major course work. Emphasis on direct work with clients, whether individuals, groups, or communities. Seminars make use of student's experiences to analyze social work theory and practice.

Note

Social work majors only.

Repeat for Credit

Y

Requisites

Prerequisite: SOCWK 550 and SOCWK 561; senior standing; permission of the instructor.

Social work majors only

Typically Offered

Fall, Spring, Summer

SOCWK 563 - The Practice of Social Work in Rural Areas

Credits 3

A review of characteristics and social problems of rural areas. The development of practice competency in social work roles and skills necessary for rural practice.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 560.

Typically Offered

On sufficient demand

SOCWK 564 - Social Work Professional Seminar

Credits 1-2

A review of various theories in the behavioral sciences which influence the practice of social work. Primary focus of the course is on the use of these theories in implementing change in various client systems.

Repeat for Credit

Y

Requisites

Prerequisite: To be taken concurrent with SOCWK 562.

Typically Offered

Spring, Summer

SOCWK 565 - Social Policy**Credits 3**

Examination of policies and programs developed to cope with various social problems. Emphasis will be placed on analysis of existing programs and policies and the formulation of alternative policies. Attention will be given to policy change through organizational and legislative actions.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 510; one course in each of the following areas: sociology, economics, and political science; and one course in social science research methods.

Typically Offered

Fall, Spring

Crosslisted

SOCIO 565

SOCWK 568 - Macro Practice and Theory**Credits 3**

Continuation of social work practice sequence with focus on skills development for macro-level social work practice and an understanding of macro-systems using the ecological perspective as a framework. Community and organization intervention strategies with emphasis on the development of a social work frame of reference. Focus on institutional racism, institutional discrimination, and the importance of recognizing these functions within society.

Note

Social work majors only.

Repeat for Credit

N

Requisites

Co-requisite: SOCWK 560 or instructor permission.

Social work majors only

Typically Offered

Fall, Spring

SOCWK 570 - Social Work with Groups**Credits 3**

Theoretical framework for effective generalist social work practice with groups, facilitates the development of group leaders who possess an understanding of group dynamics and effective leadership skills through group discussion, experiential exercises and leadership experiences. To be taken concurrently with SOCWK 561.

Note

Social work majors only.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 560 or instructor permission.

Co-requisite: SOCWK 561.

Social work majors only.

Typically Offered

Fall, Spring

SOCWK 610 - Topics in Social Work**Credits 1-3**

Supervised independent study projects.

Repeat for Credit

Y

Requisites

Prerequisite: SOCWK 100 plus 6 hours of behavioral science foundation courses and consent of instructor.

Typically Offered

Other

SOCWK 611 - Social Welfare as a Social Institution**Credits 3**

Examines policies and programs to address social problems and their impact on individuals. Explores values and beliefs underlying social welfare policy and history of social welfare policy in the United States. Identifies strengths and weaknesses of current government interventions, with special emphasis on policies to promote social and economic justice in the United States and abroad. Reviews ways to conduct effective social welfare policy analysis and interventions.

Repeat for Credit

N

Typically Offered

Spring

SOCWK 612 - Fundamentals of Communication for the Agriculture and Food Science Community**Credits 3**

This course develops communication skills among the scientific community to improve discourse with lay persons. Fundamentals of active listening as well as techniques to diffuse tense situations are addressed. Students will apply the skills learned to their career field through a final research project.

Repeat for Credit

N

Typically Offered

Fall, Spring

SOCWK 630 - Social Work Research and Evaluation Methods**Credits 3**

This course focuses on applying research skills to engage in the evidence-based practice (EBP) process, a core component of generalist practice. Students will prepare a program evaluation proposal, including formulating a

problem statement, EBP development, designing an evaluation plan, and selecting appropriate outcome measures.

Repeat for Credit

Y

Typically Offered

Fall

SOCWK 650 - Assessment and Treatment of Substance Use Disorders**Credits 3**

Comprehensive examination of substance use treatment and rehabilitation includes a thorough examination of the treatment models of addiction, recovery, and relapse.

Repeat for Credit

N

Typically Offered

Fall, Summer

SOCWK 660 - Social Work Practice I**Credits 3**

Development of social work practice skills. The social systems perspective is used to guide the development of a problem-solving methodology with attention to information gathering, assessment, and problem identification. Values clarification and self-awareness are emphasized and the skills needed for intervention, termination and evaluation are introduced.

Repeat for Credit

N

Typically Offered

Fall

SOCWK 661 - Social Work Practice II**Credits 3**

Advanced development of social work practice skills with emphasis on skill development in intervention techniques, and practice evaluation from a social systems perspective. A variety of intervention strategies and techniques is presented with emphasis on the development of a social work frame of reference.

Repeat for Credit

N

Requisites

Prerequisite: SOCWK 660.

Typically Offered

Spring

SOCWK 662 - Field Experience**Credits 1-10**

Supervised field experience in community agencies and programs as a practical application of social work knowledge and skills gained from social work course work. Emphasis on direct work with clients, whether individuals, groups, or communities. Assignments make use of student's experiences to analyze social work theory and practice.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SOCWK 668 - Macro Practice and Theory**Credits 3**

Social work practice with focus on skills development for macro-level social work skills and an understanding of macro-systems using the ecological perspective as a framework. Community and organization intervention strategies with emphasis on the development of a social work frame of reference. Focus on institutional racism, institutional discrimination, and the importance of recognizing these functions within society.

Repeat for Credit

N

Typically Offered

Fall

SOCWK 670 - Social Work with Groups**Credits 3**

Provides the theoretical framework for effective generalist social work practice with groups, facilitates the development of group leaders who possess an understanding of group dynamics and effective leadership skills through group discussion, experiential exercises and leadership experiences.

Repeat for Credit

K-State 8 Tag 2

Global Issues and Perspectives

SPAN 411 - Spanish for heritage speakers: Composition and grammar**Credits 3**

Course for heritage speakers of Spanish to improve reading and writing skills, including grammar, and develop a professional and academic knowledge of the language.

Repeat for Credit

N

Requisites

Prerequisite: Recommended SPAN 302.

Typically Offered

Fall, Spring

K-State 8

Global Issues and Perspectives

SPAN 420 - Spanish Conversation

Credits 3

Intensive practice in conversation to develop listening and speaking skills, expand vocabulary, and review grammatical structures.

Note

May be taken with SPAN 410. Course designed for students whose primary language is not Spanish or whose competence has been demonstrated in the language at this level.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 301 or equivalent.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

SPAN 421 - Listening Skills**Credits 3**

Develops aural comprehension skills for communicative situations with focus on Spanish phonetics and interpretation of oral texts within the corresponding cultural context.

Note

Not open to native speakers of Spanish.

Repeat for Credit

N

Requisites

Prerequisites: SPAN 410 or equivalent.

Typically Offered

Spring

K-State 8

Global Issues and Perspectives

SPAN 530 - Professional Spanish: Business**Credits 3**

Develops culturally relevant communication skills in business and professional contexts. Specialized content and vocabulary including professional writing, such as employment materials.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 410 or SPAN 411.

Typically Offered

Fall, Spring

SPAN 531 - Professional Spanish: Health and Human Services**Credits 3**

Develops culturally relevant communication skills in health and human services contexts (including social work, kinesiology, dietetics, education). Specialized content and vocabulary, community-based learning, and experience in professional writing.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 410 or SPAN 411.

Typically Offered

Fall

SPAN 550 - Introduction to Hispanic Readings and Media**Credits 3**

Communication, critical thinking, and analytical skills applied to Spanish-language literary texts, film, and art. Skill development through conversation, presentations, papers, and creative projects.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 410 or SPAN 411.

Typically Offered
Fall, Spring, Summer

SPAN 551 - Hispanic Readings and Media for Heritage Language Learners

Credits 3

Spanish literary introductory course for students who have acquired Spanish at home at an early age. A wide variety of literary productions and modalities are explored (e.g., songs, poems, fiction, and films). Special emphasis is placed on 1) identity-related discussions and 2) the sharing of cultural experiences to facilitate the co—construction of knowledge and the creation of a community.

Repeat for Credit
N

Requisites
Recommended Prerequisite: SPAN 411

Typically Offered
Fall or Spring

SPAN 560 - Cultures of the Spanish-speaking World: U.S. Latinx

Credits 3

Explores the development of literature and other media representing Latinx experiences in the United States since the Mexican-American War.

Note
Taught in Spanish, may include some texts in English.
SPAN 550 strongly recommended.

Repeat for Credit
N

Requisites
Prerequisite: SPAN 410 or SPAN 411.

Typically Offered
Fall, Spring, Summer

SPAN 565 - Cultures of the Spanish-speaking World: Spain

Credits 3

Develops a critical understanding of the historical, political, and forces that have shaped Spanish literature and culture through an interdisciplinary focus on a topic, (e.g. cities, music, sport).

Repeat for Credit
N

Requisites
Prerequisite: SPAN 550.

Typically Offered
Fall, Spring, Summer

SPAN 566 - Cultures of the Spanish-speaking World: Spanish America

Credits 3

Develops critical understanding of the historical, political and social forces that have shaped Spanish America through interdisciplinary focus on a region or topic (e. g. food and identity, journeys, revolutions).

Repeat for Credit
N

Requisites
Prerequisite: SPAN 550.

Typically Offered
Spring

SPAN 567 - Cultures of the Spanish-speaking World: Transatlantic

Credits 3

Develops critical understanding of the historical, political, social forces that have connected Spanish and Spanish American literatures and cultures over time through interdisciplinary focus on a topic (e.g., conflict, exploration, social class).

Repeat for Credit
N

Requisites
Prerequisite: SPAN 550 and SPAN 565.

Typically Offered
Fall, Spring, Summer

SPAN 568 - Literature of Spanish America

Credits 3

Analysis of representative works of Spanish American literature from the pre-Columbian period to the present. Develops an understanding of historical and cultural context within the framework of Spanish American literary criticism.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and SPAN 566.

Typically Offered

Fall, Spring, Summer

SPAN 569 - Special Studies in Spanish

Credits 1-18

Special Studies in Spanish

Note

Consent of department head and instructor involved.

Repeat for Credit

Y

Typically Offered

Other

SPAN 575 - Introduction to Spanish Translation

Credits 3

Introduction to concepts of translation, including aspects of history, theory, and professional ethics. Practice in bi-directional translation [Spanish-English-Spanish] of a variety of texts in different genres including literature.

Repeat for Credit

N

Requisites

Prerequisite: Minimum of 3 credit hours at the 500 level or instructor permission.

Typically Offered

On sufficient demand

SPAN 580 - Introduction to Spanish Linguistics

Credits 3

Introduction to the fundamentals of linguistic analysis, including the sound system, word and sentence formation, and semantic and pragmatic meaning. Formal and usage-based perspectives. Application of linguistics to language acquisition theory and to pedagogy.

Note

Taught in Spanish.

Repeat for Credit

N

Requisites

Prerequisite: Minimum of 3 hours at the 500 level or instructor permission.

Typically Offered

fall, Spring

SPAN 670 - Advanced Spanish Grammar

Credits 3

Intensive study of the structures of the Spanish language for communicative and pedagogical purposes. Comparison/contrast to English structures.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 410 or equivalent.

Typically Offered

Fall, Spring, Summer

SPAN 730 - Medieval Spanish Literature

Credits 3

Texts and contexts in Medieval Spain, from jarchas to La Celestina. Focus on the roles of ideologies, schools and genres. Incorporates manuscripts and oral traditions. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 567 or SPAN 568. SPAN 565 recommended.

Typically Offered

Fall, Spring

SPAN 731 - Early Modern Literature of Spain**Credits 3**

Contextualized discussion and analysis of literature and cultural life in 15th-17th-century Spain. Course may be focused on a theme, genre, or writer (such as Miguel de Cervantes).

Note

Note: Develops ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 732 - Cervantes**Credits 3**

Reading and discussion of the works of Cervantes and of his literary and cultural background. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 567 or SPAN 568. SPAN 565 recommended.

Typically Offered

Fall, Spring

SPAN 734 - 18th- and 19th- Century Spain**Credits 3**

Contextualized discussion and analysis of literature and

cultural life in 18th-19th-century Spain. Course may be focused on a theme, genre, or movement (Enlightenment, Romanticism, Realism, Naturalism). Topics may include anticlericalism and Catholicism; revolution and empire; scientific reasoning.

Note

Develops ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 735 - 20th- and 21st-Century Spain**Credits 3**

Contextualized discussion and analysis of contemporary Spanish literature and cultural life. Course may be focused on a theme or genre (e.g., the Generation of '27, the Spanish Civil War, the Franco dictatorship and transition to democracy, feminism, or immigration).

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 736 - Spanish Poetry**Credits 3**

Texts and contexts of poetry in Spain from the jarchas of the early Middle Ages through the 21st Century. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 567 or SPAN 568. SPAN 565 recommended.

Typically Offered

Other

SPAN 750 - Spanish American Narrative**Credits 3**

Contextualized discussion and analysis of literary and cultural narratives over time, focused on a theme or region. Topics may include cultural encounters, illness, and disability, ecology, modernity.

Note

Develops ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 751 - Spanish-American Narrative: Early Twentieth Century**Credits 3**

Contextualized discussion and analysis of early twentieth-century narrative literature. Includes modernismo, the Avant-Garde, and criollismo/la novela de la tierra. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 567 or SPAN 568. SPAN 565 recommended.

Typically Offered

Fall, Spring

SPAN 752 - Spanish-American Topics**Credits 3**

Interdisciplinary exploration of a Spanish American political, social, or cultural issue over time. Examples: memory and testimonio, utopia and dystopia, gender and sexuality. Includes literary readings and media.

Repeat for Credit

Y

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 755 - Spanish American Performance Studies**Credits 3**

A contextualized interdisciplinary approach to performance studies in Spanish America. Discussion and analysis of plays and other performative events (political protests, rituals, installations). May focus on a time period, region, or theme.

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 757 - Spanish-American Poetry**Credits 3**

Contextualized discussion of Spanish American poetry over time, focused on a theme or region. Examples: musicality and song lyrics, places and journeys, voice and identity, innovation.

Note

Develops the ability to interpret and craft complex, abstract

language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and additional 6 hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 760 - U.S. Latinx Literature and Culture in Spanish

Credits 3

Examines the border as a metaphorical concept in Latinx literature and culture. Analysis of literary texts and media that explore intersecting identities, languages, and counter-traditions that shape the Latinx cultural legacy in the U.S.

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 550 and 6 additional hours at the 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 768 - Hispanic Cinema

Credits 3

Critical analysis of films representing a selected region, period, or theme, within their theoretical, cultural, socio-political and historical contexts.

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class. May be repeated with a different topic.

Repeat for Credit

Y

Requisites

Prerequisite: SPAN 550 and 6 additional hours at 500-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 771 - Advanced Spanish Translation

Credits 3

Analysis and practice in bi-directional translation [Spanish-English-Spanish] of a variety of texts from a number of genres, including literary texts. Discussion of professional opportunities for translators and interpreters. Development of personal portfolio.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 575 or senior level.

Typically Offered

Spring, Summer

SPAN 772 - Spain Today

Credits 3

Explores key issues of contemporary Spain including the legacy of the Spanish Civil War. Interdisciplinary focus on a topic, such as regional tensions, economics, politics. Representative literary texts and media serve as a basis for developing a critical view of the region.

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: Minimum of 3 hours at the 700-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 773 - Spanish America Today

Credits 3

Focus on the most significant cultural, social, political, ecological and economic issues affecting Spanish America in recent years. Representative literary texts and media serve as a basis for developing a critical view of the region. Reading- and writing-intensive class.

Note

Develops the ability to interpret and craft complex, abstract language. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: Minimum of 3 hours at the 700-level or instructor permission.

Typically Offered

On sufficient demand

SPAN 774 - Topics in Spanish Translation/Interpreting

Credits 3

Theory, strategies, terminology, and practice in a designated field between Spanish and English translation and /or interpreting (fields: healthcare, literary translation, legal, technical and scientific, community interpreting).

Repeat for Credit

Y

Requisites

Prerequisite: SPAN 575 or SPAN 771.

Typically Offered

Other

SPAN 776 - History of the Spanish Language

Credits 3

The development of Spanish from Latin to its present-day variation in the Spanish-speaking world. Influence of and interaction with world cultures and languages across time. Reading- and writing-intensive class.

Repeat for Credit

N

Requisites

Prerequisite: SPAN 565 or SPAN 566 or SPAN 567 or

SPAN 568.

Typically Offered

Spring

SPAN 777 - Hispanic Cultures and Literatures: Teaching Strategies

Credits 3

An integrated teaching program that develops linguistic, cultural and literary skills through the analysis and interpretation of texts from Spain and Spanish-America. Emphasis on student-centered cooperative and collaborative learning. Reading- and writing-intensive class.

Repeat for Credit

Y

Requisites

Prerequisite: SPAN 565 or SPAN 566 or SPAN 567 or SPAN 568.

Typically Offered

Fall, Spring

SPAN 779 - Selected Topics in Spanish

Credits 3

In depth exploration of a special cultural, linguistic and/or literary subject. Reading- and writing- intensive class.

Repeat for Credit

Y

Requisites

Prerequisite: SPAN 565 or SPAN 566 or SPAN 567 or SPAN 568.

Typically Offered

Fall, Spring, Summer

SPAN 780 - Spanish in the US

Credits 3

Surveys sociolinguistic features, socio-historical events, and matters pertaining to identity as key elements that shape a growingly popular linguistic variety despite its continuous stigmatization: Spanish in the US.

Repeat for Credit

N

Requisites

Prerequisites: Two 500-level SPAN courses (SPAN 580 preferred), instructor permission or Modern Language graduate student status.

Typically Offered

Fall or Spring

SPAN 799 - Research Topics in Spanish

Credits 1-18

A seminar with variable topics.

Repeat for Credit

Y

Typically Offered

Other

SPAN 898 - Master's Report

Credits 1-2

A written report of either research or problem work on a topic in the major field.

Note

Consult of major professor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

SPAN 899 - Research in Modern Languages

Credits 1-18

Research in Modern Languages

Repeat for Credit

Y

Typically Offered

Other

SSO 735 - Electron Microscopy of Aerospace Materials

Credits 3

This course introduces students to the theory, fundamental operating principles, specimen preparation techniques, and chemical analysis utilizing scanning electron microscopy (SEM). Additionally, this course will emphasize these principles and techniques for characterizing the structure of aerospace materials at different length scales.

Repeat for Credit

N

Typically Offered

Fall, Spring

SSO 736 - Aerospace Metallurgy and Ceramics

Credits 3

The science of metallurgy and ceramics and their manufacture will be the basis of this course and is aimed at providing the necessary fundamentals for understanding aerospace materials.

Repeat for Credit

N

Typically Offered

Fall, Spring

SSO 738 - Advanced Composite Materials

Credits 3

The fundamentals of polymer-, metal-, and ceramic-matrix composites will be taught in this course and will be applied to solving a variety of aerospace problems.

Repeat for Credit

N

Typically Offered

Fall, Spring

SSO 739 - Space Systems Design and Dynamics

Credits 3

This course focuses on introducing students to the analysis, architecture, and design of spacecraft including the analysis of orbit and attitude control, navigation systems, physical structures, propulsion systems, communication systems, thermal and electrical power systems. Similarities between spacecraft will be covered in detail and systems aspects of mission profiles will be discussed and analyzed.

Repeat for Credit

N

Typically Offered

Fall

SSO 740 - Space Systems Modeling, Simulation, and Control**Credits 3**

The course will introduce students to space mission modeling, simulation and control with an emphasis on space missions supporting civil and commercial operations. Topics include orbital mechanics, communications, space environment, spacecraft technology, civil/commercial space systems, model-based systems engineering concepts applied to physical systems, agent-based modeling and discrete event simulation of space systems. Systems dynamics modeling will be applied to physical space systems operating in various microgravity environments.

Repeat for Credit

N

Typically Offered

Fall

SSO 742 - Manufacturing and Materials in Space and on Earth**Credits 3**

The course will introduce the student to the world of manufacturing on Earth and in space. The course content includes the history of manufacturing in space, manufacturing spacecraft on Earth (spacecraft, telescopes, satellites, rovers, etc.), manufacturing standards, additive manufacturing, manufacturing construction in space, materials science aboard the International Space Station, challenges of manufacturing in space, circular economics and sustainability and planetary mining, materials and manufacturing.

Repeat for Credit

N

Typically Offered

Spring

SSO 801 - Space Operations and Environment**Credits 3**

Concentrates on the commercial and military use of space operations. Space operations have two goals: exploration and commercialization of space to benefit humanity as well as space warfare and conflict to defend earth resources and space resources.

Repeat for Credit

N

Typically Offered

Spring

STAT 100 - Statistical Literacy in the Age of Information**Credits 3**

Focus will be on the development of an awareness of statistics at the conceptual and interpretative level, in the context of everyday life. Data awareness and quality, sampling, scientific investigation, decision making, and the study of relationships are included. Emphasis will be on the development of critical thinking through in-class experiments and activities, discussions, analysis of real data sets, written reports, and collaborative learning. Computing activities will be included where appropriate; no previous computing experience required.

Intended for majors in non-quantitative fields.

Note

Cannot be taken for credit if credit has been received for any other statistics course.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

**STAT 150 - Statistics and Data Science:
Introductory Seminar for Majors****Credits 1**

An introduction to the field of statistics and data science. Topics of special interest to undergraduates majoring in statistics and data sciences, including cultural and professional aspects of the field and exploration of careers available to those trained in statistics and data science.

Repeat for Credit

N

Typically Offered

Fall, Spring

STAT 225 - Introduction to Statistics**Credits 3**

A first course in probability and statistics; random sampling; graphical and numeric summaries of qualitative and quantitative data; correlation and least squares regression; probability and random variables; the normal distribution, sampling distributions and the Central Limit Theorem; confidence intervals for one mean and one proportion; sample size estimation; hypothesis tests for one parameter, power and type I and II errors; statistical inference for the difference of two means based on independent samples and matched pairs designs; statistical inference for the difference of two population proportions.

Note

Cannot be taken for credit if credit has been received for STAT 240 or 250.

Repeat for Credit

N

Requisites

Students not meeting at least one of the KBOR placement measures below are required to also take STAT 226, which is a 2-credit corequisite support class.

Placement measures: A test score equal to or greater than, Math ACT 19 OR Math SAT 510 OR ALEKS PPL 30 OR Accuplacer QAS 255; OR (unweighted HS GPA 3.00 AND grade of C- or better in Algebra 2 or Integrated Math 3); OR MATH 100.

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

STAT 226 - Introduction to Statistics Support**Credits 2**

Note: Introduction to Statistics Support credits cannot count towards the 120 required credits of a degree program. Students who do not meet any of the KBOR multiple placement measures for elementary statistics must also enroll in STAT 226 as the corequisite course to STAT 225.

Introduction to Statistics Support is the corequisite course for STAT 225 -Introduction to Statistics. STAT 226 aims to fill in gaps in students' background knowledge to promote success in STAT 225. The content of STAT 226 is directly aligned with the course objectives and content of STAT 225 but allows for flexibility to fit individual student needs. Topics vary based on student needs but can include simplifying and manipulating numerical and algebraic expressions; and reviewing functions, plots, graphs of functions, exponents, logarithms, and set theory. Students must enroll concurrently in STAT 225 and STAT 226.

This course was designed through a Kansas Board of Regents Math Pathways initiative. STAT 226 is the KBOR math pathways corequisite course for the Introduction to Statistics course.

Repeat for Credit

N

Requisites

Corequisite: STAT 225

Typically Offered

Fall, Spring

STAT 240 - Biometrics I**Credits 3**

A basic first course in probability and statistics with textbook, examples, and problems aimed toward the biological sciences. Frequency distributions, averages, measures of variation, probability, confidence intervals; tests of significance appropriate to binomial, multinomial, Poisson, and normal sampling; simple regression and

correlation.

Note

Cannot be taken for credit if credit has been received for STAT 225 or 250.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

STAT 250 - Business and Economic Statistics I

Credits 3

A basic first course in probability and statistics with textbook, examples, and problems pointed toward business administration and economics. Frequency distributions, averages, index numbers, time series, measures of variation, probability, confidence intervals, tests of significance appropriate to binomial, multinomial, Poisson, and normal sampling; simple regression and correlation.

Note

Cannot be taken for credit if credit has been received for STAT 225 or 240.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

STAT 341 - Biometrics II

Credits 3

Analysis and interpretation of biological data using analysis of variance, analysis of covariance, and multiple regression. Negative binomial distribution and its applications.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225 or STAT 240 or STAT 250.

Typically Offered

Spring

STAT 351 - Business and Economic Statistics II

Credits 3

Continuation of STAT 250 including study of index numbers, time series, business cycles, seasonal variation, multiple regression and correlation, forecasting; some nonparametric methods applicable in business and economic studies.

Repeat for Credit

N

Requisites

Prerequisite: STAT 225, STAT 240 or STAT 250.

Typically Offered

Fall, Spring, Summer

STAT 410 - Probabilistic Systems Modeling

Credits 3

Descriptive statistics and graphical methods; basic probability; probability distributions; several random variable; Poisson processes; computer simulation of random phenomena; confidence interval estimation; hypothesis testing.

Repeat for Credit

N

Requisites

Prerequisite: MATH 221 and CIS 300.

Typically Offered

Spring

STAT 450 - Special Topics for Undergraduates in Statistics and Data Science

Credits 1-3

Study of special topics in statistics and data science methods for undergraduates.

Note

Instructor consent

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STAT 490 - Statistics for Engineers**Credits 1**

First course in statistics with examples and problems toward engineering. Distributions, means, measures of variation, confidence intervals, graphical display of data, simple regression and correlation, philosophy of experimentation.

Note

Must be taken concurrent with a laboratory course in engineering which uses statistics.

Repeat for Credit

N

Typically Offered

Fall, Spring

STAT 491 - Statistics for Engineers II**Credits 1**

A continuation of STAT 490. Offered second half of the semester following STAT 490. Statistical tests, multiple regression, model fitting, simple comparative and factorial experiments. Emphasis on computer analysis of data.

Repeat for Credit

N

Requisites

Prerequisite: STAT 490.

Typically Offered

Fall, Spring

STAT 499 - Honors Project**Credits 3**

Open only to Arts and Science students who are active

members of the University Honors Program.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

STAT 510 - Introductory Probability and Statistics I**Credits 3**

Descriptive statistics, probability concepts and laws, sample spaces; random variables; binomial, uniform, normal, and Poisson; two-dimensional variates; expected values; confidence intervals; binomial parameter, median, mean, and variance; testing simple hypotheses using CIs and χ^2 ; goodness of fit. Numerous applications.

Repeat for Credit

N

Requisites

Prerequisite: MATH 221.

Typically Offered

Fall, Spring

STAT 511 - Introductory Probability and Statistics II**Credits 3**

Law of Large Numbers, Chebycheff's Inequality; continuation of study of continuous variates; uniform, exponential, gamma, and beta distribution; Central Limit Theorem; distributions from normal sampling; introduction to statistical inference.

Repeat for Credit

N

Requisites

Prerequisite: STAT 510.

Typically Offered

Spring

STAT 610 - Introduction to Mathematical Statistics I

Credits 3

Development of axiomatic probability; univariate and multivariate random variables and their probability distribution functions; conditional distributions and independent random variables; methods of transformation for distributions of functions of random variables; convergence in distribution and probability.

Repeat for Credit

N

Requisites

Prerequisite: MATH 222.

Typically Offered

Fall

STAT 611 - Introduction to Mathematical Statistics II**Credits 3**

Estimation of probability distribution parameters by maximum likelihood, Bayesian and bootstrap methods; minimum variance unbiased estimation based on sufficient statistics; mean squared error and consistency of estimators; confidence interval estimation; statistical tests of hypotheses by likelihood ratios; most powerful tests; distribution-free inference; applications to regression models and categorical data.

Repeat for Credit

N

Requisites

Prerequisite: STAT 610.

Typically Offered

Spring

STAT 701 - Fundamental Methods of Biostatistics**Credits 3**

A course emphasizing concepts and practice of statistical data analysis for the health sciences. Basic techniques of descriptive and inferential statistical methods applied to health related surveys and designed experiments. Populations and samples, parameters and statistics; sampling distributions for hypothesis testing and confidence intervals for means and proportions involving

one sample, paired samples and multiple independent samples; odds ratios, risk ratios, simple linear regression. Use of statistical software to facilitate the collection, manipulation, analysis and interpretation of health related data.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

Crosslisted

MPH 701

STAT 703 - Introduction to Statistical Methods for the Sciences**Credits 3**

Statistical concepts and methods applied to experimental and survey research in the sciences; tests of hypotheses, parametric and rank tests; point estimation and confidence intervals; linear regression; correlation; one-way analysis of variance; contingency tables, chi-square tests.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing and equivalent of college algebra.

Typically Offered

Fall, Spring, Summer

STAT 705 - Regression and Analysis of Variance**Credits 3**

Simple and multiple linear regression, analysis of covariance, correlation analysis, one-, two- and three-way analysis of variance; multiple comparisons; applications including use of computers; blocking and random effects.

Repeat for Credit

N

Requisites

Prerequisite: One previous statistics course.

Typically Offered
Fall, Spring, Summer

STAT 706 - Basic Elements of Statistical Theory

Credits 3

The mathematical representation of frequency distributions, their properties, and the theory of estimation and hypothesis testing. Elementary mathematical functions are used to illustrate theory.

Repeat for Credit
N

Requisites
Prerequisite: MATH 205, MATH 210 or MATH 220 and STAT 225 or equivalent.

Typically Offered
Fall

STAT 710 - Sample Survey Methods

Credits 3

Design, conduct, and interpretation of sample surveys.

Repeat for Credit
N

Requisites
Prerequisite: STAT 510 or STAT 770.

Typically Offered
Fall-Even Years

STAT 713 - Applied Linear Statistical Models

Credits 3

Matrix-based, applied linear regression procedures at a mathematical level appropriate for a first-year graduate statistics major. Topics include basic methodological development for simple and multiple linear regression, model building and diagnostics, analysis of variance/covariance and multiple comparison methods. Other topics from ANOVA modeling may also be covered if time permits.

Note
A student may not receive graduate credit for both STAT

705 and STAT 713.

Repeat for Credit
N

Requisites
Prerequisite: MATH 515/551 or an equivalent course and one prior course in statistics.

Typically Offered
Fall

STAT 716 - Nonparametric Statistics

Credits 3

Hypothesis testing when form of population sampled is unknown: rank, sign, chi-square, and slippage tests; Kolmogorov and Smirnov type tests; confidence intervals and bands.

Repeat for Credit
N

Requisites
Prerequisite: STAT 705 or STAT 713.

Typically Offered
Fall-Odd Years

STAT 717 - Categorical Data Analysis

Credits 3

Analysis of categorical count and proportion data. Topics include tests of association in two-way tables; measures of association; Cochran-Mantel-Haenzel tests for 3-way tables; generalized linear models; logistic regression; loglinear models.

Repeat for Credit
N

Requisites
Prerequisite: STAT 705 or STAT 713.

Typically Offered
Spring

STAT 720 - Design of Experiments

Credits 3

Planning experiments so as to minimize error variance and avoid bias; Latin squares; split-plot designs; switch-back or reversal designs; incomplete block designs; efficiency.

Repeat for Credit

N

Requisites

Prerequisite: STAT 705 or STAT 713.

Typically Offered

Spring, Summer

STAT 722 - Experimental Design for Product Development and Quality Improvement

Credits 3

A study of statistically designed experiments which have proven to be useful in product development and quality improvement. Topics include randomization, blocking, factorial treatment structures, fractional factorial designs, screening designs, and response surface methods.

Repeat for Credit

N

Requisites

Prerequisite: STAT 705 or STAT 511 or STAT 713.

Typically Offered

Fall

STAT 725 - Introduction to the SAS Computing

Credits 1

Topics may include basic environment and syntax, reading and importing data from files, writing and exporting data to files, data manipulation, basic graphics, and built-in and user-defined functions.

Repeat for Credit

N

Requisites

Prerequisite: One prior course in Statistics.

Typically Offered

Fall

STAT 726 - Introduction to R Computing

Credits 1

Topics may include basic environment and syntax, reading and importing data from files, data manipulation, basic graphics, and built-in and user-defined functions.

Repeat for Credit

N

Requisites

Prerequisite: One prior level course in Statistics.

Typically Offered

Fall

STAT 727 - Statistical Computing/Numerical Methods of Statistics

Credits 3

Topics may include efficient programming techniques, generating data from non-standard distributions, designing simulation studies, resampling methods, creating and using functions and subroutines, parallel computing in statistics, interfacing lower-level languages (e.g., C, C++, Fortran) with data analysis software (e.g., SAS, R), computational complexity, convergence analysis of algorithms.

Repeat for Credit

N

Requisites

Prerequisite: STAT 726 and STAT 771 or STAT 511.

Typically Offered

Spring

STAT 730 - Multivariate Statistical Methods

Credits 3

Multivariate analysis of variance and covariance; classification and discrimination; principal components and introductory factor analysis; canonical correlation; digital computing procedures applied to data from natural and social sciences.

Repeat for Credit

N

Requisites

Prerequisite: STAT 705 or STAT 713.

Typically Offered

Spring

STAT 736 - Bioassay**Credits 2**

Direct assays; quantitative dose-response models; parallel line assays; slope ratio assays; experimental designs for bioassay; covariance adjustment; weighted estimates; assays based on quantal responses.

Note

Meets four times a week during second half of semester.

Repeat for Credit

N

Requisites

Prerequisite: STAT 705 or STAT 713.

Typically Offered

Spring-Odd Years

STAT 745 - Statistical Graphics**Credits 3**

Visual display of quantitative information. Statistical graphics topics to include visual perception, basic graphics construction, quantitative univariate to multivariate statistical graphics, trellis displays, introduction to smoothing and graphics, introduction to density estimation and graphics, and categorical graphics. Modern graphics software will be used.

Repeat for Credit

N

Requisites

Prerequisite: STAT 705 or equivalent.

Typically Offered

Spring-Even Years

STAT 750 - Studies in Probability and Statistics**Credits 1-4**

Studies of topics in probability, statistics, experimental design, stochastic processes, or other topics.

Note

Instructor consent

Repeat for Credit

Y

Typically Offered

On sufficient demand

STAT 760 - Optimization for Data Science**Credits 3**

The class presents the theory and algorithms for linear and nonlinear optimization problems with continuous variables. Topics covered include convex analysis, first- and second-order optimality methods, duality, KKT conditions, algorithms for unconstrained optimization, linearly and nonlinearly constrained problems, and convergence rates of algorithms. The theory and algorithms are applied to data science problems arising in machine learning, statistics, and related fields (e.g., maximizing likelihood and penalized likelihood functions, MM algorithms, EM algorithms, model selection, Sparse PCA). Students are expected to be comfortable with rigorous mathematical arguments.

Repeat for Credit

N

Requisites

Prerequisite: STAT 511 or STAT 771, and prior knowledge of linear algebra and matrix theory e.g., MATH 551, and some programming knowledge e.g., STAT 726.

Typically Offered

Spring-Even Years

STAT 761 - Discrete Optimization and Scalability for Data Science**Credits 3**

Topics covered include computational complexity, NP-hardness, data as networks, graph theoretic algorithms, exact, approximation, heuristic and online algorithms, and connections between convex and non-convex optimization problems. The theory and algorithms are applied to data science problems arising in statistical machine learning, statistical clustering, design of experiments, observational studies, sampling, and variable selection. Applications may be motivated using data from social networks, search engines, the stock market and

elections.

Repeat for Credit

N

Requisites

Prerequisites: STAT 705 or STAT 713 and STAT 720 and programming knowledge e.g. STAT 726.

Typically Offered

Spring-Odd Years

STAT 764 - Applied Spatio-Temporal Statistics

Credits 3

Construction and analysis of spatial, time-series, and spatio-temporal data sets. Topics include data generation using geographic information systems, exploratory data analysis and visualization, and descriptive and dynamic spatio-temporal statistical models. For context, a focus will be on biological or ecological data.

Repeat for Credit

N

Requisites

Prerequisites: STAT 510 or STAT 770, and STAT 705, or STAT 713, and STAT 726 or equivalent.

Typically Offered

Spring-Even Years

STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics

Credits 3

Addresses the complete process of building analytical tools suitable for learning from data, including automatic online data collection, feature extraction, supervised and unsupervised statistical machine learning methods, evaluation, and report writing. Automatic retrieval of various format online data, including JSON, REST, and Streaming API, http(s), html, xml, and databases. Statistical text processing/mining, state of the art supervised and unsupervised data mining methods, case studies and applications to business, government, social and news media data. Methods include regularized linear and logistic regression, classification trees, nearest neighbor methods, support vector machines, naive Bayes, random forests, boosting/bagging/AdaBoost, clustering, latent

Dirichlet allocation, network analysis, and topic modeling models.

Repeat for Credit

N

Requisites

Prerequisites: STAT 705 or STAT 713 or STAT 717, and prior computer programming proficiency on C, C++, Fortran, R, or Python e.g., CIS 209, STAT 726.

Typically Offered

Fall

STAT 768 - Applied Bayesian Modeling and Prediction

Credits 3

Bayes rule, principles of Bayesian inference, Bayesian perspective on statistical models, posterior distribution computations using simulations, Markov Chain Monte Carlo (MCMC) (including Gibbs sampling, Metropolis-Hastings algorithm, slice sampler, hybrid forms and alternative algorithms), convergence monitoring and diagnosis, hierarchical models, model checking and model selection, and applications in the sciences using computer software such as R and WinBUGS.

Repeat for Credit

N

Requisites

Prerequisites: STAT 705 or STAT 713, and STAT 510 or STAT 770.

Typically Offered

Spring-Odd Years

STAT 770 - Theory of Statistics I

Credits 3

Introduction to probability theory, random variables, transformations of random variables, expectations, discrete and continuous distributions, moment generating functions, families of distributions, multivariate random variables, joint and marginal distributions, conditional distributions and independence, sampling distributions of normal populations, order statistics, convergence of random variables, and the central limit theorem.

Repeat for Credit

N

Requisites

Prerequisite: MATH 222.

Typically Offered

Fall

STAT 771 - Theory of Statistics II**Credits 3**

Introduction to the sufficiency principle, the likelihood principle, point estimation, uniformly minimum-variance unbiased estimators, hypothesis testing, uniformly most powerful tests, interval estimation, and asymptotic evaluations of estimators and tests.

Repeat for Credit

N

Requisites

Prerequisite: STAT 770.

Typically Offered

Spring

STAT 799 - Topics in Statistics**Credits 0-3**

Topics in Statistics

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STAT 810 - Seminar in Probability and Statistics**Credits 1**

Discussion and lectures on topics in probability and statistics; one seminar talk by each student registered for credit.

Repeat for Credit

Y

Requisites

Prerequisite: Graduate standing and at least two graduate courses in statistics.

Typically Offered

Fall, Spring

STAT 818 - Theory of Life-Data Analysis**Credits 3**

A study of models and inferential procedures important to life-data analysis. Comparison of estimators (MLE, BLUE, etc.). Pivotal quantities. Design and regression models for non-normal distributions. Analysis of censored data.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 771 and STAT 705 or STAT 713.

Typically Offered

Fall-Even Years

STAT 842 - Probability for Statistical Inference**Credits 3**

Probability spaces and random elements, distributions, generating and characteristic functions, conditional expectation, convergence modes and stochastic orders, continuous mapping theorems, central limit theory and accuracy, laws of large numbers, asymptotic expansions for approximating functions of random variables and distributions.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 770 and STAT 771, or equivalent; MATH 633 or equivalent, or concurrent enrollment in MATH 633.

Typically Offered

Fall

STAT 843 - Statistical Inference

Credits 3

Distributions (commonly used univariate and multivariate distributions, including exponential families of distributions and properties), order statistics and distributional properties, (asymptotic) unbiased estimation and the information inequality, likelihood inference for parametric statistical models (including the multi-parameter case, regular and non-regular cases), confidence sets, functional parameters and statistical functional, density estimation and nonparametric function estimation, permutation methods.

Repeat for Credit

N

Requisites

Prerequisite: STAT 842; MATH 634 or equivalent, or concurrent enrollment in MATH 634.

Typically Offered

Spring

STAT 850 - Stochastic Processes**Credits 3**

Normal processes and covariance stationary processes; Poisson processes; renewal counting processes; Markov chains; Brownian motion; applications to science and engineering.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 770.

Typically Offered

Spring-Even Years

STAT 860 - Linear Models I**Credits 3**

Subspaces, projections, and generalized inverses; multivariate normal distribution, distribution of quadratic forms; optimal estimation and hypothesis testing procedures for the general linear model; application to regression models, correlation model.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 713, STAT 771.

Typically Offered

Fall

STAT 861 - Linear Models II**Credits 3**

Continued application of optimal inference procedures for the general linear model to multifactor analysis of variance, experimental design models, analysis of covariance, split-plot models, repeated measures models, mixed models, and variance component models; multiple comparison procedures.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 860.

Typically Offered

Spring

STAT 870 - Analysis of Messy Data**Credits 3**

Design structures; treatment structures; equal and unequal variances; multiple comparisons; unequal subclass numbers; missing cells; interpretation of interaction; variance components; mixed models; split-plot and repeated measures; analysis of covariance; cross-over designs.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 720.

Typically Offered

Fall

STAT 880 - Time Series Analysis**Credits 3**

Autocorrelation function; spectral density; autoregressive integrated moving average processes; seasonal time series; transfer function model; intervention analysis; regression

model with time series error.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 713 and STAT 771.

Typically Offered

Fall-Odd Years

STAT 898 - Master's Report

Credits 2

Master's Report

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STAT 899 - Master's Thesis Research

Credits 1-18

Master's Thesis Research

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STAT 903 - Statistical Methods for Spatial Data

Credits 3

Theoretical development of modeling and inference techniques for spatially and/or temporally referenced data, including geostatistical data, lattice data and spatial point patterns; methodology for autocorrelation estimation and prediction; nonstationary spatial processes; asymptotics and computational methods for large spatial datasets; computer-aided applications.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 771, plus one introductory course in statistical computing (e.g. STAT 726 or equivalent background).

Typically Offered

Spring-Odd Years

STAT 904 - Resampling Methods

Credits 3

Theoretical development of resampling procedures, including parametric and nonparametric bootstrap, jackknife, randomization and permutation methods; expansion theory for bootstrap inference; implementation of resampling procedures via statistical computational tools.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 713, STAT 771.

Typically Offered

Spring-Even Years

STAT 905 - High-Dimensional Data and Statistical Learning

Credits 3

Theoretical framework of statistical methods for the analysis of large-scale data with the aim of understanding data mining, supervised and unsupervised statistical learning techniques from a statistical decision theoretic framework. Methods for model selection, dimensionality reduction, multiple testing control, and estimation in high-dimension data. Emphasis on the conceptual underpinning of different tools for analysis of large-scale data and how they relate to each other. Applications in various fields, including the sciences and engineering, using computer software.

Repeat for Credit

N

Requisites

Prerequisite: (STAT 713 and STAT 771), or (STAT 727 and STAT 760).

Typically Offered
Fall-Even Years

STAT 907 - Bayesian Statistical Inference

Credits 3

Principles of Bayesian estimation, testing and prediction; Bayes factors and posterior probabilities of hypotheses; hierarchical modeling; Bayesian model selection and assessment; Bayesian computation and asymptotics; nonparametric Bayesian models.

Repeat for Credit
N

Requisites
Prerequisite: STAT 713 and STAT 771, plus one introductory course in statistical computing (e.g. STAT 725 or STAT 726 or equivalent background).

Typically Offered
Fall-Odd Years

STAT 920 - Experimental Design Theory

Credits 3

Incomplete block designs; theory of the construction and analysis of experimental designs.

Repeat for Credit
Y

Requisites
Prerequisite: STAT 720 and STAT 861.

Typically Offered
Spring-Odd Years

STAT 930 - Theory of Multivariate Analysis

Credits 3

The multivariate normal distribution, the Wishart distribution, Jacobians of vector and matrix transformations, Hotelling's T^2 statistic, the union-intersection principle, tests on mean vectors and covariance matrices, Box's approximations to critical points, the multivariate general linear model, discriminant analysis,

and principal component analysis.

Repeat for Credit
Y

Requisites
Prerequisite: STAT 730 and STAT 861.

Typically Offered
Spring-Even Years

STAT 940 - Advanced Statistical Methods

Credits 3

Generalized linear models and generalized mixed models. Statistical models based on the exponential family of distributions. Applications to non-normal and discrete data, including binary, Poisson and gamma regression, and log-linear models. Topics include likelihood-based estimation and testing, model-fitting, residual analyses, over-dispersed models, quasi-likelihood, large sample properties, and the use of computer packages. Also, methods for longitudinal repeated measures data that will include inference for continuous and discrete data. Inferential objectives include prediction of response and estimation of correlation/covariance structures. Nonparametric and semiparametric methods covered as time permits.

Repeat for Credit
Y

Requisites
Prerequisite: STAT 861, plus one introductory course in statistical computing (e.g. STAT 725 or STAT 726 or equivalent background).

Typically Offered
Fall-Even Years

STAT 941 - Advanced Statistical Inference

Credits 3

Foundations and methods of modern statistical inference including asymptotic theory in parametric models (including local asymptotic normality and contiguity), efficiency of estimators and tests, Bayes procedures, rank, sign and permutation statistics, U-, M-, L-, R-estimates, chi-square tests, empirical processes and the functional delta method, quantiles and order statistics, inference for nonparametric and semi-parametric models.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 843.

Typically Offered

Spring-Even Years

STAT 945 - Problems in Statistical Consulting**Credits 1-3**

Principles and practices of statistical consulting. Supervised experience in consultation and consequent research concerning applied statistics and probability associated with on-campus investigations.

Repeat for Credit

Y

Requisites

Prerequisite: STAT 720 and instructor consent

Typically Offered

On sufficient demand

STAT 950 - Advanced Studies in Probability and Statistics**Credits 1-3**

Theoretical studies of advanced topics in probability, decision theory, Markov processes, experimental design, stochastic processes, or advanced topics.

Note

Instructor consent

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STAT 999 - Research in Statistics**Credits 1-18**

Research in Statistics

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

STRAN 400 - Transforming Society**Credits 3**

Examines a range of social concepts such as race, ethnicity, indigeneity, gender, sex, sexuality, class, disability, citizenship, nation, coloniality, and global location from the perspective of Social Transformation Studies.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Human Diversity within the U.S.

K-State 8 Tag 2

Ethical Reasoning and Responsibility

STRAN 550 - Practicing Social Justice**Credits 3**

Students apply their classroom learning by engaging in a community-based social justice project. Students will work with an organization, program, or creative movement that engages and supports underrepresented and/or historically marginalized communities.

Repeat for Credit

N

Requisites

Prerequisite: AMETH 160 OR GWSS 105.

Typically Offered

Fall, Spring, Summer

STRAN 600 - Pathways to Social Change**Credits 3**

An advanced seminar in which students design and launch

a research-based social transformation project on a topic and in a form of their choosing.

Repeat for Credit

N

Requisites

Prerequisite: junior or senior standing.

Typically Offered

Spring

SWAH 101 - Swahili I

Credits 4

Introduction to Swahili. A foundation in listening, speaking, writing, and reading the basic grammatical structures and vocabulary of Swahili. Aspects of Swahili/African culture will be introduced and highlighted as essential components toward achieving communicative competence.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

SWAH 102 - Swahili II

Credits 4

A continuation of Swahili 101. A foundation in listening, speaking, writing, and reading the basic grammatical structures and vocabulary of Swahili. Aspects of Swahili/African culture will be introduced and highlighted as essential components toward achieving communicative competence.

Repeat for Credit

N

Requisites

Prerequisite: SWAH 101 or equivalent.

Typically Offered

Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

SWAH 201 - Swahili III

Credits 4

Continuation of Swahili II. Further development of functional skills. Intensive practice of spoken and written Swahili.

Repeat for Credit

N

Requisites

Prerequisite: SWAH 102.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

SWAH 202 - Swahili IV

Credits 4

Continuation of Swahili III. Further development of functional skills. Intensive practice of spoken and written Swahili.

Repeat for Credit

N

Requisites

Prerequisite: SWAH 201.

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Global Issues and Perspectives

THTRE 111 - Production Participation

Credits 1

Provide students with practical experience when working on a theatre production. Students must choose and complete one production assignment to earn 1 credit hour. This course is available for both Theatre majors and non-majors.

Repeat for Credit

Y

Typically Offered

Fall, Spring

THTRE 171 - Fundamentals of Acting**Credits 3**

Theory and practice of fundamental skills and techniques of acting. Major emphasis is on freeing and training the individual's imagination, intellect, body, and voice through designed exercise and performed scenes.

Note

Three hours recitation per week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Ethical Reasoning and Responsibility

THTRE 201 - Drugs and Alcohol in Theatre and Film**Credits 3**

Exploration of alcohol and drug use as depicted on stage and in film.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 202 - Taboo! Transgression and Censorship in Theatre and Film**Credits 3**

An examination of the cultural controversies surrounding theatrical and cinematic productions.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 203 - Stage to Screen: Theatre into Film**Credits 3**

Explores the adaptation of theatrical works into motion pictures.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 205 - Contemporary American Theatre**Credits 3**

Investigation of contemporary American work of dramatic literature and Theatre from the 1990s to the present.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 211 - Run Crew**Credits 0-2**

Work on run crew (sets, props, light or sound board) for theatrical production.

Repeat for Credit

Y

Requisites

Prerequisite: concurrently enrolled with THTRE 369.

Corequisite: THTRE 369.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 212 - Wardrobe Crew**Credits 1**

Work on wardrobe crew for a theatrical production.

Repeat for Credit

N

Requisites

Corequisite: THTRE 368 or may be taken alone.

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 220 - Musical Theatre History**Credits 3**

Surveys the history of musical theatre.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 235 - Introduction to the Art of Film**Credits 3**

Survey of Cinema, including history, analysis and the process of production. Will include film screenings outside of regular class meetings.

Repeat for Credit

N

Typically Offered

Spring, Summer

THTRE 260 - Stage Movement**Credits 3**

A study of the technique of stage movement and an investigation of the language of gesture.

Repeat for Credit

N

Typically Offered

Other

K-State 8

Aesthetic Interpretation

THTRE 263 - Oral Interpretation of Literature**Credits 3**

Techniques of reading from the printed page, selecting portions from various forms of literature, including narrative poetry, essay, lyric, sonnet, nonfictional prose, scenes from plays, and selected short stories.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

THTRE 265 - Fundamentals of Improvisation I, II**Credits 3**

Introduction to the techniques of improvisation with the emphasis upon practical participation.

Repeat for Credit

N

Typically Offered

Other

K-State 8

Aesthetic Interpretation

THTRE 268 - Techniques of Makeup**Credits 1**

Techniques of makeup for the stage.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 269 - Fundamentals of Technical Production

Credits 3

Basic techniques, equipment and materials used in scenery construction and theatrical drafting.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

THTRE 270 - Introduction to Theatre

Credits 3

A comprehensive introduction to theatre: basic elements of theatre and theatre production, theatre history, dramatic literature, multicultural theatre traditions and perspectives, and the theatre experience.

Repeat for Credit

N

Typically Offered

Other

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Historical Perspectives

THTRE 271 - Intermediate Acting

Credits 3

Emphasis upon expanding the actor's capabilities through

more advanced scene work and character study.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Ethical Reasoning and Responsibility

THTRE 280 - Script Analysis

Credits 3

Examination of the play script to develop a common vocabulary and method for analyzing a script.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 299 - Vocal Expression for Actors

Credits 3

Study and application of vocal techniques for stage productions; emphasis on development of the actor's vocal mechanism.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 344 - Storytelling

Credits 2

Techniques of storytelling to people of all ages. History and cultural importance of storytelling. Fictional and personal storytelling will be covered.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 364 - Scene Painting**Credits 3**

Practical application of painting techniques for the stage.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

THTRE 366 - Fundamentals of Theatre Management**Credits 3**

Non-profit theatre management, including budgeting, marketing, box office, and development practices, plus examination of relevant history.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Empirical and Quantitative Reasoning

THTRE 369 - Fundamentals of Theatrical Design**Credits 3**

An exploration of the four areas of stage design: sets, lights, costumes, and sound. Includes examination of

relevant history and technology in these areas. Emphasis is on the design process and design development.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Aesthetic Interpretation

THTRE 475 - Opera Workshop**Credits 1-6**

Principles and techniques of operatic and musical theatre production, with emphasis on class rehearsal and performance of selected scenes from opera and musical drama; brief survey of the history of opera.

Note

Offered jointly by the Department of Communication Studies and School of Music, Theatre and Dance.

Repeat for Credit

N

Typically Offered

Other

Crosslisted

MUSIC 475

K-State 8

Aesthetic Interpretation

THTRE 499 - Honors Project**Credits 3**

Honors Project

Note

Open only to Arts & Sciences students who are active members of the University Honors Program.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

THTRE 503 - Theatre for Young Audiences (TYA) in Production

Credits 3

Students will gain insight into the philosophies, practicalities, and processes of developing and producing Theatre for Young Audiences (TYA).

Repeat for Credit

Y

Typically Offered

Fall or Spring

THTRE 504 - Stage Combat

Credits 3

Focuses on specific stage combat disciplines and techniques.

Repeat for Credit

Y

Requisites

Prerequisite: Theatre 261

Typically Offered

Fall or Spring

THTRE 552 - Sound Design

Credits 3

Introduces the student to the fundamental processes involved in Sound Design.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

THTRE 560 - Advanced Stage Movement

Credits 3

Study in the physical development of character and advanced techniques of stage movement.

Repeat for Credit

Y

Typically Offered

Other

THTRE 563 - Stage Management

Credits 3

Theory and practice of stage management in the professional and nonprofessional theatre. Emphasis is on the organization of all areas of theatre knowledge needed for the running of theatrical productions.

Repeat for Credit

N

Typically Offered

Fall, Spring

THTRE 565 - Principles of Directing

Credits 3

Principles, processes and techniques of directing for the theatre.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 171.

Typically Offered

Other

THTRE 566 - Rehearsal Techniques

Credits 0-12

A laboratory course for students enrolled in performance and production classes.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

K-State 8

Aesthetic Interpretation

THTRE 567 - Costume Design

Credits 3

The theory and practice of costume design for stage.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 367.

Typically Offered

Fall

THTRE 568 - Scene Design

Credits 3

Examination of the role of scene design in theatre, principles and techniques of design. Development, presentation, and synthesis of design images with the scripted play.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 368 and THTRE 369.

Typically Offered

Other

THTRE 569 - Advanced Technical Production

Credits 3

Independent study in advanced technical theatre problems.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 368.

Typically Offered

Fall, Spring

THTRE 572 - History of Theatre I

Credits 3

A survey of the development of the theatre from ancient times to 1700.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 370.

Typically Offered

Spring

THTRE 573 - History of Theatre II

Credits 3

A survey of the development of the theatre from 1700 to the present.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing or consent of instructor.

Typically Offered

Fall

THTRE 575 - Dramaturgy

Credits 3

An introduction to the theory and practice of dramaturgy, including a survey of contemporary critical theories as they apply to the work of the dramaturg.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 270

Typically Offered

Fall or Spring

THTRE 579 - Lighting Design

Credits 3

Theory and practice of theatrical lighting design, control systems, projection equipment, and lighting consulting. Production work with KSU Theatre season required.

Repeat for Credit

N

Typically Offered

Spring

THTRE 580 - Music Theatre Workshop**Credits 0-1**

Principles and techniques of musical theatre production with emphasis on rehearsal and performance of selected scenes from musical theatre. Dance, music, and theatre are studied as integrated elements within the musical theatre genre. Culminates in a public performance.

Note

Course may be repeated twice for credit.

Repeat for Credit

Y

Requisites

Prerequisite: two semesters of voice; THTRE 171; and DANCE 280; or consent of instructor.

Typically Offered

Spring

THTRE 599 - Senior Seminar**Credits 3**

Students in their final year of study will develop skills for professional presentation and create a portfolio or audition based on the standards developed for the URTA National Unified Auditions/Interviews.

Repeat for Credit

N

Typically Offered

Fall, Spring

THTRE 610 - Internship in Theatre**Credits 0-6**

Supervised participation in an internship at a professional theatre.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 171 or THTRE 368; junior standing and consent of supervising faculty member and approval of faculty.

Typically Offered

Fall, Spring, Summer

THTRE 630 - Topics in Theatre**Credits 1-4**

Selected topics in theatre.

Repeat for Credit

Y

Requisites

Prerequisite: Junior standing and consent of instructor.

Typically Offered

Fall, Spring, Summer

THTRE 661 - Professional Development**Credits 1**

Study of audition techniques including supervised preparation of appropriate material. Business aspects of professional theatre, including unions, contracts, and professional ethics.

Repeat for Credit

N

Requisites

Prerequisite: 12 hours in theatre, music, and/or dance.

Typically Offered

Fall

THTRE 662 - Playwriting**Credits 3**

Theoretical study and practical application of techniques of playwriting with regard to plot, characters, and production; emphasis on the one-act form.

Repeat for Credit

N

Typically Offered

Other

THTRE 663 - Solo Performance**Credits 3**

Students create their own solo performance piece through developing and rehearsing a script. Students will create drafts, conduct rehearsals, and culminate with a final performance of their own work.

Repeat for Credit

Y

Typically Offered

Fall or Spring

THTRE 664 - Creative Drama**Credits 3**

The development of creative imagination and personal well-being through theatre games, improvisation, storytelling, and puppetry for use in educational and recreational settings.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Other

THTRE 665 - Drama Therapy with Special Populations**Credits 3**

The therapeutic uses of drama in the development of creative imagination, self expression, and social relatedness with special populations such as clients who have developmental disabilities, physical disabilities, health issues, or are aging.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall, Spring

THTRE 667 - Period Styles for the Theatre 1**Credits 3**

Survey of historical styles of architecture, furnishings, and clothing in relation to theatrical design and the history of the theatre from the Greeks to 1800.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 572 or concurrent enrollment.

Typically Offered

Spring

THTRE 668 - Period Styles for the Theatre 2**Credits 3**

Survey of historical styles of architecture, furnishings, and clothing in relation to theatrical design and the history of the theatre from 1800 to present.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 573 or concurrent enrollment.

Typically Offered

Fall

THTRE 670 - Playback Theatre**Credits 1-3**

Improvisational theater forms in which actors listen to stories told by audience and improvisationally act the story out. Students will learn playback acting forms and how to conduct a session. Playback is often used as a technique by drama therapists in performance and in therapy sessions.

Note

Course maybe repeated for up to 6 hours.

Repeat for Credit

Y

Typically Offered
Fall, Spring, Summer

THTRE 672 - American Ethnic Theatre

Credits 3

Drama and stagecraft of ethnic groups in the United States, including the theatre of African, Asian, Hispanic, Jewish, and Native Americans.

Repeat for Credit
N

Requisites
Prerequisite: Junior standing.

Typically Offered
Other

THTRE 673 - Theatre for Conflict Resolution

Credits 3

Drama and theatre techniques used to explore the nature of conflict and how to promote collaboration through action.

Repeat for Credit
N

Requisites
Prerequisite: Junior standing.

Typically Offered
Summer

THTRE 674 - Drama Therapy with Adolescents

Credits 3

The therapeutic uses of drama with adolescents, including normal development, youth-at-risk, ESL, SED, and BD adolescents.

Repeat for Credit
N

Requisites
Prerequisite: Junior standing.

Typically Offered
Summer

THTRE 675 - Drama Therapy with Older Adults

Credits 1-3

The therapeutic uses of drama with older adults, focusing on the development of life review, social relatedness, and creative self-expression in the here and now.

Repeat for Credit
N

Requisites
Prerequisite: Junior standing.

Typically Offered
Summer

THTRE 710 - Practicum in Theatre

Credits 0-6

Supervised participation in a position of major responsibility.

Repeat for Credit
Y

Requisites
Prerequisite: THTRE 160 or THTRE 171 or THTRE 368; junior standing; consent of supervising faculty member and approval of faculty members are required.

Typically Offered
Other

THTRE 711 - Topics in Technical Theatre

Credits 3

Selected topics in creative techniques and investigation for technical theatre.

Repeat for Credit
Y

Requisites
Prerequisite: THTRE 269 and consent of instructor.

Typically Offered
Other

THTRE 712 - Theatre Management

Credits 3

Theatre management, promotion, finance, organization; emphasis on contract negotiations and use of facilities.

Repeat for Credit

N

Typically Offered

Other

THTRE 761 - Advanced Acting

Credits 3

Studies in style, technique, and characterization.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 271 and consent of instructor.

Typically Offered

Other

THTRE 762 - Advanced Playwriting

Credits 3

Further study in the writing of drama; emphasis on problems of writing the full-length play.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 662.

Typically Offered

Other

Crosslisted

ENGL 762

THTRE 763 - Advanced Acting: Consent and Intimacy in Performance

Credits 3

An in-depth examination and practice in consent and intimacy in performance. Work will cover the language, process and best practices of Intimacy Direction and Coordination.

Repeat for Credit

N

Typically Offered

Fall or Spring

THTRE 765 - Practice in Directing

Credits 3

A lecture-lab course with emphasis on directing dramatic productions under performance conditions.

Note

Consent of instructor

Repeat for Credit

Y

Typically Offered

Other

THTRE 780 - Theatrical Design Studio

Credits 0-3

Advanced problems in conceptualization and realization of design, including sets, costumes, lights and technical production. Emphasis on advanced techniques in research, analysis, and production problems.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 567, THTRE 568, THTRE 569, or THTRE 579.

Typically Offered

Fall, Spring

THTRE 782 - Women in Theatre

Credits 3

A history of the contributions made by women in theatre as playwrights, managers, directors, and performers; contemporary women in theatre and their experiments in

expressing women's consciousness.

Repeat for Credit

N

Typically Offered

Other

THTRE 783 - Practice in Acting

Credits 3

Advanced studies in characterization with emphasis on communicating with the director. Taught in conjunction with the Practice in Directing workshop.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 271 and consent of instructor.

Typically Offered

Other

THTRE 784 - Psychodrama

Credits 3

Theory and practice of Psychodrama as a treatment modality for use in Drama Therapy.

Repeat for Credit

N

Typically Offered

Other

THTRE 785 - Sociodrama

Credits 3

Theory and practice of Sociodrama as a therapeutic and educational modality for use in Drama Therapy.

Repeat for Credit

N

Typically Offered

Other

THTRE 799 - Projects in Theatre

Credits 1-4

Individual guided work in selected area.

Note

Only 3 hours may be applied to MA.

Repeat for Credit

Y

Requisites

Prerequisite: Junior standing and consent of instructor.

Typically Offered

Fall, Spring

THTRE 800 - Introduction to Graduate Studies in Theatre: Library, Research, and Information Skills

Credits 1-3

Skills for accessing research tools and resources needed in the age of the internet, along with instruction on citations, literature reviews, and other formatting necessary for graduate research papers.

Repeat for Credit

N

Typically Offered

Other

THTRE 810 - Survey of Research in Drama Therapy

Credits 3

Basic terminology, concepts, and principles underlying research in drama therapy and the helping fields.

Repeat for Credit

N

Typically Offered

Fall, Spring

THTRE 820 - Principles of Drama Therapy

Credits 3

Theory, history, and practice in the use of drama as therapy

group treatment. Survey of major drama therapy methods.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 664 or 665.

Typically Offered

Other

THTRE 830 - Creative Arts Therapies

Credits 3

Survey of five creative arts therapy modalities: drama/psychodrama, art, poetry/bibliotherapy, music, and dance/movement. Instruction in theory and hands-on experience with each modality, as well as reading, discussion and methods for using modalities interdisciplinarily.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

THTRE 840 - Play Therapy Practices and Techniques

Credits 3

The history and philosophy of, and rationale for, using play media in counseling and therapy with children and adults. Directive Play Therapy models will be explored and practiced.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

THTRE 862 - Workshop in Playwriting

Credits 3

Advanced writing of drama.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 762 or ENGL 762 or proof of equivalence. Proficiency.

Typically Offered

Other

Crosslisted

ENGL 862

THTRE 865 - Ethics and Professionalism in Drama Therapy

Credits 3

The application of ethical principles involved in the practice of drama therapy in a variety of educational and therapeutic settings.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 820 or THTRE 830.

Typically Offered

Spring, Summer

THTRE 870 - Greek and Roman Theatre

Credits 3

Studies in the drama and stagecraft of the Greek and Roman period.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 572.

Typically Offered

Other

THTRE 871 - Medieval and Baroque Theatre

Credits 3

Studies in the drama and stagecraft of the Medieval and Baroque periods.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 572.

Typically Offered

Other

THTRE 875 - Contemporary Theatre**Credits 3**

Studies in drama and stagecraft since 1968.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 573.

Typically Offered

Other

THTRE 876 - Seminar in Theatre**Credits 3**

Selected topics in theatre research.

Repeat for Credit

Y

Requisites

Prerequisite: THTRE 572 or THTRE 573.

Typically Offered

Other

THTRE 878 - History of the Physical Stage**Credits 3**

A survey course in the emergence and development of the theatre building as a distinct architectural form, with particular emphasis on the effect of the physical environment on the play.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 368.

Typically Offered

Other

THTRE 879 - Modern Theatre**Credits 3**

Studies in the drama and stagecraft of Europe and America in the period from 1870 to the present.

Repeat for Credit

N

Requisites

Prerequisite: THTRE 573.

Typically Offered

Spring-Even Years

THTRE 880 - Master's Project**Credits 3**

Major project undertaken to demonstrate competence in Drama Therapy as required for the Master's Degree.

Repeat for Credit

N

Requisites

Prerequisite: Sixteen hours of graduate credit in theatre.

Typically Offered

Fall, Summer

UAS 114 - Remote Pilot Certification for UAS**Credits 2**

This course helps prepare students to become an FAA-Certified UAS Pilot. This course covers all knowledge topics important for a commercial UAS pilot. Once complete, the student takes the FAA's Remote Pilot in Command knowledge test.

Repeat for Credit

N

Typically Offered

Fall, Spring

UAS 115 - Introduction to Multi-Rotor Flight Lab

Credits 1

Basic through advanced flight training on multi-rotor uncrewed aircraft. This course establishes the foundation of manual flight, basic automation and features. Proficiency is built through standardized maneuvers to meet practical test standards.

Note

For portions of the course, students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Corequisite: UAS 114 or proof of a valid RPIC

Typically Offered

Fall, Spring

UAS 270 - Introduction to UAS

Credits 3

Introduction to the history of UAS and survey of current UAS platforms, terminology, challenges to airspace integration and operational theory.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

UAS 272 - UAS Safety Fundamentals

Credits 3

Introduction to aviation safety, with an emphasis on best practices for safe operation of unmanned aircraft systems. Topics include safety/risk assessments, human factors, crew resource management, aeronautical decision-making, risk management, and safety assurance.

Repeat for Credit

N

Typically Offered

Fall, Spring

UAS 275 - Small UAS Maintenance I

Credits 3

This course provides students with the knowledge and skill necessary to repair and maintain both fixed- and rotary-wing aircraft during field operations and to ensure continued airworthiness throughout the service life of the aircraft. Instruction emphasizes safe practices, provide an introduction to basic shop tools and machinery used in maintaining sUAS, and develop fundamental skills in platform fabrication and the troubleshooting/repair of the circuits, subsystems and components typically found on sUAS aircraft.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Typically Offered

Spring

UAS 280 - Multi-Rotor Construction Lab

Credits 2

This course focuses on the construction of a multi-rotor UAS. This includes gaining an understanding of individual components within the system and integrating the components into a fully functional system. Students will also test and tune the UAS once assembled.

Repeat for Credit

N

Typically Offered

Fall, Spring

UAS 285 - Small Unmanned Aircraft Maintenance II

Credits 3

This course provides students with advanced knowledge and a high level of skill in the maintenance and repair of

both fixed- and rotary-wing unmanned aircraft and associated systems. The concept of continued airworthiness is emphasized. Topics include advanced techniques in the fabrication and repair of small unmanned aircraft systems and airframes, maintenance of ground support systems and principles of electronic and integrated circuit maintenance, troubleshooting and repair.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 275.

Typically Offered

Fall

UAS 300 - UAS Powerplant Fundamentals

Credits 3

A study of the principles of operation, design features, and operating characteristics of various powerplants used in UAS. Includes inspection procedures and operational theory of current electric, piston, hybrid, and turbine propulsion systems.

Note

Two hours lecture and three hours lab per week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

UAS 312 - UAS Flight Instructor Ground School

Credits 3

Intended to prepare the student for the role of UAS flight instructor. Focuses on the fundamentals of flight instruction. Lecture topics cover the techniques and the procedures necessary to generate, organize and present

lessons in instructional environment while building necessary skills and emphasizing aspects of instruction necessary to ensure student competencies in the areas of UAS field and flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 114 &UAS 115.

Corequisite: UAS 314.

Typically Offered

Fall

UAS 314 - Multi-rotor Instructor Flight Lab

Credits 1

This course refines advanced multi-rotor skills and provides the practical experience necessary to produce competent multi-rotor flight instructors.

Note

Two hours of lab per week. For portions of the course, students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115

Corequisite: UAS 312 and proof of a valid Remote Pilot in Command (RPIC)

Typically Offered

Fall

UAS 353 - Command and Control Links and Circuitry

Credits 3

This course provides a detailed examination of the theory and design of UAS command and control (2C) systems and applies this knowledge to develop a thorough understanding of the principles used in the design, maintenance and repair of 2C circuits and subsystem components. Topics include design choices in component selection, circuit and overall system design concepts and troubleshooting.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 275 or consent of instructor.

Typically Offered

Fall

UAS 357 - Introduction to UAS Fixed-Wing Flight Lab**Credits 2**

Provides an introduction to the use of an external pilot (EP) console to control fixed-wing UAS. In the event of a lost communications link, avionics or autopilot failure or other emergency, the external pilot is critical to human-in-the-loop operation of the UAS in effecting a successful recovery of the aircraft. This course develops the skills necessary to ensure students are capable of conducting safe EP operation of fixed-wing UAS during adverse flight conditions.

Note

Four hours of lab per week. Students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 314.

Typically Offered

Spring

UAS 367 - Introduction to UAS Automated Fixed-Wing Flight Lab**Credits 3**

This course focuses on developing the pilot's ability to control the UAS via a computer ground control station in the crew role of air vehicle operator (AVO). Students will become proficient in conducting site surveys, building UAS flight plans, contingency planning, emergency procedures, crew resource management, and developing mission briefings. Students will also learn methods for effectively instructing fixed-wing flight operations by developing

lesson plans and conducting instructional flights.

Note

Six hours of lab per week plus individual simulator work. Students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 357 and UAS 312.

Typically Offered

Spring

UAS 373 - Small Unmanned Aircraft Design and Construction for Non-Aviators**Credits 3**

Topics include: Unmanned Aircraft System platform, payload and component design and interfacing, system and vehicle maintenance, and systems integration. Intended for non-pilot majors and those without the FAA certifications and ratings required for UAS 370.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Corequisite: UAS 270.

Typically Offered

Fall

UAS 374 - Processing Remotely Sensed Data**Credits 3**

Students are introduced to basic theory, history, and practical applications of remote sensing technology, with an emphasis on high spatial resolution multispectral aerial imagery collected using UAS. Other topics include geographic information systems, aerial image interpretation, sensor resolution, orthomosaicing, georegistration, vegetation indices, and image classification.

Repeat for Credit

N

Typically Offered

Fall

UAS 387 - UAS Safety Applications

Credits 2

This course provides students with the knowledge needed to best prepare for and conduct advanced UAS operations while staying safe. This course will cover Crew Resource Management, Human Factors, Safety Risk Mitigation strategies, and case study investigations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115.

Typically Offered

Fall

UAS 417 - Fixed-wing Instructor Flight Lab

Credits 2

This is the culminating course intended to prepare students for roles as fixed-wing unmanned aircraft flight instructors. This course furthers develop and refine the flying skills necessary to assume control of the aircraft during adverse circumstances or unusual aircraft attitudes induced by a less experienced pilot. The fixed-wing instructor-in-training is required to demonstrate, in practice, the skills and knowledge obtained in earlier courses covering crew resource management and flight instruction as well as achievement of a high level of piloting skills. Upon successful completion of this course, the student is qualified as a K-State instructor on fixed-wing platforms and as pilot-in-command/operator-in-command during research missions authorized by the unmanned aircraft systems program.

Note

Four hours of lab per week.

Repeat for Credit

N

Requisites

Prerequisite: UAS 367.

Typically Offered

Spring

UAS 461 - Autonomous Flight Simulation Lab

Credits 1

This course provides the student with simulation on high-end, sophisticated, proprietary autopilot systems in preparation for field operations flying aircraft equipped with similar autopilot/avionics packages.

Note

To hours of lab per week.

Repeat for Credit

N

Requisites

Prerequisite: UAS 370.

Corequisite: UAS 465.

Typically Offered

Spring

UAS 463 - Introduction to Autopilots and Mission Planning for Non-Aviators

Credits 3

Focus is on mission planning and operations within the context of the simulated environment. Students are introduced to commercial, open source and/or proprietary autopilots and are required to complete simulated training missions with the ultimate goal of demonstrating skills competency and knowledge acquisition through evaluations of proficiency (e.g., through "check-outs" or "check-rides"). Students integrate autopilots into selected fixed-wing platforms. Intended for non-UAS majors and those without the FAA certifications and ratings required for UAS 370, UAS 461 and UAS 465.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 373.

Typically Offered
Spring

UAS 465 - Fixed-Wing Construction Lab and Autopilot Integration

Credits 3

In this course, students will build a fixed-wing UAS. After completing the build and conducting a successful flight, students will integrate an autopilot into their platform. Using open source ground station software and commercial-off-the-shelf (COTS), open source autopilot firmware and hardware, students learn techniques for integrating autopilots into their selected fixed-wing platform and for exploring precision autonomous flight in preparation for conducting field operations to acquire remotely sensed data.

Repeat for Credit
N

Requisites
Prerequisite: UAS 280

Typically Offered
Spring

UAS 467 - Small Unmanned Aircraft Systems Payloads

Credits 3

Course content covers various types of sUAS sensor packages and appropriate applications, preparing the student to properly select sensors based on mission profile, data needs and mission objectives. Students develop, design and construct a payload for integration into previously constructed aircraft in preparation for conducting missions to obtain data for post-flight processing.

Note
Studio format incorporating lecture and lab elements.

Repeat for Credit
N

Requisites
Prerequisite: UAS 465.

Typically Offered
Fall

UAS 470 - Flight and Field Operations

Credits 3

Emphasis is on advanced unmanned aircraft systems operations in the live flight environment with a focus on safety and crew resource management. Emphasis is on experiential learning. Students are required to travel to an area designated for flight operations.

Note
Studio format incorporating predominantly lab components with less emphasis on lecture.

Repeat for Credit
N

Requisites
Prerequisite: UAS 461 and UAS 465.

Typically Offered
Fall

UAS 471 - Advanced Fixed-Wing Operations Flight Lab

Credits 2

This course provides students with training on a high-end sophisticated, proprietary autopilot system. Course delivery will focus on safety and crew resource management. Emphasis is on experiential learning.

Note
3 hours of lab per week. Students are required to travel to an area designated for flight operations.

Repeat for Credit
N

Requisites
Prerequisite: UAS 357.

Typically Offered
Fall

UAS 475 - Data Acquisition and Post-processing

Credits 3

Students build upon the basic image processing skills gained in the previous course, expanding their knowledge

of common aerial image data processing tasks using industry-standard software packages. Aerial data collection methodologies are introduced, including consideration of aerial mission flight parameters.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115 and UAS 374.

Typically Offered

Spring

UAS 476 - Low Altitude Remote Sensing Project Development

Credits 3

Students gain practical experience collecting and processing their own high resolution aerial datasets using multirotor and/or fixed-wing UAS, and are instructed in proven workflows for successful commercial UAS mapping operations. The topic of payload selection and integration will enable a project to collect data for subsequent processing.

Repeat for Credit

N

Requisites

Prerequisite: UAS 475

Typically Offered

Fall

UAS 477 - Fundamentals of Thermography

Credits 3

Students learn the process of acquiring and interpreting radiometrically calibrated thermal imagery, including real-time analysis and ortho mosaicking. Specific topics include history of thermal sensors, best practices for calibration and mission planning, and imagery post-processing methods, analysis, and deliverables. This course will prepare students to enroll in a Level 1 Thermography Certification course.

Note

Elective option for Aeronautical Technology BS–Unmanned Aircraft Systems Option
Course within the UAS Data Analytics Certificate

Repeat for Credit

N

Requisites

Prerequisite: UAS 374

Typically Offered

Fall, Spring

UAS 478 - Fundamentals of LIDAR

Credits 3

Students learn how Light Detection and Ranging (LiDAR) systems are used in an sUAS setting and demonstrate their ability to collect, process, and analyze LiDAR data in various class, group, and individual projects. Specific topics include sUAS LiDAR integration, Global Positioning Systems (GPS), mission planning, post-processing methods and software, and final product deliverables.

Note

Elective option for Aeronautical Technology BS–Unmanned Aircraft Systems Option
Course within the UAS Data Analytics Certificate

Repeat for Credit

N

Requisites

Prerequisite: UAS 374

Typically Offered

Fall, Spring

UAS 480 - UAS Senior Design Project I

Credits 1

Culminating experience is a sustained occasion when students will put into independent practice the intellectual, creative, and expressive skills/knowledge they have cultivated in their undergraduate curriculum. In this course students integrate discipline-specific knowledge in addition to communication and inquiry methods to solve problems and communicate mastery of their respective area of interest.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing.

Typically Offered

Fall

UAS 481 - UAS Senior Design Project II

Credits 2

A continuation of UAS 480. Includes the implementation, testing, and delivery of the project initiated in UAS 480 UAS Senior Design I. Significant milestones are the completion of checkpoints outlined in the project proposal prepared in UAS 480 along with implementation, final report and final presentation.

Repeat for Credit

N

Requisites

Prerequisite: UAS 480

Typically Offered

Spring

UFS 640 - Topics in Urban Food Systems

Credits 1-3

Selected topics in urban food systems.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

UFS 791 - Urban Agriculture

Credits 2

Students will become familiar with a wide variety of urban agriculture types and production systems utilized in urban settings. The course will include background readings, case studies, guest speakers, student-facilitated class discussions, and lectures.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

Crosslisted

HORT 791

UFS 794 - Urban Food Systems

Credits 2

This course will cover all components of urban food systems through the lens of food security, food justice, access, policy, and community planning. Students will gain skills in grant-writing, non-profit planning and management, and working with urban policy and planning boards.

Repeat for Credit

N

Typically Offered

Spring

Crosslisted

HORT 794

UFS 796 - Professional Development in Urban Food Systems

Credits 1

A team instructed seminar course that provides urban food systems students with a suite of skills complimentary to their research experience but still necessary for professional career success.

Repeat for Credit

N

Typically Offered

Fall, Spring

Crosslisted

HORT 796

UFS 798 - Urban Food Systems Field Experience

Credits 1

Students will engage in a work experience at Willow Lake Student Farm, Olathe Horticulture Research and Extension

Center or another approved site. Three hours of field work per week are required.

Repeat for Credit
Y

Typically Offered
Fall, Summer

UHP 189 - Honors First-Year Seminar

Credits 1

Selected topics seminar for new members of the University Honors Program. Focal topics will vary by section, but all seminars will overview student requirements and consider potential benefits and opportunities associated with the program.

Repeat for Credit
N

Requisites
Prerequisite: Admitted to the university honors program or instructor permission.

Typically Offered
Fall, Spring

VAP 788 - Basic and Applied Pharmacokinetics

Credits 3

Provides a conceptual and quantitative understanding of the absorption, distribution, metabolism, and excretion of drugs and factors that influence these processes.

Repeat for Credit
Y

Typically Offered
Fall

Crosslisted
AP 788 Basic & Applied Pharmacokinetics

VAP 802 - Advanced Toxicology

Credits 3-6

Advanced Toxicology

Repeat for Credit
N

Typically Offered
Other

VAP 805 - Cell Physiology

Credits 3

Functions of the animal body are described with a primary focus at the cellular and molecular level with correlations to clinical topics. Course content builds on knowledge of chemistry, biochemistry, physics and biology. Basic physiological and pathophysiological mechanisms are examined in the context of the cell environment, intermediary metabolism and cell signaling.

Repeat for Credit
N

Requisites
First year standing in DVM degree or permission of course instructors

Typically Offered
Fall

VAP 806 - Gross Anatomy I

Credits 6

Gross dissection of the dog with comparative aspects of the cat.

Note
Two hours lecture and nine hours lab a week.

Repeat for Credit
N

Requisites
Prerequisite: First-year standing in College of Veterinary Medicine or consent of the instructor.

Typically Offered
Fall

VAP 807 - Veterinary Systems 1

Credits 6

Microstructure and function of the cardiovascular, endocrine, respiratory, and renal systems of domestic animals with emphasis on physiologic control mechanisms, interrelationships of body systems, and criteria for evaluating animal health.

Repeat for Credit

N

Requisites

Standing as a 1st year veterinary student or equivalent

Typically Offered

Fall

VAP 808 - Introduction to Veterinary Medicine and Biomedical Research: Concepts and Values

Credits 1

This course is intended to provide first-year students an opportunity to experience the depth of veterinary/biomedical research required to advance the practice of veterinary medicine, and advance the field of medicine in general. The students will examine the challenges of conducting 1) foundational and translation research (genetic/genomic and mechanistic research), 2) foundational and applications to clinical research 3) population and observational research (epidemiology, prospective clinical trials, retrospective studies), 4) pharmacologic research (the impact of pharmacology on the biomedical sciences). The students will examine relevant connections, consider conceptual relationships, and critically evaluate integrative issues germane to both the practice of and the innovative progress of veterinary medicine. Faculty members in the Departments of A&P, DM/P, and CS, will present topical overviews, based on their professional experiences. This will be designed to connect and integrate fundamental principles and relationships between research and clinical application. These presentations provide examples of the fundamental requirements for clinical therapies and also provide examples of how innovative science leads to new therapies for long standing clinical disease. Additionally, students will learn the tools required to search relevant topic to their career paths within the medical literature. Finally, drawing on the multidisciplinary literature presented by faculty, students will explore the challenges in conducting genetic/genomic research, using genomic information, implementing research results to clinical practice, as well as addressing the social, legal, and professional policies that are emerging from new research.

Students will be expected to do reading and to complete online worksheets and present their findings/opinions in class. Class time will be devoted to presentations and to discussion of readings and related current events.

Repeat for Credit

N

Typically Offered

Fall

VAP 816 - Gross Anatomy II

Credits 5

Gross dissection of the horse and ruminant with comparative aspects of the pig, laboratory animals, and the chicken.

Note

Three hours lecture and nine hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: VAP 806.

Typically Offered

Spring

VAP 817 - Veterinary Systems 2

Credits 4

Microstructure and function of the reproductive and digestive systems of domestic animals with emphasis on physiologic control mechanisms, interrelationships of body systems, and criteria for evaluating animal health.

Repeat for Credit

N

Requisites

Standing as 1st year veterinary student or equivalent

Typically Offered

Spring

VAP 835 - Animal Care and Welfare

Credits 1

This course will describe the veterinarian's role in protecting the health and welfare of animals. Students will be introduced to the major philosophical positions of animal use. The evolution of animal welfare science will be discussed and students will learn how to assess the welfare of companion, laboratory, zoo and food animals. Common causes of reduced animal welfare and ethical dilemmas will be covered.

Repeat for Credit

N

Typically Offered

Fall

Crosslisted

AP 835 Animal Care and Welfare

VAP 844 - Veterinary Pharmacology I**Credits 4**

The basic principles of pharmacology, the interactions of drugs and living systems including fundamental principles of pharmacokinetics, pharmacodynamics, receptor-coupling, and mechanisms of action. A systems-based approach to drug classes will be emphasized.

Note

Four hours of lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: VAP 804 and VAP 818 or equivalent.

Typically Offered

Fall

VAP 846 - Veterinary Pharmacology II**Credits 2**

The basic principles of pharmacology, the relationship of drug actions and interactions on physiological principles and pathophysiological conditions. Pharmacokinetics, pharmacodynamics, and a systems-based approach to drug classes will be emphasized.

Repeat for Credit

N

Requisites

Prerequisite: Student must have a "C" or higher in VAP 844 and DMP 712.

Typically Offered

Spring

VAP 871 - Toxicology**Credits 3**

Effects of harmful substances on the animal body. Emphasis placed on toxicologic principles and management of the poisoned patient.

Repeat for Credit

N

Requisites

Prerequisite: 3rd year standing in the College of Veterinary Medicine or graduate students in the College of Veterinary Medicine.

Typically Offered

Spring

VAP 888 - Practical Use and Interpretation of Veterinary Scientific Literature**Credits 1**

Designed primarily for veterinary students in the first, second or third year of the DVM curriculum. The course is intended to teach literature search skills, organization of your own literature library, and critical evaluation of clinical reports and research literature. The format is lecture as well as small group and online discussion. Students are required to contribute to classroom and online discussions and to complete written assignments.

Repeat for Credit

Y

Typically Offered

Fall

VAP 891 - A&P Veterinary Medicine Elective Graded

Credits .5-3

Special topics for veterinary students in the disciplines offered by the department.

Note

Lecture or combination lecture with lab.

Repeat for Credit

Y

Requisites

Prerequisite: 1st, 2nd, or 3rd year students in Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VAP 893 - Introduction to Nanomedicine**Credits 1**

This course is a brief introduction to nanomaterials and nanomedicine with a focus on clinical applications of nanotechnology. The course presents basic principles of nanotechnology; current clinical applications of nanomedicine; future horizons in nanomedicine.

Repeat for Credit

N

Typically Offered

Spring

VAP 894 - Comparative Embryology**Credits 1**

An overview of development anatomy as it relates to clinically important developmental defects and/or normal structure and function of common domestic animals.

Repeat for Credit

N

Requisites

Prerequisites: Enrollment in the One Year Master's (non-thesis M.S. in Veterinary Biomedical Science) program or permission of instructor.

Typically Offered

Spring

VAP 897 - Problems in Animal Welfare**Credits 1**

This course will expand on the role of veterinarians in the field of animal welfare. Students will be introduced to the major philosophical positions of animal use. The evolution of animal welfare science will be discussed and students will learn how to assess the welfare of companion, laboratory, zoo and food animals. Contemporary issues in animal welfare will also be explored.

Repeat for Credit

N

Requisites

Recommended Prerequisite: VAP835 or AP835

Typically Offered

Spring

VAP 900 - Advanced Clinical Anatomy and Teaching Practicum**Credits 2**

This 2-week clinical anatomy rotation elective is designed for DVM students seeking advanced knowledge and teaching experience in veterinary anatomy. Participants will enhance their understanding of regional and systemic anatomy through hands-on dissection, journal club presentations, and the development of clinical teaching materials. This course is especially beneficial for those with interests in surgical specialties, radiology, neurology, and emergency medicine.

Repeat for Credit

N

Requisites

DVM 4th Year Standing

Typically Offered

Fall, Spring

VCS 809 - Veterinary Clinical and Professional Skills I**Credits 1**

The course will be taught during the fall semester as a required introductory level course for first year veterinary students. This is the first in a series of foundational courses

designed to introduce students to key clinical skills, including communication and critical thinking, that they will encounter in a clinical setting and to provide students with a problem-based approach to learning.

Repeat for Credit

N

Requisites

Prerequisite: First year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 816 - Veterinary Clinical Skills and Professional Skills II**Credits 1**

The course will be taught during the spring semester as a required introductory level course for first year veterinary students.

The primary objective of the course is to provide students with an opportunity to learn normal animal behavior for the most commonly evaluated large animal species in clinical practice (the horse and the cow); to safely handle and restrain them; and to practice basic physical examination skills. A secondary objective of the course is to introduce students to the basic principles of biosecurity, sterile technique, venipuncture, and intravenous catheterization.

In addition, students will build onto first-semester instruction in clinical communication, written documentation within the medical record, and introductory surgical skills.

The course will include introductory lectures as well as structured and self-directed laboratory sessions that will involve both live animals and non-animal teaching models.

Note

Two 1.5-hour laboratory sessions will occur weekly.

Repeat for Credit

N

Requisites

Prerequisite: VCS 809.

Typically Offered

Spring

VCS 819 - Veterinary Medicine in a Foreign Context**Credits 1**

Lecture and discussion-based course preparing students to enroll in CS 821. Students will investigate agricultural and veterinary medicine in a specific country.

Repeat for Credit

Y

Requisites

Pre-requisite: Commitment to enroll in VCS 821 International Veterinary Study Tours and enrolled as 1st, 2nd, or 3rd year student in the College of Veterinary Medicine. Additional students admitted with discretion of the faculty member leading VCS 821.

Typically Offered

Spring

VCS 820 - Topics in Global Veterinary Medicine**Credits 1**

An overview of the role of veterinarians around the world. Topics include international uses and attitudes about animals, problems the world faces pertaining to livestock production, and social tensions. One hour lecture each week.

Note

One hour lecture each week.

Repeat for Credit

N

Requisites

Prerequisite: 1st or 2nd year standing in the College of Veterinary Medicine, or enrolled as a graduate student with instructor permission.

Typically Offered

Spring

VCS 821 - International Vet Study Tours**Credits 1**

Faculty-led trip for students to explore veterinary medicine in a foreign country. Prior to travel, students will learn

about the country through lectures, research, presentations. During the trip they will interact with nationals in the veterinary profession and experience the culture.

Repeat for Credit

Y

Requisites

Prerequisite: Successful completion of VCS 819 in the semester immediately preceding. Enrolled as a 1st-3rd year or grad student in the College of Vet Med. Additional students admitted with discretion of faculty leading the tour.

Typically Offered

Summer

VCS 822 - Introduction to Sustainable Beef Systems**Credits 1**

This course provides the fundamentals of assessing sustainability in beef production systems through evaluation of aspects of sustainability pillars, people, planet and profit, in each sector of the beef value chain. The course focuses on principles of sustainable food systems, beef cattle production practices, systems thinking, and impacts of food choices.

Repeat for Credit

N

Requisites

Prerequisite: 1st, 2nd, or 3rd Year Standing in the College of Veterinary Medicine.

Typically Offered

Fall

Crosslisted

CS 822

VCS 832 - Antimicrobial Resistance in Bacteria: A One Health Perspective**Credits 1**

This course addresses the concept of One Health which integrates the knowledge of the biological elements necessary for the evolution of antimicrobial resistance (AMR) in bacteria and other factors (animals, humans, environments, socioeconomic features, and behavioral

changes) involved in its emergence and dissemination.

Repeat for Credit

N

Requisites

Prerequisite: 1st, 2nd, or 3rd Year Standing in the College of Veterinary Medicine

Typically Offered

Fall

Crosslisted

CS 832 Antimicrobial Resistance in Bacteria: A One Health Perspective

VCS 839 - Veterinary Clinical and Professional Skills III**Credits 1**

A continuation of Veterinary Clinical and Professional Skills II. Introduces how to perform common diagnostic tests in clinical practice and interpret them. Builds upon basic palpation skills to practice isolating specific tissues and organs. Applies surgical principles to the practice of advanced suture patterns.

Repeat for Credit

N

Requisites

Prerequisite: VCS 809 and VCS 816

Typically Offered

Fall

VCS 840 - Communication with the Agricultural Worker**Credits 2**

An elective course focused on improving communications between veterinarians and animal caretakers in production agriculture and equine industries. The course will use face to face discussions and online seminars in KSOL to teach communications skills with a focus on common terminology and vocabulary necessary for effective communication. Audio-visual teaching utilizing immersion philosophy is utilized to provide the material course work.

Repeat for Credit

N

Requisites

Prerequisite: 2nd or 3rd year standing in the College of Veterinary Medicine or enrolled as a graduate student.

Typically Offered

Fall, Spring

VCS 843 - Introduction to Veterinary Surgery**Credits 2**

The purpose of VCS 843 Introduction to Veterinary Surgery is to introduce the second year veterinary student to small animal surgical principles, specific small animal surgical conditions, their clinical signs, appropriate diagnostic evaluation, surgical treatment, pre- and post-operative care, and complications. Clinical application and reasoning will also be a focus. This course will establish a foundation of knowledge that students will build on in VCS 863 Veterinary Surgery I in the fall semester of the third year.

Repeat for Credit

N

Requisites

2nd Year Standing in the College of Veterinary Medicine

Typically Offered

Spring

VCS 844 - Medicine I**Credits 4**

Consideration of medical and pathophysiologic aspects of diseases affecting the urinary, endocrine, integumentary, respiratory, hemic, and neuromuscular systems.

Note

Four one hour lectures per week.

Repeat for Credit

N

Requisites

Prerequisite: Second-year standing in the College of Veterinary Medicine.

Typically Offered

Spring

VCS 845 - Radiology**Credits 3**

The theory and principles of x-rays, production and interpretation of radiographs and exposure factors, special radiographic methods, film storage and handling, processing, safety measures, and biologic effects of radiation.

Note

Two hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: Second-year standing in the College of Veterinary Medicine.

Typically Offered

Spring

VCS 846 - Veterinary Clinical and Professional IV**Credits 1**

A continuation of Veterinary Clinical and Professional Skills III. Introduces advanced organ-specific examination techniques including otoscopy and ophthalmoscopy. Expands the concepts of diagnostic testing and diagnostic test interpretation. Prepares students for surgical anesthesia and anesthetic monitoring through the use of non-animal teaching models.

Repeat for Credit

N

Requisites

Prerequisites: VCS 809, VCS 816, and VCS 839.

Typically Offered

Spring

VCS 861 - Food Animal Medicine**Credits 4**

A study of the etiology clinical signs, diagnosis, treatment and control of diseases which affect cattle, swine, and sheep.

Note

Four hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 862 - Theriogenology**Credits 3**

Consideration of prevention, diagnosis, and treatment of disease, and maintenance of health and productivity of the genital tract of domestic animals. Three hours of lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in College of Veterinary Medicine or graduate student.

Typically Offered

Fall

VCS 863 - Veterinary Surgery I**Credits 3**

Introduction to the basics of veterinary anesthesia, surgical techniques, and patient management by a systems design. Problems common to all species of domestic animals will be presented to provide foundations of surgical knowledge and experience.

Note

Three hours of lecture.

Repeat for Credit

N

Requisites

Prerequisite: Satisfactory completion of all required second year veterinary courses.

Typically Offered

Fall

VCS 864 - Applied Clinical Skills and Surgical Laboratories**Credits 3**

The VCS 864 Applied Clinical Skills and Surgical Laboratories course is a hands-on live animal laboratory course with multiple objectives. This course teaches basic clinical skills including small animal handling, physical examination, sample collection, diagnostic procedures, patient assessment and management, medical records, and clinical communication. Additionally, the course will teach basics of small animal veterinary anesthesia, surgical techniques, and live animal patient management. Skills taught in this course will build on introductory skills learned in 1st and 2nd year clinical skills courses. The student will progress to performing general anesthesia, surgery (spays and neuters), and perioperative care for humane shelter animals. The skills taught in this course will be used as a framework for students to continue building on during their senior year as they learn to function as effective veterinarians.

Repeat for Credit

N

Requisites

Prerequisite: Concurrent with or successful completion of VCS 863

Typically Offered

Fall

VCS 865 - Exotic Pet Medicine**Credits 2**

Entry-level knowledge base for the species likely to be encountered in a private practice setting including snakes/small reptiles, caged birds, and small mammals (ferrets, gerbils, hamsters, chinchillas).

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 867 - Medicine II**Credits 4**

Consideration of the medical and pathophysiological aspects of diseases affecting the gastrointestinal, cardiovascular, and ophthalmic systems, oncology, and dentistry.

Note

Four one hour lectures per week.

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 868 - Artificial Intelligence in Veterinary Medicine**Credits 1**

This elective course explores the impact of artificial intelligence on the field of medicine, with a focus on veterinary applications. Students will learn about the fundamentals of AI, machine learning, and data science, and how these technologies are used to improve diagnostics, treatment planning, patient monitoring, and overall patient care. The course will also address ethical considerations, regulatory frameworks, and the future of AI in healthcare. Through lectures, case studies, and hands-on projects, students will gain a comprehensive understanding of AI's role in advancing medical and veterinary practices.

Repeat for Credit

N

Requisites

1st, 2nd, or 3rd Year Standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring

VCS 874 - Ethics and Jurisprudence**Credits 1**

Socratic ethics are discussed along with the American Veterinary Medical Association's Code of Ethics and practical situations with a fundamental ethical basis. The Kansas Practice Act is explored as an example of governance in veterinary medicine. The role of animals in humans' well being is addressed along with the philosophy of animal welfare. The law and the practicing veterinarian are discussed with emphasis upon professional liability.

Repeat for Credit

N

Requisites

Prerequisite: Third year standing in College of Veterinary Medicine.

Typically Offered

Spring

VCS 876 - Applied Large Animal Clinical Skills**Credits 1**

Demonstration, instruction and experience in physical examination and diagnostic skills necessary for routine veterinary practice.

Note

DVM Course only

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in the College of Veterinary Medicine.

Typically Offered

Spring

VCS 877 - Clinical Nutrition**Credits 2**

A focus on practical aspects of nutrition as it relates to performance, health and animal well-being of food-producing animals and, programs designed for health and well-being of small animals including exotic animals.

Nutritional aspects of the mechanisms of health and disease are taught primarily at the individual and population level with some molecular and cellular aspects included. Designed for all students to be able to properly nourish animals in their care during their career.

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in the College of Veterinary Medicine or graduate student.

Typically Offered

Spring

Crosslisted

ASI 886 and AP 886

VCS 878 - Veterinary Surgery II

Credits 3

A continuation of Veterinary Surgery I. Introduction to the basics of veterinary anesthesia, surgical techniques, and patient management by a systems design. Problems common to all species of domestic animals will be presented to provide foundations of surgical knowledge and experience.

Note

Three hours lecture.

Repeat for Credit

N

Typically Offered

Spring

VCS 879 - Veterinary Surgery II Laboratory

Credits 1

A continuation of Veterinary Surgery I Lab. Introduction to the basics of veterinary anesthesia, surgical techniques, and patient management by a systems design. Problems common to all species of domestic animals will be presented to provide foundations of surgical knowledge and experience.

Note

One lab per week.

Repeat for Credit

N

Typically Offered

Spring

VCS 880 - Veterinary Business and Professional Development

Credits 1

This course provides a foundation in business management and marketing to prepare veterinary students for success in private veterinary practice. Lectures include personal marketing, business organizational structure, gauging and monitoring production, management practice finance, recruitment, personnel management, effective practice marketing (internal and external), achieving better client satisfaction and retention, and the road to practice ownership.

Repeat for Credit

N

Typically Offered

Spring

VCS 881 - Clinical Pharmacology

Credits 2

Course focuses on the clinical application of drugs in veterinary species. Clinical pharmacologists and clinicians from multiple clinical specialties will focus on commonly used drugs. Students will be expected to review and build upon their previous pharmacology and medicine courses. Emphasis will be placed on administration (including routes, dosing calculations, and methods), avoiding adverse drug reactions and interactions, evaluating patient response, written and verbal client communication, and utilizing reference resources to select and properly use veterinary therapeutics.

Repeat for Credit

N

Requisites

Prerequisite: Third-year standing in College of Veterinary Medicine.

Typically Offered

Spring

VCS 882 - Equine Medicine

Credits 3

A study of the etiology, clinical signs, diagnosis, treatment, and control of common diseases which affect horses.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: VCS 867

Typically Offered

Spring

VCS 890 - CS Veterinary Medicine Elective Aux. (Graded)

Credits 0.5-3

VCS 890 (Variable credit 0.5-3) fall, summer, and spring offering. Special topics for veterinary students in the disciplines offered by the department. Lecture or combination lecture with lab. Continuation of Topics from VCS 891.

Repeat for Credit

Y

Requisites

Prerequisite: 1st, 2nd, or 3rd year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 891 - CS Veterinary Medicine Elective

Credits .5-3

Special topics for veterinary students in the disciplines offered by the department. Topics include:

Beef Production Medicine: The role of the veterinarian in livestock production units, including interactions with producers, nutritionists, investors and others in decision analysis. Emphasis is on the professional services that veterinarians provide to beef production systems.

Emergency Medicine: Presentations of cases in the ICU or cases that were recently seen on emergency. Current literature that is relevant to the case will be discussed.

Advanced Exotic Pet Medicine: Advanced study of the diseases, medicine, and captive management of non-traditional species including companion birds, reptiles, rabbits, ferrets, and rodents.

The Basics of Bovine Theriogenology: This class is designed to provide students enrolled in the veterinary curriculum a very practical knowledge base regarding bovine reproduction.

Equine Medicine: This course is designed to be complementary to CS 710. The material presented in this class will focus on diagnostic procedures and case presentations that will not be covered in the core curriculum.

The Learning Curve of Equine Practice: Covers various aspects of equine practice, not usually covered in traditional didactic lectures, including: equine husbandry, communication issues and insurance, horse colors, genetics, and genetic related diseases, aspects of equine practice and practice management, drug and medication rules for performance horses, and preventative medicine.

Pain Management: Discussion of the mechanisms of pain, certain pain syndromes, and the drugs and techniques available to provide analgesia.

Surgical Skills: Manual surgical skills will be taught using surgical models and cadaver tissues. Students will be taught the following skills and techniques: instrument handling, speed and efficiency, hand ties, ligature under tension, suture patterns, closure under tension, anastomosis and enterotomy technique and excision of circular lesions.

Advanced Concepts in Veterinary Clinical

Anesthesia: The lectures will be divided among topics to enhance student preparation for practical clinical application of anesthetic principles in both small and large animal environments. Topics: anesthetic implications for certain disease states, management of intraoperative complications, and special topics in large animal anesthesia.

Veterinary Management of Sheep and Goats: Topic content is delivered both as online seminars via KSOL and case-based discussions and problem solving exercises in the classroom on herd management, preventive health care, nutrition, medicine, diseases, reproduction, and surgery of sheep and goats.

Veterinary Ultrasonography: Topic content will be delivered both as online seminars via KSOL and case-based discussions. The physics, basic principles of use, and common artifacts of ultrasound will be covered as it relates to veterinary diagnostic imaging. Ultrasound imaging of the thorax (non-cardiac), abdomen, musculoskeletal system, and other areas (eye, thyroid/parathyroid) will be covered, predominantly in small animals. The course will cover both normal and pathologic ultrasound findings.

Applied Small Animal Behavior: Introduction to the commonly encountered canine and feline behavior topics in veterinary medicine. Students will learn how to address these behavioral concerns through behavior modification, desensitization, counter conditioning, and psychopharmacology. An additional goal of the course is to discuss practices that reduce fear in these patients during visits to their veterinarian.

Note

Lecture or combination lecture with lab.

Repeat for Credit

Y

Requisites

Prerequisite: 1st, 2nd, or 3rd year students in Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 892 - CS Veterinary Medicine Elective Cr/NC

Credits .5-3

Special topics for veterinary students in the disciplines offered by the department. Topic Include:

Pre-Clinical Food Animal (Mixed) Practice

Mentorship: Structured one week (45 contact hours) mentorship in a large animal (bovine) practice designed to promote clinical skills training in a private practice setting with practitioners who have expressed an interest in training and mentoring veterinary students.

Pre-Clinical Small Animal Practice Mentorship: Structured one week (45 contact hours) mentorship in a small animal practice designed to promote clinical skills training in a private practice setting with practitioners who have expressed an interest in training and mentoring veterinary students.

Practicing Veterinary Medicine in a Multicultural Society: Diversity in the broadest sense of the word (cultural, racial, sexual, gender, age, religious, etc.) will be explored in the context of the practice of veterinary medicine. Understanding diversity issues can positively affect the bottom line of nearly every veterinary practice.

Pre-Clinical Exotics/Zoological Practice

Mentorship: Structured one week (45 contact hours) mentorship in an exotics/zoological practice designed to promote clinical skills training in a private practice setting with practitioners who have expressed an interest in training and mentoring veterinary students.

Note

Lecture or combination lecture with lab.

Repeat for Credit

Y

Requisites

Prerequisite: 1st, 2nd, or 3rd Year students in Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 900 - Veterinary Radiology and Diagnostic Imaging

Credits 3

Radiographic, ultrasonographic and nuclear imaging in the clinical setting, with emphasis on making/identifying images of diagnostic quality, interpretation, indications for imaging, and radiation safety.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 901 - Clinical Externship and/or Programmed Study

Credits 0-6

Provides the professional student with the opportunity to

study with specialists not available at Kansas State University or in unique areas of veterinary medical practice or research.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine and the approval of the externship or program of study by the course coordinator.

Typically Offered

Fall, Spring, Summer

VCS 903 - Laboratory Animal Medicine

Credits 2

The study of laboratory animal medicine or comparative medicine to include colony health monitoring, preventive medicine, surgery, investigator support, and regulatory oversight.

Repeat for Credit

N

Requisites

Prerequisite: DMP 759 or requires coordinator approval. Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 904 - Clinical Anesthesia

Credits 3

Practical instruction in the skills and techniques used in the practice of clinical veterinary anesthesia of both large and small animals.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 905 - Zoo, Exotic, Wildlife, and Avian Medicine and Surgery

Credits 3

Study of exotic, wildlife, and zoo animal medicine through participation in the clinical service in the Veterinary Health Center. Problem solving, differential diagnosis, diagnostic procedures, and medical and surgical therapy of non-traditional animals will be emphasized. Annual preventive medicine, medical procedures, and surgical procedures are also routinely performed at the City of Manhattan Sunset Zoo. Occasional medical and surgical procedures are performed in other zoos around the area.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 906 - Ophthalmology

Credits 2

The study of the surgery and medical diagnosis and treatment of ocular disease in animals in the setting of the veterinary medical center. Problem solving, differential diagnosis, diagnostic procedures and medical and surgical therapy will be emphasized using veterinary patients.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 907 - Supplemental Zoo, Exotic, Wildlife and Avian Medicine and Surgery

Credits 3

Additional training in the study of exotic, wildlife, and zoo animal medicine and surgery through participation in the clinical service in the Veterinary Health Center. Problem

solving, differential diagnosis, diagnostic procedures, and medical and surgical therapy of non-traditional animals will be emphasized. Annual preventative medicine, medical procedures, and surgical procedures are also routinely performed at the City of Manhattan Sunset Zoo. Occasional medical and surgical procedures are performed in other zoos around the area.

Repeat for Credit

Y

Requisites

Prerequisite: 4th year standing in the College of Veterinary Medicine

Typically Offered

Fall, Spring, Summer

VCS 909 - Urgent Care

Credits 1

Additional training and skills in triaging and managing patients in need of urgent or emergent care. Examples include wounds, fractures, trauma, cardiovascular shock, respiratory distress, and other urgent/emergent conditions. This will be conducted through lecture/discussion topic rounds and case-based learning.

Repeat for Credit

Y

Requisites

4th Year Standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 910 - Livestock Local Practice

Credits 2

A study of the role of the veterinarian in the practice of clinical medicine in livestock production units. Students will work under faculty supervision in ambulatory and local practice settings.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 912 - Livestock Medicine and Surgery

Credits 2

A study of individual livestock medicine and surgery. Students will work under faculty supervision in an in-house setting.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 913 - Advanced Feedlot Production Management

Credits 2

Students desiring feedlot/stocker production training. Focus on effects of nutrition, preventative medicine, environment, personnel training and other issues on the health of growing/finishing cattle.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Summer

VCS 915 - Advanced Cow-Calf Production Management

Credits 1

For students desiring in-depth cow-calf production training including management and assessment of production data, nutrition and ration balancing, reproductive strategies, quality assurance and economic and Standardized Performance Analysis of cow-calf enterprises.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Spring, Summer

VCS 917 - Advanced Rural Food Animal Business Management**Credits 1**

An elective course that incorporates economic and food animal practice management skills. Course will focus on business aspects of agricultural industries and skills to manage a food animal practice.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Spring

VCS 919 - Food Animal Bull Reproduction**Credits 2**

Students will get hands-on experience and become competent performing a complete Breeding Soundness Exam. Other reproductive topics will be covered.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring

VCS 920 - Equine Medicine**Credits 2**

This course will offer general exposure to equine internal medicine and theriogenology. Students will be responsible for diagnoses, treatment and nursing care of out-patients, in-patients, and emergency duties.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 921 - Clinical Equine Theriogenology**Credits 2**

Students will participate in routine procedures that develop skills in handling horses, rectal exams, ultrasonography, semen collection, artificial insemination, uterine therapies and minor surgical procedures.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Spring, Summer

VCS 922 - Equine Surgery**Credits 2**

This course will offer general exposure to equine surgery and theriogenology. Students will be responsible for diagnoses, treatment, and nursing care of out-patients, in-patients, and emergency duties.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 923 - Advanced Equine Studies

Credits 4

Students will have opportunities for routine and advanced clinical skills training and case management. Course discussions and case presentations will be targeted for the equine interested student and will therefore present advanced material; case discussion and rounds materials.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 924 - Equine Field Service

Credits 2

This course will offer general exposure to equine field service and theriogenology. Students will be responsible for diagnoses, treatment, and nursing care of out-patients, in-patients and emergency duties.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 925 - Supplemental Equine

Credits 2-4

An opportunity for students to pursue additional equine studies (medicine, surgery, etc.) in depth and assume substantial responsibility for care of hospitalized cases. Or students will have option to conduct research and present a seminar on a medicine or surgical subspecialty and pursue a special problem.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 930 - Small Animal Internal Medicine

Credits 3

The study of internal medicine in the setting of the Veterinary Health Center. Students will be engaged in the diagnosis and management of complex cases referred to the internal medicine service.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 931 - Clinical Oncology

Credits 2

The approach to diagnosis and treatment of cancer-bearing patients will be emphasized. Skills to master include fine needle aspirates and basic cytology, biopsy techniques (punch, wedge, pinch and tru-cut), bone marrow aspirate and core biopsy procedures and chemotherapy administration. A greater depth of understanding of the biologic behavior and treatment options of commonly seen tumor types (lymphoma, mast cell tumors, hemangiosarcoma, osteosarcoma, etc.) and chemotherapy safety will be emphasized. Medical management of cancer-related problems as well as treatment of therapy-induced side effects will also be covered.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 932 - Small Animal General Medicine

Credits 3

The study of preventative medicine, general practice medicine, and specialty medicine. Students spend three weeks with the Pet Health Center learning the various aspects of outpatient services.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 933 - Dermatology/Medicine

Credits 2

Designed to emphasize dermatology diagnostic work-up and management of dermatologic cases. May include proper techniques for performing procedures such as skin scraping, bacterial and fungal culturing, performing cytology, obtaining skin biopsies, ear clearing and trichography.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 934 - Clinical Small Animal Soft Tissue Surgery

Credits 3

This course is designed to train senior or elective veterinary students in the diagnosis and treatment of small animal soft tissue and general surgical diseases through participation in the Small Animal Soft Tissue Service of the Veterinary Medical Teaching Hospital.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the KSU College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 935 - Comparative Cardiology

Credits 2

Designed to expose students to the cardiovascular system of domestic animals, emphasizing clinical management and understanding of common congenital and acquired cardiac diseases.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 936 - Clinical Small Animal Orthopedic Surgery

Credits 3

Course is designed to train senior or elective veterinary students in diagnosis/treatment of small animal orthopedic surgical diseases through the Orthopedic Service of the Veterinary Medical Teaching Hospital.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 937 - Shelter Medicine

Credits 2

The rotation will be a combination of in-class and laboratory exercises in Manhattan, and hands-on

experiences at regional shelters. Topics include population medicine, infectious disease recognition and control, surgical sterilization, behavioral testing, and legal issues common to shelter settings.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 938 - General Dentistry

Credits 1

Skills and concepts common to general dentistry practice in the feline and canine, pre-operative exams, day-long wet lab to take and interpret digital intraoral radiographs, extract teeth, and perform dental nerve blocks. Also may participate in the evaluation, diagnosis, and treatment of primary care patients.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 939 - Supplemental Clinical Small Animal Soft Tissue Surgery

Credits 3

Additional training in the diagnosis and treatment of small animal soft tissue and general surgical diseases through participation in the Small Animal Soft Tissue Service of the Veterinary Medical Teaching Hospital.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 940 - Small Animal Emergency Rotation

Credits 2

Enhanced training in the management of small animal patients presented to the emergency service. Evaluation, management, and monitoring of small animal patients in the intensive care unit.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 941 - Supplemental Small Animal Internal Medicine

Credits 3

Additional training in the diagnosis, management and treatment of dogs and cats referred to the Internal Medicine service at the Veterinary Health Center.

Note

This course will be scheduled after your core Internal Medicine rotation.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 942 - Advanced Surgical Experience

Credits 2

Designed to increase exposure to soft tissue surgical theories and techniques by providing both hands on surgical experience on cadavers and literature review skills.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring

VCS 943 - Supplemental Clinical Small Animal Orthopedic Surgery**Credits 3**

Additional training in the diagnosis and treatment of small animal orthopedic surgical diseases through participation in the Small Animal Orthopedic Service of the Veterinary Medical Teaching hospital.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the KSU College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 944 - Supplemental Small Animal Emergency**Credits 2-4**

An opportunity to pursue additional training in the management of small animal patients presented to the emergency services. Evaluation, management, and monitoring of small animal patients in the intensive care unit.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 945 - Supplemental Dentistry for Small Animals**Credits 1**

A one week course where students will be instructed through lecture, cadaver labs, and live animal care. Topics covered will include dental evaluation techniques, instrumentation, dental radiography, tooth extraction techniques and regional anesthesia. Objectives of the course will be to provide 4th year students with additional training of basic dentistry knowledge and experience performing oral exams, dental probing, scaling, polishing, radiographs and tooth extractions.

Note

Vet Course

Repeat for Credit

N

Requisites

Prerequisite: 4th Year Standing in the College of Veterinary Medicine and successful completion of CS 771 General Dentistry.

Typically Offered

Fall, Spring

VCS 946 - Shelter Operations Consultation**Credits 1**

This rotation will expose veterinary students to formal shelter consultation procedures. Students will learn how to take a critical look at the health of animal shelters to identify what is being done well and what needs to be improved. Students will also learn how to formulate recommendations in a way that does not overwhelm the administration of the shelters and can easily be implemented in a step-wise fashion.

Repeat for Credit

N

Requisites

Prerequisite: CS 781 Shelter Medicine and 4th Year Standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VCS 947 - Advanced Bovine Palpation**Credits 2**

Provide numerous opportunities for the student to learn how to identify the different structures of the bovine reproductive tract through rectal palpation and transrectal ultrasound, accurately diagnose pregnancy both manually and via ultraonography, and to identify various bovine reproductive abnormalities.

Repeat for Credit

N

Requisites

Prerequisite: VCS 891 Topics in Bovine Palpation Techniques and Reproductive Evaluation and 4th Year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VCS 948 - Supplemental Small Animal General Medicine

Credits 3

Additional training in the study of preventative medicine, general practice medicine, and specialty medicine through participation in the Small Animal General Medicine Service in the Veterinary Health Center.

Repeat for Credit

Y

Requisites

Fourth-year standing in the College of Veterinary Medicine

Typically Offered

Fall, Spring, Summer

VCS 949 - Shelter Medicine - Community Outreach

Credits 1

Designed to give students an opportunity to build practice skills in a community outreach setting. This one week elective course will introduce students to access to care issues and prepare them to deliver veterinary services in socioeconomically diverse settings. The rotation will consist of in-class lessons and discussion followed by outreach clinics. Clinics will primarily focus on wellness exams, preventative medicine and treatment of routine medical conditions.

Repeat for Credit

Y

Requisites

Prerequisite: 4th Year Standing in College of Veterinary Medicine

Typically Offered

Fall, Spring, Summer

VCS 950 - Problems in Medicine or Surgery

Credits 1-9

The course provides for the study of medical or surgical problems. The student, in conference with the major professor, outlines the methodology and procedures, conducts the study, and prepares a detailed report.

Repeat for Credit

Y

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VDMP 800 - Veterinary Career Development

Credits 0

Introduction to career opportunities in veterinary medicine.

Note

A required zero-credit class. No tuition is charged.

Repeat for Credit

N

Requisites

1st year standing in the College of Veterinary Medicine.

Typically Offered

Fall

VDMP 811 - Clinical Pathology I

Credits 2

Principles, application and interpretation of clinical laboratory procedures in clinical cases.

1 credit lecture / 1 credit lab

Repeat for Credit

N

Requisites

Corequisite: Current enrollment in the DVM 1st year curriculum

Typically Offered

Spring

VDMP 814 - Veterinary Bacteriology & Mycology

Credits 3

Morphology, biology and classification of pathogenic bacteria and fungi and their relation to the causes of disease.

Note

Three hours of lecture; moving one semester forward in curriculum and dropping laboratory portion.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 255

Typically Offered

Spring

VDMP 816 - Trade and Agricultural Health

Credits 2

This course considers the multilateral trading system as it relates to food safety, food security, animal health, plant health, and international cooperation. The course content will be of value to students interested in food safety and security, epidemiology, public health, agriculture, food science, security studies, political science, agricultural economics, veterinary medicine, and international relations.

Repeat for Credit

N

Typically Offered

Spring

VDMP 817 - Principles of Veterinary Immunology

Credits 3

Innate and adaptive defense mechanisms in domestic animals. Topics include vaccinology, immunopathology, autoimmunity, immunodeficiency, and immunomodulation.

Repeat for Credit

N

Requisites

Prerequisite: BIOCH 521 and BIOL 255.

Typically Offered

Spring

VDMP 818 - Veterinary Epidemiology

Credits 2

Introduction to the principles and methods of veterinary epidemiology: emphasizing how diseases affect populations (and associated implications for individuals), and application to disease diagnosis, treatment, prevention, and control.

Repeat for Credit

N

Typically Offered

Spring

Crosslisted

MPH 708

VDMP 831 - Veterinary Virology

Credits 3

Morphology, biology, and classification of viruses and their relation to the causes of disease.

Veterinary Virology is a 3 credit lecture course that is designed for veterinary students in the second year of the professional curriculum. The course provides basic and fundamental knowledge on the classification, pathogenesis, and diagnosis of viral pathogens affecting common veterinary species, including ovine, caprine, feline, canine, equine, bovine, avian, and porcine species. In addition, the course is designed to provide adequate knowledge and training for veterinarians in practice on the prevention and

management of these viral diseases.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: VDMP 817.

Typically Offered

Fall

VDMP 832 - General Pathology

Credits 4

Etiology, pathogenesis, lesions, and termination of processes of disease, including inflammation, necrosis, regeneration, oncology, and disturbances of metabolism, circulation, and growth.

Note

Three hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AP 806, AP 816 and AP 810.

Typically Offered

Fall

VDMP 834 - Veterinary Parasitology

Credits 4

Study of the helminth, arthropod, and protozoan parasites of companion and food animals. Emphases are on diagnosis, clinical signs, lesions, treatment, control epidemiology, and public health aspects of parasitic disease.

Repeat for Credit

N

Requisites

Prerequisite: AP 810, AP 804, AP 818 and DMP 817 & DMP 818. Must be 2nd yr student in the Veterinary Curriculum.

Typically Offered

Fall

VDMP 835 - Clinical Pathology II

Credits 3

Principles, application and interpretation of clinical laboratory procedures in clinical cases

Two credits lecture, 1 credit lab.

Repeat for Credit

N

Requisites

Prerequisite: VDMP 811 Clinical Pathology I

Typically Offered

Fall

VDMP 841 - Veterinary Public Health

Credits 2

The linkages between human health and animal health and production. Topics include zoonotic disease, emerging and exotic animal diseases, disaster preparedness, regulatory and community health issues focusing on the role of the veterinarian in all.

Note

Two hours lecture per week.

Repeat for Credit

N

Requisites

Prerequisite: Second-year standing in the College of Veterinary Medicine and VDMP 818.

Typically Offered

Spring

VDMP 857 - Systemic Pathology

Credits 5

Pathology of the organ systems of domestic animals including gross and microscopic study of lesions.

Note

Three hours lecture and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: VDMP 832.

Typically Offered

Spring

VDMP 888 - Globalization, Cooperation, & the Food Trade**Credits 1**

This course will focus on issues and topics including, but not limited to, disputes in the international agricultural and food trade, new concepts such as Food and Agriculture Security, and the food-related challenges faced by wealthy as well as economically poor societies. The course will also address such important topics as the roles played by innovation and investment in the agricultural and food system, the importance of cross-border cooperation in regulation and trade, and the accomplishments of public health and trade policy thought leaders across history.

Repeat for Credit

N

Typically Offered

Fall, Spring

VDMP 891 - DMP Veterinary Medicine Elective**Credits 1-3**

Special topics for veterinary students in the disciplines offered by the department, including: Immunology, Parasitology, Microbiology, Toxicology, Pathology, Epidemiology, Biosafety and Biosecurity, Herd Disease Outbreak Investigation Techniques, Laboratory Animal Science, Laboratory Diagnosis, and Exotoxicology.

Note

Lecture or combination lecture with lab.

Repeat for Credit

Y

Requisites

Prerequisite: 1st, 2nd, or 3rd year students in Veterinary Medicine.

Typically Offered

Fall, Spring

VDMP 902 - Diagnostic Medicine**Credits 2**

Practical experience in necropsy procedures and laboratory findings.

Repeat for Credit

N

Requisites

Prerequisite: Fourth-year standing in the College of Veterinary Medicine.

Typically Offered

Fall, Spring, Summer

VDMP 911 - Dairy Production Medicine**Credits 3**

This course will be conducted using both in-class discussions and field experiences on Kansas dairies. The discussion portion will incorporate about 60% of class time, and field experiences 40%.

Repeat for Credit

N

Requisites

Prerequisite: 4th year standing in the College of Ve

Typically Offered

Other

WOEM 201 - Firearms, Cartridges and Ballistics**Credits 1**

This course will cover the types and functions of firearms used in hunting/shooting sports to include rifles, shotguns and handguns. Basic firearms maintenance will also be covered in this course.

Note

Class held off campus. Minimum 15 contact hours.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Fall

WOEM 202 - Rifle and Handgun Range Design, Construction and Operations

Credits 1

This course covers the design and construction of rifle/handgun shooting ranges based on national standards. The course will also cover operational issues including events planning and implementation.

Note

Class held off campus at Fancy Creek State Shooting Range over a weekend. Minimum 15 contact hours.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Fall

WOEM 203 - Bowhunting Equipment and Skills

Credits 1

This course covers the bowhunting equipment currently used for hunting. Bowhunting skills to include distance estimation, shot placement, etc. are also covered in this course.

Note

Class held off campus at Fancy Creek State Shooting Range over a weekend. Minimum 15 contact hours.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Fall

WOEM 205 - Sporting Clays Range Development and Operations

Credits 1

This course will cover the history and present day rules of sporting clays, the development of sporting clays ranges and their ongoing operations and maintenance.

Note

Class held off campus at Flint Oak Hunting/Shooting Resort, Fall River, Kansas over a weekend. Minimum 15 contact hours.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Spring

WOEM 206 - Trap and Skeet Range Development and Operations

Credits 1

This course will cover the development of "trap" and "skeet" shooting ranges. Operating principles will be covered to include staffing, event planning and implementation.

Note

Class held off campus at Flint Oak Hunting/Shooting Resort, Fall River, Kansas, over a weekend. Minimum 15 contact hours.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Spring

WOEM 250 - Introduction to Wildlife and Outdoor Enterprise Management

Credits 1

This course covers the wildlife and outdoor enterprise management business and profession in North America and worldwide.

Note

One hour recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

WOEM 350 - Fauna and Flora of the Great Plains

Credits 3

Identification, natural history, and distributions of fauna and flora species occurring in the Great Plains.

Repeat for Credit

N

Requisites

Prerequisites: BIOL 101 or BIOL 198.

Typically Offered

Fall

K-State 8

Natural and Physical Sciences

WOEM 400 - Pond and Sportfish Management

Credits 3

Examines principles to manage ponds and recreational sportfish populations in North America including: pond design, construction, and maintenance, sportfish stocking

and harvesting, life history of common species, fish habitat requirements, aquatic vegetation identification and control, and fundamentals of operating aquatic guiding operations.

Note

Two one-hour lectures and one three-hour lab per week. Field trips required.

Repeat for Credit

N

Requisites

Prerequisite: Available only to Wildlife and Outdoor Enterprise Management and Division of Biology majors.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

WOEM 495 - Undergraduate Research in Wildlife and Outdoor Enterprise Management

Credits 0-3

Undergraduate students work with faculty mentors on projects involving various elements of research in WOEM including identifying a problem, designing and conducting experiments, interpreting and communicating the research results. The completed project must be presented at a professional forum, and students are required to write a final project report o

Note

Instructor permission

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

WOEM 555 - Big Game Management

Credits 3

Application of practices to manage North American big game species including harvest management, land management, ethics, laws, species' habitat requirements, natural history, daily and seasonal activities of each species, socioeconomic factors, and basics of managing a hunting operation.

Note

Two hours lecture and two hours lab a week. Field trips required.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 101 or BIOL 198

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

WOEM 560 - Upland Game Bird Management**Credits 3**

Application of practices to manage upland game birds in North America to include: harvest management, land management, ethics, laws, species' habitat requirements, daily and seasonal activities of each species, natural history, socioeconomic factors, and basics of managing a hunting operation.

Note

One weekend field trip required. Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 101 or BIOL 198

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Historical Perspectives

WOEM 561 - Waterfowl and Wetlands Management**Credits 3**

This course explores the natural history of waterfowl and wetland birds and habitat management. It includes basic information on the habitat requirements, management techniques, ranges, migration patterns, history, problems, diseases, and identification of the waterfowl resources of North America. Professional principles and practices associated with hunting waterfowl species in North America to include: ethics, laws, species' habitat requirements, and daily and seasonal activities of each species, methods of harvest, dog handling, post-harvest handling and clientele interactions. Includes the following success skills: Communicates Effectively and Maintains Professional Skills and Attitudes.

Note

Two one hour lectures and one two hour lab per week.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 101 or BIOL 198

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

WOEM 562 - Advanced Wildlife Habitat Management**Credits 4**

Theory and practice of managing terrestrial and aquatic vegetation for wildlife production.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 333.

Typically Offered

Fall

WOEM 570 - Internship for Wildlife and Outdoor Enterprise Management**Credits 6-10**

Intensive, paid practical experience with an approved hunting and/or shooting sports and/or fishing business. This is a three to seven month continuous experience.

Repeat for Credit

N

Requisites

Prerequisite: Available only to students majoring in Wildlife & Outdoor Enterprise Management.

Typically Offered

Fall, Spring, Summer

WOEM 590 - Problems in Wildlife and Outdoor Enterprise Management

Credits 0-6

Independent study and/or research project development guided by faculty in Wildlife and Outdoor Management.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

WOEM 595 - Wildlife and Outdoor Enterprise Management Senior Seminar

Credits 1

This course will be used as a capstone course for the Wildlife and Outdoor Enterprise Management curriculum; to include case studies and field experience reviews.

Note

One hour recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing. Available only to Wildlife and Outdoor Enterprise Management majors.

Typically Offered

Spring

WOEM 596 - Wildlife and Outdoor Enterprise Management Study Abroad

Credits 3

Seminar and travel course designed to prepare students before an international study abroad experience focused on several facets of wildlife and conservation, natural resources, diseases, and land management research. Upon completion of travel, students will analyze, critique, and report their experiences. Course will focus on appropriate oral and written documentation of the experience.

Note

Instructor permission

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

WOEM 620 - Human-Wildlife Conflicts

Credits 3

This course explores the theory and practice of assessing and controlling damage done by wild and feral vertebrate animals, especially mammals and birds. Content covers the philosophical, biological, and practical basis for managing human-wildlife conflicts. It includes basic information on use of traps, toxicants, repellents, exclusion and other wildlife control methods. Emphasis is on protecting agricultural crops and livestock, forest resources, and property.

Repeat for Credit

N

Requisites

Prerequisite: BIOL 198

Typically Offered

Spring-Odd Years

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

WOEM 855 - Resource Selection Methods and Theory

Credits 3

Develops graduate students' knowledge and application of

theory and methods used to evaluate the resource selection and distribution of wildlife and plant species.

Repeat for Credit

N

Typically Offered

The Kansas State University College of Agriculture is a dynamic, student-friendly college with a diverse offering of outstanding academic programs integrated with nationally recognized research programs. The College encompasses much more than traditional production agriculture; so, whether your interests range from the biosciences to food systems, or from environmental management to running a multi-million dollar agri-business, the K-State College of Agriculture has a program that will help you meet your objectives and prepare you for a multitude of career opportunities. Our outstanding faculty and staff are committed to student success and helping achieve future career goals.

Doctor of Philosophy

Food Science (PHD)

K-State's interdepartmental Food Science graduate program is part of the Food Science Institute which includes graduate faculty housed in five colleges and eleven departments. The program offers a Ph.D. degree on campus only.

The program provides a variety of research opportunities in the field of food science. Research emphasis includes food chemistry, food microbiology, food safety, sensory analysis, food processing, and food engineering. The program also provides opportunities to work with several food commodities including: cereal; dairy; meats and poultry; fruits and vegetables.

Admission Requirements

Students who hold a master's degree may request transfer of up to 30 hours of that degree toward the 90 credits hours required for the Ph.D.

When should I apply?

Applications should be made at the beginning of the previous semester, and preferably earlier to ensure availability of a major professor. Admission to the program is highly competitive.

- The international student deadline for Fall semester application submission is December 15.
- The international student deadline for Spring semester application submission is June 15.
- The domestic student deadline for Fall semester application submission is February 1.
- The domestic student deadline for Spring semester application submission is September 15.
- The online student deadline for Fall semester application submission is April 15.
- The online student deadline for Spring semester application submission is September 15.

What will I have to submit?

- A completed online application
- Three letters of recommendation
- Official transcripts of all previous college work
- A short statement of objectives
- Graduate Record Examination (GRE) general test scores are required
- Students may submit a current transcript and, if admitted, will receive provisional acceptance pending submission of an official transcript showing completion of a bachelor's degree, or M.S. degree for doctoral applicants.

Are there any special requirements for international students?

International students must also submit the following:

- TOEFL score of at least 577 (paper), 90 (IBT), 7.0 (IELTS) or evidence of a degree from a U.S. university
- Complete financial form and evidence of financial support for entire graduate training
- Ensure sections 1, 2, and 3 are filled out completely on the affidavit. It must include the official bank seal and signature of the bank official. A certificate of deposit or a bank statement is not acceptable to fulfill this requirement.

Course Requirements

Course requirements for the program of study will be evaluated by the student's supervisory committee. However, students are expected to select courses that provide adequate coverage in several food areas, with primary emphasis in one or more areas. The chairman of the Food Science Graduate Program must approve members of the student's supervisory committee and the program of study.

The M.S./Ph.D. program usually includes courses in biochemistry, food chemistry, microbiology, food processing, food engineering, and statistics. For the Ph.D. degree, at least 90 semester hours is required including a dissertation representing at least 30 hours of research credit. In addition, Ph.D. students must complete 24 hours of credit within a 12-month period (residence requirement). Of these 24 hours, at least 12 hours must be in graduate-level courses, and two credits of food science graduate seminar shall be included. There is no foreign language requirement.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Genetics (PHD)

The program is diverse and includes faculty from the following Divisions and Departments:

Agronomy
Animal Science & Industry
Biochemistry & Molecular Biophysics
Biology
Entomology
Horticulture & Natural Resources
Plant Pathology
Statistics

As a result, research opportunities are diverse and include plant and animal breeding, population and evolutionary genetics, quantitative genetics, molecular and developmental genetics, and genomics and bioinformatics. Interdisciplinary interactions are fostered and encouraged based upon a common interest in genetics. Such interactions often bridge basic and applied genetics and merge diverse fields such as agriculture and computer sciences. Thus, the Genetics Graduate Program offers students a truly interdisciplinary and interactive environment in which to pursue their scientific interests.

After meeting the core curriculum requirements, students in the program are encouraged to choose an emphasis, which enables them to specialize in a particular subdiscipline of genetics. At present, the following emphases are available: Arthropod Genetics; Genetics of Plant-Microbe Interactions; Molecular, Cellular, and Developmental Genetics; and Quantitative Genetics. These tracks have been designed so that there is significant overlap in coursework.

Admission Requirements

Course Requirements

Required Courses

Genetics Program students are also required to meet the seminar requirements of the students in their host departments.

A minimum of 90 credits is required, with typical course programs of 25 to 40 credit hours. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate. Courses must include:

- A statistics course (700 level or higher)
- A biochemistry class (700 level or higher)
- A course in population genetics (700 level or higher)
- BIOL 675 - Genetics of Microorganisms Credits: 3
- BIOL 705 - Eukaryotic Genetics Credits: 3

Additional courses required for the PhD degree depend on the emphasis of the degree program:

Molecular, cellular and developmental genetics emphasis

PhD students in the Molecular, Cellular and Developmental Genetics emphasis must take two or more of the following courses:

- BIOCH 907 - Advanced Topics in Insect Biochemistry Credits: 3
- BIOCH 920 - Nucleic Acids Credits: 3
- BIOL 707 - Advanced Cell Biology Credits: 3
- BIOL 860 - Modern Molecular Approaches Credits: 3
- BIOL 868 - Advanced Cellular and Developmental Biology Credits: 3
- BIOL 890 - Advanced Topics in Biology Credits: 1-6
- PLPTH 880 - Plant Molecular Biology Credits: 3

Genetics of plant-microbe interactions emphasis

PhD students in Genetics of Plant-Microbe Interactions emphasis must take two or more of the following courses:

- PLPTH 732 - Introduction to Plant Resistance to Pests Credits: 2
- PLPTH 755 - Plant Resistance to Diseases Credits: 2
- PLPTH 880 - Plant Molecular Biology Credits: 3
- PLPTH 905 - Ecology and Epidemiology of Plant Pathogens Credits: 3
- PLPTH 910 - Molecular Plant-Microbe Interactions Credits: 3
- PLPTH 927 - Fungal Genetics Credits: 3

Arthropod genetics emphasis

PhD students in the Arthropod Genetics emphasis must take two or more of the following courses:

- BIOCH 907 - Advanced Topics in Insect Biochemistry Credits: 3
- ENTOM 799 - Problems in Entomology Credits: 1-18
- ENTOM 830 - Molecular Entomology Credits: 2
- ENTOM 875 - Insect Physiology Credits: 3
- ENTOM 860 - Insect Genetics Credits: 3
- ENTOM 930 - Topics in Entomology Credits: 1-9
- PLPTH 732 - Introduction to Plant Resistance to Pests Credits: 2

Quantitative genetics emphasis

PhD students in the Quantitative Genetics emphasis must take two or more of the following courses:

- BIOL 890 - Top/Ecology of Fungi
- BIOL 890 - Top/Ecology of Genomics
- AGRON 610 - Biotechnology Credits: 3
- AGRON 630 - Crop Improvement and Biotechnology Credits: 3
- AGRON 680 - Plant Genetics Credits: 3
- AGRON 860 - Applied Plant Breeding Credits: 3
- AGRON 970 - Advanced Plant Breeding I Credits: 3
- AGRON 980 - Genomic Analysis for Crop Improvement Credits: 3
- ASI 655 - Behavior of Domestic Animals Credits: 3
- ASI 749 - Advanced Animal Breeding Credits: 3
- BIOL 604 - Biology of the Fungi Credits: 3
- BIOL 870 - Advanced Plant Systematics Credits: 4
- BIOL 875 - Evolutionary Ecology Credits: 3
- BIOL 890 - Advanced Topics in Biology Credits: 1-6
- ENTOM 930 - Topics in Entomology Credits: 1-9
- PLPTH 610 - Biotechnology Credits: 3
- PLPTH 905 - Ecology and Epidemiology of Plant Pathogens Credits: 3
- PLPTH 915 - Advanced Plant Genetics Credits: 3

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Food Science (MS)

K-State's interdepartmental Food Science graduate program offers a Master's degree with a report or thesis option that can be completed on campus or via online education.

[Click here to view the Food Science Institute page.](#)

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Thesis Option Courses

- Minimum of 30 credit hours.

- At least 24 course credit hours.
- At least 18 hours at 700 level including FDSCI 850 Graduate Seminar and 6 credit hours of FDSCI 899.

Report Option Courses

- Minimum of 30 credit hours.
- At least 28 course credit hours.
- At least 18 hours at 700 level including FDSCI 850 Graduate Seminar and 2 credit hours of FDSCI 898.

Coursework Only Option Courses

- Minimum of 34 credit hours.
- 20-22 core credits.
- At least 18 hours at 700 level.

The core courses as outlined below are to ensure that the student possesses the critical graduate level food science knowledge and communication skills required.

Required Courses (20-22 credit hours):

Block A- Required Core Courses (12 credit hours):

- ENGL 758 - Scientific Communication **Credits: 3**
- OR**
- AGCOM 810 - Scientific Communication **Credits: 3**
- FDSCI 600 - Food Microbiology **Credits: 2**
- FDSCI 815 - Advanced Food Chemistry **Credits: 3**
- FDSCI 850 - Food Science Graduate Seminar **Credits: 1**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Block B- Must take at least 3 out of 5 courses listed below (8-10 credit hours):

- SENS 701 - Sensory Analysis **Credits: 3**
- FDSCI 690 - Principles of HACCP and Preventive Controls for Human Food **Credits: 3**
- FDSCI 695 - Quality Assurance of Food Products **Credits: 3**
- FDSCI 725 - Food Analysis **Credits: 3**
- FDSCI 740 - Research and Development of Food Products **Credits: 3**

Elective Courses (12-14 credit hours)

* May include courses from Block B

Note

It is possible that a student may already have taken one or more of these courses or their equivalent on another degree. Therefore, the graduate advisory committee will determine course substitution as needed.

Total Hours Required for Master's: 30-34

Genetics (MS)

The Genetics graduate program combines a range of genetics or genetics-related courses offered by various departments at Kansas State University with an intensive original research experience that leads to the M.S. degree. The required core of genetics courses cover the genetics of organisms from throughout the Tree of Life (microorganisms, eukaryotes) as well as important quantitative and conceptual genetics topics (population genetics). Elective courses span a wide range of courses that include genetics, and include specialized genetics topics, genomics and bioinformatics courses, and applied genetics courses that are more study-system specific.

For the Genetics M.S. thesis option, the student must take 30 total credits, including at least 22 credits of coursework, and complete and defend a thesis.

Admission Requirements

All students entering the M.S program should have a background in basic Mendelian genetics and molecular genetics and have at minimum a B average in these courses. A preference is given to applicants with some experience in genetics-related research.

Questions about this degree program, the degree requirements and admissions requirements can be directed to genetics@ksu.edu. Emails to this address will be received by the Chair of the Genetics Program, the Graduate Program Director, and the Chair of the Genetics Admissions Committee.

- BIOL 675 - Genetics of Microorganisms **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**

Course Requirements

Required Courses

A minimum of 15 graduate credit hours, unless approved by supervisory committee.

- BIOL 675 - Genetics of Microorganisms **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**
A 700-level (or higher) course in population genetics
- e.g., PLPTH 820 - Population Genetics **Credits: 3**
A 700-level (or higher) statistics (STAT) course
- e.g., STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
OR
- e.g., STAT 705 - Regression and Analysis of Variance **Credits: 3**
A 500-level (or higher) biochemistry (BIOCH) course
- e.g., BIOCH 521 - General Biochemistry **Credits: 3**
Seminar. Genetics M.S. students are also required to meet the seminar requirements of the students in their host departments, including enrolling in any required seminar courses.
- e.g., PLPTH 870 - Thesis/ Dissertation Proposal Seminar **Credits: 1**

Elective Courses

At least 6 graduate credit hours. Relevant electives courses are offered by Agronomy (AGRON), Animal Science and Industry (ASI), Biochemistry and Molecular Biophysics (BIOCH), Biology (BIOL), Computer Science (CIS), Entomology (ENTOM), Plant Pathology (PLPTH), and Statistics (STAT) or other departments, subject to approval by the supervisory committee. *Below examples are not an exhaustive list of potential electives.*

- e.g., AGRON 860 - Applied Plant Breeding **Credits: 3**
- e.g., ASI 749 - Advanced Animal Breeding **Credits: 3**
- e.g., BIOL 707 - Advanced Cell Biology **Credits: 3**
- e.g., PLPTH 812 - Introduction to Integrative Genome Analysis **Credits: 3**
- e.g., PLPTH 813 - Bioinformatics Applications **Credits: 3**

Thesis Option Courses

6-8 graduate credit hours. Students enroll in M.S. research credits (thesis option) through their host department - a minimum of 6 credits are required, a maximum of 8 credits can be applied to the Genetics M.S. program of study.

- e.g., PLPTH 899 - Research in Plant Pathology for the MS Degree **Credits: 1-18**

Total Hours Required for Master's: 30

Agricultural Economics

On- Campus Program description

The Department of Agricultural Economics offers on-campus studies leading to a Master of Science (M.S.) or Doctor of Philosophy (Ph.D.) degree. The M.S. and Ph.D. programs stress a strong foundation in economic theory and quantitative analysis, and their application in agricultural and rural issues.

The Agricultural Economics program seeks to achieve excellence in teaching, research, and Extension through the development of the individual student. The core curriculum is deliberately broad in order to build a framework of fundamental information so that new findings and concepts can be assimilated as they arise in the rapidly changing field of agricultural economics. In addition, the programs are designed to provide graduate students a core body of common knowledge through a number of required courses and limited electives.

The core curriculum requires of every student successful completion of courses in microeconomic theory, macroeconomic theory, quantitative methods, production economics and agricultural marketing.

Off- Campus Program description

An off-campus distance Master's of Agribusiness (MAB) degree is offered through the Agricultural Economics Department for working professionals. The MAB program emphasizes the application of economic and management concepts to problems facing

the agribusiness professional. The program is designed for off-campus students who wish to continue full-time employment while pursuing the post-baccalaureate degree. The MAB program emphasizes the study of economic and agribusiness management concepts and their application to food and agricultural business situations. The curriculum focuses on current issues facing agribusiness managers while providing tools for making better decisions in the areas of risk management, logistics, financial management, strategic planning, agricultural resource and trade policy, marketing, human resource management, and institutional changes within agriculture. Two one-week campus sessions are required during both the first and second year of the program. For additional information please see the Agribusiness (MAB) - Distance Program catalog page.

Admission

M.S. and Ph.D. Degrees

Most incoming students have degrees in agricultural economics, economics, business, or some other field in agriculture. Some students have degrees in other social sciences, statistics, computer science, or engineering. The most important consideration for applicants is an interest in continued study and intensive research in some area of agricultural, resource, or environmental economics with the minimum prerequisites for admission to the program. A strong background in economics and quantitative methods are the most important requirements.

Application for admission to the program in a fall semester should be made in the preceding winter or early spring.

Admission to graduate study in agricultural economics requires a minimum grade point average of 3.0 (B average) in the last two years of undergraduate work that earned a bachelors degree. Undergraduate subject matter requirements are as follows:

- a. Two courses in the principles of economics
- b. A course in intermediate microeconomics or production economics and agricultural market structures
- c. A course in intermediate macroeconomic theory
- d. An additional course in agricultural economics or economics
- e. A course in statistics
- f. A course in calculus

Students whose undergraduate academic performance and program of study warrant admission, although some of the subject matter requirements are not met, may be admitted provisionally. Students admitted provisionally will make up these deficiencies by enrolling in appropriate courses for undergraduate credit.

Applicants with grades in the final two years of an undergraduate program that average below 3.0 may, in exceptional cases, be considered for probational admission. Applicants admitted on a probational basis must acquire regular standing by doing satisfactory graduate work during the first semester of graduate study.

Research facilities

The Department of Agricultural Economics is well equipped for research in agricultural economics. Computing equipment and support staff are available to assist researchers. Interdisciplinary research is encouraged and facilitated.

Graduate programs and research in departments such as economics, statistics, mathematics, computer science, industrial engineering, business administration and the production departments in agriculture provide support for research and graduate education in agricultural economics.

Financial support

The Department of Agricultural Economics financially supports graduate study and development in numerous ways. Students enrolled in the M.S. and Ph.D. programs are eligible for graduate research, teaching, and extension assistantships. Departmental faculty regularly secure research and extension grants from federal agencies, state agencies, commodity commissions, research foundations, and private industry. In addition, the Department routinely supports many teaching and research assistantships. The

Department has a successful record of securing USDA National Needs Fellowships and other graduate student fellowships and scholarships. Graduate assistantships are usually on a five-tenths basis. Stipends vary depending upon time worked and level of graduate education. Funded graduate assistants and instructors are regarded as Kansas residents for enrollment fee purposes.

Accelerated

Accelerated Agricultural Economics - Farm Management (BS)/Agricultural Economics (MS)

The accelerated Accelerated Agricultural Economics - Farm Management (BS)/Agricultural Economics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Agricultural Economics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Applicants should follow the K-State Graduate School application process. The application form can be found on the Department's website. Required elements of the application include:

- The K-State graduate application form, which should be completed on-line with the appropriate application fee.
- A brief cover letter and a 2-page statement of objectives for graduate study.
- Three letters of reference.
- Transcript(s) of all undergraduate work completed at the time of application.
- The Graduate Record Examination (GRE) is required for admission to the graduate program.

Applicants without the GRE may be admitted on a probationary basis, but will be required to take the GRE.

Applications are evaluated by the Department's Graduate Committee, which will provide a recommendation to the Director of Graduate Studies about an applicant's suitability for the program.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student must have completed the following three courses and six additional hours of agricultural economics courses. Applicants are encouraged to apply prior to entering their senior year.

- AGECE 500 - Production Economics Credits: 3
- AGECE 501 - Data Analysis and Optimization Credits: 3
- AGECE 505 - Agricultural Market Structures Credits: 3

Course Requirements

Agricultural Economics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- AGECE 712 - Optimization Techniques for Agricultural Economics Credits: 3
- ECON 730 - Applied Econometrics Credits: 3
- ECON 735 - Mathematical Economics Credits: 3
- STAT 610 - Introduction to Mathematical Statistics I Credits: 3

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Agricultural Economics - Specialty (BS)/Agricultural Economics (MS)

The accelerated Agricultural Economics - Specialty (BS)/Agricultural Economics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Agricultural Economics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Applicants should follow the K-State Graduate School application process. The application form can be found on the Department's website. Required elements of the application include:

- The K-State graduate application form, which should be completed on-line with the appropriate application fee.
- A brief cover letter and a 2-page statement of objectives for graduate study.
- Three letters of reference.
- Transcript(s) of all undergraduate work completed at the time of application.
- The Graduate Record Examination (GRE) is required for admission to the graduate program.

Applicants without the GRE may be admitted on a probationary basis, but will be required to take the GRE.

Applications are evaluated by the Department's Graduate Committee, which will provide a recommendation to the Director of Graduate Studies about an applicant's suitability for the program.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student must have completed the following three courses and six additional hours of agricultural economics courses. Applicants are encouraged to apply prior to entering their senior year.

- AGECE 500 - Production Economics **Credits: 3**
- AGECE 501 - Data Analysis and Optimization **Credits: 3**
- AGECE 505 - Agricultural Market Structures **Credits: 3**

Course Requirements

Agricultural Economics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- AGECE 712 - Optimization Techniques for Agricultural Economics **Credits: 3**
- ECON 730 - Applied Econometrics **Credits: 3**
- ECON 735 - Mathematical Economics **Credits: 3**
- STAT 610 - Introduction to Mathematical Statistics I **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Agricultural Economics (PHD)

The Ph. D. program is offered through the Department of Agricultural Economics graduate program and is operated in cooperation with the Department of Economics. The program prepares students to work in academia, the public sector, or industry.

Admission Requirements

The Ph. D. requires a total of 90 credit hours of graduate-level work beyond the bachelor's degree, composed of 60 hours of coursework and 30 hours of research credits for the dissertation. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate. The credit received for writing an M. A. or M. S. thesis or report may be used to meet the 60 hour coursework requirement for the Ph. D. The number of hours accepted from (optional) the master's degree depends on the relevance of the coursework to the doctoral degree.

Students must also pass qualifying exams and the preliminary exam as described in the department's graduate handbook. A student is advanced to candidacy after passing the preliminary exam.

Course Requirements

Economic Theory: 12 Credits

- ECON 735 - Mathematical Economics **Credits: 3**
- ECON 805 - Macroeconomic Theory I **Credits: 3**
- ECON 940 - Advanced Microeconomic Theory I **Credits: 3**
- ECON 945 - Advanced Microeconomic Theory II **Credits: 3**

Quantitative Methods: 9 credit hours

- ECON 830 - Econometrics I **Credits: 3**
- ECON 930 - Econometrics II **Credits: 3**
- AGECE 936 - Quantitative Topics in Agricultural Economics **Credits: 3**

Agricultural Economics Core Courses: 9 credit hours

- AGECE 901 - Research Methods in Economics **Credits: 3**
- AGECE 905 - Agricultural Demand and Commodity Marketing **Credits: 3**
- AGECE 923 - Economics of Agricultural Production **Credits: 3**

Electives: 3 credit hours

AGECE or ECON (900 level or higher)

Specialty Area: 6 credit hours

Courses for the specialty area must be approved by the student's major professor. No course can be used to meet both the specialty and another program requirement. Any AGECE or ECON courses used for the specialty area must be 800 level or higher.

Any courses from other programs used for the specialty area must be 700 level or higher. Any variances to these specialty area requirements must be approved by the major professor and the graduate committee.

Dissertation: 30 credit hours

Note

If a student does not have a master's degree, then an additional 21 credit hours of general electives are needed to meet the required 60 course hours, including the following M. S. level courses: AGECE 712, AGECE 805, and AGECE 823.

The following courses developed for the Masters of Agribusiness are not allowed on a student's program of study: AGECE 700, AGECE 701, AGECE 710, AGECE 713, AGECE 720, AGECE 730, AGECE 740, AGECE 760, AGECE 761, AGECE 770, and AGECE 890.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Dual Degree

Dual Degree: Master of Agribusiness and Professional Master of Business Administration

The Dual Professional Master of Business Administration/Master of Agribusiness is an academic program that allows for the concurrent study of graduate business and graduate agribusiness and leads to both the MAB degree and the PMBA degree. The program is designed for students seeking business problem-solving skills, organizational communication and change management knowledge, and development of strategic analysis competencies utilizing technological tools to increase workplace efficiencies in diverse setting spanning business, food, animal health, and agribusiness industries. The PMBA portion is designed to advance the knowledge and decision making skills necessary for today's business environment. The MAB portion is designed to provide agribusiness professionals strategies for making informed decisions based upon a thorough understanding of current issues. Students graduating from the dual degree program will receive two degrees, a Master of Business Administration and a Master of Agribusiness. The program requires the completion of 63 credit hours: 27 credit hours in the PMBA program and 36 credit hours in the MAB program. The degrees are conferred simultaneously when all requirements for the dual degree program have been met. The assessment of the dual degree program is conducted in each program independently as specified in respective programs.

Application/ Admission

Students are required to fulfill the admittance requirements of both degrees to be admitted into this dual degree program. The person seeking admission to the MAB/PMBA Dual Degree Program must:

- a. Complete an application on CollegeNet (<https://www.applyweb.com/kstateg>) using Dual MAB/PMBA program link. The link will be accessible from both the College of Business Administration and Department of Agricultural Economics portals. (Students desiring to apply only to the PMBA or MAB should select the specific program not the dual degree option in CollegeNet.) Application materials include: official transcript of all completed academic work; GRE or GMAT

scores and TOEFL scores, if applicable; statement of objectives; resume; and an Affidavit of Financial Support, if applicable.

b. The graduate admission committee of each program will evaluate the application separately and collectively make the final decision using the same criteria as specified in their respective programs. The applicant must meet admissions requirements of both programs.

c. A student who is initially admitted to either the PMBA or MAB and who later decides to pursue the dual degree must apply for a change of degree to the MAB/PMBA dual degree prior to being awarded the first degree.

d. Students admitted to the MAB/PMBA joint degree program who later decide they only want to complete one of the degrees must:

- 1) Submit a written notification to both programs.
- 2) Must have their primary program plan changed to reflect the degree to be completed.
- 3) Submit a new program of study for the degree program they will complete to the Graduate School for an approval. Students must complete the requirements for the respective program to receive the PMBA or MAB degree.

Degree Requirements

PMBA Program: 24 credit hours

Business Core 18 credit hours

- ACCTG 710 - Foundations of Accounting **Credits: 3**
- MANGT 710 - Operations and Supply Chain Management **Credits: 3**
- MANGT 720 - Managing Organizational Behavior **Credits: 3**
- MIS 830 - Business Intelligence and Storytelling in Cloud Environments **Credits: 3**
- MKTG 705 - Marketing Concepts and Research **Credits: 3**
- MANGT 860 - Managing the Triple Bottom Line Business **Credits: 3**

Integrated Core 6 credit hours

- MANGT 880 - Strategic Management **Credits: 3**
- GENBA 875 - MBA International Business Experience **Credits: 1-3**

MAB Program: 36 credit hours

Required Courses 27 credit hours

- AGECE 701 - Introduction to Computer Decision Tools for Agribusiness **Credits: 1**
- AGECE 713 - Agribusiness Financial Management **Credits: 3**
- AGECE 730 - Applied Agribusiness Logistics **Credits: 3**
- AGECE 700 - Applied Agribusiness Economics **Credits: 3**
- AGECE 761 - Optimization Techniques for Agribusiness **Credits: 2**
- AGECE 720 - Agribusiness Risk Management **Credits: 3**
- AGECE 760 - Applied Econometric Analysis **Credits: 3**

- AGECE 770 - International Agribusiness and Policy Analysis Credits: 3
- AGECE 890 - Advanced Food and Agribusiness Management Credits: 3
- AGECE 740 - Seminar in Agricultural Economics Analysis Credits: 0-18

Additional Courses – Thesis Option 6 credit hours

- AGECE 899 - Agricultural Economics Master's Research Credits: 1-18

Electives 3 credit hours

Elective (3 credit hours) from Agricultural Economics or Business

Graduate Certificate

Animal Health Management Graduate Certificate

Contact: Dr. Allen Featherstone
E-mail: afeather@ksu.edu

Contact: Mr. Paul Casady
E-mail: pscasady@ksu.edu

The increasing complexity of the global animal health industry has created a need for additional training for employees of this industry in the management of organizations in this industry. Critical issues include the redefinition of animal health as a whole and the complexities that have arisen with pharmaceutical impact in food supplies; the breadth of species included in animal health (food and companion); veterinary epidemics and the one health concept; consolidation of companies; increasing regulation; "downstream customer" influence and knowledge; workforce diversification; and the competition for resources in human/animal markets.

The aim of this certificate program is to provide a series of courses and experiences that will equip employees in animal health industries with economic and animal agriculture specific management tools to enable them to lead and manage organizations in the animal health sector. The certificate will be open to individuals meeting the admissions criteria delineated in Section E and is not limited to Master of Agribusiness students.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Agribusiness at Kansas State University.

Course Requirements

Required Courses

- AGECE 700 - Applied Agribusiness Economics Credits: 3
- AGECE 713 - Agribusiness Financial Management Credits: 3
- AGECE 735 - Sales and Marketing in the Global Animal Health Industry Credits: 3
- AGECE 780 - Economics of the Global Animal Health Industry Credits: 3
- AGECE 890 - Advanced Food and Agribusiness Management Credits: 3
- AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
- MANGT 720 - Managing Organizational Behavior Credits: 3

Total Hours Required for Graduate Certificate: 20

Master of Science

Agricultural Economics (MS)

Offered through the Department of Agricultural Economics, the M.S. in Agricultural Economics can be earned in either a thesis or no-thesis option.

Course Requirements

The thesis option includes a minimum of 30 semester hours of graduate credit including 24 hours of course work and a Master's thesis for which 6 semester credit hours are given. The program is designed to prepare students for careers in research, analysis, or to continue towards a Ph.D. program. The course requirements are:

Required Courses

- ECON 720 - Microeconomic Theory **Credits: 3**

Elective Courses

- ECON 805 - Macroeconomic Theory I **Credits: 3**
- AGECE 805 - Agricultural Marketing **Credits: 3**
- AGECE 810 - Price, Income and Trade Policies in Agriculture **Credits: 3**
- AGECE 823 - Production Economics II **Credits: 3**
- AGECE 825 - Natural Resource Policy **Credits: 3**
- AGECE 840 - International Markets and Agricultural Trade **Credits: 3**
- AGECE 880 - Agribusiness Industry Structures **Credits: 3**

Quantitative Methods: 3 credit hours

- ECON 730 - Applied Econometrics **Credits: 3**

Electives

For thesis option: 9 credit hours; for coursework only option: 21 credit hours

- AGECE Elective (700 level or higher) **Credits: 3** (Thesis option) or 12 (Coursework only option)
- General Elective (700 level or higher) **Credits: 3**

OR

- AGECE 713 - Agribusiness Financial Management **Credits: 3**
OR
- AGECE 720 - Agribusiness Risk Management **Credits: 3**
OR
- AGECE 730 - Applied Agribusiness Logistics **Credits: 3**

- General Elective (700 level or higher) **Credits: 3**

Courses for general electives must be approved by the student's major professor.

Thesis Option Course: 6 credit hours

- AGECE 899 - Agricultural Economics Master's Research **Credits: 1-18**

Coursework Only Option

The student is required to demonstrate evidence of scholarly effort by completing a creative component consisting of a written paper and an oral defense.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Total Hours Required for Master's: 30-36

Thesis Option: 30 credit hours

Non-thesis Course work only option: 36 credit hours

Note

The following courses developed for the Masters of Agribusiness program are not allowed on a student's program of study: AGECE 700, AGECE 701, AGECE 710 , AGECE 740 , AGECE 760, AGECE 761, AGECE 770, and AGECE 890.

Agricultural Economics: Concentration in Agribusiness (MS)

The on-campus Master of Science in Agricultural Economics with concentration in Agribusiness, offered by the Department of Agricultural Economics, is designed for students aiming for the next level in the agribusiness sector or academia.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

- AGECE 880 - Agribusiness Industry Structures **Credits: 3**
- ECON 720 - Microeconomic Theory **Credits: 3**
- FINAN 715 - Foundations of Finance **Credits: 3**

Elective Courses

Select one course from:

- AGECE 805 - Agricultural Marketing Credits: 3
- AGECE 810 - Price, Income and Trade Policies in Agriculture Credits: 3
- AGECE 823 - Production Economics II Credits: 3
- AGECE 825 - Natural Resource Policy Credits: 3
- AGECE 840 - International Markets and Agricultural Trade Credits: 3
- ECON 805 - Macroeconomic Theory I Credits: 3

Quantitative Methods: 6 credit hours

- AGECE 712 - Optimization Techniques for Agricultural Economics Credits: 3
- ECON 730 - Applied Econometrics Credits: 3

Ag Economics, Finance, Marketing, Management: 6 credit hours

- FINAN 820 - Advanced International Financial Management Credits: 3
 - FINAN 830 - Financial Market Theory Credits: 3
 - MANGT 710 - Operations and Supply Chain Management Credits: 3
 - MANGT 720 - Managing Organizational Behavior Credits: 3
 - MANGT 825 - Advanced Business Law Credits: 3
 - MANGT 840 - Advanced Entrepreneurship Credits: 3
 - MKTG 705 - Marketing Concepts and Research Credits: 3
 - MKTG 842 - Advanced Marketing Research Credits: 3
 - MKTG 844 - Advanced International Marketing Credits: 3
 - MKTG 860 - Advanced International Business Credits: 3
- AGECE 700 or higher level course not used for other requirements.

Thesis Option Course: 6 credit hours

- AGECE 899 - Agricultural Economics Master's Research Credits: 1-18

Note

The following courses developed for the Masters of Agribusiness are not allowed on a student's program of study: AGECE 700, AGECE 701, AGECE 710 , AGECE 740 , AGECE 760, AGECE 761, AGECE 770, and AGECE 890.

Total Hours Required for Master's: 30

Other Degrees

Master of Agribusiness (MAB)

An off-campus distance Master's of Agribusiness (MAB) degree is offered through the Agricultural Economics Department for working professionals. The MAB program emphasizes the application of economic and management concepts to problems facing the agribusiness professional. The Master in Agribusiness program is designed for off-campus students who wish to continue

full-time employment while pursuing the post-baccalaureate degree. The MAB program emphasizes the study of economic and agribusiness management concepts and their application to food and agricultural business situations. The curriculum focuses on current issues facing agribusiness managers while providing tools for making better decisions in the areas of risk management, logistics, financial management, strategic planning, agricultural resource, and trade policy, marketing, human resource management, and institutional changes within agriculture. Two one-week campus sessions are required during both the first and second year of the program.

Fax: 785-532-6925
E-mail: afeather@ksu.edu
Home Page: <http://www.mab.ksu.edu/>

Admission Requirements

Course Requirements

The Master in Agribusiness degree requires the completion of 42 credit hours. The curriculum consists of a set of integrated management and economics topics, including 27 hours of agribusiness courses, 9 hours of business courses, and 6 hours of thesis. Students enter the program as a cohort and pace through the program together over a 30 month period.

Course requirements for the Master in Agribusiness are:

Agribusiness courses (27 credit hours)

- AGECE 700 - Applied Agribusiness Economics **Credits: 3**
- AGECE 701 - Introduction to Computer Decision Tools for Agribusiness **Credits: 1**
- AGECE 713 - Agribusiness Financial Management **Credits: 3**
- AGECE 720 - Agribusiness Risk Management **Credits: 3**
- AGECE 730 - Applied Agribusiness Logistics **Credits: 3**
- AGECE 740 - Seminar in Agricultural Economics Analysis **Credits: 0-18**
- AGECE 760 - Applied Econometric Analysis **Credits: 3**
- AGECE 761 - Optimization Techniques for Agribusiness **Credits: 2**
- AGECE 770 - International Agribusiness and Policy Analysis **Credits: 3**
- AGECE 890 - Advanced Food and Agribusiness Management **Credits: 3**

Business courses (9 credit hours)

- MANGT 720 - Managing Organizational Behavior **Credits: 3**
- MKTG 705 - Marketing Concepts and Research **Credits: 3**
Business Elective of the student's choice, selection must be approved by MAB Program Director (3)

Thesis hours (6 credit hours)

- AGECE 899 - Agricultural Economics Master's Research Credits: 1-18

Total Hours Required for Master's: 42

Note

The thesis involves the application of concepts and quantitative tools learned in course work to a firm-level agribusiness problem. The candidate is expected to take a final oral examination for the purpose of defending the thesis.

Program objectives

The Department of Agronomy offers courses of study leading to degrees of master of science and doctor of philosophy in many diverse crop, soil, and range science specializations. These study areas include: agricultural climatology, crop-climate modeling, crop ecology, crop physiology, crop production, cytogenetics, environmental chemistry, environmental physics, forage management, plant breeding, plant genetics, range science, soil biochemistry, soil fertility, soil genesis and classification, soil microbiology, soil-plant-water relations, soil physics/biophysics, soil/water chemistry, soil/water conservation, soil/water management, and weed science.

The department consists of 55 graduate faculty members, about 65 graduate students, and several postdoctoral fellows and visiting scientists. The faculty are dedicated to providing students individualized training needed to address the many challenges facing agriculture.

Graduate programs are designed to accommodate the interest and objectives of the student. These programs require students to conduct original research. Students receive thorough training in investigative techniques by using modern facilities and through experienced guidance by faculty. Critical parts of the process involve the preparation of research findings in the form of a thesis or dissertation and their publication in a scientific journal. Students are encouraged to develop independent thought as well as a broad spectrum of knowledge. Flexibility in graduate training is possible because of the large number of faculty and the diversity of their research interests.

Facilities and equipment

The Department of Agronomy laboratories are well equipped with modern instrumentation for research in the many areas of specialization. Controlled environment chambers and greenhouses are available. Excellent dryland and irrigated field research facilities are available at the agronomy farms near Manhattan, at seven agronomy experiment fields, and at four Agricultural Research Centers located throughout the state. A large inventory of field, plot and laboratory equipment enable graduate students to plan and implement complex research programs which address challenges facing agriculture. Vehicle support provides student

access to the diverse cropping and grazing systems present in Kansas. The Rannells Range Research Unit and the Konza Prairie enable native range investigations to be conducted at Manhattan. Special facilities which can be utilized by graduate students include the USDA Wind Erosion Lab, USDA Grain Marketing Lab, Agronomy Soil Testing Lab, and other service labs. Reference materials from the University Library are complemented by the Agronomy Graduate Library, housed within the department. Graduate students benefit from excellent computer and networking facilities through the mainframe computer center. State-of-the-art personal computers are available for use by all students.

Admission

Incoming students commonly have a bachelor or master of science degree in agriculture, agronomy, crop science, soil science, or a related physical or life science. The most important considerations for applicants are an interest in continued study and intensive research in a specific area of agronomy along with prerequisites for admission to the program. Preparation in the biological, physical, and mathematical sciences is considered fundamental for all areas of graduate study in agronomy. Course requirements for each student are determined by a supervisory committee with consideration given to the student's qualifications and professional interests and goals.

Stipends

Research and teaching assistantships and research fellowships are available to graduate students in the Department of Agronomy. A majority of the students enrolled in Agronomy are supported during their graduate study. Nearly 50 percent of graduate students are appointed to a half-time graduate research assistantship. Stipends are competitive with leading universities. Graduate teaching and research assistants are assessed the in-state rate for tuition and fees. Graduate teaching assistants receive a substantial reduction of in-state tuition. An excellent graduate scholarship program provides additional assistance to several graduate students each year.

Application procedure

Applications are accepted at any time. However, students desiring admission and consideration for an assistantship for the fall semester are urged to submit their applications early, preferably before February 1, to enhance their chances for admission and financial support. The completed application form, statement of objectives, transcripts, and letters of recommendation are used to determine qualifications for graduate work. GRE scores are not required.

Doctor of Philosophy

Agronomy (PHD)

Students in Ph.D. Agronomy programs conduct original research and receive thorough training in investigative techniques by use of modern facilities with guidance by experienced faculty. The large number of faculty and the diversity of their research interests provides flexibility in graduate training. Course requirements for each student are determined by the major professor and the supervising committee with consideration given to the student's qualifications and professional interests and goals. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Admission Requirements

**Admission Requirements field from Curriculog proposal*

Specify in the requirements one of the following:

- A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.
- Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Application Requirements (Optional)

Graduation Requirements

**Graduation Requirements field as outlined in the Curriculog proposal – To be used only when additional requirements, beyond those specified in the Graduate Handbook's University Requirements, must be submitted for further review and approval.*

Dissertation Requirements

**Special Requirements field from Curriculog proposal*

Course Requirements

*Course Requirements – The Curriculum Schema section in the Curriculog proposal will automatically populate based on the selected template.

Required Courses

Concentration Courses

Research/Dissertation

Program Total Credits: 60

Master's degree Transfer Credits: 30

*Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree

Total Hours Required for Doctorate: 90

Graduate Certificate

Grassland Management Graduate Certificate

Contact: Walter H. Fick
E-mail: whfick@ksu.edu

This certificate is offered through the Agronomy graduate program and is available through distance education. The purpose of this program is to provide current and future grassland professionals (i.e., managers, advisors, and conservationists) and others with distance education opportunities that lead to a graduate certificate in grassland management. Grasslands (including

rangelands, pasturelands, and haylands) are the principle land resource type in the Great Plains, comprising more than 50% of the land surface area. The major use of the regions' grasslands is livestock grazing. The beef cattle industry is prominent in the Great Plains, making up more than 50% of the US beef cow inventory. Grasslands in the region are also critically important for providing wildlife habitat, recreation, high quality water and air, and other environmental services. Grasslands represent a fundamental resource of the region that determines the environmental and economic future of the Great Plains states.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

Select 12 credit hours from the following:

- AGRON 660 - Grassland Monitoring and Assessment **Credits: 2**
- AGRON 662 - Rangeland Watershed Management **Credits: 3**
- ATM 661 - Watershed Assessment and Management **Credits: 3**
- AGRON 682 - Grassland Fire Ecology **Credits: 3**
- AGRON 781 - Ecology of Invasive Species **Credits: 3**
- AGRON 821 - Principles of Forage Quality **Credits: 3**
- AGRON 832 - Grassland Plant Identification **Credits: 2**
- AGRON 881 - Grazing Ecology and Management **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Agronomy (MS)

Students in M.S. Agronomy programs conduct original research and receive thorough training in investigative techniques by use of modern facilities with guidance by experienced faculty. The large number of faculty and the diversity of their research interests provides flexibility in graduate training. Course requirements for each student are determined by the major professor and the supervising committee with consideration given to the student's qualifications and professional interests and goals.

Accelerated

Accelerated Animal Sciences and Industry - Management/Industry (BS)/Master of Business Administration (MBA)

The accelerated Animal Sciences and Industry - Management/Industry (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ASI 601 - Endocrinology and Lactation **Credits: 3**
- ASI 640 - Poultry Products Technology **Credits: 3**
- ASI 650 - Identification and Data Management of Food Animals **Credits: 2**
- ASI 680 - Ruminant Nutrition **Credits: 1**

- **STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Animal Sciences and Industry - Pre-Veterinary/Science (BS)/Master of Business Administration (MBA)

The accelerated Animal Sciences and Industry - Pre-Veterinary/Science (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate electives.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- **ASI 601 - Endocrinology and Lactation Credits: 3**
- **ASI 640 - Poultry Products Technology Credits: 3**
- **ASI 650 - Identification and Data Management of Food Animals Credits: 2**
- **ASI 680 - Ruminant Nutrition Credits: 1**
- **STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Animal Sciences (PHD)

The Department of Animal Sciences and Industry is a comprehensive unit supported by about 50 faculty devoted to research, teaching, and extension activities related to domestic farm animal species. Currently, the department has approximately 1,000 undergraduate students advised in the department and about 60 graduate students pursuing either M.S. or Ph.D. degrees in the Animal Science graduate program.

For graduate training, the department has animal research and teaching units located conveniently to the main campus. Those units include beef (grazing and feedlot), dairy, swine, sheep, poultry, and horse teaching and research units. In addition, both Call Hall and Weber Hall contain laboratories equipped to conduct most analytical techniques required for research.

Graduate training in the Department of Animal Sciences and Industry is organized within six functional discipline groups including animal breeding and genetics, meat science, monogastric nutrition, physiology, ruminant nutrition, and food science. The food science program represents a large interdisciplinary degree program and is detailed in a separate area in the catalog.

Admission Requirements

Application for admission to graduate school should begin as early as possible in the semester before the proposed admission date (i.e., for fall semester, begin application process early in the preceding spring semester). All applicants must submit a completed application form, three letters of recommendation, and official transcripts of all previous college work. In addition, the applicant should write a short statement of objectives to include the discipline area (and animal species if appropriate) in which the student desires to study. The statement of objectives should specify faculty with whom he/she desires to work as a graduate student. This information is important in placing prospective graduate students with major professors whose area of research coincides with their areas of interest.

Doctoral programs in Animal Science are all research based, so each student must have a faculty advisor who guides the research program. Typically, the most limiting step for gaining admission to graduate school is finding a faculty member to serve as advisor. Prospective graduate students are encouraged to visit directly with faculty working in their area of research interest to learn more about their research programs and determine if they are planning to accept additional students into their program. International applicants must meet English proficiency requirements as described in the Graduate School handbook (<https://www.k-state.edu/grad/student-success/graduate-handbook/chapter1.html>).

The Graduate Record Examination is not required for admission, but it may be helpful in the evaluation process.

Upon receipt of all required application documentation, the applicant's file will be reviewed by the departmental Graduate Committee which includes graduate faculty representing each of the five discipline areas. If the student is deemed acceptable for admission, a graduate faculty member willing to serve as major professor must be identified before the student's credentials are forwarded to the graduate school.

Limited numbers of Graduate Research Assistantships and Graduate Teaching Assistantships are available on a competitive basis. Individual faculty members make the key decisions about providing assistantships. For students awarded a Graduate

Research Assistantship, student tuition and fees are assessed at in-state resident rates. For students awarded a Graduate Teaching Assistantship, tuition is waived.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Special Requirements

Graduate students in Animal Science are required to assist in teaching a course during each Spring and Fall semester, although waivers can be granted, notably during the student's final semester. After successfully completing the preliminary exam, students must be enrolled at Kansas State University each semester, excluding summer semester, until degree requirements are met.

Course Requirements

Programs of study must follow the policies of the Graduate School (<https://www.k-state.edu/grad/student-success/graduate-handbook/chapter3.html#Program%20of%20Study>). Students must complete 90 credit hours, which must include 3 hours of ASI 990 (Seminar in Animal Sciences Research). Students who have previously completed a research-based M.S. degree must complete at least 25 hours of ASI 999 (Doctoral Research in Animal Sciences and Industry), whereas students who have not completed a M.S. degree must complete at least 32 hours of ASI 999.

Required Courses

Students must complete 90 credit hours, which must include 3 hours of ASI 990 (Seminar in Animal Sciences Research). Students who have previously completed a research-based M.S. degree must complete at least 25 hours of ASI 999 (Doctoral Research in Animal Sciences and Industry), whereas students who have not completed a M.S. degree must complete at least 32 hours of ASI 999.

- ASI 990 - Seminar in Animal Sciences Research **Credits: 1**
- ASI 999 - Doctoral Research in Animal Sciences and Industry **Credits: 1-18**

Concentration Courses

Animal breeding and genetics

Graduate programs are designed specifically for each student to acquire training in genetics, animal breeding, and statistics. Additional courses will be selected from the fields of biological and physical sciences. A typical program of study will include some of the following graduate level courses: statistical and population genetics; animal breeding; statistics and experimental design; genomics; and molecular biology. Research is conducted using field data from cooperating ranches, breed association, and universities. Facilities are available for adequate analysis of most data sets, including access to software used in genetic evaluation as well as access to high performance computing resources for analysis of high-throughput genomic and sequencing datasets.

Meat science

The meat science program is comprehensive and prepares students for fundamental and applied research, product and process development, and technical service in industry, academic, regulatory, and international positions. Faculty conduct research in tissue growth and development; ante- and post-mortem factors and processes affecting meat quality and composition; myofibrillar, collagen, and pigment chemistry; packaging; lighting; byproduct value enhancement; processed meats; quality assurance; and safety of meat and meat products. Facilities include a fully equipped meat laboratory that permits experimental

and industry-like fresh and processed meat processing; research laboratories for physical and chemical analyses; and thermal processing, display, and sensory facilities for instrumental and sensory panel evaluation of meat products. Graduate students are actively involved in teaching, research, and extension activities as part of their training.

Monogastric nutrition

The monogastric nutrition teams offer comprehensive training that weaves a basic understanding of nutrition into an applied research program. Areas of specialized emphasis include comprehensive programs in swine, equine, and poultry nutrition. The K-State swine nutrition program is a national leader in conducting applied field research in modern commercial swine facilities. This allows graduate students to be exposed to the swine business while conducting timely and industry-leading research. Areas of research include amino acid and energy nutrition, utilization of alternative feed ingredients, influences of technological advances on nutritional requirements, and effects of feed processing technologies on nutrient utilization.

The Equine Nutrition program at K-State has one of only two university-owned herds of cecally cannulated horses. This allows graduate students a research program focused on nutrient digestion and absorption, the equine hindgut's microbiome, and the cecal environment.

The poultry program focuses not only on broiler and laying hen nutrition, but gamebird nutrition as well. Research areas include feed processing and nutrient requirements of poultry.

Graduate students are offered an array of course work to develop areas of expertise. Common areas of training include basic nutrition, biochemistry, statistics, and grain science. Seminars and discussion groups are an integral part of the graduate program.

Physiology

Animal Sciences and Industry (ASI) graduate students pursuing a Ph.D. degree in physiology will be exposed to a comprehensive, interdisciplinary program that may consist of multiple species including cattle, pigs, horses, sheep, goats, and poultry. Physiology course work and seminars span across many areas within ASI and across related departments including statistics, biochemistry, biology, psychology, and anatomy and physiology. Graduate students have the opportunity to develop teaching skill sets by contributing to our extensive ASI undergraduate program, and many students assist with our state and regional extension efforts. Research expertise can be gained in multiple areas across physiology, including basic research in molecular, cellular, and tissue function; translational research in endocrinology, gamete function, embryology, stress physiology, immunology, and neurobehavioral mechanisms; and applied research in reproduction, health, behavior, and animal welfare. Graduate training in physiology prepares students for various careers in animal and biotechnological industries, research, teaching, technical services, consulting, youth and adult extension, and related fields of animal physiology.

Ruminant nutrition

Scientists within the ruminant nutrition program maintain the dual goals of conducting research that will advance the understanding of fundamental nutritional phenomena and also provide insight into practical aspects of the nutritional management of ruminant livestock. Individual research programs range from basic to very applied. Students in the program are provided with a strong foundation in ruminal and post-ruminal digestion, metabolism, and fundamental experimental procedures necessary for conducting ruminant nutrition research. Areas of research emphasis within the ruminant nutrition group include dairy cattle nutrition, beef feedlot nutrition, grazing livestock nutrition, measurement of greenhouse gas emissions, and stocker cattle nutrition.

Supporting course work is frequently pursued in the areas of biochemistry, grain science, microbiology, physiology, and statistics.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Food Safety and Defense Graduate Certificate

Contact: J. Scott Smith – Graduate Program Chair

E-mail: jsschem@ksu.edu

Contact: Nicole Marple – Program Assistant

E-mail: nmarple@ksu.edu

This certificate is offered through the Food Science and Industry graduate program. By providing a distance education Food Safety and Defense graduate certificate program we will serve the needs of industry and agencies that must protect the human food supply from accidental or deliberate contamination with pathogenic microbes and/or toxicants. In an era of terrorism and global food systems, effective control of foodborne hazards requires advanced education. There is an urgent need for online education for food industry personnel who, while working fulltime, would like to pursue more in-depth specialized training in food safety and security that is pertinent to their job. Many food-related industry and agency professionals have a B.S. in some aspect of food and agricultural sciences or related area along with good technical background and work experience but they may not be able to pursue a full graduate degree, due to expense, time constraints and/or interests. These needs warrant the development of a program to prepare graduate students and food-related professionals to effectively deal with food safety and biosecurity issues.

Upon completion of the graduate certificate, students will be better prepared to meet the challenges of accidental or deliberate food contamination within the food industry to protect public health, prevent foodborne illnesses, and facilitate or improve the profitability of food industries by minimizing health risks related to foodborne pathogens and toxicants.

The certificate program requires 12 credit hours comprised of core and elective courses, as outlined below. Students must complete the required 12 credit hours with a cumulative GPA of at least 3.0 and may have no grade lower than a "B" in any certificate-program course. Students must be enrolled the semester the certificate program is completed.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

Must take 4 courses (8 credit hours) from the list below:

- FDSCI 600 - Food Microbiology **Credits: 2**
- FDSCI 690 - Principles of HACCP and Preventive Controls for Human Food **Credits: 3**
- FDSCI 730 - A Multidisciplinary Overview of Food Safety and Security **Credits: 2**
- FDSCI 731 - Food Protection and Defense--Essential Concepts **Credits: 2**
- FDSCI 750 - Food Toxicants **Credits: 2**
- FDSCI 820 - Advanced Food Microbiology & Biotechnology **Credits: 2**

Elective Courses

4 credit hours

- AGECE 710 - Comparative Food and Agriculture Systems Credits: 3
- AGECE 805 - Agricultural Marketing Credits: 3
- AGECE 810 - Price, Income and Trade Policies in Agriculture Credits: 3
- DMP 754 - Introduction to Epidemiology Credits: 3
- DMP 816 - Trade and Agricultural Health Credits: 2
- FDSCI 725 - Food Analysis Credits: 3
- FDSCI 731 - Food Protection and Defense--Essential Concepts Credits: 2
- FDSCI 751 - Food Laws and the Regulatory Process Credits: 2
- FDSCI 791 - Advanced Application of HACCP Principles Credits: 3
- FDSCI 810 - Fermented Foods Credits: 2
- FDSCI 815 - Advanced Food Chemistry Credits: 3
- FDSCI 820 - Advanced Food Microbiology & Biotechnology Credits: 2
- FDSCI 961 - Graduate Problem in Food Science Credits: 1-6
- Other courses as deemed appropriate by the Food Science Program Chair.

Total Hours Required for Graduate Certificate: 12

Master of Science

Animal Sciences (MS)

The Department of Animal Sciences and Industry is a comprehensive unit supported by about 50 faculty devoted to research, teaching, and extension activities related to domestic farm animal species. Currently, the department has approximately 1,000 undergraduate students advised in the department and about 60 graduate students pursuing either M.S. or Ph.D. degrees in the Animal Science graduate program.

For graduate training, the department has animal research and teaching units located conveniently to the main campus. Those units include beef (grazing and feedlot), dairy, swine, sheep, poultry, and horse teaching and research units. In addition, both Call Hall and Weber Hall contain laboratories equipped to conduct most analytical techniques required for research.

Graduate training in the Department of Animal Sciences and Industry is organized within six functional discipline groups including animal breeding and genetics, meat science, monogastric nutrition, physiology, ruminant nutrition, and food science. The food science program represents a large interdisciplinary degree program and is detailed in a separate area in the catalog.

Admission Requirements

Application for admission to graduate school should begin as early as possible in the semester before the proposed admission date (i.e., for fall semester, begin application process early in the preceding spring semester). All applicants must submit a completed application form, three letters of recommendation, and official transcripts of all previous college work. In addition, the applicant should write a short statement of objectives to include the discipline area (and animal species if appropriate) in which the student desires to study. The statement of objectives should specify faculty with whom he/she desires to work as a graduate student. This information is important in placing prospective graduate students with major professors whose area of research coincides with their areas of interest.

M.S. programs in Animal Science are predominantly research based, so each student must have a faculty advisor who guides the research program. Typically, the most limiting step for gaining admission to graduate school is finding a faculty member to serve as advisor. Prospective graduate students are encouraged to visit directly with faculty working in their area of research interest to learn more about their research programs and determine if they are planning to accept additional students into their program. International applicants must meet English proficiency requirements as described in the Graduate School handbook (<https://www.k-state.edu/grad/student-success/graduate-handbook/chapter1.html>).

The Graduate Record Examination is not required for admission, but it may be helpful in the evaluation process.

Upon receipt of all required application documentation, the applicant's file will be reviewed by the departmental Graduate Committee which includes graduate faculty representing each of the five discipline areas. If the student is deemed acceptable for admission, a graduate faculty member willing to serve as major professor must be identified before the student's credentials are forwarded to the graduate school.

Limited numbers of Graduate Research Assistantships and Graduate Teaching Assistantships are available on a competitive basis. Individual faculty members make the key decisions about providing assistantships. For students awarded a Graduate Research Assistantship, student tuition and fees are assessed at in-state resident rates. For students awarded a Graduate Teaching Assistantship, tuition is waived.

Special Requirements

Graduate students in Animal Science are required to assist in teaching a course during each Spring and Fall semester, although waivers can be granted, notably during the student's final semester.

Course Requirements

Options for completing M.S. in Animal Science include the thesis option and the report option. For the thesis option, students must complete 6 to 8 hours of ASI 899 (Master's Research in Animal Sciences and Industry). For the report option, students must complete 2 hours of ASI 898 (Master's Report).

Programs of study must follow the policies of the Graduate School (<https://www.k-state.edu/grad/student-success/graduate-handbook/chapter2.html#Program-of-Study>). For both options, students must complete 30 credit hours, which must include 2 hours of ASI 890 (Graduate Seminar in Animal Sciences and Industry).

Classes vary depending upon the discipline of specialization as well as the student's educational objectives. Courses are mostly in the areas of animal science, statistics, biochemistry, and biology.

All graduate students in Animal Science are required to assist in teaching a course during each Spring and Fall semester, although waivers can be granted, notably during the student's final semester.

Thesis Option

Required Courses:

- ASI 890 - Graduate Seminar in Animal Sciences and Industry **Credits:** 1 (2)

Thesis Option:

- ASI 899 - Master's Research in Animal Sciences and Industry **Credits:** 1-18 (6-8)

Report Option

Required Courses:

- ASI 890 - Graduate Seminar in Animal Sciences and Industry **Credits: 1 (2)**

Report Option:

For 2 hours of credit on research or on a problem.

- ASI 898 - Master's Report **Credits: 2**

Areas of Specialization

Animal breeding and genetics

Graduate programs are designed specifically for each student to acquire training in genetics, animal breeding, and statistics. Additional courses will be selected from the fields of biological and physical sciences. A typical program of study will include some of the following graduate level courses: statistical and population genetics; animal breeding; statistics and experimental design; genomics; and molecular biology. Agricultural and Occupational Safety and Health Graduate Certificate

This certificate will provide students with knowledge and skills to fulfill the workplace safety and health management duties they will encounter during their careers in agriculture and related industries. Safety and health management is a rapidly growing field. Qualified workers are needed to fill new openings and to replace the aging workforce. Safety and health professionals enter the field from a variety of scientific, manufacturing, health, technical, and social science disciplines. Completion of this certificate will help qualify students for safety-related employment in conjunction with their undergraduate and graduate degrees from

Kansas State University.

Contact the graduate program director/coordinator: Dr. Gaia Hock, Professor, Agricultural Education, ghock@ksu.edu, 785-532-1166.

Admission Requirements

Admission to the Graduate School as a degree-seeking or non-degree-seeking student.

Graduation Requirements

To be awarded the graduate certificate, the student (a) must have earned all the required credits in the six years prior to the semester in which the certificate plan is submitted, (b) must not be on probation, (c) must have a cumulative GPA of 3.0 or higher on graduate coursework and on coursework applied to the certificate, (d) must meet all the requirements of the Graduate School and the certificate program, (e) must be enrolled during the semester when the student applies for graduation for the certificate, and (f) must provide official transcripts for any approved transfer credits. Transfer credit must be from an accredited institution.

Course Requirements

Required Courses

- ASMS 723 - Agricultural and Occupational Safety I **Credits: 3**
- ASMS 724 - Agricultural and Occupational Health I **Credits: 3**
- ASMS 753 - Agricultural and Occupational Safety II **Credits: 3**
- ASMS 754 - Agricultural and Occupational Health II **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Agricultural Education and Communication (MS)

A master's of science in Agricultural Education and Communication is a research degree that aims for the discovery of knowledge, the education of graduate students, and the improvement in the quality of life for those we serve. Three levels of research intensity are offered: Thesis (30 credit hours), Report (32 credit hours), and Non-Thesis/Project (36 credit hours). Graduates will develop the foundation for research and the ability to educate the public in the breadth and depth of the agricultural industry and communicate information to the agricultural industry as well as the general public.

Admission Requirements

1. A bachelor's degree from a college or university accredited by the regional accrediting agency.
2. Grade point average (GPA) of 3.0 or higher on a 4.0 scale in the last 60 hours of coursework. This GPA is based only on courses graded on a multilevel scale, usually A, B, C, D, F.
3. For students who do not meet the above-stated GPA requirement, an alternative would be a combined verbal/quantitative score of 300 or higher on the Graduate Record Examination (GRE) for tests taken after August 1, 2011.
4. Recommendation letters from three people knowledgeable of the applicant's professional qualifications.
5. A statement of purpose for pursuing the master's degree.

Contact the Graduate Coordinator, Dr. Gaea Hock ghock@ksu.edu, 785-532-5633.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

Research

Choose one of the following. Other courses may be proposed to the student's graduate committee.

- AGED 800 - Research Methods in Agricultural Education and Communications **Credits: 3**
- COMM 710 - Introduction to Communication Research Methods **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
- MC 780 - Research Methods in Mass Communications **Credits: 3**

Philosophical Context

Choose one of the following. Other courses may be proposed to the student's graduate committee.

- AGED 820 - History and Philosophy of Agricultural and Extension Education **Credits: 3**
- AGED 830 - The History and Leadership of the Land Grant University **Credits: 3**
- EDCI 812 - History of Education **Credits: 3**
- EDCI 813 - Comparative Philosophies of Education **Credits: 3**
- HIST 557 - History of American Agriculture **Credits: 3**
- MC 710 - History of Mass Communications **Credits: 3**
- SOCIO 831 - Sociology of Agriculture **Credits: 3**

Theoretical Foundation

Choose one of the following. Other courses may be proposed to the student's graduate committee.

- AGCOM 844 - Theory in Agricultural Communications **Credits: 3**
- AGED 790 - Agricultural Education Methods and Practicum for Teaching and Learning **Credits: 3**
- AGED 832 - Foundations and Theory of Agricultural Leadership **Credits: 3**
- AGED 840 - Advanced Theory and Methods of Teaching Agriculture **Credits: 3**

Additional Requirements for Thesis Option

Data Analysis

Choose one of the following. Other courses may be proposed to the student's graduate committee.

- AGED 810 - Social Data Analysis in Communications and Agricultural Education **Credits: 3**
- AGED 838 - Qualitative Design in Agricultural Education and Communications **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**

- SOCIO 824 - Qualitative Methodology **Credits: 3**

Thesis Option Courses

Choose 6 hours from the following:

- AGCOM 899 - Master's Thesis **Credits: 1-6**
- AGED 899 - Master's Thesis **Credits: 1-6**

Electives

Choose 12 hours of electives. Elective courses available subject to approval by the student's graduate committee.

Additional Requirements for Report Option

Leadership

A minimum of 3 credit hours must focus on Leadership. Classes may be selected from AGED, AGCOM, EDACE, or LEAD. Other courses may be proposed to the student's graduate committee.

Report Option Courses

Choose 2 hours from the following:

- AGCOM 890 - Master's Project **Credits: 1-2**
- AGED 890 - Master's Project **Credits: 1-3**

Electives

Choose 18 hours of electives. Elective courses available subject to approval by the student's graduate committee.

Additional Requirements for Non Thesis/Report Option

Leadership

A minimum of 3 credit hours must focus on Leadership. Classes may be selected from AGED, AGCOM, EDACE, or LEAD. Other courses may be proposed to the student's graduate committee.

Electives

Choose 24 hours of electives. Elective courses available subject to approval by the student's graduate committee.

Total Hours Required for Master's: 30-36

Entomology

Brian McCornack, Head

Fax: 785-532-6232
entomology@k-state.edu
<http://www.entomology.ksu.edu>

Introduction

The Department of Entomology at Kansas State University has an internationally recognized graduate program, leading to the M.S. or Ph.D. degree and an MS graduate certificate program. A wide variety of opportunities for graduate study are offered in several areas of research in which the faculty have established expertise. These areas include

- arthropod pest management
- agrospatial, behavioral, chemical ecology
- biocontrol
- molecular, developmental, and population genetics
- physiological, biochemical, toxicological, and molecular insect science
- plant resistance to insects
- molecular and ecosystem plant/insect interactions
- stored-product entomology
- ecology, systematics, and evolution
- public and animal health entomology

The department is housed in Waters Hall, and maintains excellent research facilities with state of the art research equipment, a student computer laboratory, and a research insect collection. Classrooms and teaching laboratories have been renovated and utilize multimedia-assisted instructional aids. Facilities include 22 greenhouses of various sizes, bioclimatic chambers, and rearing rooms. Field research is conducted on experimental farms at Manhattan and at branch experiment stations throughout the state. Cooperative research programs exist with the KSU Departments of Animal Sciences and Industry; Agronomy; Biochemistry and Molecular Biophysics; Grain Science and Industry; Plant Pathology; Horticulture, Forestry and Recreational Resources; the Wheat Genetics Resource Center; the College of Veterinary Medicine; the U.S. Grain Marketing Production and Research Center, and other U.S. and international organizations.

The department currently has 17 permanent, and 30 adjunct/ancillary faculty, four full-time office staff, about 30 postdoctoral and technical support staff, over 30 graduate students, and several other temporary personnel and numerous undergraduate students involved in research. The faculty have received awards for excellence in research, teaching, and extension, and serve in leadership positions with various professional societies, grant panels, blue ribbon panels, etc. Faculty receive competitive research grants from the National Institutes of Health, National Science Foundation, United States Agency for International Development, Environmental Protection Agency, and the U.S. Department of Agriculture-National Institute for Food and Agriculture Programs, Pest Management Alternatives Program, Risk Avoidance and Mitigation Program, etc., in addition to various industries and commodity commissions.

Extension Entomologists are broadly knowledgeable over a wide range of insect and related arthropod topics. Public support is offered through an insect identification and diagnostic service, 4-H and Youth programs, pesticide safety training, and training for pesticide application certification. An integrated pest management approach is used in providing the public with programs and information on insects and other arthropods of importance to field and horticultural crops, livestock, stored grain, residential environs, and human health. Programming is routinely coordinated among entomologists and members of other academic departments and many governmental agencies.

The goal of the department is to provide graduate students with opportunities for basic and practical experiences in research, teaching and extension, and for significant professional development. Students publish their research findings in leading scientific journals and participate in the preparation of extramural grant proposals. All students are afforded opportunities to

present their findings at professional meetings. Our graduate students routinely win local, regional, national, and international awards for their research endeavors, and compete in the annual Entomology Games sponsored by the Entomological Society of America, winning national and regional championships several times. In addition to a seminar series that brings nationally and internationally recognized scientists to the department, faculty and students participate in journal discussion groups on a variety of entomological topics.

The Popenoe Entomology Club (<https://popenoe.org>) is a very active group that offers students opportunities for outreach, professional development, collecting insects, funds for travel, and numerous social activities. The club was named the K-State Student Organization of the Year in 2024.

The department offers unparalleled outreach opportunities through its outstanding and well-recognized Insect Zoo, which is located in the Kansas State University Gardens. Students, staff, and faculty volunteer to serve as tour guides and in its maintenance. The mission of the Insect Zoo is to foster a better understanding and increased awareness of our natural world and of the important roles that insects and their relatives play in it. The Insect Zoo offers an interactive experience for visitors who will experience the sights, sounds, and smells of live creepy crawlies, including giant cockroaches, centipedes, scorpions, spiders, tarantulas, beetles, walking stick, and praying mantises. Visitors also can "pet" some of the animals during show-and-tell demonstrations by the staff. The Insect Zoo features a number of exciting educational exhibits including the Mick Hilleary-designed tropical tree/flooded Amazonian rainforest. Other fascinating exhibits are The Desert-Scape, observation beehive, and a mock kitchen. Many interactive learning stations with touch-screen computers along with colorful posters offer additional information on butterflies, insects, arthropods, and plants.

Financial assistance

Stipends

The Department of Entomology supports graduate study and development in numerous ways. Stipends are available as graduate research and teaching assistantships. Department faculty successfully secure research grants from federal agencies, commodity commissions, agribusiness corporations, and private foundations that fund many graduate students on research assistantships. Check with the department for current rates. Student tuition and fees are not waived, but are assessed at in-state rates for all graduate assistants.

Master's students are encouraged to seek teaching experience. Ph.D. students are required to seek teaching experience. A student can obtain teaching experience as a paid, non-credit hour teaching assistant or a graduate teaching assistant receiving variable credit for ENTOM 932 Topics in General and Systematic Entomology.

Performance requirements for continuation

In order to maintain financial assistance from assistantships or fellowships for teaching or research, graduate students are expected to maintain a B average in all course work. Failure to maintain a B average will result in academic probation for one semester before reinstatement as a regular graduate student.

Accelerated

Accelerated Entomology (BS)/ Entomology (MS)

The accelerated Accelerated Entomology (BS)/Entomology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Entomology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Entomology (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ENTOM 625 - Integrative Behavioral Ecology **Credits: 3**
- ENTOM 649 - Introduction to Arthropod Vectors of Human Pathogens **Credits: 3**
- ENTOM 660 - Introduction to Insect Genetics **Credits: 3**
- ENTOM 692 - Insect Ecology **Credits: 3**
- ENTOM 799 - Problems in Entomology **Credits: 1-18**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Entomology (PHD)

The Department has an internationally recognized graduate program leading to the M.S. and Ph.D. degrees. A wide variety of opportunities for graduate study are offered in several areas of applied and basic research such as integrated pest management, molecular biology, toxicology, ecology, medical-veterinary entomology, and others. Graduates go on to Ph.D. programs, postdoctoral positions, other academic positions, government agencies and non-government organizations, and private industry.

The doctoral degree requires 90 credits beyond the B.S. degree, or at least 60 credit hours beyond an M.S. degree (incorporating a research thesis), including a dissertation of at least 30 credits. See the doctoral degree program requirements in the Graduate Handbook for additional information: <https://www.k-state.edu/grad/student-success/graduate-handbook/chapter3.html>

The Program Contact is Crystal Ly (cly@ksu.edu) and the Graduate Program Director is Dr. Gregory Zolnerowich (gregz@ksu.edu).

Admission Requirements

- Applicants for graduate study are expected to have a background in biology, chemistry, mathematics, and the physical sciences.
- An overall 3.0 GPA (B average, 80% or better) is expected.
- GRE scores are not required but GRE scores can be helpful in the application process, if available.
- Applicants cannot be admitted to the graduate degree program unless there is a formal commitment by a faculty member to serve as the major advisor.

Prospective applicants are encouraged to contact the Graduate Program Director or faculty members to express their interest and determine availability of space and funding for a particular research program.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Fifteen of the minimum of 24 hours of coursework credit hours beyond the M.S. degree normally required by the advisory committee should be at the 800-level or above. Depending on the research program and input from the student's advisory committee, students might also take courses from departments such as Biochemistry, Biology, Geography, Plant Pathology, and Statistics.

- ENTOM 795 - Entomology Seminar **Credits: 1**
- ENTOM 800 - Professional Development in Entomology and Related Sciences **Credits: 2**
- ENTOM 932 - Teaching Experience in Entomology **Credits: 1-3**

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Entomology Graduate Certificate

Contact: Gregory Zolnerowich

E-mail: gregz@ksu.edu

Home Page: <https://entomology.k-state.edu/about/people/faculty/Zolnerowich-Gregory.html>

Graduate students in several disciplines -- agronomy, animal science, biochemistry, biological sciences, genetics, veterinary diagnostic medicine and pathobiology, horticulture, and plant pathology -- are conducting research on topics that may include

insects and plant protection/pest management. Such students may wish to demonstrate proficiency in entomology, making them more suitable for certain jobs. In order to strengthen their educational programs and the quality of graduate education without detracting from their existing graduate degree programs, an entomology graduate certificate program has been developed through the Department of Entomology. Its objectives are to prepare graduates for careers related to entomology or plant protection/pest management, encourage interdisciplinary educational experiences in entomology and enhance the educational experiences of participating graduate students.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Special Requirements:

At the master's and Ph.D. level, 12 credit hours are required PLUS one credit of Entomology Seminar (ENTOM 995) in which the student presents an oral seminar to the Department. The list of courses can include BIOCH 907 (Advanced Topics in Insect Biochemistry). The certificate program will require a focused and thematic program of study in the various sub-disciplines of entomology, which would complement the student's interest and area of expertise, thus, helping develop additional skills. In lieu of a course based on classroom work, a student may register for ENTOM 899 or ENTOM 999 Research in Entomology, and undertake a research project or register for ENTOM 799 Special Topics, and undertake specialized, independent study. The certificate program requires that it be a blend of traditional and experiential learning opportunities. Students will be advised by entomology faculty on thematic foci and requirements.

Course Requirements

Required Courses

- ENTOM 995 - Entomology Seminar **Credits: 1**

Elective Courses:

12 credit hours

- BIOCH 907 - Advanced Topics in Insect Biochemistry **Credits: 3**
- ENTOM 612 - Insect Pest Diagnosis **Credits: 2**
- ENTOM 620 - Pesticides, People, and the Environment **Credits: 2**
- ENTOM 692 - Insect Ecology **Credits: 3**
- ENTOM 695 - Insect Taxonomy **Credits: 3**
- ENTOM 799 - Problems in Entomology **Credits: 1-18**
- ENTOM 805 - Insects of Stored Products **Credits: 3**
- ENTOM 815 - Experience in Extension Entomology **Credits: 1-3**
- ENTOM 821 - Biological Control **Credits: 3**
- ENTOM 857 - Toxicology of Insecticides **Credits: 3**
- ENTOM 875 - Insect Physiology **Credits: 3**
- ENTOM 892 - Advanced Insect Ecology **Credits: 3**
- ENTOM 898 - Master's Report in Entomology **Credits: 1-18**
- ENTOM 899 - Master's Research in Entomology **Credits: 1-18**
- ENTOM 860 - Insect Genetics **Credits: 3**
- ENTOM 825 - Advanced Integrative Behavioral Ecology **Credits: 3**

- ENTOM 930 - Topics in Entomology **Credits:** 1-9
- ENTOM 932 - Teaching Experience in Entomology **Credits:** 1-3
- ENTOM 999 - Research in Entomology **Credits:** 1-18

Total Hours Required for Graduate Certificate: 13

Master of Science

Entomology (MS)

The Department has an internationally recognized graduate program leading to the M.S. and Ph.D. degrees. A wide variety of opportunities for graduate study are offered in several areas of applied and basic research such as integrated pest management, molecular biology, toxicology, ecology, medical-veterinary entomology, and others. Graduates go on to Ph.D. programs, postdoctoral positions, other academic positions, government agencies and non-government organizations, and private industry.

The Master's degree requires a minimum of 30 hours of graduate credit beyond the B.S. degree. See the M.S. degree program requirements in the Graduate Handbook for additional information: <https://www.k-state.edu/grad/student-success/graduate-handbook/chapter2.html>

Admission Requirements

- Applicants for graduate study are expected to have a background in biology, chemistry, mathematics, and the physical sciences.
- An overall 3.0 GPA (B average, 80% or better) is expected.
- GRE scores are not required but GRE scores can be helpful in the application process, if available.
- Applicants cannot be admitted to the graduate degree program unless there is a formal commitment by a faculty member to serve as the major professor.

Prospective applicants are encouraged to contact the Graduate Program Director or faculty members to express their interest and determine availability of space and funding for a particular research program.

The Program Contact is Crystal Ly (cly@ksu.edu) and the Graduate Program Director is Dr. Gregory Zolnerowich (gregz@ksu.edu).

Course Requirements

Depending on the research program and input from the student's advisory committee, students might also take courses from departments such as Biochemistry, Biology, Geography, Plant Pathology, and Statistics. Students work with their major professors to develop programs of study that meet course credit requirements for their particular focus.

Thesis Option

Students are required to have a minimum of 22 hours of coursework, with at least 18 hours from 700-level courses and above.

- ENTOM 899 - Master's Research in Entomology **Credits:** 1-18 (6-8 credits)

Report Option

Students are required to have a minimum of 28 hours of coursework, with at least 18 hours from 700-level courses and above.

- ENTOM 898 - Master's Report in Entomology Credits: 1-18 (2 credits)

Total Hours Required for Master's: 30

Grain Science and Industry

Joseph Awika, Department Head

 Fax: 785-532-7010
grains@k-state.edu
<http://www.grains.ksu.edu>

Programs

The Department of Grain Science and Industry offers courses of study leading to degrees of master of science and doctor of philosophy in grain science. Grain science faculty collaborate with the scientists at the USDA-ARS Research Laboratories and there are graduate programs that are collaborative with those laboratories.

Modern teaching and research facilities include a pilot flour mill, feed mill, bakery, extrusion laboratory, and grain storage and handling facility. In addition, more than 10 cereal chemistry laboratories are equipped with visible and ultraviolet spectrophotometers, near infrared analyzers, an infrared microspectrometer, gas chromatographs, liquid chromatographs, ultra centrifuge, freeze drying apparatus, balances, rapid viscosity analyzer, differential scanning calorimeter, thermo-mechanical analyzer, classical rheometer (Instron), dynamic rheometers, gel electrophoresis apparatus, a full array of glassware, rapid analyzers for nitrogen, fiber, and glucose, as well as recording mixers and starch viscometers.

The department has academic interest in the milling industry with particular emphasis on milling and baking properties of wheat cultivars since 1905. The wheat milling facilities range from a bench-scale mill (batch of 0.5 kg of grain) to a pilot mill with a capacity of 1 MT/hour. Specialty dry mills also are available to purify, fractionate, and grind any seed-like material, including all cereals, legumes, pulses, spices, and gums.

Another unique feature of the department is its fully functional pilot feed mill for research and development studies by university, industry, and government organizations. The feed mill at Kansas State University houses the latest in equipment in the feed milling industry. Its capabilities include cleaning and receiving raw materials, classification of raw materials, grinding and pelleting, flaking, or extruding. A premix room for microingredients and a large-scale batching system facilitate accurate proportioning and weighing of feed ingredients. The feed mill is capable of producing nearly all physical forms of formulated animal feeds.

A food-grade extrusion processing facility, houses a Wenger model X-20 single-screw extruder, a Wenger model TX-52 twin-screw extruder, and a gas-fired belt dryer.

Departmental facilities for research include well-equipped laboratories for all areas of research in cereal chemistry. This includes laboratories equipped for chemical research and special laboratories equipped for studies of the physical properties of flour, doughs and food systems. Pilot bakery facilities provide an excellent environment for teaching and research. A fully-equipped computer laboratory is available to all students.

Admission

Correspondence and questions regarding Graduate School are handled by the chair of the Graduate Program Committee, and the graduate services coordinator. Information and application forms can be found on the department website. <https://www.grains.k-state.edu/academics/graduate-programs>

Applicants need to complete the Graduate School application form, obtain and submit the official transcripts and three letters of recommendation and form. Additionally, applicants should write a well-thought out statement of objectives which should include the discipline area in which the student has an interest and desires to perform research. Applicants should have a B average or better and have completed courses in Mathematics, including College Algebra, Calculus and Statistics; Chemistry, including Biochemistry and Organic Chemistry; Physics and Biological Sciences. Submit all application materials to the attention of the Graduate Program through the Graduate School website.

All applicants whose native language is not English are required to submit a TOEFL or IELTS score. The Grain Science Graduate Program Committee requires a minimum TOEFL score of 79, or a minimum score of 6.5 on the IELTS. We give preference to students with higher TOEFL or IELTS scores and academic records.

The Graduate Record Exam (GRE) is not required.

International students must provide a completed financial form and evidence of financial support for their graduate training.

When the application materials are in hand, the department's graduate program committee will evaluate them and provide a recommendation of action. A student that is found to be acceptable will then be submitted to the graduate faculty for possible selection. No student will be admitted without a major professor identified. Once a student is matched with a major professor the application is then forwarded to the department head for approval and then to the Graduate School. The Graduate School has the ultimate authority for graduate admission.

Assistantships

Graduate research assistantships in Grain Science and Industry are designed to support the research project areas of the individual faculty members. Those projects may be Kansas Agricultural Experiment Station projects directed by the faculty member or sponsored research projects funded by industrial, state, or federal agencies. In all cases, the decisions regarding support and awarding of assistantships are made on a competitive basis. Funds are not always adequate to award assistantships to all students who would like support. Decisions regarding initial and continuing support are based on both academic performance and research progress. Failure to maintain high quality academic work or research activity can be reason to cancel or discontinue an assistantship.

Doctor of Philosophy

Grain Science (PHD)

The Ph.D. degree offered through the Grain Science and Industry graduate program normally requires at least three years beyond the master's degree. It is awarded to candidates who have demonstrated unique ability as scholars and researchers and proficiency in communication. The degree also certifies that the candidate has an understanding of the subject matter in the discipline and possesses the ability to make original contributions to knowledge.

Admission Requirements

Graduate study beyond the bachelor's degree equivalent to 90 or more semester hours is required for the doctor of philosophy degree. Those hours include enrollment in at least 30 hours of research. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate. At least a year in residence at the university is required.

The student and major professor select an advisory committee. Selection of the committee is subject to approval by the Graduate School. The committee consists of the major professor and at least three other members of the graduate faculty. One member of the committee must be a member of the graduate faculty in a department other than that of the major professor.

The duties of the supervisory committee include advising the student on preparation of a plan of study and development of a doctoral research proposal, administration of a preliminary written examination, approval of the final form of the dissertation, and administration of the final oral examination.

It is expected that each graduate student's dissertation or thesis will be published in the scientific literature. Graduate students are expected to prepare draft manuscripts prior to or by the time of their final oral exam. Publication of some items can precede publication of thesis or dissertation but guidance regarding prior publication should be followed.

Students without the prerequisite must have the permission of the instructor.

Course Requirements

Grain science includes the science and technology of cereals and other grains, their basic properties and their utilization in foods, feeds, and other industrial products. Knowledge of chemical, biological, physical, and mathematical sciences is fundamental to grain scientists. As part of their degree programs, students will develop strong written and oral communication skills.

The course requirements for each graduate student in grain science will be drawn from the fields listed above. Specific requirements for each individual will be determined by the major professor and approved by the student's graduate committee, with due consideration given the student's qualifications and professional plans and interests. Students may be required to make up deficiencies in course work in their undergraduate curriculums.

Suggested courses for the M.S. degree

All students:

- A graduate-level grain science course in at least one specialized area (i.e., baking, milling, feed science, extrusion)
- A statistics course at the 700 level
- BIOCH 521 - General Biochemistry **Credits: 3**
or
- BIOCH 755 - Biochemistry I **Credits: 3**
- BIOCH 756 - Biochemistry I Laboratory **Credits: 2**
- GRSC 602 - Cereal Science **Credits: 3**
- GRSC 815 - Fundamentals of Processing Grains for Food **Credits: 3**
- GRSC 900 - Professional Development in Grain Science **Credits: 1**

Additional suggested courses for the Ph.D. degree

Graduate level courses in chemistry, biochemistry or other basic science in support of PhD research

- BIOCH 755 - Biochemistry I **Credits: 3**
- GRSC 900 - Professional Development in Grain Science **Credits: 1**
or another graduate seminar

Cereal science programs

10 credit hours of chemistry and/or physics, including an advanced course in biochemistry and an acceptable course in physical chemistry which has calculus as a prerequisite.

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Credit Hours Required for Doctorate: 90

Master of Science

Grain Science (MS)

The Department of Grain Science & Industry at Kansas State University has an internationally recognized graduate program, leading to the M.S. or Ph.D. degree in Grain Science. A wide variety of opportunities for graduate study are offered in areas of both applied and basic research.

Contact information:

Graduate Program Director: Dr. Yonghui Li (yonghui@ksu.edu).

Admission Requirements

Please refer to the general information for graduate student at <https://www.grains.k-state.edu/academics/graduate-programs/index.html>.

Graduation Requirements

The MS degree program in the Department of Grain Science and Industry only offers a thesis degree but no non-thesis MS degree. See detailed master's degree program requirements in Graduate Handbook.

1. A committee of at least three graduate faculty members supervises the program of study for the master's degree. The candidate's major professor serves as committee chair. The committee is selected by the student and his or her major professor, with selection of the committee subject to approval by the Graduate School. The KSU graduate handbook Chapter 2 Section B defines the supervisory committee's responsibilities in guiding MS students.
2. A master's degree requires a minimum of 30 semester hours of graduate credit including 6 to 8 research credit hours resulting in a thesis. To be awarded a graduate degree, the student is required to maintain minimum B (3.0) grade point average. Please refer to the KSU graduate handbook-Chapter 2: The Master's Degree at <https://www.k-state.edu/grad/student-success/graduate-handbook/chapter2.html>.
3. If the student has a graduate research assistantship (GRA or GTA), the student must take a minimum of 6 credit hours in the fall and spring semesters and at least 3 credit hours in summer.
4. Before the end of the second semester, the student and the major professor will develop a plan/program of study (POS) (a list of the courses to be completed and applied towards the graduate degree) and form the thesis advisory committee.
5. The student must submit a written POS to the Graduate School prior to the end of the second semester that the candidate is enrolled at Kansas State University.
6. A candidate will submit the thesis to all committee members ten working days before the examination date. A copy is to be available at the final oral examination. All graduate students are required to submit an electronic version of their

thesis. Detailed information about the K-State electronic Theses, Dissertations, and Reports (ETDR) can be found at <http://www.k-state.edu/grad/etdr/index.htm>.

7. A final oral examination/defense is required for all students. This may also include interpretation of other scholarly work, and testing of the students' understanding of their fields of study.

Course Requirements

The program of study for the Master of Science program in grain science requires 30 total credits to include the following:

1. At least 18 hours including the thesis/research hours should be at the 700-level and above.
2. Courses at the 600-level may be included, but 500-level courses in the student's major area (i.e., courses in grain science) are expected to have been completed as undergraduate prerequisites to graduate study or as undergraduate deficiency courses assigned to admission and thus not included on the plan of study.
3. Restrictions: (1) No course in the student's major area may be at the 500-level (2) Normally no more than 6 credit hours may be at the 500-level. No more than 3 credit hours in "special problems" (e.g., GRSC 790) or other individualized courses may be applied to the master's degree.

Required Courses

(2 credit hours) Professional development skill.

- GRSC 900 - Professional Development in Grain Science **Credits: 1**
- GRSC 920 - Grain Science Graduate Seminar **Credits: 1**
- GRSC 899 - Research in Grain Science **Credits: 1-18** (6-8 hours)

Elective Courses

(20-22 credit hours)

Because Grain Science graduate students may have different undergraduate majors, the pathway to achieving the desired outcome for the MS degree, requires tailoring the coursework to fit the students' particular situation. Therefore, there are no other listed required courses for this program except for GRSC 900, GRSC 920, and GRSC 899. The graduate students can take courses listed in the catalog of graduate courses which are offered by the Department of Grain Science and Industry. They can also take courses offered by other departments, which should be agreed by their major advisors.

Recommended course (3 credit hours):

-Any 700 and above STAT course

Please refer to the graduate course catalog for detailed course information.

Total Hours Required for Master's: 30

Horticulture and Natural Resources

Steve Keeley, Head

Sunghun Park, Director of Graduate Studies

2021 Throckmorton Hall

Fax: 785-532-5894

E-mail: hnrinfo@ksu.edu
www.hnr.ksu.edu

Introduction

The Department of Horticulture and Natural Resources offers courses of study leading to degrees of master of science and doctor of philosophy in diverse study areas and graduate certificates in advanced horticulture and horticultural therapy. Study areas include: environmental stress and molecular biology; forestry, recreation and natural resources; horticulture and human health; sustainable food production; and turf and ornamentals.

The department is housed in Throckmorton Plant Sciences Center and has over 15,000 square feet of modern office, laboratory and classroom space and 30,500 square feet of greenhouse space. Faculty have individual research labs, equipped for their specific type of research. Field research is conducted on our five off-campus research centers located in Manhattan and throughout the state. Cooperative research programs exist with the KSU departments of pathology, soil science, entomology, agronomy, biochemistry, microbiology, marketing, food science, health and nutrition, kinesiology, psychology, education and other disciplines.

The department consists of 22 faculty members, about 40 graduate students and 10 research associates, as well as post-doctoral fellows and visiting scientists. The faculty have received awards for excellence in research, teaching, and extension, and serve in leadership positions with various professional societies grants panels, etc. Faculty receive competitive research grants from the National Science Foundation, U.S. Department of Agriculture, U.S. Fisheries and Wildlife, National Park Service, foundations, and industry groups.

The graduate program is dedicated to providing advanced discipline training, breadth and depth in research training, and mentoring to our students. The goal is the scholarly and professional development of research scientists, extension specialists, teachers, and horticultural business leaders.

Admission

Applications are accepted at any time of the year, and graduate studies can begin during fall, spring or summer terms. Applying early increases the probability of being awarded an assistantship. Departmental admission requirements can be found at <http://www.hnr.k-state.edu/graduate/admissions.html>. Applications are completed online at <http://www.k-state.edu/grad/admissions/application-process/>.

Financial Support

Research and teaching assistantships are available on a competitive basis. All students on an assistantship qualify for in-state tuition. Students may also be eligible to apply for fellowships from private and federal sources.

Accelerated

Accelerated Horticulture - Golf Course and Sports Turf Management (BS)/Horticulture and Natural Resources (MS)

The accelerated Accelerated Horticulture - Golf Course and Sports Turf Operations Management (BS)/Horticulture and Natural Resources (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Horticulture and Natural Resources degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the traditional M.S. degree except that completion of the B.S. degree is not required and the GRE score requirement will be waived.

- KSU graduate application form completed on-line and submitted before semester of enrollment. Application fee submitted with application.
- Applicant's statement of academic objective(s) and preferred primary advisor(s) must be submitted with application.
- Three letters of reference are required.
- Transcript(s) of all undergraduate work must be sent to the Director of Graduate Programs in HNR.

Once a student is admitted to the accelerated B.S./M.S degree program, the student should consult the graduate handbook for policies and procedures for M.S. degrees which include: supervisory committee, final examination, etc. The student will work closely with her/his major professor to form a supervisory committee and file a program of study by the end of the first semester of the senior year. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements. The undergraduate advisor will continue to advise the student in academic progress toward the B.S. degree, and the major professor will supervise the student's academic progress and research project for the M.S. degree. Research toward the M.S. thesis will begin as soon as possible, but will not begin later than the first semester of the senior year.

Should the student meet these requirements and be approved for admission by the HNR Graduate Admission Committee, admission will be provisional, pending the award of the B.S. degree. The student must complete all of the undergraduate requirements with the exception that up to nine (9) credit hours of graduate level classes taken for graduate credit may be applied toward the 126 credit hour requirement for the undergraduate degree and can also count toward the 30 credit hours required for the M.S. degree. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Horticulture and Natural Resources (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- HORT 600 - Herbaceous Landscape Plant Production **Credits: 3**
- HORT 706 - Advanced Culture of Golf and Sports Turf **Credits: 3**
- HORT 760 - Business Management for Horticultural Enterprises **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Horticulture - Horticulture Production (BS)/Horticulture and Natural Resources (MS)

The accelerated Accelerated Horticulture - Horticulture Production (BS)/Horticulture and Natural Resources (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Horticulture and Natural Resources degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate electives.

Application Process

The application process is the same as for the traditional M.S. degree except that completion of the B.S. degree is not rerequired and the GRE score requirement will be waived.

- KSU graduate application form completed on-line and submitted before semester of enrollment. Application fee submitted with application.
- Applicant's statement of academic objective(s) and preferred primary advisor(s) must be submitted with application.
- Three letters of reference are required.
- Transcript(s) of all undergraduate work must be sent to the Director of Graduate Programs in HNR.

Once a student is admitted to the accelerated B.S./M.S degree program, the student should consult the graduate handbook for policies and procedures for M.S. degrees which include: supervisory committee, final examination, etc. The student will work closely with their major professor to form a supervisory committee and file a program of study by the end of the first semester of the senior year. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements. The undergraduate advisor will continue to advise the student in academic progress toward the B.S. degree, and the major professor will supervise the student's academic progress and research project for the M.S. degree. Research toward the M.S. thesis will begin as soon as possible, but will not begin later than the first semester of the senior year.

Should the student meet these requirements and be approved for admission by the HNR Graduate Admission Committee, admission will be categorized as special, pending the award of the B.S. degree. The student must complete all of the undergraduate rerequirements with the exception that up to nine (9) credit hours of graduate level classes taken for graduate credit may be applied toward the 126 credit hour requirement for the undergraduate degree and can also count toward the 30 credit hours required for the M.S. degree. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.

- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Horticulture and Natural Resources (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- HORT 600 - Herbaceous Landscape Plant Production **Credits: 3**
- HORT 710 - Plant Cell, Tissue and Organ Culture. **Credits: 3**
- HORT 725 - Postharvest Technology and Physiology of Horticultural Crops **Credits: 3**
- HORT 791 - Urban Agriculture **Credits: 2**
- HORT 794 - Urban Food Systems **Credits: 2**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Horticulture - Landscape Horticulture (BS)/Horticulture and Natural Resources (MS)

The accelerated Accelerated Horticulture - Landscape Horticulture (BS)/Horticulture and Natural Resources (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Horticulture and Natural Resources degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the traditional M.S. degree except that completion of the B.S. degree is not required and the GRE score requirement will be waived.

- KSU graduate application form completed on-line and submitted before semester of enrollment. Application fee submitted with application.
- Applicant's statement of academic objective(s) and preferred primary advisor(s) must be submitted with application.
- Three letters of reference are required.
- Transcript(s) of all undergraduate work must be sent to the Director of Graduate Programs in HNR.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Horticulture and Natural Resources (PHD)

Horticulture and Natural Resources (PhD)

Admission Requirements

In addition to general Graduate School requirements, the Department of Horticulture and Natural Resources has the following requirements for admission.

Course requirements

No specific course requirements. Applicants for admission to Ph.D. degree programs are expected to have completion of a MS degree in a field relevant to the graduate program of interest.

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Grade requirements

GPA of 3.0 or better on a 4.0 scale, based on the courses taken during the last two academic years.

Graduate record examination

Graduate Record Examination (GRE) is not required.

More detailed admission information for Ph.D. degree programs can be found at this site.

Course Requirements

The courses that can be applied should be relevant to the current Ph.D. program. Thus, course and curriculum requirements are as follows:

- Of the 24 to 30 hours of course work credit hours beyond the master's degree approved by the supervisory committee, 15 credit hours should be at the 800-level or above, in addition to doctoral research credit hours.
- For course work beyond the master's degree, no more than 6 credit hours of 500-level courses are permitted in a doctoral program. No 500-level course taken in the student's major field of study, i.e., Department, may appear in the program of study.
- Not more than 6 hours of problems or other individualized courses should ordinarily appear on the program of study for the doctoral program.
- For students who bypass the master's degree, the program of study must include at least 15 credit hours at the 800-level or above, in addition to doctoral research credit hours. No more than 12 credit hours of 500 level courses are permitted in a doctoral program and they must come from outside the student's major field of study (i.e., Department).

Required Courses

Note: Each Ph.D. degree program must include 3 credit hours of Graduate Seminar (HORT 951).

- HORT 951 - Horticulture Graduate Seminar **Credits: 1**

Research

30 - 36 credit hours of research are required. The number of research credits should accurately reflect the emphasis on research inherent in the Ph.D. degree.

- HORT 999 - Research in Horticulture, PhD **Credits: 1-18**

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Graduate Certificate

Advanced Horticulture Graduate Certificate

Contact: Candice Shoemaker
E-mail: cshoemak@ksu.edu

This certificate is offered through the Horticulture and Natural Resources graduate program.

Students, upon consultation with their advisors, will select a minimum of 12-credits of coursework from graduate courses available through Hort AG*IDEA and Kansas State University. At least one course with a basis in horticultural crop physiology should be included in the Plan of Work for the certificate.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Horticulture and Natural Resources at Kansas State University.

Course Requirements

Horticultural Crop Physiology (3 credits minimum)

- HORT 706 - Advanced Culture of Golf and Sports Turf **Credits: 3**
- HORT 800 - Horticultural Physiology **Credits: 3**
- HORT 815 - Plant Nutrition and Nutrient Management **Credits: 3**
- AGRON 820 - Plant Water Relations **Credits: 3**
- HORT 960 - Environmental Plant Stress **Credits: 3**

Cultural and Business Practices (up to 9 credit hours)

- HORT 600 - Herbaceous Landscape Plant Production **Credits: 3**
- HORT 625 - Floral Crops Production and Handling **Credits: 2**
- HORT 630 - General Viticulture **Credits: 3**
- HORT 695 - Introduction to Permaculture **Credits: 3**
- HORT 710 - Plant Cell, Tissue and Organ Culture. **Credits: 3**
- HORT 715 - Advanced Interiorscaping **Credits: 3**
- HORT 720 - Environmental Nursery Production **Credits: 3**
- HORT 760 - Business Management for Horticultural Enterprises **Credits: 3**
- HORT 775 - Plant Breeding Methods in Horticulture **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Urban Food Systems Graduate Certificate

This 12-credit interdisciplinary graduate certificate in Urban Food Systems (UFS) is designed for graduate students and professionals that wish to demonstrate proficiency in UFS. Through the 6-credits of core courses and 6-credits of electives students will learn:

- a systems perspective to understand the urban environment and its cultural, political, environmental, and economic roles in urban food systems
- the inter-relationships within urban food systems, specifically among diet, food production, the environment, climate, and public health
- approaches to urban food crop production
- selected skills (grant writing, fundraising, non-profit management, advocacy, communication, evidence-based decision rules) as a community organizer, educator, or leader in urban food systems.

This program can be completed online and on-campus. Students will interact regularly with each other and leaders in the field.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Current K-State graduate students who want to pursue the certificate should contact the Program Director for guidance on filling out a plan for completing the certificate.

Certificate only students must apply to the certificate program through the online graduate admissions application process. When asked to **Select a Degree Program** choose "Graduate Certificate" for degree and "Urban Food Systems – Graduate Certificate" for program. The program will be listed under the Interdisciplinary tab. Once your application is set up, you will be asked to provide the following documents that you will upload to the online application and pay the application fee:

- **Statement of Purpose** (1-2 pages) describing your interest in urban food systems, your objectives in pursuing this certificate, and plans for completion of the program requirements. The Statement of Purpose is an important component of your application.
- Copies of all **transcripts**. If accepted, you will need to provide "official" transcripts to the Graduate School.
- **One letter of reference** from your supervisor, advisor, or a professor that can address your ability to succeed in Graduate School. You will provide the name and e-mail address and the online system will email that person and provide them with a link.

To qualify, students must have:

- A bachelor's degree from an accredited institution
- GPA of 3.0 or higher in the final two years of undergraduate study or approximately the last 60 credit hours
- Computer proficiency sufficient to complete the online course work
- Test of English as a Foreign Language (TOEFL) scores for students whose native language is not English. Acceptable TOEFL score is 550 (paper-based test), or 79 (IBT-internet-based test).

Students not meeting the requirements above may be admitted on a provisional basis at the discretion of the certificate faculty if the student has demonstrated adequate preparation in this or an equivalent field and has successfully completed projects of equivalent difficulty.

Graduation Requirements

The Graduate Certificate in Urban Food Systems consists of 12 credit hours with 6 credits of core courses and 6 credits of elective courses.

Course Requirements

Required Courses

6 credit hours

- UFS 791 - Urban Agriculture **Credits: 2**
- UFS 794 - Urban Food Systems **Credits: 2**
- UFS 796 - Professional Development in Urban Food Systems **Credits: 1**
- UFS 798 - Urban Food Systems Field Experience **Credits: 1**

Elective Courses

6 credit hours. Select from the following:

Plant and Agricultural Sciences

- AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6
- AGECE 710 - Comparative Food and Agriculture Systems Credits: 3
- AGECE 810 - Price, Income and Trade Policies in Agriculture Credits: 3
- AGECE 815 - International Agricultural Development Credits: 3
- AGECE 825 - Natural Resource Policy Credits: 3
- AGECE 890 - Advanced Food and Agribusiness Management Credits: 3
- AGRON 605 - Soil and Environmental Chemistry Credits: 3
- AGRON 615 - Topics in Agronomy Credits: 1-3
- AGRON 635 - Soil and Water Conservation Credits: 3
- CIS 590 - Special Topics in Computer Science Credits: 1-4
- CIS 890 - Special Topics in Computer Science Credits: 2-4
- ENTOM 612 - Insect Pest Diagnosis Credits: 2
- ENTOM 799 - Problems in Entomology Credits: 1-18
- HORT 725 - Postharvest Technology and Physiology of Horticultural Crops Credits: 3
- HORT 780 - Health-Promoting Phytochemicals: Fruits and Vegetables Credits: 2
- HORT 790 - Sustainable Agriculture Credits: 2
- HORT 793 - Farm to Fork Produce Safety Credits: 2
- HORT 795 - Urban Agriculture Study Tour Credits: 1
- PLPTH 765 - Integrated Plant Disease Management Credits: 2
- UFS 640 - Topics in Urban Food Systems Credits: 1-3

Leadership and Management

- AGCOM 845 - Approaches to Public/Community Engagement Credits: 3 or
- COMM 845 - Approaches to Public/Community Engagement Credits: 3 or
- LEAD 845 - Approaches to Public/Community Engagement Credits: 3
- CDPLN 633 - Grantwriting Credits: 3
- CDPLN 700 - Foundations of Community Development Credits: 3
- CDPLN 704 - Community Leadership and Capacity Building Credits: 3
- CDPLN 713 - Nonprofit Management Credits: 3
- CDPLN 720 - Community and Regional Economic Analysis Credits: 3
- DMP 815 - Multidisciplinary Thought and Presentation Credits: 3
- LEAD 701 - Foundations of Leadership Credits: 3
- POLSC 740 - Nonprofit Financial Management Credits: 3

Sociology, Economics, Health

- CDPLN 701 - Special Studies in Community Development Credits: 1-3
- CDPLN 711 - Immigrants in Communities Credits: 3
- CDPLN 712 - Sustainable Communities Credits: 3
- FDSCI 630 - Food Science Problems Credits: 0-6
- FDSCI 730 - A Multidisciplinary Overview of Food Safety and Security Credits: 2
- FDSCI 731 - Food Protection and Defense--Essential Concepts Credits: 2
- FNDH 600 - Public Health Nutrition Credits: 3
- FNDH 700 - Global Health and Nutrition Credits: 3
- SENS 701 - Sensory Analysis Credits: 3

- FNDH 820 - Functional Foods for Chronic Disease Prevention **Credits: 3**
- SENS 833 - Descriptive Sensory Analysis: Methods **Credits: 1**
- SENS 841 - Consumer Research - Fundamentals **Credits: 1**
- SENS 843 - Consumer Research - Qualitative **Credits: 1**
- SENS 848 - Consumer Research – Quantitative **Credits: 1**
- SENS 851 - Sensory Analysis Applications of Statistics **Credits: 2**
- FNDH 862 - Maternal and Child Nutrition **Credits: 3**
- LAR 741 - Problems in Landscape Architecture **Credits: 1-18** (for LAR 298 - Ethics and Environmental Dilemmas)
- MPH 818 - Social and Behavioral Bases of Public Health **Credits: 3**
- PLAN 718 - Principles and Strategies of Community Change **Credits: 3**
- PLAN 720 - Infrastructure and Plan Implementation **Credits: 3**
- PLAN 801 - Knowledge Methods **Credits: 3**
- PLAN 812 - Planning Theory & Law **Credits: 3**
- SOCIO 831 - Sociology of Agriculture **Credits: 3**
- SOCIO 832 - Sociology of Community **Credits: 3**
- SOCIO 835 - Environment and Society **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Horticulture and Natural Resources (MS)

The Horticulture and Natural Resources graduate program offers a Master of Science degree program in diverse interdisciplinary horticultural areas and in Natural Resources disciplines related to Park Management and Conservation and Wildlife and Outdoor Enterprise Management. Graduate students are expected to excel in research, teaching, extension activities and develop professionally. Independent and original research is an important part of the graduate program and forms a basis for a graduate thesis. Research can be conducted within the department or in other cooperating departments.

Admission Requirements

- Completion of a bachelor's degree from an accredited 4-year institution according to the following guidelines:
 - Horticulture: a bachelor's degree in horticulture, botany, biology or related agricultural science.
 - Park Management and Conservation: a bachelor's degree in the life sciences or natural resources is preferred but not required.
 - Wildlife and Outdoor Enterprise Management: a bachelor's degree in biology, environmental science, ecology, or related field.
- GPA of 3.0 or better on a 4.0 scale, based on the courses taken during the last two academic years.
- Graduate Record Examination (GRE) is not required.

More detailed admission information for M.S. degree programs can be found at this site.

Course Requirements

The M.S. requires at least 30 credit hours beyond the bachelor's degree. Master's students should earn a significant majority of their credit hours in courses numbered 700 or above. Therefore, of the 30 credit hours normally required for the master's program

of study at least 18 hours should be at the 700 level and above, including the thesis/research and the report/problems hours required by the thesis and report options.

Required Courses

The M.S. requires at least 30 credit hours beyond the bachelor's degree. Master's students should earn a significant majority of their credit hours in courses numbered 700 or above. Therefore, of the 30 credit hours normally required for the master's program of study at least 18 hours should be at the 700 level and above, including the thesis/research and the report/problems hours required by the thesis and report options. Course and research credit requirements are as follows:

- HORT 951 - Horticulture Graduate Seminar **Credits:** 1 (2) †
- Research Methods and/or Scientific Writing **Credits:** 3
- Statistics courses at 700-level or above **Credits:** 3
- Other courses to be selected with major advisor and committee

More detailed course work information for M.S. degree programs can be found at this site.

†Note: Each M.S. degree program must include 2 credit hours of Graduate Seminar (HORT 951).

Thesis Option Courses

- HORT 899 - Research-MS **Credits:** 1-18 (6-8)

Report Option Courses

- HORT 898 - Master's Report **Credits:** 1-18 (2)

Total Hours Required for Master's: 30

Horticulture and Natural Resources - Urban Food Systems (MS)

This specialization focuses on sustainable agriculture, food systems project management, grant writing, horticultural science, and safe food production in an urban environment. Students will gain a systems-level understanding of urban food systems and the cultural, political environmental, and economic roles within them.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

- 700 level or above Statistics **Credits:** 3

Elective Courses

9 credit hours

- HORT 791 - Urban Agriculture **Credits: 2**
- HORT 792 - Urban Food Production Practicum **Credits: 1**
- HORT 794 - Urban Food Systems **Credits: 2**
- HORT 796 - Professional Development in Urban Food Systems **Credits: 0-1**
Specialization Elective, must choose at least 3 credits from the following:
- HORT 725 - Postharvest Technology and Physiology of Horticultural Crops **Credits: 3**
- HORT 790 - Sustainable Agriculture **Credits: 2**
- HORT 793 - Farm to Fork Produce Safety **Credits: 2**
- HORT 795 - Urban Agriculture Study Tour **Credits: 1**

Thesis Option Courses

- HORT 899 - Research-MS **Credits: 1-18 (6)**
- HORT 951 - Horticulture Graduate Seminar **Credits: 1**
Research Methods and/or Scientific Writing **Credits / Units: 3**
Additional courses - to be determined by Supervisory Committee **Credits / Units: 7**

Report Option Courses

- Professional/Scientific Writing
Credits / Units: 3
- HORT 898 - Master's Report **Credits: 1-18 (2)**
- Additional courses - to be determined by Supervisory Committee
Credits / Units: 13

Total Hours Required for Master's: 30

Plant Pathology

Megan Kennelly, Department Head and Director of Graduate Studies

4024 Throckmorton Hall
1712 Claflin Rd
785-532-6176
Fax: 785-532-5692
plantpath@ksu.edu
www.plantpath.ksu.edu

Description and Mission

Our mission is to understand and improve plant health. Plant pathology is the study of plant diseases, their cause, effects, biology, ecology, and control. The discipline is closely integrated with the other biological sciences, and we have unique strengths in basic and applied research. Our work has state, regional, national, and international impact.

Departmental Research and Teaching Emphasis

Our department offers broad training across all facets of plant pathology. Coursework and research include:

- bacteria, fungi, nematodes, and viruses
- bio-informatics, biological control, biotechnology (cell and tissue culture, plant transformation and regeneration)
- disease diagnosis and management for major field crops in Kansas: wheat, corn, sorghum, alfalfa, and soybeans, horticultural plants (trees, turf, vegetables, fruits, ornamentals)
- disease physiology
- ecology and epidemiology
- host and microbial genetics and genetics
- modeling/statistics
- molecular genetics
- molecular plant-microbe interactions
- biosecurity

Our Department administers the campus-wide Integrated Genomics Facility; the 9-state, Great Plains Diagnostic Network; the Wheat Genetics Resource Center; and the Fungal Genetics Stock Center.

Professional Development

Along with providing technical training, we offer professional development in science communication, networking, and leadership:

- Weekly departmental seminar series exposes students to visiting scholars from within KSU and across the globe
- Student proposal seminars and professional communications courses offer training in science communication
- Graduate student club activities provide leadership development opportunities
- Graduate students develop mentoring skills by mentoring undergraduate researchers
- Graduate students gain instructional experience by serving as teaching assistants

Personnel

Our Department currently has about 30 faculty members onsite, 25-35 graduate students, about 25 post-doctoral fellows, and visiting scientists, and about 20 technical assistants, who come from many different areas of the world. We are a diverse and inclusive Department with a global climate in which ideas thrive and people excel.

Facilities and Equipment

Our Department is housed in the Throckmorton Plant Sciences Center on the KSU campus. The Department has 39,000 sq. ft. of a modern office, laboratory, and classroom space. The building is connected to 100,000 sq. ft. (2.3 acres, or about 1 hectare) of greenhouse space. Faculty have individual research labs, all well-equipped for the types of research they do. We share equipment, materials, and ideas across the Department.

Degree Options

The department offers a full range of courses leading to the M.S. and Ph.D. degrees on the following topics:

- plant pathogenic bacteria, fungi, nematodes, and viruses
- fungal genetics

- plant genetics
- disease control, diagnosis, ecology, epidemiology, and physiology
- host plant resistance to disease and abiotic stress
- biotechnology
- genomic applications
- bioinformatics
- plant molecular biology
- student proposal seminar
- professional communications
- special problems and topics for individualized study

A detailed list of courses is provided below along with specific curriculum requirements for the M.S. and Ph.D. programs.

Many of our faculty also participate in the interdepartmental program in Genetics, described elsewhere, which leads to a degree in Genetics.

Admission

Please see our departmental page for current admission deadlines and other details:

<https://www.plantpath.k-state.edu/graduate/application-information/index.html>

General requirements

Applicants are accepted into the program only if they are accepted by a specific faculty member who will serve as the Major Professor.

- Applicants must have a bachelor's degree, or be on schedule to complete a bachelor's degree prior to enrolling at KSU
- Applicants should have coursework or training in most of the following areas:
 - Biological sciences (such as botany, biology, plant science, plant pathology, entomology, mycology, microbiology, genetics, agronomy, horticulture)
 - Chemistry (such as inorganic, organic, biochemistry)
 - Mathematics
 - Physics
 - Statistics
- Relevant work experience or other professional training will also be considered
- Overall grade point average should be at least a B (3.0 on 4.0 point scale)
 - Grades in background courses in biology, math, chemistry, etc., should be A or B
- We do not require a GRE score
- International students whose native language is not English must provide evidence of English proficiency (see our application website for details)

Applications are completed online at <http://www.k-state.edu/grad/application/index.html>

Financial Assistance

Financial support may be available to qualified students. Current graduate research assistantship (GRA) information is on our application information page:

<https://www.plantpath.k-state.edu/graduate/application-information/index.html>

All applications are evaluated for available assistantships. Students may also be eligible to apply for fellowships from private and federal sources.

Doctor of Philosophy

Plant Pathology (PHD)

The Plant Pathology department offers a full range of courses leading to the Ph.D. degree. These cover diseases caused by bacteria, fungi, nematodes, and viruses; bacterial and fungal genetics; disease control, diagnosis, ecology, epidemiology, and physiology; host plant resistance to disease; plant pathology methods; plant tissue culture and regeneration; plant cytogenetics; and student seminar, special problems and topics, and research.

Admission Requirements

Ph.D. students are required to take at least 90 credit hours beyond the B.S. degree; graduate committees normally require at least 24 credit hours of formal class work at KSU past the M.S. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Required Courses

Three of the following (or their equivalents)

- PLPTH 730 - Plant Nematology **Credits: 3**
- PLPTH 835 - Plant Virology **Credits: 3**
- PLPTH 840 - Plant Pathogenic Bacteria **Credits: 2**
- PLPTH 845 - Plant Pathogenic Fungi **Credits: 3**

At least one of the following:

- PLPTH 880 - Plant Molecular Biology **Credits: 3**
- PLPTH 910 - Molecular Plant-Microbe Interactions **Credits: 3**

At least one of the following:

- PLPTH 820 - Population Genetics **Credits: 3**
- PLPTH 905 - Ecology and Epidemiology of Plant Pathogens **Credits: 3**

At least one of the following:

- EDCI 943 - Principles of College Teaching **Credits: 3**
- PLPTH 922 - Teaching Practicum in Plant Pathology **Credits: 1-2**

At least one of the following

- PLPTH 820 - Population Genetics **Credits: 3**
- PLPTH 905 - Ecology and Epidemiology of Plant Pathogens **Credits: 3**

At least one of the following

- EDCI 943 - Principles of College Teaching **Credits: 3**
- PLPTH 922 - Teaching Practicum in Plant Pathology **Credits: 1-2**

Alternate teaching experience approved by the student's graduate committee.

Seminar

PLPTH 870 Seminar must be taken for a total of 3 credit hours. One credit hour of PLPTH 870 must be used for a proposal seminar within the first 2 years of entering the graduate program. One credit hour of PLPTH 870 must be used for the thesis defense seminar. At least one hour of seminar must be in an area not related to the thesis work unless approved by the Seminar Committee.

- PLPTH 870 - Thesis/ Dissertation Proposal Seminar **Credits: 1**

Electives

At least four additional credit hours of electives must be taken in Plant Pathology.

Research

The Graduate School requires 30 credit hours minimum and notes that the number of research credits should accurately reflect the emphasis on research inherent in the Ph.D. degree.

- PLPTH 999 - Research in Plant Pathology for the PhD Degree **Credits: 1-18**

Free electives

39-40 credit hours

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Genetics, Genomics and Biotechnology Graduate Certificate

Contact: Richard Todd
E-mail: rbtodd@ksu.edu

The graduate certificate requires a minimum of 15 credit hours. To pursue the Genetics, Genomics and Biotechnology graduate certificate the student must file an application for admission with the program coordinator. A genetics course is a pre-requisite for entry into the program.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- PLPTH 812 - Introduction to Integrative Genome Analysis **Credits: 3**
- AGRON 610 - Biotechnology **Credits: 3**
- OR
- PLPTH 610 - Biotechnology **Credits: 3**

Laboratory Course (2-3 credit hours)*

*Students whose graduate research involves use of biotechnology laboratory techniques will not be required to complete a laboratory course. An exemption from this requirement will be granted by the Program Director if the student demonstrates use of the range of covered techniques by coauthor status on a publication (either submitted or published), or first author status on an abstract for a presentation at a national meeting, and/or direct confirmation of the contribution by the student's advisor. In this case, elective courses may be substituted for the laboratory course to reach the 15 hours of minimum credits required.

- BIOL 676 - Molecular Genetics Laboratory **Credits: 3**
- OR
- BIOCH 766 - Recombinant DNA Laboratory I **Credits: 1**
- AND
- BIOCH 767 - Recombinant DNA Laboratory II **Credits: 1**

Elective Courses

6-7 credit hours

- AGRON 630 - Crop Improvement and Biotechnology **Credits: 3**
- AGRON 732 - Introduction to Plant Resistance to Pests **Credits: 2**
- OR
- PLPTH 732 - Introduction to Plant Resistance to Pests **Credits: 2**
- AGRON 680 - Plant Genetics **Credits: 3**
- AGRON 860 - Applied Plant Breeding **Credits: 3**
- AGRON 970 - Advanced Plant Breeding I **Credits: 3**
- AGRON 980 - Genomic Analysis for Crop Improvement **Credits: 3**
- ASI 600 - Applied Animal Biotechnology **Credits: 3**
- ASI 749 - Advanced Animal Breeding **Credits: 3**
- ASI 831 - Molecular Reproductive Endocrinology **Credits: 1**
- BIOCH 755 - Biochemistry I **Credits: 3**
- BIOCH 765 - Biochemistry II **Credits: 3**
- BIOL 609 - Cellular and Molecular Biology of Human Diseases **Credits: 3**
- BIOL 640 - Population Biology **Credits: 3**
- BIOL 670 - Immunology **Credits: 3**
- BIOL 671 - Immunology Lab **Credits: 2**
- BIOL 675 - Genetics of Microorganisms **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**
- BIOL 707 - Advanced Cell Biology **Credits: 3**
- BIOL 730 - General Virology **Credits: 3**
- BIOL 734 - Introduction to Genomics and Bioinformatics **Credits: 4**
- OR

- CIS 734 - Introduction to Genomics and Bioinformatics Credits: 4
- BIOL 840 - Molecular and Cellular Immunology Credits: 3
- BIOL 860 - Modern Molecular Approaches Credits: 3
- BIOL 886 - Confocal, Fluorescence and Light Microscopy Credits: 3
- BIOL 888 - Electron Microscopy Techniques Credits: 3
- ENTOM 860 - Insect Genetics Credits: 3
- HORT 710 - Plant Cell, Tissue and Organ Culture. Credits: 3
- HORT 910 - Advances in Plant Cell Culture Credits: 2
- PLPTH 813 - Bioinformatics Applications Credits: 3
- PLPTH 755 - Plant Resistance to Diseases Credits: 2
- PLPTH 885 - Genomic Technologies Workshop Credits: 2
- PLPTH 820 - Population Genetics Credits: 3
- PLPTH 835 - Plant Virology Credits: 3
- PLPTH 880 - Plant Molecular Biology Credits: 3
- PLPTH 910 - Molecular Plant-Microbe Interactions Credits: 3
- PLPTH 915 - Advanced Plant Genetics Credits: 3
- PLPTH 916 - Cytogenetics Laboratory Credits: 1
- PLPTH 927 - Fungal Genetics Credits: 3

Total Hours Required for Graduate Certificate: 15

Master of Science

Plant Pathology (MS)

The Plant Pathology graduate program offers a full range of courses leading to the M.S. degree. These cover diseases caused by bacteria, fungi, nematodes, and viruses; bacterial and fungal genetics; disease control, diagnosis, ecology, epidemiology, and physiology; host plant resistance to disease; plant pathology methods; plant tissue culture and regeneration; plant cytogenetics; and student seminar, special problems and topics, and research.

Course Requirements

Candidates may choose to complete the thesis option or the report option.

Most students in our Department choose the thesis option and sign up for PLPTH 899. Students who do not desire the intensive research experience may choose to do a report instead, and will sign up for PLPTH 898. Because research experience is considered a prelude for a Ph.D., the report option is sometimes considered a "terminal degree;" i.e., students who complete the report option are much less likely to be accepted into a Ph.D. program. It is recommended only for those students who do not intend to later pursue a Ph.D.

Students who start in the research option and have taken PLPTH 899 for credit, and then switch to a report option, sign up for 2 credits of PLPTH 898 and leave the PLPTH 899 credit on their transcripts; however, the PLPTH 899 credit does not count toward the 30 credit-hour minimum requirement for the M.S. degree.

Required Courses

At least two of the following (or their equivalents)

- PLPTH 730 - Plant Nematology Credits: 3
- PLPTH 835 - Plant Virology Credits: 3
- PLPTH 840 - Plant Pathogenic Bacteria Credits: 2
- PLPTH 845 - Plant Pathogenic Fungi Credits: 3

At least one of the following

- PLPTH 610 - Biotechnology Credits: 3
- PLPTH 880 - Plant Molecular Biology Credits: 3
- PLPTH 910 - Molecular Plant-Microbe Interactions Credits: 3

At least one of the following

- AGRON 732 - Introduction to Plant Resistance to Pests Credits: 2

OR

- PLPTH 732 - Introduction to Plant Resistance to Pests Credits: 2

AND

- PLPTH 755 - Plant Resistance to Diseases Credits: 2
- PLPTH 820 - Population Genetics Credits: 3
- PLPTH 905 - Ecology and Epidemiology of Plant Pathogens Credits: 3

One credit hour of PLPTH 870 Thesis/Dissertation Proposal Seminar must be used for a proposal seminar within the first three semesters of enrollment and a noncredit, public seminar and oral defense is required prior to completion of the graduate program.

- PLPTH 870 - Thesis/ Dissertation Proposal Seminar Credits: 1

Thesis Option Courses

PLPTH 899 Research in Plant Pathology for the M.S. degree (6 credit hours minimum, 8 credit hours maximum; students can take more than 8 credit hours, but only 8 credit hours will count toward the degree and only 8 credit hours can be listed on the Program of Study).

- PLPTH 899 - Research in Plant Pathology for the MS Degree Credits: 1-18

Report Option Courses

2 credit hours

- PLPTH 898 - Master's Report Credits: 1-2

Total Hours Required for Master's: 30

College of Architecture, Planning and Design

Michael McClure, Dean

Katie Kingery-Page, Associate Dean

1127 Regnier Hall

Fax: 785-532-6722

Email: apdesign@k-state.edu

The College of Architecture, Planning, and Design offers accredited professional degree programs in architecture, interior architecture and industrial design, landscape architecture, and regional and community planning.

The college consists of three academic departments: architecture, interior architecture and industrial design, and landscape architecture and regional and community planning.

The curriculum in architecture is accredited by the National Architectural Accrediting Board (NAAB). The interior architecture curriculum is accredited by the Council for Interior Design Accreditation (CIDA), and approved by the National Association of Schools of Art and Design (NASAD). The industrial design curriculum is approved by the National Association of Schools of Art and Design (NASAD). The landscape architecture curriculum is accredited by the Landscape Architectural Accreditation Board (LAAB). The planning curriculum is accredited by the American Institute of Certified Planners (AICP) in cooperation with the Association of Collegiate Schools of Planning (ACSP).

APDesign offers both professional and post-professional degrees with several points of entry to the accredited programs including accredited 5-year non-baccalaureate Master's degrees designed for high school graduates and transfer students, accredited 2-3+ year post-baccalaureate Master's degrees designed for students who hold a bachelor's degree in any field, non-accredited 2-year post-professional degrees for students who hold accredited degrees in one of the design/planning professions, as well as an interdisciplinary Ph.D. designed for students who have either earned a master's or a bachelor's degree coupled with relevant professional, research or creative work experience. Learn more about our application process and admission requirements for all degrees offered in APDesign.

The accredited degree programs will lead to the respective professional licensing or certification in the states that require such exams.

Click on any of the following links for information:

- [Student academic creations](#)
- [Study Abroad](#)
- [Internship](#)
- [Kansas City Design Center \(KCDC\)](#)

Student academic creations

All programs involve extensive project work. Students are advised to budget sufficient funds to cover the cost of equipment, materials, and supplies. Material costs will be higher than those published for non-studio curricula.

Student academic creations are subject to Kansas State University and Board of Regents intellectual property policies. The Regents policy states:

"The ownership of student works submitted in fulfillment of academic requirements shall be with the creator(s). The student, by enrolling in the institution, gives the institution a non-exclusive royalty-free license to mark on, modify, retain the work as may be required by the process of instruction, or otherwise handle the work as set out in the institution's intellectual property policy or in the course syllabus. The institution shall not have the right to use work in any other manner without the written consent of the creator(s)." "Otherwise handle," as referenced in this policy, includes display of student work in various media and use for accreditation purposes.

K-State's intellectual property policy.

Study Abroad

Students can earn academic credit by studying abroad in Italy, Australia, Denmark, England, Germany or the Czech Republic. Specific information is available from the Director of International Programs. Requirements vary among the departments.

Internship

Internships are available with private practitioners, corporations, and government agencies. Students earn academic credit and a salary while on internship. Specific requirements vary among the departments.

The opportunity to study in the heart of downtown Kansas City, at a nationally recognized, nonprofit-partnership comprised of local civic leaders, professional designers and planners and students who are actively seeking urban design and planning solutions for this major metropolitan area. For additional information go to <http://www.kcdesigncenter.org/>

Extracurricular activities

The college offers opportunities for students to become involved in student government, student chapters of professional societies, college ambassadors, peer educators, Open House, and the student journal, *OZ*.

Doctor of Philosophy

Environmental Design and Planning (PHD)

The Environmental Design and Planning Ph.D. at the College of Architecture, Planning and Design is an interdisciplinary research-based degree program, with the aim of contributing to a more livable and ecologically-sustainable society. Our doctoral students are members of the College at-large, rather than a particular department, allowing students to draw from the sizeable and wide-ranging knowledge of faculty from the university and all three of our departments:

- Architecture,
- Interior Architecture and Industrial Design, and
- Landscape Architecture and Regional & Community Planning.

This program is designed to prepare graduates to teach at the graduate level and/or conduct research. In addition to teaching, our graduates also are well-equipped to undertake research to inform design and/or planning for governmental, environmental, and planning agencies; developers; professional design firms; and international corporations that focus on environmental stewardship.

Admission Requirements

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Major Professor/Advisor. One member of the core Ph.D. faculty must accept mentorship responsibility for any student prior to their admittance to the doctoral program. Applicants are strongly encouraged to be in contact with Ph.D. faculty members with whom they share interests, and if possible, obtain a commitment from a faculty member to support their application.

Application Review Committee. Even with faculty commitment, the application must be reviewed and approved by the PhD committee before an offer of acceptance can be made.

Course Requirements

Sample program of study

First semester

- Research
- Research tools course

- Organize advisory committee for research tool and course of study
- ENVD 900 - Conceptual Approaches to Design and Planning **Credits: 3**

Second semester

- Research tools course
- College 800-level cross-disciplinary seminar
- Organize doctoral committee
- Submit doctoral Program of Study to the Graduate School
- ENVD 901 - Research Methods in Design and Planning **Credits: 3**

Third semester

- 700- or 800-level elective
- 700- or 800-level elective
- 700- or 800-level elective
- *Write first draft of dissertation proposal*

Fourth semester

- 700- or 800-level elective
- Independent study (with major professor)
- *Preliminary examination (early in semester)*
- *Defend dissertation proposal (late in semester)*

Fifth semester

- ENVD 999 - Dissertation Research **Credits: 0-18**

Sixth semester

- *Defend dissertation*
- ENVD 999 - Dissertation Research **Credits: 0-18**

Elective courses:

Design

- ARCH 765 - Advanced Problems in Architecture **Credits: 1-18**
- ARCH 801 - Topics in History of the Designed Environment **Credits: 3**
- ARCH 811 - Topics in Architectural Design Methods **Credits: 3**
- ARCH 815 - Topics in Architecture **Credits: 3**
- ARCH 830 - Advanced Architectural Studies **Credits: 1-18**
- ARCH 835 - Topics in Building Construction Systems in Architecture **Credits: 1-4**
- ARCH 852 - Topics in Structural Systems in Architecture II **Credits: 3**

- ARCH 853 - Professional Practice: Professional Responsibility Credits: 1
- IARC 625 - Lighting Credits: 3
- IARC 710 - Advanced 3-D Computer Modeling Credits: 3
- IARC 760 - IARC Seminar Credits: 0-18
- IARC 802 - Design Workshop II Credits: 3
- IARC 803 - Design Workshop II Studio Credits: 1
- IAID 814 - Furniture Design III Credits: 4
- IAPD 821 - Advanced IAPD Design Studio Credits: 4
- IARC 822 - Advanced Product Design Studio Credits: 6
- IARC 823 - Advanced Interior Architecture Design Studio Credits: 6
- IAID 824 - Advanced Furniture Design Studio Credits: 6
- IARC 830 - Problems in IARC Credits: 0-18
- IAID 891 - Contemporary Design Seminar Credits: 3
- LAR 635 - Golf Course Planning and Design Credits: 1-4
- LAR 647 - Design Implementation III Credits: 5
- LAR 740 - Advanced Studio Credits: 5
- LAR 741 - Problems in Landscape Architecture Credits: 1-18

Planning

- LAR 646 - Community Engagement Studio Credits: 5
- LAR 740 - Advanced Studio Credits: 5
- LAR 704 - Environmental Landscape Planning and Design Credits: 3
- PLAN 655 - Land Development Planning Credits: 3
- PLAN 741 - Special Studies in Planning Credits: 1-18
- PLAN 753 - Planning Law Credits: 3
- PLAN 765 - Growth Management Credits: 3
- PLAN 801 - Knowledge Methods Credits: 3
- PLAN 802 - Planning Methods II Credits: 3
- PLAN 815 - Planning Theory, Ethics and Practice Credits: 3
- PLAN 836 - Plan Making Credits: 5
- PLAN 880 - Topics in Planning Credits: 1-18

Sustainability

- ARCH 816 - Topics in Environmental Systems in Architecture Credits: 3
- LAR 647 - Design Implementation III Credits: 5
- LAR 704 - Environmental Landscape Planning and Design Credits: 3
- LAR 720 - Public Lands and Natural Resources Law Credits: 3
- PLAN 765 - Growth Management Credits: 3

Place making

- ARCH 704 - Topics in Environment and Behavior Credits: 3
- ARCH 803 - Environmental Aesthetics Credits: 3
- ARCH 820 - Environment and Behavior Credits: 3

- LAR 646 - Community Engagement Studio Credits: 5
- LAR 647 - Design Implementation III Credits: 5
- LAR 740 - Advanced Studio Credits: 5
- LAR 750 - Advanced Seminar Credits: 3
- PLAN 650 - Housing and Development Programs Credits: 3
- PLAN 660 - Community Development Planning Credits: 3
- PLAN 661 - Community Development Workshop Credits: 3
- PLAN 740 - Small Community and Rural Area Planning Credits: 3

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Academic Advising

<http://apdesign.k-state.edu/current-students/advising.html>

Overview

The Department of Architecture, situated within the interdisciplinary College of Architecture, Planning and Design, offers two degrees at the graduate level: an accredited, professional Master of Architecture and a research based post-professional Master of Science in Architecture.

Master of Architecture (M.ARCH)

The NAAB-accredited Master of Architecture program is based firmly upon the complementary foundations of general and architectural education. We emphasize mastery of the knowledge, skills and understandings essential to the artful creation of buildings, spaces and places. The faculty seeks to assure that our students receive extensive exposure to social, political, economic and technological perspectives that will aid them in functioning as effective leaders in a rapidly changing global context.

In emphasizing the architect's role as a designer of environments that responsibly address individual and societal needs, the professional Master of Architecture curriculum includes a sequence of design studios providing holistic examination of environmental design issues. Courses in history, theory, human behavior, construction, structural and environmental systems,

planning, programming, and professional practice compliment students' work in the carefully orchestrated series of design studios.

The M.ARCH degree has two entry points. Students with little or no college experience should apply for the five year plus Non-Baccalaureate Master of Architecture. Students who currently have a Bachelor's Degree, regardless of field of study, should apply for the Post-Baccalaureate Master of Architecture program.

Master of Science in Architecture (M.S.ARCH)

The M.S. Architecture program is for students with a scholarly interest in the field of architecture. The M.S.ARCH allows students to critically explore a wide range of design-related issues in several areas of emphasis: Design Theory, and Ecological and Sustainable Design. The 30 credit graduate degree, normally completed in one to two years, is comprised of seminars and faculty-guided individual study, and leads to a capstone project or thesis.

Special Activities and Programs

Short, carefully structured visits to cities in Kansas and nearby states during the first year of study introduce students to techniques of urban and architectural analysis and extend the range of their experience. Longer trips are taken in subsequent years. Second year students travel to Dallas; third year students travel to major cities such as New York, Boston, Chicago, San Francisco, and Seattle. Led by faculty, students visit leading architectural firms, contemporary and historical buildings of importance, and examine critical urban design features. Design studio projects are often located in the city visited, so the trips are also site visits, which provide opportunities for detailed urban analysis.

Fourth-year students have access to extended elective field study opportunities, including the semester-long Architectural Internship program and study abroad programs in Italy, the Czech Republic, Denmark, Germany or other countries. Architectural internship and study abroad students return with renewed purpose and fresh insights to share with fellow students and faculty during their final year in the Master of Architecture program.

Fifth year students have the option of international travel based on the focus of their studio projects. The College also offers a year-long fifth year urban design studio at the Kansas City Design Center in Kansas City, Missouri.

Accreditation and Professional Practice

The completion of the Master of Architecture degree and a professional experience qualify our graduates to sit for the Architectural Registration Examination administered by each American state and territory to candidates who wish to become licensed as architects.

In the United States, most registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit professional degree programs in architecture offered by institutions with U.S. regional accreditation, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted an eight-year, three-year, or two-year term of accreditation, depending on the extent of its conformance with established educational standards.

Doctor of Architecture and Master of Architecture degree programs may require a preprofessional undergraduate degree in architecture for admission. However, the preprofessional degree is not, by itself, recognized as an accredited degree.

Kansas State University, College of Architecture Planning and Design, Department of Architecture offers the following NAAB-accredited degree programs:

M. Arch. (139 undergraduate credits + 31 graduate credits)

Next accreditation visit for all programs: 2025

From the 2016 NAAB Conditions for Professional Degree programs in Architecture.

Resources

College of Architecture, Planning and Design resources include the Paul Weigel Library, a professionally staffed branch of the university's main facility. It includes over 44,000 bound volumes and approximately 200 periodical subscriptions as well as audio-visual resources. K-State's Library has subscriptions to a broad range of scholarly databases, including architecture and design-oriented scholarship. Among other facilities supporting instruction and research in the College are a computer laboratory, a photography studio, and an artificial sky. The College has an extensive shop for woodworking, metalwork, and other materials. The shop can accommodate everything from small-scale model building activities to full-scale prototyping. The shop includes CAD/CAM equipment such as a large-bed CNC machine and laser cutters. Faculty from the College's other departments, including planning, landscape, interiors, and industrial design, often offer expert criticism for student projects and help foster a holistic approach to the designed environment. Students in the college enjoy a diverse range of lectures, seminars, exhibits, and guest critics throughout the academic year.

Master of Architecture

Master of Architecture (MARCH) (non-baccalaureate track)

Our department offers a NAAB-accredited 5-year Master's degree in Architecture (M. ARCH), crafted for high school graduates and transfer students entering with no academic training in design. The Master of Architecture program is based firmly upon the complementary foundations of general and architectural education. We emphasize mastery of the knowledge, skills and understandings essential to the artful creation of buildings, spaces and places. The faculty seeks to assure that our students receive extensive exposure to social, political, economic and technological perspectives that will aid them in functioning as effective leaders in a rapidly changing global context.

In emphasizing the architect's role as a designer of environments that responsibly address individual and societal needs, the professional Master of Architecture curriculum includes a sequence of design studios providing holistic examination of environmental design issues. Courses in history, theory, human behavior, construction, structural and environmental systems, planning, programming, and professional practice compliment students' work in the carefully orchestrated series of design studios.

Course Requirements

The coursework only option for this program does not require a culminating experience.

First semester: 17 credit hours

- COMM 106 - Public Speaking I **Credits: 3**
- ENVD 201 - Environmental Design Studio I **Credits: 4**
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits: 1**
- ENVD 204 - Studio Seminar **Credits: 1**
- ENVD 250 - History of the Designed Environment I **Credits: 3**
- MATH 100 - College Algebra **Credits: 3**
- General Studies Elective **Credits: 2**

Second semester: 15 credit hours

- ENGL 100 - Expository Writing I **Credits: 3**
- ENVD 202 - Environmental Design Studio II **Credits: 4**

- ENVD 251 - History of the Designed Environment II **Credits: 3**
- PHYS 115 - Descriptive Physics **Credits: 5**

Third semester: 18 credit hours

- ARCH 248 - Fundamentals of Architectural Technology **Credits: 3**
- ARCH 274 - Digital Architecture I **Credits: 1**
- ARCH 302 - Architectural Design Studio I **Credits: 5**
- ARCH 325 - Introduction to Architectural Theory **Credits: 3**
- ENGL 213 - Writing Arguments for Architecture Students **Credits: 3**
- General Studies Elective **Credits: 3**

Fourth semester: 16 credit hours

- ARCH 304 - Architectural Design Studio II **Credits: 5**
- ARCH 347 - Structural Systems in Architecture I **Credits: 4**
- ARCH 252 - History of Contemporary Architecture **Credits: 3**
- ARCH 373 - Digital Architecture II **Credits: 1**
- ARCH 433 - Building Construction Systems in Architecture I **Credits: 3**

Supplemental Study: 6 credit hours

- General Studies Electives **Credits: 6**

Fifth semester: 17 credit hours

- ARCH 374 - Digital Architecture III **Credits: 1**
- ARCH 403 - Architectural Design Studio III **Credits: 5**
- ARCH 413 - Environmental Systems in Architecture I **Credits: 4**
- ARCH 448 - Structural Systems in Architecture II **Credits: 4**
- General Studies Elective **Credits: 3**

Sixth semester: 17 credit hours

- ARCH 404 - Architectural Design Studio IV **Credits: 5**
- ARCH 434 - Building Construction Systems in Architecture II **Credits: 3**
- ARCH 514 - Environmental Systems in Architecture II **Credits: 3**
- LAR 500 - Site Planning and Design **Credits: 3**
- General Studies Elective **Credits: 3**

Seventh semester: 16 credit hours

- ARCH 605 - Architectural Design Studio V **Credits: 5**
- General Studies Elective **Credits: 3**
- Planning Elective **Credits: 5**

- Professional Support Elective **Credits: 3**

Eighth semester: 14 credit hours

- ARCH 606 - Architectural Design Studio VI **Credits: 5**
- Professional Support Electives **Credits: 9**

Ninth semester: 17 credit hours

- ARCH 805 - Comprehensive Design Preparation **Credits: 3**
- ARCH 817 - Architectural Design Studio VII **Credits: 5**
- ARCH 853 - Professional Practice: Professional Responsibility **Credits: 1**
- ARCH 854 - Professional Practice: Office Practices **Credits: 1**
- ARCH 855 - Professional Practice: Discipline-Specific Topics **Credits: 1**
- General Studies Elective **Credits: 3**
- Architecture Seminar **Credits: 3**

Tenth semester: 17 credit hours

- ARCH 818 - Architectural Design Studio VIII **Credits: 5**
- Architecture Seminar **Credits: 6**
- Professional Support Elective **Credits: 3**
- General Studies Elective (Undergraduate Level) **Credits: 3**

Notes

A minimum of twenty-eight (28) general studies elective credits must be in non-architectural studies courses. Courses in addition to any course in communications, history, humanities, social sciences, natural sciences, foreign languages, or mathematics will fulfill this requirement. They may be taken in pursuit of a minor. They may be taken any time prior to or during the Architecture program and may include KSU approved AP, IB, CLEP and transfer credit. A maximum of 3 credits of English Language Program courses and a maximum of 3 credits in recreation courses may be used to fulfill general studies requirements. General studies electives may include KSU approved extracurricular work as allowed by university regulations.

** The M.Arch degree requires twenty-seven (27) hours of professional support (PSE) electives, twelve (12) for undergraduate credit and fifteen (15) for graduate credit. Of the undergraduate credits, at least three (3) hours must be planning elective credits; the other nine (9) are usually fulfilled in the 8th semester as part of the 4th year study options. At least nine (9) hours of the graduate level PSE must be architecture seminars. See the M. Arch Handbook for further details. Students may not count more than three (3) total hours of department approved extracurricular PSE credits (such as Oz, NOMAS, Plot Club etc.) toward graduation. PSE credits correspond to optional studies as listed in the 2014 NAAB Conditions for Accreditation.

*** Students are encouraged to participate in off-campus study in the 4th year of the program. Alternative study options for ARCH 606 include study abroad or attending the Kansas City Design Center. An optional academic internship program is also available. Students interested in participating in one or more of these options should meet with their academic advisor.

Undergraduate Hours: 139

Graduate Hours: 31

Total Hours Required for Master's: 170

Master of Architecture (MARCH) (post-baccalaureate track)

The NAAB accredited Post-Baccalaureate Master of Architecture program is an accelerated, three-year pathway to architect status, designed for those with a Bachelor's degree in any field. This accredited, professional program is well-respected, and our graduates are highly desired by employers across the nation and internationally. The Post-Baccalaureate program requires a minimum of three years of study, including a required summer studio.

A unique program option is the Kansas City Design Center, which offers a year-long interdisciplinary design studio that tackles real-world issues in a growing, thriving metropolitan area.

***Advanced Standing Option for Pre-Professional Degree Holders:**

If you have or will graduate from a 4 year pre-professional architecture degree program offered by a NAAB-Accredited school, you may be eligible for advanced standing. Advanced standing students generally are able to waive the first and second semesters of the Post-Baccalaureate Program. Extremely qualified students may be placed further along in the program.

Course Requirements

The coursework only option for this program does not require a culminating experience.

First semester: 17 credit hours

- ARCH 248 - Fundamentals of Architectural Technology **Credits: 3**
- ARCH 274 - Digital Architecture I **Credits: 1**
- ARCH 325 - Introduction to Architectural Theory **Credits: 3**
- ARCH 401 - Accelerated Architectural Design Studio I **Credits: 5**
- Professional Support Electives **Credits: 5**

Second semester: 16 credit hours

- ARCH 252 - History of Contemporary Architecture **Credits: 3**
- ARCH 347 - Structural Systems in Architecture I **Credits: 4**
- ARCH 373 - Digital Architecture II **Credits: 1**
- ARCH 402 - Accelerated Architectural Design Studio II **Credits: 5**
- ARCH 433 - Building Construction Systems in Architecture I **Credits: 3**

Third semester: 17 credit hours

- ARCH 374 - Digital Architecture III **Credits: 1**
- ARCH 403 - Architectural Design Studio III **Credits: 5**
- ARCH 413 - Environmental Systems in Architecture I **Credits: 4**
- ARCH 448 - Structural Systems in Architecture II **Credits: 4**
- Professional Support Elective **Credits: 3**

Fourth semester: 14 credit hours

- ARCH 404 - Architectural Design Studio IV **Credits: 5**
- ARCH 434 - Building Construction Systems in Architecture II **Credits: 3**
- ARCH 514 - Environmental Systems in Architecture II **Credits: 3**
- LAR 500 - Site Planning and Design **Credits: 3**

Summer semester: 8 credit hours

- ARCH 605 - Architectural Design Studio V **Credits: 5**
- Professional Support Elective* **Credits: 3**

Fifth semester: 17 credit hours

- ARCH 805 - Comprehensive Design Preparation **Credits: 3**
- ARCH 817 - Architectural Design Studio VII **Credits: 5**
- ARCH 853 - Professional Practice: Professional Responsibility **Credits: 1**
- ARCH 854 - Professional Practice: Office Practices **Credits: 1**
- ARCH 855 - Professional Practice: Discipline-Specific Topics **Credits: 1**
- Professional Support Elective* **Credits: 3**
- Architecture Seminar* **Credits: 3**

Sixth semester: 14 credit hours

- ARCH 818 - Architectural Design Studio VIII **Credits: 5**
- Architecture Seminar* **Credits: 6**
- Professional Support Elective* **Credits: 3**

Notes

Undergraduate Hours 72

Graduate Hours 31

Total Degree Requirement 103

Incoming students must meet the minimum requirements of the Graduate School – completion of their undergraduate degree and a 3.0 GPA over the last 60 hours of undergraduate study. International students must meet additional requirements of English proficiency, visa status, etc.

The following courses (or their equivalents) must be completed prior to entry into the post-baccalaureate track: MATH 100, COMM 106, PHYS 113 or PHYS 115, ENGL 200, a studio-based art or design course, and a course in architecture or art history.

*The Post-Baccalaureate degree requires 26 hours of professional support (PSE) electives, 11 for undergraduate credit and 15 for graduate credit. At least 9 hours of the 15 graduate level PSE must be architecture seminars. PSE credits correspond to optional studies as listed in the NAAB Conditions for Accreditation. See the M.Arch Handbook for further details.

Total Hours Required for Master's: 103

Master of Science

Architecture (MS)

The Master of Science in Architecture program at Kansas State University is a post-professional program of study requiring a minimum of 30 semester credit hours for completion of the degree. The program usually requires two years in residence, and is designed to enable students to pursue specialized study in specific Architectural topics. It is not a NAAB accredited degree.

Specializations are available in Design Theory, Ecological and Sustainable Design, and Environment Behavior and Place Studies. These areas of specialized study in the Master of Science in Architecture program accommodate graduates of five or six year programs in architecture, interior architecture, or landscape architecture, and of certain four year baccalaureate degrees. Applicants are considered upon the merits of their academic backgrounds and proposed programs of study. Minimum entrance requirements established by the Kansas State University Graduate School include a bachelor's degree from an accredited university and a grade point average of B (3.0) or better in the last two years of undergraduate study (or a "first class" degree).

This program focuses on research, and therefore does not include the full range of topics required to qualify a student to sit for the examination to become licensed to practice architecture. Since research is the mode of learning at the limits of knowledge, our objective is to develop the capacities needed for independent study and research.

Approximately 10 students matriculate each year, and the total enrollment in the program is about 20.

Required coursework

All M.S.ARCH students will be required to take a class that provides them with the tools to facilitate in-depth academic research. Other coursework will be determined by selected area of emphasis and individual programs of study.

Thesis and Non-Thesis Options

There are two options in the Master of Science in Architecture program. Students must, in conjunction with their advisory committee, choose to pursue either a Thesis or Non-Thesis (coursework only) option. Both options require the submittal of a proposal to the Graduate Committee for approval. Both options require a final examination, which can be the defense of the thesis, or an exam based on coursework taken by the student.

A non-thesis option should have a defined focus within the general area of emphasis. A number of courses must be taken that relate to this focus.

Students may undertake an applied or theoretical research-oriented thesis which involves qualitative and/or quantitative approaches to a problem, or a design-oriented thesis that examines a physical design problem in depth from a number of points of view, including but not limited to theoretical, behavioral, economic, social, and cultural issues.

Admission Requirements

Admission to the Master of Science in Architecture program requires the following. All application materials must be submitted online via the Graduate School website. No hard copy applications or supporting documentation will be accepted.

The deadline for international applicants is January 1 for the fall and August 1 for the spring semester. The priority deadline for domestic applicants is February 1 for the fall and August 1 for the spring semester.

- **A 3.0 graduate point average** (on a 4.0 scale) in all higher education work to-date
- **A baccalaureate degree**
- **Complete the K-State Graduate School application**
- **Pay the application fee (Domestic \$90 & International \$100)**
- **Letters of recommendation:** Three letters of recommendation from professors and/or employers
- **Statement of objectives**
- **Transcripts:** Please include official transcripts from any institution of higher education you have attended. If the transcripts are not in English, a translated copy to English must be provided.
- **Portfolio:** Samples of academic/professional work, including a description of each project, its objectives, and your role and responsibilities. Samples of written work are also highly recommended.
- **TOEFL/IELTS scores (international students):** Applicants who are submitting iBT TOEFL (internet based) scores must have a minimum total score of 95. Applicants who are submitting an IELTS score must have a minimum total score of 7.0.
- **Financial statement (international students)**
- There is a non-refundable application fee of \$90.00 for U.S. citizens/permanent residents and \$100 for international applicants, which includes the department and Graduate School fees. Applications will not be considered without this fee. Applicants will pay their application fee online by credit card, debit card or online check through CollegeNet prior to submitting their application materials. The credit card must be issued by a U.S. financial institution. Visa, Master Card, American Express, and Discover are all accepted.

Special Requirements

A limited number of graduate teaching assistantships are available for students with particularly strong qualifications. Appointment as a teaching assistant requires knowledge in the subject matter of the course, human relations skills, and excellence in spoken and written English. Continuation of an appointment is contingent upon availability of positions and the GTA's academic performance as well as performance as a GTA.

Course Requirements

The coursework only option for this program does not require a culminating experience.

Design theory emphasis

The graduate emphasis in Design Theory enables the student to study specific issues in architectural and urban theory and history. The studies are not based on a rigidly defined set of theoretical courses, but an association of the student's academic interests and faculty expertise. In general, studies consist of the development of a theoretical framework, through selected courses and readings, which is subsequently used as an instrument for the analysis and examination of a particular architectural or urban phenomenon. The so defined inquiry ranges qualitatively from the poetic and speculative to the applicative and pragmatic. Analytical methods encompass a wide range of potential techniques from critical literature review to in-depth building design.

Required curriculum credits

Choose one of the following:

Non-Thesis Option

- ARCH 715 - Topics in Architecture Seminar **Credits: 3**
- ARCH 725 - Architecture Research Methods **Credits: 3**

- **ARCH 830 - Advanced Architectural Studies Credits: 1-18**
Departmental Electives (10-13 credits)
Other Electives (6 credits)

Thesis Option

- **ARCH 715 - Topics in Architecture Seminar Credits: 3**
- **ARCH 725 - Architecture Research Methods Credits: 3**
- **ARCH 899 - Thesis Credits: 1-18**
Departmental Electives (9 credits)
Other Electives (7 credits)

Recommended electives

Students consult with their advisors to select courses that match their educational and research objectives. Appropriate graduate-level history and theory courses will be identified each semester from among current course offerings. Normally, at least one three hour course on an aspect of contemporary architecture is taken by students in the design theory option. It is recommended that international students take one or more courses concerned with American architecture and urbanism. The Design Theory emphasis requires nine of the sixteen elective credits be taken within the discipline; seven may be taken outside the Department of Architecture. Outside electives should be related to the student's overall program of study, to reinforce or complement other courses and their thesis topic.

- **ARCH 700 - Topics in History of the Designed Environment Credits: 3**
- **ARCH 711 - Topics in Architectural Design Methods Credits: 3**
- **ARCH 715 - Topics in Architecture Seminar Credits: 3**
- **ARCH 830 - Advanced Architectural Studies Credits: 1-18**
- **PLAN 815 - Planning Theory, Ethics and Practice Credits: 3**

Ecological and sustainable design

Ecological and Sustainable Design (ESD) focuses on the theory and practice of architectural and environmental design that makes maximum use of the same renewable energy flows and material cycling processes by which all other living systems on earth are sustained. It is an approach to design that is holistic in nature, encompassing a concern for ecological systems, building technological systems, and socio-cultural/existential systems. Ecological systems are studied not only as the context for architecture but also as models for design, providing the fundamental principles by which sustainable buildings are designed and operated. Energy and resource conserving building technologies as well as healthy and ecologically benign building materials are studied so that ecological design principles can be implemented in environmentally appropriate architecture. The emphasis also stresses the socio-economic, political, and cultural/existential context of design as a complexly structured framework within which questions of sustainability must be considered and building designs implemented. The ESD option necessarily involves the development of a broad understanding of architectural and environmental design that is as much philosophical as it is practical.

Required curriculum credits

Choose one of the following:

Non-Thesis Option

- **ARCH 716 - Topics in Environmental Systems in Architecture Credits: 3**
- **ARCH 725 - Architecture Research Methods Credits: 3**

- **ARCH 830 - Advanced Architectural Studies Credits: 1-18**
Electives (16-19 credits)

Thesis Option

- **ARCH 716 - Topics in Environmental Systems in Architecture Credits: 3**
- **ARCH 725 - Architecture Research Methods Credits: 3**
- **ARCH 899 - Thesis Credits: 1-18**
Electives (16 credits)

Recommended elective credits

In addition to completing the required courses, students are encouraged to select an area of focus that will support their thesis. The Ecological and Sustainable Design emphasis recognizes the interdisciplinary and collaborative nature of the sustainable approach to design. As such, at least six elective credits should be taken outside the Department. Students consult with their faculty advisors to develop a program of study that meets their individual needs and interests.

- **AGEC 525 - Natural Resource And Economics Credits: 3**
- **ARCH 715 - Topics in Architecture Seminar Credits: 3**
- **ARCH 716 - Topics in Environmental Systems in Architecture Credits: 3**
- **BIOL 529 - Ecology Credits: 3**
- **CE 563 - Environmental Engineering Fundamentals Credits: 3**
- **ECON 527 - Environmental Economics Credits: 3**
- **GEOG 605 - Remote Sensing of the Environment Credits: 3**
- **GEOG 761 - Human Impact on the Environment Credits: 3**
- **IARC 625 - Lighting Credits: 3**
- **IARC 760 - IARC Seminar Credits: 0-18**
- **LAR 704 - Environmental Landscape Planning and Design Credits: 3**
- **LAR 720 - Public Lands and Natural Resources Law Credits: 3**
- **PHILO 595 - Environmental Ethics Credits: 3**
- **SOCIO 536 - Society and Natural Resources Credits: 3**

Environment behavior and place studies emphasis

Environment-Behavior and Place Studies (EBPS) focuses on the behavioral and experiential aspects of person-environment relationships and their implications for environmental design and research. The program examines varying philosophic and methodological approaches to issues in environmentbehavior and place experience. Approaches to these issues range from quantitative, explanatory styles of research, emphasizing analytic philosophies, pragmatic strategies and solutions, to qualitative, descriptive styles emphasizing continental philosophical concerns. Within this framework, students' programs of study and research are individualized to meet particular interests and needs. After completing an introductory core curriculum, students may choose to concentrate on a specific environmental problem or approach, or to work creatively to combine several approaches and issues. Within environment-behavior and place studies, areas of focus can include community and facility design for special populations, experience of place and landscape, project planning and programming, or a special focus meeting the particular educational and career goals of an individual student. Students, in consultation with the advisor, combine elective courses within and outside the College to meet the needs of their specific areas of focus.

Required curriculum credits

Choose one of the following:

Non-Thesis Option

- ARCH 704 - Topics in Environment and Behavior **Credits: 3**
 - ARCH 720 - Environment and Behavior **Credits: 3**
 - ARCH 725 - Architecture Research Methods **Credits: 3**
 - ARCH 830 - Advanced Architectural Studies **Credits: 1-18**
- Elective Courses (13-16 credits)

Thesis Option

- ARCH 704 - Topics in Environment and Behavior **Credits: 3**
 - ARCH 720 - Environment and Behavior **Credits: 3**
 - ARCH 725 - Architecture Research Methods **Credits: 3**
 - ARCH 899 - Thesis **Credits: 1-18**
- Electives (13 credits)

Recommended elective credits

Any of the thirteen elective credits in the Environment-Behavior and Place Studies Emphasis may be taken outside the Department. Courses in other Departments including Philosophy, Anthropology, Art and History may be considered, pending approval of the student's advisory committee.

- ARCH 703 - Environmental Aesthetics **Credits: 3**
- ARCH 711 - Topics in Architectural Design Methods **Credits: 3**
- ARCH 715 - Topics in Architecture Seminar **Credits: 3**

Total Hours Required for Master's: 30

Academic Advisor

<https://apdesign.k-state.edu/current-students/advising.html>

The Interior Architecture & Industrial Design department offers two master's degrees, one that focuses on Interior Architecture, or MIARC, and another on Industrial Design, or MINDD. These degrees engage our students to (re)envision building interiors

and the consumer products of the future. Our students are instructed in the essential process of inquiry, design and the making of space and form. With innovative curriculums, our degrees prepare our students to become professional leaders in their industry to shape places we live and work and the products we use every day.

Graduate Certificate

Furniture Design Graduate Certificate

An internal graduate certificate in Furniture Design, available to students enrolled in the Master of Interior Architecture or Master of Industrial Design graduate degree programs who complete specialized coursework focused on the subject of furniture design.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Interior Architecture or Master of Industrial Design at Kansas State University.

Admission Requirements

Must be enrolled in the Master of Interior Architecture or Master of Industrial Design programs and must successfully complete all course requisites.

Course Requirements

Required Courses

- IAID 814 - Furniture Design III **Credits: 4**
- IAID 824 - Advanced Furniture Design Studio **Credits: 6**
- INDD 815 - Advanced Studio Programming **Credits: 2-3**

Electives

Additionally, choose 3 credit hours from the following courses:

- IAID 615 - Topics in Furniture Design **Credits: 1-3**
- IAID 680 - Production Furniture for the Contract Market Research **Credits: 1**
- IAID 681 - Production Furniture for the Contract Market Design **Credits: 2**
- Independent Study (upon request) **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Master of Industrial Design

Master of Industrial Design (MINDD) (non-baccalaureate track)

The Master of Industrial Design is a five-year non-baccalaureate degree. It is designed to give students a diverse exposure in the industrial design profession. Students will focus on ergonomics, human factors, manufacturing processes, product semantics and design theory. Throughout the curriculum there will be a series of workshop courses to expose students to furniture design and fabrication skills. This degree will also have built into the curriculum field trips to major metropolitans, study abroad experiences and internship opportunities. This is a hands-on degree where students are given a balance of design theory, the hard science of

manufacturing and the art of craft. This degree will also provide students with three courses toward an entrepreneurship minor. With just two more courses students can opt to receive their minor in entrepreneurship with their general electives.

Housed within the College of Architecture, Planning and Design and in the department of Interior Architecture and Industrial Design this degree will leverage a wide variety of expertise in designing products for the built environment. Our building in Seaton and Regnier Hall boast large well-appointed design labs. We also have a 20,000 square foot state of the art Fabrication Lab allowing our students to create products as small as a flash drive to as large as the interior cabin of a helicopter.

Our faculty care deeply about teaching students how to innovate for the future needs of the consumer, while still maintaining practices that are sustainable and responsible for our environment. Our Master of Industrial Design is a 170 credit hour degree which will give students a full spectrum of exposure to industry partnerships, study abroad and internship experiences. Our students learn to not only dream up what is next to come tomorrow but learn how to execute that dream today.

Course Requirements

The coursework only option for this program does not require a culminating experience.

Environmental Design Studies Program

First Semester (17 credit hours)

- COMM 106 - Public Speaking I **Credits: 3**
- ENVD 201 - Environmental Design Studio I **Credits: 4**
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits: 1**
- ENVD 204 - Studio Seminar **Credits: 1**
- ENVD 250 - History of the Designed Environment I **Credits: 3**
- MATH 100 - College Algebra **Credits: 3**
- General Elective* **Credits: 2**

Second semester (15 credit hours)

- ENGL 100 - Expository Writing I **Credits: 3**
- ENVD 202 - Environmental Design Studio II **Credits: 4**
- ENVD 251 - History of the Designed Environment II **Credits: 3**
- PHYS 115 - Descriptive Physics **Credits: 5**

Industrial Design Program

Third semester (17 credit hours)

- INDD 307 - INDD Design Studio I **Credits: 5**
- INDD 325 - Human Factors in Industrial Design **Credits: 3**
- IAID 290 - Design and Material Culture **Credits: 3**
- IAID 299 - History of Furniture **Credits: 3**
- IAID 430 - Visual Communication I **Credits: 3**

Fourth semester (18 credit hours)

- IAID 407 - Design Workshop I **Credits: 4**
- IAID 431 - Visual Communication II **Credits: 3**
- INDD 320 - INDD Design Studio II **Credits: 5**
- INDD 350 - Product Semantics **Credits: 3**
- INDD 500 - Materials and Manufacturing Processes **Credits: 3**

Fifth semester (17 credit hours)

- IAID 432 - Visual Communication III **Credits: 3**
- IAID 602 - Furniture Design II **Credits: 4**
- INDD 310 - INDD Digital Applications **Credits: 2**
- INDD 435 - INDD Design Studio III **Credits: 5**
- INDD 520 - Materials and Manufacturing Processes II **Credits: 3**

Sixth semester (17 credit hours)

- ENGL 200 - Expository Writing II **Credits: 3**
- INDD 433 - User Interface and User Experience Design **Credits: 3**
- INDD 440 - INDD Design Studio IV **Credits: 5**
- INDD 600 - Professional Practice **Credits: 3**
- LAR 211 - Unlocking Creativity **Credits: 3**

Summer options (7 credit hours)

- INDD 664 - Summer Internship **Credits: 6**
AND
- INDD 665 - Summer Internship Report **Credits: 1**
OR
- Study Abroad **Credits: 7**
OR
- Focus Courses** **Credits: 7**

AND
- INDD 645 - Internship Report **Credits: 5**

Eighth semester (15 credit hours)

- ENTRP 340 - Business Innovation and the Entrepreneurial Mindset **Credits: 3**
- IAID 814 - Furniture Design III **Credits: 4**
- INDD 801 - INDD Design Studio VI **Credits: 5**

- INDD 811 - Design Research **Credits: 3**

Ninth semester (18 credit hours)

- ENTRP Course level 300 or above **Credits: 3**
- INDD 810 - INDD Capstone Studio **Credits: 5-6**
- INDD 815 - Advanced Studio Programming **Credits: 2-3**
- General Electives* **Credits: 6**

Tenth semester (15 credit hours)

- IAID 824 - Advanced Furniture Design Studio **Credits: 6**
OR
- INDD 822 - Advanced Industrial Design Studio **Credits: 6**
- IAID 891 - Contemporary Design Seminar **Credits: 3**
- General Electives* **Credits: 6**

Notes

*A minimum of fourteen (14) general elective credits must be taken. General electives may be taken in pursuit of a minor. They may be taken any time prior to or during the Interior Architecture and Product Design program and may include K-State approved AP, IB, CLEP, K-State Core if selected, and transfer credit. Students may not count more than three (3) total hours of recreation credits toward graduation.

**Focus Course includes INDD 605, as well as other department head approved courses, including those associated with a minor program. Petition process required.

***Electives taken in the seventh semester should support student interest including professional electives and study abroad courses. These may also be associated with a minor program.

Undergraduate Hours: 140

Graduate Hours: 30

Total Hours Required for Master's: 170

Master of Industrial Design (MINDD) (post-baccalaureate track)

The Interior Architecture and Industrial Design department offers an accredited 2/3-year Master's degree in Industrial Design (MINDD), developed for students entering with a previously completed bachelor's degree in any program of study. Applicants with previous degrees in design will be viewed on a case-by-case basis. Depending on how closely your degree aligns with our curriculum, the years needed to complete the MINDD may be reduced from the three-year-plan. This degree is approved by the National Association of Schools of Art & Design (NASAD), and incorporates coursework in industrial design and furniture design.

Course Requirements

The coursework only option for this program does not require a culminating experience.

Summer Study (9 credit hours)

- ENVD 201 - Environmental Design Studio I **Credits: 4**
- ENVD 202 - Environmental Design Studio II **Credits: 4**
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits: 1**

First Semester (17 credit hours)

- IAID 290 - Design and Material Culture **Credits: 3**
- IAID 299 - History of Furniture **Credits: 3**
- IAID 430 - Visual Communication I **Credits: 3**
- INDD 307 - INDD Design Studio I **Credits: 5**
- INDD 325 - Human Factors in Industrial Design **Credits: 3**

Second Semester (18 credit hours)

- IAID 407 - Design Workshop I **Credits: 4**
- IAID 431 - Visual Communication II **Credits: 3**
- INDD 320 - INDD Design Studio II **Credits: 5**
- INDD 350 - Product Semantics **Credits: 3**
- INDD 500 - Materials and Manufacturing Processes **Credits: 3**

Third semester (17 credit hours)

- IAID 432 - Visual Communication III **Credits: 3**
- IAID 602 - Furniture Design II **Credits: 4**
- INDD 310 - INDD Digital Applications **Credits: 2**
- INDD 435 - INDD Design Studio III **Credits: 5**
- INDD 520 - Materials and Manufacturing Processes II **Credits: 3**

Fourth Semester (17 credit hours)

- ENTRP 340 - Business Innovation and the Entrepreneurial Mindset **Credits: 3**
- INDD 433 - User Interface and User Experience Design **Credits: 3**
- INDD 440 - INDD Design Studio IV **Credits: 5**
- INDD 811 - Design Research **Credits: 3**
- LAR 211 - Unlocking Creativity **Credits: 3**

Summer Semester II (9 credit hours)

- IAID 814 - Furniture Design III **Credits: 4**
- INDD 801 - INDD Design Studio VI **Credits: 5**

Fifth Semester (12 credit hours)

- INDD 810 - INDD Capstone Studio **Credits:** 5-6
- INDD 815 - Advanced Studio Programming **Credits:** 2-3
- ENTRP - Any ENTRP course level 300 or above **Credits:** 3

Sixth semester (12 credit hours)

- INDD 822 - Advanced Industrial Design Studio **Credits:** 6
or
- IAID 824 - Advanced Furniture Design Studio **Credits:** 6
- IAID 891 - Contemporary Design Seminar **Credits:** 3
- INDD 600 - Professional Practice **Credits:** 3

Notes

Total credit hours required for graduate school program of study is 30. The following courses (or their equivalents) must be completed prior to entry in the postbaccalaureate track: MATH 100 and PHYS 113 or PHYS 115.

Undergraduate Credit Hours: 81

Graduate Credit Hours: 30

Total Hours Required for Master's: 111

Master of Interior Architecture

Master of Interior Architecture (MIARC) (non-baccalaureate track)

The Master of Interior Architecture provides a comprehensive and vibrant approach to studying design. From reconstructing building interiors to individual products, our students are grounded in the essential process of inquiry, design and the making of space and form.

Course Requirements

Environmental Design Studies Program

First semester (17 credit hours)

- COMM 106 - Public Speaking I **Credits:** 3
- ENVD 201 - Environmental Design Studio I **Credits:** 4
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits:** 1
- ENVD 204 - Studio Seminar **Credits:** 1

- ENVD 250 - History of the Designed Environment I **Credits: 3**
- MATH 100 - College Algebra **Credits: 3**
- General Elective **Credits: 2**

Second semester (15 credit hours)

- ENGL 100 - Expository Writing I **Credits: 3**
- ENVD 202 - Environmental Design Studio II **Credits: 4**
- ENVD 251 - History of the Designed Environment II **Credits: 3**
- PHYS 115 - Descriptive Physics **Credits: 5**

IARC Non-Baccalaureate Professional Program

Third semester (17 credit hours)

- IAID 290 - Design and Material Culture **Credits: 3**
- IAID 299 - History of Furniture **Credits: 3**
- IAID 430 - Visual Communication I **Credits: 3**
- IARC 248 - Fundamentals of Architectural Technology **Credits: 3**
- IARC 307 - IARC Design Studio I **Credits: 5**

Fourth semester (18 credit hours)

- ARCH 347 - Structural Systems in Architecture I **Credits: 4**
- ARCH 433 - Building Construction Systems in Architecture I **Credits: 3**
- ENGL 200 - Expository Writing II **Credits: 3**
- IAID 431 - Visual Communication II **Credits: 3**
- IARC 320 - IARC Design Studio II **Credits: 5**

Fifth semester (18 credit hours)

- ARCH 413 - Environmental Systems in Architecture I **Credits: 4**
- ARCH 448 - Structural Systems in Architecture II **Credits: 4**
- IARC 310 - IARC Digital Applications **Credits: 2**
- IARC 409 - Materials and Finishes **Credits: 3**
- IARC 435 - IARC Design Studio III **Credits: 5**

Sixth semester (18 credit hours)

- ARCH 514 - Environmental Systems in Architecture II **Credits: 3**
- IAID 407 - Design Workshop I **Credits: 4**
- IARC 440 - IARC Design Studio IV **Credits: 5**
- IARC 625 - Lighting **Credits: 3**
- IARC 628 - Construction Documentation **Credits: 3**

Summer Study (7 credit hours)

- IARC 664 - Summer Internship **Credits: 6**
- IARC 665 - Summer Internship Report **Credits: 1**
OR
- Study Abroad **Credits: 7**
OR
- Focus Courses** **Credits: 7**

Seventh semester (15 credit hours)

- IAID 602 - Furniture Design II **Credits: 4**
- IAID 753 - Professional Practice: Professional Responsibility **Credits: 1**
- IAID 754 - Professional Practice: Office Practices **Credits: 1**
- IARC 755 - Professional Practice: Discipline-Specific Topics **Credits: 1**
- IARC 801 - IARC Design Studio V **Credits: 5**
- IARC 811 - Design Research **Credits: 2-3**

Eighth semester (14 credit hours)

- IARC 606 - IARC Design Studio VI **Credits: 5**
- Electives*** **Credits: 9**
OR
- IARC 644 - Internship **Credits: 9**
- IARC 645 - Internship Report **Credits: 5**

Ninth semester (16 credit hours)

- IARC 810 - IARC Capstone Studio **Credits: 5-6**
- IAID 814 - Furniture Design III **Credits: 4**
- IARC 815 - Advanced Studio Programming **Credits: 2-3**
- General Elective* **Credits: 3**

Tenth semester (15 credit hours)

- IARC 823 - Advanced Interior Architecture Design Studio **Credits: 6**
OR
- IAID 824 - Advanced Furniture Design Studio **Credits: 6**
- IAID 891 - Contemporary Design Seminar **Credits: 3**
- General Electives* **Credits: 6**

Notes

*A minimum of eleven (11) general elective credits must be taken. General electives may be taken in pursuit of a minor. They may be taken any time prior to or during the Interior Architecture program and may include K-State approved AP, IB, CLEP and transfer credit. Students may not count more than three (3) total hours of recreation credits toward graduation.

****Focus Courses** include IARC 605 Problems in IARC, as well as other department head approved courses, including those associated with a minor program.

*****Electives** taken in the eighth semester should support student interest including professional electives and study abroad courses. These may also be associated with a minor program.

Notes

Total credit hours required for graduate school program of study is 31. The following courses (or their equivalents) must be completed prior to entry in the post-baccalaureate track: MATH 100 and PHYS 113 or PHYS 115.

Undergraduate Hours: 84

Graduate Hours: 30

Total Hours Required for Master's: 114

Landscape Architecture and Regional & Community Planning

Huston Gibson, Head

1086 Seaton Hall
785-532-5961
Fax: 785-532-6722
Email: larcdept@ksu.edu
apdesign.k-state.edu/larcp

The Department of Landscape Architecture and Regional & Community Planning (LARCP) offers two accredited professional degree options: a Master of Landscape Architecture and a Master of Regional & Community Planning; an online Master of Science in Community Development; and a Community Planning Minor. The programs provide nationally recognized and affordable education, real world engagement, and a strong LARCP community. Graduates of the programs are in demand throughout the country in private practice, governmental service, and academic setting.

The Master of Landscape Architecture (MLA) and Master of Regional & Community Planning (MRCP) degrees have two entry points. Undergraduate students complete a five-year plus Non-Baccalaureate Track, see Department of Landscape Architecture and Regional & Community Planning page in the Undergraduate Catalog. Students who have completed a bachelor's degree, regardless of the field of study, complete a Post-Baccalaureate Track of study (3-years plus for the MLA and 2-years for the MRCP).

The MLA program prepares students to create and protect outdoor places of significance to the human experience; address ecological and social needs; plan for inclusive and equitable communities; to design landscape. Information about the resources and opportunities supporting students' preparation for professional practice is available at <https://apdesign.k-state.edu/larcp/la/>.

The MRCP program prepares students to be advocates for resilient cities that enhance quality of life in ways that are sustainable, equitable, and accessible to all citizens. We help communities address challenges related to resource conservation, growing of diverse populations, and continually changing technologies and value systems. Information about the resources and opportunities supporting students' preparation for professional practice is available at <https://apdesign.k-state.edu/larcp/rcp/>.

The Master of Science in Community Development prepares students to promote participatory democracy, sustainable development, rights, equality, economic opportunity, and social justice, through the organization, education and empowerment of people within their communities. Information about the fully online degree is available at <https://online.k-state.edu/programs/community-development-masters/>.

Graduate Certificate

Community Development Graduate Certificate

The online graduate certificate in Community Development (CD) will provide foundations of the CD field and associated theories. Opportunity for elective selections allow students to pursue subtopics related to community development such as community leadership & capacity building, community economic strategies, international development, not-for-profit management, and/or sustainable communities.

This Community Development graduate certificate is a 12-credit hour online collaborative interinstitutional certificate offered through the Department of Landscape Architecture and Regional & Community Planning in cooperation with the Innovative

Digital Education Alliance (IDEA). Participating universities include Kansas State University, North Dakota State University, and University of Nebraska. Students may enroll in this collaborative program at any of the participating universities. While the certificate name may vary by university, the curriculum will be comparable, and courses offered in the program will be the collaborative result of a diverse faculty from within the participating universities.

Additional information may be obtained by contacting:

Dr. Huston Gibson
Professor and Department Head
Department of Landscape Architecture and Regional & Community Planning
Kansas State University
1086 Seaton Hall
Manhattan, KS 66506-2909
(785) 532-5961
larcdept@ksu.edu

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Community Development at Kansas State University.

Course Requirements

Completion of core requirements and 6 credit hours of CDPLN electives.

Required Courses

- CDPLN 705 - Organizing for Community Change **Credits: 3**
- CDPLN 715 - Principles and Strategies of Community Change **Credits: 3**

Elective Courses

Minimum of 6 credit hours of CDPLN electives.

- CDPLN 620 - Ecological Economics **Credits: 3**
- CDPLN 633 - Grantwriting **Credits: 3**
- CDPLN 655 - Land Development Planning **Credits: 3**
- CDPLN 700 - Foundations of Community Development **Credits: 3**
- CDPLN 701 - Special Studies in Community Development **Credits: 1-3**
- CDPLN 703 - Applied Community Development **Credits: 1-3**
- CDPLN 704 - Community Leadership and Capacity Building **Credits: 3**
- CDPLN 706 - Economic Development Strategies and Programs **Credits: 3**
- CDPLN 710 - Community Analysis **Credits: 3**
- CDPLN 711 - Immigrants in Communities **Credits: 3**
- CDPLN 712 - Sustainable Communities **Credits: 3**
- CDPLN 713 - Nonprofit Management **Credits: 3**
- CDPLN 720 - Community and Regional Economic Analysis **Credits: 3**
- CDPLN 725 - Community and Natural Resource Management **Credits: 3**
- or successful completion of any total of 6 credit hours of CDPLN electives

Total Hours Required for Graduate Certificate: 12

Master of Landscape Architecture

Master of Landscape Architecture (MLA) (non-baccalaureate track)

[Click here to view the Landscape Architecture and Regional & Community Planning graduate program page.](#)

Landscape planning and design have been part of the curriculum at Kansas State University since 1871, being part of the required curriculum of all students in the early days of the institution. The first MLA student graduated in 1968. The degree is offered through two tracks:

- The non-baccalaureate track for students without a previous degree allows students to enter as freshmen and progress through the professional graduate degree in landscape architecture
- The post-baccalaureate track for students with a previous degree allows completion of a first professional degree in landscape architecture.

The MLA program is fully accredited by the Landscape Architectural Accreditation Board of the American Society of Landscape Architects.

Program definition

Our definition of advanced landscape architecture education includes development of a strong foundation of traditional knowledge and skills as well as self-motivated and defined scholarship. Throughout the program, we are committed to research as a means of learning and serving communities and individuals.

Graduates of our program practice in a wide variety of natural and built environments including urban, suburban, rural, wilderness, domestic, and international. Their practice takes place in small and large firms, multidisciplinary firms, design/build, land development, facility management, public practice, academic settings, and within other fields. Kansas State University MLA graduates provide leadership in and advocacy for stewardship of the land and the interface of people with the land. They seek longterm solutions concerning land health, human dignity, and aesthetic quality.

Program mission and objectives

We prepare graduates to be leaders in the field of landscape architecture by integrating student learning with faculty research and creative pursuits and engaging with partners in communities and other disciplines. Through these activities we significantly advance the discipline of landscape architecture. We blend our understanding of ecological and societal needs to design, plan and manage the interface between humans and nature to shape environments in ways that benefit both through critical thinking, design processes and implementation. Focused on preparation for professional practice, we are highly skilled, diligent, passionate people dedicated and working together in vertically integrated studios that are collaborative and energetic.

Course Requirements

MLA program Master's Report Option

First semester: 17 credit hours

- ENVD 201 - Environmental Design Studio I **Credits: 4**
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits: 1**
- ENVD 204 - Studio Seminar **Credits: 1**
- ENVD 250 - History of the Designed Environment I **Credits: 3**

- COMM 106 - Public Speaking I **Credits: 3**
- MATH 100 - College Algebra **Credits: 3**
- General Elective **Credits: 2**

Second semester: 15 credit hours

- ENGL 100 - Expository Writing I **Credits: 3**
- ENVD 202 - Environmental Design Studio II **Credits: 4**
- ENVD 251 - History of the Designed Environment II **Credits: 3**
- PHYS 115 - Descriptive Physics **Credits: 5**

Third semester: 16 credit hours

- LAR 010 - Travel: Regional 1 **Credits: 0**
- LAR 101 - Introduction to Landscape Architecture **Credits: 3**
- LAR 220 - Drawing Landscapes Studio **Credits: 5**
- LAR 230 - Modeling Landscapes Studio **Credits: 5**
- LAR 350 - Plants and Design **Credits: 3**

Fourth semester: 16 credit hours

- ENGL 200 - Expository Writing II **Credits: 3**
- LAR 020 - Travel: Regional 2 **Credits: 0**
- LAR 298 - Ethics and Environmental Dilemmas **Credits: 3**
- LAR 420 - Socio-Ecological Systems Studio **Credits: 5**
- LAR 433 - Landscape History and Design Studio **Credits: 5**

Summer Study: 9 credit hours

- LAR 030 - Travel: Narratives and Placemaking **Credits: 0**
- LAR 425 - Narratives and Placemaking Seminar **Credits: 2**
- LAR 430 - Narratives and Placemaking Studio **Credits: 4**
- PLAN 115 - Introduction to Regional and Community Planning **Credits: 3**

Fifth semester: 16 credit hours

- LAR 040 - Travel: Major City 1 **Credits: 0**
- LAR 438 - Site Design Implementation **Credits: 5**
- LAR 442 - Site Research and Design Studio **Credits: 5**
- LAR 444 - Career and Academic Planning **Credits: 3**
- LAR 352 - Landscape Performance Lab **Credits: 3**

Notes

Undergraduate Hours: 119

Graduate Hours: 34

Total (MLA) Degree Requirement: 153

The K-State 8 General Education areas are covered by courses required in the Landscape Architecture curriculum. Information about the K-State 8 is available on the web and in the university catalog.

All required courses taught in the landscape architecture and regional & community planning programs that are counted toward the degree must be passed with a grade of C or better. Graduate School admission is contingent upon completion of all required courses in the 3rd - 6th semesters.

*A minimum of six (6) general elective credits must be taken. General elective may be taken in pursuit of a minor. They may be taken any time prior to or during the Landscape Architecture program and may include KSU approved AP, IB, CLEP and transfer credit. Students may not count more than 3 total hours of recreation credits toward graduation.

**Off-campus semester: Two distinct study opportunities are offered, each requiring 14 credit hours. The study abroad and the internship options have course requirements that substitute for the 9 professional elective credit requirements. If the internship option is not selected during the seventh or eighth semester, a summer internship is required before graduation.

*** Six (6) credit hours of the required graduate level professional electives must be LAR courses. Students may petition for an exception to this policy if there is a demonstrated academic benefit.

Undergraduate Hours: 119

Graduate Hours: 34

Total Hours Required for Master's: 153-155

Master of Landscape Architecture (MLA) (post-baccalaureate track)

[Click here to view the Landscape Architecture and Regional & Community Planning graduate program page.](#)

Landscape planning and design have been part of the curriculum at Kansas State University since 1871, being part of the required curriculum of all students in the early days of the institution. The first MLA student graduated in 1968. The degree is offered through two tracks:

- The non-baccalaureate track for students without a previous degree allows students to enter as freshmen and progress through the professional graduate degree in landscape architecture
- The post-baccalaureate track for students with a previous degree allows completion of a first professional degree in landscape architecture.

The MLA program is fully accredited by the Landscape Architectural Accreditation Board of the American Society of Landscape Architects.

Program Definition

Our definition of advanced landscape architecture education includes development of a strong foundation of traditional knowledge and skills as well as self-motivated and defined scholarship. Throughout the program, we are committed to research as a means of learning and serving communities and individuals.

Graduates of our program practice in a wide variety of natural and built environments including urban, suburban, rural, wilderness, domestic, and international. Their practice takes place in small and large firms, multidisciplinary firms, design/build, land development, facility management, public practice, academic settings, and within other fields. Kansas State University MLA graduates provide leadership in and advocacy for stewardship of the land and the interface of people with the land. They seek longterm solutions concerning land health, human dignity, and aesthetic quality.

The MLA program and curriculum

There are two track offerings to the Master of Landscape Architecture, non-baccalaureate and post-baccalaureate degrees, both of which result in a master's degree.

Course Requirements

MLA program Master's Report Option

First semester: 16 credit hours

- LAR 010 - Travel: Regional 1 **Credits: 0**
- LAR 101 - Introduction to Landscape Architecture **Credits: 3**
- LAR 220 - Drawing Landscapes Studio **Credits: 5**
- LAR 230 - Modeling Landscapes Studio **Credits: 5**
- LAR 350 - Plants and Design **Credits: 3**

Second semester: 13 credit hours

- LAR 020 - Travel: Regional 2 **Credits: 0**
- LAR 420 - Socio-Ecological Systems Studio **Credits: 5**
- LAR 433 - Landscape History and Design Studio **Credits: 5**

Master of Regional and Community Planning

Master of Regional and Community Planning (MRCP) (non-baccalaureate track)

Program Definition

The Master of Regional & Community Planning integrates the concept of comprehensive community development planning in an environmental context with considerations for social, economic, cultural and political issues in the community while recognizing the importance of financial management, private enterprise-government relations, and citizen participation in community decision making. Core courses reflect the impact of these key concerns on traditional planning activities, while exploring related ethical issues in depth.

With a firm educational foundation in basic planning and analytical techniques, management, human relations, and ethics, today's MRCP graduate will have the skills and judgment to become tomorrow's successful practicing planner.

Graduates of our program become directors or managers of community development / city planning departments, economic development agencies, housing or related departments and agencies in cities, small communities, counties and regions. Some graduates may use the same educational background to become directors of planning or related activities in private consulting firms and research organizations, while others may enter the field of real estate development and a host of related disciplines.

Program Mission and Objectives

We prepare graduates to be effective advocates of resilient cities and responsible for community growth and redevelopment. We engage in the exchange of ideas that develop strategic visioning to enhance quality of life in ways that are sustainable, equitable, and accessible to all our citizens. We contribute to the expansion of knowledge through research and its dissemination, outreach to various constituents, and professional education grounded in creative and critical thinking. Students and faculty engage in exploration, analysis, synthesis, and resolution of planning, design and management issues. Our aim is to help communities effectively address challenges related to resource conservation, growing of diverse populations, and continually changing technologies and value systems.

Course Requirements

*A minimum of fourteen (14) general elective credits must be taken. General electives may be taken in pursuit of a minor. They may be taken any time prior to or during the Regional and Community Planning program and may include KSU approved AP, IB, CLEP and transfer credit. Students may not count more than three (3) total hours of recreation credits toward graduation.

Professional Electives must include 6 graduate credit hours of PLAN courses.

All required courses taught in the Landscape Architecture and Regional & Community Planning Programs that are counted toward the degree must be passed with a grade of C or better.

First semester (16 credit hours)

- COMM 105 - Public Speaking IA **Credits: 2**
- ENVD 203 - Survey of the Design, Planning and Community Development Professions **Credits: 1**
- MATH 100 - College Algebra **Credits: 3**
- Humanities/Design Elective* **Credits: 3**
- Social Science/History Elective* **Credits: 3**
- Social Science/Sociology Elective* **Credits: 3**

Second semester (15 credit hours)

- ENGL 100 - Expository Writing I **Credits: 3**
- Humanities/Design Elective* **Credits: 6**
- Natural Science Elective with Lab* **Credits: 4**
- General Elective* **Credits: 2**

Third semester (15 credit hours)

- GEOG 302 - Cartography and Thematic Mapping **Credits: 3**
- PLAN 115 - Introduction to Regional and Community Planning **Credits: 3**
- PLAN 510 - Graphic Composition and Representation for Planning **Credits: 2**

Fourth semester (16 credit hours)

- ENGL 200 - Expository Writing II **Credits: 3**
- GEOG 508 - Geographic Information Systems I **Credits: 4**
- LAR 298 - Ethics and Environmental Dilemmas **Credits: 3**
- PLAN 215 - World Cities **Credits: 3**
- General Elective* **Credits: 3**

Fifth semester (13 credit hours)

- PLAN 010 - Planning Field Trip 1 **Credits: 0**
- PLAN 444 - Career Planning Seminar **Credits: 2**
- PLAN 510 - Graphic Composition and Representation for Planning **Credits: 2**
- PLAN 640 - Urban Design and Development **Credits: 3**
- General Elective **Credits: 6**

Sixth semester (14 credit hours)

KCDC or Study Abroad option:

- PLAN 703 - Off-Campus Studies **Credits: 5**
- Professional Electives **Credits: 9**

Internship Option:

- PLAN 655 - Land Development Planning **Credits: 3**
- PLAN 703 - Off-Campus Studies **Credits: 5**

Master of Science

Community Development (MS)

The program serves community leaders, practitioners and those committed to people and places in fields such as community and regional planning, parks and recreation, housing, applied sociology, environmental and social justice, community economic development, cooperative extension services, and non-profit sectors. The community development master's degree program provides the skills, information and networks needed to facilitate sustainable and prosperous community change. It equips practitioners with the tools necessary to build a community in the 21st Century.

This Master of Science in Community Development is a 36-credit hour online collaborative inter-institutional degree program offered through the department of Landscape Architecture and Regional & Community Planning in cooperation with the Innovative Digital Education Alliance (IDEA). Participating universities include Kansas State University, North Dakota State University, and University of Nebraska. Students may enroll in this collaborative program at any of the participating universities. The key distinction between the degrees offered by each university lies in the capstone experience of their graduates. While the program name and degree name may vary by university, the curriculum will be comparable, and courses offered in the program will be the collaborative result of a diverse faculty from within the participating universities.

Program Mission:

The Community Development Program provides professional preparation for career development or advancement. We prepare graduates to address challenges faced by communities across rural to urban United States and other countries. Community Development graduates actively promote positive social, economic, cultural and environmental change and engage citizens in democratic decision-making and action. A diverse faculty from several institutions teaches critical thinking, ethical consideration, careful planning and involvement of all stakeholders.

Program of Study Requirements:

A Program of Study is required to be filed with the Graduate School upon completion of 14 credit hours.

Program Administration:

The MS program in Community Development is officially administered by the Department of Landscape Architecture and Regional & Community Planning, under the auspices of the Graduate School at Kansas State University, and in conjunction with the Institute for Academic Alliances at Kansas State University. The degree is awarded by the Graduate School, through the Department of Landscape Architecture and Regional & Community Planning, College of Architecture, Planning and Design. All courses in this program option are offered online through Global Campus at KSU but may be taught by any of the participating universities. Additional information may be obtained by contacting:

Dr. Huston Gibson
Professor and Department Head
Department of Landscape Architecture and Regional & Community Planning
Kansas State University
1086 Seaton Hall
Manhattan, KS 66506-2909
785-532-5961
larcdept@ksu.edu

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

18 credit hours

Successful completion of the following courses with a minimum overall grade requirement of 3.0:

- CDPLN 700 - Foundations of Community Development **Credits: 3**
- CDPLN 705 - Organizing for Community Change **Credits: 3**
- CDPLN 710 - Community Analysis **Credits: 3**
- CDPLN 715 - Principles and Strategies of Community Change **Credits: 3**
- CDPLN 720 - Community and Regional Economic Analysis **Credits: 3**
- CDPLN 725 - Community and Natural Resource Management **Credits: 3**

Elective Courses

A minimum of 18 credit hours of elective courses is required for the degree. If a student petitions to complete a capstone option other than the final exam, research and proposal hours may count toward the elective requirement.

Total Hours Required for Master's: 36

College of Arts and Sciences

www.k-state.edu/arts

At the heart of every great university is a college that serves as its academic center. The College of Arts and Sciences is the intellectual heart of Kansas State University.

The College of Arts and Sciences contains more than 20 departments and offers a number of special programs and secondary majors. With more than 7,000 students, it has the largest enrollment of any K-State college. It also offers approximately 85 percent of all freshman courses and 65 percent of all credits taught.

Encompassing studies in the natural sciences, social sciences, humanities and fine arts, the College of Arts and Sciences gives you an exciting range of options. You can choose from more than 115 degree programs, study abroad experiences, and pre-professional options.

Arts and Sciences professors are committed to the art of teaching. They combine lectures, labs, and small-group discussions so that even the most complex theories will be within your grasp. And your class projects will test what you're learning--from painting a self-portrait to setting up your own psychology experiment to writing a news report that airs on campus radio.

Our professors are also internationally recognized researchers and scientists, building such world-class programs as a NASA Specialized Center of Research and Training and the Macdonald Laboratory particle accelerator. You can work with distinguished scholars on exciting projects in ecology, gravitation, atomic energy, laser technology, numerical analysis, and cancer research using state-of-the-art facilities and equipment.

Arts and Sciences grads go on to great things. Our students have built an outstanding record of winning prestigious scholarships and gaining acceptance into professional and graduate programs at rates far above the national average. And they have achieved success in careers ranging from medicine to playwriting.

The Arts and Sciences experience, with its provocative courses, respected faculty, and opportunities for individual research, will enable you to follow your interests and pursue your career ambitions.

Dean of Arts and Sciences

Doctor of Philosophy

Security Studies (PHD)

The graduate program in Security Studies is a rigorous, interdisciplinary program intended to prepare its students for careers in research, teaching, and security and international affairs through a broad exploration of social science and historical methodologies as well as topics relating to security issues. Many students will already have a Master of Arts in Security Studies from Kansas State University, but this is not required. Students with other relevant masters degrees may apply to the Ph.D program directly.

Admission Requirements

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Dissertation Requirements

Ph.D comprehensive exams

Comprehensive exams in Security Studies entail a written and oral examination, subdivided into a general field and a special field. The written component of the general field examination is one closed-book, 8-hour exam in the History of International Security, and one closed-book, 8-hour exam in the Politics of International Security (usually, these two exams will occur on successive days or two out of three days). An interdisciplinary Exam Committee of KSU Security Studies faculty, which may vary from year to year, will determine the precise format and administer the written general field exam. The student will be allowed to consult the history and political science reading lists in hardcopy form but will not be permitted to have any notes or other resources available during the examination.

Reading List for History of International Security Exam

Reading List for Politics of International Security Exam

Students should regard the reading lists as indispensable tools to help prepare them to be knowledgeable and independent thinkers. However, examiners also may pose questions on important Security Studies issues not specifically included in the readings. A successful exam does not merely summarize the findings of other scholars; it presents clear and well-argued theoretical arguments supported by the literature but rooted in the student's own ideas.

There is no guarantee that future exams will mirror the format of previous exams. Past general field written exams are available through the links below:

[Spring 2015 exam questions](#)

[Fall 2014 exam questions](#)

Spring 2014 exam questions
Fall 2013 exam questions

The subject of the special field exam is chosen by the student in consultation with his or her PhD adviser and committee. The special field may be geographic in focus (post-Soviet states, Africa, or Latin America, for example) or thematic (civil-military relations, crisis bargaining models, or arms proliferation, for example). The precise format of the special field exam will be determined by the PhD adviser/examiner in consultation with the student's PhD committee.

Dissertation prospectus defense

Following the completion of the Ph.D coursework, the student will submit a written dissertation prospectus to his/her Ph.D Committee. The Committee will provide written feedback on the prospectus. After the student revises the prospectus, he/she will present and defend it orally to the Committee (via live video streaming if necessary). After completion of comprehensive exams and the completion of an acceptable prospectus, the student officially becomes a Ph.D candidate in the program and commences the dissertation.

Writing the dissertation

The student will research and write the dissertation, consulting with the Ph.D Committee as often as necessary. The dissertation should be a substantial and original contribution to knowledge and scholarship.

Research Hours

By decision of the Security Studies faculty committee in consultation with the Dean of the Graduate School, Ph.D. students who are NOT resident in Mnahttan must register for Division of Continuing Education (DCE) research hours.

Dissertation defense

After completing the dissertation, the student will defend it orally before the Ph.D Committee (again, via live video streaming if necessary).

Submission of dissertation

Upon successful completion of the oral defense, the student will make any additional revisions to the dissertation required by the Ph.D Committee and submit the final version of the dissertation to the Graduate School at KSU.

Ph.D committee

Within their first two semesters in the program, students will choose a Ph.D Committee consisting of at least four members of the KSU Security Studies faculty, including at least one member from History and at least one member from Political Science. As in any graduate program, adjunct professors are eligible to serve on committees. This committee will work with the student to craft an appropriate and feasible dissertation topic and advise the student on suitable coursework and preparation. Students will report to their committee at regular intervals. The Ph.D Committee may require the student to master specific research skills appropriate for the dissertation, including foreign languages or quantitative methods.

Course Requirements

The Ph.D degree will require 90 hours of course work. The Ph.D. committee will judge the suitability and applicability of the previous credits. An additional 30 hours of those 90 will be research hours towards the dissertation. The remaining coursework to reach the total of 90 hours will include 15 hours of required courses. The required courses consist of:

1. The Historical Research Sequence.

This sequence consists of two courses of three hours each. The first will study various approaches to the history of security, international relations, and military affairs. The second will be a methodology course in the theory and concrete practice of historical research in security studies.

- HIST 911 - Historical Approaches to Security **Credits: 3**
- HIST 912 - Historical Methods in Security Studies **Credits: 3**

2. The Political Research Sequence.

This sequence also consists of two courses. The first, Research Design and Qualitative Methods, focuses on the construction of social science research and the various research design issues students must understand to construct qualitative social science studies. The second course, Quantitative Methods, will introduce students to the statistical tools used by political scientists studying international security issues.

- POLSC 900 - Advanced Research Methods I **Credits: 3**
- POLSC 901 - Advanced Research Methods II **Credits: 3**

3. The final PhD-level required course

The final PhD-level required course must be taken after completing the history and political science two course research sequences. Each student must complete a directed reading with the chair of the student's Ph.D committee. The course is intended to allow the student to hone his or her dissertation topic in one-on-one consultation with the PhD chair.

- HIST 985 - Readings in History **Credits: 1-3**
- OR
- POLSC 985 - Readings in Security Studies **Credits: 1-6**

Notes

The other fifteen hours of coursework will be elective courses chosen in consultation with the Ph.D committee to prepare the student for research and teaching in security studies, as well as to help prepare for the Ph.D exams. These electives may be drawn from History, Political Science, or from other disciplines deemed appropriate by the committee.

The intent of the Ph.D coursework is to prepare students for writing the dissertation. Upon completion of the Ph.D coursework students will have the research skills necessary to complete a dissertation-length scholarly study on a well-defined topic developed in consultation with their PhD Chair.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Arts

Security Studies (MA)

The graduate program in Security Studies is a rigorous, interdisciplinary, and professionally-oriented program of graduate studies. The resulting degree provides a broad, analytical perspective on national and international security issues while maintaining academic standards in accord with existing MA degrees in History and Political Science. Coursework concentrates on issues of strategy, politics, economics, and society from both historical and social science perspectives. A minimum of 30 credits is required.

Committees

Each student will be supervised by a master's committee consisting of three members of the Security Studies graduate faculty. As in any graduate program, adjunct professors are eligible to serve on committees. For students at Fort Leavenworth, the MA committee will normally be made up of the Director of Security Studies and the two faculty members teaching POLSC 810 / POLSC 815.

Course Requirements

Course requirements will consist of 30 hours of graduate-level work, up to 12 hours of which may be transfer credit from other graduate-level work. Students at Fort Leavenworth for ILE can normally transfer those 12 hours from their ILE work. The admissions committee will evaluate the suitability of transfer credits from other institutions. The remaining hours will consist of 18 hours of required courses and additional graduate-level electives as needed to total 30 hours.

The coursework only option for this program does not require a culminating experience.

1. Required: Fundamentals of Security (3 credit hours)

This course will introduce students to major themes covered in the M.A. program of study. It is designed to provide students with foundations for the other core courses and so must be completed in the first term of student enrollment. Students will read key texts on international security, military history, and strategy, as well as works on the theory and research practice of history and political science. They will write essays on the assigned readings, participate in on-line synchronous and asynchronous discussions, and compose a final paper or take a final exam on the issues raised by the course.

- POLSC 812 - Foundations of Security Studies **Credits: 3**

2. Required: Security Studies Methodology (2 credit hours)

This course is a rigorous exploration of interdisciplinary methods in history and political science.

- POLSC 810 - Security Studies Methodology **Credits: 2**
- HIST 810 - Security Studies Methodology **Credits: 2**

3. Required: History and Security of Pivotal Regions (6 credit hours)

Students will take at least two courses on the history of regions of central importance to international affairs. These courses may focus on East Asia, Latin America, the Middle East, or other strategic areas.

- HIST 850 - History and Security: East Asia **Credits: 3**

- HIST 851 - History and Security: Latin America **Credits: 3**
- HIST 852 - History and Security: the Middle East **Credits: 3**
- HIST 853 - History and Security: Russia/Central Asia **Credits: 3**
- HIST 854 - History and Security: South Asia **Credits: 3**
- HIST 855 - History and Security: Modern Africa since 1850 **Credits: 3**
- HIST 860 - Topics in International History **Credits: 3**

4. Required: International Security and Transnational Security (6 credit hours)

Political Science will offer two courses. International Security will focus on traditional issues of the causes of war, deterrence, the relevance/role of international institutions, arms proliferation, the politics of international intervention, and conflict resolution. The second, Terrorism and Transnational Security, will cover security issues that have been given increasing emphasis over recent years. Examples include the unique context of security problems in the developing world, demographic developments and internal/external conflict, environmental issues and their relation to security, economic globalization and security, post-conflict reconstruction, and humanitarian emergencies.

- POLSC 813 - International Security **Credits: 3**
- POLSC 814 - Terrorism and Transnational Security Issues **Credits: 3**

5. Required: Research Design in Security Studies (1 credit hour)

This course is a study of research methods in history and political science culminating in a piece of original research in Security Studies.

- HIST 815 - Research Design in Security Studies **Credits: 1**
- POLSC 815 - Research Design in Security Studies **Credits: 1**

Thesis Option Courses

Students completing the thesis option will take 24 credit hours of coursework consisting of the 18 credit hours of required courses and six credit hours of electives. They will also take six credit hours of Master's Research in either Political Science or History.

- POLSC 899 - Master's Thesis **Credits: 6**
- OR
- HIST 899 - Master's Research in History **Credits: 1-18**

Total Hours Required for Master's: 30

Art

Shreepad Joglekar, The Lindy E. Bell Head of the Department of Art
Nancy Morrow, Graduate Program Director

111 Willard Hall
 785-532-6605
 Fax: 785-532-0334
art@k-state.edu

<http://art.ksu.edu/grad/admission.html>

The Department of Art offers a 60-hour graduate program leading to the Master of Fine Arts degree. As established by the College Art Association and accepted by all accredited universities, the Master of Fine Arts degree is the terminal degree in studio art practice and is equivalent to terminal degrees in other fields, such as the Ph.D. or Ed.D. The intent of the M.F.A. Program is to educate students for professional careers as artists and designers or as college and university teachers of the visual arts.

First and foremost, the profession demands from the recipient of the M.F.A. degree the ability to produce technically and conceptually accomplished and engaging art. When work toward the M.F.A. is concentrated in a particular medium, professional mastery of that medium is expected. A generalist, with less specialized practice, must still meet the critical demands of the profession by demonstrating expertise and knowledge in several areas. In any case, the need for thorough training of the mind, the eye, and the hand is self-evident.

Admission procedures

For information regarding admission procedures, please see the Department of Art website at <http://art.ksu.edu/grad/admission.html>.

Entrance requirements

To be admitted as a graduate student in the M.F.A. program, the applicant must have a B.A., or B.F.A. degree from an accredited institution, adequate undergraduate education in the visual arts, and an undergraduate average of B (3.0) or better in the last six semesters of their university coursework. The applicant will ideally have at least 60 undergraduate semester credit hours in visual arts, with a minimum of 20 semester hours in the area of concentration.

All international students applying to the M.F.A. program must meet the same level of achievement as U.S. students.

Applicants with the M.A. degree

Students with an M.A. degree from an accredited institution who wish to apply for the M.F.A. program at Kansas State University should follow the same general application procedures outlined above.

Students who hold an M.A. degree may apply up to 10 hours of that degree toward an M.F.A. with approval from the Department of Art before starting the program. The number of hours accepted will depend on the relevance of the course work to the M.F.A. After the applicant has been accepted into the M.F.A. program, the Graduate Program Director will meet with the department's Graduate Studies Committee, the proposed major professor and the coordinator of the student's studio area to evaluate the student's transcript and to determine the number of credits that may be applied to the M.F.A. degree.

Master of Fine Arts

Master of Fine Arts (MFA)

The Master of Fine Arts at Kansas State University is a terminal degree program, accredited by the National Association of Schools of Art and Design (NASAD). The M.F.A. provides students with the competency and experience to have successful careers as professional artists and designers, to teach in higher education, and to pursue a variety of other art related occupations. Inquiry begins from the standpoint of a focus area that is then paired with exploratory studio, research of current and historical contexts, and multiple opportunities for exchange of ideas. Focus areas include ceramics, drawing, digital/experimental media (D/X media), painting, printmaking, photography, metalsmithing and jewelry, sculpture, and visual communication design. Studio practice that extends beyond one area into other art disciplines is encouraged.

Housed in the Department of Art, M.F.A. students receive in-depth mentorship from Graduate Faculty members, who in addition to teaching, are active in exhibiting, performing client work, engaging in social practice, or publishing. Students in the program are expected to be in residence working in their studio on campus each semester of the academic year, for the duration of their program.

Graduation Requirements

Graduate Exhibition and Final Exam

The M.F.A. is a degree program that culminates in a final, solo graduate exhibition. This exhibition includes a substantial body of original works and is exhibited on campus during the final semester of the student's program.

An accompanying written document is required in which the candidate demonstrates proficiency in analyzing, interpreting and organizing material, and provides evidence of the ability to communicate perceptions, insights, and conclusions. A digital portfolio of the graduate exhibition and related written materials is required and will be kept by the Department of Art as documentation. Satisfactory completion of both the visual and written portions of the graduate exhibition is required for the awarding of the M.F.A. degree.

The final oral examination for the M.F.A. degree will be taken when the student is in the final semester of completing their program of study, has installed his or her graduate exhibition, and has delivered a copy of the written document to each member of the supervisory committee.

Course Requirements

The graduate course requirements for the M.F.A. consist of 60 credit hours, normally distributed over six semesters of the three-year program. M.F.A. program students are expected to be in residence working in their studio on campus each semester of the academic year, for the duration of their program. The 60 credits include courses in art history and cognate areas of study. Required program credits may not include course work that is necessary to resolve undergraduate deficiencies.

Studio Art Studies: 39 credit hours

Choose any 600-level or above ART studio art courses.

- Studio Art Focus Area **Credits:** 24-36
- Studio Art Exploration (Non-Focus Area) **Credits:** 3-15

Academic Studies: 12 credit hours

- Any ART art history courses 600-level or above **Credits:** 6
- ART 826 - Graduate Seminary **Credits:** 3
- ART 887 - Contemporary Art Theory and Criticism **Credits:** 3

Electives: 9 credit hours

Choose courses at 600-level or above.

Courses outside the area of emphasis should be taken from faculty other than the major professor, in order to get as much experience as possible with other members of the Graduate Faculty. Students are also encouraged to take a portion or all of their free electives outside the Department of Art.

Each student's program of study is subject to the approval of their major professor and supervisory committee. This is a Graduate School and departmental policy, not a student's option.

Total Hours Required for Master's: 60

Biochemistry and Molecular Biophysics

Michal Zolkiewski, Head

Timothy Durrett, Director of graduate studies

Om Prakash, Admissions Chair

785-532-6121

Fax: 785-532-7278

gbiochem@ksu.edu

<http://www.k-state.edu/bmb/>

Biochemistry and Molecular Biophysics is an interdepartmental graduate program with faculty participants from many academic departments of the University.

Overview

Biochemistry and Molecular Biophysics explores the molecular basis of life processes. It examines structure, function, assembly, and dynamic changes of macromolecules and the chemistry and dynamics of small molecules. Through use of recombinant DNA technology and new instrumentation, a revolution is underway in our understanding of the ways that plants and animals regulate metabolic processes and express genetic information. Researchers at Kansas State University are in the forefront of that revolution. The study of biochemistry at Kansas State University is conducted under a versatile arrangement through which faculty of the Department of Biochemistry and Molecular Biophysics and faculty in other departments cooperate in a graduate biochemistry program. Both fundamental questions about living processes and applications to living systems are supported in this interdisciplinary program.

Degree programs

The biochemistry and molecular biophysics program seeks excellence in teaching and research through a program tailored to the development of the individual student. The core curriculum is broad and students are expected to specialize through appropriate choice of advanced courses from the many offerings taught by faculty in their areas of research expertise. A strong seminar program involves presentations by eminent visiting scholars from around the world and by the faculty of many departments on campus. A graduate student seminar program provides further opportunity for acquiring insights into new developments in the field.

The Graduate Biochemistry and Molecular Biophysics Group administers granting of M.S., B.S./M.S., and Ph.D. degrees in biochemistry whether the research is conducted within the Department of Biochemistry or in other cooperating departments. The program of study is flexible, accommodating students with a wide range of backgrounds, including genetics, microbiology, physics, and medicine as well as the traditional chemistry, biochemistry, and biology degrees. Students are admitted to either the M.S. or the Ph.D. program based on qualifications, which include undergraduate and graduate performance, letters of recommendation, and program of study deficiencies.

In biochemistry and molecular biophysics, both the Ph.D. and the M.S. degrees are considered research degrees. Thus, in addition

to specific course requirements, there is a requirement for writing a thesis based on independent and original research conducted in the laboratory of one of the participating faculty members.

Students in either the M.S. or Ph.D. degree program take the two-semester, comprehensive, core biochemistry courses Biochemistry I and II and a one-semester course in molecular biophysics. All students are expected to attend the weekly graduate student seminar and individual research group meetings.

Financial support of graduate students

Within the Department of Biochemistry and Molecular Biophysics, support for graduate teaching assistants is through the College of Arts and Sciences. Graduate research assistants are supported through the Agricultural Experiment Station and by research grants. Usually a student is admitted to the graduate program in biochemistry and molecular biophysics only if university funds are available for salary support or if the student has another source of support such as a government (U.S. or other) fellowship. U.S. citizens with a strong undergraduate record can apply for NSF predoctoral fellowships. Some supplements to teaching and research support are available on a competitive basis from the Graduate School for outstanding U.S. students.

Incoming students receive half of their support in the form of teaching assistantships (requiring six contact hours per week) and half in the form of a research assistantship. After the first year, the teaching assistantship may be replaced by extramural support. This is expected for Ph.D. candidates beyond their third year of study.

Graduate students in the B.S./M.S. dual degree program will not be expected to teach and will not be supported by departmental teaching or research assistantships. They are eligible for support as research assistants in laboratories of individual faculty members.

Student fees

For graduate teaching assistants and graduate research assistants, student fees are assessed at the instate level. Students receiving such support are required to enroll in 6 credit hours each semester. A waiver of half the tuition costs is provided to those supported as combined graduate teaching/research assistants.

Research environment and facilities

More than two dozen faculty members are formally associated with the Graduate Biochemistry and Molecular Biophysics Group. Many others with interests in biochemistry and molecular biology are collaborative investigators and participants on graduate student supervisory committees. The research environment in biochemistry is exciting and vigorous because of these diverse but interacting programs. Our graduates compete favorably with those from the world's best programs because they are well trained in biochemical literature and research techniques. Members of the group currently receive more than \$3 million per year in outside research funds. These funds support technicians, postdoctoral fellows, and some graduate research assistants at later stages of their career. They also allow purchase of up-to-date research equipment and supplies.

The Department of Biochemistry and Molecular Biophysics has 14 large research suites. Ten are located in Chalmers Hall. That building also houses the department's teaching laboratories. The other research suites are located in Burt Hall. The department is well equipped for advanced research in a wide range of areas. NMR studies are conducted within the NMR Facility using Varian 500 MHz Unity Plus NMR with triple channel detection, pulsefield gradient, and high stability temperature control and waveform generation. Other biophysical studies are conducted with conventional and magnetic circular dichroism, fluorescence spectroscopy with fluorescence polarization capability and UV-Visible differential scanning spectroscopy. A new analytical ultracentrifuge (Beckman XL-I), micro calorimeters (MicroCal VP-DSC and isothermal titration calorimeter), and a surface plasmon resonance instrument (Biacore 3000) enhance studies of macromolecule interactions and folding properties.

The department has equipment and technical capability for gene cloning (supported by polymerase chain reaction capabilities) and all varieties of electrophoresis experiments. For preparative procedures the department has multiple ultracentrifuges, high performance liquid chromatographs, and facilities for both anaerobic enzyme preparations and large scale preparations of subcellular organelles. The department has several cold rooms, animal cell culture facilities, instrument rooms, and dark rooms.

Facilities are available for housing animals and growing plants year-round. Analytical instruments include scintillation counters, gamma counters and scanning spectrophotometers.

The university Biotechnology Core Facility is housed within the Department of Biochemistry and Molecular Biophysics and provides both instruments and expertise for mass spectrometry of biopolymers, oligonucleotide synthesis, peptide synthesis and gas-phase peptide sequencing. High resolution purification of peptides and synthesis of peptides containing non-natural amino acids are areas of special interest. The mass spec capabilities include high throughput screening of peptides.

Additional facilities are also available on campus: DNA sequencing, fluorescence-activated cell sorting, electron microscopy (transmission and scanning), quasi-elastic light scattering, GLC-mass spectrometry, emission spectrometry, Fourier-transform infrared spectrometry, atomic absorption and stopped flow kinetics. High resolution GLC- mass spec is used for lipidomics studies. Parallel computing, mini super-computers, and ethernet and internet networks are available throughout the campus.

Job opportunities

Biochemistry and molecular biology are growth areas in the economy of the 21st century. Graduate training in biochemistry and molecular biophysics provides a strong base for varied academic and technological careers. Our Ph. D. and postdoctoral graduates find positions not only in departments of biochemistry, biophysics, and molecular biology, but also in biology, chemistry, pharmacology, nutrition and medicine. Doctoral graduates find positions requiring independent work in a wide range of industries including biotechnology, chemistry, pharmacology, medicine, and food technology. M.S. graduates occupy skilled technical positions in industry, government and academic research laboratories. Many also continue for the Ph.D. at this or other institutions.

Accelerated

Accelerated Biochemistry (BS)/Biochemistry (MS)

The accelerated Accelerated Biochemistry (BS)/Biochemistry (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biochemistry degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Biochemistry (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BIOCH 755 - Biochemistry I **Credits: 3**
- BIOCH 765 - Biochemistry II **Credits: 3**
- BIOCH 775 - Molecular Biophysics **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Biochemistry (PHD)

The science of biochemistry

Biochemistry explores the molecular basis for life processes through chemical and physical studies on the structure and behavior of complex molecules found in biological materials. Biochemistry has emerged as a highly creative and successful discipline that has developed many new technologies and broadly applies the technological advances of other disciplines. Through characterizing the structure, function, assembly, and dynamic changes of macromolecules, biochemists seek to answer fundamental questions about living processes (basic research) and to bring to fruition significant improvements in the quality of life and medical care (applied research). The great complexity and endless variety of biological systems, together with the need for broad explorations, assure that imaginative research will continue in the field of biochemistry for the foreseeable future.

Graduate program approach

The biochemistry program seeks excellence in teaching and research through a program tailored to the development of the individual student. The Biochemistry and Molecular Biophysics Graduate Group administers granting of M.S. and Ph.D. degrees in biochemistry whether the research is conducted within the Department of Biochemistry and Molecular Biophysics or in other cooperating departments. The program of study is flexible, accommodating students with a wide range of backgrounds, including genetics, microbiology, physics, and medicine as well as the traditional chemistry, biochemistry, and biology degrees. The graduate program is structured to aid students in the successful completion of their graduate training in biochemistry by providing access to leading researchers in biochemistry and related fields, offering a core curriculum, seminars, and teaching and research opportunities.

Admission Requirements

Applicants must have a bachelor's degree from an accredited institution, appropriate and adequate course work, and an average of B or better in the junior and senior years or an excellent postgraduate record at another institution. Provisional admission may occur when there are limited deficiencies in undergraduate course work that can be removed by course work taken at Kansas State University or when there is uncertainty in evaluation of transcripts, as may occur in the case of international students. In the latter case, removal of the provisional status occurs upon the accumulation of 9 hours of course work with a B or better average.

Undergraduate and postgraduate credits should include analytical, organic, and physical chemistry, calculus, physics, and a semester of biology including a laboratory. Physical chemistry may be completed as part of an M.S. or Ph.D. program, but all other deficiencies must be completed without graduate credit. No foreign language is required.

All applicants are required to take the Graduate Record Exam and submit their scores with the application.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

International students

A minimal score of 550 on the written Test of English as a Foreign Language (TOEFL) or 79 on the Internet-based TOEFL (IBT) is required for admission to the Graduate School for any student whose native language is not English. Because beginning graduate students in biochemistry are appointed as combined teaching/research assistants, a Test of Spoken English (TSE) score of 50 of 60 is required by the Kansas Board of Regents. The test may be taken in the U.S. or abroad.

Course Requirements

The Graduate School requires at least three years of two semesters each of graduate study (equivalent to 90 semester hours) beyond the bachelor's degree and a dissertation for the degree of Doctor of Philosophy. Approximately 30 to 40 hours of course work are required for the Ph.D. in addition to research for a satisfactory dissertation. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Admission to candidacy for the Ph.D. requires satisfactory performance in the two core biochemistry courses, and defense of a research proposal on a topic selected by the student in consultation with their supervisory committee. This defense serves as the preliminary examination for admission to candidacy for the Ph.D.

Required Courses

In addition to the required biochemistry courses, 10 credit hours of biology courses are required, and advanced chemistry or physics courses are encouraged. Two credits must be obtained in the Graduate Biochemistry Seminar (BIOCH 806).

- BIOCH 806 - Biochemistry Seminar Credits: 0-1

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Biochemistry (MS)

Offered through the Biochemistry and Molecular Biophysics graduate program.

Biochemistry explores the molecular basis for life processes through chemical and physical studies on the structure and behavior of complex molecules found in biological materials. Biochemistry has emerged as a highly creative and successful discipline that has developed many new technologies and broadly applies the technological advances of other disciplines. Through

characterizing the structure, function, assembly, and dynamic changes of macromolecules, biochemists seek to answer fundamental questions about living processes (basic research) and to bring to fruition significant improvements in the quality of life and medical care (applied research). The great complexity and endless variety of biological systems, together with the need for broad explorations, assure that imaginative research will continue in the field of biochemistry for the foreseeable future.

Admission Requirements

Applicants must have a bachelor's degree from an accredited institution, appropriate and adequate course work, and an average of B or better in the junior and senior years or an excellent postgraduate record at another institution. Provisional admission may occur when there are limited deficiencies in undergraduate course work that can be removed by course work taken at Kansas State University or when there is uncertainty in evaluation of transcripts, as may occur in the case of international students. In the latter case, removal of the provisional status occurs upon the accumulation of 9 hours of course work with a B or better average.

Undergraduate and postgraduate credits should include analytical, organic, and physical chemistry, calculus, physics, and a semester of biology including a laboratory. Physical chemistry may be completed as part of an M.S. or Ph.D. program, but all other deficiencies must be completed without graduate credit. No foreign language is required.

All applicants are required to take the Graduate Record Exam (GRE) and submit their scores with the application.

International Applicants

A minimal score of 550 on the written Test of English as a Foreign Language (TOEFL) or 79 on the Internet-based TOEFL (IBT) is required for admission to the Graduate School for any student whose native language is not English. Because beginning graduate students in biochemistry are appointed as combined teaching/research assistants, a Test of Spoken English (TSE) score of 50 of 60 is required by the Kansas Board of Regents. The test may be taken in the U.S. or abroad.

Course Requirements

For the M.S. degree, the Graduate School requires a minimum of 30 semester hours of graduate credit, which includes a master's thesis based on 6-8 credit hours of research. In addition to the required biochemistry courses, one credit must be obtained in the Graduate Biochemistry Seminar (BIOCH 806).

Required Course

- BIOCH 806 - Biochemistry Seminar **Credits:** 0-1

Total Hours Required for Master's: 30

Biology

Mark Ungerer, Director

For more detailed information on faculty research interests, see <http://www.k-state.edu/biology/people/tenure/index.html>.

Programs

Biology and Microbiology are broad and innovative disciplines, and our graduate program reflects both of these characteristics. Our faculty members are research scientists with a breadth and depth of research expertise, and they apply that expertise in their roles as graduate mentors. The graduate faculty members of the Division of Biology strongly believe that independent research is the preeminent feature of our graduate programs. Research expertise represented within the Division of Biology ranges from studies of cell development and cell signaling to the influence of grazers and fire with plant and animal communities on the tallgrass prairie. Graduate opportunities are available in all areas of biology, including molecular, cellular and developmental biology; community, ecosystem and landscape ecology; wildlife biology; cancer biology; microbiology; virology; immunology; parasitology; and genetics.

In partnership with a major professor and a supervisory committee, each graduate student develops an individualized program of study, consisting of course work and laboratory or field research. Each program of study is tailored to meet the specific needs of the individual student. Unlike more formal curricula with rigid requirements, our flexible approach allows students to pursue their professional goals more efficiently and more effectively. All beginning graduate students are required to take BIOL 863 (Professional Skills in Biology), where they learn about grant-writing, presentation skills, research ethics, effective instructional techniques, and other skills that will be useful to them throughout their careers as professional scientists. This course is the only required course; all other courses are chosen in consultation with the advisory committee. A minimum of 30 credit hours beyond the bachelor's degree is required to earn a master's degree; a minimum of 90 credit hours beyond the bachelor's degree is required to earn a doctoral degree. In addition, we require that each student write a thesis or dissertation based on their original research; this work should be of sufficient quality and importance to merit publication in a refereed journal. For additional details regarding responsibilities and expectations for our graduate students, see <http://www.ksu.edu/biology/grad/responsibilities.html>.

Facilities

Graduate research and education takes place primarily in four on-campus sites--Ackert Hall, Bushnell Hall, Chalmers Hall, and Leasure Hall--as well as at the off-campus site of the Konza Prairie Biological Station.

Ackert Hall

Ackert Hall is the main biology facility, containing 130,000 square feet of research and instructional space. Ackert Hall provides modern, well-equipped laboratories for teaching and research, and, contains the Division offices, a rooftop greenhouse, an electronics shop, a research supply storeroom, and animal care facilities. Equipment available for research includes ultracentrifuges, growth chambers, a research microscope facility (with confocal and transmission electron microscope plus image processing capabilities), mass spectroscopy facilities, and many other research and support equipment items that are required for a modern biology research program. Research labs overseen by faculty members in all three of our sections (see above) can be found in Ackert Hall.

Bushnell Hall

Graduate faculty members with an interest in ecological studies have offices and laboratory space in Bushnell Hall. Included in this building are the herbarium, environmental chambers, dark rooms, analytical laboratories, and tanks for fish culture ranging from 100- to 2,000-liter capacity. Extensive computing and imaging facilities support the climatologic and remote sensing activities.

Chalmers Hall

Chalmers Hall was completed in November 2002 and is adjacent to Ackert Hall. This modern facility houses ten Division of Biology faculty and research programs in 12,300 square feet on the second floor of the building. Faculty members with laboratories in Chalmers Hall have research interests in developmental biology, immunology, virology, bioinformatics, ecological genomics, and vector biology.

Leasure Hall

Leasure Hall houses the Kansas Cooperative Fish and Wildlife Research Unit. This unit is a partnership of the U.S. Department of the Interior, Kansas State University, the Kansas Department of Wildlife and Parks, and the Wildlife Management Institute. Two U.S. Department of the Interior employees, with appointments as Division of Biology adjunct graduate faculty members, oversee fisheries and wildlife research programs as part of their duties in the Kansas Cooperative Fish and Wildlife Research Unit.

Konza Prairie Biological Station

The Konza Prairie Biological Station is located only a few miles south of the main KSU campus, allowing for ease of access for faculty members and graduate students working there. This station contains approximately 8,616 acres of native tall grass prairie, and has been set aside by the Nature Conservancy as a unique outdoor laboratory for long-term research. This land was purchased with funds provided by Katharine Ordway, and leased to the Division of Biology by the Nature Conservancy. Experimental manipulations of the landscape, involving grazing and/or burning, allow researchers to focus on patterns and processes which might be important in maintenance of the tall grass prairie ecosystem.

Research strengths

The graduate faculty members of the Division of Biology have a proven track record in scientific achievement, and they continue to excel in competition for extramural research funding. Our research programs are funded by the state of Kansas, via support from the Kansas Agricultural Experiment Station and Kansas Wildlife and Parks, and by direct grants to our faculty members from a diverse group of agencies and foundations, including the National Science Foundation, the National Institutes of Health, the Environmental Protection Agency, the Department of Interior, the Department of Energy, DOD, the American Heart Association, the American Cancer Society, as well as others. Areas of particular research strength, which provide collaborative research opportunities for our graduate students, include:

Long-Term Ecological Research

The National Science Foundation has supported Division of Biology research activities on the Konza Prairie continuously since 1980. This long-term approach is designed to investigate gradual and subtle changes in microbe, plant and animal diversity and numbers on the tall grass prairie, the impact of human activities on ecosystem productivity, and changes in ecological processes caused by burning and/or grazing.

Kansas Lipidomics Research Center

The Kansas Lipidomics Research Center is a collaborative venture of scientists in the Division of Biology, in the Department of Biochemistry and Molecular Biophysics, and at the University of Kansas. The Center performs comprehensive, quantitative profiling of lipid molecular species with high sample throughput, using mass spectrometry and other innovative technologies. Diversity and concentrations of lipid metabolites in genomically altered and physiologically manipulated organisms are investigated in order to identify the functions of genes that encode proteins involved in lipid metabolism. The Center is also dedicated to improving lipid analytical technologies, to promoting collaborative research among lipid scientists, and to providing training opportunities for post doctoral, graduate, and undergraduate students. More information is available at <http://www.k-state.edu/lipid/lipidomics/>.

Ecological Genomics

The Ecological Genomics initiative is an interdisciplinary research enterprise, aimed at exploring the genetic bases for organismal responses to the environment. Students involved in the program engage in a truly multidisciplinary program, working with faculty members in ecology and molecular biology/genetics. These research efforts employ functional genomic techniques to probe the interface between ecology and genetics. More information about the Kansas Ecological Genomics collaborative research groups can be found at <http://www.ksu.edu/ecogen/>.

Other multi-investigator research initiatives

Information about many other exciting collaborative research efforts can be found at <https://www.k-state.edu/biology/research/interdisciplinary.html>

Admission and financial support

For detailed information on admission and financial support, see <http://www.k-state.edu/biology/grad/index.html>.

Accelerated

Accelerated Biology - Animal Biology (BS)/Biology (MS)

The accelerated Accelerated Biology - Animal Biology (BS)/Biology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

To enter this program a student must be nominated by a Biology graduate faculty member who also will serve as the student's major professor. The nomination can take place any time from the second semester of the sophomore year through the second semester of the junior year when he/she has accumulated 75 credit hours toward the Bachelor degree. By the time of nomination, students must have completed at least one course from each of the following two blocks: Block 1 – [BIOL 221, BIOL 255], Block 2 – [BIOL 398, BIOL 520, BIOL 529], his/her math requirement, and at least two semesters of chemistry. A student may be nominated during the senior year with special permission from the chair of the Biology Graduate Affairs Committee

Course Requirements

Biology (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BIOL 612 - Freshwater Ecology **Credits: 4**
- BIOL 640 - Population Biology **Credits: 3**
- BIOL 642 - Principles of Conservation Biology **Credits: 3**
- BIOL 682 - Fish Ecology **Credits: 3**
- BIOL 684 - Wildlife Management and Techniques **Credits: 4**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Biology - Cellular and Molecular Biology (BS)/Biology (MS)

The accelerated Accelerated Biology - Cellular and Molecular Biology (BS)/Biology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

To enter this program a student must be nominated by a Biology graduate faculty member who also will serve as the student's major professor. The nomination can take place any time from the second semester of the sophomore year through the second semester of the junior year when he/she has accumulated 75 credit hours toward the Bachelor degree. By the time of nomination, students must have completed at least one course from each of the following two blocks: Block 1 – [BIOL 221, BIOL 255], Block 2 – [BIOL 398, BIOL 520, BIOL 529], his/her math requirement, and at least two semesters of chemistry. - BIOL 670 - Immunology **Credits: 3**
- BIOL 675 - Genetics of Microorganisms **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**
- BIOL 707 - Advanced Cell Biology **Credits: 3**
- BIOL 734 - Introduction to Genomics and Bioinformatics **Credits: 4**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Microbiology – Medical Microbiology(BS)/Biology(MS)

The accelerated Accelerated Microbiology - Medical Microbiology (BS)/Biology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.

- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Insert Link to Master Program Name (Degree Type) from the approved curriculum/catalog

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BIOL 609 - Cellular and Molecular Biology of Human Diseases **Credits: 3**
- BIOL 670 - Immunology **Credits: 3**
- BIOL 675 - Genetics of Microorganisms **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**
- BIOL 707 - Advanced Cell Biology **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Biology (PHD)

The Ph.D. program in Biology provides advanced training in numerous biological subdisciplines including ecology, evolution, physiology, genetics, genomics, molecular biology, developmental biology, and cell biology. The program trains students to be independent, rigorous, and creative life scientists in preparation for careers in research, teaching, industry, and government.

The Ph.D. in Biology requires a minimum of 90 credit hours, including at least 24 credit hours of graded coursework and at least 30 hours of BIOL 998 (Ph.D. Research in Biology). Students work closely with faculty mentors to develop major laboratory and/or field-based research projects. Most students will publish multiple peer-reviewed research papers that form the basis for their doctoral dissertation.

Optional Rotations

Applicants can be recruited directly into a specific faculty member's research program but also have the option of doing laboratory rotations. Rotating students do short projects in 2-3 different labs during their first semester to explore different research opportunities and find the best fit for their interests. Applicants with interests in Ecology, Evolutionary Biology, Conservation Biology, and similar fields typically apply to work with a specific faculty mentor but will occasionally do rotations.

Rotations are common but not mandatory for students with interests in Genetics, Molecular Biology, Cell Biology, Developmental Biology and related fields.

Admission Requirements

Applicants must have a 4-year bachelor's degree. An average of B or higher in the final 60 hours of undergraduate coursework (3.0/4.0 on a 4-point scale or equivalent) is required for regular admission, but applicants with lower GPAs can potentially be admitted on probationary status. Preference is given to applicants with undergraduate degrees in biology or other life sciences. Applicants with undergraduate degrees in other disciplines should have extensive life science coursework or other evidence of biology fundamentals. Prior research experience is essential. A key issue in admissions decisions is a good match with the research interests of one or more Biology faculty members who could serve as the applicant's Major Professor. Prospective applicants are encouraged to contact potential mentors to discuss opportunities in their research programs.

Applications must include transcripts, contact details for three professional references, and a personal statement of goals and experiences. The personal statement should discuss career goals and past research experience, and it should explain how the applicant's research interests are aligned with the research programs of one or more Biology faculty members. GRE scores are not required but can be provided if available. International applicants must meet the KSU graduate school requirements for English proficiency, but TOEFL IBT scores ≥ 100 (with 22 or higher on the SPEAK test) or IELTS ≥ 7.0 are preferred.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Contact Info

Graduate Program Contact: biology@ksu.edu

Graduate Program Director: Dr. Michael Veeman (veeman@ksu.edu)

Course Requirements

90 credit hours, including at least 24 hours of graded coursework and at least 30 hours of research credit. Depending on the student's previous coursework, the supervisory committee may require up to 30 hours of graded courses. At least 15 hours of the graded coursework must be at the 800 level or higher. All students must take BIOL 863 (Professional Skills and Ethics) in the first year. Other courses are selected in consultation with the student's Major Professor and supervisory committee, which is typically formed in the second semester. These flexible requirements allow Programs of Study to be tailored to the research and career development needs of individual students across diverse biological subdisciplines. Courses from other KSU units including but not limited to Agronomy, Biochemistry and Molecular Biophysics, Geography, Plant Pathology and Statistics can be included in the Program of Study.

Enrollment Requirements

Biology Ph.D. students should enroll in 9 credit hours per semester, excluding summer semester, to be on track to graduate in the typical 5 years. Students on appointment as GTAs or GRAs must always be enrolled in at least 6 credit hours in each Spring and Fall semester to qualify for salary and benefits. Students who are no longer on a GTA or GRA appointment but have not completed their final degree requirements must enroll in 1 hour per semester until the dissertation is completed.

Required Course

- BIOL 863 - Professional Skills and Ethics **Credits: 3**

Suggested Courses

Rotation students should sign up for a 1-credit section of BIOL 891 (Advanced Problems in Biology) for each rotation.

Students with research interests in molecular and cellular biology will often take BIOL 705 (Eukaryotic Genetics), BIOL 707 (Advanced Cell Biology), and BIOL 860 (Modern Molecular Approaches) in their first year.

Many cutting-edge topics are taught as different sections of BIOL 890 (Advanced Topics in Biology). Students are encouraged to consult the course schedule for an up-to-date list of these offerings.

Doctoral students in Biology are encouraged to take courses that help build quantitative and computational skills. These include but are not limited to:

- BIOL 734 - Introduction to Genomics and Bioinformatics **Credits: 4**
- BIOL 810 - Analysis of Ecological Gradients **Credits: 3**
- BIOL 823 - Demographic Methods **Credits: 3**
- PLPTH 813 - Bioinformatics Applications **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**

Electives

- 21 credit hours of electives, with at least 15 hours at the 800 level or higher **Credits: 21**

Research

Minimum 30hrs. Students without a prior M.S. degree will typically take 66 hours of research credit to make up the total of 90 hours required. Students with a prior M.S. may request transfer of up to 30 credit hours toward the 90 credits required for the doctorate and would only need 36 hours.

- BIOL 998 - PhD Research in Biology **Credits: 1-18 (30)**

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Microbiology (PHD)

The PhD program in Microbiology trains students to be independent, rigorous and creative microbiologists in preparation for careers in research, teaching, industry and government. Most Microbiology PhD students will graduate in 5 years and publish 2-5 papers.

Admission Requirements

The Microbiology Ph.D. degree, offered through the Biology graduate program, requires a minimum of 24-30 hrs course work, including 15 hours of courses at the 800 level. Students already holding an applicable master's degree upon admission can count

30 credits toward the 90 credits required for the doctorate. Course selection is done in consultation and approval of the student's supervisory committee and should include the following.

Course Requirements

I. Required Courses

- BIOCH 755 - Biochemistry I **Credits: 3**
- BIOCH 765 - Biochemistry II **Credits: 3**
- BIOL 863 - Professional Skills and Ethics **Credits: 3**

II. Suggested courses for the specialization in ecological microbiology

- AGRON 645 - Soil Microbiology **Credits: 3**
- BIOCH 766 - Recombinant DNA Laboratory I **Credits: 1**
- BIOCH 767 - Recombinant DNA Laboratory II **Credits: 1**
- BIOL 604 - Biology of the Fungi **Credits: 3**
- BIOL 632 - Ecology Laboratory **Credits: 1**
- BIOL 805 - Advanced Mycology **Credits: 3**
- BIOL 818 - Advanced Aquatic Ecology **Credits: 3**
- BIOL 823 - Demographic Methods **Credits: 3**
- BIOL 826 - Nutrient Dynamics **Credits: 3**
- BIOL 860 - Modern Molecular Approaches **Credits: 3**
- BIOL 865 - Advanced Plant Ecology **Credits: 4**
- BIOL 870 - Advanced Plant Systematics **Credits: 4**
- BIOL 886 - Confocal, Fluorescence and Light Microscopy **Credits: 3**
- BIOL 888 - Electron Microscopy Techniques **Credits: 3**
- PLPTH 835 - Plant Virology **Credits: 3**
- PLPTH 840 - Plant Pathogenic Bacteria **Credits: 2**
- PLPTH 845 - Plant Pathogenic Fungi **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

III. Suggested courses for the specialization in molecular microbiology

- BIOCH 766 - Recombinant DNA Laboratory I **Credits: 1**
- BIOCH 767 - Recombinant DNA Laboratory II **Credits: 1**
- BIOCH 920 - Nucleic Acids **Credits: 3**
- BIOCH 930 - Proteins **Credits: 3**
- BIOCH 950 - Advanced Topics in Protein Science **Credits: 3**
- BIOL 670 - Immunology **Credits: 3**
- BIOL 671 - Immunology Lab **Credits: 2**
- BIOL 676 - Molecular Genetics Laboratory **Credits: 3**
- BIOL 705 - Eukaryotic Genetics **Credits: 3**
- BIOL 707 - Advanced Cell Biology **Credits: 3**

- BIOL 730 - General Virology Credits: 3
- BIOL 830 - Advanced Virology Credits: 3
- BIOL 835 - Cellular and Molecular Parasitology Credits: 3
- BIOL 840 - Molecular and Cellular Immunology Credits: 3
- BIOL 850 - Advanced Topics in Immunology Credits: 1-2
- BIOL 860 - Modern Molecular Approaches Credits: 3
- BIOL 886 - Confocal, Fluorescence and Light Microscopy Credits: 3
- BIOL 888 - Electron Microscopy Techniques Credits: 3
- DMP 860 - Bacterial Pathogenesis and Host Response Credits: 3
- DMP 871 - Molecular Diagnostics of Infectious Diseases Credits: 3
- DMP 878 - Applications of Flow Cytometry Credits: 1-3

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Credits Required for Doctorate: 90

Master of Science

Biology (MS)

The M.S. program in Biology provides advanced training in numerous biological subdisciplines including ecology, evolution, physiology, genetics, genomics, molecular biology, developmental biology, and cell biology. This is a research-based program in which students conduct laboratory and/or field research under the guidance of faculty mentors. These research projects form the basis for an M.S. thesis and are also typically published as peer-reviewed research papers. The M.S. in Biology prepares students for private and public sector employment as well as for further graduate study.

The M.S. program in Biology requires 30 credit hours, including a minimum of 22 credit hours of graded coursework and 6-8 hours of BIOL 898 (M.S. Research in Biology). A report option instead of a thesis is only available in exceptional circumstances and requires the permission of the supervisory committee and graduate program director.

Admission Requirements

Applicants must have a 4-year bachelor's degree. An average of B or higher in the final 60 hours of undergraduate coursework (3.0/4.0 on a 4-point scale or equivalent) is required for regular admission, but applicants with lower GPAs can potentially be admitted on probationary status. Preference is given to applicants with undergraduate degrees in biology or other life sciences. Applicants with undergraduate degrees in other disciplines should have extensive life science coursework or other evidence of biology fundamentals. Prior research experience is highly desirable. A key issue in admissions decisions is a good match with the research interests of one or more Biology faculty members who could serve as the applicant's Major Professor. Prospective applicants are encouraged to contact potential mentors to discuss opportunities in their research programs.

Applications must include transcripts, contact details for three professional references, and a personal statement of goals and experiences. The personal statement should discuss career goals and past research experience, and it should explain how the applicant's research interests are aligned with the research programs of one or more Biology faculty members. GRE scores are not

required but can be provided if available. International applicants must meet the KSU Graduate School requirements for English proficiency, but TOEFL IBT scores ≥ 100 (with 22 or higher on the SPEAK test) or IELTS ≥ 7.0 are preferred.

Research Facilities

As a medium-sized department, K-State Chemistry is large enough to ensure that our students are provided with access to a variety of first-rate equipment, yet small enough to assure our students of close personal interactions with faculty. We recognize

that our students are individuals, and our programs are structured to allow each student to reach his or her potential at an appropriate pace. The Department of Chemistry occupies two adjoining buildings – CBC and King Hall – that provide over 81,000 square feet of research, teaching and office space for the activities of our 19 faculty, 5 staff and 55 graduate students and research associates.

Computing resources for research and teaching are provided by the KSU research computing cluster, Beocat. Beocat is currently the largest academic supercomputer in Kansas. All Faculty, staff and students have access to the Beocat compute nodes.

The department houses extensive computational resources including two Beowulf clusters, and numerous and broad electrochemical research capabilities. Chemistry researchers have access to a wide array of microscopy techniques, including AFM, STM, TEM, near-field scanning optical microscopy, multiphoton-excited fluorescence microscopy (with single molecule detection capability), and ultrafast video microscopy.

The Chemistry Department possesses substantial instrumentation for the synthesis of nanoscale materials: chemical vapor deposition, plasma-enhanced chemical vapor deposition, electrochemical deposition and metal-vapor deposition methods are all available in faculty research groups. An extensive set of materials characterization methods are available within the department including surface plasmon resonance, ellipsometry, chemisorption and temperature-programmed desorption techniques, thermogravimetric analysis, differential scanning calorimetry and FT-IR/Raman/DRIFT spectra of gases, liquids and solids.

Apart from routine spectroscopic instrumentation, the department houses many custom-built systems for time-resolved terahertz spectroscopy, fluorescence line-narrowing spectroscopy, hole-burning spectroscopy, single-molecule spectroscopy and high-resolution FT spectroscopy.

The Department also has a well-stocked chemical storeroom, electronics and machine shops (staffed by full-time personnel), and a dedicated glass shop operated by a Senior Scientific Glassblower. Safety in our research and teaching laboratories is of paramount importance to us, and we are fortunate to have a full-time safety officer.

The Kansas State University Libraries provide excellent facilities and support for research in the chemical sciences. Apart from electronic access to a full spectrum of research journals, the libraries maintain an extensive collection of print holdings. The library also participates in an interlibrary loan service that provides rapid access to work that has been published in obscure journals. The department enjoys round-the-clock access to all the resources of SciFinder Scholar and other online databases.

Programs of study and group structure

Programs of study and group structure

The Department of Chemistry offers programs leading to the M.S. and Ph.D. degrees specializing in analytical, biological, inorganic, materials, organic, and physical chemistry. The department faculty and research programs are operated through six overlapping "themes"; Drug Design, Biomolecular Processes, and Biosensing, Theory, Computation, and Advanced Analytics, Energy, Environment, Agriculture, and Sustainability, Design and Synthesis of Molecules and Supramolecular Architectures, Spectroscopy, Imaging, and Dynamics, and Functional Materials, Catalysis, and Nanochemistry. Each "theme" has faculty and adjunct faculty who work together to coordinate each graduate program involving graduate courses, seminar programs and a cumulative examination system.

Entering students are administered diagnostic exams in each of the traditional areas of chemistry (analytical, inorganic, organic, and physical) designed to assess their preparation for graduate studies. A minimum grade of C must be obtained in all courses in order to earn credit and a minimum overall grade point average of 3.0 (out of a possible 4.0) is necessary. Original research is the most important part of the graduate program, and selection of a research director is made during the first semester in residence in order to allow students to start work on their research projects at an early date.

Financial support

Most graduate students are supported for the duration of their studies by various teaching assistantships, research assistantships, and fellowships. Incoming students are generally awarded teaching assistantships; summer support also is provided if

performance in course work and teaching duties during the academic year is satisfactory. Students with excellent undergraduate credentials frequently receive supplemental departmental fellowships and are considered for graduate fellowships on a university-wide competitive basis. Outstanding graduate students are recognized annually through teaching and research awards.

Accelerated

Accelerated Chemistry (BS)/Adult Learning and Leadership (MS)

The accelerated Accelerated Chemistry (BS)/Adult Learning and Leadership (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Adult Learning and Leadership degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Students should apply to the program during their junior year. Applications should include the following:

- A completed on-line application to the K-State Graduate School with paid application fee.
- Written documentation demonstrating agreement by a member of the Graduate Faculty in the Kansas State University College of Education, Adult Learning and Leadership Program, who will serve as the student's major professor.
- Statement of objectives: State your academic objectives in one to two pages and include the following information: (1) career and professional goals and aspirations and how being accepted to the program will specifically benefit your goals and aspirations; (2) description of relevant professional experience within education or a related field; and (3) future professional plans.
- Resume/curriculum vitae

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- The BA/BS degree normally requires 120 undergraduate credit hours and the M.S. degree 33 graduate credit hours. However, the MS program requires 9 credit hours of elective courses at the 600 level or above that may count towards both the Chemistry BA/BS and the MS
- Students may begin taking graduate courses during their 4th year of the program.
- Graduate courses must be completed with a minimum GPA of 3.0.

- A grade of C or above must be achieved in all courses taken to fulfill Chemistry BA/BS requirements.
- The BA/BS degree may be awarded at any time following the completion of the undergraduate degree requirements. Alternatively, the BA/BS and MS degrees may be awarded concurrently following completion of the full program.
- Students must choose one of two options in the BA/BS program – the Chemistry Program or the Chemical Science Program.

Course Requirements

Adult Learning and Leadership (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CHM 611 - Inorganic Chemistry I **Credits: 3**
- CHM 612 - Inorganic Chemistry II **Credits: 3**
- CHM 652 - Organic Chemistry III: Reactions and Mechanisms **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Chemistry (BS)/Master of Business Administration (MBA)

The accelerated Accelerated Chemistry (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CHM 611 - Inorganic Chemistry I **Credits: 3**
- CHM 612 - Inorganic Chemistry II **Credits: 3**
- CHM 652 - Organic Chemistry III: Reactions and Mechanisms **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Chemistry (PHD)

Group programs

There are six programs of graduate course work that can be followed for the Ph.D. degree:

- Analytical Group Program
- Biological Group Program
- Inorganic Group Program
- Materials Group Program
- Organic Group Program
- Physical Group Program

The program of study is different in each program, but has the following common features:

Departmental requirements:

Two credit hours of common course work are required for all group programs.

Credit seminar programs:

Two credit hours of credit seminar are required together with attendance at a seminar program throughout the entire program of study. Students register for 0 credit hours in the seminar course when the seminar program is not taken for credit.

Group programs:

- Substantive Group Courses: A number of credit hours are required in course work specific to a particular group.
- Other Chemistry Department Courses: A number of credit hours are required in chemistry department courses.
- Additional Courses: A number of credit hours may be required that may be taken from chemistry department courses and sometimes from courses offered in other departments.

Cumulative examinations:

There are separate cumulative examinations in the Analytical, Inorganic, Materials, Organic and Physical groups.

Admission Requirements

Applicants admitted to the Chemistry graduate program must select a program of study from a "group program" that will include at least 20 hours of graduate course work, which may include courses from all areas of chemistry, and must include at least 16 hours of graduate course work in Chemistry. A total of 90 semester hours is required, including at least 50 hours of research for students entering with a bachelor's degree and 36 hours for students entering with a master's degree. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

The preliminary exam for the Ph.D. degree consists of a series of written cumulative exams on topics within the student's area of specialization and an oral research proposition examination that the student must prepare and defend before his or her supervisory committee. Completion of the Ph.D. degree requires the submission of a written dissertation and its oral defense before one's supervisory committee.

Course Requirements

Department requirements (2 credit hours)

Every student in the Chemistry Department is required to take the following one credit hour courses:

- CHM 601 - Safe Chemical Laboratory Practices **Credits: 1**
- CHM 700 - Practicum in Teaching Chemistry **Credits: 1**

Credit seminar programs (2 hours)

All students in the Chemistry Department are required to attend the appropriate group seminar program every semester (registering for 0 or 1 credit hour), and to register for a total of 2 credit hours during their Ph.D. program. When the seminar program is taken for credit, the student will be evaluated on a 50 minute seminar.

Analytical group program

- CHM 901 - Graduate Seminar in Analytical Chemistry **Credits: 0-1**

Biological group program

one from:

- CHM 901 - Graduate Seminar in Analytical Chemistry **Credits: 0-1**
- CHM 902 - Graduate Seminar in Inorganic Chemistry **Credits: 0-1**
- CHM 903 - Graduate Seminar in Organic Chemistry **Credits: 0-1**
- CHM 904 - Graduate Seminar in Physical Chemistry **Credits: 0-1**

Inorganic group program

- CHM 902 - Graduate Seminar in Inorganic Chemistry **Credits: 0-1**

Materials group program

one from:

- CHM 901 - Graduate Seminar in Analytical Chemistry **Credits: 0-1**
- CHM 902 - Graduate Seminar in Inorganic Chemistry **Credits: 0-1**
- CHM 903 - Graduate Seminar in Organic Chemistry **Credits: 0-1**
- CHM 904 - Graduate Seminar in Physical Chemistry **Credits: 0-1**

Organic group program

- CHM 903 - Graduate Seminar in Organic Chemistry **Credits: 0-1**

Physical group program

- CHM 904 - Graduate Seminar in Physical Chemistry **Credits: 0-1**

Group programs (16 credit hours)

Analytical group program

Substantive group courses:

9 credit hours required consisting of at least **three** 3-credit-hour analytical group courses that can be chosen from the following courses:

- CHM 920 - Analytical Separations **Credits: 3**
- CHM 937 - Applications of Surface Science to Chemistry **Credits: 3**
- CHM 939 - Topics in Analytical Chemistry **Credits: 1-3**
- CHM 940 - Chemical Microscopy **Credits: 3**
- CHM 944 - Electroanalytical Chemistry **Credits: 2-3**
- CHM 947 - Applied Molecular Spectroscopy **Credits: 3**

Other chemistry department courses:

3 to 6 credit hours are required consisting of one or two 3-credit-hour courses chosen from the following courses:

- CHM 801 - Chemical Thermodynamics Credits: 3
- CHM 820 - Materials Chemistry Credits: 3
- CHM 854 - Theoretical Chemistry I Credits: 3
- CHM 856 - Chemical Kinetics Credits: 3
- CHM 862 - Organic Spectroscopy Credits: 3
- CHM 929 - Physical Methods in Inorganic Chemistry Credits: 3
- CHM 954 - Theoretical Chemistry II Credits: 3
- CHM 965 - Physical Organic Chemistry Credits: 3

Additional courses:

The remaining 1 to 4 credit hours may be taken from the two previous lists or from:

Any science or engineering courses at the 600 level or higher in any department other than Chemistry in the colleges of Arts and Sciences, Agriculture, Human Ecology, or Engineering.

- CHM 600 - Scientific Glassblowing Credits: 1
- CHM 657 - Inorganic Techniques Credits: 2
- CHM 800 - Chemistry in Outer Space and in the Laboratory Credits: 2
- CHM 930 - Homogeneous Catalysis Credits: 2

Biological group program

Students must meet the group requirement by completing one of the other group programs (Analytical, Inorganic, Materials, Organic or Physical). In addition, students in the biological group may select additional courses offered either inside or outside the Department of Chemistry. A list of possible courses that students may choose to take that are offered outside the department include the following:

- BIOCH 755 - Biochemistry I Credits: 3
- BIOCH 765 - Biochemistry II Credits: 3
- BIOL 855 - Molecular Biology of Cellular Membranes Credits: 3
- BIOL 860 - Modern Molecular Approaches Credits: 3

Inorganic group program

Substantive group courses:

9 credit hours required consisting of the following courses:

- CHM 929 - Physical Methods in Inorganic Chemistry Credits: 3

Other chemistry department courses:

3 to 6 credit hours from the following courses:

- CHM 801 - Chemical Thermodynamics Credits: 3
- CHM 820 - Materials Chemistry Credits: 3
- CHM 854 - Theoretical Chemistry I Credits: 3

- CHM 856 - Chemical Kinetics **Credits: 3**
- CHM 862 - Organic Spectroscopy **Credits: 3**
- CHM 920 - Analytical Separations **Credits: 3**
- CHM 935 - Selected Topics in Inorganic Chemistry **Credits: 1-3**
- CHM 937 - Applications of Surface Science to Chemistry **Credits: 3**
- CHM 940 - Chemical Microscopy **Credits: 3**
- CHM 944 - Electroanalytical Chemistry **Credits: 2-3**
- CHM 947 - Applied Molecular Spectroscopy **Credits: 3**
- CHM 954 - Theoretical Chemistry II **Credits: 3**
- CHM 965 - Physical Organic Chemistry **Credits: 3**

Additional courses:

The remaining 1 to 4 credit hours may be taken from the two previous lists or from:

Any science or engineering courses at the 500 level or higher in any department other than Chemistry in the colleges of Arts and Sciences, Agriculture, Human Ecology, or Engineering.

- CHM 600 - Scientific Glassblowing **Credits: 1**
- CHM 657 - Inorganic Techniques **Credits: 2**
- CHM 800 - Chemistry in Outer Space and in the Laboratory **Credits: 2**
- CHM 930 - Homogeneous Catalysis **Credits: 2**

Materials group program

Substantive group courses:

3 credit hours required consisting of the following course:

- CHM 820 - Materials Chemistry **Credits: 3**

Other chemistry department courses:

9 to 12 credit hours from the following courses:

- CHM 801 - Chemical Thermodynamics **Credits: 3**
- CHM 854 - Theoretical Chemistry I **Credits: 3**
- CHM 856 - Chemical Kinetics **Credits: 3**
- CHM 862 - Organic Spectroscopy **Credits: 3**
- CHM 920 - Analytical Separations **Credits: 3**
- CHM 929 - Physical Methods in Inorganic Chemistry **Credits: 3**
- CHM 935 - Selected Topics in Inorganic Chemistry **Credits: 1-3**
- CHM 937 - Applications of Surface Science to Chemistry **Credits: 3**
- CHM 940 - Chemical Microscopy **Credits: 3**
- CHM 944 - Electroanalytical Chemistry **Credits: 2-3**
- CHM 947 - Applied Molecular Spectroscopy **Credits: 3**
- CHM 954 - Theoretical Chemistry II **Credits: 3**
- CHM 965 - Physical Organic Chemistry **Credits: 3**

Additional courses:

The remaining 1 to 4 credit hours may be taken from the two previous lists or from:

Any Science or Engineering courses at the 500 level or higher in any department other than chemistry in the College of Arts and Sciences, Agriculture, Human Ecology, or Engineering. Special consideration should be given to the following courses:

- CHM 600 - Scientific Glassblowing **Credits: 1**
- CHM 657 - Inorganic Techniques **Credits: 2**
- CHM 800 - Chemistry in Outer Space and in the Laboratory **Credits: 2**
- CHM 930 - Homogeneous Catalysis **Credits: 2**
- PHYS 655 - Physics of Solids **Credits: 3**

Organic group program

Substantive group courses:

13 credit hours required consisting of the following courses:

- CHM 860 - Synthetic Organic Chemistry **Credits: 4**
- CHM 862 - Organic Spectroscopy **Credits: 3**
- CHM 965 - Physical Organic Chemistry **Credits: 3**

Other chemistry department courses:

0 to 3 credit hours from any Chemistry Department courses with numbers above 710 excluding seminar courses.

Additional courses:

0 to 3 credit from any science or engineering courses at the 500 level or higher in any department other than Chemistry in the colleges of Arts and Sciences, Agriculture, Human Ecology, or Engineering.

Physical group program

Substantive group courses:

3 credit hours consisting of the following course:

- CHM 854 - Theoretical Chemistry I **Credits: 3**

And 3 credit hours from the following list of courses:

- CHM 801 - Chemical Thermodynamics **Credits: 3**
- CHM 856 - Chemical Kinetics **Credits: 3**
- CHM 937 - Applications of Surface Science to Chemistry **Credits: 3**
- CHM 947 - Applied Molecular Spectroscopy **Credits: 3**
- CHM 950 - Chemical Statistical Mechanics **Credits: 3**
- CHM 954 - Theoretical Chemistry II **Credits: 3**

- CHM 965 - Physical Organic Chemistry **Credits: 3**

Other chemistry department courses:

6 credit hours from any Chemistry Department courses with numbers above 710 excluding seminar courses.

Additional courses:

The remaining 4 credit hours may be taken from the two previous lists or from:

Any Science or Engineering courses at the 600 level or higher in any department other than chemistry in the College of Arts and Sciences, Agriculture, Human Ecology, or Engineering.

- CHM 600 - Scientific Glassblowing **Credits: 1**
- CHM 657 - Inorganic Techniques **Credits: 2**
- CHM 800 - Chemistry in Outer Space and in the Laboratory **Credits: 2**
- CHM 930 - Homogeneous Catalysis **Credits: 2**

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Master of Science

Chemistry (MS)

A minimum of 30 semester hours of graduate credit is required for the Chemistry Master of Science degree program, of which no less than 22 hours will be earned in course work. The program of study for the master's degree will normally include up to 15 hours in the student's major area of study, 6 to 12 hours in related areas, and one hour of graduate seminar. At least two semester hours of credit must be earned at the 700 level or higher in each of three of the following groups: analytical, inorganic, organic, physical, materials, and biological. A master's thesis that is based on 6 to 8 semester hours of original research must also be defended before one's supervisory committee.

Admission Requirements

Course Requirements

Analytical group program

- CHM 920 - Analytical Separations **Credits: 3**
- CHM 937 - Applications of Surface Science to Chemistry **Credits: 3**
- CHM 940 - Chemical Microscopy **Credits: 3**

- CHM 944 - Electroanalytical Chemistry Credits: 2-3
- CHM 947 - Applied Molecular Spectroscopy Credits: 3
- CHM 939 - Topics in Analytical Chemistry Credits: 1-3

Inorganic group program

- CHM 929 - Physical Methods in Inorganic Chemistry Credits: 3
- CHM 930 - Homogeneous Catalysis Credits: 2
- CHM 935 - Selected Topics in Inorganic Chemistry Credits: 1-3

Materials group program

- CHM 820 - Materials Chemistry Credits: 3

Organic group program

- CHM 860 - Synthetic Organic Chemistry Credits: 4
- CHM 862 - Organic Spectroscopy Credits: 3
- CHM 965 - Physical Organic Chemistry Credits: 3

Physical group program

- CHM 801 - Chemical Thermodynamics Credits: 3
- CHM 854 - Theoretical Chemistry I Credits: 3
- CHM 856 - Chemical Kinetics Credits: 3
- CHM 937 - Applications of Surface Science to Chemistry Credits: 3
- CHM 947 - Applied Molecular Spectroscopy Credits: 3
- CHM 950 - Chemical Statistical Mechanics Credits: 3
- CHM 954 - Theoretical Chemistry II Credits: 3
- CHM 955 - Selected Topics in Physical Chemistry Credits: 1-3

Biological group program

- Any 700 level or higher Biochemistry course

Total Hours Required for Master's: 30

Economics

Dr. Peri da Silva, Department Head

Dr. Lance Bachmeier, Director of Graduate Studies

327 Waters Hall

785-532-7357

Fax: 785-532-6919

econ@ksu.edu
<http://www.ksu.edu/economics/>

Program description

The Department of Economics offers graduate programs leading to the M.A. and Ph.D. degrees. The M. A. degree can be completed in one to two years, and course work for the Ph.D. degree can be completed in three years. The Ph.D. degree also requires passage of comprehensive examinations and the completion of a doctoral dissertation.

The graduate program in economics provides a strong foundation in macroeconomic theory, microeconomic theory, and econometrics. In addition, it offers course work by nationally recognized scholars in such fields as development economics, econometrics, international economics, industrial organization, labor economics, macroeconomics, and public finance. Advanced course work is also available in agricultural economics, computer science, mathematics, and statistics.

Financial assistance

There are two types of graduate teaching assistants: those who teach their own course and those who assist others by grading exams, proctoring, and carrying out other assignments. Graduate teaching assistantships provide a stipend, tuition waiver, and subsidized health insurance. In addition, the department offers supplemental awards: the Carroll B. Greene Scholarship, to the outstanding female graduate student, the M. Jarvin Emerson Memorial Scholarship to a top doctoral student, the John Nordin Memorial Scholarship for outstanding performance in economic theory, and the Thomas Graduate Student Teaching Award.

Accelerated

Accelerated Economics (BS)/Master Business Administration (MBA)

The accelerated Accelerated Economics (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student must complete all B.S. in economics undergraduate requirements with the exception that up to 9 credit hours of 600 or 700 level professional electives taken for graduate credit can also count toward his/her undergraduate degree requirements.

The student must complete all the requirements of the M.B.A. program.

Once an individual is admitted to the accelerated B.S. Economics/M.B.A. degree program, the student should consult the graduate handbook for policies and procedures for graduate degrees, which include: supervisory committee, final examination, thesis defense, etc. The student's supervisory committee must approve the program of study, which is that student's graduation requirements for the M.B.A.

In the event that a student begins this program, but does not wish to finish it, he/she must change the nine credit hours of his/her graduate classes to undergraduate credit and then he/she will receive a B.S. in economics degree.

The degree requires continuous enrollment. If a student fails to enroll in classes for over a year, then student has lost the ability to count courses toward both his/her undergraduate and graduate degree requirements unless granted permission by the respective departments.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ECON 608 - Python Coding for Economics **Credits: 3**
- ECON 630 - Introduction to Econometrics **Credits: 3**
- ECON 633 - Public Finance **Credits: 3**
- ECON 684 - International Finance and Open Economy Macroeconomics **Credits: 3**
- ECON 686 - Economics Forecasting **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Economics (PHD)

The graduate program in economics provides a strong foundation in macroeconomic theory, microeconomic theory, and econometrics. In addition, it offers course work by nationally recognized scholars in such fields as development economics, econometrics, international economics, industrial organization, labor economics, macroeconomics, and public finance. Advanced course work is also available in agricultural economics, computer science, mathematics, and statistics.

Admission Requirements

Course Requirements

Required Courses

As part of the 90 hours required for a Ph.D. degree, each Ph.D. degree program must contain the following 30 hours of course work or equivalent:

- ECON 735 - Mathematical Economics **Credits: 3**
 - ECON 805 - Macroeconomic Theory I **Credits: 3**
 - ECON 830 - Econometrics I **Credits: 3**
 - ECON 905 - Macroeconomic Theory II **Credits: 3**
 - ECON 930 - Econometrics II **Credits: 3**
 - ECON 940 - Advanced Microeconomic Theory I **Credits: 3**
 - ECON 945 - Advanced Microeconomic Theory II **Credits: 3**
- Two graduate economics courses at the 800-level or above, one of which is in a third field. **Credits: 6**
- and select one of these four courses:
- AGECE 901 - Research Methods in Economics **Credits: 3**
 - AGECE 905 - Agricultural Demand and Commodity Marketing **Credits: 3**
 - AGECE 923 - Economics of Agricultural Production **Credits: 3**
 - AGECE 936 - Quantitative Topics in Agricultural Economics **Credits: 3**

Additional requirement

Also required is course work in two fields of specialization. Normally a field consists of 6 additional hours of course work in economics or in related departments. Students entering the Ph.D. program with a master's degree in economics may receive 30 hours of credit toward the 90 credits required for the doctorate.

Ph.D. dissertation

In the process of completing the research and writing of a Ph.D. dissertation, the student must enroll in at least 30 hours of the following:

- ECON 999 - PhD Research in Economics **Credits: 1-18**

Ph.D. qualifying exams

Students must pass qualifying exams in macroeconomic theory and microeconomic theory. Students are normally expected to take these exams immediately after completing the aforementioned course work. The courses preparing the students for these exams are:

- ECON 805 - Macroeconomic Theory I **Credits: 3**
- ECON 905 - Macroeconomic Theory II **Credits: 3**
- ECON 940 - Advanced Microeconomic Theory I **Credits: 3**
- ECON 945 - Advanced Microeconomic Theory II **Credits: 3**

Additional Requirements

A preliminary exam must also be passed in one other fields. This field must include at least six hours of course work at the 800-level or above. The field exam may not be taken until the macroeconomic theory and microeconomic theory exams are passed.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Arts

Economics (MA)

The M.A. program in Economics can be tailored to prepare students for positions in business or government or to provide a solid foundation for Ph.D. level studies. The master's degree program consists of at least 30 credit hours and includes courses in microeconomic theory, macroeconomic theory and statistics. Beyond this, students have considerable flexibility in choosing coursework. Remaining courses are selected and agreed upon by the student and his or her advisory committee based on the student's background, objectives, and undergraduate preparation. The M.A. degree can be completed in one to two years.

Admission Requirements

In addition to general Graduate School requirements, the Department of Economics has the following requirements for admission.

Course requirements

- 3 credit hours of intermediate macroeconomic theory
- 3 credit hours of intermediate microeconomic theory
- 3 credit hours of statistics taken in a statistics department
- 3 credit hours of calculus taken in a math department

If these courses are not part of the student's undergraduate program, admission will be provisional upon completing these courses.

Grade requirements

- A 3.0 GPA in your most recently completed degree program.
- A grade of C or above for the courses listed above.

Although students with academic performance below these standards may be admitted because of other considerations such as high GRE scores, admission will be probationary.

Graduate record examination

- Submitting a Graduate Record Examination (GRE) score is optional, but most successful applicants include a GRE general test score with their application. Strong performance on the GRE can offset weaknesses in the application.

Course Requirements

Each master's degree program must consist of at least 30 hours and include courses in microeconomic theory (ECON 720) and macroeconomic theory (ECON 805) along with a course in statistics, unless the student has previously taken a statistics course for graduate credit.

Specific course requirements beyond these core requirements are selected and agreed upon by the student and his or her advisory committee based on the student's background, objectives, and undergraduate preparation. The program may include a minor consisting of 6 to 12 hours of course credit in a single field (outside the Department of Economics).

Degree options

The coursework only option for this program does not require a culminating experience.

Three options are available to complete the master's degree: thesis option, report option, and Ph.D. qualifying-exam option.

Thesis Option Courses

As part of the required 30 hours of course work, the student must complete a master's thesis, for which 6 semester credit hours are given.

Report Option Courses

As part of the required 30 hours of course work, the student must complete a master's report for which 2 semester hours of credit are given.

Note:

Ph.D. qualifying-exam option: The Ph.D. qualifying-exam option requires successful completion (a grade of B or higher) of a graduate economics course that has as one of its requirements the writing of a term paper, and a master's-level pass in the Ph.D. qualifying exams in microeconomic theory and macroeconomic theory.

Total Hours Required for Master's: 30

English

Karin Westman, Head

Fax: 785-532-2192

gradeng@ksu.edu

<http://www.ksu.edu/english/>

Admission procedures

All applications are reviewed by the director of graduate studies and the graduate advisory committee within the department. Applicants are expected to have performed at a B level or better in all of their undergraduate work, but the committee bases its judgment primarily on the student's performance in English courses.

Because some persons do not mature as students until late in their undergraduate careers, the department may sometimes accept students with less than the expected grade average if the students' final semesters indicate the ability to do graduate work. Moreover, the department recognizes that students who have majored in fields other than English as undergraduates may choose English for their graduate work. Such students are usually admitted with provisional standing and are enrolled in courses for undergraduate credit until any deficiencies are made up.

Applications need to include the following:

1. Completed application form.
2. Two copies of the official transcript from each college or university the applicant has attended. Only official copies are accepted by the Graduate School. (If the transcripts do not show an undergraduate major comparable to that of K-State with a minimum of 24 credit hours in English above the freshman level, the applicant may be admitted with provisional standing and enrolled in courses for undergraduate credit until the deficiency has been removed.)
3. Three letters of recommendation from persons qualified to speak informatively of the applicant's academic performance and his or her potential for advanced study in English.
4. A statement of objectives (a succinct account of aims and interests).
5. A writing sample of 8-15 pages of analytical or persuasive prose.
6. Application fee.
7. For applicants who expect to enter the creative writing track, a writing sample of either 10-30 pages of fiction or 6-10 poems.
8. For international students, an official TOEFL score report and Kansas State University's financial affidavit.

Financial support

Most M.A. students qualify to be graduate teaching assistants and are provided valuable teaching experience as well as financial support. GTAs receive a nine-month stipend and a full tuition waiver. The Department of English also offers a small number of scholarships; awarded on a competitive basis, these may be held in addition to an assistantship. Students in the creative writing track may apply for the Seaton Fellowships; students in all tracks may apply for the Edwards, Glenn, Grindell, and Popkins Scholarships.

Graduate Certificate

Technical Writing and Professional Communication Graduate Certificate

Contact: Han Yu

E-mail: hyu1@ksu.edu

Home page: www.ksu.edu/english/programs/techwriting.html

Offered through the English department, the graduate certificate in technical writing and professional communication recognizes the complexities and demands of written, oral, and digital communication in the workplace as well as the interdisciplinary character of writing and communication studies in the academy. Thus, while centered on writing, the certificate includes course options in rhetoric, communication, design, digital media, speech, and group dynamics.

The certificate is available to any student with an undergraduate degree. A current undergraduate may take courses toward the graduate certificate if they enroll and pay for graduate credit. Classes for the certificate do not count toward their undergraduate degree. In some cases, courses may count toward a graduate degree. Interested students should meet with the program contact for

advising and planning a course of study before taking any courses.

The certificate requires four courses (12 credit hours): one in writing and three electives.

At least one course must be from outside the student's home discipline. Because of the wide variety of electives available, students can craft much of the certificate to meet their own career and educational goals. As with graduate degrees, participants are required to map out a coherent Program of Study with the certificate coordinator. The structure of the certificate is flexible enough so that most students, with advance planning, can pursue it without impeding regular degree progress.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

This certificate recognizes the multiple demands of written, oral, and digital communication in the workplace, as well as the interdisciplinary character of writing and communication studies in the academy. Thus, while centered on writing, the certificate also includes course options in rhetoric, communication, design, digital media, speech, and group dynamics. It emphasizes the rich theoretical and rhetorical principles that govern effective communication across a range of contexts as well as the pragmatic skills needed in the workplace.

The certificate requires four courses (12 credits) in two categories: one in writing and three in electives.

Students map out a coherent plan of study with the certificate coordinator for submission to the Graduate School. The structure of the certificate is flexible enough so that most students, with advance planning, can pursue it without impeding regular degree progress.

To complete the certificate, students must submit sample work from their courses to be evaluated by graduate faculty in the area of Technical Communication.

Required Courses

- ENGL 759 - Studies in Technical Communication **Credits: 3**

Elective Courses

Students choose three from the following:

(Students can petition to use additional courses as electives by discussing with the Certificate Director, preferably before they take the course, and by demonstrating that course meets Certificate SLOs)

- AGCOM 610 - Crisis Communication **Credits: 3**
- AGCOM 712 - Environmental Communication **Credits: 3**
- AGCOM 810 - Scientific Communication **Credits: 3**
- COMM 726 - Seminar in Persuasion **Credits: 3**
- COMM 730 - Classical Rhetorical Theory **Credits: 3**
- COMM 733 - Rhetorical Criticism **Credits: 3**
- COMM 834 - The Rhetoric of Social Movements **Credits: 3**
- EDACE 786 - Topics in Adult Learning and Leadership **Credits: 1-3**

(Grant Writing)

- ENGL 665 - Advanced Creative Writing: Nonfiction **Credits: 3**
OR
- ENGL 753 - Theories of Composition and Rhetoric **Credits: 3**
- ENGL 755 - Studies in Composition and Rhetoric **Credits: 3**
- ENGL 756 - Business Communication **Credits: 3**
- ENGL 758 - Scientific Communication **Credits: 3**
- ENGL 765 - Creative Writing Workshop: Creative Nonfiction **Credits: 3**
- ENGL 767 - Literary Editing and Publishing **Credits: 3**
- ENGL 797 - Professional Writing Internship **Credits: 0-18**
- MC 750 - Strategic Health Communication **Credits: 3**
- MC 712 - Environmental Communications **Credits: 3**
- MC 760 - Issues, Risk, and Reputation **Credits: 3**
- MC 765 - Communication Theory **Credits: 3**

Note:

Note: ENGL 510, AGCOM 590, ART 575, COMM 526, and MANGT 520 no longer count towards the Graduate Certificate Technical Writing and Professional Communication as a result of changes to the regulations governing Graduate Certificate Programs. See the Graduate Handbook Chapter 4 B.2 for information.

Total Hours Required for Graduate Certificate: 12

Master of Arts

English (MA)

K-State's Department of English provides students with a carefully structured but individualized program that encourages creativity, promotes innovative scholarship, and fosters close working relationships between students and faculty.

Questions about our program? Contact our Director of Graduate Studies, Cameron Leader-Picone, at gradeng@ksu.edu.

Course Requirements

The M.A. degree in English is awarded in one of five tracks, each of which can be completed in 30 hours. All tracks include a literature core (9 hours); courses in the chosen track (9 hours); electives (9 hours); a seminar (3 hours); foreign language certification (or equivalent research tool); a final writing project or thesis; and a final oral examination, a defense and discussion of the writing project or thesis.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Degree Track Options

British and American Literature

Concentration in this track is on the study of British and American literature; a student may emphasize any time period in either national literature and will work with graduate faculty who are experts in that period.

Children's Literature

Concentration in this track is on the study of children's and young adult literature; a student may emphasize a particular period or region, such as nineteenth-century American literature, or a particular genre, such as picture books. Students will work with faculty who have expertise in the area, or in a field that complements the student's focus.

Creative Writing and Literature

Concentration in this track is on the student's creative work in fiction, poetry, creative nonfiction, or drama; the student will work closely with graduate faculty well-published in the genre the student chooses to emphasize. The department's visiting writers program brings several writers of national stature to campus each year. In addition, opportunities for editorial experience are open to graduate students in this track.

Cultural Studies and Literature

Concentration in this track is on training in Marxist, feminist, poststructuralist, and psychoanalytic theory. A student may complement the study of literature with the study of politics, sociology, political economy, popular and mass culture, film, and other art forms.

Composition, Rhetoric and Literature

Concentration in this track is on composition and rhetorical theory. Like the other M.A. tracks, this one can prepare students for Ph.D. work, for teaching in community colleges, and for a career in technical writing.

<http://www.ksu.edu/geography>

Overview

The Department of Geography and Geospatial Sciences graduate program at Kansas State University offers a Master of Science (MS) degree and a Philosophy (PhD) degree in Geography. Discovery and dissemination of new knowledge are the cornerstones of our mission. Drawing upon the research interests and experience of the faculty, the department's core areas of geographic inquiry are illustrated in the figure below. Much of the research conducted by faculty and graduate students incorporates more than one of these themes, and we accomplish these research activities in an atmosphere of open inquiry and academic freedom.

The department's research mission incorporates studies that reinforce the land-grant mandate of the institution, including agricultural water management and rural community development, examination of the role on climatic variability on Great Plains ecosystems, and assessment of changes in stream systems and reservoirs related to human activity. Research themes include:

- Research into human spatial behavior, regional and place identity, and the relationship between humans and the environment, such as societal adjustments to floods, population redistribution in the Great Plains, cultural, social, and ethnic change in the landscape, and assessments of migration decisions associated with residential satisfaction;
- Examination of the applicability of new geographic knowledge and the emerging technologies associated with computer cartography, geographic information systems, and remote sensing; and
- A symbiotic relationship among discovery of new knowledge, graduate and undergraduate education, and improvement in the quality of life through research application to societal issues.

In accomplishing the University's instructional mission, we stress quality teaching and advising and strive to provide all students with opportunities to develop the knowledge, understanding, and skills characteristic of an educated person. Our contributions include:

- Providing undergraduate and graduate students with a thorough grounding in the discipline of geography from a liberal arts perspective;
- Teaching service courses that provide students with an opportunity to meet a number of either general education or college distribution requirements with classes and seminars that deal with international awareness, social and cultural diversity, and human interactions with the physical environment;
- Preparing students to better appreciate local, regional, and global affairs by promoting attainment of knowledge and modes of thought that will help individuals make meaningful lifetime decisions;
- Educating students so that they are successful in either further academic study or professional employment;
- Offering extracurricular learning experiences, including geographically oriented internships and seminars by internationally renowned geographic scholars, that promote academic excellence and cultural diversity; and
- Using educational approaches that permit the communication and application of basic geographic concepts and techniques that have broad implications for other disciplines.

The benefits of the graduate program at K-State include a balanced curriculum and a commitment to a broad-based approach to geographic research and scholarship. The moderate size of the department fosters an informal, friendly atmosphere with the opportunity to work closely with faculty. Teams of students and faculty frequently collaborate on research and publications. A graduate certificate in GIScience is also available, which can be earned as a stand-alone certificate or in conjunction with a master's or doctoral degree.

The department is centrally located on campus in Seaton Hall near the libraries, most classrooms, and the Student Union. Departmental resources include the Geographic Information Systems/Spatial Analysis Laboratory (GISSAL) for geospatial analysis, the Remote Sensing Research Lab, with capability for collection and analysis of imagery and proximal remote sensing data, the Paleoenvironment Lab, with a full suite of instrumentation for sediment and pollen analysis, The Soil-Geomorphology lab, equipped to characterize pedogenic and geomorphic processes, and the Geospatial Teaching Lab, equipped for interactive and distance teaching across the range of GIScience. Software resources for research and teaching include a campus site license from ESRI and a range of widely used statistical and remote sensing programs.

Admission procedures and requirements

For complete information on how to apply to a geography graduate program, visit the Department of Geography and Geospatial Sciences.

Regular admission to the Graduate School and the Department of Geography and Geospatial Sciences requires a 3.0 grade point average on a 4.0 scale, three letters of recommendation, official transcripts, and a one- to two-page statement of interests and objectives. Admission to the graduate program is contingent upon the willingness of a geography faculty member to serve as the student's advisor. The Graduate Program Committee, currently consisting of Drs. Audrey Joslin (director), Langston, Smirnova, and Lu, administers the admissions process. Ph.D. students who have not completed the master's degree by the end of their first semester in the Ph.D. program are subject to dismissal. In some cases, applicants with less than a 3.0 grade point average may be admitted to the M.A. program on a probationary basis.

For non-degree applicants the Department of Geography and Geospatial Sciences requires official transcripts, a one- to two-page statement of interests and objectives, and two letters of recommendation.

Student applicants should Graduate School application deadlines, which are usually earlier for international students. The faculty contact for questions about admission is Dr. Audrey Joslin (ajoslin@ksu.edu).

Financial support

Several positions as a Graduate Teaching Assistant (GTA) or Graduate Research Assistant (GRA) are available each year on a competitive basis for nine-month appointments; some support may also be available for summer months. Full-time GTAs receive a stipend, a full tuition waiver and a start-of-year Steve R. Kale scholarship. GRAs, supported from geography faculty research grants, receive a stipend, tuition support, and a tuition reduction from out-of-state to in-state rates. A limited number of competitive Timothy R. Donoghue Scholarships may also be available from the Graduate School to enhance graduate stipends; the Department of Geography applies for these on behalf of qualified students.

Graduate assistantships are generally awarded for two years for M.A. students and three years for Ph.D. students, contingent upon satisfactory performance of the GTA or GRA duties and academic progress, including the achievement of a minimum cumulative 3.33 grade point average in graduate studies at Kansas State University. Doctoral students may be eligible for a fourth year of GTA funding, depending on the needs and resources of the department and their performance. For a student to receive a fourth year of GTA funding the student must have demonstrated good departmental citizenship and high-quality teaching. The student must also have achieved PhD Candidacy by passing the preliminary examination and presenting an acceptable dissertation proposal before February 1 of the student's third academic year.

Graduate Teaching Assistant Guidelines:

- GTA assignments are made by the Department Head in consultation with the Graduate Program Committee and faculty. Tasks generally include teaching lecture or lab sections, or providing assistance for faculty who are teaching large enrollment classes, such as proctoring exams, developing class resources, and other tasks. Most GTAs hold 9-month .5 FTE appointments; this requires 20 hours/week of GTA work during the fall and spring semesters.

Graduate Research Assistant Guidelines:

- Responsibilities are determined by the principal investigator but generally include data analysis, report and manuscript writing, preparation of graphics for professional presentations, attending meetings on the research project, and completing hardware and software maintenance.

Career opportunities

Career opportunities in geography are diverse and employment prospects after receipt of the master's or Ph.D. degree are excellent. Employment opportunities include positions in business, government, and education.

Federal agencies, such as the Environmental Protection Agency, National Imagery and Mapping Agency, Defense Intelligence Agency, Bureau of the Census, and Bureau of Land Management employ numerous geographers each year. State and local agencies employ geographers with specialties in many areas, including environmental geography, physical geography, health, cultural geography, planning, and spatial techniques.

The geographer's training in location analysis, social and environmental problems, and a variety of spatial techniques including remote sensing, geographic information systems, and computer cartography, make the geographer particularly valuable in the private sector. Job titles such as geographic information systems manager, environmental planner, market researcher, and risk analyst are just a few of the varied positions held by geographers in business.

Graduates of the department have also achieved success in teaching and/or research positions at public and private educational institutions. PhD graduates of the department, for example, are employed as professors at a variety of universities, including Auburn University, Fort Hays State University, Kansas State University, Macalester College, Morehead State University, Auburn

University, University of North Dakota, Saginaw Valley State University, Frostburg State University, and Jacksonville State University.

Faculty-Graduate Student Liaison

The Faculty-Graduate Student Liaison will serve a one-year term, potentially renewable, from July 1 to June 30. The Liaison will be selected by the graduate students, subject to faculty approval. The student officers of the local chapter of Gamma Theta Upsilon, the international geographical honor society, also handle some of the responsibilities listed below, thus the Liaison must coordinate the implementation of these responsibilities with GTU officers.

Responsibilities include:

- Fostering an atmosphere of collegiality and respect among all departmental citizens.
- Enhancing the communication of graduate program issues and events among the faculty, department head, graduate program director, and graduate students.
- Coordinating graduate student involvement in departmental events, such as lunches and receptions for visiting speakers, graduate school fairs, open house, and the alumni board meeting.
- Attending faculty meetings, except for closed sessions; raising issues of interest to graduate students; and communicating with graduate students about the content of these meetings.

General Requirements

Program Advising

Each new graduate student will be assigned an initial graduate advisor to assist in planning the student's graduate program. A student may select another faculty member to become the student's primary advisor at any time, contingent upon the willingness of the faculty member to serve as the advisor. In accordance with Graduate School regulations, a copy of the student's Program of Study together with the names of the major professor and committee members should be filed with the Graduate School after completion of at least nine graduate hours. The program of study is typically filed in the second semester, for an MA student, and no later than the fourth semester for a doctoral student. (The terms major professor, thesis/report/dissertation supervisor, committee chair, and advisor are used interchangeably.)

The M.A. degree supervisory committee must include a minimum of three faculty members, all of whom may be geographers. The thesis supervisor is typically the graduate advisor for the duration of the program of study. The doctoral supervisory committee must include a minimum of four faculty members, one of whom must be from a department other than geography, i.e., a non-geographer. The Graduate School, based upon a request from the student's committee chair, must approve any committee members from other universities. All members of a supervisory committee must have Graduate Faculty status at Kansas State University; for a list see: <https://www.k-state.edu/geography/people/index.html>.

Graduate Program Meetings

The program meeting is an evaluation of the student's past academic experiences and discussion about the student's program objectives. The planning meetings serve as a foundation from which to plan the program of study, obtain recommendations for course work beyond that required in the program of study, and discuss progress toward the degree and completion of the report, thesis, or dissertation. Their first semester meeting will be with the student, advisor, and any other faculty invited by the advisor. During each semester thereafter the program meeting will include the faculty on the supervisory committee. Graduate students are also required to submit an annual progress report.

Transfer Credits

The Geography and Geospatial Sciences Department may accept up to a maximum of ten credit hours of graduate credit from another university. Only courses that logically fit the student's program of study will be accepted, based on a majority vote of the supervisory committee.

Seminars in Geography

For purposes of program requirements the following courses in geography are considered graduate level seminars. This list is subject to change. Please see your advisor for information about seminars that are likely to be offered during your semesters of residence. Seminar in Regional Geography (680), Topics in Remote Sensing (711), World Population Patterns (715), Geography of Land Use (720), Geography of Water Resources (725), World Agricultural Systems (730), Topics in Climatology (735), Urban Geography (750), Human Impact on the Environment (760), Geography of Natural Hazards (765), Perception of the Environment (770), Cultural Geography (780), Seminar in Cultural-Economic Geography (790), Rural Population Geography (815), Rural Geography (830), Rural Economic Development (835), Advanced Environmental Geography (840), Rural Cultural Geography of the U.S. (855), Rural Medical Geography (865), Western Landscapes (870), Spatial Data Analysis and Modeling (880), Advanced Spatial Analysis Techniques (890), Methods, Theory, and Models in Geography (900).

Grade Requirements

Graduate School regulations require students to 1) have a cumulative GPA of 3.0 or higher on graduate course work and on course work in the Program of Study, 2) meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and 3) be enrolled during the semester in which the degree requirements are completed. The Department of Geography and Geospatial Sciences requires all graduate students receiving funding as a GTA or GRA to maintain a minimum cumulative GPA of 3.33 in coursework at Kansas State University.

Credit/No Credit Grading

Graduate School regulations pertaining to the taking of courses by graduate students on a credit/no credit basis are highly restrictive. In the Geography and Geospatial Sciences Department, only the Master's Report (GEOG 898), the Master's Thesis (GEOG 899), and the Ph.D. Research in Geography (GEOG 999), may be taken on a credit/no credit basis. Very few courses in other departments have been similarly designated for credit/no status for graduate credit; most of the 600 and 700 level courses shown in the course schedule that are available for credit/no credit grading are so indicated only in reference to undergraduate credit. In any case, no more than three hours of such credit (excluding the Report, Thesis, or Dissertation) may appear on the program of study. Independently of the program of study, additional courses may be taken on a credit/no credit basis with the approval of the professor offering the course. These courses may not be applied toward a degree.

A/Pass/Fail

Only courses beyond those listed on the program of study may be taken on A/PASS/F basis with the approval of the major professor and the professor offering the course. These courses may not be applied toward the requirements for an MA or Ph.D. degree.

Course Load

Students should choose their course load for any given semester in consultation with their advisor. All geography graduate students in residence are required to enroll in GEOG 800 (Graduate Seminar in Geography) each semester. Graduate Teaching and Research Assistants are required by the Graduate School to carry a minimum program of 6 credit hours per semester, and those holding a 5/10 time assistantship may not take more than 10 credit hours of course work during each semester. The Geography and Geospatial Sciences Department requires that GTAs take at least six credit hours each semester in courses that are either a part of, or relevant to, the student's program of study.

Independent Study

Graduate School regulations place a limit of 3 credit hours of independent study which may be counted as part of the hours required for the MA and 6 credit hours for the Ph.D. degree excluding, however, the thesis, dissertation, or report hours. A student's advisor may petition the Graduate School for an exception to these limits.

Visiting Scholars

In order to broaden the graduate students' experience with various specialties in geography, and various methodological outlooks, the Department invites four or more geographers a year to visit our community. Ordinarily, such a visit will include a public lecture, a departmental seminar, a student luncheon, and an informal evening gathering often at a faculty member's home. Graduate students in residence are expected to attend all departmental speaker events as part of their enrollment in GEOG 800 (Graduate Seminar in Geography). In the event an unavoidable conflict arises regarding attendance at any of the scheduled events, the student should give prior notice to the advisor.

Thesis and Dissertation Proposals

Students will prepare a thesis or dissertation under the direction of a supervising faculty member. The supervisor will certify that a written proposal is acceptable for presentation to the assembled departmental faculty and graduate students. Students in the M.A. thesis option must present a thesis proposal as part of Geographic Research Methods (GEOG 821). In addition, students pursuing the non-thesis option must present a research proposal in Geographic Research Methods. The student's desire to pursue the thesis or non-thesis option must be made known to the faculty before the presentation. Following the presentation, thesis supervisory committee will discuss with the student the necessary proposal revisions, if any, and appropriate next steps in the research. Prior to the preliminary examination, Ph.D. students will complete a written dissertation proposal and publicly present it to the supervisory committee, other faculty, and other students. An oral presentation of the proposal will be conducted before the supervisory committee, other faculty, and students.

As regular faculty carry nine-month appointments (mid-August through mid-May), there should be no expectations on the part of the student that members of the faculty will be available during the summer term for presentation of proposals, preliminary exams (either oral or written), final oral exams, or thesis or dissertation defenses. Participation in such activities is voluntary and at the discretion of individual professors.

As a thesis or dissertation topic is developed, the student should consult closely with and seek approval from the major professor. The members of the graduate supervisory committee should be selected based on consultation with the major professor and the department head. The thesis or dissertation supervisor will assume the duties of major professor (advisor) for the remainder of the student's program. Students should work with their advisor to establish a complete committee. It is the student's responsibility to inquire as to whether or not a faculty member is interested in serving on the committee.

Enrollment During Final Term

Graduate School regulations specify that students must be enrolled for the term in which their degree requirements are completed. This requirement may be met by enrolling in one additional hour of either Geography 898, 899 or 999 during the term the student expects to receive his or her degree. This applies even for students who leave campus before the end of the term. Note, however, that the Ph.D. Candidate must maintain continuous enrollment (at least 1 hour each spring and fall semester) from the completion of the preliminary exam until the Graduate School accepts the dissertation. A student who misses the normal deadlines for graduation within a term but who completes all the requirements before the end of that term is not required to enroll for a subsequent term.

Inactive Status

A student not yet admitted to candidacy will be considered inactive if he or she has not enrolled for two consecutive years. Once in inactive status a student must reapply to (and be accepted into) a graduate program before being considered for re-entry by the Graduate School. In order to be allowed to resume graduate studies, the student must meet all requirements for entry in force at the time of the new application. Inactive students who seek to regain active status will not, however, be required to recreate

materials submitted with their original applications and held in their files by the Graduate School. If allowed to regain active status, the formerly inactive student will be subject to all requirements in force in the graduate program and in the Graduate School at the time the student returns to active status.

Doctor of Philosophy

Geography (PHD)

The Geography and Geospatial Sciences Ph.D. at Kansas State University is designed to develop and enhance a student's knowledge and ability to conduct original independent research that makes a scholarly contribution to the student's areas of specialization. The Ph.D. program fosters:

- an understanding of scientific inquiry
- knowledge of the structure of the geographic discipline, its history, issues, methods, and trends;
- proficiency in appropriate analytical and technical skills; and
- competency in communicating the results of research

Admission Requirements

Applicants to the Ph.D. program are expected to have earned a master's degree with a thesis or equivalent and can count 30 credits of the master's toward the 90 credits required for the doctorate. Students who have not completed a master's degree by the end of their first semester in the Ph.D. program will be subject to dismissal. Students without a previous degree in geography are encouraged to apply. Students without previous course work in human geography, physical geography, and spatial techniques, may, however, be required to add hours to their program of study. If a student has not previously taken a course in the history and philosophy of geography, the student will be required to take GEOG 820 as part of the program of study. The addition of hours to a program of study is determined on a case-by-case basis during the program planning interview in the student's first semester and will reflect the faculty's appraisal of the student's experience and needs. Courses taken to strengthen the student's background in geography may count toward the 30 credit hours of course work required for the Ph.D., but only if approved by the student's graduate committee.

Students will complete a minimum of 60 credit hours beyond the master's degree: at least 30 credit hours of course work and 30 credit hours of dissertation research.

All students seeking the Ph.D. in geography will complete the following requirements:

Course Requirements

1. Required courses

These courses must be taken while in residence.

- Two 3-credit hour research seminars in geography at the 800-level or above. **Credits:** (6)
- GEOG 900 - Methods, Theory, and Models in Geography **Credits:** 3

2. 800-level course requirement

No more than 6 credit hours of 500-level courses are permitted in a Ph.D. program, but no 500-level geography course may appear in the program of study.

Not more than 6 hours of independent study or other individualized courses should ordinarily appear on the program of study for the doctoral program. For exceptions to this, the chair of a student's supervisory committee should write a memo to the Graduate School that accompanies the program of study and explains the reasoning for the exception request.

3. Non-Geography course requirement

At least three hours must be taken in a department other than geography. Preferably, a course will be taken from a faculty member who will serve as the outside member of the supervisory committee.

4. Residence requirement

Students must spend at least one full academic year in residence.

5. Dissertation proposal

Students must complete a written dissertation proposal and present it orally before the supervisory committee, other faculty, and students. Following the public presentation, the supervisory committee and the student will discuss the appropriate revisions to the proposal, if any, and the next steps in the research.

6. Preliminary examination

To be eligible to schedule the preliminary examination, the student must:

- a) have an approved program of study on file with the Graduate School,
- b) have completed a satisfactory written dissertation proposal and presented it orally, and
- c) have completed 21 hours of graduate course work on the program of study, with a grade point average of 3.33 or better.

To schedule the preliminary exam, the student and major professor must complete the "Request for Preliminary Examination Ballot." The student and major professor should submit this form to the Graduate School one month prior to the date of the oral portion of the exam. The preliminary exam must be completed at least 7 months prior to the final defense of the dissertation. The examination covers the student's fields of specialization as defined by the student's doctoral committee. It will include both a written and an oral portion. Performance on the examination must provide evidence of the student's mastery of the subject in four sub-fields as defined by the supervisory committee, knowledge of related geographic literature, and an understanding of research theory and methods. Copies of the examination are filed with the department and made available on request to any graduate faculty member for a period of two years from the date of examination.

7. Ph.D. candidacy

Passing the preliminary examination is required for the student to become a doctoral candidate.

The period of candidacy may last up to five years from the end of the semester in which the preliminary exam was passed. If a student fails to complete both the dissertation and final oral examination within this period, the student will be dropped from candidacy. The Ph.D. Candidate must maintain continuous enrollment (at least 1 hour each spring and fall semester) from the completion of the preliminary exam until the Graduate School accepts the dissertation.

8. Ph.D research hours requirement

Students must complete 30 credit hours of GEOG 999.

- GEOG 999 - PhD Dissertation Research **Credits: 1-18**

9. Dissertation defense/final examination

The dissertation will be a cohesive, original, and independent contribution to scholarship. The research is to be performed under the guidance of the major professor and the supervisory committee and must be acceptable to them and to the Graduate School representative, who chairs the final examination. The dissertation must follow guidelines outlined by the Graduate School.

A final oral examination in defense of the dissertation will be conducted and evaluated by the supervisory committee. Two weeks prior to the dissertation defense, copies of the defense draft will be distributed to the supervisory committee and one will be placed in the department office for review by other faculty and graduate students. Other faculty and students are encouraged to attend the public presentation at the defense.

Sample Doctoral Program:

First semester

- 800-level research seminar in Geography - Credits: (3)
- GEOG 999 - Credits: (1)
- Program Meeting with potential committee members
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**
- GEOG 820 - Geographic Thought **Credits: 3**
- GEOG 830 - Seminar in Rural Geography **Credits: 3**

Second semester

- 800-level research seminar in Geography - Credits: (3)
- GEOG 999 - Credits: (1)
- Elective course - Credits: (3)
- Form Supervisory Committee
- Submit doctoral program of study to the Graduate School
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**
- GEOG 900 - Methods, Theory, and Models in Geography **Credits: 3**

Third semester

- Write dissertation proposal
- 800-level non-Geography seminar - Credits: (3)
- GEOG 999 - Credits: (4)
- Program Meeting with Committee

- Elective course - Credits: (3)
- GEOG 800 - Graduate Seminar in Geography Credits: 0

Fourth semester

- Present dissertation proposal (early in the semester)
- Elective course - Credits: (3)
- Elective course - Credits: (3)
- GEOG 999 - Credits: (4)
- Preliminary Exam (late in the semester)
- GEOG 800 - Graduate Seminar in Geography Credits: 0

Fifth semester

- GEOG 999 - Credits: (10)
- Program Meeting with Committee
- GEOG 800 - Graduate Seminar in Geography Credits: 0

Sixth semester

- GEOG 999 - Credits: (10)
- Defend Dissertation (Final Examination)
- GEOG 800 - Graduate Seminar in Geography Credits: 0

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Geographic Information Science Graduate Certificate

Contact: J.M. Shawn Hutchinson

E-mail: shutch@ksu.edu

Geographic information systems (GIS) are an organized collection of computer hardware, software, geographic data, and people designed and organized to efficiently capture, store, update, manipulate, analyze, and display all forms of geographically referenced information. Effective use of geographic information systems (GIS) has evolved into a requisite skill in most academic research, as well as for agencies in both the public and private sectors. Graduate students from such varied disciplines as agronomy, biological sciences, economics, engineering, geography, landscape architecture, and sociology benefit from applying GIS and related technologies such as global positioning systems (GPS), remote sensing, geostatistics, and computer programming to input, analyze, model, and display (map) location-based data.

Offered through the Geography and Geospatial Sciences graduate program, the Graduate Certificate in Geographic Information Science (GIScience) is designed to provide graduate students with the knowledge and skills necessary to succeed in the rapidly

expanding field of GIScience or apply GIScience concepts in their own field of study. Three components comprise the program curriculum: A set of prerequisites to gain entry into the program, core geospatial courses focusing on geographic information systems (GIS) and satellite remote sensing, and a set of elective courses that allow for the exploration of advanced themes in GIScience and/or the application of GIScience in geography or related disciplines. The Graduate Certificate in GIScience may be awarded as a "stand-alone" certificate or in conjunction with the completion of graduate degree requirements in one of the academic units at Kansas State University. The certificate program is administered by the Department of Geography and Geospatial Sciences and is supervised by a multidisciplinary group of instructors and researchers from across the K-State campus.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

- Competence in cartography, thematic mapping, or geodesy, or geomatics (e.g., GEOG 302)
- Competence in basic statistics (e.g., STAT 320, STAT 330, STAT 250)
- Competence in object-oriented computer programming (e.g., Python)

Special Requirements

The supervisory graduate faculty for the Graduate Certificate of GIScience represent a multidisciplinary group of instructors and researchers from across the K-State campus. Other interested faculty are encouraged to participate in the certificate and can contact the certificate coordinator if they are interested in having their name included.

A limited number of graduate research and/or teaching assistantships may be available to qualified students through participating departments. In addition, corporate- and industry-sponsored scholarships may be available to exceptional applicants. Contact the certificate coordinator for further details.

Course Requirements

The course requirements for the Graduate Certificate in GIScience are shown below. A minimum of 15 graduate credit hours is required to earn the certificate. A maximum of two geospatial core courses may be waived and replaced with approved electives in cases where students have completed prior coursework for undergraduate credit. A minimum of 12 hours at the 600-level or higher is required. Students must earn a minimum GPA of 3.33 in the geospatial core to earn the certificate.

Required Courses

10 credit hours

- GEOG 508 - Geographic Information Systems I **Credits: 4**
- GEOG 605 - Remote Sensing of the Environment **Credits: 3**
- GEOG 608 - Geographic Information Systems II **Credits: 3**

Elective Courses

In addition to the Geospatial Core courses, students enrolled in the Graduate Certificate on GIScience program must take a minimum of 6 additional credit hours of electives consisting of courses in intermediate/advanced GIScience or application courses with a major emphasis on the use of geospatial technologies. Elective requirements may be satisfied from the following

course list or, in some instances, be met through special topics or independent study courses with significant geospatial content (must be approved by the certificate coordinator). Select two (minimum of 6 credit hours):

- AGRON 655 - Site Specific Agriculture Credits: 3
- BAE 669 - Watershed Modeling Credits: 3
- BAE 869 - Advanced Watershed Modeling Credits: 3
- BIOL 822 - Landscape Ecology Credits: 4
- CE 585 - Civil Engineering Project Credits: 3
- CE 752 - Advanced Hydrology Credits: 3
- CE 786 - Land Development for Civil Engineers and Planners Credits: 3
- CE 857 - Advanced Civil Engineering Design Using GIS Credits: 3
- CIS 501 - Software Architecture and Design Credits: 3
- CIS 560 - Database System Concepts Credits: 3
- CIS 635 - Introduction to Computer-Based Knowledge Systems Credits: 3
- CIS 636 - Introduction to Computer Graphics Credits: 3
- CIS 736 - Computer Graphics Credits: 3
- CIS 761 - Data Base Management Systems Credits: 3
- COT 674 - Processing Techniques for Low-Altitude Remotely Sensed Data Credits: 3
- COT 676 - Low-Altitude Remote-Sensing Product/Project Development Credits: 3
- DMP 725 - GIS (Geographic Information System) Applications in Animal and Public Health Credits: 2
- DMP 726 - GIS (Geographic Information System) Applications in Animal and Public Health Lab Credits: 1
- GEOG 602 - Computer Mapping and Geographic Visualization Credits: 3
- GEOG 610 - Geography Internship Credits: 1-6
- GEOG 700 - Quantitative Analysis in Geography Credits: 3
- GEOG 705 - Thematic Remote Sensing. Credits: 3
- GEOG 706 - Biophysical Remote Sensing Credits: 3
- GEOG 707 - Remote Sensing of Water Credits: 3
- GEOG 709 - Geography Field Research Techniques Credits: 2-3
- GEOG 711 - Topics in Remote Sensing Credits: 3
- GEOG 712 - Internet GIS and Distributed Geographic Information Services Credits: 3
- GEOG 728 - Programming for Geographic Analysis Credits: 3
- GEOG 742 - Digital Geomorphology Credits: 3
- GEOG 790 - Seminar in Geography Credits: 1-3
- GEOG 795 - Topics in Geographic Information Science Credits: 1-3
- GEOG 808 - Geocomputation Credits: 3
- GEOG 880 - Spatial Data Analysis and Modeling Credits: 3
- GEOG 890 - Advanced Spatial Analysis Techniques Credits: 3
- GEOG 895 - Topics in Spatial Analysis Credits: 1-3
- LAR 580 - Planning and Design Intro to GIS Credits: 2
- LAR 704 - Environmental Landscape Planning and Design Credits: 3
- PLAN 801 - Knowledge Methods Credits: 3
- PLAN 836 - Plan Making Credits: 5
- STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 726 - Introduction to R Computing Credits: 1

- STAT 764 - Applied Spatio-Temporal Statistics Credits: 3
- STAT 903 - Statistical Methods for Spatial Data Credits: 3

Graduation Requirements

The Graduate Certificate in GIScience **may be awarded as a "stand-alone" certificate or in conjunction with the completion of advanced graduate degree requirements** in one of the academic units at Kansas State University. To be awarded a graduate certificate in GIScience, the student:

1. Must not be on probation,
2. Must have a cumulative grade point average (GPA) of 3.0 or higher on graduate coursework (if applicable), and
3. Must be enrolled during the semester in which the certificate requirements are completed.

In order to ensure that certificate recipients display a strong command of GIScience, the certificate is granted only to those graduate students who earn **a minimum cumulative GPA of 3.33 in the Geospatial Core courses** that comprise the Graduate Certificate in GIScience program. The GPA for certificate purposes will be computed in accordance with Kansas State University policy.

Courses may be waived in consultation with the certificate coordinator and academic advisor if the student can demonstrate satisfactory completion of similar coursework or significant professional experience in the area. If transfer courses are to be used to meet program requirements, the student *must* furnish the program director with a certified university transcript and, in some instances, a copy of the class syllabus. A maximum of **6 transfer credit hours** may be used to meet program requirements.

Upon approval by the certificate coordinator, course credits earned before the student entered the certificate program may be applied to the Graduate Certificate in GIScience. Graduate students, and post-baccalaureate students returning to acquire the certificate, **may be asked to repeat** any of the prerequisite, geospatial core, and/or elective courses completed **more than five years** prior to the semester in which the certificate requirements are finished.

Total Hours Required for Graduate Certificate: 15

Master of Science

Geography (MS)

Program objectives

The Master of Science degree in Geography at Kansas State University is designed to further develop the student's understanding of geographic perspectives and to assist the student in identifying and addressing specific and significant geographic research questions.

Students without a previous degree in geography are encouraged to apply. Students without previous course work in human geography, physical geography, and spatial techniques, may, however, be required to add hours to their program of study. The addition of hours to a program of study is determined on a case-by-case basis during the program planning interview in the student's first semester and will reflect the faculty's appraisal of the student's experience and needs. Courses taken to strengthen the student's background in geography may count toward the course work required for the M.A., but only if approved by the student's graduate committee.

Special Requirements

Final Examination

All master's students will take a final oral examination administered by the supervisory committee. Other faculty and students are encouraged to attend the public presentation portion of the examination.

For students completing the thesis option, the examination consists of a defense of the thesis, including its relationship to geography. Two weeks prior to the final examination the written thesis will be available for review by the supervisory committee, other faculty, and graduate students.

For students completing one of the report options, the examination consists of a defense of the report and a comprehensive examination on the student's areas of study and geography.

Course Requirements

Students may choose, in consultation with their advisors, one of the three programs leading to the M.S. degree. For most students, the Department of Geography encourages completion of the thesis option.

Required Courses

The two required courses for the MS degree are: GEOG 700 - Quantitative Analysis in Geography (Though this is not required for students in the Report Option for Teachers), and GEOG 821 - Research and Professional Development in Geography. Additionally, the Graduate School stipulates that students may include no more than three credits of independent study coursework on the program of study, and at least 18 hours of the coursework on the program of study should be at the 700 level and above. All geography students in the Master of Science degree program are required each semester to enroll in GEOG 800 - Graduate Seminar in Geography.

- GEOG 700 - Quantitative Analysis in Geography **Credits: 3**
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**
- GEOG 821 - Research and Professional Development in Geography **Credits: 3**

Thesis Option Courses

This option requires 30 hours of graduate credit including 6 hours of credit for a thesis. Of the 24 hours of credit required in course work, at least 15 hours must be in geography. Three research seminars in geography (3 credit hours each) are required, with at least one at the 800 level.

Sample master's thesis program

1st Semester

- Geography research seminars (one of the three geography seminars must be at the 800 level) - Credits: (6)
- Elective course - Credits: (3)
- Program Meeting with possible committee
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**

2nd Semester

- Elective course - Credits: (3)
- Form supervisory committee (early in the semester)
- Program Meeting with committee to discuss approval of thesis proposal (end of semester)
- Submit program of study to the Graduate School

- Develop and present thesis proposal in GEOG 821
- GEOG 700 - Quantitative Analysis in Geography **Credits: 3**
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**
- GEOG 821 - Research and Professional Development in Geography **Credits: 3**

3rd Semester

- Geography research seminar - Credits: (3)
- Elective courses - Credits: (6)
- Program Meeting with committee
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**

4th Semester

- Defend thesis (final examination)
- GEOG 899 - Credits: (6)
- GEOG 800 - Graduate Seminar in Geography **Credits: 0**

Report Option Courses

This option is a nonthesis program designed for students who have a specific professional goal in mind and who do not intend to continue for a doctorate. A student must consult with their advisor to arrange a program of study that is acceptable to the supervisory committee. Thirty-two hours of graduate-level work are required, including a two-credit hour Master's Report (GEOG 898). Up to twelve hours may be outside the geography department. The student must complete at least one course, which may include independent study, with each member of the supervisory committee.

Procedures relating to the preparation of a master's report are almost identical to those relating to the thesis, including the formal proposal of the topic, except that approval of the topic may be given by the individual faculty member supervising the report.

- GEOG 898 - Master's Report **Credits: 2**

Report Option for Teachers

This option is for students who intend to pursue or continue careers in public school or junior college teaching. It is open to persons who are already certified to teach at the public school or junior college level in any state and to those who will make courses required for such certification an integral part of their program. Thirty-two hours of graduate-level work are required, including a two-credit hour Master's Report (GEOG 898). The master's report shall consist of the design of a teaching syllabus in a sub-field of geography in conjunction with a faculty member in the College of Education, or a research project concerning geographic education. During their residence, students are required to present three lectures in Department of Geography courses, with no more than two of the lectures in the same course. One academic credit (under GEOG 850, GEOG 860, or GEOG 870) will be awarded for this activity. The student must complete at least one course, which may include independent study, with each member of the supervisory committee. This option is not suitable for any student who may continue for a doctorate degree.

- GEOG 898 - Master's Report **Credits: 2**

Total Hours Required for Master's: 30-32

Geology

<http://www.ksu.edu/geology/>

Program description

The Master of Science degree in geology is the level of professional education needed by today's career geologists in corporate or government employment. It is also a routine stepping stone for geologists continuing their studies for the doctoral degree. At K-State the Department of Geology encourages the student to select an area of interest, guides him or her through 24 (or more) credit hours of course work to develop essential skills in that area (including study in supporting sciences where appropriate), and supervises the completion of 6 credit hours of research that will culminate in a written thesis. We maintain active research programs in a wide range of geoscience subdisciplines including chemical hydrogeology, petroleum geology, exploration seismic and near surface geophysics, structural geology, economic geology, igneous petrology, volcanology, isotope geochemistry, climate change, tidal sedimentation processes, luminescence dating, biomineralization, and biogeochemistry.

The department presently has nine full-time graduate faculty members and approximately 20 graduate students. The alumni of the geology department have shown their support and their generosity by endowing more than 20 scholarships. In recent years, the total scholarship funding for geology majors and graduate students has averaged ca. \$100,000, with individual awards ranging from \$500 to \$5,000. The department also has 11 graduate teaching assistantships, which include a waiver of tuition. Some department funds are available to support field research and the presentation of student papers at meetings. Scholarship support is also available from several regional societies and organizations.

K-State's Department of Geology has active collaborations through a number of organizations, especially the Kansas Geological Survey and the U.S. Geological Survey. Other collaborations are sometimes available through neighboring universities and the geological surveys of other states. We also encourage our students to take advantage of corporate internships to further their research projects.

The department has a range of research instrumentation and Thompson Hall has recently been upgraded to include a suite of new geochemistry research labs (see below).

Computer laboratory

The Thompson Hall computer laboratory is available to all geology majors and contains computers, scanners, printers, and plotters. Computers with industry software in the laboratory are used for exercises in geophysics, petrology, petroleum geology, and geochemical modeling courses. A 44" plotter is also available in Thompson Hall and used to print posters for presentation. We will be moving to new teaching spaces during 2025-2026 in Willard Hall.

Research laboratories

Thompson Hall laboratories contain equipment used for cutting and crushing rock, sectioning and polishing, and other rock sample preparation tasks. Binocular and petrographic microscopes, which include fixed digital cameras, are available for collecting sample images. Recently refurbished geochemistry and microbiology laboratories include access to fume hoods, analytical balances, drying ovens, centrifuges, an anaerobic chamber, and two ultra-pure water systems. We will be moving to new research labs during 2025-2026 in the Chemistry-Biochemistry Building.

Analytical instruments

Analytical instruments available in Thompson Hall currently include:

- X-Ray Diffractometer (PANalytical Empyrean) that can analyze both amorphous and crystalline solid-phase samples using numerous techniques
- Renishaw inVia Raman microscope
- Bruker Tracer III hand-held X-Ray Fluorescence
- Fully-automated luminescence dating system (model no. Risø TL-DA-20C/D)
- Gas chromatograph (Gow Mac 580 series) used for gas compositional analysis
- Ion chromatography system (Dionex ICS-1100) capable of analyzing a wide range of solutes in water samples
- UV-Vis spectrophotometers also used for water chemistry analyses
- Digital inverted fluorescence microscope (EVOS) for capturing multi-channel fluorescence images at high resolution

Field equipment

Other research facilities available on campus

Numerous other research facilities are also available on campus. An extensive list is found **here**. On-campus facilities used regularly by Geology students and faculty include:

Field equipment

Field equipment available in the department for undergraduate and graduate research include:

- Hand-held transits
- GPS devices
- Water level meter
- Water quality monitoring devices
- Topcon GTS-229 laser total station
- Proton precession magnetometer
- Ground-penetrating radar system with antennae for two different depth ranges
- Worden gravimeter
- Electromagnetic sensor
- Seismic reflection/refraction system

Other research facilities available on campus

Numerous other research facilities are also available on campus. On-campus facilities used regularly by Geology students and faculty include the TRIGA Mark II pulsing reactor (Neutron Activation Analysis), the Stable Isotope Mass Spectrometer Lab and Microscopy Lab in the Division of Biology, the Integrated Genomics Facility and Soil Testing Lab in the Department of Agronomy, and the Electron Microscopy Lab in the College of Veterinary Medicine.

Applications

Applications (forms downloadable from the graduate school website) to the M.S. program should be accompanied by (1) official transcripts from all colleges attended; (2) three letters of recommendation; (3) GRE replacement questions; and (4) a statement of career goals and interests. Please see this page for more details on application materials and the process: <https://www.k-state.edu/geology/academics/graduate/>.

International applicants should refer to the graduate school website for additional requirements. Applications for financial assistance should be received by January 8th for both domestic and international applicants.

Graduate Certificate

Mineral Exploration for a Sustainable Future Graduate Certificate

Certificate students must be admitted as full time graduate students. Application for admission must be made to the Graduate School. Students must earn a minimum GPA of 3.00 in the Mineral Exploration Core to earn the certificate. Courses counted towards the completion of one Certificate may not be double counted towards the completion of a second Certificate or completion of Master degree. Admission requires a BS in Geology or related field and a minimum of 2.8 GPA at undergrad level.

The course requirements for the Graduate Certificate in Mineral Exploration for a Sustainable Future are as follow. A minimum of 18 graduate credit hours is required to earn the certificate. **A maximum of two core courses may be waived and replaced with approved electives in cases where students have completed prior coursework for undergraduate credit.** A minimum of 12 hours at the 600-level or higher is required.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Geology at Kansas State University.

Admission Requirements

A Bachelor in Geology is required to be admitted to the program. Student should have completed at least courses such as Petrology, Structural Geology, Field Camp, or equivalent courses. Admission requires a B. Sc in Geology or related field and a minimum of 2.8 GPA at undergrad level.

Graduation Requirements

A minimum of 18 graduate credit hours is required to earn the certificate. Students must earn a minimum GPA of 3.00 in the Mineral Exploration core to earn the certificate. Courses counted towards the completion of one Certificate may be counted towards the completion of a Master degree.

Course Requirements

Required Courses

6 credit hours. Students will have to complete both courses:

- GEOL 701 - Economic Geology **Credits: 3**
- GEOL 802 - Mineral Exploration for a Sustainable Future **Credits: 3**

Personal Project Development

Enrolled student should complete the following course for personal technical skills development in the field of Petrology, Mineralogy, Geochemistry, Geophysics. For this, student will have to work with an advisor among faculties from the department of Geology.

- GEOL 790 - Problems in Geology **Credits: 0-18**

Elective Courses

9 credit hours. Student should select 3 of the following courses:

- GEOG 508 - Geographic Information Systems I Credits: 4
- GEOG 605 - Remote Sensing of the Environment Credits: 3
- GEOG 608 - Geographic Information Systems II Credits: 3
- GEOL 611 - Hydrogeology Credits: 3
- GEOL 642 - Field Geophysics Credits: 3
- GEOL 680 - Field Geology Credits: 3
- GEOL 790 - Problems in Geology Credits: 0-18
- GEOL 805 - Advanced Igneous and Metamorphic Petrology Credits: 3
- GEOL 810 - Isotope Geology Credits: 3

Total Hours Required for Graduate Certificate: 18

A minimum of 18 graduate credit hours is required to earn the Graduate certificate in Mineral Exploration for a Sustainable Future.

Master of Science

Geology (MS)

We offer a Geology M.S. degree for students who want to learn more about a specific area of geology. A graduate degree is an opportunity for students to advance their scientific research skills beyond their undergraduate experience. It can also promote their career options and earning potential.

The Master of Science degree program offers two options: a Thesis option or a Report option.

Graduate Program Director: Dr. Matthew Brueseke, brueseke@ksu.edu

Thesis Option Program Contact: Jillian Tiemeier, jtiemeier2@ksu.edu

Report Option Program Contact: Hunter Rose, huntress@k-state.edu

Admission Requirements

Applicants should have a bachelor's degree in geology or a related field, although students with a strong record and willingness to take additional courses to make up deficiencies in geology and related sciences are encouraged to apply. Few with GPAs below 3.0 (on a scale of 4.0) will be accepted, and grade-point averages of 3.3 or higher are most competitive for financial assistance. Students with GPAs lower than 3.0 may be admitted on a probationary basis in some circumstances. The rules for this are described in detail in the university's Graduate Handbook (<http://www.k-state.edu/grad/graduate-handbook/>).

Prospective candidates must meet both the minimum admission requirements for the Graduate school (<http://www.k-state.edu/grad/admissions/application-process/admit.html>) and for the Geology Department. For example, students with a Geology/Earth Science background must hold a minimum GPA of 3.0 in all Geology/Earth science coursework. All international students admitted must demonstrate the same level of achievement as U.S. students.

Graduation Requirements

The thesis option requires the satisfactory completion of a master's thesis. The thesis option is where a student will research and report an original project, earning 6 credit hours toward the total 30 credit hours required for the degree, with 24 credit hours of course work.

Under the report option, students will not complete a thesis but will be required to satisfactorily complete a substantive research project totaling 2 credit hours, representing a scholarly effort in the research or practice of geology leading to completion of a publicly presented research report.

Course Requirements

There are no required core courses – our M.S. program coursework is designed for students to tailor their coursework to best fit their M.S. research and overall career goals.

Thesis Option Courses

The Thesis option is meant to be more intensive than the report option and is required of all students entering the graduate program as teaching or research assistants.

Of the 30 credit hours required for the Master's degree (Thesis Option) in geology, 24 hours are coursework while 6 hours are M.S. thesis hours (GEOL 899). Of these 30 credit hours, at least 18 credit hours should be at the 700 level or above (including GEOL 899).

Of the 24 coursework credit hours, courses at the 600-level may be included, but 500-level courses in the student's major area are expected to have been completed as undergraduate prerequisites to graduate study or as undergraduate deficiency courses assigned upon admission. Courses at the 500-level outside a student's major area (e.g., Geology) can be applied toward the program of study, provided they do not exceed 6 credit hours in total.

Unless specifically approved by the graduate school, no more than 3 credit hours of problems courses (GEOL 790) or other individualized courses may be applied to the master's degree, and no more than 3 credit hours of credit/no credit or pass/fail (exclusive of research credit hours) may appear on the program of study. Note that while GEOL 790 courses may be used for individualized study, they are not intended as an alternative or extension to the thesis research (GEOL 899 or GEOL 898).

- **GEOL 899 - Master's Thesis Research Credits: 1-6 (6)**

Report Option Courses

The Report option (i.e. Professional Studies Option) is only available to those students who have limited time for completion of a degree and are not contributing to the department's teaching or research efforts. Students choosing this option might include foreign students fully supported by their governments, or military personnel supported by the U. S. government, planning intense courses of study to complete the M.S. degree in the shortest possible time. Other students might include professional educators at the public school or community college level, or professional geologists with full-time employment, planning part-time studies to complete the M.S. degree over a period of years.

Of the 32 credit hours required for the Master's degree (Report Option) in geology, 30 hours are coursework while 2 hours are M.S. report research hours (GEOL 898). Of these 32 credit hours, at least 18 credit hours should be at the 700 level or above (including GEOL 898).

Of the 30 coursework credit hours, formal graded graduate coursework needs to be completed from at least four different graduate instructors. Up to 12 credit hours may be from outside the geology department. No more than 3 of the 30 credit hours may be from directed independent study (GEOL 790 or equivalent). The university also permits transfer of up to 10 credit hours from another institution, provided that certain criteria are met (see University Graduate Handbook, Section D.6 Transfer of Credits). Note that while GEOL 790 courses may be used for individualized study, they are not intended as an alternative or extension to the thesis research (GEOL 899 or GEOL 898).

- **GEOL 898 - Master's Report Research Credits: 1-2 (2)**

Total Hours Required for Master's: 30-32

History

Andrew Orr, Chair

Louise Breen, Director of Graduate Studies

117D Calvin Hall

hoffice@ksu.edu

<http://www.ksu.edu/history>

Overview

The Department of History offers well-prepared students an exceptional opportunity to work closely with an unusually productive and well-regarded faculty. The department aims to help students find and develop their talents fully and to establish themselves as independent scholars, teachers, and other historical professionals.

The department offers programs of study leading to the master of arts and doctor of philosophy degrees in selected traditional and innovative fields. In addition to various American and European fields, the department's strengths include areas such as gender history and the history of science and technology. An area of particular strength at Kansas State University is military history.

The university's Hale Library has a number of large, specialized collections. In addition, nearby are several excellent research facilities: the Eisenhower Presidential Library in Abilene, with outstanding holdings relating to the Eisenhower administration and recent military history; the Kansas State Historical Archives in Topeka; the Truman Presidential Library in Independence, Missouri, with valuable collections on the Truman administration, the history of the American presidency, and foreign policy; the Linda Hall Library in Kansas City, Missouri, emphasizing materials pertaining to science and the history of science; and the regional Federal Records Center in Kansas City, currently rich in military and civilian records and eventually to have a microfilm duplication of the main holdings of the National Archives in Washington.

The history department encourages its students to engage in broad professional activities. Many students publish in historical journals, present papers at conferences, and speak to off-campus groups while completing their degrees. The history department also has an active internship program. Graduate students can gain valuable "hands-on" experience in institutions such as the Riley County Historical Museum, the Fort Riley Cavalry Museum, the Kansas State Historical Society, and the Dwight D. Eisenhower Library.

Graduate degrees in history have traditionally led to positions in higher education, and students earning the Ph.D. at Kansas State University have effective preparation for careers as teachers and scholars. But a high percentage of history graduate degree holders also enter archival or museum work, historical publishing, governmental official history programs, historical research for private businesses, and professional service as military officers. The history faculty regards such nontraditional careers as legitimate first choices for its students and works with the students to define programs that accommodate these varied objectives.

Degrees

The master of arts requires a minimum of 30 hours beyond the baccalaureate degree, and the program offers three options: 24 hours of course work plus a thesis (6 research hours); 28 hours of course work plus a report (2 research hours); or 30 hours of course work. All candidates for the M.A. must take a course in historiography. Those who write a thesis or report must take two seminars or topics courses and pass an oral or written final examination that centers on the student's research. Those who take the non-thesis degree must take three seminars or topics courses and pass a written final examination over their coursework.

The doctor of philosophy requires completing 30 hours of course work beyond the master's, satisfying the language requirement,

passing the qualifying examination, and writing a sound dissertation based on original historical research that is approved by the student's committee. The qualifying examination includes separate examinations in a geographically and chronologically defined comprehensive field and three special fields. One of the special fields must focus on the student's principal research interests, and another must cover a substantially different geographical area or chronological period than the student's comprehensive field or be from outside history.

Admission

Applicants to graduate programs at Kansas State University must submit an application for admission and provide official copies of transcripts of record from each college or university attended. In addition, all applicants to the programs in history must complete a statement of purpose and provide three letters of academic reference. Scores from the Graduate Record Examination general test will also be taken into consideration.

International students must provide evidence of financial support as required by the Graduate School, and those whose native language is not English must present a score of 600 or better on the Test of English as Foreign Language for admission.

Financial support

Outstanding graduate students in history qualify for fellowships granted by the Graduate School, and some students may be appointed to graduate research assistantships funded by the University or by money from external grants.

The Department of History also offers graduate teaching assistantships to qualified students on a competitive basis. GTAs also receive a full tuition fee waiver. Beginning GTAs work as graders or discussion leaders, and experienced assistants are frequently assigned independent sections of survey courses. Prospective students wishing to be considered for graduate teaching assistantships must complete their applications for admission by December 1.

Prospective students may apply simultaneously for admission to the graduate program and for a GTA. Assistantships are only awarded once a year to begin in the fall semester. Anyone wishing to be considered for an assistantship should indicate that in the space provided at the bottom of the Statement of Objectives form. Only those applying for fall semester admission whose application is received by December 1st of the preceding year will be considered.

Continuing students who do not already hold a GTA may apply by letter to the Graduate Admissions and Awards Committee. They must also provide a letter of recommendation from a member of the faculty, normally the student's major professor. These applicants are reviewed on the basis of their entire record, which includes all of the materials supplied for admission plus their grades and other evidence of their performance in our program, including the required letter of recommendation.

Students who hold an assistantship and seek to have it renewed for another year are likewise expected to apply for consideration, providing a letter of recommendation from the major professor and, for those who have assisted a faculty member, a letter from the supervising instructor. Doctoral students who are seeking renewal of their GTA appointment must also provide a copy of an application for a fellowship or grant, which they have filed with some external funding agency.

All applications are reviewed by the graduate admissions and awards committee. The committee considers first the requests for renewal. Master's students may hold an assistantship for a maximum of two years and doctoral students for a maximum of four years. To merit renewal, the holders of assistantships are expected to demonstrate satisfactory performance of their duties as GTA and satisfactory progress toward their degrees.

The history department has four basic types of graduate courses:

HISTORY AND SECURITY COURSES

HIST 850-860: These courses are designed for the Security Studies MA program (though they are open to history students). They focus on the historical roots of contemporary security issues.

SURVEYS

HIST 903-909: Survey courses are intended to introduce students to the most important themes and issues in their respective fields. They aim to put the historical literature in broad context to help students prepare for teaching and for their comprehensive field exams.

SEMINARS

HIST 919-979, 990-992: Seminars are courses in which students are expected to study the primary source material for particular topics within a general area of study and to write a paper based on research using such sources. These courses are intended to develop graduate students' skills in the use of research tools and methods, ability to conceptualize and organize an argument, and facility in presenting research findings.

TOPICS COURSES

HIST 980-984: Topics courses are designed through reading and discussion to acquaint students with the literature in particular fields of history. They are also intended to familiarize students with major substantive areas of dispute and historical debate within a field of study. Precise topics courses vary from semester to semester, and specific topics will be listed in the class schedule.

Doctor of Philosophy

History (PHD)

History (PhD)

Admission Requirements

Graduation Requirements

Foreign Language Requirement

Doctoral students must establish reading proficiency in a foreign language. They must complete the foreign language requirement and any other research proficiencies required by their supervisory committee prior to the taking of the preliminary examination.

Proficiency may be demonstrated by any one of the following methods:

1. A student may provide evidence of passing the final course of a four-semester sequence, or the equivalent, in one foreign language at the undergraduate level with an overall grade point average of 3.0 or better and a 3.0 or higher in the final course in the sequence. In the case of students whose coursework makes it difficult to determine if they have met this standard, the Chair and the Director of Graduate Studies will, in consultation with the major advisor, determine the student's status. Or,
2. A student may provide evidence of having passed an equivalent graduate-level reading/translation examination at another accredited university. Or,
3. A student may pass a foreign language examination certifying that, with the aid of a dictionary and other printed reference materials, the student is able to understand a text relevant to the student's research well enough to use primary sources and secondary literature written in that language.

4. A student may present proof of successfully completing an immersion or other intensive language training program which provides reading proficiency. This can include, but is not limited to, academic immersion programs and government/military language training.

NOTE: Supervisory committees may specify which method the student must use to demonstrate proficiency. Further, the supervisory committee, depending on a student's area of specialization, may require that the student demonstrate a higher standard of proficiency in a foreign language, and/or additional specialized research skills, including an additional foreign language.

Preliminary Examinations: Written and Oral

Upon the completion of their course work, students take a set of written examinations, over a period of two weeks, in four fields - a comprehensive field and three special fields -- chosen in consultation with the supervisory committee. The written exams are followed by an oral examination scheduled within the same semester as the written exam period.

The Dissertation and Defense

A dissertation exhibiting mature scholarly ability will be completed under the direction of the major professor and committee in accordance with the regulations of the Graduate School. A minimum of 30 credit hours of History Ph.D. Research is required for the dissertation.

Course Requirements

Required Courses

All doctoral students must include the following courses in their programs of study:

Historiography. This requirement may be waived if a student has successfully completed a 3-hour graduate-level course in historiography at another university.

- HIST 801 - Historiography **Credits: 3-4**

900-level Seminar. Seminar courses are devoted mainly to research in primary sources and preparation of a major research paper. 3 credits.

- HIST 928 - Seminar in American History **Credits: 3**
- HIST 930 - Seminar in Modern European History **Credits: 3**
- HIST 987 - Seminar in Writing History for Publication **Credits: 3**
- HIST 990 - Seminar in Military History **Credits: 3**

Topics Courses

Eight topics courses at the 800 level or above, chosen in consultation with a student's advisory committee, based on the student's chosen chronological and thematic specialization. 24 credits.

Courses that may be taken include, but are not limited to, the following:

- HIST 905 - Nineteenth-Century Europe **Credits: 3**
- HIST 906 - Twentieth-Century Europe **Credits: 3**

- HIST 907 - Colonial/Revolutionary America Credits: 3
- HIST 908 - Nineteenth-Century America Credits: 3
- HIST 909 - Twentieth-Century America Credits: 3
- HIST 981 - Topics in Third World History Credits: 1-3
- HIST 983 - Topics in Military History Credits: 1-3
- HIST 984 - Topics in American History Credits: 1-3

Doctoral Research

30 credit hours

- HIST 999 - PhD Research in History Credits: 1-18

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Arts

History (MA)

There are three options by which students can earn the MA, which requires 30 credits: the thesis option; the report option; or the course work (non-thesis/non-report) option.

Students who choose the thesis option or the report option must include on their programs of study a prescribed number of credits in MA Research – 6 hours for those pursuing the thesis option, and 2 hours for those pursuing the report option.

Graduation Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Culminating experiences (depending on option):

Thesis option. Students must write and defend an MA thesis of approximately 75 to 100 pages. The thesis should demonstrate the candidate's capacity to organize and analyze original materials by constructing a historical argument based largely on primary materials (manuscript and archival holdings, newspapers, government publications, and other published and unpublished historical materials). The topic is chosen in consultation with the supervisory committee, which then evaluates the quality of the student's written work and their ability to orally defend the thesis's argument.

Report option. The MA report is required to meet the same requirements as the thesis but is about half the length. The supervisory committee evaluates the quality of the candidate's written work and their ability to orally defend their report's argument.

Non thesis/non report option. In the last semester of course work, the student takes a three-hour MA examination focusing on their course work, followed by an oral exam, administered by the supervisory committee.

Foreign Language

There is no general requirement of foreign language proficiency for the MA degree; however, the supervisory committee may require a student to gain proficiency in a language if this is needed for them to be able to do primary research on their chosen topic.

Course Requirements

Required Courses

All MA students must include the following courses in their programs of study:

Historiography. 3 credits. This requirement may be waived if a student has successfully completed a 3-hour graduate-level course in Historiography at another university. In such a case, a graduate topics course, chosen in conjunction with the supervisory committee, may replace Historiography.

- HIST 801 - Historiography **Credits: 3-4**

Research Seminar. 3 credits. Seminar courses are devoted mainly to research in primary sources and preparation of a major research paper.

- HIST 928 - Seminar in American History **Credits: 3**
- HIST 930 - Seminar in Modern European History **Credits: 3**
- HIST 987 - Seminar in Writing History for Publication **Credits: 3**
- HIST 990 - Seminar in Military History **Credits: 3**

Thesis Option Courses

Thesis option. 24 credits. Students must complete at least 6 topics courses at the 700 level or above and are required to enroll in at least one 800 or 900 level history course every regular semester the student is in the program unless there is only a thesis left to complete or the supervisory committee agrees to excuse this requirement.

Courses that can be taken include, but are not limited to, the following:

- HIST 899 - Master's Research in History **Credits: 1-18** (6 credit hours required)
- HIST 860 - Topics in International History **Credits: 3**
- HIST 905 - Nineteenth-Century Europe **Credits: 3**
- HIST 906 - Twentieth-Century Europe **Credits: 3**
- HIST 907 - Colonial/Revolutionary America **Credits: 3**
- HIST 908 - Nineteenth-Century America **Credits: 3**
- HIST 909 - Twentieth-Century America **Credits: 3**
- HIST 980 - Topics in European History **Credits: 1-3**
- HIST 981 - Topics in Third World History **Credits: 1-3**
- HIST 983 - Topics in Military History **Credits: 1-3**
- HIST 984 - Topics in American History **Credits: 1-3**

Report Option Courses

24 credits. Students must complete at least 7 topics courses at the 700 level or above and are required to enroll in at least one 800 or 900 level history course every regular semester the student is in the program unless there is only a report to complete or the supervisory committee agrees to excuse this requirement.

- HIST 899 - Master's Research in History Credits: 1-18 (2 credit hours required)

Coursework Only Option Courses

24 credits. Students must complete at least 8 topics courses at the 700 level or above and are required to enroll in at least one 800 or 900 level history course every regular semester the student is in the program.

Total Hours Required for Master's: 30

Mathematics

Pietro Poggi-Corradini, Head

math@math.ksu.edu
<http://www.math.ksu.edu/graduate/>

Overview

The Department of Mathematics offers Ph.D. and M.S. degree programs in Mathematics, a Graduate Certificate in Applied Mathematics, a Graduate Certificate on Quantitative Techniques of Data Science, and an Accelerated B.S./M.S. in Mathematics. There are over 40 graduate students in the master's and Ph.D. programs; students and faculty come from various states in the US and countries around the world, which lends a truly international flavor to the academic environment of the Department. Financial assistance is available on a competitive basis to well-qualified Ph.D. and M.S. applicants in the form of graduate teaching assistantships and graduate research assistantships; in addition, there are graduate student fellowships and GTA stipend supplements available through the Graduate School on a competitive basis.

Research areas and facilities

The department has thriving research groups and centers in major areas of mathematics:

- Groups in algebra, analysis, applied mathematics, combinatorics, geometry, number theory, and topology.
- Center for the study of mirror symmetry and tropical geometry.
- Interdisciplinary group in network optimization.
- Center for the integration of undergraduate, graduate and postdoctoral research.
- Center devoted to mathematics education.

Kansas State University provides excellent facilities for mathematical research. The university libraries have extensive holdings in the mathematical sciences. The university provides a modern computer environment and full internet access. The Mathematics Department also has its own state-of-the-art network of workstations and PC's used for both teaching and research.

Admission

Applicants to both the masters' and doctoral programs should have completed work in mathematics at least equivalent to that required for a bachelor's degree in mathematics at Kansas State University. While there are no formal application deadlines,

international applicants residing outside the U.S. or Canada should have their application materials in by February 1 to be guaranteed consideration for the fall semester of the same year.

Accelerated

Accelerated Mathematics - Actuarial Mathematics (BS)/Mathematics (MS)

The accelerated Accelerated Mathematics - Actuarial Mathematics (BS)/Mathematics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Mathematics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process will be the same as for the traditional M.S. degree except completion of the B.S. degree is not required. The following steps are required:

- KSU graduate application form completed online before semester of enrollment. In general, applicants are only considered for fall enrollment. Application fee should be (personal check, money order, or cashier's check payable to Kansas State University Graduate School) submitted with application.
- Applicant's statement of academic objectives and preferred primary advisor(s) must be submitted with the application.
- Three letters of reference must be submitted with the application.
- Transcript(s) of all undergraduate work must be sent directly to the Department of Mathematics.

The graduate program will process the application of the student and forward it to the Graduate School, as currently occurs for students holding a B.S. who apply to the M.S. program. Should the student meet the requirements, provisional admission to the M.S. program will be granted, pending the award of the B.S. degree. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- Students may apply for the accelerated B.S./M.S. program from the second semester of the sophomore year through the second semester of the junior year (when they have accumulated 75 credit hours toward the B.S. degree). Students may apply with higher credit-hour accumulation or during first semester of their senior year with special permission from the Department Head or the Director of Graduate Studies of the Mathematics department.

- Students must have completed the Mathematics Core Curriculum (MATH 220, MATH 221, MATH 222, MATH 340, MATH 511 or MATH 512, MATH 520 or MATH 633) either at K-State or by transfer credit.
- Minimum standards for admission to the accelerated program are a cumulative GPA of 3.00 and a GPA of 3.25 in the Mathematics Core courses. Retention in the program requires maintenance of a 3.00 GPA in both undergraduate and graduate coursework.

Course Requirements

Mathematics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- MATH 706 - Theory of Numbers **Credits: 3**
- MATH 715 - Applied Mathematics I **Credits: 3**
- MATH 721 - Introduction to Real Analysis **Credits: 3**
- MATH 730 - Abstract Algebra I **Credits: 3**
- MATH 770 - Introduction to Topology/Geometry I **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Mathematics - Applied Mathematics (BS)/Mathematics (MS)

The accelerated Accelerated Mathematics - Applied Mathematics (BS)/Mathematics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Mathematics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process will be the same as for the traditional M.S. degree except completion of the B.S. degree is not required. The following steps are required:

- KSU graduate application form completed online before semester of enrollment. In general, applicants are only considered for fall enrollment. Application fee should be (personal check, money order, or cashier's check payable to Kansas State University Graduate School) submitted with application.
- Applicant's statement of academic objectives and preferred primary advisor(s) must be submitted with the application.
- Three letters of reference must be submitted with the application.
- Transcript(s) of all undergraduate work must be sent directly to the Department of Mathematics.

The graduate program will process the application of the student and forward it to the Graduate School, as currently occurs for students holding a B.S. who apply to the M.S. program. Should the student meet the requirements, provisional admission to the M.S. program will be granted, pending the award of the B.S. degree. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- Students may apply for the accelerated B.S./M.S. program from the second semester of the sophomore year through the second semester of the junior year (when they have accumulated 75 credit hours toward the B.S. degree). Students may apply with higher credit-hour accumulation or during first semester of their senior year with special permission from the Department Head or the Director of Graduate Studies of the Mathematics department.
- Students must have completed the Mathematics Core Curriculum (MATH 220, MATH 221, MATH 222, MATH 340, MATH 511 or MATH 512, MATH 520 or MATH 633) either at K-State or by transfer credit.
- Minimum standards for admission to the accelerated program are a cumulative GPA of 3.00 and a GPA of 3.25 in the Mathematics Core courses. Retention in the program requires maintenance of a 3.00 GPA in both undergraduate and graduate coursework.

- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Mathematics (PHD)

The goal of the Ph.D. Program in Mathematics is to prepare each student for a successful career in academia or industry. Candidates must demonstrate they have met criteria for both breadth and depth in their studies. A two-part qualifying exam system first examines students on their breadth, which is gained through coursework in the first year, and then examines students on depth in the area of specialty--which is achieved through further coursework and independent study. Together these exams (QE I and QE II) comprise the Graduate School's Preliminary Exam.

Admission Requirements

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

- Complete a minimum of 90 hours of graduate credit (courses numbered at the 700 level or above), with at least 60% of the credit hours in courses numbered 800 or higher.
- The above-mentioned 90 credit hours must contain a minimum of 30 credit hours of MATH 999 (PhD research), and at least 24 credit hours of coursework (exclusive of MATH 999 courses) in the Department of Mathematics.
- Eligibility to enroll in MATH 999 is restricted to students who have passed the Preliminary Exam (QE I and QE II).

Qualifying Examination QE I

QE I consists of subject exams, currently offered in four areas:

- Algebra (based on MATH 730-731)
- Analysis (based on MATH 721-723)
- Applied Math (based on Math 715-716)
- Geometry/Topology (based on MATH 770-771)

Students must pass exams in three subjects. Two are to be passed by the May following the student's first year of study; a third must be passed by the following August.

Supervisory Committee and the Program of Study

Within two years of passing QE I, the student is expected to select a major professor, to form a supervisory committee, and to file a Program of Study with the Graduate School. The Supervisory Committee will advise the student throughout the remaining period of the study, as well as administer the QE II and the final oral defense.

- The Program of Study primarily serves to notify the Graduate School of the student's supervisory committee as well as the list of the relevant coursework. It must be approved by the student's Supervisory Committee, the Department Head, and the Dean of Graduate School.
- The student must maintain at least a 3.0 GPA in the courses listed on the Program of Study. Furthermore, the student must earn a grade of A or B in three-fourths of these courses, with nothing worse than a C grade in the remaining courses.

Qualifying Exam QE II

QE II consists of written or oral exams in two subjects, a major subject and a minor subject.

The student, along with their dissertation committee, designs a syllabus based on material from 800-level courses or more advanced topics. The major subject portion of the syllabus must cover at least two semesters at this level; the minor portion at least one semester.

The student's advisor and dissertation committee must approve the format (oral, written, or combined) of the exams, which may be taken on separate occasions.

Failure of the QE II is tantamount to failing the Preliminary Exam and will be grounds for termination of financial support by the Department of Mathematics (if applicable), and failure of the second attempt will be grounds for dismissal from the Ph.D. program by the Graduate School.

Upon satisfactory completion of QE II, the doctoral student is automatically advanced to candidacy for the PhD degree.

Ph.D. Dissertation

After successful completion of the QE II, students will continue their research under the supervision of their doctoral advisors. To receive the PhD degree, the student will be required to write a PhD thesis containing non-trivial, new results of publishable quality, and successfully defend this thesis in a final oral examination administered by the Supervisory Committee. All K-State PhD students are required to submit an electronic version of their dissertation.

After the student's dissertation has been deemed acceptable by the doctoral advisor, a final oral examination will be scheduled through the Graduate School and held in accordance with Graduate School requirements.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Applied Mathematics Graduate Certificate

Contact: Dinh-Liem Nguyen
E-mail: dlnguyen@ksu.edu

Offered through the Mathematics graduate program, the Graduate Certificate in Applied Mathematics is intended to introduce students from mathematics, science, and engineering to a common foundational set of tools from modern mathematical analysis, and prepare students to use these tools for the analysis and solution of mathematical model equations arising in interdisciplinary research.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- MATH 715 - Applied Mathematics I **Credits: 3**
- MATH 716 - Applied Mathematics II **Credits: 3**

Elective Courses

- MATH 615 - Introduction to Digital Image Processing **Credits: 3**

- MATH 635 - Dynamics, Chaos, and Fractals Credits: 3
- MATH 725 - The Mathematics of Data and Networks I Credits: 3
- MATH 726 - The Mathematics of Data and Networks II Credits: 3
- MATH 789 - Combinatorial Analysis Credits: 3
- MATH 801 - Numerical Solution of Differential Equations I Credits: 3
- MATH 802 - Numerical Solution of Differential Equations II Credits: 3
- IMSE 881 - Linear Programming Credits: 3
- IMSE 882 - Network Flows and Graph Theory Credits: 3
- IMSE 884 - Integer Programming and Combinatorial Optimization Credits: 3
- IMSE 982 - Nonlinear Programming Credits: 3
- ECE 840 - Computer Engineering Methods for Analysis, Simulation, and Design Credits: 3
- ECE 861 - Applied Probability Theory & Random Processes Credits: 3
- ECE 963 - Detection & Estimation Theory Credits: 3
- ECE 965 - Information Theory Credits: 3
- CE 803 - Numerical and Analytic Techniques for Engineers Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 710 - Sample Survey Methods Credits: 3
- STAT 713 - Applied Linear Statistical Models Credits: 3
- STAT 716 - Nonparametric Statistics Credits: 3
- STAT 717 - Categorical Data Analysis Credits: 3
- STAT 720 - Design of Experiments Credits: 3
- STAT 722 - Experimental Design for Product Development and Quality Improvement Credits: 3
- STAT 730 - Multivariate Statistical Methods Credits: 3
- STAT 736 - Bioassay Credits: 2
- STAT 745 - Statistical Graphics Credits: 3
- ME 820 - Intermediate Topics in Thermal and Fluid Mechanics Credits: 0-18
- CIS 625 - Concurrent Software Systems Credits: 3
- CIS 770 - Formal Language Theory Credits: 3
- CIS 775 - Analysis of Algorithms Credits: 3

Total Hours Required for Graduate Certificate: 12

Quantitative Techniques of Data Science Graduate Certificate

Contact: Nathan Albin
Email: albin@ksu.edu

Completion of this certificate will provide training in the theory and practice of data analytics, including both technical skills and social and ethical considerations.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

MATH 222, MATH 551, STAT 250, or equivalents.

Course Requirements

Required Courses

Mathematical Background

- MATH 620 - Convex Optimization for Data Science **Credits: 3**

Statistics Background

- STAT 705 - Regression and Analysis of Variance **Credits: 3**

OR

- STAT 713 - Applied Linear Statistical Models **Credits: 3**

Data Science in Context (*Choose one of the following*)

- CRIM 550 - Cybercrime, Security, and Society **Credits: 3**
- GWSS 435 - Race/Sex/Science **Credits: 3**
- HIST 320 - History of Technology **Credits: 3**
- HIST 519 - Science and Technology in the United States **Credits: 3**
- PHILO 386 - Philosophy of Computer Science and Software Engineering **Credits: 3**

Elective Courses

Advanced Techniques for Data Science (**Select two classes from the following**)

- CC 535 - Applied Data Science **Credits: 3**
- CIS 531 - Introduction to Programming Techniques for Data Science and Analytics **Credits: 3**
- IMSE 785 - Big Data Analytics **Credits: 3**
- MATH 725 - The Mathematics of Data and Networks I **Credits: 3**
- MATH 726 - The Mathematics of Data and Networks II **Credits: 3**
- STAT 745 - Statistical Graphics **Credits: 3**
- STAT 760 - Optimization for Data Science **Credits: 3**
- STAT 761 - Discrete Optimization and Scalability for Data Science **Credits: 3**
- STAT 764 - Applied Spatio-Temporal Statistics **Credits: 3**
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics **Credits: 3**
- STAT 768 - Applied Bayesian Modeling and Prediction **Credits: 3**

Topics courses that address Data Science, with the approval of the Certificate Coordinator.

Students are strongly encouraged to have a class that addresses programming if they don't already have a strong background in that area.

Total Hours Required for Graduate Certificate: 15

Master of Science

Mathematics (MS)

The goal of the master's program in mathematics at Kansas State University is to expose each student to the foundations of advanced mathematics. There are three distinct master's degree options recognized by both the Mathematics Department and the Graduate School: master's thesis; master's report; and the qualifying exam option. In all cases, the graduate student must include at least 30 credit hours of mathematics at the 700 level or above on the program of study, which is composed in consultation with the student's supervisory committee.

Supervisory Committee and the Program of Study

By the end of the second semester of graduate study, the student is expected to choose a major professor and a Supervisory Committee and file a Program of Study with the Graduate School. This Supervisory Committee will advise the student throughout the remaining period of study, as well as administer the Final Examination.

The Program of Study must be approved by the student's Supervisory Committee, the Department Head, and the Dean of the Graduate School. The student must earn a minimum of 30 credit hours of graduate credit (courses numbered at the 700 level or above). The student must maintain at least a 3.0 GPA in the courses listed on the Program of Study. Furthermore, the student must earn a grade of A or B in three-fourths of these courses, with nothing worse than a C grade in the remaining courses.

Course Requirements

Required Courses

9 credit hours. Grade of B or better in these courses

- MATH 715 - Applied Mathematics I **Credits: 3**
- MATH 716 - Applied Mathematics II **Credits: 3**
- MATH 721 - Introduction to Real Analysis **Credits: 3**
- MATH 723 - Complex Functions **Credits: 3**
- MATH 730 - Abstract Algebra I **Credits: 3**
- MATH 731 - Abstract Algebra II **Credits: 3**
- MATH 770 - Introduction to Topology/Geometry I **Credits: 3**
- MATH 771 - Introduction to Topology/ Geometry II **Credits: 3**

Thesis Option Courses

Meet all course work requirements (30-32 credit hours) to include nine credit hours of core QE I courses (715, 716, 721, 723, 730, 731, 770, 771 with a grade of B or better in these courses) and write a thesis involving original mathematical research. The thesis must be defended before the Department of Mathematics faculty.

- MATH 899 - Thesis Topics **Credits: 1-18** (6-8 credit hours)

Report Option Courses

Meet all course work requirements (30-32 credit hours) to include nine credit hours of core QE I courses (715, 716, 721, 723, 730, 731, 770, 771 with a grade of B or better in these courses) and write a report on existing mathematical results. The report must be defended before the Department of Mathematics faculty.

- MATH 898 - Master's Research **Credits: 1-18** (2 credit hours)

Qualifying Exam Option

Pass two QE I subject exams and all course work requirements (30-32 credit hours) to include at least nine credit hours of core QE I courses (715, 716, 721, 723, 730, 731, 770, 771 with a grade of B or better in these courses).

Total Hours Required for Master's: 30-32

Media and Communication

Graduate Certificate

Dialogue, Deliberation, and Public Engagement Graduate Certificate

Designed to be a transformative experience for graduate students and professionals, this program covers the practice and theory of leading groups through collaborative decision-making. Through a series of four courses, students will learn:

- approaches to participatory planning and collaborative decision-making that are supported by sound scholarship
- communication and leadership skills for designing and leading productive meetings
- dialogic practices for developing and maintaining constructive working relationships and managing conflict
- proven frameworks selecting or designing engagement processes for organizations, stakeholders, or whole communities
- a wide range of tools and techniques for engaging small and large groups to address conflicts, explore alternatives and inform policy
- principles and practices that move groups toward sustainable action that changes lives

Courses are presented in a hybrid format, with some offered online and others face-to-face. Students will interact regularly with each other and leaders in the field.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Acceptance into the program is contingent on satisfactory standing with the graduate school. Approval must be granted by the student's graduate committee and the DDPE director.

Course Requirements

Required Courses

6 credit hours

- COMM 790 - Deliberation & Dialogue Theory **Credits: 3**
AND
- COMM 816 - Small Group Communication **Credits: 3**
OR
- COMM 837 - Practicum in Communication and Conflict **Credits: 3-6**

Elective Courses

6 credit hours

- COMM 816 - Small Group Communication **Credits: 3**
- COMM 831 - Deliberation & Dialogue Process Models **Credits: 3**
- COMM 835 - Leadership Communication **Credits: 3**
- COMM 837 - Practicum in Communication and Conflict **Credits: 3-6**

- COMM 840 - Intercultural Communication **Credits: 3**
- COMM 845 - Approaches to Public/Community Engagement **Credits: 3**
- COMM 916 - Communication Theories and Engagement **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Digital Media for Educators Graduate Certificate

The Interdisciplinary Graduate Certificate in Digital Media for Educators, open to all graduate students on campus and online and working professionals, is a fully online program designed to help students build advanced knowledge, confidence, and skills to effectively use a range of educational technology, digital media, and social media as well as earn an industry-recognized certification in social media, digital marketing, and other subjects.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

All applicants are required to meet the general university admission requirements.

Graduation Requirements

Completion of certificate courses with a cumulative GPA of 3.0

Course Requirements

Required Courses

- EDCI 864 - Social/Cultural Issues in Educational Technology **Credits: 3**
- EDCI 866 - Educational Technology Change Management **Credits: 3**
- EDCI 886 - Seminar in Curriculum and Instruction **Credits: 1-18**
- MC 820 - Digital Media Audiences and Analytics **Credits: 3**

Elective Courses

Choose one:

- COMM 843 - Communication and Technology **Credits: 3**
- MC 782 - Strategic Communications Management **Credits: 3**
- MC 840 - Social Media Data Visualization **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Strategic Health Communication Graduate Certificate

The interdisciplinary online certificate in strategic health communication advances students' knowledge and communication skills to effectively communicate about a wide array of public health issues. The program provides the necessary theoretical and methodological grounding for design of health communication strategies and messaging that can be disseminated through social media and other communication strategies. Students will be equipped with the necessary skills to gather and analyze data, and to develop, disseminate and evaluate evidence-based health communication campaigns.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Working professionals with a bachelor's degree; seniors and graduate status from discipline with interest in a career in public health, health and environmental reporting, hospital public relations, administration.

Graduation Requirements

15 credit hours, 3.0 GPA overall

Course Requirements

Foundational Course

3 credit hours. Choose one:

- MC 780 - Research Methods in Mass Communications **Credits: 3**
- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**

Required Courses

9 credit hours

- MC 712 - Environmental Communications **Credits: 3**
- MC 750 - Strategic Health Communication **Credits: 3**
- MPH 754 - Introduction to Epidemiology **Credits: 3**

Elective Courses

3 credit hours. Choose one:

- DMP 815 - Multidisciplinary Thought and Presentation **Credits: 3**
- DMP 844 - Global Health Issues **Credits: 3**
- FNDH 700 - Global Health and Nutrition **Credits: 3**
- HDFS 725 - Community Mental and Relationship Health Interventions **Credits: 3**
- KIN 818 - Social and Behavioral Bases of Public Health **Credits: 3**

Total Credit Hours Required for Graduate Certificate: 15

Master of Arts

Communication Studies (MA)

The graduate program in communication studies within the Media and Communication department, offers students a broad-based education in the theory and criticism of human communication. The objective of the program is to provide students with a program of instruction that exposes them to diverse perspectives within the field of communication studies in preparation for careers in higher education, business, law, ministry, government, and community service.

The communication studies program is housed in Nichols Hall, one of the architectural showpieces of the K-State campus. Facilities include semi-private office accommodations for graduate teaching assistants, a departmental library, seminar room, and practice facilities for debate and forensics activities. The K-State campus is ideally situated for students interested in the study of political communication because of the proximity of the Eisenhower and Truman presidential libraries.

The graduate program in communication studies has been recognized as one of the top graduate programs in communication studies in the midwest region. The graduate faculty is committed to providing every student with individual attention in the planning and conduct of his or her program of study. Classes are small, allowing faculty and students to work closely together on projects of mutual interest. Graduate students may also work with K-State's nationally recognized debate and forensics programs.

Course Requirements

Students become eligible for the master of arts in communication studies upon recommendation of the graduate faculty and completion of the following requirements:

Degree Options

Students may elect either a thesis or nonthesis (report) program of study. A master's thesis identifies an original research problem, implements an appropriate methodology and reports and interprets its findings. Completion of a thesis project demonstrates the student's ability to carry out sustained, independent research that makes an original contribution to the discipline. A master's report is an academic essay that reviews and analyzes research literature within the discipline. Completion of a report project demonstrates the student's ability to interpret and synthesize scholarly literature in a given subject area.

Completion of the coursework only option provides students with additional classroom exposure to the discipline and may be appropriate for students who do not intend to pursue doctoral study in the discipline. *A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.*

Both the master's thesis and research report options require prospectus approval by the graduate faculty and adherence to Graduate School and departmental guidelines.

Required Courses

- COMM 710 - Introduction to Communication Research Methods **Credits: 3**
- COMM 720 - Perspectives on Communication **Credits: 3**
- COMM 730 - Classical Rhetorical Theory **Credits: 3**
and one of the following:
- COMM 733 - Rhetorical Criticism **Credits: 3**

- COMM 821 - Experimental Research in Communication Studies **Credits: 3**
OR
- COMM 822 - Field Research in Communication Studies **Credits: 3**

Elective Courses

An additional 18 credit hours in communication studies courses numbered at the 600 level or above, including six credit hours of COMM 899 (for students electing the thesis option); or an additional 18 credit hours, including 2 credit hours of COMM 899 (for students electing the nonthesis (report) option).

Submission of an acceptable thesis or report.

OR

Successful completion of a comprehensive (written and oral) examination over coursework for those electing the coursework only degree option.

In consultation with his or her advisor, a student may develop a minor emphasis of up to 6 credit hours at the 500 level or above in academic areas outside the communication studies program.

Total Hours Required for Master's: 30

Master of Science

Mass Communications (MS)

Every industry has one thing in common. They all need experts in communication to help them deliver their message. The A.Q. Miller School's Master's in Mass Communications provides the flexibility to tailor coursework to fit students' individual career goals. Topics include strategic communications, health and science communication, community media or digital news.

Working with nationally recognized faculty from across the university, students will tap into the latest ideas, methods, and topics. Faculty in the A.Q. Miller School regularly conduct communication research and engage in community development projects across Kansas and around the world. Graduates have gone on to careers at major media outlets, as well as leadership positions at national public relations and advertising agencies.

Admission Requirements

Admission to the master's degree program requires an undergraduate degree from a four-year college or university, with basic undergraduate course work in journalism and mass communications. Provisional admission may be granted to applicants entering the degree program with no previous course work in mass communications, with the requirement to take basic undergraduate courses along with the graduate course work. Also required are satisfactory scores on the GRE (an average in the 50th percentile) and an undergraduate GPA of 3.0 or above on the final 60 hours of course work. Official transcripts of undergraduate degree work and three letters of reference from instructors and/or professional colleagues must be sent directly to the School.

Consideration for admission is given to international applicants who have a TOEFL score of 600 or above (or 250 or above on the computer version), in addition to a satisfactory score on the GRE. Application forms will not be sent to international students until notice of GRE and TOEFL scores is received. Also required is certification that applicants have adequate financial resources to complete the degree.

Graduation Requirements

Course Requirements

30 graduate semester hours, distributed as follows:

- Two 700-level electives in MC
- Thesis or report
- Graduate electives in the area of specialization to complete 30 semester hours
 - courses in MC must be 600-level or above; courses outside MC can be 500-level or above to count for graduate credit.

Required Courses

- MC 765 - Communication Theory **Credits: 3**
- MC 780 - Research Methods in Mass Communications **Credits: 3**
- MC 850 - Applied Research in Mass Media **Credits: 3**

Total Hours Required for Master's: 30

Modern Languages

Rebecca Bender, Interim Head

207 Eisenhower Hall
785-532-6760
Fax: 785-532-7004
modlang@k-state.edu
<http://www.ksu.edu/mlangs>

Admission

Incoming students should have undergraduate degrees in the particular language of study or in teaching, although we do accept on a provisional basis those students who have considerable expertise in the language and culture in other ways, e.g., native speakers or U. S. citizens with extensive travel, living, and educational experience abroad.

All applications are reviewed by the department head and the graduate faculty within the department. The priority deadline for consideration for funding (Graduate Teaching Assistantship and/or scholarships) is December 15 (fall admission) for all candidates. Depending on the language you wish to study, assistantships may or may not be available after this date.

Applications need to include the following:

1. Personal statement explaining your aims and interests
2. Application
3. A recording or video responding to the following questions: (1) what is your interest in the program? (please answer in English) and (2) please describe your professional goals long term. (please answer in the target language of study)
4. Three letters of recommendation from persons qualified to speak informatively of the applicant's academic performance and his or her potential for advanced studies in the field.
5. Copies of the official transcripts from each college or university the applicant has attended. Only official copies are accepted by the Graduate School.

6. Application fee (required by the Graduate School)
7. Completed application to the Graduate School
8. For international students, an official TOEFL, or IELTS score report and Kansas State University's financial affidavit

Financial support

A limited number of graduate teaching assistantships (GTA) are available. These positions offer the opportunity of teaching university-level courses under close pedagogical supervision. Full-time teaching assistants will teach three courses per year. All full-time GTAs receive a 100% tuition waiver. GTAs must be enrolled in a minimum of 6 hours of classwork in the Department of Modern Languages per semester to qualify. Except in unusual circumstances, GTAs are expected to enroll in 9 hours. Assistantships are normally renewable for a period of two years, assuming satisfactory teaching performance and progress toward the degree. The department also offers scholarships; awarded on a competitive basis, these may be held in addition to an assistantship.

Graduate Certificate

Teaching English as a Foreign Language Graduate Certificate

The Graduate Certificate Program in Teaching English as a Foreign Language is intended for aspiring teachers of English for non-native speakers, as well as for practicing teachers who would like to enhance their skills and credentials. Students will be better prepared to teach English in a wide range of contexts, both abroad and domestically, or to pursue a graduate degree in TEFL or another field within applied linguistics. A total of 18 credit hours are required to complete the certificate program, 15 hours (5 courses) of required, core courses, and 3 hours (1 course) of an approved elective course.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Applicants must hold a BA in a related field (e.g., language, education, etc.) or must be pursuing an MA in a related field. Applicants with a different academic background may, at most, be permitted probationary admission, with stipulations for coursework and/or expectations for performance during the first semester in the program.

Course Requirements

Required Courses

12 credit hours

- MLANG 600 - Principles of Linguistics: Language Structure and Language Use **Credits: 3**
- MLANG 710 - Foreign Language Pedagogy **Credits: 3**
- MLANG 770 - Theories of 2nd Language Acquisition **Credits: 3**
- MLANG 803 - Practicum in Adult TESL/TEFL: Written and Oral Communication **Credits: 3**

Elective Courses

Select one 3 credit hour course from, the following list. Alternative courses may be allowed after consultation and approval by the department head.

- ANTH 525 - Language and Culture **Credits: 3**
- ANTH 528 - Topics in Linguistic Anthropology **Credits: 1-4**
- ANTH 720 - Field Methods in Linguistics **Credits: 3**
- COMM 840 - Intercultural Communication **Credits: 3**
- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 731 - ESL/Dual Language Linguistics **Credits: 3**
- EDCI 742 - ESL/Dual Language Assessment **Credits: 3**
- ENGL 700 - Old English **Credits: 3**
- ENGL 757 - Studies in Language and Linguistics **Credits: 3**
- ENGL 820 - Seminar in Language **Credits: 3**
- MLANG 804 - Seminar/Topics in TESL/TEFL **Credits: 3**
- PHILO 625 - The Philosophy of Language **Credits: 3**
- ENGL 790 - History of the English Language **Credits: 3**
- MLANG 779 - Seminar in Modern Languages **Credits: 3**

Total Credits Required for Graduate Certificate: 15

Master of Arts

Modern Languages (MA)

The Department of Modern Languages offers a 30-hour M.A. program with subspecialties in French, German, Spanish, or Teaching English as a Foreign Language. Courses are offered in language, second language acquisition, pedagogy, (applied) linguistics; literature, cultural studies, film, literary theory; translation and interpretation. Graduates are prepared to pursue study at the doctoral level or to seek a career where advanced proficiency in a second language is necessary (e.g. teaching, governmental agency work, international business, translation and interpretation, etc.).

Course Requirements

In consultation with the student's advisory committee, each student will complete the following program of study.

Required Courses

A minimum of 3 hours selected from courses below. Additional courses from this list may be taken as subspecialty electives.

- MLANG 600 - Principles of Linguistics: Language Structure and Language Use **Credits: 3**
- MLANG 710 - Foreign Language Pedagogy **Credits: 3**
- MLANG 720 - Introduction to Literary Theory and Research Methodology **Credits: 3**
- MLANG 770 - Theories of 2nd Language Acquisition **Credits: 3**

Elective Courses

Students will complete 21 hours of course work at the 600-level or above in their subspecialty (French, German, Spanish, or Teaching English as a Foreign Language), in consultation with committee. Students may substitute Modern Languages topics

courses at the 700 and 800 level in consultation with their major professor as appropriate. Students may petition to substitute some hours with courses outside of the department of Modern Languages, with the approval of the committee.

Thesis Option Courses

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

6 hours related to the thesis.

Report Option Courses

2 hours related to the report, 4 hours of additional electives.

Coursework Only Option Courses

6 hours of additional electives.

Total Hours Required for Master's: 30

Teaching English as a Foreign Language (MA)

The Modern Languages department offers a Master of Arts degree in Modern Languages with a specialization in Teaching English as a Foreign Language. This track provides a range of interdisciplinary courses. Concentrations in this track are in the study of second language acquisition, the teaching of English as a foreign language (TEFL), and in English-language culture and literature.

The MA TEFL will equip graduates to become leaders in classroom innovation in the field of English language teaching. As skilled English teachers they will be highly employable in the increasingly wide range of contexts emerging globally, as demand for competence in English continues to grow. The MA in TEFL is intended for aspiring teachers of English or for practicing teachers who wish to upgrade their professional standing. It is most suitable for teachers whose interests lie mainly in classroom practice.

Entrance requirements are those of the Graduate School. With approval of the graduate committee, the student would choose:

- 30 hours of course work
- 28 hours of course work plus a master's report
- 24 hours of course work plus a master's thesis

In addition, the M.A. candidate would take a written comprehensive exam, followed several days later by a one-hour oral exam.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

I. Pedagogy and Methodology (9 hours)

- MLANG 710 - Foreign Language Pedagogy Credits: 3

- MLANG 770 - Theories of 2nd Language Acquisition **Credits: 3**
- MLANG 600 - Principles of Linguistics: Language Structure and Language Use **Credits: 3**

II. Teaching English as a Foreign Language (6 hours)

- MLANG 803 - Practicum in Adult TESL/TEFL: Written and Oral Communication **Credits: 3**
- MLANG 804 - Seminar/Topics in TESL/TEFL **Credits: 3**

III. Language and Culture (6-12 hours)

May be selected from existing courses in English or Modern Languages, depending on the needs of the individual participant, or courses in related areas such as anthropology, education, or speech.

IV. Electives (3-6 hours, with the approval of the program committee)

- ENGL 759 - Studies in Technical Communication **Credits: 3**
- ENGL 799 - Problems in English **Credits: 1-18**
- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 829 - Learning Principles **Credits: 3**
- EDCEP 775 - Readings in Counseling and Educational Psychology **Credits: 1-3**
- EDCEP 795 - Problems in Counseling and Educational Psychology **Credits: 1-18**
- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 731 - ESL/Dual Language Linguistics **Credits: 3**
- EDCI 742 - ESL/Dual Language Assessment **Credits: 3**
- COMM 840 - Intercultural Communication **Credits: 3**
- ANTH 528 - Topics in Linguistic Anthropology **Credits: 1-4**
- EDACE 786 - Topics in Adult Learning and Leadership **Credits: 1-3 ***

*Grant Writing

V. Master's Thesis (6 hours), or Master's Report (2 hours)

Total Hours Required for Master's: 30

Music Program

Kansas State University's graduate program in music is designed to furnish specialized professional training supported by competence in those fundamental areas needed by all musicians. Emphasis is placed on the personal growth and development of the student toward individual goals. The program is large enough to provide ample variety, yet small enough to allow personal attention to each student. While students are given considerable responsibility in all phases of the educational program, faculty guidance is available constantly.

The Music program offers the master of music with a specialization in the following areas: music education, music history/literature, performance with pedagogy emphasis, and composition.

Areas of Emphasis

Bands: Goins, Tracz, Wimmer, Payne

Brass instruments: Fassler-Kerstetter, Parker, Maxwell, Kilgore, Hinman

Chamber music: All faculty as approved by the Graduate College

Choral groups: Oppenheim, Yu-Oppenheim

Conducting: Dirks, Oppenheim, Tracz, Wimmer, Yu-Oppenheim

Jazz studies: Cochran, Gartner, Goins, Payne

Keyboard instruments: Dobrzanski, Pickering

Music education: Burrack, Gurgel, Oppenheim, Payne, Tracz, Ward, Wimmer, Yu-Oppenheim

Music history and musicology: Cochran, Hunt, Parker, Goins

Opera and musical theatre: Rosine, Pittman

Orchestras: Dirks

Percussion instruments: Gartner

String instruments: Dirks, Jansen

Theory: Fassler-Kerstetter, Morris, Pickering, Weston

Voice: Pinkall, Pittman, Rosine, Thompson

Woodwind instruments: Kerstetter, Morris, White, Wytko

Composition: Morris, Weston

Theatre Program

The graduate program in theater offers a master of arts degree in theater with concentration in drama therapy. Students take courses in drama therapy, play writing, and psychology/family studies/human development/counseling to fulfill the requirements for registry with the North American Drama Therapy Association. The degree is approved and accredited by the North American Drama Therapy Association.

Music, Theatre and Dance Facilities

The School of Music, Theatre and Dance is housed in McCain Auditorium, Nichols Hall, and the Purple Masque Theatre (West Stadium). Ample classrooms, rehearsal halls, practice studios, and offices are supplemented by a small hall for chamber music, a 1,800-seat auditorium, a 240-seat thrust theatre, and a 100 seat thrust theatre. The Piano Lab provides 15 midi work-stations with a state-of-the-art teaching/presentation station. Midi Workstations also exist in Nichols Hall. The department is an official Steinway School and owns four concert grand pianos, several studio grands, and a number of well-maintained practice uprights. Organs include a concert Austin (40 rks), a Bosch tracker (9 rks), and a J.W. Walker Continuo organ. An electronic studio centers around digital and analog synthesizers with ample supporting equipment. For the performance of early music, the department owns one harpsichord, a chest of matched viols, and assorted wind instruments.

The music division of Hale Library contains a growing reference and research collection fully adequate to master's level work, as well as an extensive collection of recordings. The Special Collections Division holds a number of rare items, from 16th century

prints to one of the two largest collections of the manuscripts of Gail Kubik, world-renowned 20th-century composer. The Graduate Music Seminar-Study Room offers a place in the Music Program in which materials may be placed on reserve for easy, convenient availability to graduate students.

Music Careers

In addition to enriching the quality of one's life, enhancing the understanding of other epochs and cultures, and providing outlets for self-expression, graduate study in music prepares students for a variety of professions. K-State's music alumni perform professionally with symphony orchestras, military bands, chamber music ensembles, opera and musical theatre companies, choral ensembles, jazz, rock, country, and bluegrass groups, in recording studios, and as soloists and accompanists. Others are active as composers of concert, commercial, liturgical, and/or educational music. K-State graduates also hold prominent positions in the fields of music education (pre-school through collegiate levels), private teaching, church music, music therapy, librarianship, and in the music industry. In addition, several K-State music graduates have used their arts degrees as preparation for professional schools such as law and medicine.

Music Performance Opportunities

A full range of performing organizations and small ensembles provides the graduate student with a variety of performance opportunities. These include Concert Choir, Collegiate Chorale, University Treble Chorus, University Choir, Grand Chorus, In-A-Chord, Collegium Musicum, Madrigal & Motet Ensemble, Opera Workshop, Wind Ensemble, Wind Symphony, Concert Band, University Band, Concert Jazz Ensemble, Jazz Lab A, Jazz Combos, Brass Ensemble, Woodwind Ensemble, Percussion Ensembles, Marching Band, Additional Athletic Bands, Symphony Orchestra, Theatre Orchestra, Opera Theatre, and multiple small ensembles. Moreover, the Collegium Musicum performs early music on authentic instruments, and chamber music flourishes in a number of small groups of various instrumentation.

Although not directly associated with the School of Music Theatre, and Dance, the McCain Auditorium Performance Series brings to the campus large musical attractions, world-famous soloists, and chamber music, as well as dance troupes and theatre companies. Faculty recitals expand the opportunities to hear performances of professional caliber.

Theatre Season and Outreach Programs

The Theatre program offers 4 main stage shows each year: one musical, produced in conjunction with the music and dance programs, and three straight plays, usually directed by faculty. The Purple Masque season presents four non-musical plays per year. These productions are often directed by graduate students in theatre as part of their creative projects for their degree. Drama therapy graduate students are involved in the Barrier-Free Theatre, a company for actors with and without disabilities, among other outreach opportunities in the community.

Admission to the Graduate Program in Music

Admission to the Graduate School of Kansas State University is handled through individual departments. Applicants interested in the Graduate Program in Music should send inquiries to Frederick Burrack, Director of Graduate Studies, School of Music, Theatre and Dance, Graduate Music Studies, 109 McCain Auditorium, Kansas State University, Manhattan, KS 66506-4702. Graduate Teaching Assistantships are selected in January. (International Student should note the deadlines for admission as seen on the Graduate website).

Application is made through <http://www.k-state.edu/grad/admissions/application-process/> requiring the following:

1. The application fee.
2. One copy of an official transcript from each undergraduate and/or graduate institution previously attended.
3. Three letters of recommendations.
4. A statement of applicant's personal and professional goals.

5. Requested but not required: YouTube link demonstrating performance skills (if specialization performance, pedagogy; conducting/teaching skills if specialization is music education), sample original scores (if specialization is composition), or an example of scholarly work (if specialization is history/literature). On-campus auditions are usually required.
6. International students are also required to send TOEFL scores and Affidavit of Financial Support.

Admission to the Graduate Program in Theatre with concentration in Drama Therapy

Application is made through <http://www.k-state.edu/grad/admissions/application-process/> requiring the following:

1. A completed application form (completed online - <http://www.k-state.edu/grad/application>)
2. The application fee.
3. One copy of an official transcript each undergraduate and/or graduate institution previously attended.
4. Three letters of recommendations of professors or professional employers who can speak to your potential to succeed at the graduate academic level.
5. A statement of the applicant's personal and professional goals.
6. International students are also required to send TOEFL scores and Affidavit of Financial Support.

Students interested in drama therapy need to arrange an interview with Michelle Yadon, Director of the Drama Therapy Program at sdbailey@k-state.edu.

Entrance requirements

Admission with full standing

To be considered for admission with full standing, the applicant must have:

1. A bachelor's degree from an approved institution.
2. Adequate preparation in the field of music: normally a B.M., B.M.E., B.S. in music education, B.A. in music, or the equivalent.
OR
Adequate preparation in the field of drama therapy: normally a B.A., B.S. or B.F.A. in theatre or the equivalent.
Undergraduate electives in psychology are not required, but are helpful.
3. An undergraduate average of B or better.

If all of the foregoing requirements are not met, probationary admission may be considered, provided there is other evidence that the applicant has the ability to do satisfactory graduate work. Such evidence might include a post-graduate record at another institution or successful professional work.

Probationary admission

Students may be admitted provisionally if there is uncertainty in evaluating transcripts.

Full standing for probationary or provisional students is attained automatically upon completion of at least 9 hours of work for graduate credit with a grade of B or better. Students admitted on probation may be denied continued enrollment if they receive a grade less than B.

Special students

An application for admission to the Graduate School in the School of Music, Theatre and Dance ordinarily implies the student's intention to work toward an advanced degree. Students who do not plan to work toward an advanced degree, however, may be admitted as special students. Those who later wish to enter the degree program must undergo a full review. No more than 9 semester hours earned as a special student may be transferred into a regular degree program.

Admission to the Graduate School in the Department of Music does not necessarily imply admission to a particular program within the department. For special requirements, see the individual areas of emphasis.

Residence requirements

Candidates in music will require 4 semesters to complete the degree. The summer program can be completed in 3 summers. Summer study in music education requires on-campus attendance during residency week. Candidates who serve as graduate assistants or hold positions outside of their academic responsibilities must be completed in four semesters.

Candidates in drama therapy will need at least 4 semesters and one summer to complete all of the academic requirements of the degree and of the North American Drama Therapy Association.

Courses taken more than six years before the completion of the degree generally cannot be credited toward the degree.

Transfer credit

Graduate credit with a grade of B, or better, may be transferred from other accredited institutions. Transfer of more than 6 hours requires special action; in no case may more than 10 hours be transferred.

Assistantships and financial aid

A limited number of graduate assistantships in the Music program are available during the regular academic session, but they are not available in the summer. Assistantships are given in specific areas, according to departmental needs. Teaching assistants are usually needed in aural skills, music theory, music education, accompanying, band, choir, orchestra, collegium musicum, music appreciation, piano class, and voice (class and/or studio teaching). Other assistantships involve work in the Music Library, the instrument room, and various aspects of administration. All assistantships include monitoring the technology lab and taking attendance at recitals.

The Theatre program offers a limited number of Graduate Teaching Assistantships (GTA) in theatre. Students may also apply to other departments and offices on campus for GRAs, GAs, and GTAs.

Graduate assistantships require up to 16-20 hours a week, which is regarded as five-tenths of full time. Such an appointment entitles the student to a full waiver of tuition and out-of-state fees, as well as eligibility to apply for university health insurance. Graduate assistants who are appointed to a .25 tenths position work 8-10 hours per week. All applicants for full-time study in the Master of Music program are automatically considered for assistantships; no additional application form is needed. Drama therapy students interested in an assistantship should submit their application by February 1 for the coming academic year to meet the deadline to apply for assistantships offered in other campus offices.

Assistantships are awarded with the expectation that the student will spend two years in residence and that satisfactory performance of duties and satisfactory academic work will bring renewal of the assistantship. Assistantships are not available for more than two years. Graduate assistants in the Music Program are expected to participate in a large ensemble each semester.

For eligible students, work-study funds are available for a variety of jobs on campus. There are work-study positions in the costume shop and scene shop for individuals who have the appropriate skills. Inquiries regarding eligibility for work-study should be addressed to the Office of Aids and Awards, Fairchild Hall, Kansas State University, Manhattan, KS 66506.

All non-native English-speaking applicants, including those with a bachelor's degree from a U.S. college or university, must score at least 550 on the TOEFL and at least 50 on the Speak Test before being appointed to a graduate teaching assistantship in the Kansas State University Music Program.

Course loads

No graduate student in music shall take more than 16 hours of credit during fall or spring semesters. Most graduate students in theatre take a minimum of 11 credit hours during fall and spring semesters and are typically involved in drama therapy internships and/or production work throughout the year. Courses taken during the summer are not covered under most assistantships. Graduate assistantships will only cover the tuition for 10 credit hours per semester. Any credit hours above that amount are paid for at the in-state tuition cost. Graduate assistants may not take less than six hours in any semester.

Registration

Registration procedures are outlined each semester in the Schedule of Classes and Enrollment Procedures. First-term graduate students may be required to arrive on campus (for orientation and testing) one week before classes begin. The needed information will be communicated to each student in ample time by the Director of Graduate Studies. All music graduate students will register through the office of the Director of Graduate Studies in Music. All theatre graduate students will register through the office of the Director of Graduate Studies in Theatre.

Music Placement tests

Each entering music graduate student will take placement tests. The written tests will consist of two sections, theory and music history. The tests will include components equivalent to those of the KSU undergraduate program.

The results of these tests will be used in planning a suitable program of study for each individual. If remedial work is indicated, it may be accomplished through coursework or by doing independent study before re-examination.

Supervisory committee

During the **music student's** first semester, the director of graduate studies in music shall, in consultation with the student, appoint a major professor for each student. No later than the second semester, the major professor will organize a Supervisory Committee consisting of himself/herself as chair, the Director of Graduate Studies in Music, and at least one other faculty member.

By the end of the first semester **all theatre** students should have identified a major professor in consultation with the director of graduate studies in theatre. No later than end of the second semester, a Supervisory Committee of three faculty members, including the major professor, should be identified and a program of study filed with the Graduate School.

The duties of the Major Professor will be to (1) meet no later than the student's second semester to review the student's work, (2) meet with the student no later than the second semester in order to formulate and approve the student's academic program, (3) offer counsel and advice to the student throughout his/her academic career and to approve such changes in his/her program as are agreed upon, (4) advise the student in the selection of a topic for the master's thesis, report, or creative project or the program for master's recital, and to approve the final choice, (5) The Supervisory Committee will act as the final reading committee of the master's thesis, or report, or as the judging committee for the student's final master's recital (music) or creative project (theatre), (6) serve as the examining committee for the student's comprehensive examination.

The initial organization of the Supervisory Committee and the scheduling of its first meeting shall be the responsibility of the major professor. Thereafter, the student has the responsibility for consultation with members of his or her committee and for obtaining the approval of the committee on appropriate matters.

Student's program of study

No later than the end of a student's second semester, each student will, at some time before preregistration for the following term, meet with his/her major professor and, in consultation with other members of his/her Supervisory Committee, plan his/her academic program. This program is entered on an electronic form on the Graduate School website. Signatures from committee members are gathered electronically.

The student is then responsible for following the program through his/her academic career, for obtaining the Supervisory Committee's approval for any desired or needed changes, and for seeing that his/her major professor registers such changes with the Graduate School office.

Accelerated

Accelerated Music (BA)/Master of Business Administration (MBA)

The accelerated Accelerated Music (BA)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- MUSIC 731 - Music Business 1 **Credits: 2**
- MUSIC 732 - Music Business 2 **Credits: 2**
- MUSIC 733 - Music Marketing and Management Internship **Credits: 2**
- THTRE 712 - Theatre Management **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Master of Arts

Theatre (MA)

Provided through the Music, Theatre, and Dance graduate program, the Masters of Art degree in Theatre offers students a broad base of theatre courses and the ability to emphasize in a specific area, such as acting, directing, playwriting, design, management or technical theatre. The degree prepares students for teaching at the high school or community college level, for professional theatre work and for advanced study in theatre.

30 semester credits are required. All students must take: three 800-level 3 credit hour courses in dramatic literature; 3 credit hours in a 600- or above level course in acting, directing or playwriting; 3 credit hours in a 600- or above level course in design technical theatre or theatre management. The 15 remaining credits constitute electives which are usually in the student's area of concentration. At least 15 credits must be at the 800-level.

Each student must complete a creative project. Creative projects involve an extended original project with written reflection. A review of the candidate's work is conducted through an oral examination administered near the end of the degree program.

Students may apply for graduate teaching assistantship positions in public speaking, introduction to theatre, technical theatre or acting. These GTA positions cover the cost of tuition and pay an additional stipend.

Course Requirements

Students are admitted on the basis of their undergraduate transcripts and three letters of recommendation. A major in theatre is expected, but students with degrees in other areas may take undergraduate courses to make up deficiencies. A 3.0 overall undergraduate average is required, but students who do not meet this requirement may be admitted on probation.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

There are three categories to the degree requirements:

Required Courses (15 credits)

- Three 800-level 3 credit hour courses in dramatic literature
- 3 credit hours in a 600- or above level course in acting, directing or playwriting
- credit hours in a 600- or above level course in design technical theatre or theatre management

Elective Courses (15 credits)

- 15 credit hours of electives; 6 credit hours must be at the 800-level

Creative Project

Total Hours Required for Master's: 30

Theatre - Drama Therapy (MA)

Kansas State University is one of the few master level theatre programs in the U.S. which offers a concentration in drama therapy, which is offered through the Music, Theatre, and Dance graduate program. One of the strengths of the program is its strong theatre base and opportunities for creating drama-in-education, theatre-in-education, or issue-based community projects. Service learning and internships are incorporated into courses to provide students with direct client contact experiences.

The KSU MA program fulfills all of the requirements of the North American Drama Therapy Association's requirements of training and education toward registry (the national credential for drama therapy in the U.S.).

53 semester credits are required, including a minimum of 8 courses (24 credits) in drama therapy, 1 course in research methods (1 credit), 7 credits in drama therapy practicum/internship and supervision, and 6 courses (18 credits) in psychology, counseling and student development, educational leadership, family studies and human services, marriage and family therapy or anthropology.

Students' Masters Project (3 credits), Reports (2 credits) or Theses (6 credits) will focus on an aspect of drama therapy. These written projects will be presented to the student's committee in an Oral Examination.

Students in the drama therapy concentration may apply for Graduate Teaching Assistantship positions in the Theatre Department and other programs on campus. These GTA positions cover the cost of tuition up to 10 credits per semester and pay an additional stipend. Students may also apply for Graduate Assistantships in other programs on campus. These GA positions provide in-state tuition and pay a stipend.

Students are admitted on the basis of their application essay, undergraduate transcripts, three letters of recommendation and an interview. A major in theatre is expected, but students with degrees in other areas may take undergraduate courses to make up deficiencies. A 3.0 overall undergraduate average is required, but students who do not meet this requirement may be admitted on probation.

Course Requirements

Required Courses

- THTRE 820 - Principles of Drama Therapy **Credits: 3**
- THTRE 830 - Creative Arts Therapies **Credits: 3**

One course in improvisation from:

- THTRE 664 - Creative Drama **Credits: 3**
- THTRE 670 - Playback Theatre **Credits: 1-3**

One course in drama therapy with a specific population from:

- THTRE 630 - Topics in Theatre **Credits: 1-4**
- THTRE 665 - Drama Therapy with Special Populations **Credits: 3**
- THTRE 674 - Drama Therapy with Adolescents **Credits: 3**
- THTRE 675 - Drama Therapy with Older Adults **Credits: 1-3**

- THTRE 840 - Play Therapy Practices and Techniques **Credits: 3**

One course in Psychodrama or Sociodrama from:

- THTRE 784 - Psychodrama **Credits: 3**
- THTRE 785 - Sociodrama **Credits: 3**

Additional Required Courses to Complete Core:

- THTRE 710 - Practicum in Theatre **Credits: 0-6**
- Internship and Supervision **Credits: 7** (1 credit first semester, 2 credits for each of the next 3 semesters (spring and fall))
- THTRE 800 - Introduction to Graduate Studies in Theatre: Library, Research, and Information Skills **Credits: 1-3**
- THTRE 862 - Workshop in Playwriting **Credits: 3**
- THTRE 865 - Ethics and Professionalism in Drama Therapy **Credits: 3**
- One 3 credit drama therapy elective or the equivalent in 1 or 2 credit drama therapy courses.

Psychology Courses (18 credits)

A minimum of six courses from the following:

One course in Research from:

- ANTH 710 - Writing Cultures: Ethnographic Methods **Credits: 3**
- ANTH 715 - Research Methods in Digital Ethnography **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- HDFS 888 - Research Methods in Human Development and Family Science **Credits: 3**
- THTRE 810 - Survey of Research in Drama Therapy **Credits: 3**

One course in Group Processes from:

- CFT 870 - Couples and Sex Therapy **Credits: 3**
- CFT 872 - Family Therapy **Credits: 3**
- CNRES 751 - Interpersonal Conflict Skills and Strategies **Credits: 3**
- EDCEP 858 - Group Processes **Credits: 3**
- HDFS 785 - Family Dynamics **Credits: 3**

One course in Developmental Psychology from:

- HDFS 786 - Lifespan Development **Credits: 3**
- ECED 810 - Child Development **Credits: 3**
- ECED 820 - Theories of Human Development **Credits: 3**

One course in Abnormal Psychology or Psychopathology from:

- CFT 879 - Systemic Assessment and Treatment of Psychopathology **Credits: 3**
- PSYCH 505 - Introduction to Psychopathology **Credits: 3**

One course in Theories of Personality/Theories of Counseling from:

- EDCEP 823 - Counseling Theory **Credits: 3**
- PSYCH 520 - Life Span Personality Development **Credits: 3**
- THTRE 876 - Seminar in Theatre **Credits: 3**

One course in Multicultural Counseling from:

- EDCEP 951 - Multicultural Counseling **Credits: 3**

Project, Thesis, or Report

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Project: Demonstration of competence in a specific area of drama therapy (3 credits)

Report: Writing a research paper for the purposes of gathering and assimilating information on a particular topic of drama therapy (2 credits)

Thesis: Writing of a lengthy research paper that makes an original contribution to the field of drama therapy (6 credits)

Oral Examination on Project, Report, or Thesis

Total Hours Required for Master's: 53

Master of Music

Master of Music (MM)

Gain the fundamental skills and practical training needed by all music educators in this hybrid program designed around the busy schedules of teachers.

Designed for music educators at all levels, this master's degree will improve your knowledge in a variety of skills, techniques and concepts. The hybrid Master of Music program consists of online coursework and an intensive one-week session on the main K-State campus in Manhattan, Kansas. The program offers four areas of study from which to choose: choral, elementary/general, band and orchestra.

Course Requirements

Kansas State University offers the Master of Music degree with specialization in the following areas: music education, performance, music history/literature, keyboard pedagogy, and composition. The degree requires a minimum of between 32 and

36 credit hours including a master's report (or recital) or a master's thesis. Music education majors may elect to take 36 credit hours without master's report or master's thesis. Graduate students cannot register for both graduate report and graduate thesis.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

A Placement Examination will determine whether or not academic deficiencies exist. If they are present, the student is required to enroll in the appropriate remedial courses or by doing independent study before re-examination.

See areas of specialization for further explanation. (MUSIC 802, taken during the summer, does not fulfill the seminar requirement.)

- **MUSIC 801 - Introduction to Graduate Study in Music Credits: 2**
Theory and history-literature 11-12 hours, including MUSIC 702 and at least one seminar course or MUSIC 767.
- **MUSIC 702 - Style Analysis Credits: 3**
- **MUSIC 767 - Topics in American Music Credits: 3**
History options include:
 - **MUSIC 156 - Introduction to the Broadway Musical Credits: 3**
 - **MUSIC 466 - Music History I: Ancient Greece to Beethoven Credits: 3**
 - **MUSIC 467 - Music History II: Beethoven to Present Credits: 3**
 - **MUSIC 468 - Music History III: 1850 to the Present Credits: 3**
 - **MUSIC 726 - History of the Opera Credits: 3**
 - **MUSIC 766 - Seminar in the Life and Works of an Individual Composer Credits: 3**
 - **MUSIC 803 - Seminar in Music History Credits: 2**
 - **MUSIC 807 - History and Philosophy of Music Education Credits: 3**
 - **MUSIC 830 - Seminar in Medieval and Renaissance Music Credits: 3**
 - **MUSIC 832 - Seminar in Baroque Music Credits: 3**
 - **MUSIC 834 - Seminar in Classical Music Credits: 3**
 - **MUSIC 836 - Seminar in Romantic Music Credits: 3**
 - **MUSIC 837 - Seminar in 20th-Century Music Credits: 3**Theory options include:
 - **MUSIC 711 - Concert and Ethnic Percussion Techniques Credits: 2-3**
 - **MUSIC 714 - Advanced Orchestration Credits: 2**
 - **MUSIC 724 - 18th Century Counterpoint Credits: 2**
 - **MUSIC 725 - Theories of Contemporary Music Credits: 2**
 - **MUSIC 802 - Seminar in Music Theory Credits: 3**
 - **MUSIC 804 - Advanced Analysis Credits: 3**
 - **MUSIC 857 - Advanced Composition Credits: 1-2**Literature options include:
 - **MUSIC 704 - Symphonic Literature Credits: 3**
 - **MUSIC 705 - Chamber Music Literature Credits: 3**
 - **MUSIC 706 - Song Literature Credits: 3**
 - **MUSIC 707 - History of Wind Bands Credits: 3**
 - **MUSIC 708 - Choral Literature Credits: 3**
 - **MUSIC 737 - Organ Literature Credits: 3**
 - **MUSIC 738 - Piano Literature Credits: 3**

- MUSIC 740 - Studies in Music Literature **Credits: 3**

Requirements for individual areas of specialization

Music education

Admission

An applicant in music education may arrange a personal audition or send a recording demonstrating ability in the major area of performance as part of the admission process. Those who do not do so will audition during the registration period.

Required Courses

As above with the following amplification: MUSIC 807: History and Philosophy of Music Education is required.

Performance

4 hours individual instruction in the major performance area of the student's undergraduate study, or in a chosen secondary performance area, or in advanced conducting.

Major field

Music education core: (6 credit hours.)

- MUSIC 805 - Theories of Music Education **Credits: 3**
- MUSIC 808 - Research in Music Education **Credits: 3**

Music education electives: (6-7 credit hours)

not more than 2 hours of 811 or 814 may be counted

- MUSIC 806 - Psychology of Music **Credits: 3**
- MUSIC 809 - Seminar in Music Education **Credits: 3**
- MUSIC 811 - Symposium in Music **Credits: 2**
- MUSIC 814 - World Music Pedagogy, Culturally Relevant Pedagogy, and Special Populations in Music Education **Credits: 3**

Master's report: (2 credit hours)

With the approval of the student's advisory committee and the graduate faculty of the area concerned, the requirements may be satisfied by one of the following:

1. A scholarly paper on some aspect of the student's major area of teaching;
2. An original composition of acceptable proportions, with an accompanying report;
3. A recital on the student's major instrument, the recital to be given under the conditions listed under the performance major;
4. Six additional semester hours of graduate courses in music education and/or advanced courses related field, (e.g., art, drama, education, philosophy, psychology, statistics, etc.).

Performance

Admission

Each student wishing to major in performance must audition in person or send a recording of a recent concert. The audition, or audition recording, must be of substantial length and include music from at least three different style periods. The audition must be approved by the faculty of the appropriate division.

Required Courses

As above with the following amplifications: History-Literature hours must include:

For wind and percussion students:

- MUSIC 704 - Symphonic Literature **Credits: 3**

For choral conducting students:

- MUSIC 708 - Choral Literature **Credits: 3**

For band conducting students:

- MUSIC 707 - History of Wind Bands **Credits: 3**

For string students:

- MUSIC 705 - Chamber Music Literature **Credits: 3**

For voice students:

- MUSIC 706 - Song Literature **Credits: 3**

For organ students:

- MUSIC 737 - Organ Literature **Credits: 3**

For piano students:

- MUSIC 738 - Piano Literature **Credits: 3**

Electives (4 to 6 credit hours)

Major field

A minimum of 12 hours in the division of the student's major performance area, 8 hours of which must be individual instruction. The remaining 4 hours may be in pedagogy, methods, or ensemble. Voice majors who are found deficient in knowledge of foreign language diction will take 1 hour of diction.

Master's report (recital), (2 credit hours)

All graduate students majoring in performance will perform a full recital of not less than one hour. The program for the recital must be approved by the student's advisory committee, and the advisory committee will judge the recital. All solo literature (including concertos) will be played from memory, unless the advisory committee grants an exception in recognition of unusual circumstances. The recital will be digitally recorded and the recording uploaded to EDTR, with supporting material, for presentation as a master's report. The student will also either (a) prepare substantial program notes of a historical and analytical nature, these notes to be with the recorded recital; or (b) present a lecture-recital on a major work not included on the master's recital, the lecture-recital to be recorded and uploaded to EDTR with the master's recital. Under both options a and b, the project is to be done under supervision of the major professor or the director of graduate studies. The program notes or the lecture should demonstrate the student's ability to investigate and interpret the historical aspects of a work, to analyze style, and to use commendable English. The literary standards should be comparable to those required for the usual master's report. Under option b the student's choice of a work must be approved by his or her advisory committee.

Additional requirements and policies: students in areas in which ensemble performance plays an important role will be expected to take part in appropriate ensembles and organizations as determined in consultation with the student's advisory committee.

History-literature

Required Courses

As above.

Performance

Collegium Musicum, 2 hours.

Major field

12 hours minimum

including at least 9 hours from the following:

- MUSIC 709 - History of School Choral Music **Credits: 3**
- MUSIC 830 - Seminar in Medieval and Renaissance Music **Credits: 3**
- MUSIC 832 - Seminar in Baroque Music **Credits: 3**
- MUSIC 834 - Seminar in Classical Music **Credits: 3**
- MUSIC 836 - Seminar in Romantic Music **Credits: 3**
- MUSIC 837 - Seminar in 20th-Century Music **Credits: 3**

Master's report: (2 credit hours.)

OR

Master's thesis: (6 credit hours)

This option is open by permission to history majors who are not required to take 601 and who have a special interest in research.

Electives (2 to 8 credit hours)

Additional requirements

Reading knowledge of foreign language; German or French preferred, Italian, Latin, Russian, or Spanish acceptable.

Oral examination

In defense of thesis or report.

Piano pedagogy

Major field

6 hours individual instruction and the following courses:

- MUSIC 821 - Piano Pedagogy I **Credits: 3**
- MUSIC 822 - Piano Pedagogy II **Credits: 3**
- MUSIC 823 - Supervised Teaching in Piano **Credits: 2**
- MUSIC 824 - Half Recital in Piano **Credits: 1**
- MUSIC 825 - Lecture Recital in Piano **Credits: 1**

Master's report (recital)

In place of a master's recital and report, all students will present a lecture–recital that will be musically-illustrated presentation on some aspect of piano pedagogy. MUSIC 824 and MUSIC 825 will replace the two credits of MUSIC 898 Graduate Report.

Composition

Admission

Entrance to the program normally requires at least 26 undergraduate hours of composition courses. The applicant should submit original scores to the composition faculty for approval.

Required Courses

As above with the following amplification:

- MUSIC 837 - Seminar in 20th-Century Music **Credits: 3**

Performance

One course (2 hours) in advanced conducting or score reading.

Major field

Total, 16 hours, as follows: 10 to 14 hours, including MUSIC 802 (Seminar in Music Theory) or MUSIC 804 (Advanced Analysis), and individual instruction in composition; and master's report, 2 hours or master's thesis, 6 hours. The report or thesis may be either a theoretical paper or a composition in a larger form with an accompanying report.

- MUSIC 802 - Seminar in Music Theory **Credits: 3**
or
- MUSIC 804 - Advanced Analysis **Credits: 3**

Electives (Up to 6 credit hours.)

Additional requirements and policies

The composition student must prove his or her proficiency in conducting and in electronic instrumentation, either by class study or by actual performance in the area.

All students receiving individual instruction in composition are required to copy their music in the prescribed professional manner.

Wherever possible, the composer should assume the responsibility of seeing to the performance of his or her own music.

Music Education Summer Program

Please visit <http://www.k-state.edu/musiceducation/summergrad/index.html> for more information.

Required Courses (17 credit hours)

- MUSIC 707 - History of Wind Bands **Credits: 3**
OR
- MUSIC 709 - History of School Choral Music **Credits: 3**
- MUSIC 801 - Introduction to Graduate Study in Music **Credits: 2**
- MUSIC 802 - Seminar in Music Theory **Credits: 3**
- MUSIC 807 - History and Philosophy of Music Education **Credits: 3**
- MUSIC 808 - Research in Music Education **Credits: 3**

Major Field (15 credit hours)

- MUSIC 719 - Marching Band Techniques **Credits: 2**
OR
- MUSIC 720 - Choral Ensemble Techniques **Credits: 2**
- MUSIC 728 - Advanced Instrumental Rehearsal Techniques **Credits: 2**
OR
- MUSIC 729 - Advanced Choral Rehearsal Techniques **Credits: 2**
- MUSIC 805 - Theories of Music Education **Credits: 3**
- MUSIC 858 - Advanced Choral Conducting **Credits: 1-2**
OR
- MUSIC 859 - Advanced Instrumental Conducting **Credits: 1-2**

Choose one from the following:

- MUSIC 722 - Arranging for Bands **Credits: 2**
- MUSIC 730 - Organization and Administration of School Music Programs **Credits: 2**
- MUSIC 806 - Psychology of Music **Credits: 3**

Electives (4 credit hours)

- MUSIC 710 - Percussion Pedagogy **Credits: 2-3**
- MUSIC 711 - Concert and Ethnic Percussion Techniques **Credits: 2-3**
- MUSIC 712 - Jazz and Marching Percussion Techniques **Credits: 2-3**
- MUSIC 721 - Jazz Techniques **Credits: 2**

Masters Report (2 credit hours)

With the approval of the student's advisory committee and the graduate faculty of the area concerned, the requirements will be satisfied by a scholarly paper that includes detailed analysis of performance literature, rehearsal plans, and performance documentation in the student's major area of teaching.

Master's report or thesis

The master's report should demonstrate the student's ability to locate and gather information, to organize this information, and to interpret and evaluate it. While the subject need not be taken from a totally unexplored area, the master's report should reflect originality of thought and approach, and it must represent essentially the student's own work. The report is written with the guidance of the major professor. The director of graduate studies is the second reader and should be consulted early in the work. The other member of the advisory committee also reads the report and should be consulted well before the work is finished.

The master's thesis differs from the report only in the broader scope and greater length required.

Both the thesis and the report must be in clear and commendable English. The form and style should follow Irvine's Writing About Music, 3rd edition, revised and enlarged by Mark A. Radice (Portland, Oregon: Amadeus Press, 1999). (Music education majors will use the Publication Manual of the American Psychological Association, most current edition, instead.)

For discussion of the master's report (recital), see above under the performance specialization.

Final examination

The purpose of the final examination is to expose required learnings from your graduate program of study and should include questions from the three general areas: the candidate's major field, history-literature, and theory. The candidate will be expected to demonstrate a breadth of knowledge in the field of music covered in their course work. The final examination for the master of music degree consists of either a written examination of four questions to be answered within a four hour period of time or an oral defense of their master's recital/report/thesis. The responsibility for evaluating the examination lies with the candidate's supervisory committee. Although focused on the program of study, the candidate will be expected to demonstrate a breadth of knowledge in the field of music beyond that covered in course work, as well as the ability to relate his or her special area to other areas. The responsibility for evaluating the examination lies with the candidate's supervisory committee.

Problems courses

Not more than three hours in MUSIC 799: Problems in Music should ordinarily be applied to the master's degree except that two hours of Problems in Music may be applied to the master's report.

The purpose of the Problems in Music course is to provide opportunity for guided independent study in areas not included in regular course offerings. If scheduling difficulties have made it impossible for the student to take a needed or desired course, Problems in Music may be used to cover that subject matter.

Symposium in music and workshops

MUSIC 811: Symposium in Music and the other short, concentrated workshop courses, designed especially for school music teachers and supervisors, are given during the summer session. Often these are taught by visiting musicians and educators of national prominence. The symposium and various workshops carry graduate credit, but only 2 hours of these courses may be applied toward the master's degree. Further information may be obtained from Professor Jana Fallin, Department of Music, Kansas State University, 109 McCain Auditorium, Manhattan, KS 66506-4702.

Total Hours Required for Master's: 32-36

Program description

The research programs of the Department of Physics are focused in the areas of atomic, molecular and optical physics, condensed, soft and biological matter physics, physics education, cosmology, and high energy physics. We have concentrated our major research commitments in these areas to maintain strength and balance. The Department of Physics offers graduate programs leading to the M.S. and Ph.D. degrees. These are described here with the research interests of the faculty. Our graduate core curriculum is an excellent foundation for work in a large variety of specialties.

Careers

Graduate study in physics provides training for many varied academic and technological careers. Graduates in physics at all levels have found attractive careers in industrial and governmental laboratories and in academic departments. Graduates from K-

State are presently engaged in communications research, x-ray laser development, genetic research, university teaching and research in various areas of physics, petroleum research, industrial electronics, and many other fields. M.S. graduates generally occupy skilled technical positions and Ph.D. graduates generally occupy positions requiring independent work in a wide range of areas.

Research and facilities

Atomic, molecular and optical physics

The experimental atomic, molecular and optical physics group is involved in a diverse program that investigates the interactions of atoms, molecules and light using intense ultrashort laser pulses. High harmonic generation, ionization, electron re-scattering and molecular breakup are a few of the problems being investigated using the state-of-the art lasers housed in the James R. Macdonald Laboratory (JRML), which can produce pulses from the infrared to X-ray regimes. The Laboratory also houses research using ultrafast fiber lasers to investigate frequency combs, with a goal of developing applications useful in the telecommunications industry, and research into the coherent control of cold photo-association collisions.

The results of the experiments carried out in the lab are compared to the theoretical predictions made by the Kansas-State theory group as well as by theorists elsewhere. The close interplay between theorists and experimentalists often leads to a better understanding of the physics and in some cases suggests new phenomena, experimental methods, or improved calculation methods. The combination of strong groups in both theory and experiment within the same department makes Kansas State one of the leading atomic, molecular and optical physics groups in the world. Because of this, we have attracted researchers from around the world to come to Kansas State to carry out their experiments.

Condensed, soft and biological matter physics

Our condensed matter physics group performs research in a multitude of areas, including controlled assembly of nanoparticles into 2-D and 3-D solids, the stretching of proteins, and growth of nanowires and their application to living cells. Our soft and biological matter group works at the interface of physics, chemistry and biology.

Cosmology and particle astrophysics

The K-State cosmology group studies the physical properties and evolution of the Universe. Questions we are trying to address include: Why is the Universe's expansion accelerating? What is Dark Energy and Dark Matter? We develop theoretical models and look into cosmological data to provide answers to these fundamental questions."

High energy physics

This group studies physics at the smallest known scales of the universe; the indivisible particles that make up atoms and matter. The group seeks to provide answers to many fundamental questions of physics such as the existence of extra dimensions of space, dark energy and the nature of the dark matter of the universe and the origin of mass. The group members collaborate with many groups throughout the world, including the Fermilab near Chicago, and with CERN in Switzerland, where recently they were involved in discovering the Higgs boson.

Physics education research

The physics education research group conducts research related to the teaching and learning of physics, and develops learning materials based on that research and the research of others. The group continues to develop cutting-edge teaching technology, as well as improve both in-service and pre-service teacher education.

Financial support

The department is continually awarded outside support for research and teaching. The extramural research support for the department has averaged over \$6.5 million during each of the last four years. This support is important for the graduate student because it is an indication that the research conducted by the department is regarded highly by the research peers who review the department's proposals. It also indicates that a large number of graduate research assistantships are available in the department. Exceptional students can compete for university graduate fellowships and graduate fellowships offered by the Graduate School. Applications must be completed by January 8 to be considered for a fellowship. The schedule for teaching assistants is about 8 to 10 hours per week in laboratory sections in the introductory physics courses. Summer appointments as research assistants are generally available. The stipend is sufficient for a comfortable life in Manhattan.

Doctor of Philosophy

Physics (PHD)

Program description

The research programs of the Department of Physics are focused in the areas of atomic, molecular and optical physics, condensed soft and biological matter physics, cosmology and particle astrophysics, high energy physics, and physics education research. We have concentrated our major research commitments in these areas to maintain strength and balance. The Department of Physics offers graduate programs leading to the Ph.D. degree. These are described here with the research interests of the faculty. Our graduate core curriculum is an excellent foundation for work in a large variety of specialties.

Admission Requirements

For regular admission to the graduate program, a bachelor's degree in physics, a minimum upperclass GPA of 3.0, and the results of the GRE advanced test in physics are recommended. Candidates with degrees in mathematics, chemistry or engineering will also be considered. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate. Students from non-English speaking countries are required to show proficiency in English via the TOEFL, IELTS or PTE exams. See <http://www.k-state.edu/grad/admissions/application-process/international/index.html#English-Proficiency-Requirements> for more information. Applications for admission to the program in the fall semester should be completed by January 1 at <https://www.applyweb.com/kstateg/>.

Careers

Graduate study in physics provides training for many varied academic and technological careers. Graduates in physics at all levels have found attractive careers in industrial and governmental laboratories and in academic departments. Graduates from K-State are presently engaged in communications research, x-ray laser development, genetic research, university teaching and research in various areas of physics, petroleum research, industrial electronics, and many other fields. M.S. graduates generally occupy skilled technical positions and Ph.D. graduates generally occupy positions requiring independent work in a wide range of areas.

Research areas

Experimental atomic physics

The experimental atomic, molecular and optical physics group is involved in a diverse program that investigates the interaction of highly-charged ions with various target media. The ions are created as beams by several ion sources and accelerators located in the J. R. Macdonald Laboratory for atomic physics. The ion beams used in the experiments have a well-defined charge and energy and are thus ideally suited to investigating the behavior of collisions under a variety of well-defined conditions. Single- and multi-electron atomic and molecular processes are investigated by observing the final ionic species and their decay products.

The targets in these collisions consist of ground state and laserexcited atoms and molecules, as well as atomic and molecular ion beams. Many measurements are precise enough to provide information about the specific quantum mechanical states involved in the reaction. The results of these observations are compared to the theoretical predictions made by the Kansas-State theory group as well as by theorists elsewhere. The close interplay between theorists and experimentalists often leads to a better understanding of the physics and in some cases suggests new phenomena, experimental methods, or improved calculation methods. The combination of strong groups in both theory and experiment within the same department makes Kansas State one of the leading atomic physics groups in the world. Because of this, we have attracted researchers from around the world to come to Kansas State to carry out their experiments.

A new ultra-short pulse, ultra-high intensity laser system is being used to study the interaction of the laser light with atoms, ions and molecules. High harmonic generation, ionization, electron re-scattering and molecular breakup are a few of the problems being investigated. The theorists are working in close collaboration with the experimentalists in these endeavors.

Experimental condensed matter physics

The experimental condensed matter group at K-State is conducting research in a wide range of often inter-related areas.

Research on condensed phases include the physics of aggregates, their optics (scattering and absorption), morphology, how they form and how they move; particularly in the context of aerosols, synthesis and properties (magnetic and optical) of nanoparticles and their assemblies (such as superlattices and gels) and of water, especially supercooled, and aqueous solutions.

Phase transitions at liquid surfaces and within multilayer liquid films are being studied via optical techniques in order to better understand the physics at the boundaries of bulk materials. Surface structure is strongly influenced not only by the interactions at interfaces but also by any phenomena which is occurring in the adjacent bulk medium. We have therefore been studying (i) the coupling between bulk second order phase transitions and surface phenomena where we have observed universal surface critical behavior in both semi-infinite systems and within thin films and (ii) surface interactions and how these influence and govern surface phase transitions and surface dynamics on a molecular level. A more complete understanding of surface phenomena will be of benefit for many important technological and biological processes, such as, surface chemical reactions, lubrication, and fluid flow through biological membranes or porous media.

Magnetic nanostructures such as nanoscale particles, single layers and multilayers containing rareearths are prepared by sputter deposition. Making materials small modifies their properties in a number of interesting ways and in this work we look at how the properties of permanent magnets based on Nd₂Fe₁₄B and SmCo₅ are modified. Magnetic properties down to 5 K are studied in fields up to 55 kOe and the structure of the materials is characterized with x-ray diffraction and electron microscopy. Our effort can be divided into two areas: 1) improving the hard magnetic properties of permanent magnets (coercivity, energy product) by preparing these materials in very small form, 2) understanding how the observed improvements can be explained in terms of size and interfacial effects.

Experimental high energy physics

The High Energy Physics group has strong research programs in collider physics. Kansas State physicists are playing a key role in building the silicon vertex detector for the next upgrade of the D0 experiment at Fermilab, and are now analyzing data from the frontier of high energy proton-antiproton collisions from the previous D0 experiment. To remain at the energy frontier, they are also heavily involved in preparations for the CMS experiment now under construction at CERN.

The High Energy Physics group is also strong in neutrino physics. K-State physicists have major roles in data analysis and Monte Carlo simulation for the KamLAND experiment and the proposed Double CHOOZ and Braidwood experiments. HEP group

members are leaders in the background working group of Braidwood and the on-line group of Double CHOOZ, and have initiated several local research projects to advance the future development of Braidwood, Double CHOOZ, and KamLAND.

Theoretical and computational physics

The department offers a diversified program in theoretical and computational physics, including atomic, solid state, soft condensed matter, molecular and surface physics, statistical mechanics, materials physics, cosmology and particle astrophysics. There is significant interaction between experimentalists and theorists within the department and there is also collaboration with faculty in chemistry, biochemistry and engineering. Seminars are held weekly in several of these areas.

Computational physics students are trained to solve accurately and efficiently problems in physics using a wide range of computational techniques. An important aspect of the training is the presentation of problem solutions in a way that can be easily visualized and understood. Various algorithms for molecular dynamics simulation, Monte Carlo methods, ab-initio electronic structure calculations and solutions of generalized Langevin equations are being developed. A strong focus in this area is in the development of efficient algorithms to best exploit the benefits of parallel architecture in modern computers.

A broad range of computational facilities is available in our department with the main computations being carried out using the departmental cluster of Compaq Alpha workstations, high-end and low-end Unix and Linux workstations, and the high performance computational environment provided by clusters of Linux computers. A number of faculty members and their students use supercomputers at national centers in their work, in addition to facilities housed on our own campus.

Some studies of mathematical methods in physics have also been carried out by our faculty and graduate students. These include: studies in group theory with application to atoms, molecules, and nuclei; development of the method of hyperspherical coordinates; and development of complex integration with application to Coulomb wavefunctions. Mathematical aspects of formulations of the fewbody and many-body problem have also been developed in our department.

There is strong national and international collaboration with other colleagues. We have a steady exchange with scientists in Argentina, Brazil, China, Denmark, England, France, Finland, Germany, India, Italy, Japan, Korea, Pakistan, Portugal, Spain, Sweden, and Taiwan. We participate actively in conferences ranging from regional to international. Professors, graduate students and post-doctoral fellows all take part in these meetings.

Theoretical atomic and molecular physics

A broad range of topics in both scattering theory and atomic and molecular structure are studied. These studies are often initially motivated by the need to understand experimental results; they provide broader perspectives on electronic interactions in atoms that are then further tested in experiments. To complement this focus on experimentally driven results, investigations of a fundamentally theoretical nature are also carried out including the development of novel theoretical and computational methods. Theoretical models for collisions of ions, electrons, and photons with atoms and molecules over a broad range of energies are being developed to understand the transfer of energy and momentum among the collision partners. These studies are developed to understand the results of experiments performed at Kansas State and at other laboratories. The study of atomic structure covers a detailed mapping of the de-excitation of atoms and ions produced in such collisions. Our studies of multiply excited states of atoms using hyperspherical coordinates are revealing the similarity between the collective electronic excitations of atoms and the rotational-vibrational modes of polyatomic molecules. Our investigations of interactions of ions (atoms) with surfaces and clusters (such as C₆₀) contribute to a better understanding of corrosion, catalysis, and the still new field of fullerene chemistry.

Theoretical condensed matter physics

The Theoretical Condensed Matter Physics group works in a number of related areas, trying to understand structural, physical, chemical, electronic, vibrational, magnetic, optical, and other properties of solids and condensed phases. The types of systems studied include polymer mixtures and block copolymers, polymer films on rough substrates, metals and semiconductors and their alloys, surfaces, nanocrystallites and nanostructures, chemisorbed gases, magnetic layers, and fine magnetic particles. Theorists working in condensed matter theory apply quantum mechanics, statistical mechanics and advanced computational techniques such as ab-initio electronic structure calculations and classical and quantum Monte Carlo and molecular dynamics simulations, to model the fundamental interactions between atoms and molecules in a material. All of our theorists use computation as an important tool. In addition to achieving a basic theoretical understanding of how atomic interactions lead to interesting macroscopic behavior, an important goal of our condensed matter theorists is to describe many phenomena of technological importance, such as corrosion, catalysis, wetting, phase changes, magnetic and electronic data storage, and friction and nanotribology. Ultimately, theory developed in collaboration with experimentalists will contribute towards the development of novel materials and new and interesting devices based on those materials.

Cosmology and particle astrophysics

The cosmology research program spans both theoretical work and analyses of cosmological data. On the theoretical side we work on developing models for the large-scale matter and radiation distributions in the Universe. We study observational consequences of Dark Energy and gravity models and test them by comparing their predictions with observational data, including the anisotropy in the cosmic microwave background radiation, and the mass correlation function.

Physics education

The Physics Education Research Group at K-State investigates the learning and teaching of physics using methods drawn from physics education research, the learning sciences, and science education. The group applies evidence from research to develop ways to improve physics learning. In recent years the work of this group has concentrated research on how students learn physics and mathematics, how they come to think as physicists, and ways to make this and other research available to physics instructors at all levels. Further efforts have involved the development of learning materials for the high school and college level and the training and support of science teachers and physics faculty members through both in-person and online resources.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Physics (MS)

The Master of Science in Physics degree is a 30 credit degree to meet the needs of students interested in expanding their knowledge of physics beyond the undergraduate level, who wish to pursue careers in skilled technical fields that include basic science & research, space & earth science, environmental science, lasers, engineering, medicine, computers, education, industry, and science communications. There is i) a research thesis option for those who wish to apply their efforts to original research in some field of physics, and ii) a research report option for those who wish to apply their efforts in understanding or describing a topic in physics. The research areas available to students are 1) atomic, molecular and optical physics, 2) condensed, soft, and biological matter physics, 3) cosmology and particle astrophysics, 4) high energy physics, and 5) research in physics education.

Admission Requirements

For regular admission to the graduate program, a bachelor's degree in physics or closely related field (mathematics, chemistry, or engineering) with a minimum GPA of 3.0 is recommended. Other requirements are those of the Graduate School. Preference is given to applicants in the PhD program. Prospective students must submit a completed graduate school application form, transcripts of previous coursework, a statement of objectives, and three letters of recommendation. GRE exams are not required but can be submitted if available. Students from non-English speaking countries are required to show proficiency in English via the TOEFL, IELTS or PTE exams. See <http://www.k-state.edu/grad/admissions/application-process/international/index.html#English-Proficiency-Requirements> for more information. Applications for admission to the program in the fall semester should be completed by the early January deadline. See Application for Admission (k-state.edu).

Graduation Requirements

M.S. Degree Requirements

- 30 credit hours of coursework are required.
- For the research report option, students must write a report and enroll in 2 hours of credit in PHYS 899.
- For the research thesis option, students must write a research thesis and enroll in 6 to 8 hours of credit in PHYS 899.
- Students must select either the report option or the thesis option by the end of the second semester in the M.S. program. By the same deadline, the student must select a major professor and form a supervisory committee and file a program of study. If the degree option is not explicitly chosen in the program of study, it will default to the thesis option.
- There is no departmental qualifying exam for the M.S. degree.
- The student will present a copy of the thesis or report to each member of their supervisory committee, in advance of the student's final oral exam for the M.S. degree, which will be conducted as outlined in the Graduate School Handbook.

Course Requirements

The program of study for the M.S. in physics program requires 30 total credit hours, selected from the following:

Required Courses

(23 credit hours)

- PHYS 801 - Mathematical Methods of Physics **Credits: 3**
- PHYS 806 - Journal Club **Credits: 1-18**
- PHYS 807 - Graduate Physics Seminar **Credits: 1**
- PHYS 811 - Quantum Mechanics I **Credits: 3**
- PHYS 821 - Advanced Dynamics **Credits: 3**
- PHYS 831 - Electrodynamics I **Credits: 3**
- PHYS 911 - Quantum Mechanics II **Credits: 3**
- PHYS 931 - Electrodynamics II **Credits: 3**
- PHYS 971 - Statistical Mechanics **Credits: 3**

Elective Courses

7 or more credit hours

- PHYS 701 - Cosmology **Credits: 3**
- PHYS 707 - Topics in Physics **Credits: 1-18**
- PHYS 709 - Applied Quantum Mechanics **Credits: 3**

- PHYS 741 - The Physics of Lasers **Credits: 3**
- PHYS 775 - Biological Physics **Credits: 3**
- PHYS 800 - Problems in Physics I **Credits: 1**
- PHYS 802 - Computational Methods in Physics **Credits: 4**
- PHYS 808 - Advanced Problems **Credits: 1-18**
- PHYS 850 - Theory of Atomic Structure and Atomic Interactions **Credits: 3**
- PHYS 860 - Electron and Ion Impact Phenomena **Credits: 3**
- PHYS 870 - Nonlinear and Quantum Optics **Credits: 3**
- PHYS 881 - Introduction to Solid State Physics **Credits: 3**
- PHYS 899 - Research in Physics **Credits: 1-18**
- PHYS 907 - Advanced Topics in Physics **Credits: 0-18**
- PHYS 912 - Advanced Quantum Mechanics **Credits: 3**
- PHYS 913 - Advanced Topics in Mathematical Physics **Credits: 3**
- PHYS 914 - Quantum Field Theory **Credits: 3**
- PHYS 915 - Quantum Field Theory II **Credits: 3**
- PHYS 953 - Advanced Topics in Atomic Interactions **Credits: 1-18**
- PHYS 981 - Solid State Physics **Credits: 3**
- PHYS 982 - Advanced Topics in Solid State Physics **Credits: 3**

Total Hours Required for Master's: 30

Political Science

Nathaniel Birkhead, Head

polsci@k-state.edu

<http://www.k-state.edu/polsci/>

Admissions Criteria

To be eligible for admission, a student must have a bachelor's degree with a minimum of 3.0 GPA (on a 4.0 scale). Others with at least a 2.7 GPA may be admitted on probation, or on special student category. Admission to the MPA and MA programs and financial assistance are based on academic accomplishment and promise. Admission applications are welcome at any time.

Application Procedure

- Go to <https://www.applyweb.com/apply/kstateg/> to fill out an online application. Supporting documents need to be uploaded directly with your application.
- Supporting materials for *domestic* students:
 - Payment of a processing fee will be required before officially submitting your graduate school application.
 - Statement of objectives.

- 3 letters of recommendation [must be originals on official letterhead uploaded directly to your application by your references].
- Transcripts from all previous colleges attended [must be originals].
- Supporting materials for *international* students:
 - Payment of a processing fee will be required before officially submitting your graduate school application.
 - Statement of objectives.
 - 3 letters of recommendation [must be originals on official letterhead uploaded directly to your application by your references].
 - Transcripts from all previous colleges attended.
 - TOEFL or other English language competency score: less than 2 years old.
 - Financial affidavit plus **original** bank documents: **MUST BE CONVERTED TO USD.**

International Students: English Language Competency

- The Graduate School requires each international applicant whose native language is not English to demonstrate competence in the English language by achieving a satisfactory score (defined below) on the Test of English as a Foreign Language (TOEFL), the International English Language Testing System (IELTS) and Pearson Test of English (PTE). The TOEFL, IELTS or PTE is required to ensure that the student's progress toward a degree is not jeopardized by language barriers.
- The TOEFL (K-State TOEFL school code 6334) is offered several times a year throughout the world by the Educational Testing Service, Princeton, New Jersey.
- International applicants are advised to take the TOEFL as early as possible to avoid delays in the processing of their applications for admission. However, the test date should be no older than eighteen months from the application deadline for international applicants.
- **English Proficiency Requirements**
 - Applicants who are submitting IBT TOEFL (internet based) scores must have a minimum total score of 79 with no part score below 20 on the reading, listening, and writing sections.
 - Applicants who are submitting paper-based TOEFL (PBT) test scores must have a minimum total score of 550 with no part score below 55 on reading or listening sections and a TWE (Test of Written English) score of 5.0 or higher.
 - Applicants who are submitting an IELTS score must have a minimum total score of 6.5 with part scores of 6.5 or higher on the reading, listening, and writing sections.
 - Applicants who are submitting a Pearson Test of English (PTE) score must have a minimum total score of 58 with part scores of 58 or higher.
 - Applicants who do not meet the scores specified above must meet the following criteria during the first semester of enrollment in order to satisfy the English proficiency requirement:
 - Applicants with **one or two low part scores** (14-19 IBT, 48-54 PBT, 5.0-6.4 IELTS, or 47-57 PTE) must successfully complete one or more of the specified classes based on the section of the examination that is below the minimum (20 IBT; 55 on reading or listening sections and a TWE of less than 5.0 on PBT; 6.5 IELTS; 58 PTE):
 - Applicants with **three part scores below** 20 IBT, 55 PBT, 6.5 IELTS, or 58 PTE are required to take the English Proficiency Test (EPT) and successfully complete the English course(s) specified on their EPT score reports.
 - Applicants with any one score below 14 IBT, 48 PBT, 5.0 IELTS, or 47 PTE must take the English Proficiency Test and successfully complete full time intensive English.

Financial Assistance

The Department of Political Science has two types of financial assistance available to support graduate study. This includes graduate assistantships and graduate scholarships. The application deadline for all department financial assistance is March 1.

- **Graduate Scholarships & Assistantships**

- The Department of Political Science offers a number of scholarships. These vary in terms of the amount of assistance and the exact requirements of each. To view a list of available scholarships and fellowships and learn how to apply, click here!
- The Department of Political Science also provides financial assistance in the form of a graduate assistantship on a competitive basis in exchange for assistance to faculty with their teaching, research, or administrative responsibilities. Specific assignments to teaching or research depend on the needs and abilities of the graduate assistant, and the needs of the department. Assistantships must be applied for on a yearly basis. For more information and how to apply, click here!

- **Selection criteria**

- Academic performance, promise, and intellectual ability.
- Past performance as a departmental assistant, if applicable.
- Needs of the department faculty.
- Financial need.

- **Conditions of Assistantship**

Graduate assistants must enroll in a minimum of six credit hours per semester and make reasonable degree progress as reflected by at least a 3.0 GPA. During the period of appointment, assistants may not hold another paid full-time position of any kind. The department reserves the right to withdraw support at any time if academic performance falls below the 3.0 GPA, or if the job performance is not satisfactory. The assistantship is awarded for one academic year, assuming all conditions are met. A reapplication is required for each additional year of support.

- **Amount of Assistantship**

- Graduate assistantships involve a stipend, a tuition waiver for up to 10 credit hours per semester and fee reductions. The amount of the stipend changes from year-to-year and may be obtained by contacting the graduate program's Director.
- Graduate assistants are required to work a maximum of 20 hours per week in support of the research, teaching, and administrative activities of departmental faculty and staff.

- **Award Announcement**

All applicants will be notified of the department's decisions, and award recipients will be asked to acknowledge acceptance formally. Awards are announced mid-April.

Accelerated

Accelerated Political Science (BA)/Master of Public Administration (MPA)

The accelerated Accelerated Political Science (BA)/Master of Public Administration (MPA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Public Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.

- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- The program requires a total of 160 credit hours including 120 undergraduate hours and 40 graduate hours.
- However, a maximum of 9 credit hours from the graduate degree can also be counted towards the undergraduate degree, effectively reducing the total number of hours to 151.
- The 9 credit hours to be counted for both undergraduate and graduate credit must be chosen from among the "core courses" described below.
- Graduate courses must be completed with an overall GPA of at least a 3.0 GPA.
- At least 24 of the hours on the graduate program of study must be at the 700 or above level.

Course Requirements

Master of Public Administration (MPA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- POLSC 700 - Research Methods in Political Science **Credits: 3**
- POLSC 702 - Public Administration and Society **Credits: 3**
- POLSC 708 - Public Personnel Administration **Credits: 3**
- POLSC 710 - Policy Analysis and Evaluation **Credits: 3**
- POLSC 735 - Public Organization Theory **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Political Science (BA)/Security Studies (MA)

The accelerated Accelerated Political Science (BA)/Security Studies (MA) will provide high-performing undergraduates the opportunity to pursue an accelerated MA/Master of Arts in Security Studies degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process will be the same as for applicants that are seeking the stand-alone M.A. in security studies, but they will not be required to have completed their undergraduate degree. The earliest that students can submit applications for admission is at the January submission deadline during their junior year (after five semesters). A completed application requires the following materials:

- A statement of objectives
- Three letters of recommendation
- A transcript from each academic institution since high school
- A writing sample

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The program requires a total of 150 credit hours including 120 undergraduate hours and 30 graduate hours.

- However, a maximum of 9 credit hours from the graduate degree can also be counted towards the undergraduate degree, effectively reducing the total number of hours to 141.
- Graduate courses must be completed with an overall GPA of at least a 3.0 GPA.
- At least 18 of the hours on the graduate program of study must be at the 700 or above level.

Course Requirements

Security Studies (MA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- POLSC 625 - East Asian Politics **Credits: 3**
- POLSC 626 - African Politics **Credits: 3**
- POLSC 630 - Politics of Russia and the Former Soviet Union **Credits: 3**
- POLSC 642 - International Conflict **Credits: 3**
- POLSC 700 - Research Methods in Political Science **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Political Science (BS)/Master of Public Administration (MPA)

The accelerated Accelerated Political Science (BS)/Master of Public Administration (MPA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Public Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Graduate Certificate

Public Administration Graduate Certificate

Contact: James Franke

E-mail: jfranke@k-state.edu

Home Page: www.k-state.edu/polsci/

The mission of the Graduate Certificate in Public Administration is to provide a flexible professional certificate program for those who desire to pursue professional training in principles of public management in order to advance their administrative careers in the public sector and the nonprofit sector. Certificate holders will be trained for entry level management positions with government and nonprofit agencies at the federal, state, or local level, and with regional or sub-state organizations.

Students with a Graduate Certificate in Public Administration will understand the general principles of public administration, including but not limited to public sector budgeting, personnel, public organization theory, and research methods. Course work may be accomplished entirely via various distance learning technologies so that students will not need to be resident in Manhattan in order to obtain this certificate.

After obtaining the certificate, if they so desire students may apply their certificate hours towards a Master of Public Administration at Kansas State University.

The Graduate Certificate in Public Administration is offered through the Political Science graduate program.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Public Administration at Kansas State University.

Course Requirements

Students are required to take 15 hours (5 courses) of course work, 12 of which are core courses and 3 of which are elective hours.

Required Courses

The core courses are listed below. POLSC 708, POLSC 735 and POLSC 737 are required. Students may choose either POLSC 700 or POLSC 710 as their fourth core course. Whichever of the two is not chosen may be taken as an elective. 12 credit hours

- POLSC 708 - Public Personnel Administration **Credits: 3**
- POLSC 735 - Public Organization Theory **Credits: 3**
- POLSC 737 - Public Budgeting **Credits: 3**
- POLSC 700 - Research Methods in Political Science **Credits: 3**
- OR
- POLSC 710 - Policy Analysis and Evaluation **Credits: 3**

Elective Courses

Elective Courses are listed below. Students should choose one. 3 credit hours

- * POLSC 607 - Administrative Law **Credits: 3**
- * POLSC 618 - Urban Politics **Credits: 3**
- POLSC 620 - State and Local Government **Credits: 3**
- POLSC 628 - Civic Engagement **Credits: 3**
- * POLSC 700 - Research Methods in Political Science **Credits: 3**
- OR
- * POLSC 710 - Policy Analysis and Evaluation **Credits: 3**
- POLSC 711 - Administrative Ethics **Credits: 3**
- POLSC 739 - Intergovernmental Relations **Credits: 3**
- POLSC 740 - Nonprofit Financial Management **Credits: 3**
- * POLSC 785 - Readings in Political Science **Credits: 3**
- POLSC 799 - Pro-Seminar in Political Science **Credits: 3**
- * POLSC 812 - Foundations of Security Studies **Credits: 3**

** Typically available online.*

Total Hours Required for Graduate Certificate: 15

Security Studies Graduate Certificate

The graduate certificate in Security Studies is a rigorous, interdisciplinary, and professionally-oriented program of graduate studies, and is available for both on campus and distance students. The certificate provides a broad, analytical perspective on national and international security issues. Coursework concentrates on issues of strategy, politics, economics, and society from both historical and social science perspectives. A minimum of 15 credits is required.

Students currently or previously enrolled in Ft. Leavenworth's Command and General Staff College may apply to transfer up to 3 credits towards the completion of the Security Studies Graduate Certificate.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Security Studies at Kansas State University.

Admission Requirements

- Bachelor's degree

Course Requirements

Required Courses

- History Topics Courses **Credits:** *6two HIST 850- or HIST 860-level courses for 6 credit hours total*
- POLSC 812 - Foundations of Security Studies **Credits:** 3
- POLSC 813 - International Security **Credits:** 3
- POLSC 814 - Terrorism and Transnational Security Issues **Credits:** 3

Total Hours Required for Certificate: 15

Master of Public Administration

Master of Public Administration (MPA)

The Master of Public Administration (MPA) degree at Kansas State University prepares both mid and pre-career students to serve the public interest and establish themselves as civic leaders. The program emphasizes a theoretically informed and research driven skills based approach to learning designed to insure that our students develop specific competencies which prepare them for the challenges of work in the public and nonprofit sectors immediately upon graduation. Students are given a broad exposure to policy systems, political environments, administrative principals and research methods. Additionally, students are required to think critically, apply knowledge and seek practical solutions to real world problems.

Course Requirements

For pre-career students lacking significant administrative experience, the degree requires 37 hours of graduate credit including a one credit hour internship involving at least 400 hours of employment in an appropriate public or nonprofit setting. The one credit hour internship is not required of mid-career students with administrative experience. Full-time students are normally able to complete the degree in two years- four semesters plus one summer course.

The curriculum of study for the Master of Public Administration program includes core, elective and area of emphasis courses.

All core and elective courses, and most area of emphasis courses, are taught on a regular basis- once per academic year or every other academic year. Students can obtain a projection of courses to be offered over the course of their program of study.

Core Curriculum	21 credit hours
Electives	9 credit hours
Area of Emphasis	6 credit hours
Internship	1 semester hour (pre-career students only)
Total	37 semester hours (36 for mid-career students)

Required Courses: 21 Credit Hours

The core curriculum is composed of seven required courses which focus upon subject matter that any administrator needs to master and use. Students are advised to take all core courses except POLSC 831 early in their degree programs. Please note that each of these courses is only offered once per academic year.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

- POLSC 700 - Research Methods in Political Science **Credits: 3** Fall Semester
- POLSC 702 - Public Administration and Society **Credits: 3** Fall Semester
- POLSC 708 - Public Personnel Administration **Credits: 3** Fall Semester
- POLSC 738 - Public Finance **Credits: 3** Fall Semester
- POLSC 710 - Policy Analysis and Evaluation **Credits: 3** Spring Semester
- POLSC 831 - Public Administration Capstone **Credits: 3** Spring Semester
- POLSC 711 - Administrative Ethics **Credits: 3** Spring Semester
- POLSC 737 - Public Budgeting **Credits: 3** Spring Semester

Elective Courses: 9 Credit Hours

Students choose elective courses in order that their required courses, transfer credits, and electives total 37 hours. Those electives are primarily chosen from among political science and relevant program courses at the 700-level or above. Courses from other departments, and courses below 700-level, may be taken with permission of the student's advisor. For advice on electives, students should consult with the director of the Public Administration program or members of the MPA committee.

MPA Area of Emphasis: 6 Credit Hours

Each student must develop a particular emphasis. Below are several areas of emphasis which we highly recommend to our students. Students wishing to propose other emphases may do so with the advice and consent of the Director of Graduate Studies.

- Public Budgeting and Finance
- Planning
- Security Studies
- State and Local Government

MPA Internship: 1 Credit Hour

Pre-Career Students

- Pre-service students are required to complete an internship (POLSC 897). This entails serving in a full-time administrative position for a period of at least 10 weeks (400 hours) in the public sector, or in a not-for-profit agency.
- Internship positions are coordinated by the Director of Graduate Studies. Ideally the internship should occur after the second semester of full time coursework. All internships are competitive in nature and are available on a regular basis with state, county, and local governments. A student's progress in the internship is monitored by the student's immediate supervisor and by the Director of Graduate Studies.
- Please note that the internship should not be done until most of the core courses are completed

Mid-Career Students

Mid-career students with significant employment experience may have the internship requirement waived. Students who wish an internship waiver, should send a request to the Director of Graduate Studies in writing during their first year of study.

Total Hours Required for Master's: 37

Psychological Sciences

David P. Schmitt, Head

Mary E. Cain, Director of graduate studies

492 Bluemont Hall

Fax: 785-532-5401
psych@k-state.edu
<http://www.k-state.edu/psych/>

Admission

For admission to graduate study, the university requires an undergraduate grade point average of B or better during the junior and senior years. As additional evidence of competence, the Department of Psychological Sciences requires the applicant to submit academic transcripts, a statement of purpose, and three letters of recommendation (preferably from faculty members at a previously attended institution). Students for whom English is not a native language will not be considered for admission unless they receive a minimum score or higher on the Test of English as a Foreign Language (550 on the paper-based test, 213 on the computer-based test, or 79 on the internet-based test). A TOEFL scores of less may require remedial English courses.

The Department of Psychological Sciences expects all applicants to have met the minimum standards for the bachelor's degree in psychology as recommended by the American Psychological Association. These include 18 semester hours of psychology, or its equivalent, in such courses as research methods, statistics, cognitive psychobiology, personality, etc. Students who wish to concentrate in behavioral neuroscience must have the necessary background in the physical and biological sciences. In some prearranged cases, deficiencies can be made up after enrollment. A detailed description of the graduate programs, as well as additional information about financial support, can be obtained from the Department of Psychological Sciences website <http://www.k-state.edu/psych>.

Performance standards

Graduate students' performance is evaluated twice each year in the domains of classroom work, research, and (when appropriate) teaching or research assistantship activities. Each faculty member who has had significant contact with a graduate student during the preceding semester completes a standard evaluation instrument. These are then made available to the student, who is encouraged to consult with faculty and discuss their evaluations. Finally, faculty meet as a group to formally assess each student's individual performance and progress toward a graduate degree.

A preliminary examination is usually taken following completion of core courses and the Master's requirements and covers the student's area of concentration and tests a high level of competence.

Financial assistance

Departmental Assistantships

Providing excellent opportunities for research experience or classroom teaching, a number of these awards are made each year on a competitive basis. Such assistantships require approximately 20 hours work a week, allow students to carry a normal load of 10 to 12 semester hours of course work a semester, and provide tuition remission and fee reductions.

Research Assistantships

These positions are comparable to departmental assistantships except they are funded out of individual staff member's grant or contract funds. The student is assigned to a particular staff member's research project, and all course loads and stipends are like those of departmental assistants.

Campus Assistantships

Students not supported by the Department of Psychological Sciences are often successful in obtaining assistantships elsewhere on campus. For example, recent graduate students have found employment in the Office of Institutional Equity, the Office of Student Life, the Office of Educational Innovation and Evaluation, the Graduate School, and the Teaching and Learning Center.

Fees and Tuition

An incidental fee and other fees for the student health center, student union, and student activities are charged. As staff members, departmental or research assistants are charged in-state fees and tuition according to the number of semester hours carried. Teaching assistants receive a partial rebate of incidental fees and total tuition remission. Fees are subject to change without notice.

Housing

The university maintains modestly priced one- and two-bedroom apartments for married student and single parents. These are located close to the central campus. Residence halls are also available. Students who wish to apply for university housing should write to Housing and Dining Services soon after they are accepted into the program.

Doctor of Philosophy

Psychology (PHD)

Graduate programs in Psychological Sciences

All doctoral candidates, regardless of special areas of interest, are expected to obtain a thorough grounding in general psychology, including theory, content, and methods. Such grounding is accomplished in part by requiring all students to take a series of basic core courses in both quantitative and substantive areas of psychology. Students who enter the program with a Master's degree may be required to do a Master's level project if, in the opinion of their advisor and at least one other faculty member in the same area, the previous thesis was not of sufficient quality or not based on empirical research.

Admission Requirements

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Required Courses

All graduate students must take at least 5 of the following 9 courses depending on their area of concentration. In general, students should take as many of these core courses as possible in their first two years in the graduate program. Requests to deviate from these guidelines due to special circumstances should be approved by the student's major advisor in consultation with the supervisory committee.

- PSYCH 885 - History and Trends in Psychology **Credits: 3**
- PSYCH 803 - Physiological Psychology **Credits: 3**
- PSYCH 804 - Industrial/Organizational Psychology **Credits: 3**
- PSYCH 810 - Learning **Credits: 3**
- PSYCH 812 - Perception **Credits: 3**
- PSYCH 814 - Advanced Cognitive Psychology **Credits: 3**
- PSYCH 816 - Psychology of Health **Credits: 3**
- PSYCH 820 - Personality Theory and Research **Credits: 3**
- PSYCH 830 - Pro-Seminar in Social Psychology **Credits: 3**

The first two years of graduate study are typically devoted to a broad survey of the major areas of psychology and the acquisition of certain basic research techniques. The first year of this period is spent primarily in basic courses. During the second year, students begin to satisfy related requirements, complete work on their Master's thesis, and begin to develop a major area of professional interest. The third and fourth years of the doctoral program constitute a period of special training during which students are occupied to an increasing extent with pursuing their special research and professional interests. Most of their time is spent in small seminars and directed study. During this time, students must pass a final written examination that covers their major areas of interest, and complete a doctoral dissertation that constitutes an original contribution to the research literature in those areas. Our graduate training includes an opportunity to gain supervised experience in teaching at the college level. The Teaching Apprenticeship Program provides both coursework on pedagogical methods and supervised experience as an instructor for an introductory level psychology course and, later, one or more of the department's core or service courses. Close interaction between the graduate student and two skilled faculty members is maintained to provide an optimum learning environment. Because most academic positions taken by our graduates involve teaching to a greater or lesser extent, this type of formal training makes our students highly competitive in the job market. Students who complete the doctoral program are eligible for a variety of teaching, research, and professional positions in colleges and universities, governmental agencies, and business and industry.

Each of the specialization programs (Behavioral Neuroscience/Animal Learning, Cognitive/Human Factors, Industrial-Organizational, and Social-Personality) has particular course requirements. Students in these programs should consult with their advisors regularly to make sure of enrolling in the appropriate classes.

Program total Credits (minimum 90 credits)

Statistics Courses

Students are required to take the following sequence of courses.

- PSYCH 802 - Psychological Research Design and Analysis I **Credits: 3**
- PSYCH 805 - Psychological Research Design and Analysis II **Credits: 3**

Following the above two courses, one of the following courses:

- PSYCH 961 - Multivariate Analyses of Behavioral Data **Credits: 3**
- PSYCH 958 - Seminar in Mathematical Models of Behavior **Credits: 1-3**

Seminar in Professional Problems

All graduate students must take the Seminar in Professional Problems:

- PSYCH 968 - Seminar in Professional Problems **Credits: 1-3**

Behavioral Neuroscience/Animal Learning Program

Our program is designed to train students broadly in experimental psychology in addition to their behavioral neuroscience specialization. While courses are an important part of training, students should expect to engage in laboratory research throughout their Master's and doctoral program. Successful degree candidates typically have broad training in the biological sciences as undergraduates.

Program Requirements

In addition to the department requirements, students in the Behavioral Neuroscience/Animal Learning program are required to complete the following core courses:

- PSYCH 803 - Physiological Psychology **Credits: 3**
- PSYCH 810 - Learning **Credits: 3**

Students are strongly encouraged to complete the following core courses:

- PSYCH 812 - Perception **Credits: 3**
- PSYCH 814 - Advanced Cognitive Psychology **Credits: 3**

Program Electives

Graduate students are encouraged to take advantage of other elective courses within the department as part of their program of study. In addition, extensive possibilities for courses outside of the department exist. Students should consult with their major advisor and supervisory committee to determine which of these courses would be most appropriate.

Cognitive/Human Factors Program

The Cognitive/Human Factors Psychology Graduate Program at Kansas State University is designed to prepare students for careers as psychologists in academia, government, and industry. The program provides students with a broad background in the research methodology used in experimental as well as many other areas of psychology. The students are expected to acquire a general knowledge of the research problems and practices of current experimental psychologists in their chosen area. Current active research areas include memory, judgment and decision making, visual perception, psycholinguistics, and applications of all of the above in various settings.

Program Requirements

- PSYCH 803 - Physiological Psychology **Credits: 3**
- PSYCH 812 - Perception **Credits: 3**
- PSYCH 814 - Advanced Cognitive Psychology **Credits: 3**

Industrial/Organizational Psychology Program

The doctoral program in Industrial and Organizational Psychology at Kansas State University prepares students for careers in consulting, private business, public agencies, and academic settings. The program was founded in the late 1950s, and has existed in its current form since 1976.

Program Requirements

These industrial and organizational psychology courses are offered on a regular basis to assure that all students are able to take them in a timely fashion.

- PSYCH 804 - Industrial/Organizational Psychology **Credits: 3**
- PSYCH 806 - Psychological Measurement **Credits: 3**
- PSYCH 878 - Industrial Psychology: Personnel Selection **Credits: 3**
- PSYCH 879 - Organizational Psychology **Credits: 3**

Program Electives

In addition to the requirements for the degree are those established by the Department of Psychological Sciences, I/O graduate students are encouraged to take advantage of other elective courses specifically related to industrial and organizational psychology as part of their program of study. The following is a list of examples and more elective courses would be available. Students should consult with their major advisor and supervisory committee to determine which of these courses would be most appropriate.

- PSYCH 875 - Industrial Psychology: Personnel Training **Credits: 3**
- PSYCH 876 - Industrial Psychology: Work Motivation **Credits: 3**
- PSYCH 877 - Industrial Psychology: Leadership **Credits: 3**
- PSYCH 960 - Seminar in Industrial Psychology **Credits: 3**

Social-Personality Program

The faculty members directly connected with the program are very diversified in their theoretical and research interests, but all are strongly committed to the training of scholar-researcher "generalists" rather than technical specialists. That is, our students are expected to acquire a broad, theoretically informed understanding of the Social-Personality field, and its articulation with other branches of psychology, as well as the various technical skills necessary for basic and applied research. As students progress through the program, their areas of particular expertise become defined by their research projects, thesis, and dissertation. Graduate students within the Social-Personality Program will consult with their major advisor to select appropriate courses to fulfill the department's core course requirement.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Psychology (MS)

Graduate programs in Psychological Sciences provide professional training leading to the master of science degree as a requirement of the Ph.D. program for students entering with a relevant bachelor's degree.

Master's training is offered in four broad areas:

- (1) behavioral neuroscience/animal learning (with concentrations in animal learning/behavior or physiological psychology/behavioral neuroscience)
- (2) cognitive/human factors psychology (with concentrations in psycholinguistics, judgment and decision making, human factors/engineering psychology, or sensation and perception)
- (3) social-personality (with concentrations in social, personality, or developmental psychology)
- (4) industrial/ organizational (with concentrations in human-resources/personnel issues and procedures, organizational behavior and theory)

At the master's level, students may specialize in any of the traditional areas. The first year of the Master's program is spent primarily in basic courses. Graduate students will also complete a first-year research project (see below). During the second year, students begin to satisfy related requirements, complete work on their master's thesis, and begin to develop a major area of professional interest.

Course Requirements

A minimum of 30 semester hours of graduate credit is required for the Psychology Master of Science degree program, of which no less than 22 hours must be earned in coursework. Coursework for the M.S. program in Psychology must include PSYCH 802, PSYCH 805, and two semesters of the one-credit seminar in Professional Problems (PSYCH 968). Details on the thesis requirement are provided below.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

14 credit hours

- PSYCH 802 - Psychological Research Design and Analysis I **Credits: 3**
- PSYCH 805 - Psychological Research Design and Analysis II **Credits: 3**
- PSYCH 899 - Master's Research in Psychology **Credits: 1-18**
- PSYCH 968 - Seminar in Professional Problems **Credits: 1-3**

The other 16 credit hours are chosen among courses approved by a student's supervisory committee and consistent with the student's chosen area of specialization. Course selection is done in consultation with and with the approval of the student's supervisory committee.

First-Year Research Project

Graduate students will complete a first-year research project that is designed in consultation with their major adviser. This research endeavor is intended to reflect the importance of establishing a productive research component of an individual's

graduate program. Early in the second year, students will present their first-year project to the department in a format similar to a national meeting of a scientific society.

Master's Thesis

Students are expected to complete a Master's thesis as part of their degree requirements in preparation for their doctorate work. Ideally, the Master's thesis should be completed by the end of the third year. Students will complete a Master's thesis prior to taking a preliminary examination and being advanced to candidacy in the doctoral program. Under limited circumstances a student may complete a non-thesis report instead of a thesis by taking 2 credits of 899 and 4 credits of approved coursework in lieu of the 6 credits of 899. The report must meet department requirements and describe research conducted by the student; the final report must be approved by the student's supervisory committee. This option is available only by means of petition of the department's Graduate Program Committee and is intended to only be used for students who cannot complete the thesis due to extenuating circumstances and who will not be continuing to the Ph. D.

Total Hours Required for Master's: 30

Distance Master's Program in Industrial/Organizational Psychology

Distinct from the on-campus graduate program area in Industrial/Organizational Psychology, there is a distance Master's program in Industrial/Organizational Psychology which does not include a thesis project. The Master of Science program in industrial/organizational psychology (MIOP) is a 38-hour sequence of on-campus and web-based courses. The program is directed at working human resource professionals and aims at teaching students to apply analytical behavioral science skill and course concepts to company related issues. The program spans 2 1/2 years. The last semester of the program consists of students conducting a research practicum in their own organization under the supervision of faculty. Students attend campus once a year over the summer for two-week sessions. Four courses are taught as on-campus courses, and the remaining four courses and practicum are delivered via web-based instruction.

Course Requirements

Required Courses

12 credit hours

- PSYCH 804 - Industrial/Organizational Psychology **Credits: 3**
- PSYCH 808 - Applied Research Methods **Credits: 3**
- PSYCH 809 - Applied Research Methods II **Credits: 3**
- PSYCH 968 - Seminar in Professional Problems **Credits: 1-3** (Ethical and Legal Issues)

Topics Courses

12 credit hours

- PSYCH 875 - Industrial Psychology: Personnel Training **Credits: 3**
- PSYCH 878 - Industrial Psychology: Personnel Selection **Credits: 3**
- PSYCH 879 - Organizational Psychology **Credits: 3**
- PSYCH 880 - Industrial Psychology: Performance Appraisal **Credits: 3**

Practicum: 14 credit hours taken across six semesters

- PSYCH 860 - Practicum in Psychology Credits: 1-18

Total Hours Required for Master's: 38

Security Studies

Michael Flynn, Director of Graduate Studies

309 Calvin Hall

Security Studies is an interdepartmental graduate program with faculty participants from History and Political Science.

Social Transformation Studies

Yolanda Broyles-Gonzalez, Head
Christie Launius, Associate Head

003 Leasure Hall
785-532-5738
E-mail: soctran@k-state.edu
Web address: <https://www.k-state.edu/social-transformation/>

Drawing on the interdisciplinary scholarly and pedagogical traditions of the fields of ethnic studies and gender, women, and sexuality studies, Social Transformation Studies offers students a base of knowledge and skills that will enable them to launch and sustain careers devoted to tackling some of the most pressing social issues facing Kansans, and Americans more broadly, including health disparities, food insecurity, gender violence, and racial and economic inequalities.

Social Transformation Studies offers students the opportunity to think critically about the multifaceted realities, identities, and important knowledges created by diverse peoples; develop cultural competencies that can be used in workplace settings; learn about and promote practices of inclusivity; and foster community-based engaged research and praxis responsive to the needs and realities of underserved communities.

A major in Social Transformation Studies equips students to approach issues of equity and civic engagement from a variety of perspectives and prepare them to excel in a wide range of fields, including violence prevention and advocacy, law and policy studies, health professions, the technology sector, business, and public health, as well as graduate-level studies. The Social Transformation Studies program provides students with skills that employers seek: innovation skills to create new solutions to both emerging and enduring social problems, the ability to work with and serve diverse and underserved constituencies, and critical thinking, writing and communication.

In addition to the general university and college requirements for the BA/BS degree, all Social Transformation Studies majors are required to complete 30 credit hours. All STRAN majors will complete one 3 credit introductory course (AMETH 160 or GWSS 105), 9 cr. of core courses (STRAN 400, STRAN 550, and STRAN 600), and 3 cr. of elective in either AMETH or GWSS. For the remaining 15 credits of the Social Transformation Studies major, students will choose one of two tracks: American Ethnic Studies or Gender, Women, and Sexuality Studies.

The department offers an undergraduate major, minors in American Ethnic Studies, Gender, Women, and Sexuality Studies, and Queer Studies, a certificate in Intercultural Competence, and a graduate certificate in Gender, Women, and Sexuality Studies.

Certificate

Gender, Women, and Sexuality Studies Graduate Certificate

Valerie Padilla Carroll, Interim Head

Web address: <https://www.k-state.edu/social-transformation/academics/graduate/>

Anne Longmuir, Director of Graduate Certificate

Email: longmuir@ksu.edu

The Department of Social Transformation Studies offers a graduate certificate for students in M.A., M.S., Ph.D. and professional programs at Kansas State or those wishing to complete the certificate independent of another degree. It consists of 12 hours of graduate level courses in gender, women, and sexuality studies. One core course—GWSS 810 is required. Three other courses at the 600 level and above can be chosen from an approved list of electives from a variety of disciplines.

To apply to the graduate certificate program, admitted students enrolled in a master's or doctoral program at K-State should email the graduate certificate director, outlining their goals in pursuing the certificate, and copying their major professor or director of graduate studies in their degree program. Students wishing to pursue the certificate independently of another degree program at K-State should apply online through the graduate school. After they have been accepted, students should meet with the coordinator to identify the courses most congruent with their chosen program of study.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

The certificate consists of 12 hours of approved graduate level courses at the 600 level or above in gender, women, and sexuality studies.

Required Courses

- GWSS 810 - Key Concepts in Gender, Women, and Sexuality Studies **Credits: 3**

Elective Courses

Courses followed by a subtitle in parentheses vary and count toward the Gender, Women, and Sexuality Studies Graduate Certificate only when offered with the indicated subtitle. Choose 9 hours from the following list of courses:

- GWSS 605 - Social Change Field-Experience **Credits: 3**
- GWSS 610 - Capstone Seminar in Gender, Women, and Sexuality Studies **Credits: 3**
- GWSS 700 - Advanced Topics in Gender, Women, and Sexuality Studies **Credits: 1-3**
- GWSS 784 - Internship in Gender, Women, and Sexuality Studies **Credits: 1-12**
- GWSS 799 - Independent Study for Graduate Students or Advanced Undergraduate Students **Credits: 1-3**
- ANTH 710 - Writing Cultures: Ethnographic Methods **Credits: 3**
- CFT 865 - Human Sexuality **Credits: 3**

- CFT 869 - Systematic Treatment of Trauma Violence and Substance Abuse **Credits: 3**
- COMM 630 - Special Topics in Rhetoric and Communication **Credits: 3** (Gender and Communication)
- CRIM 665 - Women and Crime **Credits: 3**
- EDACE 750 - Women, Education, Leadership, and Work **Credits: 3**
- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDCEP 830 - Diversity in Higher Education. **Credits: 3**
- EDCI 735 - Gender Implications for Education **Credits: 3**
- EDCI 886 - Seminar in Curriculum and Instruction **Credits: 1-18** (Women, Education, and Leadership)
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- ENGL 605 - Readings in Medieval Literature **Credits: 3** (Medieval Others: Dragons, Damsels, & Death, The Idea of Work in the Middle Ages)
- ENGL 625 - Readings in Eighteenth-Century British Literature **Credits: 3**
(Austen, Readings in 18th Century Women, Restoration Drama, or Ghosts and Goths)
- ENGL 630 - Readings in Nineteenth-Century British Literature **Credits: 3** (Victorian Childhoods)
- ENGL 635 - Readings in Twentieth-and Twenty-First Century British Literature **Credits: 3**
(Bloomsbury Group)
- ENGL 650 - Readings in Twentieth- and Twenty-First-Century American Literature **Credits: 3**
(Queer Native Literatures or Dream Acts)
- ENGL 655 - Readings in American Ethnic Literature **Credits: 3**
(What is African American Literature? or Dream Acts: Immigration in Ethnic Literature)
- ENGL 660 - Readings in Major Authors **Credits: 3**
(The Brontes, Gender and Performance, George Eliot, Louise Erdrich and Sherman Alexie, Shakespeare, Austen and Her Legacy, Whitman and Dickinson, American Indian Literatures, American Gothic, or Louise Erdrich)
- ENGL 670 - Topics in British Literature **Credits: 3** (18th Century British Women Writers, Downton Abbey in Context)
- ENGL 680 - Topics in American Literature **Credits: 3**
(In the Shadows of American Literature, Latino/a Literature, or Asian American Literature, or Two-Spirit Literature)
- ENGL 695 - Topics in Literature **Credits: 3**
(African American Children's Literature, Innocence and Experience, or Postcolonial Literature)
- ENGL 705 - Theories of Cultural Studies **Credits: 3**
- ENGL 710 - Studies in a Literary Genre **Credits: 3**
(Back to the Future) (Gender and Sexuality in American Indian Literature, Romances and Saints' Lives)
- ENGL 720 - Studies in a Major Author **Credits: 3**
(The Brontes, Drama, Shakespeare, or Extreme Shakespeare)
- ENGL 725 - Studies in Children's/Young Adult Literature **Credits: 3**
(African American Children's Literature)
- ENGL 730 - Studies in a Literary Period **Credits: 3**
(Alcott and Twain or Global Middle Ages)
- ENGL 740 - Studies in Literary Theory **Credits: 3**
(African American Literary Theory)
- ENGL 745 - Cultural Studies **Credits: 3** (Queer Cinema in Context)
- ENGL 745 - Cultural Studies **Credits: 3** (Welcome to Apocalypse)
- ENGL 755 - Studies in Composition and Rhetoric **Credits: 3**
(Power and Persuasion)
- ENGL 825 - Seminar in Literature **Credits: 3**
(Golden Age of Children's Literature, Medieval Endings, Harry Potter and Literary History, Econ/Vict. Lit)
- ENGL 830 - Seminar in Cultural Studies **Credits: 3**
(Affect Theory, Queer Native Literature, American Feminisms, US Latino Studies, Victorian Women Writers, or Literature of Mad Men)

- ENGL 840 - Seminar in Composition and Rhetoric **Credits: 3**
(Maverick Rhetorics)
- FREN 716 - Topics in Contemporary French Literature **Credits: 3** (Colette)
- GRMN 701 - Topics in Eighteenth Century German Literature and Culture **Credits: 3**
(Judaism in Germany)
- GRMN 705 - Topics in Twentieth and Twenty-First Century German Literature and Culture **Credits: 3** (The Graphic Novel and Postmemory)
- HIST 984 - Topics in American History **Credits: 1-3**
(Gender in American History, or Gender and Sexuality in the United States)
- MC 612 - Diversity in Media **Credits: 3**
- POLSC 606 - Gender and Politics **Credits: 3**
- POLSC 799 - Pro-Seminar in Political Science **Credits: 3**
(Women and Law)
- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 670 - Diversity and Social Interaction in the Workplace **Credits: 3**
- SOCIO 833 - Gender Differentiation and Inequality **Credits: 3**
- SOCIO 933 - Gender and Society **Credits: 3**
- THTRE 782 - Women in Theatre **Credits: 3**

Note

Other appropriate graduate level Topics and Readings courses are offered every year in a variety of disciplines. Thus, students have a large selection of classes to choose from each year.

Overview

The primary objective of the graduate program in sociology at Kansas State University is to provide the highest quality graduate training possible for students seeking to become teachers and scholars in the field of sociology or those seeking to enter careers in applied research in government or private industry. The program offers a small student/faculty ratio. Graduate students have a high level of contact with faculty and are provided with the opportunity to participate in supervised research.

The master's program provides in-depth exposure to sociological theory and methods of research, while providing flexibility in allowing students to design a program to meet their specific needs. It is intended for both students who are seeking to continue on for the Ph.D., and those seeking careers in government, business, or non-profit organizations.

The Ph.D. program offers specialized training in four areas: Community, Agriculture, Food, and Environment; Politics and Development; Criminology; and Social Inequalities. All students take core courses in sociological theory and research methods. Graduates will be prepared for academic careers in teaching and research and careers in applied social research.

Facilities

In addition to the university's computing center, the department has two graduate student computer lab's with direct access to the university mainframe. The computers contain data analysis software, word processing, spreadsheet, and data base management systems.

The department is active in interdisciplinary programs such as Women's Studies, Gerontology, American Ethnic Studies and International Studies.

Degree programs

The Master's of Arts degree requires a minimum of 30 graduate credit hours and normally takes two years to complete. It is offered under three degree options. The thesis option is designed primarily for students continuing on for a Ph.D. in sociology, or seeking a career in sociology. The non-thesis option is designed to provide general sociological knowledge for students seeking careers in government, business, or non-profit organizations. The Master's in Social Analysis option is designed to provide advanced research and analytical skills for students already employed, or those seeking careers in government, business, or non-profit organizations.

The Ph.D. degree requires a minimum of 60 credit hours beyond the Master's: 30 hours of course work and 30 dissertation hours. The course work includes 15 hours of core requirements and 18 hours in two major areas of concentration. Some core requirements can be met at the Master's level. All students must take two preliminary examinations. Preliminary examinations in their theory and methods core are waived if performance in the required courses is sufficient.

Admissions

Official transcripts from each college or university attended are required, as are a statement of purpose, curriculum vitae, three letters of reference, and a sample of previously written scholarly work. For international applications, TOEFL/IELTS scores and a financial affidavit are also required.

The general application deadline for the Fall semester is January 15 for domestic applicants and January 8 for international applicants. Applicants will receive notification about admittance in March. Notification about financial assistance (if requested) is usually sent out in early April.

Applications without financial support are considered if received before May 1 (for Fall admissions) and October 1 (for Spring admissions) for domestic applicants. August 1st is the deadline for Spring admissions for international students.

Assistantships

Teaching and research assistantships are available each year. They require approximately 16 hours of work per week. All assistants must be enrolled in a minimum of 6 hours of course work per semester, which can include hours for thesis or dissertation research.

Students awarded assistantships who make normal degree progress can expect to receive support for two years at the M.A. level and three years at the Ph.D. level, which is contingent upon university funding.

Proseminar

All entering graduate students are required to enroll in the departmental proseminar during their first fall semester on campus. The proseminar is conducted by the graduate director and consists of discussions designed to orient the graduate student to the discipline of sociology as a profession and to the department.

Graduate Handbook

Details of the procedures, deadlines, and policies of the department and the graduate school on all matters pertaining to graduate study in Sociology are available on the department's website.

Accelerated

Accelerated Sociology (BA)/Sociology (MA)

The accelerated Accelerated Sociology (BA)/Sociology (MA) will provide high-performing undergraduates the opportunity to pursue an accelerated MA/Master of Arts in Sociology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Students should apply to the program by their junior year. Applications should include the following:

- A completed on-line application to the K-State Graduate School with paid application fee.
- A statement of objectives indicating professional goals relative to the M.A. degree.
- Three letters of recommendation; at least two of them must be from KSU Sociology faculty who are familiar with the student's ability.
- Official transcript(s) of all undergraduate course work completed at the time of application.
- A sample of written work (e.g. research paper, essay).

Applications are evaluated by the Graduate Admissions Committee, which will provide a recommendation to the Director of Graduate Studies about an applicant's suitability for the program.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The bachelor's degree normally requires 120 undergraduate credit hours and the M.A. degree 30 graduate credit hours. However, a maximum of 9 credit hours of graduate courses may be counted toward both the undergraduate and graduate degrees.

- Student must have completed a minimum of 75 credit hours toward the bachelor degree at time of application for admission to the accelerated program.
- Graduate courses must be completed with a minimum GPA of 3.0.
- The bachelor's degree may be awarded at any time following the completion of the undergraduate degree requirements. Alternatively, the B.A./B.S. degree and the M.A. may be awarded concurrently following the completion of the M.A. degree.
- Students must choose one of four options in the M.A. program – Sociology, Sociology-CAFE, Sociology-Social Inequalities, Criminology.

Please contact Gabriel Bachura gbachura@ksu.edu for further details about requirements and opportunities related to the accelerated B.A./M.A. program.

Course Requirements

Sociology (MA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 618 - Religion in Culture **Credits: 3**
- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 738 - International Migration **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Sociology (BS)/Sociology (MA)

The accelerated Accelerated Sociology (BS)/Sociology (MA) will provide high-performing undergraduates the opportunity to pursue an accelerated MA/Master of Arts in Sociology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Students should apply to the program by their junior year. Applications should include the following:

- A completed on-line application to the K-State Graduate School with paid application fee.
- A statement of objectives indicating professional goals relative to the M.A. degree.

- Three letters of recommendation; at least two of them must be from KSU Sociology faculty who are familiar with the student's ability.
- Official transcript(s) of all undergraduate course work completed at the time of application.
- A sample of written work (e.g. research paper, essay).

Applications are evaluated by the Graduate Admissions Committee, which will provide a recommendation to the Director of Graduate Studies about an applicant's suitability for the program.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The bachelor's degree normally requires 120 undergraduate credit hours and the M.A. degree 30 graduate credit hours. However, a maximum of 9 credit hours of graduate courses may be counted toward both the undergraduate and graduate degrees.

- Student must have completed a minimum of 75 credit hours toward the bachelor degree at time of application for admission to the accelerated program.
- Graduate courses must be completed with a minimum GPA of 3.0.
- The bachelor's degree may be awarded at any time following the completion of the undergraduate degree requirements. Alternatively, the B.A./B.S. degree and the M.A. may be awarded concurrently following the completion of the M.A. degree.
- Students must choose one of four options in the M.A. program – Sociology, Sociology-CAFE, Sociology-Social Inequalities, Criminology.

Please contact Gabriel Bachura gbachura@ksu.edu for further details about requirements and opportunities related to the accelerated B.A./M.A. program.

Course Requirements

Sociology (MA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 618 - Religion in Culture **Credits: 3**
- SOCIO 633 - Gender, Power, and Development **Credits: 3**

- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 738 - International Migration **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Sociology (PHD)

The Ph.D. program offers specialized training in four core areas: (1) Community, Agriculture, Food, and Environment (CAFE); (2) Politics and Development; (3) Criminology; and (4) Social Inequalities. All students take core courses in sociological theory and research methods. Graduates will be prepared for academic careers in teaching and research as well as careers in applied social research.

Full details about the Ph.D. Program and its requirements are available in the Sociology Graduate Handbook and the Graduate School Student Handbook.

Admission Requirements

Ph.D. applicants must have completed a master's degree by the time of entry into the Ph.D. program and must have earned a grade point average equivalent to B or above. A student's preparation should include courses in Sociological Theory, Methods of Research, and Statistical Methods.

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Dissertation Requirements

After successfully completing comprehensive exams in two concentration areas, students must enroll in 6 credit hours of dissertation research per semester, excluding summer semester, until the dissertation is complete or 18 credit hours are completed. After 18 credit hours of dissertation are completed, a student must enroll in 1 hour per semester, excluding summer semester, until the dissertation is completed.

See the Sociology Graduate Handbook and the Graduate Student Handbook for additional details about program and dissertation requirements.

Course Requirements

Students must complete a minimum of 60 credit hours of Ph.D. work beyond the master's degree: 30 hours of coursework and 30 hours of dissertation research.

- Students who completed their M.A. in Sociology at K-State are not required to re-take theory and methods courses that were part of the M.A. program, though they are still required to complete 30 hours of coursework. Any courses that

were counted on the M.A. program of study cannot also be counted on the Ph.D. program of study. Please see the Graduate School Handbook for more information.

- All Ph.D. students must take preliminary examinations in two areas of concentration. Each area of concentration requires 9 credit hours of concentration courses. Courses counted toward one concentration area must be different than those counted toward the second area. Up to 6 hours of M.A. work may count toward each of the Ph.D. areas of concentration, but they cannot be counted in the Program of Study for the Ph.D.

Required Courses:

- SOCIO 801 - Introductory Proseminar **Credits: 1**
-for students who did not complete their M.A. degree at Kansas State University
- SOCIO 809 - Classical Social Theory **Credits: 3**
- SOCIO 810 - Contemporary Sociological Theory **Credits: 3**
- SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**
- SOCIO 825 - Quantitative Methods **Credits: 3**

One additional methods courses from among the following:

- SOCIO 822 - Introduction to Methods of Social Analysis **Credits: 3**
- SOCIO 824 - Qualitative Methodology **Credits: 3**
- SOCIO 923 - Methods of Social Policy Research **Credits: 3**
- SOCIO 925 - Specialized Approaches to Sociological Research **Credits: 3**
- SOCIO 931 - Seminar in Demographic Methods **Credits: 3**

Concentration Courses:

Community, Agriculture, Food, and Environment (CAFE)

- SOCIO 830 - Social Demography **Credits: 3**
- SOCIO 831 - Sociology of Agriculture **Credits: 3**
- SOCIO 832 - Sociology of Community **Credits: 3**
- SOCIO 835 - Environment and Society **Credits: 3**
- SOCIO 842 - Technology and Society **Credits: 3**
- SOCIO 851 - Sociology of Development **Credits: 3**
- SOCIO 853 - International Development **Credits: 3**
- SOCIO 934 - Sociology of Rural Development **Credits: 3**
- SOCIO 935 - Seminar in Demography **Credits: 3**
- SOCIO 951 - Political Sociology **Credits: 3**

Politics and Development

- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 738 - International Migration **Credits: 3**
- SOCIO 833 - Gender Differentiation and Inequality **Credits: 3**
- SOCIO 850 - Criminal Justice in Context **Credits: 3**
- SOCIO 880 - Social Movements **Credits: 3**
- SOCIO 935 - Seminar in Demography **Credits: 3**
- SOCIO 951 - Political Sociology **Credits: 3**
- SOCIO 953 - States and Civil Society **Credits: 3**

Criminology

- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 850 - Criminal Justice in Context **Credits: 3**
- SOCIO 861 - Sociology of Deviance **Credits: 1**
- SOCIO 862 - Criminological Theory **Credits: 3**
- SOCIO 962 - Topics Seminar in Criminology/Deviance **Credits: 3**

Social Inequalities

- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 640 - Sociology of the Family **Credits: 3**
- SOCIO 643 - Sociology of Religion **Credits: 3**
- SOCIO 738 - International Migration **Credits: 3**
- SOCIO 833 - Gender Differentiation and Inequality **Credits: 3**
- SOCIO 838 - Sociology of Culture **Credits: 3**
- SOCIO 841 - Social Stratification **Credits: 3**
- SOCIO 933 - Gender and Society **Credits: 3**

Research:

- SOCIO 999 - PhD Dissertation Research **Credits: 1-18**

Program Total Hours: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Master of Arts

Sociology (MA)

The Master of Arts degree normally requires two years of full-time work for completion. The master's program offers three degree options and provides flexibility in designing a curriculum to meet a student's needs. The thesis option is designed primarily for students continuing on for a Ph.D. in sociology, or seeking a career in sociology. The master's in social analysis option is designed to provide advanced research and analytical skills for students already employed, or those seeking careers in government, business, or non-profit organizations. The non-thesis option is designed to provide general sociological knowledge for students seeking careers in government, business, or non-profit organizations. Each of these options requires a minimum of 30 credit hours.

Full details about the M.A. Program and its requirements are available in the Sociology Graduate Handbook and the Graduate School Student Handbook.

Admission Requirements

Applicants to the M.A. Program must have graduated with a bachelor's degree from an institution whose requirements are equivalent to those of Kansas State University. M.A. applicants must have earned an undergraduate grade point average equivalent to B or above.

Thesis Option

Students interested in researching and writing a master's thesis should consult with their major professor and supervisory committee to identify a topic. Once the topic has been determined, the student writes and defends a proposal describing the research project. Once the proposal is approved, the student completes the research project described in the proposal. The student researches, writes, and defends the thesis. Full details about the thesis option are available in the Sociology Graduate Handbook and the Graduate School Student Handbook.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Course Requirements

Required Courses

- Seminar**
 - SOCIO 801 - Introductory Proseminar **Credits: 1**
- Theory Requirements**
 - SOCIO 809 - Classical Social Theory **Credits: 3**
 - SOCIO 810 - Contemporary Sociological Theory **Credits: 3**
- Methods Requirements**
 - SOCIO 822 - Introduction to Methods of Social Analysis **Credits: 3**
 - SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**

Substantive Course Requirements:

Students must complete 12 hours of substantive course work at the 700 level or above. With the permission of a student's advisor, one 600 level sociology course (3 hours) may be substituted for one of the substantive sociology courses at the 700 level or above. Students must enroll only in sociology courses during their first semester in the program, unless given explicit, prior permission by the graduate director to take other courses. Those interested in Criminology are strongly encouraged to take SOCIO 862, Criminological Theory, as part of their substantive course work hours during their M.A. program.

- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 618 - Religion in Culture **Credits: 3**
- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 640 - Sociology of the Family **Credits: 3**
- SOCIO 643 - Sociology of Religion **Credits: 3**
- SOCIO 645 - Post-Communist Societies **Credits: 3**
- SOCIO 647 - Sociology of Work **Credits: 3**
- SOCIO 670 - Diversity and Social Interaction in the Workplace **Credits: 3**
- SOCIO 701 - Problems in Sociology **Credits: 1-18**
- SOCIO 738 - International Migration **Credits: 3**
- SOCIO 742 - Society and Change in South Asia **Credits: 3**

- SOCIO 824 - Qualitative Methodology Credits: 3
- SOCIO 825 - Quantitative Methods Credits: 3
- SOCIO 830 - Social Demography Credits: 3
- SOCIO 831 - Sociology of Agriculture Credits: 3
- SOCIO 832 - Sociology of Community Credits: 3
- SOCIO 833 - Gender Differentiation and Inequality Credits: 3
- SOCIO 835 - Environment and Society Credits: 3
- SOCIO 838 - Sociology of Culture Credits: 3
- SOCIO 840 - Comparative Social Systems Credits: 3
- SOCIO 841 - Social Stratification Credits: 3
- SOCIO 842 - Technology and Society Credits: 3
- SOCIO 850 - Criminal Justice in Context Credits: 3
- SOCIO 851 - Sociology of Development Credits: 3
- SOCIO 853 - International Development Credits: 3
- SOCIO 861 - Sociology of Deviance Credits: 1
- SOCIO 862 - Criminological Theory Credits: 3
- SOCIO 880 - Social Movements Credits: 3

Thesis Research Hours:

Students must enroll for a minimum of 6 hours of SOCIO 899 and successfully complete a master's thesis under the direction of their major professor.

- SOCIO 899 - Master's Thesis Research Credits: 1-18 (6+)

Master's in Social Analysis Option

The master's in social analysis option is designed to enhance career opportunities for M.A. students who wish to go into applied professional fields, specialize in social analysis and program evaluation, and/or focus on organizational dynamics. The MSA option differs from the thesis and non-thesis options in two key ways: (a) the MSA option requires a greater number of credit hours in research methods (12 hours compared to 6); and (b) offers the option of a field practicum in social analysis which will allow students to earn credit hours while employed, or placed in an internship at an approved agency, organization, or firm.

Students enrolled in the MSA option must take 6 credit hours of SOCIO 897 Practicum in Social Analysis and must complete the Social Analysis Research Project. In taking the practicum, students must complete an on-site, learning experience in a professional organizational environment consisting of a minimum of 200 service hours. Students who are employed may substitute their work experience for the 200 hour practicum, pending approval from the student's major professor.

Students taking the practicum in lieu of the M.A. thesis or M.A. comprehensive exam must complete a Social Analysis Research Project. The requirements for this research project will be developed in consultation with the student's major professor and must be approved by members of the student's advisory committee. The end product will be a research paper developed from the on-site learning experience. Once the paper is completed, it must be evaluated as satisfactory by the student's supervisory committee.

Any student enrolled in the MSA option and writing an M.A. thesis or taking the M.A. comprehensive exam may also take SOCIO 897 Practicum in Social Analysis for 3 hours credit as an elective course. Students taking the SOCIO 897 for 3 hours credit must complete the requirements for the on-site learning experience (pre-proposal agreement, onsite hours, Practicum Evaluation Report, and seminar participation), but are not required to complete the Social Analysis Research Project.

Full details about MSA requirements are available in the Sociology Graduate Handbook and the Graduate School Student Handbook.

Course Requirements

Required Courses

Seminar

- SOCIO 801 - Introductory Proseminar **Credits: 1**

Theory Requirements

- SOCIO 809 - Classical Social Theory **Credits: 3**
- SOCIO 810 - Contemporary Sociological Theory **Credits: 3**

Methods Requirements (4 of the following 5 courses are required)

- SOCIO 822 - Introduction to Methods of Social Analysis **Credits: 3**
- SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**
- SOCIO 824 - Qualitative Methodology **Credits: 3**
- SOCIO 825 - Quantitative Methods **Credits: 3**
- SOCIO 923 - Methods of Social Policy Research **Credits: 3**

Substantive Course Requirements:

Students must complete 6-12 hours of substantive course work. This must include two sociology courses (6 hours) at the 700 level or above. One 600 level sociology course (3 hours) may be substituted for one sociology course at the 700 level or above with the permission of a student's advisor. In meeting the substantive requirement, students can select one of four options:

A) 12 hours of substantive courses plus the M.A. comprehensive exam. The 12 hours of substantive courses could include: (a) 9 hours of course work corresponding to an area of concentration and a 3 hour elective course (see the Sociology Graduate Handbook for details about areas of concentration); or (b) 12 hours of elective courses. A student taking this option will take the M.A. comprehensive examination according to the guidelines described under the non-thesis option.

B) 6 hours of elective courses plus an M.A. thesis (which requires a minimum of 6 hours of SOCIO 899). Students following this option will write an M.A. thesis according to the guidelines described under the thesis option.

C) 6 hours of elective courses plus 6 hours of SOCIO 897 Practicum in Social Analysis.

D) 9 hours of course work corresponding to an area of concentration (see areas of concentration listed under Ph.D. program below), plus 6 hours of SOCIO 897 Practicum in Social Analysis.

Students enrolled in the MSA option who do not wish to fulfill the substantive requirement by writing an M.A. thesis, or taking the M.A. comprehensive examination (options A & B above), may complete the M.A. degree requirements by taking the Practicum in Social Analysis (option C or D). Students selecting either of these options must take 6 credit hours of SOCIO 897 Practicum in Social Analysis and must complete the Social Analysis Research Project. In taking the practicum, students must complete an on-site, learning experience in a professional organizational environment consisting of a minimum of 200 service hours. Students who are employed may substitute their work experience for the 200 hour practicum, pending approval from the student's major professor.

- CRIM 665 - Women and Crime **Credits: 3**
- SOCIO 618 - Religion in Culture **Credits: 3**
- SOCIO 633 - Gender, Power, and Development **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 640 - Sociology of the Family **Credits: 3**
- SOCIO 643 - Sociology of Religion **Credits: 3**
- SOCIO 645 - Post-Communist Societies **Credits: 3**
- SOCIO 647 - Sociology of Work **Credits: 3**

- SOCIO 670 - Diversity and Social Interaction in the Workplace **Credits: 3**
- SOCIO 701 - Problems in Sociology **Credits: 1-18**
- SOCIO 738 - International Migration **Credits: 3**
- SOCIO 742 - Society and Change in South Asia **Credits: 3**
- SOCIO 824 - Qualitative Methodology **Credits: 3**
- SOCIO 825 - Quantitative Methods **Credits: 3**
- SOCIO 830 - Social Demography **Credits: 3**
- SOCIO 831 - Sociology of Agriculture **Credits: 3**
- SOCIO 832 - Sociology of Community **Credits: 3**
- SOCIO 833 - Gender Differentiation and Inequality **Credits: 3**
- SOCIO 835 - Environment and Society **Credits: 3**
- SOCIO 838 - Sociology of Culture **Credits: 3**
- SOCIO 840 - Comparative Social Systems **Credits: 3**
- SOCIO 841 - Social Stratification **Credits: 3**
- SOCIO 842 - Technology and Society **Credits: 3**
- SOCIO 850 - Criminal Justice in Context **Credits: 3**
- SOCIO 851 - Sociology of Development **Credits: 3**
- SOCIO 853 - International Development **Credits: 3**
- SOCIO 861 - Sociology of Deviance **Credits: 1**
- SOCIO 862 - Criminological Theory **Credits: 3**
- SOCIO 880 - Social Movements **Credits: 3**

Practicum or Thesis Research Hour Requirements

- SOCIO 897 - Practicum in Social Analysis **Credits: 3-6 (6)**
- SOCIO 898 - Master's Report Research **Credits: 1-18 (6+)**

Non-Thesis Option

Students pursuing the non-thesis option take the M.A. Comprehensive Examination. The M.A. Comprehensive Examination consists of three parts: (1) Theory; (2) Methods; and (3) one additional area of the student's choice. The area examination may be taken in one of the following specialty areas: Community, Agriculture, Food, and Environment (CAFE); Politics and Development; Criminology; Social Inequalities; or some other area approved by the student's major professor and supervisory committee. Full details about non-thesis M.A. requirements are available in the Sociology Graduate Handbook and the Graduate School Student Handbook.

- SOCIO 841 - Social Stratification **Credits: 3**
- SOCIO 842 - Technology and Society **Credits: 3**
- SOCIO 850 - Criminal Justice in Context **Credits: 3**
- SOCIO 851 - Sociology of Development **Credits: 3**
- SOCIO 853 - International Development **Credits: 3**
- SOCIO 861 - Sociology of Deviance **Credits: 1**
- SOCIO 862 - Criminological Theory **Credits: 3**
- SOCIO 880 - Social Movements **Credits: 3**

Directed Study Requirements (6 hours):

This requirement may be met through taking one independent study (SOCIO 701) and one additional elective at the 700 level or above

Total Hours Required for Master's: 30

Statistics

Juan Du, Director of Graduate Studies

Trevor Hefley, Director of Graduate Studies

101 Dickens Hall

785-532-6883

gradrec@ksu.edu

<http://www.ksu.edu/stats/>

Statistics is a science which combines ideas from classical and modern mathematics, probability theory, inductive reasoning, and computer science to develop tools for extracting critical insights from data. It is a dynamic and continuously evolving discipline driven by scientific and technological breakthroughs that both increase the complexity and volume of available data. Statistical analysis plays a central role in all disciplines that make evidence-based decisions, including machine learning and artificial intelligence, and the demand for skilled statisticians and data scientists continues to grow rapidly. Today, statisticians and data scientists are partners in most scientific and technological enterprises.

Careers

"The best thing about being a statistician is that you get to play in everyone's backyard." - John Tukey

There are a wide variety of career opportunities for a professional statistician. Nearly every field that collects and stores data—including the natural and physical sciences, medicine, engineering, sports, and education—employs statisticians. Subject experts have sought statisticians to help solve a broad range of problems, including detecting changes in the environment, developing new vaccines, improving product reliability, increasing crop yield, calculating insurance risks, scouting football players, building and testing artificial intelligence solutions, and developing recommendation systems. Statistics is a field in which experts have virtually unlimited opportunities.

While many statisticians opt to work in private industry, employment opportunities abound in other sectors as well. Many state and federal government agencies—not just the Bureau of Labor Statistics and the Bureau of the Census—employ large teams of statisticians. Universities have faculty openings for statisticians within many academic departments—not just statistics, including data science, public health, mathematics, management sciences, economics, political science, genetics, history, and psychology, and often hire additional statisticians to provide administrative and research support. Finally, private consulting can be lucrative for the experienced statistician who desires to work with both private industry and government. Organizations of all sizes rely on statisticians to extract insights and draw actionable conclusions from their data.

Preparation

The Department of Statistics accepts students with a strong quantitative background. The graduate programs welcome students from many different disciplines. Students entering the M. S. program should have a background of calculus, matrix algebra, computer programming, and introductory statistics. Students entering the Ph.D. program should have additional course work in statistics and mathematics.

Degree Programs

The Department of Statistics offers four-degree programs: B.S. in statistics, a concurrent B.S./M.S. in statistics, M.S. in statistics (Mathematical Statistics Track or Data Science and Analytics Track), and Ph.D. in statistics. A master's degree is recommended for a career in industry or government. The Ph.D. degree is usually required for post-secondary teaching and

higher-level positions. The department offers concentrations in applied, computational, and mathematical probability and statistics.

Graduate Certificate in Applied Statistics

The department offers the Graduate Certificate in Applied Statistics to recognize the preparation and proficiency of non-majors in data analysis in a wide variety of subject matter areas. Graduate students in a variety of academic disciplines are conducting research that requires knowledge in applied statistics. Such students may wish to demonstrate proficiency in applied statistics as it may be useful when looking for meaningful employment opportunities, in addition to helping them become better researchers in their chosen fields. In order to strengthen their educational programs and the quality of graduate education, a Graduate Certificate in Applied Statistics has been developed.

Consulting opportunities

The department does a tremendous amount of consulting work for researchers and students on campus and for individuals and agencies off campus. Projects vary in length of time and sophistication of methods needed to complete them. Students may contact the department head to find out what is available. Those who wish to do consulting will be assigned a faculty member to direct the work. At the student's discretion, up to 2 hours credit may be earned for consulting by registering for STAT 945.

Accelerated

Accelerated Statistics and Data Science (BS)/Statistics (MS)

The Accelerated Statistics and Data Science (BS)/Statistics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Science in Statistics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process will be the same as for the traditional MS degree except completion of the BS degree is not required. The following steps are required:

- Fill out the online KSU graduate application. Required supporting documents should be uploaded to the online application as requested in the application.
- All supplemental documents required by the Statistics Department (e.g., statement of objectives, scanned copies of transcripts, letters of recommendation) will be requested as the on-line application is completed.
- A copy of an applicant's statement of objectives is to be uploaded. A written personal statement of academic objectives, giving specific reasons for the selection of the discipline of Statistics for study, contemplated research areas and professional plans. In addition, the statement can also mention one or more KSU faculty with whom the applicant has an interest in working.
- An electronic copy (PDF preferred) of applicant's transcript(s) from each college or university where applicant completed any undergraduate coursework and completed any post-baccalaureate course work or degrees is to be uploaded.
- Provide three references. Recommenders will upload their letters of recommendation directly to the applicant's application.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- Students must have completed MATH 220, MATH 221, MATH 222, STAT 225, STAT 240 or STAT 250 (or higher), STAT 341 or STAT 351, STAT 610, and one additional STAT course at the 500-level or higher, either at K-State or by transfer credit. Students may use STAT 510 instead of STAT 610 with special permission from the Director of Graduate Studies of the Statistics department.
- Minimum standards to apply to the accelerated program are a cumulative GPA of 3.00 and a GPA of 3.25 in the STAT/MATH Core (above) courses, with a recommended GPA of 3.5 or higher in STAT/MATH for successful admission. Retention in the program requires maintenance of a 3.00 GPA in both undergraduate and graduate coursework.

Course Requirements

Statistics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- STAT 713 - Applied Linear Statistical Models **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- STAT 722 - Experimental Design for Product Development and Quality Improvement **Credits: 3**
- STAT 730 - Multivariate Statistical Methods **Credits: 3**
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Statistics (PHD)

Statistics (PhD)

Admission Requirements

All doctoral students should have a background in certain mathematical topics usually presented in advanced calculus, and matrix or linear algebra courses. At K-State, these would be MATH 515, MATH 551, MATH 633, and MATH 634. Students who do not have this background upon entering the PhD program should discuss with their major professor, provisional advisor, or graduate program directors the best way to quickly acquire this background after entering the program.

Students are required to have 90 semester hours of course work and research credit.

- A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.
- The remaining credit hours may include the courses required below, elective courses approved by the student's major professor in consultation with the student's graduate committee, and research credits.
- Elective courses may be selected from courses offered by the Department of Statistics or by other disciplines.

Course Requirements

Required Courses

All doctoral students are required to include the following courses in their programs of study.

- STAT 842 - Probability for Statistical Inference **Credits: 3**
- STAT 843 - Statistical Inference **Credits: 3**
- STAT 860 - Linear Models I **Credits: 3**
- STAT 861 - Linear Models II **Credits: 3**
- STAT 870 - Analysis of Messy Data **Credits: 3**

and at least 7 credit hours of 900 level Statistics classes selected from:

- STAT 903 - Statistical Methods for Spatial Data **Credits: 3**
- STAT 904 - Resampling Methods **Credits: 3**
- STAT 905 - High-Dimensional Data and Statistical Learning **Credits: 3**
- STAT 907 - Bayesian Statistical Inference **Credits: 3**
- STAT 940 - Advanced Statistical Methods **Credits: 3**
- STAT 941 - Advanced Statistical Inference **Credits: 3**
- STAT 945 - Problems in Statistical Consulting **Credits: 1-3**
- STAT 950 - Advanced Studies in Probability and Statistics **Credits: 1-3**

Ph.D. Qualifying Exam

Students interested in pursuing the Ph.D. are required to first pass a departmental Qualifying Exam. Subsequently, students pursuing the Ph.D. must pass the doctoral preliminary examination (see below) in order to be approved for degree candidacy by the Graduate School.

Students must enroll in at least one credit hour during any and all semesters in which they are actively engaged in the qualifying examination process.

The purpose of the PhD qualifying exam is to assess the students' readiness for the coursework required for the PhD. The exam is designed so that students who possess an MS Degree in Statistics from Kansas State University or have a comparable academic background can take the exam immediately following admission into the PhD program. As part of the PhD program, all students are required to pass the qualifying exam.

The PhD qualifying exam is offered twice per year. The exam will be offered during the week before the Fall Semester (the Fall Exam) and the week before the Spring Semester (the Spring Exam). The qualifying exam is comprised of two sections: a 4-hour theoretical statistics exam and a 2-hour applied statistics exam. Each section is offered on a different day. The two sections are described below.

- Statistical Theory: This exam covers topics taught in STAT 770 and STAT 771.
- Applied Statistics: This exam covers topics taught in STAT 713.

Both exams are written exams, and the use of a computer is not permitted.

Students must receive a passing grade on both sections of the exam prior to the spring semester of their second full academic year in the program. The Spring Exam of a student's second full academic year is the last exam for which the student is eligible.

PhD students are granted two attempts at the qualifying exam. The last attempt must occur no later than the Spring semester of their second full academic year in the program.

Preliminary Exam

The Ph.D. Preliminary Exam consists of two components: a dissertation proposal and a public seminar.

Students must enroll in at least one credit hour during any and all semesters in which they are actively engaged in the preliminary examination process.

For more information please see the department website: <http://www.k-state.edu/stats/academics/gradstudents/DegreePhD.html>

Total Credit Hours Required for Doctorate: 90

Graduate Certificate

Applied Statistics Graduate Certificate

Contact: Juan Du

E-mail: dujuan@ksu.edu

Home Page: <http://www.k-state.edu/stats>

The Department of Statistics offers the Graduate Certificate in Applied Statistics to recognize the preparation and proficiency of non-majors in data analysis in a wide variety of subject matter areas. Graduate students in a variety of academic disciplines are conducting research that requires knowledge in applied statistics. Such students may wish to demonstrate proficiency in applied statistics as it may be useful when looking for meaningful employment opportunities, in addition to helping them become better researchers in their chosen fields. In order to strengthen their educational programs and the quality of graduate education, a Graduate Certificate in Applied Statistics has been developed.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

A minimum of 15 credit hours with at least a 3.0 GPA in applied statistics courses at the 700 level and above. These courses may also be used for a student's Program of Study in his/her chosen field if approved by the student's Graduate Committee.

Courses that can be used for the Graduate Certificate in Applied Statistics Program are:

At most 3 credit hours from the following three courses can be counted toward the certificate:

- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 706 - Basic Elements of Statistical Theory **Credits: 3**

At most 3 credit hours from the following two courses can be counted towards the certificate:

- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- or
- STAT 713 - Applied Linear Statistical Models **Credits: 3**

Most of the classes listed above are prerequisites for the classes below. Students are recommended to take prerequisite courses before taking the courses below.

- STAT 710 - Sample Survey Methods **Credits: 3**
- STAT 716 - Nonparametric Statistics **Credits: 3**
- STAT 717 - Categorical Data Analysis **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- STAT 722 - Experimental Design for Product Development and Quality Improvement **Credits: 3**
- STAT 725 - Introduction to the SAS Computing **Credits: 1**
- STAT 726 - Introduction to R Computing **Credits: 1**
- STAT 727 - Statistical Computing/Numerical Methods of Statistics **Credits: 3**
- STAT 730 - Multivariate Statistical Methods **Credits: 3**
- STAT 736 - Bioassay **Credits: 2**
- STAT 745 - Statistical Graphics **Credits: 3**
- STAT 750 - Studies in Probability and Statistics **Credits: 1-4**
- STAT 760 - Optimization for Data Science **Credits: 3**
- STAT 761 - Discrete Optimization and Scalability for Data Science **Credits: 3**
- STAT 764 - Applied Spatio-Temporal Statistics **Credits: 3**
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics **Credits: 3**
- STAT 768 - Applied Bayesian Modeling and Prediction **Credits: 3**
- STAT 870 - Analysis of Messy Data **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Note

A maximum of three credit hours can be earned from coursework taken outside the Department of Statistics, either in another department on campus, or at another university. Persons wishing to apply such credits will gain approval from the director of the certificate program. Courses so approved must clearly be of an applied statistics nature, of a duration commensurate with the number of credit hours claimed on the certificate, and at a graduate level (under no circumstances will undergraduate courses be considered). The person asking for this exception will need to supply such information as deemed necessary by the director for such approval, possibly including syllabus and identification of textbook used.

Master of Science

Statistics (MS)

We offer two distinct tracks for the MS degree.

- **Mathematical Statistics track**
This is a traditional curriculum, designed for students who want a more theoretical background and those who intend to pursue a higher degree.
- **Data Science and Analytics track**
This track is more computational, with a balanced approach to modeling theory and practical skills that are in growing global demand for both the private and public sectors.

Master's degree requirements

All master students should have a background in mathematics at least at the level of calculus, along with prior knowledge of matrix or linear algebra. The Data Science and Analytics track requires proficiency of STAT 510 and STAT 511 or equivalent, and at least 3 credit hours of a programming language course that uses C, C++, Fortran, R or Python, for admission. Students without the background of STAT 510 and STAT 511 prior to admission are required to take extra credits to fulfill the requirement.

Course Requirements

Two master's degree completion options are available for each track: the master's report option and the non-report option.

- For the master's report option, the student must take 30 hours of coursework and write a report for 2 additional hours of credit in STAT 898 .
- For the non report option, the student must take 36 hours of coursework and pass a comprehensive exam for the Mathematical Statistics track, or complete a Capstone Project for the Data Science and Analytics track.
- Students must select either the report option or the non-report option by the first week of the fall semester of their second year in the MS program. At this time, the student is required to file a program of study. Students that do not file a program of study that specifies an explicit choice of degree option in a timely manner will be automatically assigned to the non-report option. Students are not allowed to switch between report versus non-report options after filing the program of study unless the switch is approved by the Graduate Program Committee.
- Students that are interested in pursuing the report option should contact potential faculty advisors by the end of their first year in the MS program in order to allow time to identify a suitable project.
- For both the Report Option and the Non-Report option: Students must be enrolled in at least one hour the semester in which they plan to complete the final examination or defend their report and graduate. In addition, international students should check with International Student and Scholar Services to be certain of the enrollment required.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses - Mathematical Statistics Track

For the Mathematical Statistics track, the course work must include:

- STAT 713 - Applied Linear Statistical Models **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- **OR** STAT 722 - Experimental Design for Product Development and Quality Improvement **Credits: 3**
- STAT 770 - Theory of Statistics I **Credits: 3**
- STAT 771 - Theory of Statistics II **Credits: 3**
- STAT 860 - Linear Models I **Credits: 3**
- STAT 861 - Linear Models II **Credits: 3**
- STAT 945 (Statistical Consulting) is recommended for those students with applied interests.
- STAT 945 - Problems in Statistical Consulting **Credits: 1-3**

Required Courses - Data Science and Analytics Track

For the Data Science and Analytics track, the course work must include:

- STAT 727 - Statistical Computing/Numerical Methods of Statistics **Credits: 3**
At least 3 credits from:
- STAT 760 - Optimization for Data Science **Credits: 3**
- STAT 761 - Discrete Optimization and Scalability for Data Science **Credits: 3**
At least 6 credits from:
- STAT 713 - Applied Linear Statistical Models **Credits: 3**
- STAT 717 - Categorical Data Analysis **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- **OR** STAT 722 - Experimental Design for Product Development and Quality Improvement **Credits: 3**
- STAT 730 - Multivariate Statistical Methods **Credits: 3**
At least 6 credits from:
- STAT 764 - Applied Spatio-Temporal Statistics **Credits: 3**
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics **Credits: 3**
- STAT 768 - Applied Bayesian Modeling and Prediction **Credits: 3**

Elective Courses

For both tracks, electives can be selected from Statistics courses at the 700 level and above, as well as from other departmental offerings, which requires approval by the department. Such approval is at the department's discretion.

Report Option Courses

- STAT 898 - Master's Report **Credits: 2**

Coursework Only Option Courses

For the non report option, the student must take 36 hours of coursework and pass a comprehensive exam for the Mathematical Statistics track, or complete a Capstone Project for the Data Science and Analytics track.

M.S. Exam or Capstone Project

Master's students in the non-report option in the Mathematical Statistics track will meet with the MS Exam committee near the beginning of the semester in which the student intends to take the MS Exam. The exam is offered twice each year, near the end of the fall and spring semesters. This committee will compose an exam based on material from STAT 770 , STAT 771 , and STAT 713 . The format will be a written 3 hour exam. A decision of Pass/Fail will be made by a two thirds vote in the exam committee, in accordance with section J.3 of the Graduate School Handbook. In the event of a Fail, a second attempt may be requested by the student in accordance with Graduate School policies.

Master's students in the non-report option in the Data Science and Analytics track will complete a capstone project, which can be conducted with industry, government, and academic partners, and which may result in the creation of a usable/public data product for real-world problems.

Students admitted to the Ph.D. program in statistics may, with approval of the MS Exam committee, use the Ph.D. Qualifying Exams to satisfy the exam requirement of the M.S. non-report option. A passing mark on at least one Ph.D. qualifying exam will be interpreted as a pass of the MS. Exam.

Note:

- Students planning to pursue the PhD in Statistics at K-State are required to take STAT 720 .
- Master's students wishing to continue for the PhD must apply for admission to that program. Students should meet with the Department Head regarding available funding.

Total Hours Required for Master's: 30-36

College of Business Administration

Kevin Gwinner, Edgerley Family Dean

Chwen Sheu, Associate Dean for Academic Programs

Dawne Martin, Assistant Dean for Diversity

Olivia Law-Delrosso, Assistant Dean for Diversity, Equity, Inclusion and Belonging

Bente Janda, Assistant Dean for Undergraduate Student Services

Mission statement

The mission of the College of Business Administration at Kansas State University is excellence in the advancement and dissemination of knowledge consistent with the needs of students, business, faculty and society.

Principles

To accomplish our mission, we strive for quality in our intellectual contributions, teaching and service activities.

1. Intellectual contributions include basic and applied scholarship and instructional development. These activities support and foster continuous improvement in teaching and hence are inseparable from it. The College, therefore, places major and approximately equal emphasis on intellectual contributions and teaching, while providing sufficient flexibility to accommodate the unique objectives of individual departments. Service receives relatively minor emphasis.
2. Within the area of intellectual contributions, we seek a balance between basic scholarship, applied scholarship and instructional development, while again providing sufficient flexibility to accommodate the unique objectives of each department. These contributions address both domestic and global market environments and are disseminated in the classroom, scholarly and applied journals, professional conferences, books and continuing education courses.
3. Quality teaching goes beyond merely emphasizing a body of knowledge. We help students develop a sense of values; an appreciation of the diversity of their world; an ability to work with others and to communicate effectively; the skill to solve complex and ambiguous problems and a belief in lifelong learning.
4. To maintain the high quality of our degree programs, we continuously review and improve them in accordance with the principles above.

Accreditation

Kansas State University's College of Business Administration is accredited by the Association to Advance Collegiate Schools of Business (AACSB) at both the undergraduate and graduate levels.

The International Association of Management Education is an international organization that requires that its members maintain high educational standards. The AACSB is recognized as the sole accrediting agency for baccalaureate and master's degree programs in business administration by the U.S. Office of Education and the Council on Post-Secondary Accreditation. Members of the organization have established high standards for the professional achievement of the faculty, their teaching effectiveness and research productivity, proper balance in the curriculum, and effective student job placement. AACSB-accredited programs meet the rigorous standards of quality set by the organization. Only 25 percent of the approximately 1,300 Colleges of Business Administration in the United States are accredited by the AACSB. The Department of Accounting became the first in Kansas to receive accreditation by the AACSB for both undergraduate and graduate programs. Approximately 50 graduate accounting programs are accredited in the United States, which places the master of accountancy program among the top in the nation.

Application requirements

A complete application file must be received in the College of Business Administration Graduate Studies Office before the deadlines indicated below in order to be considered for admission. Requests for financial aid applications (assistantships, scholarships, and/or fellowships) should be communicated directly to the Director of Graduate Studies using the above address and telephone number or the email address below. The following items constitute a complete application:

- completed Application for Admission to Graduate School (Online application is preferred.)
- non-refundable application fee (Online fee payment is preferred.)
- official record of your GMAT score sent directly from Educational Testing Service (ETS). (GMAT waiver is considered for an applicant who demonstrates a high level of academic performance, analytical skill, and ability of academic success.)
- two official copies of your transcript(s) from all universities attended
- three letters of recommendation from former professors or employers (Reference Form for Graduate Study preferred)
- one page Statement of Objectives in pursuing the program
- official record of your TOEFL score sent directly from ETS (for applicants whose native language is not English)
- completed Affidavit of Financial Support [PDF] dated **within nine months of desired entry date** (for international applicants only) Note: Substitute documentation other than the Affidavit cannot be accepted

Deadlines

Students are admitted to the MBA program only at the start of the Fall semester. The completed application deadline is March 1.

Assistantships

Many graduate teaching and research assistantships are available each year. Assistantships vary between two-tenths and four-tenths time (40-hour per week basis) for the nine-month academic year. The amount of such stipends is reviewed annually. Some assistantships also carry a partial tuition waiver. A student on a four-tenths time appointment may not carry more than 12 credit hours per semester.

In recent years, graduate assistants have performed research with professors, advised undergraduate students, proctored exams, and assisted in the college's computer laboratory. An applicant interested in obtaining an assistantship should request an application form from the Director of Graduate Studies. When possible, all assistantship positions will be granted immediately following the application deadlines.

For specific information about graduate assistantships, fellowships, or College of Business Administration scholarships, contact the Director of Graduate Studies.

Accelerated Degree

Accelerated Computer Science (BS)/Master of Business Administration (MBA)

Dual Degree

Master of Business Administration and MS in Hospitality Administration

Accelerated

Accelerated Business Administration (BSBA)/Data Analytics (MS)

The accelerated Accelerated Business Administration (BSBA)/Data Analytics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Data Analytics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the stand-alone MSDA degree except that completion of the B.S.B.A. degree is not required. Students may begin the application process in the semester they are completing the final course requirement for admission, but formal admission will not be granted until all admission requirements are completed. The student must submit all of the following documents to be considered. Typically, application is made in the second semester of the student's Junior year, with acceptance following posting of final grades.

- KSU graduate application form completed on-line before semester of enrollment.
- Student's statement of academic objective(s).
- Two letters of recommendation.
- Official transcript(s) of all undergraduate work.

Admission to the MSDA program is provisional, subject to completion of the B.S.B.A. degree and maintaining a 3.0 GPA in the final 60 credit hours of coursework. Once admitted, the requirements for the graduate degree are the same as for the regular

MSDA program. Students may count up to 9 credit hours of courses taken for graduate credit toward the unrestricted electives in the B.S.B.A. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Data Analytics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CIS 731 - Programming Techniques for Data Science and Analytics **Credits: 3**
- ECON 630 - Introduction to Econometrics **Credits: 3**
- MIS 665 - Business Analytics and Data Mining **Credits: 3**
- MIS 670 - Social Media Analytics and Web Mining **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Business Administration (BSBA)/Master of Business Administration (MBA)

The accelerated Accelerated Business Administration (BSBA)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the stand-alone MBA degree except that completion of the B.S.B.A. degree is not required. Students may begin the application process in the semester they are completing the final course requirement for admission, but formal admission will not be granted until all admission requirements are completed. The student must submit all of the following documents to be considered. Typically, application is made in the second semester of the student's Junior year, with acceptance following posting of final grades.

- KSU graduate application form completed on-line before semester of enrollment.
- Student's statement of academic objective(s).
- Official transcript(s) of all undergraduate work.

Admission to the MBA program is provisional, subject to completion of the B.S.B.A. degree and maintaining a 3.0 GPA in the final 60 credit hours of coursework. Once admitted, the requirements for the graduate degree are the same as for the regular MBA program. Students may count up to 9 credit hours of courses taken for graduate credit toward the unrestricted electives in the B.S.B.A. The B.S. degree may be awarded at any time following the completion of the undergraduate degree requirements. Alternatively, the B.S. and MBA degrees may be awarded concurrently.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- FINAN 653 - Security and Portfolio Analysis **Credits: 3**
- MANGT 630 - Sports Management **Credits: 3**
- MANGT 662 - Procurement, Logistics and Supply Chain Design **Credits: 3**
- MIS 665 - Business Analytics and Data Mining **Credits: 3**
- MKTG 690 - Marketing Strategy **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Dual Master of Business Administration (MBA)/Master of Accountancy (MACC)

Location(s): Manhattan Campus

The dual Master of Business Administration (MBA) / Master of Accountancy (MACC) provides graduate students the opportunity to earn an MBA and MAcc at the same time as well as the ability to count 6 hours of electives dually towards the MBA and MAcc. The MBA portion is designed to advance the knowledge and practice of business administration. The Master of Accountancy portion is designed to prepare students for a career in Corporate Accounting & Finance (CMA path) or Professional Accounting (CPA path). Regardless of the path, students will be challenged with cutting-edge topics such as Accounting Analytics, Financial Statement Analysis, and International and Multijurisdictional Taxation. Students graduating from the dual degree program will receive two degrees, an MBA and an MAcc. The program requires the completion of 54 credit hours: 30 credit hours for the MBA program and 24 credit hours in the MAcc program. The degrees are conferred simultaneously when all requirements for the dual degree program have been met.

Admission Requirements

The admission requirements do not change for either program. The applicant must meet the eligibility requirements for both programs.

The student must be seeking an MBA and MAcc degree from the College of Business Administration

The person seeking admission to the MBA/MAcc Dual Degree Program must:

Complete an application on CollegeNet (<https://www.applyweb.com/kstateg>) using Dual MBA/MAcc program link. Students desiring to apply only to the MBA or MAcc should select that specific program NOT the dual degree option in CollegeNet. The link will be accessible from the College of Business portal. Application materials include: official transcript of all completed academic work; GRE or GMAT scores and TOEFL scores, if applicable; statement of objectives; resume; and an Affidavit of Financial Support, if applicable.

The graduate admission committee of each program will evaluate the MBA/MAcc application separately, and only those who are accepted by both programs will be admitted to the Dual MBA/MAcc program.

A student who is initially admitted to either the MBA or MAcc degree and who later decides to pursue the dual degree must apply for change of degree to the MBA/MAcc dual degree prior to being awarded the first degree.

Students admitted to the MBA/MAcc joint degree program who later decide they only want to complete one of the degrees must: Submit a written notification to both programs.

Must have their primary program plan changed to reflect the degree to be completed.

Submit a new program of study for the degree program they will complete to the graduate school for an approval. Students must complete the requirements for the respective program to receive the MBA or MAcc degree.

Application Process

The application process is the same as for the stand-alone MBA and MAcc degrees. The student must submit all of the following documents to be considered. KSU graduate application form completed on-line before semester of enrollment.

Student's statement of academic objective(s).

Official transcript(s) of all undergraduate work.

Course Requirements

The program structure is the same as the individual programs except that students are able to count 6 hours of elective credit towards both programs.

Prerequisites

Curriculum prerequisite courses (MBA)

Six hours of economics

MATH 205 General Calculus and Linear Algebra or evidence of equivalent preparation

An undergraduate statistics course or equivalent preparation (STAT 703 must be taken in the first year of the program)

Curriculum prerequisite courses (MAcc)

Prior business and accounting training achieving basic competency in the following business core foundation areas: accounting, statistics, management information systems, economics, finance, marketing, and management, as determined by prior coursework. You may acquire these competencies by completing additional business core foundation coursework even after applying to the program.

Total Hours Required for MBA: 36

Total Hours Required for MAcc: 30

Graduate Certificate

Data Analytics Graduate Certificate

Contact: Chwen Sheu

E-mail: gradbusiness@ksu.edu

Home Page: global.k-state.edu/business/analytics/

A 15-credit-hour graduate certificate program, delivered completely online, is offered to enable students to increase their knowledge and to prepare them for expanding opportunities in this high demand area. The area of Data Analytics is broad, and the skill needs of professionals in this area span both technical data science capabilities and applied data analytics capabilities. As such, the certificate brings together courses that are foundational to knowledge and skill development in both data sciences and applied data analytics, in order to provide alternatives to develop a personalized plan to meet the needs of individual students in the program.

The Data Analytics certificate is a cooperative interdisciplinary program of the colleges of Business Administration, Arts and Sciences, and Engineering. The College of Business Administration serves as the academic home for the program, coordinating administration of the program and providing administrative support.

Academically, the program is governed by a steering committee with representatives from the participating departments, currently Computing and Information Sciences, Industrial and Manufacturing Systems Engineering, Management, Marketing, Mathematics, Statistics, and Global Campus.

Two faculty, one with an applied analytics focus and the other with a focus on data science, serve as advisors for the program. The advisors provide curriculum leadership, respond to student inquiries, evaluate student admissions, advise students and develop plans of study, as well as other academic related tasks. All correspondence should be directed to the College of Business Administration.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Data Analytics at Kansas State University.

Course Requirements

Required Courses

The Graduate Certificate in Data Analytics consists of 15 credit hours.

Students will be required to complete 12 credit hours from the list of approved courses below plus a 3-credit-hour capstone course. Each student will be required to take at least one course from each area to ensure that they are gaining background in both data science and applied analytics. Additional credits may be earned from the selection of elective courses.

- CIS 730 - Principles of Artificial Intelligence Credits: 3

- CIS 732 - Machine Learning and Pattern Recognition Credits: 3
- CIS 734 - Introduction to Genomics and Bioinformatics Credits: 4
- CIS 833 - Information Retrieval and Text Mining Credits: 3
- ECE 841 - Network Theory Credits: 3
- MATH 725 - The Mathematics of Data and Networks I Credits: 3
- MATH 726 - The Mathematics of Data and Networks II Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 730 - Multivariate Statistical Methods Credits: 3

Courses in Applied Analytics

- IMSE 785 - Big Data Analytics Credits: 3
- MIS 665 - Business Analytics and Data Mining Credits: 3
- MIS 670 - Social Media Analytics and Web Mining Credits: 3
- MKTG 880 - Applied Marketing Analytics Credits: 3
- MKTG 881 - Advanced Marketing Analytics Credits: 3

Capstone Course

- GENBA 894 - Data Analytics Capstone Credits: 3

Total Hours Required for Graduate Certificate: 15

Master of Business Administration

Master of Business Administration (MBA)

The master of business administration (MBA) program, offered through the College of Business Administration, is designed to provide professional business education to individuals who wish to pursue a variety of administrative careers in both the private and public sectors. The theme of the curriculum is intrapreneurship which can be defined as an "entrepreneurial attitude and approach to management and problem-solving within any organization, large or small." Throughout the program, the focus is "what one needs to know to run a business" while developing the ability to analyze all types of business situations and propose appropriate, creative and financially sound solutions. The curriculum combines conceptual, analytical and experiential approaches to learning both in and out of the classroom. Once the foundation of basic problem solving tools and knowledge in each functional area is established, the program deepens the interdisciplinary understanding of problem-solving approaches and their functional, ethical, environmental and international ramifications. The program concludes with a culminating learning experience.

The MBA curriculum is a 36 credit hour program designed to be completed in one and a half to two years of full-time study or four years of part-time, typically evening study. Three components comprise the curriculum:

- Business core (24 credit hours)
- Culminating experience (3 credit hours)
- Set of Electives (9 credit hours-see below)

On-Campus students may choose to pursue a prespecified, focused Concentration in lieu of the Set of Electives. Students pursuing a masters degree in another field may choose to use 9 credit hours from their other Masters as the Set of Electives in the MBA. Thus, a dual Masters/MBA can be obtained with an additional 27 credit hours.

The culminating experience requirement can be accomplished in one of two ways: (1) approved internship (campus students only), or (2) a business capstone course.

Online students must have three years of full-time approved work experience and should take GENBA 875 International Business Experience (3 credits), MIS 830 - Information Technology Strategy and Application (3 credits), and one three hour elective in place of the Set of Electives.

Before beginning the MBA coursework, students must acquire basic competency in mathematical analysis, statistics and economic theory and analysis. These competencies may be acquired through specific undergraduate course work with the number of courses required depending on the applicant's prior academic work. This basic competency coursework may be taken after admission to the MBA program during the student's first semester.

Once admitted, MBA students are responsible for making themselves aware of Graduate School policies and deadlines.

Areas of concentration - Available only to on-campus students

K-State's MBA offers its on-campus students the opportunity to gain general business knowledge as well as develop a focus in a particular area of interest. Concentration areas are available in accounting, data analytics, finance, management, technology entrepreneurship, and international business. Students must take 12 credit hours in the concentration area. Specific courses have been carefully developed to complement one another and best meet the needs of our students. Students wishing to complete specific concentrations will be restricted to designated course work.

Accounting

The MBA concentration in accounting allows students to expand their basic knowledge of accounting topics. It is not intended to be a substitute for a masters degree in accounting, nor to prepare students for the CPA exam. Students interested in a career in accounting should enroll in the Master of Accountancy (MAcc) program.

Data Analytics

A concentration in data analytics will allow students to analyze large data sets to provide insight for practical problems, and to relate patterns shown in the data to real-world situations and communicate the implications of these patterns to others.

Finance

The finance concentration will allow students to combine the broad MBA education with specific skills necessary to be a successful financial analyst or manager. Students will specialize in controlling the resource investments required to support an enterprise's operating activities, planning and negotiating appropriate financing arrangements to support these investment requirements, and managing the risks inherent in an enterprise's investment and financing activities.

Management

A concentration in management will allow a student to develop their knowledge in human resource management and/or operations management. Courses are offered in a variety of areas of management such as leadership, entrepreneurship, supply chain management, personnel law, etc.

Marketing

A concentration in marketing will allow a student to develop their knowledge of marketing strategy, research, analytics and sales management. Courses are offered in a variety of areas in marketing.

Technology entrepreneurship

The technology entrepreneurship concentration allows graduate students to gain valuable exposure to the innovation and technology commercialization process at Kansas State University through in-class teaching and on-the-job training programs. Students in the concentration focus on the creation and management of innovation in organizations with a particular emphasis on the commercialization of intellectual property. Students with undergraduate degrees in the sciences and engineering are especially encouraged to consider this concentration as part of their programs.

International Business

The international business concentration provides graduate students with the knowledge and skills to conduct business in a global context. Students are required to understand the international dimensions of business. Courses are offered in various areas, including accounting, management, marketing, and finance.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Curriculum prerequisite courses

- Six hours of economics
- MATH 205 - General Calculus **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
or equivalent preparation

Required Courses

24 credit hours; may waive 6 credit hours if "B" or better is achieved in equivalent courses at the discretion of the program director. Typically waivers are only granted for multiple undergraduate courses taken, and only credits from AACSB accredited institutions are accepted.

- ACCTG 710 - Foundations of Accounting **Credits: 3**
- ECON 815 - Economic Analysis for Business **Credits: 3**
- FINAN 715 - Foundations of Finance **Credits: 3**
- MANGT 710 - Operations and Supply Chain Management **Credits: 3**
- MANGT 720 - Managing Organizational Behavior **Credits: 3**
- MANGT 860 - Managing the Triple Bottom Line Business **Credits: 3**
- MANGT 880 - Strategic Management **Credits: 3**
- MKTG 705 - Marketing Concepts and Research **Credits: 3**

Integrated course

- GENBA 890 - Business Capstone **Credits: 3**

Electives/concentration

9 credit hours of courses offered at the graduate level (600 or above) from any college, **with the approval from the student's advisory committee**. Similar courses available at both the upper-division undergraduate (600) and graduate (700-800) level **MUST** be taken at the graduate level. A limited number of business concentrations will be available on campus only.

Online students must have the following in lieu of the series of electives

- Three years of full-time approved work experience
 - One elective offered for graduate credit **Credits:** (3)
 - MIS 830 - Business Intelligence and Storytelling in Cloud Environments **Credits:** 3
 - GENBA 875 - MBA International Business Experience **Credits:** 1-3
- * GENBA 875 3 credits required

Total Hours Required for Master's: 36

Master of Science

Data Analytics (MS)

This Master of Science – Data Analytics (MS-DA) program is a graduate program, in collaboration with the Departments of Computer Science, Economics, Mathematics, Industrial Management and Systems Engineering, Statistics, and Geography, focusing on using advanced technologies to manipulate big data, utilizing rigorous methods to interpret the data, and obtaining the business skills necessary to translate understanding into actionable organizational strategies. Specifically, upon completion of the Master of Science – Data Analytics program, students will possess the following knowledge and skills:

Knowledge

- demonstrate knowledge of big data management, predictive modeling using machine learning/statistical methods, and model validation and evaluation
- demonstrate knowledge of analytics project requirements, data acquisition and visualization, and business communication/presentation

Skills

- demonstrate the ability to convert client's business (or problem domain) into analytics project requirements
- demonstrate the ability to collect data from social media and corporate databases, to assess data quality assessment, and provide analysis in terms of exploratory data analysis and data visualization
- demonstrate the ability to clean and transform raw data sets for further data analytics processes
- demonstrate the ability to use various machine learning algorithms (e.g., hierarchical clustering, association) & statistical modeling techniques (e.g., regression, classification) to the data, including feature engineering and parameter optimization
- demonstrate the ability to use proper model validation (e.g., cross validation) and evaluation methods and performance metrics (e.g., prediction accuracy)
- demonstrate the ability to interpret model outputs, develop managerial and technical implications, and express oneself clearly, accurately, and professionally in both oral and written form

Students will be required to complete 30 hours of coursework: 21 hours of required and 9 hours of electives (Data Science track or Applied Analytics track).

Course Requirements

The coursework only option for this program does not require a culminating experience.

Required Courses

21 credit hours

- CIS 731 - Programming Techniques for Data Science and Analytics Credits: 3
OR
- MANGT 725 - Organizational Management and Data Analytics Credits: 3
OR
- MANGT 897 - Topics in Management Contemporary Issues in Management Credits: 3
OR
- MKTG 881 - Advanced Marketing Analytics Credits: 3
- ECON 630 - Introduction to Econometrics Credits: 3
- IMSE 785 - Big Data Analytics Credits: 3
- MIS 830 - Business Intelligence and Storytelling in Cloud Environments Credits: 3
- MIS 665 - Business Analytics and Data Mining Credits: 3
- MIS 670 - Social Media Analytics and Web Mining Credits: 3
- MKTG 880 - Applied Marketing Analytics Credits: 3

Track Electives: 9 credit hours

Data Science Track

- CIS 730 - Principles of Artificial Intelligence Credits: 3
- CIS 732 - Machine Learning and Pattern Recognition Credits: 3
- CIS 733 - Data Science Foundations Credits: 3
- CIS 751 - Computer and Information Security Credits: 3
- CIS 833 - Information Retrieval and Text Mining Credits: 3
- IMSE 680 - Quantitative Problem Solving Techniques Credits: 3
- MATH 725 - The Mathematics of Data and Networks I Credits: 3
- MATH 726 - The Mathematics of Data and Networks II Credits: 3
- STAT 717 - Categorical Data Analysis Credits: 3
- STAT 730 - Multivariate Statistical Methods Credits: 3
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics Credits: 3

Applied Analytics Track

- ACCTG 844 - Design of Accounting and Business Information Processes Credits: 3
- ACCTG 856 - Accounting Analytics Credits: 3
- CIS 732 - Machine Learning and Pattern Recognition Credits: 3
- ECON 686 - Economics Forecasting Credits: 3
- FINAN 623 - Financial Modeling Credits: 3
- GEOG 608 - Geographic Information Systems II Credits: 3
- GEOG 712 - Internet GIS and Distributed Geographic Information Services Credits: 3
- GEOG 728 - Programming for Geographic Analysis Credits: 3
- GEOG 808 - Geocomputation Credits: 3
- GENBA 890 - Business Capstone Credits: 3
- GENBA 894 - Data Analytics Capstone Credits: 3
- IMSE 680 - Quantitative Problem Solving Techniques Credits: 3
- MANGT 662 - Procurement, Logistics and Supply Chain Design Credits: 3
- MANGT 663 - Supply Chain Analytics Credits: 3

- MANGT 725 - Organizational Management and Data Analytics Credits: 3
- MANGT 897 - Topics in Management Contemporary Issues in Management Credits: 3
- MKTG 881 - Advanced Marketing Analytics Credits: 3
- STAT 730 - Multivariate Statistical Methods Credits: 3
- STAT 766 - Applied Data Mining/Machine Learning and Predictive Analytics Credits: 3

Mission Statement

The mission of the Department of Accounting at Kansas State University is to ensure a quality liberal, general business, and accounting education at the undergraduate and master's levels that prepares students to become both productive citizens and successful professional accountants.

Statement of Focus and Commitment

The focus of the faculty of the Department of Accounting in achieving its mission is on maintaining a responsive accounting program that provides students with sufficient technical and conceptual knowledge for a successful career in accounting as well as with the problem-solving and communication skills necessary to apply their knowledge in a professional setting.

To maintain such a program and as a matter of principle, the faculty of the Department of Accounting is committed to and considers its highest priority high-quality teaching, including innovative curriculum and other instructional development. The faculty is also committed to research and other forms of scholarly activity that add to the body of knowledge or support and foster improvement in teaching. In addition, the faculty is committed to participation in service activities that advance the profession and maintain the faculty's professional currentness.

Also to maintain such a program and as a matter of principle, the faculty of the Department of Accounting is committed to attracting and retaining highly motivated students with promise of success both in the Department's academic program and in the accounting profession. To this end, the faculty actively engages in student recruitment and placement, and strives to provide a supportive instructional environment.

Accelerated

Accelerated Accounting (BSBA)/Master of Accountancy (MACC)

The accelerated Accelerated Accounting (BSBA)/Master of Accountancy (MACC) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Accountancy degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the stand-alone MACC degree, except that completion of the BSBA degree is not required, and the GMAT score requirement will be waived as long as the student maintains a 3.000 GPA in the last 60 hours of coursework and 3.000 in accounting. The student must submit all of the following documents to be considered. Students may begin the application process in the semester they are completing the final course requirement for admission, but formal admission will not be granted until all admission requirements are completed. Typically, application is made in the second semester of the student's Junior year, with acceptance following posting of final grades.

- K-State's graduate application form is completed online and submitted before the semester of enrollment. The application fee is submitted with the application.
- Applicant's statement of academic objective(s) must be submitted with the application.
- Three letters of recommendation are required.
- Transcript(s) of all undergraduate work must be submitted through the Graduate School's online application system.

Admission to the MACC program is provisional, subject to completion of the BSBA degree and maintaining a 3.000 GPA in the final 60 credit hours of coursework with a 3.000 in all accounting courses. Once admitted, the requirements for the graduate degree are the same as for the regular MACC program. Students may count up to 9 credit hours of courses taken for graduate credit toward the unrestricted electives in the BSBA. The BSBA degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student must have a GPA of 3.000 or above in all accounting courses completed at Kansas State University and a cumulative undergraduate GPA of 3.000 or above.

Course Requirements

Master of Accountancy (MACC)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ACCTG 641 - Intermediate Accounting and Analytics III **Credits: 3**
- ACCTG 642 - Accounting Research and Communication **Credits: 3**
- ECON 530 - Money and Banking **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Business Administration (BSBA)/Master of Accountancy (MACC)

The accelerated Accelerated Business Administration (BSBA)/Master of Accountancy (MACC) will provide high-performing undergraduates the opportunity to pursue an accelerated Master in Accountancy degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the stand-alone MAcc degree except that completion of the B.S.B.A. degree is not required. Students may begin the application process in the semester they are completing the final course requirement for admission, but formal admission will not be granted until all admission requirements are completed. The student must submit all of the following documents to be considered. Typically, application is made in the second semester of the student's Junior year, with acceptance following posting of final grades.

- KSU graduate application form completed on-line before semester of enrollment.
- Student's statement of academic objective(s).
- Official transcript(s) of all undergraduate work.

Admission to the MAcc program is provisional, subject to completion of the B.S.B.A. degree and maintaining a 3.0 GPA in the final 60 credit hours of coursework. Once admitted, the requirements for the graduate degree are the same as for the regular MAcc program. Students may count up to 9 credit hours of courses taken for graduate credit toward the unrestricted electives in the B.S.B.A. The B.S. degree may be awarded at any time following the completion of the undergraduate degree requirements. Alternatively, the B.S. and MAcc degrees may be awarded concurrently.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.

- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Master of Accountancy (MACC)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ACCTG 631 - Accounting Internship **Credits: 0-3**
- ACCTG 641 - Intermediate Accounting and Analytics III **Credits: 3**
- ACCTG 642 - Accounting Research and Communication **Credits: 3**
- FINAN 675 - Cases in Finance **Credits: 3**
- MKTG 690 - Marketing Strategy **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Master of Accountancy

Master of Accountancy (MACC)

The M.ACC curriculum is a 30-credit-hour program of study offered through the Accounting graduate program that may be completed in two regular semesters and a summer term or in three semesters. Students without prior or complete business and accounting training must acquire basic competency in the following business core foundation areas: accounting, statistics, management information systems, economics, finance, marketing, and management. These competencies may be acquired through specified business core foundation course work. The specific number of business core foundation courses required depends on the applicant's prior academic work. The basic competency course work may be taken after admission to the MAcc program, but certain business core foundation courses must be completed prior to taking MAcc courses that are in the same subject or that otherwise require a knowledge of the business core foundation material.

The objective of the master of accountancy program is to provide candidates with a greater breadth and depth in accounting than is possible in the baccalaureate or master of business administration program in preparation for careers as professional accountants in financial institutions, government, industry, nonprofit organizations, and public practice. For complete application information, see the College of Business Administration website.

Course Requirements

All MAcc students are expected to make themselves aware of and conform to the academic policies of the Graduate School as described in the Graduate Handbook and the Graduate Catalog. **In addition to an overall 3.0 GPA required by the graduate school, Master of Accountancy students must maintain a 3.0 GPA in graduate accounting course.**

Required Courses

- ACCTG 811 - Advanced Financial Reporting **Credits: 3**

Accounting Electives (12 credit hours)

Students may select 12 credit hours from ACCTG labelled courses at the 800 level. Students are encouraged to consult with their Master of Accountancy advisor to design a set of accounting and other electives consistent with their planned career objective.

- ACCTG 710 - Foundations of Accounting **Credits: 3**
- ACCTG 831 - Fraud and Forensics **Credits: 3**
- ACCTG 832 - Advanced Auditing **Credits: 3**
- ACCTG 833 - Corporate Taxation **Credits: 3**
- ACCTG 834 - Partnership Taxation **Credits: 3**
- ACCTG 835 - Business Consulting & Advanced Managerial Accounting **Credits: 3**
- ACCTG 841 - Advanced Accounting Theory **Credits: 3**
- ACCTG 842 - Advanced Topics in Taxation **Credits: 3**
- ACCTG 844 - Design of Accounting and Business Information Processes **Credits: 3**
- ACCTG 845 - International Accounting **Credits: 3**
- ACCTG 846 - International and Multijurisdictional Taxation **Credits: 3**
- ACCTG 852 - Accounting Research and Communication **Credits: 3**
- ACCTG 855 - Financial Statement Analysis and Business Valuation **Credits: 3**
- ACCTG 856 - Accounting Analytics **Credits: 3**
- ACCTG 857 - Accounting for Not-For-Profit Entities **Credits: 3**
- ACCTG 860 - Management Accounting and Business Problem Solving **Credits: 3**
- ACCTG 870 - Problems in Accounting **Credits: 3**
- ACCTG 890 - Seminars in Professional Accounting **Credits: 1-6**
- ACCTG 895 - Accounting Internship **Credits: 3**
- ACCTG 896 - Accounting International Experience **Credits: 1-6**

Other Electives (12 credit hours)

Students may select courses based on the following criteria.

- Any accounting course at the 800 level not taken as an accounting elective.
- Other business or non-business courses at the 600 level or above *approved by the student's supervisory committee.*

Culminating experience

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

All students must complete one of the following four activities as an integrative/culminating experience as part of the Master of Accountancy program. The experience must be completed after admission to the program, or after commencement of graduate coursework, whichever is earlier.

- An approved study abroad experience of at least 7 days (for or not for credit)
- An approved internship consisting of at least four weeks of full-time work (for or not for credit)
- A course such as GENBA 890 involving a semester-long hands-on project.
- A written comprehensive exam

Consult with your Master of Accountancy advisor prior to commencing any integrative/culminating activity for pre-approval.

DCE Home Page: <http://www.dce.ksu.edu/gradcib/>

The graduate certificate in Business Administration is offered through College of Business Administration. The certificate is designed for non-business graduate students who want to gain basic business knowledge in five different functional areas of business. Students in the certificate program are expected to complete 15 credit hours in accounting, finance, marketing, operations management and behavior management. The primary goal of the business certificate program is to prepare any graduate student so that he or she is better able to both "speak" and understand the language of business and interact successfully with anyone in the business world.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Business Administration at Kansas State University.

Course Requirements

Required Courses

- ACCTG 710 - Foundations of Accounting **Credits: 3**
- FINAN 715 - Foundations of Finance **Credits: 3**
- MANGT 710 - Operations and Supply Chain Management **Credits: 3**
- MANGT 720 - Managing Organizational Behavior **Credits: 3**
- MKTG 705 - Marketing Concepts and Research **Credits: 3**

Total Hours Required for Graduate Certificate: 15

"Preparing educators to be knowledgeable, ethical, caring decision makers for a diverse and changing world"

Our Mission is fulfilled through:

- the delivery of exemplary instruction to students at the undergraduate and graduate levels;
- production, interpretation, and dissemination of sound and useful research and scholarship;
- leadership, collaboration, and service within the profession;
- and promotion, understanding, and celebration of diversity.

Admission

For graduate programs in Curriculum and Instruction, click on the program for application and admission requirements: <https://coe.k-state.edu/academics/graduate/curriculum-instruction/>

Program description

The curriculum and instruction graduate programs offer a variety of graduate-level courses in all curricular areas with specific emphasis upon trends and recent developments in practice, theory, and research. These courses are offered on-campus, at selected off-campus sites, or via distance learning.

This program supports the following degrees: the master of science in curriculum and instruction, the doctor of education in curriculum and instruction, and the doctor of philosophy in curriculum and instruction. In all of these programs, breadth of study is stressed with students taking courses in other programs in the College of Education and the university.

The program offers numerous short courses, workshops, and seminars in addition to courses in the catalog. These can be applied to degree programs or taken for personal or professional development unrelated to a degree program.

Doctor of Education

Curriculum and Instruction (EDD)

The Curriculum and Instruction Ed.D. program is directed by a minimum of five members of the university graduate faculty, including a major professor with substantial expertise in the area of emphasis, two other faculty members with strengths in the area of emphasis, one faculty member outside the student's specialization.

Each student's program of study is individualized with the approval of the major professor and the supervisory committee to optimize the student's interests, expertise, and professional goals.

Information on the Ed.D. programs may be obtained from the Curriculum and Instruction Graduate Program Director.

Admission Requirements

All students are required to meet the general university admission requirements.

- Undergraduate and graduate degree from a recognized and accredited institution
- If you are applying to the Ed.D., you must also meet the following requirements:
 - U.S. applicants must be currently employed as a teacher or administrator and remain under contract with an institution for the duration of the program.
 - International applicants must be currently employed as educators within their national system. Must have at least three years of teaching experience.

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Dissertation Requirements

Completion of a dissertation which treats an important topic of professional education practice using a systematic methodology consistent with accepted research paradigms; the dissertation must be successfully defended in a public, oral defense.

- EDCI 999 - Research in Curriculum and Instruction **Credits: 1-18**

Course Requirements

Prerequisite

An introductory survey to research methods and methodologies in the social sciences. The course may be included on the Program of Study.

Possible courses: EDCEP 816 Research Methods in Education or a course approved by the supervisory committee.

- EDCEP 816 - Research Methods in Education **Credits: 3**

Area of emphasis: 48 credit hours

Introductory Courses: 6 credit hours

- EDCI 900 - Introduction to Ed.D. Doctoral Studies **Credits: 3**
- EDCI 901 - Literature Reviews for Doctoral Research **Credits: 3**

Analysis and Interpretation of Educational Research: A Theory Course: 3 credit hours

Possible course includes:

- EDCI 907 - Curriculum Theory **Credits: 3**
Or, a Theory Course approved by the supervisory committee.

Courses with EDCI prefix: 12 credit hours

A minimum of 12 credit hours of the post-master's credits on the Ed.D. Program of Study must designate the EDCI prefix at the 800 or 900 course level. Research credits (EDCI 999) and internship credits (EDCI 991) may not be applied to the 12 credit hour minimum.

Courses in the major and minor area: 27 credit hours

Foundational Knowledge: 12 credit hours

Possible courses for 1-4 below include:

History and Philosophy of Educational Ideas and Practice: 3 credit hours

- EDCI 812 - History of Education **Credits: 3**
- EDCI 813 - Comparative Philosophies of Education **Credits: 3**

Education in a Diverse Society: 3 credit hours

- EDCI 864 - Social/Cultural Issues in Educational Technology **Credits: 3**

Supporting Positive Change through Educational Technology: 3 credit hours

- EDCI 866 - Educational Technology Change Management **Credits: 3**

Curriculum: 3 credit hours

- EDCI 831 - Contemporary Issues in Teaching and Learning **Credits: 3**
- EDCI 882 - Teaching and Learning Models **Credits: 3**

ELD Track: 9 credit hours

Applies to EFL track only; all 9 hours of EFL courses listed are required for EFL track

- EDCI 845 - ELD/Dual Language Methods **Credits: 3**
- EDCI 846 - ELD/Dual Language Culture and Language in Classroom Practice **Credits: 3**

- EDCI 847 - ELD/Dual Language Assessment **Credits: 3**

Or, Foundational Knowledge courses approved by the supervisory committee.

Research courses: 12 credit hours

Research courses addressing methodology consistent with that required for the dissertation and approved by the supervisory committee.

Possible courses include:

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 819 - Survey Research **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDCI 912 - Historical Research Methods in Education **Credits: 3**
- EDCI 913 - Inquiry I – Statistical Analysis in Curriculum and Instruction **Credits: 3**
- EDCI 914 - Inquiry II – Qualitative Research in Curriculum and Instruction **Credits: 3**
- EDCI 915 - Inquiry III - Program Evaluation for Curriculum and Instruction **Credits: 3**
- EDCI 917 - Inquiry IV - Advanced Quantitative Methods in Curriculum & Instruction **Credits: 3**
- EDCI 918 - Inquiry IV - Advanced Qualitative Methods in Curriculum & Instruction **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**
- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3**

Or, Research courses approved by the supervisory committee.

Clinical Experience: 12 credit hours

- EDCI 991 - Internship in Curriculum and Instruction **Credits: 1-18**
Fall and Spring, year 1 and year 2

Research

16 credit hours

- EDCI 999 - Research in Curriculum and Instruction **Credits: 1-18**

Preliminary examination

Satisfactory completion of all segments of a written examination of at least 12 hours over all areas of the program of study.

Program Total Credits: 64

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Credit Hours Required for Doctorate: 94

Doctor of Philosophy

Curriculum and Instruction (PHD)

The Curriculum and Instruction Ph.D. program is directed by a minimum of four members of the graduate faculty, including a major professor with substantial expertise in the area of emphasis, two other faculty members with strengths in the area of emphasis, and one faculty member outside the Department of Curriculum and Instruction.

Each student's program of study is individualized with the approval of the major professor and the supervisory committee to optimize the student's interests, expertise, and professional goals.

Information on the Ph.D. programs may be obtained from the Curriculum and Instruction Graduate Program Director.

Admission Requirements

The Doctor of Philosophy (Ph.D.) in Curriculum and Instruction requires a minimum of 90 postbaccalaureate, graduate credit hours. A master's degree is a requirement for admission and, with the approval of the supervisory committee, up to 30 graduate hours earned as part of the Master's degree may be used to satisfy the 90 credits required for the doctorate.

Course Requirements

Areas of emphasis (54 credit hours)

Theory Course (3 credit hours)

Possible courses include:

- EDCI 907 - Curriculum Theory **Credits: 3** (This course is offered in the Fall of odd years.)
- Or a theory course in the content field (e.g., EDCI 818 Theoretical Models of Reading)
- Or a theory course approved by the advisor

Courses with the EDCI prefix (12 hours)

A minimum of 12 credit hours of the post-master's credits on the Ph.D. Program of Study must designate the EDCI prefix at the 800 or 900 course level. Research credits (EDCI 999) and internship credits (EDCI 991) may not be applied to the 12 credit hour minimum.

Courses in the major and minor area (42 hours)

Foundations of Education (3 credit hours)

Possible courses include:

- EDCI 812 - History of Education **Credits: 3**
- EDCI 813 - Comparative Philosophies of Education **Credits: 3**

Research courses (15 credit hours)

Programs of Study must include quantitative and qualitative methodologies.

Possible courses include:

- EDCI 912 - Historical Research Methods in Education **Credits: 3**
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 819 - Survey Research **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**
- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3**

Note

EDCEP 816 Research Methods or its equivalent is considered a *prerequisite* for the 15 hours of research in the PhD program. Also, EDCI 760 Action Research in Education cannot be included in the 15-hour research course requirement.

Doctoral Research (18 hours minimum; no more than 30 hours)

- EDCI 999 - Research in Curriculum and Instruction **Credits: 1-18**

Preliminary examination

Satisfactory completion of all segments of an examination over all areas of the program of study.

Dissertation research (18 credit hours minimum; no more than 30 credit hours)

Completion of a dissertation which examines a topic congruent with the program of study using a systematic methodology consistent with accepted research paradigms; the dissertation must be successfully defended in a public, oral defense.

- EDCI 999 - Research in Curriculum and Instruction **Credits: 1-18 ; no more than 30**

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Computer Science Education Graduate Certificate

The Graduate Certificate in Computer Science Education is designed to expose in-service and preservice teachers to content and pedagogical knowledge associated with teaching computer science at the elementary and secondary levels. With a focus on

computational thinking skills, the certificate focuses on the connected nature of computer science to all core content areas in K-12 education.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Curriculum & Instruction, or a Doctorate of Curriculum & Instruction (EdD or PhD) at Kansas State University.

Course Requirements

Required Courses

- CC 710 - Introduction to Computing for Educators **Credits: 2**
- CC 711 - Computer Education Programming Fundamentals **Credits: 1**
- CC 730 - Computer Programming for Educators **Credits: 4**
- CC 750 - Data Structures and Algorithms for Educators I **Credits: 3**
- EDCI 765 - Contemporary Pedagogies for Teaching Computer Science **Credits: 3**

Elective Courses

Choose one of the following courses (3 credits)

- EDCI 768 - Teaching Computer Science in Elementary Schools **Credits: 3**
- EDCI 769 - Teaching Computer Science in Secondary Schools **Credits: 3**

Total Credit Hours Required for Graduate Certificate: 16

Dual Language Instruction Graduate Certificate

Participants will be prepared to teach in Dual Language classroom settings using evidence-based theories and practices.

Certificate can be completed by degree-seeking students at Kansas State University or as a free-standing credential on its own.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

15 credit hours

- EDCI 700 - Introduction to Bilingual/Dual Language Education **Credits: 3**
- EDCI 714 - Reading in the Bilingual/DL Classroom **Credits: 3**
- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 740 - Culture and Language in Classroom Practice **Credits: 3**
- EDCI 742 - ESL/Dual Language Assessment **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Educational Technology Graduate Certificate

Contact: Deepak Prem Subramony

E-mail: deepak7@ksu.edu

This 12-credit graduate certificate focuses on the study and ethical practice of facilitating learning and improving performance by creating, using, and managing appropriate technological processes and resources (following guidelines prescribed by the Association for Educational Communications and Technology).

Students seeking this certificate must submit a Graduate School application indicating the field of study will be the Educational Technology Graduate Certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants need to submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework.
- A statement of objectives explaining the goals and purposes for seeking this graduate certificate.
- Three letters of recommendation.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Curriculum and Instruction at Kansas State University.

Special Requirements

- EDCI 718 - Introduction to Educational Technology **Credits: 3**
- OR similar graduate level introductory educational technology course

Course Requirements

Required Courses

- EDCI 862 - Instructional Systems Design **Credits: 3**
- EDCI 863 - Online Teaching and Learning **Credits: 3**
- EDCI 864 - Social/Cultural Issues in Educational Technology **Credits: 3**
- EDCI 866 - Educational Technology Change Management **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Teaching and Learning Graduate Certificate

Contact: C&I Graduate Program Director

Department Contact info: edcigrad@ksu.edu, 785-532-5550 (Bluemont Hall, Room 261) Homepage: <https://coe.k-state.edu/academics/certificates/teaching-learning.html>

The Graduate Certificate in Teaching and Learning is offered through the Curriculum and Instruction graduate program. The certificate provides two tracks of graduate-level professional course work in education. The licensure track leads to teacher licensure to address critical statewide and national shortages in the following subjects:

- Agriculture (Grades 6-12)

- Art (Grades PK-12)
- Biology (Grades 6-12)
- Business (Grades 6-12)
- Chemistry (Grades 6-12)
- Earth and Space Sciences (Grades 6-12)
- English (Grades 6-12)
- Family and Consumer Sciences (Grades 6-12)
- Journalism (Grades 6-12)
- Mathematics (Grades 6-12)
- Modern Language (Grades PK-12)
- Music (Grades PK-12)
- Physical Education and Health (PK-12)
- Physics (Grades 6-12)
- Social Studies (Grades 6-12)
- Speech and Theatre (Grades 6-12)

The licensure track of the certificate program was designed to attract qualified candidates to the profession of teaching. Candidates must have a baccalaureate degree in the subject field where licensure is sought.

The licensure track certificate consists of 19-20 core credit hours with additional content area classes for licensure. Field experiences are required in PK-12 schools after the completion of these nine credit hours: EDCI 702 (Credits: 3) or MUSIC 810 (Credits: 3), EDCI 715 (Credits: 3), EDSP 711 (Credits: 3).

Questions concerning exceptions (or substitutions) within the licensure track should be directed to the College of Education's Licensure Officer (Center for Student Success and Professional Services, 785-532-5524).

The non-licensure track is offered to address global shortages in qualified teachers in ESL/EFL education (Grades PK-16). Candidates must have a baccalaureate degree in education. The non-licensure track is intended for international students through contractual relationships with the College of Education regarding international ESL programs.

The non-licensure track consists of two "blocks" of course work. The order in which Block I courses are completed may vary. However, all Block I courses must be completed prior to enrolling in the Block II Internship semester.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Curriculum and Instruction at Kansas State University. (Note: must apply for the M.S. first and then add the certificate)

English language proficiency

If your native language is not English, the Graduate School requires each applicant to provide a satisfactory test score for TOEFL, IELTS or PTE (see chart below).

An applicant who has received a degree in the last two years from a United States college or university is exempt from this requirement.

English Proficiency Test Score Requirements

Test	Minimum Score
IBT TOEFL (internet based)	79
TOEFL (PBT)	550

IELTS	6.5
Pearson Test of English (PTE)	58

The TOEFL is offered several times a year throughout the world by the Educational Testing Service. Accepted TOEFL test scores are from the TOEFL IBT (Internet Based Test) and TOEFL PBT (Paper Based Test). International applicants are advised to take the TOEFL as early as possible to avoid delays in the processing of their applications. Please request your scores to be sent to Kansas State University (K-State TOEFL school code 6334). All scores are valid for two years from the initial test date.

Admission Requirements

Acceptance of students leading to a Graduate Certificate in Teaching and Learning is contingent on being eligible for admission to the Graduate School and meeting the following specific criteria:

Licensure Track:

- Represent a teaching field identified as a critical area of need: Agriculture (6-12), Art (PK-12), Biology (6-12), Business (6-12), Chemistry (6-12), Earth & Space Science (6-12), English (6-12), Family & Consumer Sciences (6-12), Journalism (6-12), Mathematics (6-12), Modern Language (PK-12), Music (PK-12), PE/Health (PK-12), Physics (6-12), Social Studies (6-12), and Speech and Theatre (6-12)
- Meet all undergraduate content requirements (or equivalent) for subject in which licensure is sought (most subject areas require additional content hours);
- Possess a baccalaureate (or equivalent) in the subject area in which licensure is sought;
- Receive the support, through personal interview, of at least one member of the faculty sponsoring the Graduate Certificate;
- Have documented experiences working with youth.

Prior to application, you must first meet with the Licensure Officer to determine your eligibility for the certificate and your faculty content advisor.

Official application to the certificate occurs when you begin the completion of any required undergraduate coursework, and have met with the Licensure Officer and your faculty content advisor.

Non-Licensure Track:

- Represent the field of ESL/EFL education (Grades PK-16).
- Possess a baccalaureate (or equivalent) in education.
- Receive the support, through personal interview, of at least one member of the faculty sponsoring the Graduate Certificate.

Prior to application, you must first meet with your faculty content advisor.

Official application to the certificate occurs when you begin the completion of required coursework and have met with your faculty content advisor.

Application

Students seeking this certificate must submit a Graduate School application indicating the field of study will be the Teaching and Learning graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants need to submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework.
- A statement of objectives explaining the goals and purposes for seeking this graduate certificate.
- Three letters of recommendation.

Students seeking this certificate and who need financial aid should apply to the Master's in Curriculum and Instruction (M.S.) program.

Curriculum

Licensure Track:

Block I (9 credit hours)

- EDCI 702 - Curriculum, Instruction, and Assessment **Credits: 3**
OR
- MUSIC 810 - Curriculum Development and Learning Assessment **Credits: 3**
- EDCI 715 - Literacy and Diverse Learners in the Content Areas **Credits: 3**
- EDSP 711 - Characteristics of Exceptionalities **Credits: 3**

Block II (6-7 credit hours)

Foundations, one of the following:

- EDCI 812 - History of Education **Credits: 3**
OR
 - EDCI 813 - Comparative Philosophies of Education **Credits: 3**
OR
 - MUSIC 807 - History and Philosophy of Music Education **Credits: 3**
- Content Area Teaching Methods, one of the following:
- EDCI 703 - MAT Secondary Math Methods **Credits: 3**
Or
 - EDCI 704 - Science Methods and Practicum for Teaching and Learning **Credits: 3**
Or
 - EDCI 705 - MAT Social Studies Methods **Credits: 3**
Or
 - EDCI 706 - MAT Secondary English/Language Arts **Credits: 3**
Or
 - EDCI 707 - FACS Methods and Practicum for Teaching and Learning **Credits: 3**
Or
 - EDCI 708 - Business Methods and Practicum for Teaching and Learning **Credits: 3**
Or
 - EDCI 709 - Agricultural Education Methods and Practicum for Teaching and Learning **Credits: 3**
Or
 - EDCI 711 - Art Methods and Practicum for Teaching and Learning **Credits: 3**
Or
 - EDCI 712 - MAT Foreign Language Methods **Credits: 3**
Or
 - EDCI 724 - Fundamentals of Teaching Music **Credits: 1**
and
 - EDCI 725 - Music Methods for Elementary Schools **Credits: 1**

- and
- EDCI 726 - Music Program in Middle and Secondary Schools **Credits: 1**
- and
- EDCI 727 - Advanced Methods in Music Education **Credits: 1**

Block III (4 credit hours)

- EDCI 801 - Internship in K-12 Schools **Credits: 1-4**

Non-Licensure Track:

The non-licensure track consists of two "blocks" of course work. The order in which Block I courses are completed may vary. However, all Block I courses must be completed prior to enrolling in the Block II Internship semester.

Block I (15 credit hours)

- EDCI 718 - Introduction to Educational Technology **Credits: 3**
- EDCI 845 - ELD/Dual Language Methods **Credits: 3**
- EDCI 846 - ELD/Dual Language Culture and Language in Classroom Practice **Credits: 3**
- EDCI 847 - ELD/Dual Language Assessment **Credits: 3**
- EDCI 910 - Multicultural Curriculum Programming **Credits: 3**

Block II (4 credit hours)

- EDCI 991 - Internship in Curriculum and Instruction **Credits: 1-18**

Technology Requirement

Upon admission to the Graduate Certificate in Teaching and Learning, students must have a personal device equipped with keyboard, microphone, and webcam (desktop, laptop, or tablet).

Total Hours Required for Graduate Certificate: 19-20

Master of Arts in Teaching

Master of Arts in Teaching - Elementary (MAT)

The Master of Arts in Teaching (MAT) program is designed for second-career adults who have previously attained a Bachelor's degree and would like to become elementary or secondary teacher. Program completers would earn a Master of Arts in Teaching degree and a recommendation for initial teacher licensure. The MAT has the choice of an elementary track or a secondary track. Candidates for secondary education must have a bachelor's degree in the subject field where licensure is sought.

The program is designed as a cohort model and is delivered exclusively online in 12 months. Each cohort begins with the May intersession. The program provides an alternative pathway to teaching that is not currently available to Kansans or others who live outside a reasonable radius of a university or other teacher education unit.

Application requirements and information about the program can be found in the MAT Handbook at the Master of Arts in Teaching website (<http://coe.ksu.edu/academics/mateaching/index.html>)

Elementary Track

All courses will be delivered online through a cohort model. Until demand justifies additions, one cohort of students will be admitted per year beginning with the May Intersession. All courses are required and there are no electives.

Students will complete a 2-credit-hour practicum (EDCI 800) and a 4-credit-hour teaching internship (EDCI 801). Field experiences will be arranged in accredited elementary schools convenient to students in the program.

Course Requirements

The coursework only option for this program does not require a culminating experience.

May Intersession

- EDCI 710 - Social Foundations of K-12 Education **Credits: 3**
- EDCI 890 - Master's Project **Credits: 1-6**

Summer

- EDCI 702 - Curriculum, Instruction, and Assessment **Credits: 3**
- EDCI 716 - Teaching Diverse Learners **Credits: 3**

Fall

- EDCI 791 - Teaching Science and Mathematics in the Elementary School **Credits: 4**
- EDCI 792 - Teaching Social Studies, Reading, and Literacy in the Elementary School **Credits: 4**
- EDCI 800 - Teaching Practicum **Credits: 1-6**

January Intersession

- EDCI 793 - Teaching Health, Movement, and Fine Arts in Elementary Schools **Credits: 4**

Spring

- EDCI 801 - Internship in K-12 Schools **Credits: 1-4**
- EDCI 760 - Action Research in Education **Credits: 3**

Total Hours Required for Master's: 31-33

Master of Arts in Teaching - Secondary (MAT)

The Master of Arts in Teaching (MAT) program is designed for second-career adults who have previously attained a bachelor's degree and would like to become an elementary or a secondary teacher. Program completers will earn a Master of Arts in

Teaching degree and a recommendation for an initial teacher license. The MAT has the choice of an elementary track or a secondary track. Candidates for secondary education must have a bachelor's degree in the subject field where licensure is sought.

The program is designed as a cohort model and is delivered exclusively online in 12 months. Each cohort begins with the May intersession. The program provides an alternative pathway to teaching that is not currently available to Kansans or others who live outside a reasonable radius of a university or other teacher education unit.

Application requirements and information about the program can be found in the *MAT Handbook* at the Master of Arts in Teaching website (<http://coe.ksu.edu/academics/mateaching/index.html>)

Secondary Track

All courses will be delivered online through a cohort model. Until demand justifies additions, one cohort of students will be admitted per year beginning with the May Intersession. All courses are required and there are no electives.

Applicants must possess an undergraduate degree in the appropriate content field and present a passing score on the content area licensure exam.

Students will complete a 2-credit-hour practicum (EDCI 800) and a 4-credit-hour teaching internship (EDCI 801). Field experiences will be arranged in accredited middle or secondary schools convenient to students in the program.

Course Requirements

The coursework only option for this program does not require a culminating experience.

May Intersession

- EDCI 710 - Social Foundations of K-12 Education **Credits: 3**
- EDCI 890 - Master's Project **Credits: 1-6**

Summer

- EDCI 702 - Curriculum, Instruction, and Assessment **Credits: 3**
- EDCI 716 - Teaching Diverse Learners **Credits: 3**
- EDCI 797 - Secondary Content Field Colloquium I **Credits: 2**
or
- AGED 797 - Agricultural Education Colloquium I **Credits: 2**

Fall

- EDCI 715 - Literacy and Diverse Learners in the Content Areas **Credits: 3**
- EDCI 703 - MAT Secondary Math Methods **Credits: 3**
or
- EDCI 705 - MAT Social Studies Methods **Credits: 3**
or

- EDCI 706 - MAT Secondary English/Language Arts **Credits: 3**
or
- EDCI 712 - MAT Foreign Language Methods **Credits: 3**
or
- AGED 790 - Agricultural Education Methods and Practicum for Teaching and Learning **Credits: 3**

- EDCI 798 - Secondary Content Field Colloquium II **Credits: 2**
or
- AGED 798 - Agricultural Education Colloquium II **Credits: 2**
- EDCI 800 - Teaching Practicum **Credits: 1-6**

Winter Intersession

- EDCI 799 - Secondary Content Field Colloquium III **Credits: 2**
or
- AGED 799 - Agricultural Education Colloquium III **Credits: 2**

Spring

Final Project

Information about the Teaching and Learning Portfolio is provided by the College of Education.

Total Hours Required for Master's: 31-33

Master of Science

Curriculum and Instruction (MS)

With an emphasis on trends and recent developments in practice, theory and research, the Master of Science in Curriculum and Instruction was designed to be customizable to a variety of roles within the modern school system for those with a background in education. The learning skills/school improvement concentration was designed to leverage interactive technologies to increase student achievement and teacher retention.

You may choose to complete this program on its own or add an educational technology graduate certificate or reading specialist endorsement, with no additional credits required.

Course Requirements

The M.S. in Curriculum and Instruction requires a minimum of 31 hours of graduate credits. Three hours in each of these core areas is required: curriculum, teaching and learning, diversity, educational technology, and research and scholarship. In addition, at least 15 hours in an area of specialization are required. All students take the Master's Project (1 hr.), while others also take the

Master's Report (2 hours) or the Master's Thesis (6 hours). The requirements for each core area and for each of these specializations are described below.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

A. Curriculum (3 credit hours)

This category addresses all aspects of K-12 curriculum. It is intended that one course in curriculum would address the broad range of these issues.

- The foundations of curriculum (philosophical, historical, psychological, and social foundations; curriculum theory)
- The principles of curriculum (aims, goals, objectives; curriculum design, development, implementation, and evaluation)
- Issues of curriculum (trends and issues; future directions; national standards)

Recommended courses for this core category

- EDCI 803 - Curriculum Development **Credits: 3**
OR a curriculum course approved by the student's advisor and committee.

B. Teaching and learning

This category deals with theoretical, practical, and research-based issues associated with the creation of an environment for effective teaching and learning. The following topics are representative of the issues that might affect the creation of the learning environment:

- Teaching strategies (e.g., direct instruction, cooperative learning)
- Learning theory (e.g., sociocultural theory, schema theory)
- Theory and research into practice
- Instructional planning and design
- Assessment
- Learning environments (organization, management, discipline)
- Standards and practices

One course in teaching and learning may address only one of these issues; one course is not intended to provide a survey of all possible issues that affect the creation of a learning environment.

Recommended courses for this category:

- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 831 - Contemporary Issues in Teaching and Learning **Credits: 3**
- EDCI 862 - Instructional Systems Design **Credits: 3**
- EDCI 882 - Teaching and Learning Models **Credits: 3**
OR a teaching and learning course approved by the student's advisor and committee.

C. Diversity (3 credit hours)

This category addresses the nature of learner differences and the instructional implications of these differences. Teaching students in a pluralistic society entails knowledge of many possible factors that may affect student performance, behavior, and instruction.

Student diversity may be due to factors such as: ethnicity, race, socioeconomic status, gender, exceptionalities, language, religion, sexual orientation, or geographical areas. One course in diversity may address several of these issues; but one course is not intended to provide a survey of all possible issues that address the nature of learner differences, the instructional implications of these differences, and the nature of the institution of schooling and biases that may exist.

Recommended courses for this core category:

- EDCI 740 - Culture and Language in Classroom Practice **Credits: 3**
 - EDCI 755 - Multicultural Issues in Teaching **Credits: 3**
 - EDCI 812 - History of Education **Credits: 3**
 - EDCI 813 - Comparative Philosophies of Education **Credits: 3**
 - EDCI 864 - Social/Cultural Issues in Educational Technology **Credits: 3**
- OR a diversity course approved by the student's advisor and committee.

D. Educational technology (3 credit hours)

This category examines:

- Roles that technology, teachers, and learners may take in any educational context
- Ways of integrating technology into teaching and learning
- Issues involved in using technology in K-12 settings

Recommended courses for this category:

- EDCI 718 - Introduction to Educational Technology **Credits: 3**

E. Research and scholarship (3 credit hours)

This category deals with interpreting, using, and conducting research and scholarly activities. Scholarship might include analysis, position papers, essays, research into

practice, and other creative endeavors. Scholarship is broader and more inclusive than research. Research is a form of scholarship.

This category addresses:

- The many forms of scholarship
- Scientific and naturalistic research
- Analysis, interpretation, and application of research and scholarship to improve teaching and learning
- Designing and conducting research and scholarship
- How research relates to practice

It is intended that one course in research and scholarship would address the broad range of these items.

Students must complete the research course before starting the master's degree project, report, or thesis (see category F).

Recommended courses for this category:

- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCI 760 - Action Research in Education **Credits: 3**
OR a research and scholarship course approved by the student's advisor and committee.

F. Project, report, or thesis (1-6 credit hours)

Students must complete a research course in Category E before starting this project, report, or thesis. The results of the research project, report, or thesis are to be reported to the student's supervisory committee in the oral exam in the last semester of the degree program.

Project (1 credit hour)

The objective of the project is to improve the student's own practice. Students select a topic pertinent to their own practice. This project includes the construction of a professional portfolio to represent the student's learning throughout the master's degree program.

- EDCI 890 - Master's Project **Credits: 1-6**

Report (2 credit hours)

A master's report is generally shorter than a thesis, and it may present the results of a more limited investigation. Alternatively, it may review the state of a particular scholarly or scientific problem, or - especially in the case of professional programs or applied disciplines - it may describe a project appropriate to the disciplines.

- EDCI 898 - Master's Report **Credits: 1-18**

Thesis (6 credit hours)

The master's thesis presents the results of an original investigation of a problem or topic approved by the candidate's supervisory committee. Its purpose is to demonstrate the candidate's ability to conduct original research, and to present the results in a form acceptable to the supervisory committee.

- EDCI 899 - Master's Thesis **Credits: 1-18**

G. Area of specialization (15 credit hours)

Students must select one of the following areas of specialization (details for each are on the following pages):

- G1. Elementary/Middle-Level Curriculum and Instruction
- G2. Reading/Language Arts
- G3. The Reading Specialist Endorsement
- G4. Middle Level/Secondary Curriculum and Instruction

- G5. Educational Technology
- G7. English as a Second Language
- G8. Learning Skills/School Improvement
- G9. Mathematics Education
- G10. Civic Education
- G11. World Modern Language

G1. Elementary/middle level curriculum and instruction (15 credit hours)

This specialization is intended for elementary teachers who teach a variety of subjects and middle-level teachers who teach in more than one subject field. Core and elective courses for this specialization are intended to focus on curricular issues of the subjects that elementary/middle level teachers teach (e.g., math, science, social studies, science, language arts, reading).

Recommended courses:

- EDCI 776 - Teaching in Middle Schools **Credits: 3**
 - EDCI 816 - Approaches to Literacy Instruction **Credits: 3**
 - EDCI 820 - Contemporary Issues in Language Arts **Credits: 3**
 - EDCI 821 - Advanced Methods in the Teaching of K-12 Mathematics **Credits: 3**
 - EDCI 834 - Improving Science Teaching **Credits: 3**
- OR other courses approved by the advisor.

G2. Reading/language arts (15 credit hours)

Master's degree candidates may specialize in reading/language arts course without taking the particular courses for the reading endorsement (that endorsement can be obtained with specialization G3). Students may choose any 15 hours of approved elementary/middle level and/or secondary courses that emphasize reading and the language arts. Some of the courses may have prerequisites; see the catalog for that information.

Recommended courses:

- EDCI 715 - Literacy and Diverse Learners in the Content Areas **Credits: 3**
 - EDCI 756 - Tradebooks Across the Curriculum **Credits: 3**
 - EDCI 758 - Reading/Writing Connections **Credits: 3**
 - EDCI 816 - Approaches to Literacy Instruction **Credits: 3**
 - EDCI 820 - Contemporary Issues in Language Arts **Credits: 3**
 - EDCI 840 - Literacy Assessment **Credits: 3**
 - EDCI 841 - Striving Literacy Learners **Credits: 3**
 - EDCI 878 - The Language Arts Curriculum **Credits: 3**
- OR other courses approved by the advisor.

G3. Reading specialist endorsement (15 credit hours)

Special licensure requirements exist for K-12 school teachers of special reading classes in Kansas. In addition to degree certification and teaching experience, a planned sequence of graduate reading courses are required for licensure endorsement. Students seeking this endorsement must hold a valid Kansas Professional teaching license.

Required courses (15 credit hours):

- EDCI 816 - Approaches to Literacy Instruction **Credits: 3**
- EDCI 818 - Theoretical Models of Literacy **Credits: 3**
- EDCI 840 - Literacy Assessment **Credits: 3**
- EDCI 841 - Striving Literacy Learners **Credits: 3**
- EDCI 930 - Leadership in Literacy **Credits: 3**

Required practicum (3 credit hours):

- EDCI 945 - Clinical Practicum in Reading **Credits: 3**

Additional requirements:

After completing the required courses and practicum, the applicant must fulfill these additional requirements to obtain an initial reading specialist license:

1. Hold a currently valid Kansas professional teaching license.
2. Present a score of 165 or above on the Praxis II exam for the Reading Specialist (test number 5302).
3. Hold a masters degree. (It is permitted but not necessary to include the required courses as part of the masters degree.)
4. Have a 3.25 grade point average in graduate coursework.
5. Have recent teaching experience or coursework (i.e., at least one year of teaching or 8 credit hours within the last six years.)

G4. Middle level/secondary curriculum and instruction (15 credit hours)

This specialization is intended for middle-level and secondary teachers who teach in one subject field. This specialization is intended to enhance one's knowledge and skills about their teaching field (e.g., education in math, science, social studies, language arts, family and consumer sciences, agriculture, vocational fields).

- A curriculum course in the teaching field (3 hours)
- Electives (12 hours)
- These courses may relate to the content being taught, the curricular program, or instructional aspects of the teaching field.

G5. Educational Technology (15 credit hours)

This area of specialization focuses – following guidelines prescribed by the Association for Educational Communications and Technology (AECT) – on the study and ethical practice of facilitating learning and improving performance by creating, using, and managing appropriate technological processes and resources. While K-12 educators constitute its largest audience, this specialization is equally appropriate for those from higher education or corporate/industry backgrounds who want to explore the role of educational and communications technologies in enabling effective teaching and meaningful learning. This specialization also provides a solid foundation for those wishing to pursue a doctoral program in Educational Technology.

Required Foundations Courses

B: Teaching and Learning (3 credit hours)

- EDCI 862 - Instructional Systems Design **Credits: 3**

C: Diversity (3 credit hours)

- EDCI 864 - Social/Cultural Issues in Educational Technology **Credits: 3**

D: Educational Technology (3 credit hours)

- EDCI 718 - Introduction to Educational Technology **Credits: 3**

Area of Specialization Courses

Required (12 credit hours)

- EDCI 863 - Online Teaching and Learning **Credits: 3**
- EDCI 866 - Educational Technology Change Management **Credits: 3**
- EDCI 887 - Educational Technology Proseminar I **Credits: 3**
- EDCI 888 - Educational Technology Proseminar II **Credits: 3**

Electives (select at least 3 credit hours from the following)

- EDCI 826 - Contemporary Technologies in Mathematics Education **Credits: 3**
- Any other Educational Technology centered elective approved by the advisor **Credits: 3**

G7. English as a second language (ESL endorsement) (15 credit hours)

(For students seeking the ESL endorsement, any substituted course must closely address the content of the course it is replacing.)

- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 731 - ESL/Dual Language Linguistics **Credits: 3**
- EDCI 740 - Culture and Language in Classroom Practice **Credits: 3**
- EDCI 742 - ESL/Dual Language Assessment **Credits: 3**
- EDCI 745 - ESL/Dual Language Elementary Practicum **Credits: 3**
- OR
- EDCI 746 - ESL/Dual Language Secondary Practicum **Credits: 3**

G8. Learning Skills/School improvement (15 credit hours)

This area is appropriate for educators who want to develop knowledge and skills to work with others in the school or district on improvement in curriculum and instruction. Course selection should be done with the guidance of an advisor.

- EDCI 991 - Internship in Curriculum and Instruction **Credits: 1-18**
- OR other courses approved by the advisor.

G9. Mathematics Education (15 credit hours)

This area of specialization is designed for teachers who wish to further their understandings of mathematics curriculum, content, and pedagogy. Courses are designed to provide a contemporary perspective on teaching mathematics in K-12 schools.

- EDCI 729 - Middle-Level Mathematics for Teachers **Credits: 3**
- EDCI 821 - Advanced Methods in the Teaching of K-12 Mathematics **Credits: 3**

- EDCI 823 - History of Mathematics Education **Credits: 3**
- EDCI 825 - Research in Mathematics Teaching and Learning **Credits: 3**
- EDCI 826 - Contemporary Technologies in Mathematics Education **Credits: 3**
- EDCI 827 - Theoretical Models of Mathematics Teaching and Learning **Credits: 3**
- EDCI 828 - Assessment in Mathematics Education **Credits: 3**
- EDCI 886 - Seminar in Curriculum and Instruction **Credits: 1-18**
- Other courses may be approved by the advisor. These hours may include up to six hours from the KSU Math Department (e.g., MATH 591, MATH 791).

G10. Civic Education (15 credit hours)

This area of specialization is designed for teachers who wish to further their understandings of civic education curriculum, content, and pedagogy. Courses are designed to provide a contemporary perspective on teaching civic education in K-12 schools.

- EDCI 781 - Teaching the Theoretical Foundations of Constitutional Government **Credits: 1**
 - EDCI 782 - Teaching the Historical Origins of Constitutional Government **Credits: 1**
 - EDCI 783 - Teaching the Development of Constitutional Principles **Credits: 1**
 - EDCI 784 - Teaching the Institutions of Government **Credits: 1**
 - EDCI 785 - Teaching the Bill of Rights **Credits: 1**
 - EDCI 787 - Teaching Citizenship **Credits: 1**
 - EDCI 788 - Teaching the Constitutional Principles of America's Founders. **Credits: 3**
 - EDCI 789 - Methods and Materials in Civic Education **Credits: 3**
 - EDCI 790 - Engaged Citizens: Public Policy Issues and Processes **Credits: 3**
- Or other courses approved by the adviser; these hours may include up to six hours in political science, history, or law.

G.11 World Modern Languages (15 hours)

This area of specialization is designed for teachers who wish to further their understandings of world modern language education curriculum, content, and pedagogy. Courses are designed to provide a contemporary perspective on teaching world modern language education in K-12 schools.

Recommended Courses:

- EDCI 770 - Advanced Approaches in World Lang Ed **Credits: 3**
- EDCI 771 - Assessment in World Language Education **Credits: 3**
- EDCI 772 - Current Trends and Research in World Language Education **Credits: 3**
- EDCI 773 - Contemporary Technology in World Language Education **Credits: 3**
- EDCI 871 - World Language Education Practicum **Credits: 3**

Total Hours Required for Master's: 31

Please refer to Curriculum and Instruction

Dean of Education

Other Degrees

Endorsement for certification or licensure requiring work beyond the bachelor's degree

The College of Education will recommend for licensure individuals satisfying program requirements for the following: building leader (administrator), district leader (administrator), school counselor, reading specialist, early childhood unified education, and English as a second language (ESL). Licensure recommendations are initiated through the Office of Licensure, 13 Bluemont Hall.

Administrative leadership endorsements

A graduate degree is required for any professional administrative leadership license granted by the state of Kansas. The program required by the College of Education must be completed. A minimum of eight hours from courses required for the administrative leadership license must be earned at K-State before the College of Education may recommend administrative leadership licensure. The educational leadership faculty should be contacted regarding advisement for specific administrative leadership licensure.

There are two Kansas administrative leadership endorsements: the building leadership endorsement for the principalship and the district leadership endorsement for the superintendency, which also covers other positions such as special education director (see special education, below).

Building administrative leadership endorsement

This endorsement is for licensure for the principalship. It includes 36 hours of course work. Many courses required for this endorsement are the same as those required in the M.S. in educational leadership. Students who already have applicable course work from another graduate degree do not need a second degree in order to qualify for the license. Endorsement requirements are listed here.

Initial Building Leadership License* (36 hours)

- EDLEA 801 - Ethical Dimensions of Educational Leadership **Credits: 3**
- EDLEA 810 - Historical and Philosophical Analysis of Leadership in Education **Credits: 3**
- EDLEA 836 - School-Community Relations **Credits: 3**
- EDLEA 886 - Leadership for Special Populations **Credits: (3)**
- EDLEA 886 - Leadership in Assessment Issues **Credits: (3)**
- EDLEA 855 - Administrative Leadership in Curriculum **Credits: 3**
- EDLEA 885 - Technology Leadership for Administrators **Credits: 3**
- EDLEA 819 - Introduction to Education Finance **Credits: 3**
- EDLEA 865 - Administrative Leadership in Staff Development **Credits: 3**
- EDLEA 831 - Educational Law **Credits: 3**
- EDLEA 835 - The Principalship **Credits: 2**
- EDLEA 889 - Practicum in Educational Leadership **Credits: 1-3**
- EDLEA 910 - Educational Human Resource Administration **Credits: 3**

Professional Building Leadership License***

* All initial building leadership license candidates must complete the School Leaders Licensure Assessment through ETS (www.ets.org) and meet a minimum score of 165.

** Students are required to document a minimum of 150 clock hours guided field experience through the formal practicum and other coursework (i.e. additional practicum requirements are imbedded in many courses in the licensure sequence to assist in reaching the 150 clock hour requirement). A written log of practicum activities must be included with the student's final portfolio assessment. Further, see policy on acceptable internship settings.

*** After receiving an initial license, students must complete a one-year supervised internship in an administrative position to earn the professional license.

District administrative leadership endorsement

This endorsement is for licensure for the superintendency. It includes 60 total hours of graduate course work. Much of this same work is also required for building-level leadership licensure. Accordingly, students who already hold a master's degree in educational leadership may apply those degree hours toward this license. The course work for this endorsement is listed below:

Initial District Leadership License (60 total required hours)

Prerequisite to Pursuit of District Leadership License (36* hours)

- Candidates for the initial district leadership license must have a masters degree from an accredited university.
- Candidates must hold a current Kansas building administrative leadership license OR have satisfied the requirements for the Initial Building Leadership License.
- Candidates must have completed the School Superintendent Assessment (through ETS www.ets.org) with a score of 157 or above.

District Leadership (24 hours)

- EDLEA 827 - Political and Community Leadership in Education **Credits: 3**
- EDLEA 830 - Introduction to Educational Facility Planning **Credits: 3**
- EDLEA 834 - Strategies for Educational Change **Credits: 3**
- EDLEA 845 - Leadership for Diverse Populations **Credits: 3**
- EDLEA 801 - Ethical Dimensions of Educational Leadership **Credits: 3**
- EDLEA 901 - The School District Leader **Credits: 3**
- EDLEA 950 - Advanced School Business Management **Credits: 3**
- EDLEA 986 - Advanced Seminars in Educational Leadership **Credits: 1-18**
- EDLEA 902 - District Leader Internship **Credits: 1-3**

Professional District Leadership License****

* Candidates holding degrees from other universities may be required to take additional coursework to total 60 hours beyond the bachelor's degree.

** If the candidate obtained building licensure through Kansas State University and his/her transcript shows completion of EDADL 886 Ethical Dimensions of Leadership during the building license program, this requirement has been satisfied. Otherwise, the requirement applies.

*** Students are required to document a minimum 150 clock hours guided field experience through the formal internship and other coursework (i.e. additional internship requirements are imbedded in many courses in the licensure sequence to assist in reaching the 150 clock hour requirement). Further, see policy on acceptable internship settings.

**** After receiving an initial license, students must complete a one-year supervised internship in an administrative leadership position to earn the professional license.

School counseling endorsements

(The official title of this degree approved by the Board of Regents is M.S. in Counseling and Student Development.)

The Master of Science Degree in School Counseling is accredited by the Council for the Accreditation of Counseling and Related Educational Programs (CACREP). Students who complete the 48-hour program are eligible for school counseling licensure. There are two options for licensure as a school counselor in the State of Kansas. One option is for individuals who have a professional teaching license; the second option, the parallel pathway, is for individuals who do not have a professional teaching license. The parallel pathway option requires additional field experiences over two semesters in schools.

Core requirements (27 hours)

- EDCEP 810 - Mental Health in Schools **Credits: 3**
- EDCEP 822 - Counseling Adolescents **Credits: 3**
- EDCEP 823 - Counseling Theory **Credits: 3**
- EDCEP 852 - Career Development for School Counselors **Credits: 3**
- EDCEP 856 - Counseling Children **Credits: 3**
- EDCEP 857 - Counseling Program Management **Credits: 3**
- EDCEP 871 - Leadership, Advocacy, and Consultation for Counselors **Credits: 3**
- EDCEP 824 - Development Across the Lifespan for School Counselors **Credits: 3**
- EDCEP 951 - Multicultural Counseling **Credits: 3**

Research and appraisal requirements (9 hours)

- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDCEP 815 - Using Tests in Counseling **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**

Clinical Requirements (12 hours)

- EDCEP 858 - Group Processes **Credits: 3**
- EDCEP 877 - Practicum in Counseling **Credits: 3**
- EDCEP 887 - Counseling Internship **Credits: 1-3**
(6 hours of EDCEP 887 required)

Reading Specialist Endorsement (18 hours)

Special licensure requirements exist for K-12 school teachers of special reading classes in Kansas. In addition to degree certification and teaching experience, a planned sequence of graduate reading courses are required for licensure endorsement. Students seeking this endorsement must hold a valid Kansas Professional teaching license.

Required courses (15 hours)

- EDCI 816 - Approaches to Literacy Instruction **Credits: 3**
- EDCI 818 - Theoretical Models of Literacy **Credits: 3**
- EDCI 840 - Literacy Assessment **Credits: 3**
- EDCI 841 - Striving Literacy Learners **Credits: 3**
- EDCI 930 - Leadership in Literacy **Credits: 3**

Required Practicum (3 hours)

- EDCI 945 - Clinical Practicum in Reading **Credits: 3**

Additional Requirements

After completing the required courses and practicum, the applicant must fulfill these additional requirements to obtain a conditional reading specialist license:

1. Hold a valid professional teaching license.
2. Present a score of 560 or above on the Praxis II exam for the Reading Specialist (test number 0300).
3. Hold a masters degree. (It is permitted but not necessary to include the required courses as part of the masters degree.)

Special education endorsements

Endorsements can be in one or more of the following areas: adaptive or functional special education. The endorsement programs for adaptive or functional special education may lead to a master's degree. Specific requirements for these endorsement areas are included in the description for the M.S. in special education. At least half of the credits required for special education endorsement must be earned at K-State, including at least one major course and one practicum, before the College of Education may recommend for special education endorsement.

The special education endorsement can be granted to a person who holds a valid Kansas teaching license for the level (i.e., elementary, or secondary) of special education preparation. Contact the department of special education, counseling and student affairs for information about provisional endorsement.

Teaching endorsement for adaptive special education elementary and/or secondary

Prerequisites

Eligible for licensure in elementary or secondary education, and one of the following courses:

Required courses for elementary and secondary (39 hours)

- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDSP 742 - Intensive Interventions for Students with Emotional Disability **Credits: 3**
- EDSP 743 - Intensive Interventions for Students with Dyscalculia and Other Math Difficulties **Credits: 1-3**
- EDSP 745 - The Consulting Process in Special Education **Credits: 3**

- EDSP 777 - Social Emotional Learning and Behavior Management Strategies **Credits: 3**
- EDSP 778 - Technology for Special Education **Credits: 3**
- EDSP 785 - Practicum I **Credits: 1-3**
- EDSP 830 - Assessment in Special Education **Credits: 3**
- EDSP 848 - Transitions in Special Education **Credits: 3**

Required course for Secondary

- EDSP 844 - Special Education in Secondary Schools **Credits: 2**

Teaching endorsement for functional special education elementary and/or secondary

Prerequisites

Eligible for certification in elementary or secondary education, and one of the following courses:

Required courses (48 hours)

- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDSP 742 - Intensive Interventions for Students with Emotional Disability **Credits: 3**
- EDSP 743 - Intensive Interventions for Students with Dyscalculia and Other Math Difficulties **Credits: 1-3**
- EDSP 745 - The Consulting Process in Special Education **Credits: 3**
- EDSP 777 - Social Emotional Learning and Behavior Management Strategies **Credits: 3**
- EDSP 778 - Technology for Special Education **Credits: 3**
- EDSP 785 - Practicum I **Credits: 1-3**
- EDSP 830 - Assessment in Special Education **Credits: 3**
- EDSP 841 - Interventions: Low Incidence Special Education **Credits: 3**
- EDSP 848 - Transitions in Special Education **Credits: 3**
- EDSP 849 - Interventions: Autism Spectrum Disorders **Credits: 3**
- EDSP 885 - Practicum in Education of Individuals with Low Incidence Special Education Needs **Credits: 1-6**

English as second language (ESL) endorsement

Completion of the following five courses meets requirements for ESL endorsement through Kansas State University. Students enroll in one course per semester; each is offered for three hours of graduate or undergraduate credit. The courses in the endorsement are:

- EDCI 720 - ESL/Dual Language Methods **Credits: 3**
- EDCI 731 - ESL/Dual Language Linguistics **Credits: 3**
- EDCI 740 - Culture and Language in Classroom Practice **Credits: 3**
- EDCI 742 - ESL/Dual Language Assessment **Credits: 3**
- EDCI 745 - ESL/Dual Language Elementary Practicum **Credits: 3**

OR

- **EDCI 746 - ESL/Dual Language Secondary Practicum Credits: 3**
Endorsement in many states, including Kansas, also requires a passing score on a Praxis exam.

Admission

For admission requirements, please see the Education catalog page.

Program description

The Department of Educational Leadership offers several degrees within three programs: educational leadership, adult learning and leadership, and community college leadership. Courses leading to the Master's degree and Ed.D. degree in Educational Leadership may also lead to licensure as a building administrator (principal) or a district administrator (superintendent). Other leadership positions in educational organizations are also enhanced by masters and/or doctoral degrees in educational leadership.

Three degrees are offered within the adult learning and leadership program, including: (1) the Master of Science in Adult Learning and Leadership, designed to prepare practitioners for careers in a variety of adult education and leadership settings; (2) the Ph.D. in Adult Learning and Leadership, designed to prepare scholars for careers in college and university settings; and (3) the Ed.D. in Adult Learning and Leadership, designed to provide advanced education and experience by preparing people for work in business, industry, training, government, health services, community agencies, and careers in two- and four-year colleges and universities. Courses focus on issues related to planning, developing, delivering, or facilitating instruction for adult learners. Courses in the adult learning and leadership education program also support the master's and doctoral degrees in the College of Education. The graduate programs are compatible with a variety of delivery settings where the following specializations and support areas are required or desired: adult and continuing education, extension education, administration and leadership of programs, human resource development, training, community education and development, and institutions, agencies, and organizations that deal primarily with adult needs and education.

The Community College Leadership program offers an Ed.D. degree. This is a cohort program that prepares community college leaders and practitioners. The curriculum focuses exclusively on community college history, philosophy, issues, organization, programs, policy, and leadership.

Doctor of Education

Adult Learning and Leadership (EDD)

The Doctor of Education degree in Adult Learning and Leadership offered through the Educational Leadership graduate program requires a minimum of 90 post-baccalaureate, graduate credit hours. With the approval of the supervisory committee, up to 30 graduate hours earned as part of the Master's degree may be used to satisfy the degree requirements.

Contact information for graduate program coordinator alearnlead@ksu.edu.

Admission Requirements

Applicants must submit unofficial transcripts documenting their bachelor's degree, documenting their master's degree and any other graduate level coursework completed.

- Professional history and goal statement (between 5 and 10 pages in length, double-spaced)
- Resume/curriculum vitae
- Writing sample as defined on this website: <https://coe.k-state.edu/academics/program-areas/adult-learning-leadership/doctoral.html>
- Three professional references with name, institution or company, position and email address

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Required Courses

Students without a master's degree in adult education must take these courses in addition to the 90 credit hours in the doctoral degree, as determined by the supervisory committee.

- EDACE 780 - Introduction to Adult Learning and Leadership **Credits: 3**
- EDACE 790 - Characteristics of the Adult Learner **Credits: 3**
- EDACE 818 - Critical and Social Issues in Adult Learning **Credits: 3**
- EDACE 830 - Program Planning in Adult Learning and Leadership **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**

Required Doctoral Courses

15 hours from the following list:

- EDACE 916 - Foundations of Adult Learning and Leadership **Credits: 3**
- EDACE 960 - Introduction to Doctoral Studies **Credits: 3**
- EDACE 975 - Scholarly Writing **Credits: 3**
- EDACE 980 - The Dissertation Process **Credits: 3**
- EDACE 986 - Advanced Seminars in Adult Learning and Leadership **Credits: 1-18**

Research

Minimum of 15 credit hours from the following list or equivalent as approved by supervisory committee:

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**
- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3**
or quantitative/qualitative research courses taken from other disciplines at K-State and approved by the supervisory committee.

Electives

Select electives appropriate to the area of emphasis that satisfy the minimum 90 credit hours for the program. EDACE prefix, additional quantitative/qualitative research courses or other disciplines at K-State and approved by the supervisory committee.

- EDACE 733 - Practicum in Adult Learning and Leadership **Credits: 1-6**
- EDACE 775 - Readings in Adult Learning and Leadership **Credits: 1-3**
- EDACE 795 - Problems in Adult Learning and Leadership **Credits: 1-18**

Internship

6 required credits.

- EDACE 991 - Internship in Adult Learning and Leadership **Credits: 1-6**

Research

Minimum of 12 hours.

- EDACE 999 - Doctoral Research **Credits: 1-18**

Notes

Residency Requirement: Doctoral students must complete two residency courses on campus. These two EDACE courses will be offered in the summer months in an online and 1-week on-campus intensive format.

Preliminary Exam: The dissertation proposal is the preliminary exam. The written portion is the first three chapters of the dissertation, and the oral defense is conducted at the proposal meeting with the supervisory committee.

Dissertation Requirements: After successfully completing the comprehensive exam, students must enroll in 1 credit hours of dissertation per semester, excluding summer semester, until the dissertation is complete. After minimum number of doctoral research hours listed on program of study are completed, a student must enroll in 1 hour per semester, excluding summer semester, until the dissertation is completed.

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Community College Leadership (EDD)

The Community College Leadership doctorate (Ed.D.) prepares leaders for practical leadership. The curriculum focuses exclusively on community college history, philosophy, issues, organization, programs, policy, and leadership. It is the most community college-centric curriculum ever created by a university. To encourage active and practical learning, the local

community college hosting the cohort serves as a learning laboratory with real-life issues serving as projects and products for course and internship content.

Admission Requirements

Because participants in the Ed.D. degree are often pre-screened or employer-selected, participants are exceptionally qualified even before university admission requirements are applied. The first qualification for cohort admission is often nomination by respective community college employers, making participants clearly singled out for likely advancement upon graduation.

Participants also must satisfy Kansas State University's program-specific criteria to gain admission, as the Department of Educational Leadership will require every program entrant to meet or exceed these standards on a continuous basis:

- Completed application
- Master's degree or higher from a regionally-accredited institution in the U.S. or international institution of higher education recognized by the ministry of education or other appropriate government agency
- Minimum cumulative GPA of 3.00 achieved for all previous graduate coursework
- Official transcripts reflecting all academic work completed at baccalaureate and graduate levels from regionally-accredited institutions of higher education
- Current curriculum vita demonstrating three years of related professional experience
- Personal and professional goal statements
- Three signed letters of recommendation on letterhead from professionals who are familiar with the applicant's academic and leadership potential
- Willingness to participate throughout the program of study as a member of a cohort
- Commitment to successfully completing all courses, internships, and field experiences in a prescribed calendar sequence to earn the Ed.D. degree

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Year 1: Fall

Year 1: Fall

- EDACE 851 - The Historical and Contemporary Community College **Credits: 1**
- EDACE 852 - Field Study: The Historical and Contemporary Community College **Credits: 1**
- EDACE 853 - Access, Equity, and Success **Credits: 2**
- EDACE 854 - Field Study: Access, Equity, and Success **Credits: 1**

Year 1: Spring

- EDACE 861 - Fostering Desired Culture: Fundamentals & Strategies for Org Development **Credits: 2**
- EDACE 862 - Field Study: Organizational Development **Credits: 1**
- EDACE 882 - Introduction to Educational Research **Credits: 2**
- EDACE 883 - Field Study: Educational Research **Credits: 1**

Year 1: Summer

- EDACE 857 - Effective Leadership and Theory **Credits: 4**
- EDACE 858 - Field Study Effective Leadership **Credits: 1**
- EDACE 859 - Effective Leadership Institute **Credits: 1**

Year 2: Fall

- EDACE 855 - Aligning Vision, Planning, and Resources **Credits: 2**
- EDACE 856 - Field Study: Vision, Planning and Resources **Credits: 1**
- EDACE 863 - Creating a Culture of Evidence and Inquiry **Credits: 2**
- EDACE 864 - Field Study Enrollment to Outcomes **Credits: 1**

Year 2: Spring

- EDACE 920 - Educational Value Choices **Credits: 2**
- EDACE 921 - Field Study Ed Value Choices: Access, Equity, and Success **Credits: 1**
- EDACE 922 - Policy Formation and Public Process **Credits: 2**
- EDACE 923 - Field Study Policy and Public Process **Credits: 1**
- EDACE 924 - Effective Governance and Leadership **Credits: 2**
- EDACE 925 - Field Study Governance and Leadership **Credits: 1**

Year 2: Summer

- EDACE 926 - Leadership for Transformation **Credits: 2**
- EDACE 927 - Field Study Leadership for Transformation **Credits: 1**
- EDACE 928 - Designing a Comprehensive Plan for Success **Credits: 2**
- EDACE 929 - Field Study Plan for Success **Credits: 1**

Year 3: Fall

- EDACE 970 - Dissertation Development **Credits: 4**
- EDACE 971 - Field Study Dissertation Development I **Credits: 1**
- EDACE 972 - Field Study: Dissertation Development II **Credits: 1**

Year 3: Spring

- EDACE 991 - Internship in Adult Learning and Leadership **Credits: 1-6**

Year 3: Summer

- EDACE 930 - Implementing Leadership Competencies **Credits: 2**
- EDACE 931 - Field Study (Institute) Leadership Competencies **Credits: 1**
- EDACE 999 - Doctoral Research **Credits: 1-18**

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Credit Hours Required for Doctorate: 90

Educational Leadership (EDD)

Offered by the Educational Leadership graduate program, the Doctor of Education in educational leadership is a professional degree program principally for preparing skilled practitioners. Students who do not already hold a district-level (superintendent) endorsement may tailor course work in their emphasis area to meet that license requirement. Contact the Educational Leadership program for current district license requirements. The student's Ed.D. program is directed by a minimum of four members of the university graduate faculty, including a major professor with substantial expertise in the area of emphasis, two other faculty members with strengths in the area of emphasis, one faculty member outside the student's specialization. Each student's program of study is individualized with the approval of the major professor and the supervisory committee to optimize the student's interests, expertise, and goals.

Admission Requirements

- A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

- Applicants must submit unofficial transcripts documenting their bachelor's degree, documenting their master's degree and any other graduate level coursework completed.
- Professional history and goal statement (1-2 page statement that includes the following information:
- Career and professional goals and aspirations, and how being accepted to the program will benefit the goals and aspirations, Your reasons for seeking this degree, Any research interests, Past and present employment within education or related fields, and Future professional plans.
- Resume/curriculum vitae
- A Completed Ed.D. Admission Standards Form (within the online application)
- Writing sample A scholarly writing sample is required. Please download from this website: <https://coe.k-state.edu/academics/graduate-programs/education-leadership-doctorate/>
- Three professional references with name, institution or company, position and email address
- Interview (as scheduled with the admission committee)

Applications are due by October 1st for Spring semester enrollment and March 1st for Fall semester enrollment.

Contact information for graduate program coordinator: Edleadership@ksu.edu

Dissertation Requirements

Preliminary Exam: The dissertation proposal is the preliminary exam. The written portion is the first three chapters of the dissertation, and the oral defense is conducted at the proposal meeting with the supervisory committee.

After successfully completing the comprehensive exam, students must enroll in 1 credit hours of dissertation per semester, excluding summer semester, until the dissertation is complete. After minimum number of doctoral research hours listed on program of study are completed, a student must enroll in 1 hour per semester, excluding summer semester, until the dissertation is completed.

See doctoral degree program requirements in Graduate Handbook: <https://www.k-state.edu/grad/student-success/graduate-handbook/chapter3.html>

Course Requirements

The Doctor of Education (Ed.D.) in Educational Leadership requires a minimum of 90 post-baccalaureate, graduate credit hours. A master's degree is a requirement for admission and with the approval of the supervisory committee, up to 30 graduate hours earned as part of the master's degree may be used to satisfy the degree requirements. All courses are three credit hours unless otherwise noted.

- Prerequisite: EDCEP 816 - Research Methods in Education **Credits: 3**
or other approved course. Waived if in MS degree.

Required Courses (15 credit hours)

- EDACE 960 - Introduction to Doctoral Studies **Credits: 3**
- EDACE 980 - The Dissertation Process **Credits: 3**
- EDLEA 834 - Strategies for Educational Change **Credits: 3**
- EDLEA 928 - Organizational Leadership in Education **Credits: 3**
- EDLEA 986 - Advanced Seminars in Educational Leadership **Credits: 1-18**

Research Methods Courses (15 credit hours)

Choose from the list below or as approved by supervisory committee.

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- Advanced Research Methods Concentration **Credits: 9**
Courses approved by supervisory committee.

Area of Emphasis (15 credit hours)

- EDLEA prefix, additional quantitative/qualitative research courses **Credits: 1-15**
- Or other disciplines at K-State as approved by the supervisory committee.

Clinical Experience (minimum 3 credits)

- EDLEA 991 - Doctoral Internship in Educational Leadership **Credits: 1-12**

Research/Dissertation (12 credit hours)

- EDLEA 999 - Research in Educational Leadership **Credits: 1-18**

Total Hours Required for Doctorate: 90

Master's degree Transfer Credits: 30

KSU/WU Collaborative Program Requirements (94 credit hours)

Students with a masters degree may transfer up to 30 hrs as approved by the supervisory committee.

First-level Priority Admissions—School District Leadership (52 credit hours)

- EDCEP 816 - Research Methods in Education **Credits: 3**
(or other approved course)
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
(or other approved course)
- EDLEA 801 - Ethical Dimensions of Educational Leadership **Credits: 3**
- EDLEA 810 - Historical and Philosophical Analysis of Leadership in Education **Credits: 3**
- EDLEA 845 - Leadership for Diverse Populations **Credits: 3**
- EDLEA 986 - Advanced Seminars in Educational Leadership **Credits: 1-18**
(or other approved course)
- EDLEA 991 - Doctoral Internship in Educational Leadership **Credits: 1-12**
- EDLEA 999 - Research in Educational Leadership **Credits: 1-18**

WU Collaborative Transfer (12-18 credit hours)

- EA 595 - Practicum in Education Administration **Credits: 3**

- EA 596 - Human Resource Management **Credits: 3**
- EA 597 - School Planning and Facilities **Credits: 3**
- EA 598 - The District Leader **Credits: 3**

OR

Second-level Priority Admission—Other Leadership Designations

- EA xxx - Appropriate courses as approved by committee **Credits: 12-18**

Total Hours Required for KSU/WU Collaborative Program: 94

Doctor of Philosophy

Adult Learning and Leadership (PHD)

Offered through the Educational Leadership graduate program, the Doctor of Philosophy degree in Adult Learning and Leadership is a minimum 90-credit hour, post baccalaureate program designed to prepare scholars who are committed to a career with responsibilities and requirements associated with college/university faculty membership, corporate training and leadership and/or interest in the development of knowledge, theory, and research. With the approval of the supervisory committee, up to 30 graduate hours earned as part of the Master's degree may be used to satisfy the degree requirements.

Admission Requirements

- Applicants must submit unofficial transcripts documenting their bachelor's degree, documenting their master's degree and any other graduate level coursework completed.
- A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.
- Professional history and goal statement (between 5 and 10 pages in length, double-spaced)
- Resume/curriculum vitae
- Writing sample as defined on this website: <https://coe.k-state.edu/academics/program-areas/adult-learning-leadership/doctoral.html>
- Three professional references with name, institution or company, position and email address

Contact information for graduate program coordinator alearnlead@ksu.edu.

Dissertation Requirements

Course Requirements

Required Academic Courses

Students without a master's degree in adult education must take these courses in addition to the 90 credit hours in the doctoral degree, as determined by the supervisory committee.

- EDACE 780 - Introduction to Adult Learning and Leadership **Credits: 3**
- EDACE 790 - Characteristics of the Adult Learner **Credits: 3**
- EDACE 818 - Critical and Social Issues in Adult Learning **Credits: 3**
- EDACE 830 - Program Planning in Adult Learning and Leadership **Credits: 3**

- EDCEP 816 - Research Methods in Education **Credits: 3**

Required Doctoral Courses

15 credits from the following list:

- EDACE 916 - Foundations of Adult Learning and Leadership **Credits: 3**
- EDACE 960 - Introduction to Doctoral Studies **Credits: 3**
- EDACE 975 - Scholarly Writing **Credits: 3**
- EDACE 980 - The Dissertation Process **Credits: 3**
- EDACE 986 - Advanced Seminars in Adult Learning and Leadership **Credits: 1-18**

Research

Minimum of 15 credit hours from the following list or equivalent as approved by supervisory committee:

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**
- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3**
or quantitative/qualitative research courses taken from other disciplines at K-State and approved by the supervisory committee.

Electives

Select electives appropriate to the area of emphasis that satisfy the minimum 90 credit hours for the program. EDACE prefix, additional quantitative/qualitative research courses or other disciplines at K-State and approved by the supervisory committee.

- EDACE 733 - Practicum in Adult Learning and Leadership **Credits: 1-6**

- EDACE 795 - Problems in Adult Learning and Leadership **Credits: 1-18**
- EDACE 991 - Internship in Adult Learning and Leadership **Credits: 1-6**

Doctoral Research

Minimum of 12 hours.

- EDACE 999 - Doctoral Research **Credits: 1-18**

Notes

Residency Requirement: Doctoral students must complete two courses in residence on campus. These two courses will be offered in the summer months in an online and 1-week on-campus intensive format.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Adult Learning Graduate Certificate

Contact: Royce Ann Collins

E-mail: racollin@k-state.edu

This 15-credit hour, online graduate certificate offered by the Department of Educational Leadership emphasizes how adult learning principles and instructional methods can be used to strengthen skills of trainers and educators who provide educational opportunities for adult learners. This program will assist any working professional who would like to expand their skills in the areas of adult curriculum design, learning theories and methods of teaching, and program evaluation.

Students seeking this certificate must submit a Graduate School application indicating the field of study will be the Adult Learning graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants need to submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework.
- A statement of objectives explaining the goals and purposes for seeking this graduate certificate.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- EDACE 765 - Adult Learners and Integrating Technology into Curriculum **Credits: 3**
- EDACE 785 - Designing Classroom Instruction and Curriculum for Adult Learners **Credits: 3**
- EDACE 790 - Characteristics of the Adult Learner **Credits: 3**
- EDACE 847 - Adult Learning and Motivation **Credits: 3**
- EDACE 875 - Program Evaluation in Adult Learning and Leadership **Credits: 3** (or approved course)

Total Hours Required for Graduate Certificate: 15

Indigenous Education Leadership Graduate Certificate

This 12-credit hour online graduate certificate in Indigenous Education Leadership (IELC) will train leaders to work in American Indian educational contexts. This program is built around a new set of leadership standards produced by the Tribal Education Department's National Assembly (TEDNA), which were approved January 13, 2021 by the TEDNA board.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Students enrolling in the K-State graduate certificate program in Indigenous Education Leadership must be admitted to K-State's Graduate School. A student with a bachelor's degree and a cumulative grade point average of at least 3.0 from a regionally accredited institution can expect to be fully admitted to the certificate program.

Students seeking this graduate certificate must fill out a Graduate School Application Form indicating that the field of study will be the Indigenous Education Leadership Certificate. In addition to the Graduate School Application Form, applicants must submit: (1) official copies of transcripts for all undergraduate and graduate work; and (2) a statement of goals and objectives for seeking this certificate which addresses the applicant's current professional experience and how the Indigenous Education Leadership Certificate will assist in reaching personal or professional goals. This material must be uploaded in the CollegeNet admission system used by the Graduate School. For students already enrolled in a graduate level program: Given that the students will be filling out a Graduate School Application form for their own respective program, they will only need to send the statement of goals (item #2 listed above) to the program coordinator to be reviewed for admission into the certificate program.

Course Requirements

The courses are intended to be taken in the order listed. In accordance with the student's needs and workplace requirements and with approval of the program coordinators, a student may substitute a graduate level equivalent course for EDLEA 730 or EDLEA 740 as long as they are relevant equivalents as it relates to educational leadership and experiences with Indigenous populations. EDLEA 740 - Applied Project in Educational Leadership for Indigenous Populations must be the last course in the sequence.

Required Courses

- EDLEA 710 - Fundamental Histories and Philosophies in Indigenous Education **Credits: 3**
- EDLEA 720 - Self-Determination, Sovereignty, and Systems of Indigenous Education **Credits: 3**

Elective Courses

- EDLEA 730 - Leadership, Advocacy, and Action in Indigenous Education **Credits: 3**
or equivalent as approved by program administrators, such as relevant credit through:
- EDLEA 775 - Readings in Educational Leadership **Credits: 1-3**
- EDLEA 786 - Topics in Educational Leadership **Credits: 1-18**
- EDLEA 795 - Problems in Educational Leadership **Credits: 1-18**

Practicum

- EDLEA 740 - Applied Project in Educational Leadership for Indigenous Populations **Credits: 3**
or other relevant specialty credit related to applied projects or practicum in Indigenous educational contexts

Total Hours Required for Graduate Certificate: 12

Leadership Dynamics for Adult Learners Graduate Certificate

Contact: Royce Ann Collins
E-mail: racollin@k-state.edu

This 15-credit hour graduate certificate, offered by the Department of Educational Leadership, emphasizes relationship skills, leadership, and communication based on adult learning theories and principles.

Students seeking this certificate must submit a Graduate School application indicating the field of study will be the Leadership Dynamics for Adult Learners graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants need to submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework.
- A statement of objectives explaining the goals and purposes for seeking this graduate certificate.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required courses

- EDACE 832 - Interpersonal and Intrapersonal Dynamics in Adult Learning and Leadership **Credits: 3**
- EDACE 835 - Developing Teams and Adult Leaders **Credits: 3**
- EDACE 839 - Experiential Learning and Leadership Dynamics **Credits: 3**

Elective Courses

Select 2 of the following courses:

- EDACE 831 - Teaching and Leading Multigenerations of Adults **Credits: 3**
- EDACE 833 - Digital Leadership Development in Adult Education **Credits: 3**
- EDACE 834 - Leading Adults in a Globalized and Diverse World **Credits: 3**
- EDACE 836 - Group Dynamics in Adult Learning and Leadership **Credits: 3**
- EDACE 837 - Quality Programs and Staff Management in Adult Learning and Leadership **Credits: 3**
- EDACE 867 - Managing Change in Adult Learning and Leadership **Credits: 3**
- EDACE 886 - Seminars in Adult Learning and Leadership **Credits: 1-18**

Total Hours Required for Graduate Certificate: 15

Qualitative Research Graduate Certificate

This 18-credit hour graduate certificate is offered by the Department of Educational Leadership in collaboration with other departments within the College of Education. This certificate was created in response to the demand for trained qualitative researchers at the national and international levels. The need for trained qualitative researchers reflect an interdisciplinary demand, such as those who can work in academia, public health, non-profit sector, business and marketing, amongst others.

This program is suitable for anyone who wants to use qualitative inquiry in their professional spaces. This would include people who want to conduct qualitative inquiry in their scholarly, or scholarly practitioner projects. Students will be introduced to learning qualitative methods from a broad social science perspective so they understand how qualitative research has been taken up in education and other fields. This experience will allow students to make connection between different parts of the inquiry

process, thereby developing a stronger understanding of how to conceptualize, execute, and report projects conducted through qualitative inquiry.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- EDLEA 838 - Qualitative Research in Education **Credits: 3** or equivalent
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3** or equivalent
- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3** or equivalent

Elective Courses

6-9 credit hours

- EDLEA 828 - Scholarly Orientation to Graduate Studies **Credits: 3** or equivalent
Can only be used if students choose to write a research interest paper that explores a research interest via qualitative inquiry.
- EDLEA 958 - Case Study in Qualitative Research **Credits: 3** or equivalent
- EDLEA 848 - Understanding Theoretical Frameworks **Credits: 3** or equivalent
- EDLEA 968 - Discourse Analysis **Credits: 3** or equivalent
- EDLEA 988 - Differentiated Research **Credits: 3** or equivalent
- EDLEA 978 - Qualitative Data Management and Analysis Using Nvivo **Credits: 3** or equivalent
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3** or equivalent
- EDLEA 929 - Narrative and Arts-Based Inquiry in Qualitative Research **Credits: 3** or equivalent
- EDCI 760 - Action Research in Education **Credits: 3** or equivalent
- EDCI 920 - Narrative Inquiry in Education **Credits: 3** or equivalent
- **Outside Electives**
- THTRE 862 - Workshop in Playwriting **Credits: 3** or equivalent
- THTRE 880 - Master's Project **Credits: 3** or equivalent
Project in Ethnodrama
- HDFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3** or equivalent
- HDFS 808 - Topics in Applied Family Science **Credits: 1** or equivalent

Optional Courses

Applied project could constitute a completion of a dissertation using qualitative methods. Students who wish to use their completed dissertation using qualitative methods could use a maximum of 3 credit hours to complete this requirement. Certificates will be granted only after the completion of a dissertation.

Students who wish to submit a publishable paper to a refereed journal based on an empirical study, could use 3 credit hours earned from EDLEA 988 - Differentiated Research (Pre-requisite EDLEA 838).

Other ways of submitting a publishable paper to a refereed journal could include, but not limited to, preparing the manuscript as a result of specific coursework, or preparing the manuscript as an independent study with a faculty member, or preparing the manuscript, outside of coursework through the student's own initiative.

Total Hours Required for Graduate Certificate: 18

Social Justice Education Graduate Certificate

The purpose of this 15-credit hour program, offered through the Department of Educational Leadership, is to prepare individuals to integrate theoretical and pedagogical aspects of social justice education in formal and informal educational settings at local, national, and international levels.

Students applying to the K-State Graduate Certificate Program in Social Justice Education (SJE) must be admitted to the K-State Graduate School. A student with a bachelor's degree or in the final year of completing the degree is expected to have a cumulative grade point average of at least 3.0 from an accredited institution to be admitted to the certificate program.

The 15-credit SJE certificate program focuses on the integration of foundational, theoretical, and practical aspects of social justice in educational settings, with social justice education theory-to-practice as central to the program. The certificate is based on the concept that social justice education is an ongoing, contextual process that impacts inequitable social, economic, and political systems through critical examination and intentional advocacy.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

6 credit hours

- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDACE 817 - Reflective Practice in Social Justice Education **Credits: 3**

Elective Courses

6 - 9 credit hours

- EDACE 750 - Women, Education, Leadership, and Work **Credits: 3**
- EDACE 818 - Critical and Social Issues in Adult Learning **Credits: 3**
- EDACE 822 - International Adult Education and Literacy **Credits: 3**
- EDACE 830 - Program Planning in Adult Learning and Leadership **Credits: 3**
- EDCEP 851 - Multicultural Aspects of Academic Advising **Credits: 3**
- EDCI 721 - Learning Strategies and Study Skills **Credits: 3**
- EDCI 740 - Culture and Language in Classroom Practice **Credits: 3**
- EDCI 755 - Multicultural Issues in Teaching **Credits: 3**
- EDCI 910 - Multicultural Curriculum Programming **Credits: 3**
- EDLEA 801 - Ethical Dimensions of Educational Leadership **Credits: 3**
- EDLEA 834 - Strategies for Educational Change **Credits: 3**

- EDLEA 845 - Leadership for Diverse Populations **Credits: 3**

Elective Courses from Other Colleges

Courses approved for program on a case-by-case basis. 0 – 3 credits. Examples are:

- GWSS 605 - Social Change Field-Experience **Credits: 3**
- PSYCH 556 - Multicultural Psychology **Credits: 3**
- PSYCH 563 - Gender Issues in the Workplace **Credits: 3**
- ANTH 613 - Gender, Power, and International Development **Credits: 3**
- ANTH 615 - Race and Culture **Credits: 3**
- SOCIO 541 - Wealth, Power, and Privilege **Credits: 3**
- SOCIO 635 - Sociology of Human Trafficking **Credits: 3**
- SOCIO 851 - Sociology of Development **Credits: 3**
- GERON 777 - Advanced Policy & Advocacy in Gerontology **Credits: 3**
- CNRES 752 - Culture and Conflict **Credits: 3**
- CNRES 761 - International Conflict & Trauma **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Master of Science

Adult Learning and Leadership (MS)

The Master of Science in Adult Learning and Leadership is offered through the Educational Leadership graduate program.

Course Requirements

Required Courses (15 credit hours)

- EDACE 780 - Introduction to Adult Learning and Leadership **Credits: 3**
- EDACE 790 - Characteristics of the Adult Learner **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
or approved equivalent
- EDACE 818 - Critical and Social Issues in Adult Learning **Credits: 3**
- EDACE 830 - Program Planning in Adult Learning and Leadership **Credits: 3**

Elective Courses (18 credit hours)

Students select 18 hours approved by the student's supervisory committee that can include:

- EDACE 750 - Women, Education, Leadership, and Work **Credits: 3**
- EDACE 786 - Topics in Adult Learning and Leadership **Credits: 1-3**
- EDACE 815 - Introduction to Community Educational Development **Credits: 3**
- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDACE 825 - Theory and Practice of Continuing Education **Credits: 3**

- EDACE 850 - Self-Directed Learning **Credits: 3**
- EDACE 860 - Innovative Higher Education Programs for Adults **Credits: 3**
- EDACE 865 - Principles of Workplace Learning **Credits: 3**
- EDACE 875 - Program Evaluation in Adult Learning and Leadership **Credits: 3**
- EDACE 817 - Reflective Practice in Social Justice Education **Credits: 3**
- EDACE 886 - Seminars in Adult Learning and Leadership **Credits: 1-18**
- EDACE 937 - Organization and Administration of Adult Learning and Leadership **Credits: 3**

Individualized Courses (may be used as electives)

(Students may take no more than 6 hours of individualized coursework as electives. Practicum coursework cannot exceed 3 credit hours.)

- EDACE 733 - Practicum in Adult Learning and Leadership **Credits: 1-6**
- EDACE 775 - Readings in Adult Learning and Leadership **Credits: 1-3**
- EDACE 795 - Problems in Adult Learning and Leadership **Credits: 1-18**

Note

Program will accept 12 hours transfer from the U.S. Army Command and General Staff College (CGSC) for students attending CGSC.

Total Hours Required for Master's: 33

Educational Leadership (MS)

The Master of Science degree in Educational Leadership is a 30-credit hour professional degree program aligned with the NELP (2018) Standards (Building Level). The program is designed for students who intend to assume significant leadership roles in P-12 school settings not requiring professional leadership licensure or for those who would like to pursue building level licensure. Students who desire a Kansas building-level (principal) license should select this degree program. Students should contact the Department of Educational Leadership for specific license requirements.

Admission Requirements

The application must include:

- Statement of objectives: State your academic objectives in one to two pages and include the following information:
 - career and professional goals and aspirations and how being accepted to the program will specifically benefit your goals and aspirations
 - description of relevant professional experience within education or a related field
 - future professional plans
 - resume/curriculum vitae
- Official transcripts from each college or university where you received your bachelor's degree(s) and completed any post-baccalaureate coursework or degrees
- Two letters of recommendation from college or university educators and/or colleagues or supervisors who are qualified to address your professional skills and your potential for success in the graduate program
- A completed Admissions Standards Self-Survey (located within the application). A score of level 3 or higher is required for admission.

Contact information for graduate program coordinator: edleadership@ksu.edu

Course Requirements

Required Courses: 30 credit hours

- EDLEA 801 - Ethical Dimensions of Educational Leadership **Credits: 3**
- EDLEA 810 - Historical and Philosophical Analysis of Leadership in Education **Credits: 3**
- EDLEA 819 - Introduction to Education Finance **Credits: 3**
- EDLEA 820 - Data Literacy/Data Informed Decisions in Educational Leadership **Credits: 3**
- EDLEA 831 - Educational Law **Credits: 3**
- EDLEA 835 - The Principalship **Credits: 2**
- EDLEA 836 - School-Community Relations **Credits: 3**
- EDLEA 855 - Administrative Leadership in Curriculum **Credits: 3**
- EDLEA 860 - Inclusive School Culture in Educational Leadership **Credits: 3**
- EDLEA 870 - Educational Professional Learning and Human Resources in Educational Leadership **Credits: 3**
- EDLEA 889 - Practicum in Educational Leadership **Credits: 1-3**

Total Hours Required for Master's: 30

Admission

For admission requirements, please see the College of Education catalog page.

Doctor of Education

Special Education (EDD)

The Special Education Ed.D. program, offered through Special Education, Counseling, and Student Affairs, is directed by a minimum of five members of the university graduate faculty, including a major professor with substantial expertise in the area of

emphasis, two other faculty with strengths in the area of emphasis, one faculty member outside the student's specialization, and one faculty member, appointed by the Dean of the Graduate School, from another department within the College of Education who serves as the chair of the examination committee for the oral defense of the dissertation.

Each student's program of study is individualized with the approval of the major professor and the supervisory committee to optimize the student's interests, expertise, and professional goals.

Admission Requirements

A minimum of 90 semester hours beyond the baccalaureate degree.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Dissertation Requirements

Completion of a dissertation which treats an important topic of professional education practice using a systematic methodology consistent with accepted research paradigms; the dissertation must be successfully defended in a public, oral defense. 12 credit hours

Course Requirements

Foundations: 12 credit hours

Required courses in foundations include these areas: historical and philosophical analysis of educational ideas and practice; techniques and interpretation of educational research; social science explanations of educating a diverse society; and psychological bases of educational thought and practice. Each of these courses or their equivalent must be completed:

- EDLEA 810 - Historical and Philosophical Analysis of Leadership in Education **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCI 910 - Multicultural Curriculum Programming **Credits: 3**

Research: 6 credit hours

Research courses are required which concern methodology consistent with that required for the dissertation.

Clinical experience: 12 credit hours

The clinical experience is designed to enhance one's professional development by providing field-based exposure to the process of administration and supervision of special education programs and personnel. The objectives, activities, and outcomes for this clinical experience/internship are commonly determined by the major professor (advisor), in consultation with the student advisory committee.

Area of emphasis: 48 credit hours minimum

Preliminary examination requirement

Satisfactory completion of all segments of a monitored, written examination of at least 12 hours over all areas of the program of study, 3 of which must be over the foundation courses.

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Doctor of Philosophy

Counseling and Student Development - Counselor Education and Supervision (PHD)

The Special Education, Counseling, and Student Affairs graduate program offers a Doctor of Philosophy in Counseling and Student Development with an emphasis in Counselor Education and Supervision. The program requires a minimum of 96 hours post baccalaureate. Training extends beyond that found in the entry-level, basic master's program. The doctoral program addresses the professional leadership roles in counselor education, supervision, advanced counseling practice, and research competencies. The program is accredited by the Council for the Accreditation of Counseling and Related Educational Programs (CACREP).

Admission Requirements

Course Requirements

Professional Courses (24 credit hours)

- EDCEP 821 - Fundamentals of Program Evaluation **Credits: 3**
- EDCEP 953 - Multicultural and Social Justice Issues in Counselor Education **Credits: 3**
- EDCEP 955 - Legal and Ethical Issues in Counseling **Credits: 3**
- EDCEP 957 - Teaching and Learning in Counselor Education **Credits: 3**
- EDCEP 958 - Advanced Group Counseling **Credits: 3**
- EDCEP 962 - Leadership and Advocacy in Counselor Education and Supervision **Credits: 3**
- EDCEP 967 - Appraisal and Psychopathology **Credits: 3**
- EDCEP 985 - Advanced Counseling Theory **Credits: 3**

Cognate Area (6 credit hours)

Students will develop an area of focus constructed of courses outside of the department planned with concurrence of the committee.

Research Courses (12 credit hours)

- EDCEP 817 - Statistical Methods in Education **Credits: 3**

- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**

Practicum/Internship (12 credit hours)

- EDCEP 977 - Advanced Counseling Practicum **Credits: 3**
- EDCEP 987 - Counseling Supervision Practicum **Credits: 3**
- EDCEP 991 - Internship in Counseling and Educational Psychology **Credits: 1-18**

Research (12-15 credit hours)

- EDCEP 999 - Doctoral Research **Credits: 1-18**

Program Total Credits: 66

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 96

Counseling and Student Development - Leadership in Academic Advising (PHD)

Offered through the Special Education, Counseling, and Student Affairs graduate program, the PhD in Counseling and Student Development with specialization in Leadership in Academic Advising requires a minimum of 90 hours post baccalaureate. The doctoral program prepares professionals for roles in leadership, research, and teaching focused on academic advising in higher education.

Admission Requirements

Course Requirements

Doctoral degree requirements

A designated core of 6 hours of graduate credit is required. These courses may be part of a master's degree or must be completed in addition to the doctoral course work. These courses include the following:

- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 851 - Multicultural Aspects of Academic Advising **Credits: 3**
- Or
- EDCEP 830 - Diversity in Higher Education. **Credits: 3**

1. Professional Courses (18 credit hours)

- EDCEP 923 - Higher Education Law **Credits: 3**
- EDCEP 925 - Higher Education Finance **Credits: 3**

- EDCEP 926 - Enrollment Management in Higher Education **Credits: 3**
- EDCEP 927 - Higher Education Administration **Credits: 3**
- EDCEP 948 - Advanced Student Development Theory in College Student Affairs **Credits: 3**
- EDLEA 828 - Scholarly Orientation to Graduate Studies **Credits: 3**

2. Academic Advising Professional Courses (9 credit hours)

- EDCEP 930 - Approaches to Academic Advising: Linking Theory, Research, and Practice **Credits: 3**
- EDCEP 932 - Ethical Issues and Practice in Academic Advising **Credits: 3**
- EDCEP 937 - Administration of Academic Advising **Credits: 3**

3. Research Courses (15 credit hours)

- EDLEA 988 - Differentiated Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDCEP 934 - Research in Academic Advising **Credits: 3**

4. Dissertation Research (18 credit hours)

Preliminary examination. Candidates must successfully complete an examination of areas of the program of study.

- EDCEP 999 - Doctoral Research **Credits: 1-18**

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Counseling and Student Development - Student Affairs in Higher Education (PHD)

Offered through the Special Education, Counseling, and Student Affairs graduate program, the Ph.D. in Counseling and Student Development with specialization in Student Affairs in Higher Education requires a minimum of 90 hours of post baccalaureate.

Admission Requirements

Course Requirements

Doctoral degree requirements

A designated core of 6 hours of graduate credit, typically a part of the master's degree in college student personnel work, is required. These courses may be part of a master's degree or must be completed in addition to the doctoral course work. These courses include the following:

- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 830 - Diversity in Higher Education. **Credits: 3**
- or
- EDCEP 851 - Multicultural Aspects of Academic Advising **Credits: 3**

1. Professional courses (18 credit hours)

- EDCEP 923 - Higher Education Law **Credits: 3**
- EDCEP 925 - Higher Education Finance **Credits: 3**
- EDCEP 926 - Enrollment Management in Higher Education **Credits: 3**
- EDCEP 927 - Higher Education Administration **Credits: 3**
- EDCEP 948 - Advanced Student Development Theory in College Student Affairs **Credits: 3**
- EDLEA 828 - Scholarly Orientation to Graduate Studies **Credits: 3**

2. Outside area/specialization (9 credit hours)

This specialization is developed in consultation with the major professor and must be approved by the student's program of study committee.

3. Research courses (15 credit hours)

- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3** or another advanced qualitative course approved by program committee
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- Elective **Credits: 3** - A quantitative or qualitative course approved by program committee

4. Dissertation research (18 credit hours)

Preliminary examination. Candidates must successfully complete a written comprehensive examination prior to advancing to candidacy and gaining formal approval for dissertation work.

- EDCEP 999 - Doctoral Research **Credits: 1-18 (18 credit hours)**

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Academic Advising Graduate Certificate

Contact: Lisa M. Rubin

E-mail: rubin@ksu.edu

Home Page: <https://coe.k-state.edu/academics/certificates/academic-advising.html>

This certificate is offered through the Special Education, Counseling, and Student Affairs graduate program in collaboration with NACADA: The Global Community for Academic Advising, and is available through distance education only. The 15-credit hour program is consistent with standards and guidelines for academic advising programs specified by the Council for the Advancement of Standards (CAS). The courses within the certificate program contribute to the student's knowledge about academic advising strategies, approaches, theories of career and student development, and application to college and university settings. The courses are delivered exclusively in an on-line format.

Admission Requirements

Prospective and current students interested in this certificate must submit a Graduate School application indicating the field of study will be the Academic Advising graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants also submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework with a minimum 3.0 GPA over the last two years of undergraduate study or in graduate coursework.
- 1-2 page statement of goals and professional experience that includes the following information:
 - career and professional goals and aspirations, and how being accepted to the program will benefit the goals and aspirations
 - the reason for interest in seeking the graduate certificate
 - evidence of motivation, leadership, and strong work ethic
 - professional experiences that support application
- Professional resume or curriculum vitae.

Students may apply credits earned through the graduate certificate completion towards a Master of Science in Academic Advising at Kansas State University (which has a separate admissions process).

Course Requirements

Required Courses

- EDCEP 829 - Learning Principles **Credits: 3**
- EDCEP 835 - Foundations of Academic Advising **Credits: 3**
- EDCEP 838 - Student Development Theory **Credits: 3**
- EDCEP 851 - Multicultural Aspects of Academic Advising **Credits: 3**
- EDCEP 863 - Trends in Career Development **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Total hours MUST include between 12 and 20 hours of graduate credit: Graduate Handbook, Chapter 4

College Athlete Development Graduate Certificate

Contact: Lisa M. Rubin

E-mail: rubin@ksu.edu

Home Page: <https://coe.ksu.edu/academics/graduate-programs/college-athlete-development-certificate/>

This 12-credit hour, online graduate certificate offered by the Department of Special Education, Counseling, and Student Affairs emphasizes how professionals can strengthen knowledge and skills to provide educational and holistic development opportunities for college athletes. This program will assist anyone who would like to expand their skills in the areas of athletic advising, college athlete holistic development, and the ever-changing landscape of college athletics covering topics such as name-image-likeness, athlete mental health and wellbeing, and conference realignment.

Students may apply credits earned through the graduate certificate completion towards a Master of Science in College Student Development at Kansas State University (which is an on-campus program and has a separate admissions process).

Admission Requirements

- Prospective and current students interested in this certificate must submit a Graduate School application indicating the field of study will be the College Athlete Development graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants also submit the following:
- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework with a minimum 3.0 GPA over the last two years of undergraduate study or in graduate coursework
- 1-2 page statement of goals and professional experience that includes the following information:
 - career and professional goals and aspirations, and how being accepted to the program will benefit the goals and aspirations
 - the reason for interest in seeking the graduate certificate
 - evidence of motivation, leadership, and strong work ethic
 - professional experiences that support application
- Professional resume or curriculum vitae.

Course Requirements

Required Courses

- EDCEP 837 - Individualized Learning Experience in Higher Education **Credits: 3**
- EDCEP 854 - College Student Athletes **Credits: 3**
- EDCEP 863 - Trends in Career Development **Credits: 3**
- EDCEP 864 - Current Issues in Intercollegiate Athletics **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Teaching Students With Autism Spectrum Disorders Graduate Certificate

Contact: Marilyn Kaff

E-mail: mkaff@ksu.edu

Offered through the Special Education, Counseling, and Student Affairs graduate program, the central goal of the certificate program in autism is to provide special education teachers with understanding and skills to provide special education programs for students with autism. Specifically, students will learn the characteristics and causes of autism, identification and assessment

procedures, effective educational interventions, program delivery and transition approaches. In addition, students will participate in an advanced practicum under the supervision of a university supervisor and qualified cooperating teacher.

The autism certificate program extends the training of graduate students who have either already completed a M.S. degree in special education or who are currently enrolled in the M.S. program in special education at KSU and wish to add the autism certificate.

Students seeking this certificate must submit a Graduate School application indicating the field of study will be the Teaching Students with Autism Spectrum Disorders graduate certificate program. This is a separate application from the one for admission into a master's degree. In addition to the Graduate School application, applicants need to submit the following:

- An official transcript for the bachelor's degree and for any subsequent undergraduate and graduate coursework.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- EDSP 841 - Interventions: Low Incidence Special Education **Credits: 3**
- EDSP 849 - Interventions: Autism Spectrum Disorders **Credits: 3**
- EDSP 885 - Practicum in Education of Individuals with Low Incidence Special Education Needs **Credits: 1-6**

*Note: EDSP 885 must be taken for 3 credit hours

- EDSP 889 - Advanced Practicum: Autism Spectrum Disorders **Credits: 1-6**

*Note: EDSP 889 must be taken for 3 credit hours

Total Hours Required for Graduate Certificate: 12

Master of Science

Academic Advising (MS)

The Master of Science in Academic Advising is offered through the Special Education, Counseling, and Student Affairs graduate program for advising professionals and future professional advisors seeking to enhance their knowledge and ability to work more effectively with postsecondary students in their academic and career planning. All courses are offered online, which serves graduate students in Kansas and students both across and outside the country.

The program's conceptual framework emphasizes development of "highly skilled and educated" professional advisors who through their work prepare undergraduates for their future careers. Curricular experiences include interpersonal relations; needs and characteristics of specific groups of students; research methods; learning principles; advising strategies; college student development; career development and multicultural aspects of advising. Students complete 27 hours of core courses and also select one of two 3-credit hour restricted electives.

For more information on Academic Advising go to global.k-state.edu/education/academic-advising/.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses (27 credit hours)

- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 829 - Learning Principles **Credits: 3**
- EDCEP 835 - Foundations of Academic Advising **Credits: 3**
- EDCEP 836 - Interpersonal Relations for Academic Advising **Credits: 3**
- EDCEP 838 - Student Development Theory **Credits: 3**
- EDCEP 851 - Multicultural Aspects of Academic Advising **Credits: 3**
- EDCEP 854 - College Student Athletes **Credits: 3**
- EDCEP 863 - Trends in Career Development **Credits: 3**
- EDSP 853 - College Students with Disabilities **Credits: 3**

Elective Courses (3 hours)

- EDCEP 812 - History and Philosophy of Higher Education **Credits: 3**
- EDCEP 839 - Assessment of Academic Advising **Credits: 3**
- EDCEP 864 - Current Issues in Intercollegiate Athletics **Credits: 3**

Total Hours Required for Master's: 30

Counseling and Student Development - College Student Development (MS)

The Special Education, Counseling, and Student Affairs graduate program offers a Master of Science degree in Counseling and Student Development with an emphasis in College Student Development. This emphasis is designed to prepare the student for work in a college setting at one or many different student affairs agencies and to assist the student to meet the professional entry-level and advancement requirements in the field. A minimum of 39 graduate credit hours are required in the program.

Students complete 33 credit hours of core requirements in addition to 6 credit hours aligned with one of three options. The Student Affairs Administration option is most appropriate for those intending to work in various functional areas in student affairs in higher education. The Social Justice Education option is appropriate for those who wish to pursue a focus on social justice education within their work in higher education settings. The College Athlete Development option is most appropriate for those who want to strengthen their knowledge and skills to provide educational and holistic development opportunities for college athletes.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

(33 credit hours)

- EDCEP 812 - History and Philosophy of Higher Education **Credits: 3**

- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 818 - Principles of Student Affairs Administration **Credits: 3**
- EDCEP 826 - Student Success and Learning in Higher Education **Credits: 3**
- EDCEP 830 - Diversity in Higher Education. **Credits: 3**
- EDCEP 831 - Current Issues in Higher Education **Credits: 3**
- EDCEP 837 - Individualized Learning Experience in Higher Education **Credits: 3**
- EDCEP 838 - Student Development Theory **Credits: 3**
- EDCEP 863 - Trends in Career Development **Credits: 3**
- EDCEP 885 - Practicum in Higher Education **Credits: 3 ***
- EDSP 853 - College Students with Disabilities **Credits: 3**

Notes:

* Must be a degree-seeking student in the M.S. in College Student Development program, have submitted a Program of Study, and have completed at least 18 hours prior to enrolling in EDCEP 885.

Options (Select one)

A. Student Affairs Administration (6 credit hours)

- EDCEP 821 - Fundamentals of Program Evaluation **Credits: 3**
- EDCEP 835 - Foundations of Academic Advising **Credits: 3**
- OR**
- LEAD 701 - Foundations of Leadership **Credits: 3**
- Comprehensive Poster Project

B. Social Justice Education (6 credit hours)

- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDACE 817 - Reflective Practice in Social Justice Education **Credits: 3**
- Comprehensive Poster Project

C. College Athlete Development (6 credit hours)

- EDCEP 854 - College Student Athletes **Credits: 3**
- EDCEP 864 - Current Issues in Intercollegiate Athletics **Credits: 3**
- Comprehensive Poster Project

Total Hours Required for Master's: 39

Counseling and Student Development - School Counseling (MS)

The Special Education, Counseling, and Student Affairs graduate program offers a Master of Science degree in Counseling and Student Development with an emphasis in School Counseling. The 48 hour program is accredited by the Council for the Accreditation of Counseling and Related Educational Programs (CACREP).

The program's conceptual framework emphasizes development of knowledgeable, caring, ethical decision-makers within the context of groups and institutions, client development and learning, guidance and counseling of students leading to theory-driven

and research-guided practice in school counseling. Curricular experiences include human growth and development, appraisal, research and program evaluation, professional orientation, and foundations.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

(27 credit hours)

- EDCEP 810 - Mental Health in Schools **Credits: 3**
- EDCEP 822 - Counseling Adolescents **Credits: 3**
- EDCEP 823 - Counseling Theory **Credits: 3**
- EDCEP 852 - Career Development for School Counselors **Credits: 3**
- EDCEP 856 - Counseling Children **Credits: 3**
- EDCEP 857 - Counseling Program Management **Credits: 3**
- EDCEP 871 - Leadership, Advocacy, and Consultation for Counselors **Credits: 3**
- EDCEP 824 - Development Across the Lifespan for School Counselors **Credits: 3**
- EDCEP 951 - Multicultural Counseling **Credits: 3**

2. Research and appraisal requirements (9 credit hours)

- EDCEP 715 - Principles of Assessment **Credits: 3**
- EDCEP 815 - Using Tests in Counseling **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**

3. Clinical requirements (12 credit hours)

- EDCEP 858 - Group Processes **Credits: 3**
- EDCEP 877 - Practicum in Counseling **Credits: 3**
- EDCEP 887 - Counseling Internship **Credits: 1-3**

Note: 6 total credit hours required for EDCEP 887

Notes

The internship will consist of 600 clock hours under weekly supervision of a licensed school counselor and faculty professor. The student will attend class for group supervision and provide 240 clock hours of direct service in the school setting. Included activities are individual counseling, group work, developmental classroom guidance, and consultation.

Internship arrangements are made by the coordinating faculty member when required coursework has been completed and only after submission and approval of a pre-enrollment application, available in 369 Bluemont Hall. Both the coordinating faculty member and the student's committee must approve enrollment.

Total Hours Required for Master's: 48

Special Education (MS)

Kansas State University prepares special education teachers at the graduate level in a cross categorical program with two areas of specialization: high incidence special education and low incidence special education. These programs have been approved for special education endorsement by the Kansas State Department of Education (KSDE).

Students pursuing a master's degree in special education are required to complete requirements for full endorsement in at least one area of specialization. However, when feasible, it is advisable to plan programs leading to endorsement in more than one specialization area.

Kansas Endorsement Requirements

Each area of specialization has a separate course sequence designed by the College of Education and approved by the Kansas State Board of Education (KSBE) and the National Council for the Accreditation of Teacher Education (NCATE). The special education endorsement can be granted to a person who holds a valid Kansas teaching license.

Special education endorsement can be met without completion of the master's degree. However, most students choose to complete the master's degree while working toward endorsement. Completing the master's degree is recommended by the special education faculty. Students who intend to complete a master's degree should apply for admission to the master's program before completing nine hours of graduate coursework.

Full Endorsement

Full endorsement is granted to the applicant by the State Department of Education upon completion of the required sequence of courses.

Provisional Endorsement

Provisional endorsement is possible in the High Incidence area.

For provisional endorsement, a candidate must complete a specified sequence of courses, including a practicum. Provisional endorsement is for a two (2) year period, and may be renewed for an additional two year period. At the time of renewal, the candidate must have completed 50% of the courses remaining for full endorsement. The entire sequence of courses for full endorsement must be completed within four years.

Courses Required for Provisional Endorsement in Special Education

- EDSP 742 - Intensive Interventions for Students with Emotional Disability **Credits: 3**
- EDSP 743 - Intensive Interventions for Students with Dyscalculia and Other Math Difficulties **Credits: 1-3**
- EDSP 785 - Practicum I **Credits: 1-3**

Practicum and Provisional Endorsement

1. You must be admitted to the M.S. Program in Special Education prior to the semester you request your first practicum, unless you are completing your first practicum as part of either the undergraduate Quickstart or Step Ahead programs.
2. You must contact the professor in charge of practicum during the semester prior to the semester you are requesting practicum.

3. If you are considering provisional endorsement, EDSP 711, EDSP 742, and EDSP 743 must be taken prior to your first practicum.
4. You must complete EDSP 830 before registering for a second practicum. (EDCEP 715 is a prerequisite for EDSP 830)
5. You will be required to maintain a comprehensive portfolio that provides evidence of your competence in meeting the requirements of both practica.

Endorsement Policies as Kansas State University

- At least half of the credits required for special education endorsement must be earned at Kansas State University, including at least one major area course and one practicum, before the College of Education may recommend for special education endorsement.
- Teachers are endorsed in special education at the level at which they hold regular teaching certificates. Individuals who hold K-12 certificates in content areas such as music, art, or physical education will need to make up deficiencies in elementary education if they wish to be certified K-12 in special education. Teachers fully certified at the elementary level in special education may add secondary-level certification by completing the secondary-level sequence, including a practicum at that level.
- Teachers are responsible for initiating their own endorsement (Licensing Officer, 013 Bluemont Hall, 785-532-5524).
- Provisional endorsement is not granted until the applicant is employed in a special education position.

Limitations

To be recommended for endorsement, the student must have a 3.0 GPA overall in graduate work and must not receive a grade lower than a B in the 12 hours of core courses (EDSP 742, EDSP 743, and EDSP 785). The above program is subject to change depending on actions taken by the Kansas State Board of Education.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

High Incidence Disabilities: Elementary or Secondary

Prerequisites

Eligible for licensure in elementary or secondary education, and one of the following courses

- EDSP 323 - Exceptional Students in the Secondary School **Credits: 2**
- EDSP 224 - Exceptional Child in the Regular Classroom **Credits: 3**

Required Courses

- EDSP 711 - Characteristics of Exceptionalities **Credits: 3**
- EDSP 742 - Intensive Interventions for Students with Emotional Disability **Credits: 3**
- EDSP 744 - Intensive Interventions for Students with Dyslexia and Other Reading Difficulties **Credits: 1-3**

- EDSP 743 - Intensive Interventions for Students with Dyscalculia and Other Math Difficulties **Credits: 1-3**
- EDSP 745 - The Consulting Process in Special Education **Credits: 3**
- EDSP 777 - Social Emotional Learning and Behavior Management Strategies **Credits: 3**
- EDSP 785 - Practicum I **Credits: 1-3**
- EDSP 800 - Practicum II **Credits: 3**
- EDSP 830 - Assessment in Special Education **Credits: 3**
- EDSP 835 - The IEP Process in Special Education **Credits: 1-3**

Electives

- EDSP 844 - Special Education in Secondary Schools **Credits: 2**
(Required for adding secondary level endorsement to elementary level endorsement and for all secondary special education endorsements. Offered in spring semesters of odd-numbered years.)

Low Incidence Special Education: Elementary or Secondary

All courses required for High Incidence endorsement and:

- EDSP 841 - Interventions: Low Incidence Special Education **Credits: 3**
- EDSP 849 - Interventions: Autism Spectrum Disorders **Credits: 3**
- EDSP 885 - Practicum in Education of Individuals with Low Incidence Special Education Needs **Credits: 1-6** Must be taken for 3 credit hours.

Additional Requirements for a Master's Degree

The above program leads to endorsement in special education. Students wishing to complete the master's degree must complete at least 30 hours of graduate level credit and successfully present their teaching portfolio. Committee members will recommend additional course work based on individual student need. This course work will include but not be limited to: EDSP 886 - Seminar in Special Education or EDCEP 816 - Research Methods in Education.

Total Hours Required for Master's: 30

Other Degrees

School Counseling (EDS)

The Special Education, Counseling, and Student Affairs graduate program offers an Education Specialist degree in School Counseling. The 60-hour program is accredited by the Council for the Accreditation of Counseling and Related Educational Programs (CACREP).

The program's conceptual framework emphasizes development of knowledgeable, caring, ethical decision-makers within the context of groups and institutions, client development and learning, counseling of students leading to theory-driven and research-guided practice in school counseling. Curricular experiences include professional orientation, counseling and ethical practice, social and cultural diversity, human growth and development, career development, counseling and helping relationships, group counseling and group work, assessment and testing, research and program evaluation, and foundations.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

51 credit hours

- EDCEP 810 - Mental Health in Schools **Credits: 3**
- EDCEP 815 - Using Tests in Counseling **Credits: 3**
- EDCEP 816 - Research Methods in Education **Credits: 3**
- EDCEP 822 - Counseling Adolescents **Credits: 3**
- EDCEP 823 - Counseling Theory **Credits: 3**
- EDCEP 824 - Development Across the Lifespan for School Counselors **Credits: 3**
- EDCEP 832 - Counseling Techniques **Credits: 3**
- EDCEP 852 - Career Development for School Counselors **Credits: 3**
- EDCEP 855 - Professional Counseling Orientation and Ethical Practice **Credits: 3**
- EDCEP 856 - Counseling Children **Credits: 3**
- EDCEP 857 - Counseling Program Management **Credits: 3**
- EDCEP 858 - Group Processes **Credits: 3**
- EDCEP 860 - Trauma and Crisis Counseling **Credits: 3**
- EDCEP 867 - Counseling Mental Health Disorders **Credits: 3**
- EDCEP 871 - Leadership, Advocacy, and Consultation for Counselors **Credits: 3**
- EDCEP 886 - Seminar in Counseling and Educational Psychology **Credits: 1-18**
- EDCEP 951 - Multicultural Counseling **Credits: 3**

Clinical Requirements

9 credit hours

- EDCEP 877 - Practicum in Counseling **Credits: 3**
- EDCEP 887 - Counseling Internship **Credits: 1-3**
- EDCEP 887 - Counseling Internship **Credits: 1-3**

Note

The internship will consist of 600 clock hours over two semesters in approved school settings (elementary and secondary) arranged by the program coordinator and internship faculty member. A minimum of 240 hours over the two semesters is required for direct service counseling with clients with weekly supervision held by a licensed school counselor and faculty professor. Students attend class for group supervision weekly with an additional one hour for individual supervision. Internship placements are approved only following successful completion of Counseling Practicum and submission and approval of the Internship application.

Total Hours Required: 60

College of Engineering

The College of Engineering offers doctoral programs leading to the Ph.D. degree in engineering in the following areas: Biological and Agricultural Engineering, Chemical Engineering, Civil Engineering, Electrical Engineering, Industrial Engineering, Mechanical Engineering, and Nuclear Engineering. A doctoral program leading to the Ph.D. in Computer Sciences is also offered.

Programs leading to the M.S. degree in all of the above areas are offered. In addition, programs are offered for the M.S. in Operations Research, M.S. in Architectural Engineering, the Master of Software Engineering, and the Master of Engineering Management degrees.

Entering graduate students must meet the entrance requirements of the Graduate School and must have completed the B.S. degree in a field of engineering, computing and information science, or a closely related area of science.

Engineering (PHD)

The College of Engineering offers doctoral programs leading to the Ph.D. degree in engineering in the following areas: Biological and Agricultural Engineering, Chemical Engineering, Civil Engineering, Computer Science, Electrical and Computer Engineering, Industrial Engineering, Mechanical Engineering, and Nuclear Engineering.

The Department

The Department of Architectural Engineering and Construction Science and Management offers courses of study leading to the master of science degree. The undergraduate degree is ABET accreditation (Accreditation Board for Engineering and Technology, Inc.).

The department consists of 16 full-time faculty members. A master of science degree in architectural engineering with specialization in structural engineering, lighting/electrical, and heating and air conditioning for buildings. The research interests of the staff cover major areas of modern building systems design: seismic analysis of buildings, slender wall design, vibration analysis, lighting/electrical, heating and air conditioning, plumbing, cold-formed steel design, green building design, energy analysis, energy auditing, acceptance testing, and indoor air quality. Several faculty members direct research and utilize this research in the enhancement of both graduate and undergraduate teaching. The objective of the program is to provide advanced studies in engineering, analysis and design of all the disciplines in building systems. The department has excellent facilities and access to the most recent computer software technology.

Accelerated

Accelerated Architectural Engineering (BS)/Architectural Engineering (MS)

The accelerated Architectural Engineering (BS)/Architectural Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Architectural Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Architectural Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ARE 722 - Building Loads and Computer Aided Structural Analysis and Design **Credits: 3**
- ARE 723 - Timber Structures **Credits: 3**

- ARE 724 - Advanced Steel Design **Credits: 3**
- ARE 726 - Masonry Structural Design **Credits: 3**
- ARE 729 - Building Seismic Design **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Program Specific Admission Requirements

The applicant must have at least one graduate faculty in the GE Johnson Department of Architectural Engineering and Construction Science agree to serve as the major professor for the applicant and sign the applicant's Major Professor Form.

Master of Science

Architectural Engineering (MS)

The Master of Science in Architectural Engineering is designed to meet the emerging needs of architectural engineering industry and is offered through the Architectural Engineering and Construction Science graduate program. The M.S. degree program is for individuals who have graduated with a bachelor's degree from an ABET accredited engineering program. This professional M.S. degree challenges top students with research experiences, faculty mentoring, and advanced course work. The program allows the student an opportunity to specialize in an emphasis area of systems engineering applied to building design and analysis. Students and faculty are matched by interest and capability to determine an emphasis area, program of study, and graduate committee. Current emphasis areas include: building mechanical systems, building electrical power distribution and illumination, and building structural systems design.

Admission Requirements

Applicants to the MS in Architectural Engineering program shall meet all entrance requirements as stipulated in K-State Graduate Handbook Section 1B. In addition, applicants should have:

- Completed an ABET accredited Bachelor of Science in engineering.
- Been accepted by Architectural Engineering Graduate Faculty.

Course Requirements

A minimum of 30 graduate credits is required for graduation. Students have the thesis option or report option, as stipulated in Section 1A of K-State Graduate Handbook. Eighteen of the 30 credits shall be from 700-800 level ARE courses, including, but not limited to, the following:

- ARE 711 - Building Energy Codes and Standards **Credits: 2**
- ARE 712 - Energy Modeling Lab **Credits: 1**
- ARE 720 - Topics in Architectural Engineering **Credits: 1-18**

- ARE 722 - Building Loads and Computer Aided Structural Analysis and Design **Credits: 3**
- ARE 723 - Timber Structures **Credits: 3**
- ARE 724 - Advanced Steel Design **Credits: 3**
- ARE 725 - Cold-Formed Steel Design **Credits: 3**
- ARE 726 - Masonry Structural Design **Credits: 3**
- ARE 729 - Building Seismic Design **Credits: 3**
- ARE 731 - Advanced Lighting Design **Credits: 3**
- ARE 733 - Advanced Mechanical Hydronic Systems Design **Credits: 3**
- ARE 734 - Advanced Mechanical Air Systems Design **Credits: 3**
- ARE 735 - Advanced Electrical Systems Design **Credits: 3**
- ARE 736 - Advanced Plumbing Design **Credits: 3**
- ARE 741 - Building Communication Systems **Credits: 3**
- ARE 890 - Problems in Architectural Engineering **Credits: 0-18**
- ARE 898 - Master's Report **Credits: 1-18** (2 Credits, Report Option)
- ARE 899 - Master's Thesis **Credits: 1-18** (6 Credits, Thesis Option)

Total Hours Required for Master's: 30

Program description

The Department of Biological and Agricultural Engineering offers courses of study leading to the Master of Science in biological and agricultural engineering, and the Doctor of Philosophy in biological and agricultural engineering.

The department consists of 14 graduate faculty members, about 40 graduate students, and one adjunct graduate faculty member. Master of Science and Doctor of Philosophy students may specialize in (1) environmental engineering, (2) bioprocess engineering, (3) machinery systems, and (4) natural resource engineering. Minimum degree requirements for Master of Science degrees are 30 semester hours of graduate credit, including a Master's thesis of 6 semester hours based upon original research or a master's report of 2 semester hours of research or problem work. Award of a doctorate requires successful completion of 90 semester hours beyond the baccalaureate as well as completion of a major research study reported in a doctoral dissertation. Up to 30 semester hours from a Master of Science degree may be used towards completion of the Doctor of Philosophy degree.

Research facilities

The department is located in Seaton Hall. The department possesses 15 well-equipped instructional and research laboratories, including the computer laboratory, and laboratories for instrument and control, physical properties, image processing, thermal food processing, grain wet processing, air quality and control, water quality and control, hydrology, engine testing, machinery systems, and biomass energy systems. Field studies may be carried out at experiment fields near Topeka and St. John and at

Research Extension Centers near Garden City and Colby. Opportunities also exist for research in the U.S. Grain Marketing and Production Research Center and the Wind Erosion Research Unit, USDA-ARS, both located in Manhattan.

Financial support

Students are admitted into the Biological and Agricultural Engineering graduate program either with an assistantship that pays a stipend from University funds or with their own source of financial support. A limited number of assistantships providing teaching and research experiences are available. Graduate assistant appointments are usually at four-tenths time. Fees are assessed at the same rate as university employees for graduate teaching assistants and graduate research assistants.

Accelerated

Accelerated Biological System Engineering - Biological (BS)/Biological and Agricultural Engineering (MS)

The accelerated Accelerated Biological System Engineering - Biological (BS)/Biological and Agricultural Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biological and Agricultural Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

An entering student must be pursuing a B.S. BSE and have at least a cumulative 3.25 GPA. The student must enroll in this program after completing 80 undergraduate credit hours, but before his/her B.S. degree is awarded.

- At least 18 hours of graduate courses must be at or above the 700 level.
- Graduate courses in the BAE department must be at or above the 600 level.
- Graduate courses outside the department must be at or above the 500 level.
- Continuous enrollment required.
- Two of the following courses must be taken: BAE 815 , BAE 816 , BAE 817 , and/or BAE 818 .

Course Requirements

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BAE 626 - Bioseparations **Credits: 3**
- BAE 640 - Instrumentation and Control for Biological Systems **Credits: 3**
- BAE 643 - Life Cycle Assessment **Credits: 3**
- BAE 645 - Bioenvironmental Reaction Engineering **Credits: 3**
- BAE 651 - Air Pollution Engineering **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Biological System Engineering - Environmental (BS)/Biological and Agricultural Engineering (MS)

The accelerated Accelerated Biological System Engineering - Environmental (BS)/Biological and Agricultural Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biological and Agricultural Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

An entering student must be pursuing a B.S. BSE and have at least a cumulative 3.25 GPA. The student must enroll in this program after completing 80 undergraduate credit hours, but before his/her B.S. degree is awarded.

- At least 18 hours of graduate courses must be at or above the 700 level.
- Graduate courses in the BAE department must be at or above the 600 level.
- Graduate courses outside the department must be at or above the 500 level.
- Continuous enrollment required.
- Two of the following courses must be taken: BAE 815 , BAE 816 , BAE 817 , and/or BAE 818 .

Course Requirements

Biological and Agricultural Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BAE 640 - Instrumentation and Control for Biological Systems **Credits: 3**
- BAE 645 - Bioenvironmental Reaction Engineering **Credits: 3**
- BAE 651 - Air Pollution Engineering **Credits: 3**
- BAE 660 - Hydraulic Transport in Biological Systems **Credits: 3**
- BAE 663 - Environmental and Ecological Risk Assessment **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Biological Systems Engineering - Machine Systems (BS)/Biological and Agricultural Engineering (MS)

The accelerated Accelerated Biological Systems Engineering - Machine Systems (BS)/Biological and Agricultural Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Biological and Agricultural Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.

- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

An entering student must be pursuing a B.S. BSE and have at least a cumulative 3.25 GPA. The student must enroll in this program after completing 80 undergraduate credit hours, but before his/her B.S. degree is awarded.

- At least 18 hours of graduate courses must be at or above the 700 level.
- Graduate courses in the BAE department must be at or above the 600 level.
- Graduate courses outside the department must be at or above the 500 level.
- Continuous enrollment required.
- Two of the following courses must be taken: BAE 815 , BAE 816 , BAE 817 , and/or BAE 818 .

Course Requirements

Biological and Agricultural Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- BAE 636 - Biological Systems Engineering Senior Design II **Credits: 1-3**
- BAE 640 - Instrumentation and Control for Biological Systems **Credits: 3**
- BAE 750 - Analysis and Design of Off-Highway Vehicles **Credits: 3**
- ME 610 - Finite Element Applications in Mechanical Engineering **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Biological and Agricultural Engineering (PHD)

The Carl and Melinda Helwig Department of Biological and Agricultural Engineering offers courses of study leading to the Doctor of Philosophy (Ph.D.) in Biological and Agricultural Engineering. Ph.D. students may specialize in (1) environmental engineering, (2) bioprocessing engineering, (3) machinery systems, or (4) natural resource engineering.

Admission Requirements

Admission to the Ph.D. program in Biological and Agricultural Engineering requires a degree of Master of Science in agricultural engineering, biological systems engineering or related engineering disciplines and meeting all requirements for admission to the Graduate School. Strongly qualified students with a Bachelor of Science in agricultural engineering, biological systems engineering or related engineering disciplines may be admitted directly to the Ph.D. program without a Master of Science degree. Graduates from other engineering curricula or a strong physical/biological science curriculum may be admitted provisionally with undergraduate course deficiencies specified.

An application for admission should be made six months prior to the start of the term in which enrollment is desired. Additional information on graduate programs and on application for admission to the Graduate School of Kansas State University may be obtained by writing the department.

A TOEFL score of 550 or higher is required of those students whose native language is not English. The TOEFL score must reflect results of a TOEFL test that was taken within two years prior to the application. Students meeting all requirements for admission except for the TOEFL score may be admitted to the Graduate School on a provisional status. They may enroll upon scoring 550 or higher on a subsequent TOEFL or after successfully completing the English Language Program at Kansas State University.

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Course Requirements

The requirements for a Ph.D. degree are 90 credit hours beyond the bachelor degree, including a Ph.D. dissertation of at least 30 semester hours based upon major, original research. Award of a doctorate requires successful completion of the equivalent of at least three full years of full-time study beyond the baccalaureate.

Required Courses: 4 credit hours

- BAE 815 - Graduate Seminar 1: Literature Review **Credits: 1**
- BAE 816 - Graduate Seminar 2: Academic Writing and Publishing **Credits: 1**
- BAE 817 - Graduate Seminar 3: Data Interpretation and Presentation **Credits: 1**
- BAE 818 - Graduate Seminar 4: Research Presentation and Teaching **Credits: 1**

Concentration Courses: 20-26 credit hours

These courses are suggested, but other courses may be used. Other courses may be substituted as approved by the student's supervisory committee and consistent with Graduate School requirements for graduate credit.

- BAE 626 - Bioseparations **Credits: 3**
- BAE 640 - Instrumentation and Control for Biological Systems **Credits: 3**
- BAE 642 - Fundamentals of Conversion of Biorenewable Resources **Credits: 3**
- BAE 643 - Life Cycle Assessment **Credits: 3**
- BAE 645 - Bioenvironmental Reaction Engineering **Credits: 3**
- BAE 650 - Energy and Biofuel Engineering **Credits: 3**
- BAE 651 - Air Pollution Engineering **Credits: 3**
- BAE 660 - Hydraulic Transport in Biological Systems **Credits: 3**
- BAE 663 - Environmental and Ecological Risk Assessment **Credits: 3**
- BAE 664 - Green Stormwater Infrastructure Design and Assessment **Credits: 3**

- BAE 665 - Ecological Engineering Design Credits: 3
- BAE 669 - Watershed Modeling Credits: 3
- BAE 740 - Biomaterials Processing Credits: 3
- BAE 750 - Analysis and Design of Off-Highway Vehicles Credits: 3
- BAE 768 - Geoenvironmental Engineering Design Credits: 3
- BAE 840 - Measurement Systems Credits: 3
- BAE 842 - Advanced Biomass Thermochemical Conversion Credits: 3
- BAE 865 - Advanced Ecological Engineering Design Credits: 3
- BAE 869 - Advanced Watershed Modeling Credits: 3

Research: 30-36 credit hours

- BAE 999 - Dissertation Research Credits: 1-18

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Graduate Certificate

Sustainable Food, Energy, Water Graduate Certificate

This graduate certificate program will train students with the technical skills and broad understanding to address sustainability and key resource challenges (e.g., food, water, energy, population) faced by many sectors of society, with an emphasis on rural areas. The graduate certificate will prepare students to address critical issues in FEW systems such as cross-cutting engineering innovations, socioeconomic factors driving resource recovery, reuse, and rural development; soil, water, and energy conservation; water and wastewater management.

Point of contact:

Stacy L. Hutchinson, Ph.D.

Email: sllhutch@ksu.edu | Phone: 785-532-5844

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Admission to the FEW Graduate Certificate program will require that the student (a) has completed a 4-year undergraduate degree or has been accepted by the Graduate School for admission to a graduate degree program at Kansas State University, and (b) has completed at least 3 upper-division (junior-level or higher) undergraduate courses in technical areas consistent with topics included in FEW subject matter electives. The FEW Program Director will determine if the required qualifications have been met by each applicant.

Special Requirements

General Requirements: Students must be enrolled in a graduate degree program at Kansas State University, and complete a minimum of 12 hours of prescribed coursework.

Complete 2 semesters of DEN 892 FEW Seminar (0 credit hours).

If a student is enrolled in a graduate degree program, no more than six credits may be taken from the student's home department. In addition, the decision about which FEW courses may count toward graduate program degree requirements is left to the student and his/her supervisory committee in accordance with home departmental policy.

Course Requirements

Required Courses

- GENAG 670 - Introduction to Agricultural Resources and Environmental Management **Credits: 2**
- GENAG 870 - Capstone for Agricultural Resources and Environmental Management **Credits: 1**

Natural/Technology Systems Elective Courses

Minimum of 3 credits required.

- AGRON 615 - Topics in Agronomy **Credits: 1-3**
- AGRON 635 - Soil and Water Conservation **Credits: 3**
- AGRON 835 - Nutrient Sources, Uptake and Cycling **Credits: 3**
- ATM 661 - Watershed Assessment and Management **Credits: 3**
- BAE 560 - Hydrology for Biological Systems **Credits: 3**
- BAE 665 - Ecological Engineering Design **Credits: 3**
- BAE 669 - Watershed Modeling **Credits: 3**
- BAE 865 - Advanced Ecological Engineering Design **Credits: 3**
- BAE 869 - Advanced Watershed Modeling **Credits: 3**
- CE 550 - Water Resources Engineering **Credits: 3**
- CE 565 - Water and Wastewater Engineering **Credits: 3**
- CE 625 - Principles of Geoenvironmental Engineering **Credits: 3**
- CE 751 - Hydraulics of Open Channels **Credits: 3**
- CE 752 - Advanced Hydrology **Credits: 3**
- CE 766 - Wastewater Engineering: Biological Processes **Credits: 3**
- CE 816 - Selected Topics in Civil Engineering **Credits: 1-18**
- CE 854 - Analysis of Groundwater Flow **Credits: 3**
- CE 866 - Advanced Wastewater Treatment **Credits: 3**
- CHE 862 - Advanced Transport Phenomena I **Credits: 3**
- GEOG 535 - Global Climatology and Climate Change **Credits: 4**
- GEOG 840 - Advanced Environmental Geography **Credits: 3**
- ME 523 - Thermodynamics II **Credits: 3**
- ME 721 - Thermal Systems Design **Credits: 3**
- ME 820 - Intermediate Topics in Thermal and Fluid Mechanics **Credits: 0-18**

Social/Human System Elective Courses

Minimum of 3 credits required.

- AGCOM 610 - Crisis Communication Credits: 3
- AGCOM 810 - Scientific Communication Credits: 3
- AGED 786 - Topics in Agricultural Education Credits: 1-3
- AGRON 502 - International Experience in Agronomy Credits: 0-6
- AGECE 525 - Natural Resource And Economics Credits: 3
- AGECE 610 - Current Agriculture and Natural Resource Policy Issues Credits: 3
- AGECE 810 - Price, Income and Trade Policies in Agriculture Credits: 3
- AGECE 823 - Production Economics II Credits: 3
- AGECE 825 - Natural Resource Policy Credits: 3
- AGECE 925 - Advanced Resource and Environmental Economics Credits: 3
- GEOG 761 - Human Impact on the Environment Credits: 3
- GEOG 765 - Geography of Natural Hazards Credits: 3
- GEOG 770 - Perception of the Environment Credits: 3
- SOCIO 532 - Our Communities, Our Futures Credits: 3
- SOCIO 533 - Society, Food, and Agriculture Credits: 3
- SOCIO 536 - Society and Natural Resources Credits: 3
- SOCIO 831 - Sociology of Agriculture Credits: 3
- SOCIO 832 - Sociology of Community Credits: 3
- SOCIO 835 - Environment and Society Credits: 3
- SOCIO 842 - Technology and Society Credits: 3
- SOCIO 934 - Sociology of Rural Development Credits: 3

Total Hours Required for Graduate Certificate: 12

Master of Science

Biological and Agricultural Engineering (MS)

Admission to a Master of Science program in Biological and Agricultural Engineering requires a degree of Bachelor of Science in agricultural engineering, biological systems engineering, or related engineering disciplines and meeting all requirements for admission to the Graduate School. Graduates from other engineering curricula or a strong physical/biological science curriculum may be admitted provisionally with undergraduate course deficiencies specified.

Admission Requirements

An application for admission should be made six months prior to the start of the term in which enrollment is desired. Additional information on graduate programs and on application for admission to the Graduate School of Kansas State University may be obtained by writing the department.

A TOEFL score of 550 or higher is required of those students whose native language is not English. The TOEFL score must reflect results of a TOEFL test that was taken within two years prior to the application. Students meeting all requirements for admission except for the TOEFL score may be admitted to the Graduate School on a provisional status. They may enroll upon

scoring 550 or higher on a subsequent TOEFL or after successfully completing the English Language Program at Kansas State University.

Course Requirements

The minimum requirements for an M.S. degree are 30 semester hours of graduate credit with at least 18 of these semester hours being at the 700 level or above. No 500 level courses with the BAE or ATM prefix may be used towards the degree.

Required Courses

Take two of the following courses

- BAE 815 - Graduate Seminar 1: Literature Review **Credits: 1**
- BAE 816 - Graduate Seminar 2: Academic Writing and Publishing **Credits: 1**
- BAE 817 - Graduate Seminar 3: Data Interpretation and Presentation **Credits: 1**
- BAE 818 - Graduate Seminar 4: Research Presentation and Teaching **Credits: 1**

Electives Courses

Other courses may be substituted as approved by the student's supervisory committee and consistent with Graduate School requirements for graduate credit.

- BAE 626 - Bioseparations **Credits: 3**
- BAE 640 - Instrumentation and Control for Biological Systems **Credits: 3**
- BAE 642 - Fundamentals of Conversion of Biorenewable Resources **Credits: 3**
- BAE 643 - Life Cycle Assessment **Credits: 3**
- BAE 645 - Bioenvironmental Reaction Engineering **Credits: 3**
- BAE 650 - Energy and Biofuel Engineering **Credits: 3**
- BAE 651 - Air Pollution Engineering **Credits: 3**
- BAE 660 - Hydraulic Transport in Biological Systems **Credits: 3**
- BAE 663 - Environmental and Ecological Risk Assessment **Credits: 3**
- BAE 664 - Green Stormwater Infrastructure Design and Assessment **Credits: 3**
- BAE 665 - Ecological Engineering Design **Credits: 3**
- BAE 669 - Watershed Modeling **Credits: 3**
- BAE 740 - Biomaterials Processing **Credits: 3**
- BAE 750 - Analysis and Design of Off-Highway Vehicles **Credits: 3**
- BAE 768 - Geoenvironmental Engineering Design **Credits: 3**
- BAE 840 - Measurement Systems **Credits: 3**
- BAE 842 - Advanced Biomass Thermochemical Conversion **Credits: 3**
- BAE 865 - Advanced Ecological Engineering Design **Credits: 3**
- BAE 869 - Advanced Watershed Modeling **Credits: 3**

Thesis Option Courses

6-8 credit hours

- BAE 899 - Master's Thesis Credits: 1-18

Report Option Courses

2 credit hours

- BAE 899 - Master's Thesis Credits: 1-18

Total Hours Required for Master's: 30

Program description

The department offers M.S. and Ph.D. programs in chemical engineering and in interdisciplinary areas of bio-based materials science and engineering, food science, environmental engineering, and materials science.

Areas of study and research emphasize sustainable energy, nanotechnology, reaction engineering, materials science and transport phenomena. Specific areas include biomaterials science, biomass conversion, biochemical engineering, biological interfaces, biosensing, bionanotechnology, protein engineering, catalytic conversion of light hydrocarbons, chemical vapor deposition of electronic materials, environmental pollution control, heterogeneous catalysis, polymer science, semiconductor crystal growth, short-contact time reactors, surface science, molecular modeling, and high performance computing.

For more information about the Ph.D. program, see the Engineering section of this catalog

Research facilities

The Department of Chemical Engineering has modern, well-equipped research laboratories for studying transport phenomena, materials science and engineering, chemical reaction engineering and biochemical engineering. Specialized instrumental capabilities include, Fourier-transform infrared spectrometry, catalyst preparation equipment, tubular gas reactors, gas and liquid chromatography, mass spectrometry, polymer characterization equipment such as dynamic mechanical analysis, gas adsorption analysis, chemical vapor deposition reactors, ultra-high temperature furnaces, epifluorescent microscopy, patterned illumination system, x-ray diffractometer, high performance computing cluster, energy storage, heterogeneous catalysis, automated fluorescence microscopes for live-cell microscopy, microfluidic device fabrication facilities, cell culturing facilities, confocal laser scanning fluorescence microscope, dynamic/static light scattering, size exclusion chromatography, microplate reader, free radical analyzer DNA/protein electrophoresis, and more.

Admission procedures

Highly motivated students interested in earning an advanced graduate degree and the research activities of the department are encouraged to apply. All applicants must submit a completed application form, official copies of their undergraduate transcripts, 3 letters of recommendations, official GRE scores and TOEFL scores if they did not earn their BS degree from an ABET-accredited institution.

Financial support

Graduate research assistantships and fellowships are available to qualified students. The base stipend begins at \$31,000 plus tuition and fees. Supplemental grants and fellowships are also available to outstanding candidates. Sponsored research work can be used toward thesis credit.

Doctor of Philosophy

Chemical Engineering (PHD)

For more information about the Ph.D. program, see the Chemical Engineering section of this catalog.

Admission Requirements

The Ph.D. degree requires 90 credit hours. This is divided among major course work, minor subjects, and research work. Students enrolled in 12 hours per semester during the regular semesters and 3 hours during the summer term would achieve this total in just over 3 years. A diversified and flexible choice of minor subjects and a good selection of research topics are available. Qualified students may bypass the master's degree and work directly toward the Ph.D. degree. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Requirements specific to the Department of Chemical Engineering (please see below) are as follows:

- Satisfactory completion of specified coursework.
- Satisfactory performance in a qualifying examination covering the field of Chemical Engineering.
- Submission of a written thesis proposal and satisfactory oral defense of this proposal.
- Submission of an acceptable dissertation, and satisfactory oral defense of this dissertation.
- Presentation of research results at a departmental seminar.

Course Requirements

Required Courses

Ph.D. students are expected to be well grounded in the fundamentals of Chemical Engineering and must successfully complete the following courses (or their equivalents).

- CHE 815 - Advanced Chemical Engineering Thermodynamics **Credits: 3**
- CHE 822 - Advanced Chemical Reaction Engineering **Credits: 3**
- CHE 835 - Chemical Engineering Analysis **Credits: 3**
- CHE 862 - Advanced Transport Phenomena I **Credits: 3**
- CHE 875 - Graduate Seminar in Chemical Engineering **Credits: 1**

Elective Requirements (18 hours)

Elective Graduate Courses - all students are required to demonstrate a mastery of some body of knowledge in their research field by completing elective courses. At least fifteen hours of work is required in addition to those listed above.

No more than 6 hours of course work at the 500-level are permitted.

Thesis Hours

A Ph.D. must include at least 30 hours of research credits. All students on stipends must be enrolled 9 hours per semester. Students receive research credit for those hours not taken as coursework. Thus, reaching this minimum is not difficult.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Air Quality Graduate Certificate

Contact: M.H. Hosni
E-mail: hosni@ksu.edu

Contact: Ronaldo Maghirang
E-mail: rmaghir@ksu.edu

This certificate is offered through the Chemical Engineering graduate program.

Educational objectives

The educational objectives of the air quality certificate program are as follows:

1. To prepare graduates for careers related to air quality
2. To encourage interdisciplinary educational experiences in air quality
3. To enhance the educational experiences of participating graduate students

Administration

The air quality program administrative office is the Institute for Environmental Research in Seaton Hall. This office will administer the air quality certificate program.

Students working toward advanced degrees should submit a proposed list of courses to be used to meet certification requirements to the director of the air quality program. Where these courses are included in a program of study for an advanced degree, they should be approved by the student's supervisory committee and the coordinator of the air quality certificate program. A copy of the approved program should be distributed to the student, major professor, and the graduate school. A file is maintained for each student who is in the certificate program by the administrative office in the Institute for Environmental Research. Where some

courses for the certificate program are not included in the advanced degree program of study, the course list should be approved by the major professor and the coordinator of the air quality certificate program. For example, the student may decide to complete the certificate program after the advanced degree program of study is already filed and nearly completed.

The air quality graduate education committee will review the air quality certificate program periodically, and they will have the authority to approve modifications to the approved list of courses.

Air Quality Faculty

Faculty who wish to participate in the air quality program are welcome to do this. Those not presently listed may submit a request to the director to be added to the list.

Coordination

The air quality certificate program is coordinated by Mo Hosni, Institute for Environmental Research, Seaton Hall, and Ronaldo Maghirang, Associate Dean of Engineering, Rathbone Hall. All correspondence should be sent to the administrative office in the Institute for Environmental Research. Mo Hosni is the coordinator who officially approves course lists for the certificate program.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Special requirements

The course requirements for the certificate program in air quality are as follows:

1. For the Ph.D. degree, 15 credit hours are required including two credits of Air Quality Seminar, at least one course which includes safety and health/toxicology, at least one course which includes air quality measurement and characterization, and at least one course which includes air quality management and control. To fulfill the interdisciplinary objectives of the program, the course list should include courses from at least three academic departments.
2. For the M.S. degree, 12 credit hours are required including one credit of Air Quality Seminar and courses from at least two of the three areas required for the Ph.D. The course list should include courses from at least three different departments.

It is expected that special topics courses in air quality will be approved for the certificate program by the air quality graduate education committee upon request following the procedure described below.

Course Requirements

Courses in Safety and Health/Toxicology

- DMP 650 - Fundamentals of Public Health and Food Safety **Credits: 3**
- AP 871 - Toxicology **Credits: 3**
- AP 830 - Toxins in the Biological System **Credits: 2**
- AP 831 - Current Topics in Toxicology **Credits: 2**
- FDSCI 915 - Food Toxicology **Credits: 2**
- IMSE 610 - Occupational Safety Engineering **Credits: 3**
- ASMS 511 - Occupational and Agricultural Health **Credits: 3**

Courses in Measurement and Characterization

- ASI 864 - Analytical Techniques-Immunoassays Credits: 1
- BAE 811 - Advances in Particle Technology Credits: 3
- CHM 566 - Instrumental Methods of Analysis Credits: 3
- FDSCI 713 - Rapid Methods and Automation in Microbiology Credits: 2
- GEOG 608 - Geographic Information Systems II Credits: 3
- GEOG 711 - Topics in Remote Sensing Credits: 3

Courses in Management and Control

- BAE 651 - Air Pollution Engineering Credits: 3
- FDSCI 791 - Advanced Application of HACCP Principles Credits: 3
- ME 622 - Indoor Environmental Engineering Credits: 3
- ME 721 - Thermal Systems Design Credits: 3
- ME 722 - Human Thermal Engineering Credits: 3

Supporting Courses

- AGRON 746 - Environmental Soil Physics Credits: 3
- AGRON 900 - Micrometeorology Credits: 3
- BIOL 604 - Biology of the Fungi Credits: 3
- BIOL 687 - Microbial Ecology Credits: 3
- BIOL 805 - Advanced Mycology Credits: 3
- CE 967 - Physicochemical Processes Credits: 3
- CHE 682 - Surface Phenomena Credits: 3
- CHE 750 - Air Quality Seminar Credits: 1
- CHE 862 - Advanced Transport Phenomena I Credits: 3
- CHE 910 - Selected Topics in Transport Phenomena Credits: 3
- CHM 856 - Chemical Kinetics Credits: 3
- CHM 937 - Applications of Surface Science to Chemistry Credits: 3
- ENTOM 620 - Pesticides, People, and the Environment Credits: 2
- FDSCI 695 - Quality Assurance of Food Products Credits: 3
- GEOG 735 - Topics in Climatology Credits: 3
- GEOG 761 - Human Impact on the Environment Credits: 3
- GEOG 890 - Advanced Spatial Analysis Techniques Credits: 3
- GEOL 712 - Advanced Geochemistry Credits: 3
- ME 720 - Intermediate Fluid Mechanics Credits: 3
- ME 831 - Boundary Layer Theory Credits: 3
- PHYS 651 - Introduction to Optics Credits: 4
- PHYS 652 - Applied Optics and Optical Measurement Credits: 3

Total Hours Required for Graduate Certificate: 12-15

Master of Science

Chemical Engineering (MS)

A M.S. degree in Chemical Engineering requires 30 credit hours, and can be earned with either the thesis or report options. In the thesis option, 24 hours of course work and 6 hours of thesis are required. The thesis is based on directed research performed by the student. In the report option, 28 hours of course work and 2 hours of report are required. The report is based on a literature review or design project performed by the student.

Course Requirements

Required Courses

M.S. students are expected to be well grounded in the fundamentals of Chemical Engineering and must successfully complete the following courses (or their equivalents).

- CHE 835 - Chemical Engineering Analysis **Credits: 3**
- CHE 815 - Advanced Chemical Engineering Thermodynamics **Credits: 3**
- CHE 822 - Advanced Chemical Reaction Engineering **Credits: 3**
- CHE 862 - Advanced Transport Phenomena I **Credits: 3**
- CHE 875 - Graduate Seminar in Chemical Engineering **Credits: 1**

Elective Courses

Total Hours Required for Master's: 30

Program description

The Department of Civil Engineering at Kansas State University offers comprehensive programs leading to the degrees of master of science and doctor of philosophy in civil engineering. Specializations include environmental engineering, geotechnical engineering, structural engineering, transportation engineering, and water resources engineering. An active research program is conducted in each of these areas, and it is the goal of the department to maintain a close association between graduate study, research, teaching, and engineering practice.

Research facilities

The Department of Civil Engineering has several laboratories which can be used to perform a wide variety of graduate research projects. These include laboratories in the areas of environmental engineering, hydraulic engineering, materials testing, geotechnical engineering, structural engineering, and water resources engineering.

The department also has the Civil Infrastructure Systems Laboratory (CISL) which includes a full-scale Accelerated Pavement Testing facility.

In addition, the department has modern computing facilities including a number of personal computers and workstations.

Financial support

The department offers several graduate research, teaching, and graduate assistantships. These positions are generally 0.5 time appointments and the stipends vary accordingly. In addition, a number of graduate research assistantships are supported through externally funded research projects obtained by individual faculty members. Student fees are assessed at the in-state level for graduate students who receive research, teaching, and graduate assistantships.

"Students holding GTA, GRA, or GA appointments from September 1 through November 17 receive tuition benefits for the fall term, and students holding GTA, GRA, or GA appointments from February 1 through April 17 receive tuition benefits for the spring term. If a graduate appointment does not begin by these dates or terminates before these ending dates, all tuition benefits will be lost. The student then is responsible for the total tuition payment." Graduate Handbook, The Graduate School

Career opportunities

Graduate study in civil engineering will provide students with training for a wide variety of academic, technological, and public service careers. Students completing the master of science degree program typically find employment related to their chosen discipline in either private consulting firms or governmental agencies. Students completing the doctor of philosophy degree program can also expect to find employment in academic positions, or in government and private research laboratories.

Areas of emphasis

Environmental and water resources engineering: Im, Parameswaran

Structural analysis and design: Ghimire, Peterman, Rasheed

Geotechnical engineering: Peric, Hossain

Transportation and materials engineering: Aziz, Fitzsimmons, Hossain, Jones

Accelerated

Accelerated Civil Engineering - Construction (BS)/Civil Engineering (MS)

The accelerated Accelerated Civil Engineering - Construction (BS)/Civil Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Civil Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.

- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The Graduate School requires that all graduate courses be taken for graduate credit during the semester of enrollment. The Graduate School will not change an undergraduate course to a graduate course after grades are assigned. If the student has deferred admission, then the student must submit a special enrollment request to enroll or change current course(s) to the graduate level credit.

- Students must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- Students must complete all B.S.C.E. degree requirements with the exception that up to 6 credit hours of approved 600 or 700-level classes taken for graduate credit can also count toward their B.S. degree requirements. For those students in the research with thesis option, an additional 3 credit hours of independent study can also count toward their B.S. degree requirements.

Course Requirements

Civil Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CE 680 - Economics of Design and Construction **Credits: 3**
- CE 741 - Civil Engineering Materials II **Credits: 3**
- CE 743 - Advanced Reinforced Concrete Design **Credits: 3**
- CE 774 - Pavement Design **Credits: 3**
- CE 777 - Portland Cement Concrete Pavements **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Civil Engineering - Environmental (BS)/Civil Engineering (MS)

The accelerated Accelerated Civil Engineering - Environmental (BS)/Civil Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Civil Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The Graduate School requires that all graduate courses be taken for graduate credit during the semester of enrollment. The Graduate School will not change an undergraduate course to a graduate course after grades are assigned. If the student has deferred admission, then the student must submit a special enrollment request to enroll or change current course(s) to the graduate level credit.

- Students must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- Students must complete all B.S.C.E. degree requirements with the exception that up to 6 credit hours of approved 600 or 700-level classes taken for graduate credit can also count toward their B.S. degree requirements. For those students in the research with thesis option, an additional 3 credit hours of independent study can also count toward their B.S. degree requirements.

Course Requirements

Civil Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CE 625 - Principles of Geoenvironmental Engineering **Credits: 3**
- CE 654 - Design of Groundwater Flow Systems **Credits: 3**
- CE 751 - Hydraulics of Open Channels **Credits: 3**
- CE 762 - Water Treatment Processes **Credits: 3**
- CE 766 - Wastewater Engineering: Biological Processes **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Civil Engineering - General (BS)/Civil Engineering (MS)

The accelerated Accelerated Civil Engineering - General (BS)/Civil Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Civil Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The Graduate School requires that all graduate courses be taken for graduate credit during the semester of enrollment. The Graduate School will not change an undergraduate course to a graduate course after grades are assigned. If the student has deferred admission, then the student must submit a special enrollment request to enroll or change current course(s) to the graduate level credit.

- Students must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- Students must complete all B.S.C.E. degree requirements with the exception that up to 6 credit hours of approved 600 or 700-level classes taken for graduate credit can also count toward their B.S. degree requirements. For those students in the research with thesis option, an additional 3 credit hours of independent study can also count toward their B.S. degree requirements.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Civil Engineering - Transportation/Material (BS)/Civil Engineering (MS)

The accelerated Accelerated Civil Engineering - Transportation/Material (BS)/Civil Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Civil Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.

- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The Graduate School requires that all graduate courses be taken for graduate credit during the semester of enrollment. The Graduate School will not change an undergraduate course to a graduate course after grades are assigned. If the student has deferred admission, then the student must submit a special enrollment request to enroll or change current course(s) to the graduate level credit.

- Students must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- Students must complete all B.S.C.E. degree requirements with the exception that up to 6 credit hours of approved 600 or 700-level classes taken for graduate credit can also count toward their B.S. degree requirements. For those students in the research with thesis option, an additional 3 credit hours of independent study can also count toward their B.S. degree requirements.

Course Requirements

Civil Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CE 680 - Economics of Design and Construction **Credits: 3**
- CE 771 - Travel Demand Modeling **Credits: 3**
- CE 774 - Pavement Design **Credits: 3**
- CE 775 - Traffic Engineering **Credits: 3**
- CE 786 - Land Development for Civil Engineers and Planners **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Civil Engineering - Water Resources (BS)/Civil Engineering (MS)

The accelerated Accelerated Civil Engineering - Water Resources (BS)/Civil Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Civil Engineering degree with early admission

to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The Graduate School requires that all graduate courses be taken for graduate credit during the semester of enrollment. The Graduate School will not change an undergraduate course to a graduate course after grades are assigned. If the student has deferred admission, then the student must submit a special enrollment request to enroll or change current course(s) to the graduate level credit.

- Students must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- Students must complete all B.S.C.E. degree requirements with the exception that up to 6 credit hours of approved 600 or 700-level classes taken for graduate credit can also count toward their B.S. degree requirements. For those students in the research with thesis option, an additional 3 credit hours of independent study can also count toward their B.S. degree requirements.

Course Requirements

Civil Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CE 625 - Principles of Geoenvironmental Engineering **Credits: 3**
- CE 654 - Design of Groundwater Flow Systems **Credits: 3**
- CE 725 - Seepage in Permeable Materials **Credits: 3**
- CE 751 - Hydraulics of Open Channels **Credits: 3**
- CE 752 - Advanced Hydrology **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Civil Engineering (PHD)

The doctorate program in civil engineering is a research-oriented curriculum designed to prepare students for advanced research and university-level academic positions in civil engineering, as well as industry.

Admission Requirements

The general requirements for admission to a civil engineering graduate program include a Bachelor of Science or equivalent degree from an accredited civil engineering program and evidence the applicant has the ability to do satisfactory graduate work. Students not possessing a degree in civil engineering may be admitted if their undergraduate work is closely related to their civil engineering specialty area of interest, and they complete a core program of undergraduate civil engineering coursework.

Students admitted for work toward a doctorate degree are required to develop an original research program, pass a preliminary examination and complete a doctoral dissertation under the guidance of and advisory committee.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

This program requires a minimum of 90 credit hours or 60 credit hours beyond the master's degree, including at least 30 hours of research credit.

Fifteen hours of coursework should be at the 800-level or above. Appropriate coursework from the master's degree can be transferred to the Ph.D. program of study with the approval of the supervisory committee.

A written preliminary exam must be taken by doctoral students. The preliminary exam must be completed within three years and at least seven months before the final oral exam. A dissertation of original research of sufficient quality and importance to merit publication in refereed journals should be completed by all doctoral students. The final examination may be taken when the student has completed all requirements of the Program of Study as well as satisfied all other program requirements.

Required Courses

Concentration Courses

Research/Dissertation

Program Total Credits: 60

Master's degree Transfer Credits: 30

*Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree

Total Hours Required for Doctorate: 90

Graduate Certificate

Geoenvironmental Graduate Certificate

Contact: Mustaque Hossain

E-mail: mustak@ksu.edu

The purpose of the geoenvironmental certificate program is to:

- Prepare graduates for careers related to geoenvironmental engineering;
- Promote interdisciplinary educational experiences in geoenvironmental engineering and;
- Enhance interactions among faculty and students in the allied science and engineering disciplines related to geoenvironmental engineering.

Consistent with the other certificate programs established by the Graduate School, this certificate program requires 12 credit hours of coursework. It includes nine credit hours from three required courses and three credit hours of elective chosen from a list of approved courses. The geoenvironmental certificate program is administered and coordinated in the Department of Civil Engineering.

Course Requirements

Required Courses

- CE 625 - Principles of Geoenvironmental Engineering Credits: 3
- CE 654 - Design of Groundwater Flow Systems Credits: 3
- CE 768 - Geoenvironmental Engineering Design Credits: 3

Elective Courses

Choose one course from:

- AGRON 605 - Soil and Environmental Chemistry Credits: 3
- AGRON 746 - Environmental Soil Physics Credits: 3
- AGRON 816 - Soil Physics Credits: 3
- AGRON 905 - Advanced Soil Chemistry Credits: 3
- AGRON 916 - Advanced Soil Physics Credits: 3
- CE 723 - Designing with Geosynthetics Credits: 3
- CE 725 - Seepage in Permeable Materials Credits: 3
- CE 762 - Water Treatment Processes Credits: 3
- CE 766 - Wastewater Engineering: Biological Processes Credits: 3
- CE 807 - Applied Geostatistics Credits: 2
- CE 823 - Engineering Properties of Cohesive Soils Credits: 3

- CE 825 - Environmental Geotechnology Credits: 3
- CE 828 - Advanced Seepage and Settlement Analysis in Soils Credits: 3
- CE 854 - Analysis of Groundwater Flow Credits: 3
- CE 861 - Environmental Engineering Chemistry Credits: 3
- CE 930 - Advanced Topics in Geotechnical Engineering Credits: 1-18
- CE 970 - Advanced Topics in Environmental and Water Resources Engineering Credits: 1-18
- CHE 650 - Hazardous Waste Engineering Seminar Credits: 1
- CHE 682 - Surface Phenomena Credits: 3
- CHE 715 - Biochemical Engineering Credits: 3
- CHE 805 - Selected Topics in Biochemical Engineering Credits: 3
- CHE 862 - Advanced Transport Phenomena I Credits: 3
- GEOL 611 - Hydrogeology Credits: 3
- GEOL 712 - Advanced Geochemistry Credits: 3

Total Hours Required for Graduate Certificate: 10-12

Transportation Engineering Graduate Certificate

Contact: Eric Fitzsimmons

Email: fitzsimmons@ksu.edu

Home Page: <http://global.k-state.edu/engineering/transportation/>

The provision of a safe, efficient and environmentally sound transportation system is critical to the physical, environmental and economic health of the nation. A pool of highly qualified transportation professionals is required to plan, design, operate and maintain our nation's transportation infrastructure, facilities, and services. There is a need for educational programs designed for transportation professionals who want to expand their knowledge and skills through a program of graduate study that is less extensive, and different from, a traditional master's program. Offered through the Civil Engineering graduate program, the transportation engineering certificate program will provide transportation professionals with the opportunity to pursue a focused collection of courses that, when completed, allows the student to receive recognition of their continued effort in the area of transportation engineering, or to cumulate credit hours toward their master's degree.

Special Requirements

In addition to the course work requirements described below, students are further required to demonstrate advanced knowledge and competency in the area of transportation engineering by completing one of the following:

1. A research paper prepared as part of the requirements of one of the Core or Elective Courses described above. To satisfy this requirement, the research paper must have received a minimum letter grade of "B."
2. Presentation of the results of a transportation engineering related study or project to the faculty of the Transportation Engineering Certificate Program. To satisfy this requirement, the study or project must have been completed under the supervision of the candidate for the Graduate Certificate in Transportation Engineering.

The required evidence of advanced knowledge and competency should be presented to the Program Coordinator prior to the beginning of the candidate's final semester of course work.

Course Requirements

The Graduate Certificate in Transportation Engineering requires the completion of 12 credit hours of course work as described below.

Required Courses

All students must complete two of the following Core Courses (6 credit hours):

- CE 774 - Pavement Design **Credits: 3**
- CE 775 - Traffic Engineering **Credits: 3**
- CE 786 - Land Development for Civil Engineers and Planners **Credits: 3**

Elective Courses

In addition to the Core Courses, students must complete a minimum of 6 additional credit hours of electives from the remaining core course and the following approved list of courses.

- CE 680 - Economics of Design and Construction **Credits: 3**
- CE 741 - Civil Engineering Materials II **Credits: 3**
- CE 771 - Travel Demand Modeling **Credits: 3**
- CE 777 - Portland Cement Concrete Pavements **Credits: 3**
- CE 816 - Selected Topics in Civil Engineering **Credits: 1-18**
- CE 872 - Transportation Safety **Credits: 3**
- CE 874 - Sustainable Transportation Asset Management **Credits: 3**
- CE 875 - Traffic Flow Theory **Credits: 3**
- Other Graduate level course work (maximum of 3 credit hours) in Engineering Management or Statistics as approved by the Program Director.

Total Hours Required for Graduate Certificate: 12

Master of Science

Civil Engineering (MS)

The master's program is a broad-based curriculum designed to prepare students for advanced positions in the civil engineering industry, consulting and public agencies, as well as for advancing graduate studies. Students can choose a coursework-only option (30 course credits and a final exam), thesis (24 course credits + 6 thesis credits) or project option (28 course credits + 2 project credits) or pursue their degree online through the K-State global campus.

Contact information for graduate program coordinator: Dr. Prathap Parameswaran, prathapp@ksu.edu.

Admission Requirements

A bachelor's degree in civil engineering or other equivalent engineering/technology degree is the minimum requirement. Non-engineering bachelor's degree may be accepted for admission into the CE Master's program, provided appropriate deficiency course requirements will be completed prior to completion of the PhD degree.

An undergraduate GPA above 3.0 (or an equivalent scale for accredited international programs) is required. Completion of the Graduate Records Examination (GRE) is a requirement, with a preferred score of 80th percentile in the Quantitative section and can be waived for domestic applicants from K-State or those with an undergraduate degree from an ABET accredited institution. For international applicants, the minimum English language proficiency test requirements from the K-State graduate school should be met, more information can be found here: <https://www.k-state.edu/grad/admissions/application-process/>.

Graduation Requirements

Thesis Requirements:

A master's thesis presents the results of an original investigation of a problem or topic approved by the candidate's supervisory committee. Its purpose is to demonstrate the candidate's ability to conduct original research of a type appropriate to the academic discipline, to analyze the information obtained from the research, and to present the results in a form acceptable to the supervisory committee.

Report Requirements:

A master's report is generally shorter than a thesis, and it may present the results of a more limited original investigation. Alternatively, it may review the state of a particular scholarly or scientific problem, or especially in the case of professional programs or applied disciplines it may describe a project appropriate to the discipline.

Students who pursue a report or thesis option should follow the guidelines from the K-State graduate school and comply with the deadlines for the respective semester when the student intends to graduate.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

- Of the 30 credit hours required for the master's POS, at least 18 hours should be at the 700 level and above, including the thesis/research and the report/problems hours required by the thesis and report options.
- No 500-level course taken in the student's major field of study, e.g., department, may appear in the program of study.
- Normally no more than 6 credit hours may be at the 500 level from relevant courses offered by any other college or department. No more than 3 hours in problems or other individualized courses may be applied to the master's degree.

The following is a list of recommended courses for each of the four specialization areas within the graduate Civil Engineering program.

Specialization area: Environmental Engineering

Required Courses

At least 9 credit hours required from this list.

- CE 762 - Water Treatment Processes **Credits: 3**
- CE 766 - Wastewater Engineering: Biological Processes **Credits: 3**
- CE 861 - Environmental Engineering Chemistry **Credits: 3**
- CE 868 - Chemicals in the Environment: Fate and Transport **Credits: 3**

Additional Courses

At least 6 credit hours required from this list.

- CE 654 - Design of Groundwater Flow Systems **Credits: 3**
- CE 751 - Hydraulics of Open Channels **Credits: 3**

- CE 816 - Selected Topics in Civil Engineering **Credits: 1-18**
- CE 854 - Analysis of Groundwater Flow **Credits: 3**
- CE 866 - Advanced Wastewater Treatment **Credits: 3**

Elective Courses

Student may choose from a list of approved electives offered by the Civil Engineering graduate program or other departments, in consultation with the student's supervisory committee.

Research

- Report option only: CE 898 - Master's Report **Credits: 1-18** (2 hours required)
- Thesis option only: CE 899 - Master's Thesis **Credits: 1-18** (6 hours required)

Specialization area: Geotechnical Engineering

Required Courses

At least 9 credit hours required from this list.

- CE 728 - Advanced Geotechnical Design **Credits: 3**
- CE 822 - Shear Strength and Slope Stability of Soils **Credits: 3**
- CE 824 - Strength and Deformation of Geo-materials **Credits: 3**
- CE 828 - Advanced Seepage and Settlement Analysis in Soils **Credits: 3**

Additional Courses

At least 9 credit hours required from this list.

- CE 774 - Pavement Design **Credits: 3**
- CE 803 - Numerical and Analytic Techniques for Engineers **Credits: 3**
- CE 816 - Selected Topics in Civil Engineering **Credits: 1-18**
- CE 827 - Computational Applications in Geo-Systems **Credits: 3**

Elective Courses

Student may choose from a list of approved electives offered by the Civil Engineering graduate program or other departments, in consultation with the student's supervisory committee.

Research

- Report option only: CE 898 - Master's Report **Credits: 1-18** (2 hours required)
- Thesis option only: CE 899 - Master's Thesis **Credits: 1-18** (6 hours required)

Specialization area: Structural Engineering

Required Courses

At least 9 credit hours required from this list.

- CE 732 - Advanced Structural Analysis I **Credits: 3**
- CE 742 - Advanced Steel Design **Credits: 3**
- CE 743 - Advanced Reinforced Concrete Design **Credits: 3**
- CE 802 - Advanced Mechanics of Materials and Applied Elasticity **Credits: 3**

Additional Courses

At least 12 credit hours required from this list.

- CE 741 - Civil Engineering Materials II **Credits: 3**
- CE 745 - Structural Dynamics **Credits: 3**
- CE 803 - Numerical and Analytic Techniques for Engineers **Credits: 3**
- CE 833 - Advanced Structural Analysis II **Credits: 3**
- CE 834 - Strengthening Design of Reinforced Concrete with Fiber Reinforced Polymers **Credits: 3**
- CE 837 - Structural Stability **Credits: 3**
- CE 844 - Prestressed Concrete Design **Credits: 3**
- MATH 551 - Applied Matrix Theory **Credits: 3**
- MATH 632 - Elementary Partial Differential Equations **Credits: 3**

Elective Courses

Student may choose from a list of approved electives offered by the Civil Engineering graduate program or other departments, in consultation with the student's supervisory committee.

Research

- Report option only: CE 898 - Master's Report **Credits: 1-18** (2 hours required)
- Thesis option only: CE 899 - Master's Thesis **Credits: 1-18** (6 hours required)

Specialization area: Transportation Engineering

Required Courses

All options.

- CE 774 - Pavement Design **Credits: 3**
- CE 775 - Traffic Engineering **Credits: 3**
- CE 786 - Land Development for Civil Engineers and Planners **Credits: 3**

Option Electives

Students should choose at least one course from each of the following areas, or 9-12 hours in one option area.

Planning Option

- CE 680 - Economics of Design and Construction Credits: 3
- CE 771 - Travel Demand Modeling Credits: 3
- CE 816 - Selected Topics in Civil Engineering Credits: 1-18
- CE 872 - Transportation Safety Credits: 3
- CE 874 - Sustainable Transportation Asset Management Credits: 3
- ECON 631 - Principles of Transportation Credits: 3
- GEOG 608 - Geographic Information Systems II Credits: 3
- IMSE 850 - Ergonomics (Human Factors) Engineering Credits: 3
- PLAN 667 - Transportation Planning Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 710 - Sample Survey Methods Credits: 3

Operations Option

- CE 680 - Economics of Design and Construction Credits: 3
- CE 771 - Travel Demand Modeling Credits: 3
- CE 816 - Selected Topics in Civil Engineering Credits: 1-18
- CE 872 - Transportation Safety Credits: 3
- CE 874 - Sustainable Transportation Asset Management Credits: 3
- CE 875 - Traffic Flow Theory Credits: 3
- ECON 631 - Principles of Transportation Credits: 3
- IMSE 560 - Introduction to Operations Research I Credits: 3
- IMSE 850 - Ergonomics (Human Factors) Engineering Credits: 3
- IMSE 881 - Linear Programming Credits: 3
- PLAN 667 - Transportation Planning Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 710 - Sample Survey Methods Credits: 3

Design Option

- CE 680 - Economics of Design and Construction Credits: 3
- CE 771 - Travel Demand Modeling Credits: 3
- CE 728 - Advanced Geotechnical Design Credits: 3
- CE 751 - Hydraulics of Open Channels Credits: 3
- CE 816 - Selected Topics in Civil Engineering Credits: 1-18
- CE 822 - Shear Strength and Slope Stability of Soils Credits: 3
- CE 844 - Prestressed Concrete Design Credits: 3
- CE 872 - Transportation Safety Credits: 3
- CE 874 - Sustainable Transportation Asset Management Credits: 3
- IMSE 850 - Ergonomics (Human Factors) Engineering Credits: 3
- PLAN 667 - Transportation Planning Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 710 - Sample Survey Methods Credits: 3

Materials Option

- CE 680 - Economics of Design and Construction **Credits: 3**
- CE 728 - Advanced Geotechnical Design **Credits: 3**
- CE 741 - Civil Engineering Materials II **Credits: 3**
- CE 802 - Advanced Mechanics of Materials and Applied Elasticity **Credits: 3**
- CE 816 - Selected Topics in Civil Engineering **Credits: 1-18**
- CE 822 - Shear Strength and Slope Stability of Soils **Credits: 3**
- CE 828 - Advanced Seepage and Settlement Analysis in Soils **Credits: 3**
- CE 874 - Sustainable Transportation Asset Management **Credits: 3**
- ME 862 - Finite Elements **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- STAT 710 - Sample Survey Methods **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**

Elective Courses

Student may choose from a list of approved electives offered by the Civil Engineering graduate program or other departments, in consultation with the students' supervisory committee.

Research

- Report option only: CE 898 - Master's Report **Credits: 1-18** (2 hours required)
- Thesis option only: CE 899 - Master's Thesis **Credits: 1-18** (6 hours required)

Specialization area: Water Resources Engineering

Required Courses

At least 9 credit hours required from this list.

- CE 654 - Design of Groundwater Flow Systems **Credits: 3**
- CE 751 - Hydraulics of Open Channels **Credits: 3**
- CE 752 - Advanced Hydrology **Credits: 3**
- CE 803 - Numerical and Analytic Techniques for Engineers **Credits: 3**

Additional Courses

At least 6 credit hours required from this list.

- CE 625 - Principles of Geoenvironmental Engineering **Credits: 3**
- CE 725 - Seepage in Permeable Materials **Credits: 3**
- CE 762 - Water Treatment Processes **Credits: 3**
- CE 766 - Wastewater Engineering: Biological Processes **Credits: 3**
- CE 861 - Environmental Engineering Chemistry **Credits: 3**
- CE 866 - Advanced Wastewater Treatment **Credits: 3**

Elective Courses

Student may choose from a list of approved electives offered by the Civil Engineering graduate program or other departments, in consultation with the students' supervisory committee.

Research

- Report option only: CE 898 - Master's Report **Credits: 1-18** (2 hours required)
- Thesis option only: CE 899 - Master's Thesis **Credits: 1-18** (6 hours required)

Total Hours Required for Master's: 30

Current faculty research projects are funded by the National Science Foundation, U.S. Department of Agriculture, USDA - Agricultural Research Service - Plains Area, USDA - Research Education and Economics - National Institute of Food and Agriculture (NIFA), HHS - Food and Drug Administration (FDA), HHS - National Institutes of Health (NIH), U.S. Department of Energy, U.S. Air Force, DOD - Air Force - Air Force Office of Scientific Research (AFOSR), DARPA, Department of Transportation, Kansas Department of Education, Amazon, Rockwell Collins, University of Kansas Center for Research, Inc., Peak Technologies, RTI International, Mathinvestments, Inc., Pioneer Hi-Bred International, Inc., United Sorghum Checkoff Program, and National Technology & Engineering Solutions of Sandia LLC.

Objectives

The department is committed to excellence in scholarly activities and research; interdepartmental and interuniversity collaborative projects are particularly emphasized. Key research areas include: artificial intelligence, data science, programming languages, high assurance software, cyber-physical systems, cybersecurity, computation science, bioinformatics, databases, semantic web, software engineering, agent-oriented software systems, and robotics.

Research groups

Programming languages research in the department concentrates upon techniques and tools for designing, analyzing, and implementing programming languages. Specific topics include abstract interpretation, algebraic semantics, compiler synthesis from denotational semantics definitions, full abstraction, lambda definability, type theory, probabilistic semantics, concurrency theory, and model checking.

High assurance software research in the department focuses on developing techniques for designing and implementing software that are able to establish with high levels of assurance that the resulting systems satisfy their requirements and are free from

unanticipated faults. Automated tool frameworks for software modeling, software architecture, and component integration techniques for large scale systems of systems are being developed.

Research in cyber-physical systems is focusing on developing theory and tools for sensor network, parallel and grid computing, and distributed, cooperative robotics. Specific topics include tools to automate the design, analysis and deployment of sensor systems, tools for solving computational intensive scientific problems via parallel computing, and to effectively utilize the available computation, storage and network resources in a cluster of machines, and frameworks to control large numbers of heterogeneous, semi-autonomous robots in dynamic, uncertain environments in order to cooperatively perform a task.

Computational Science and Informatics research in the department involves the application of artificial intelligence heuristics, algorithms, data structures, and database concepts and processes to specific domains. For example, in bioinformatics – the study of how biological data is stored, retrieved, and analyzed to solve a specific biological research problem, computer scientists use data mining techniques and algorithms to find patterns in biological data that enable scientists to derive structure and relate structure to the function of a specific gene. Research is being performed by several interdisciplinary teams of domain specialists and informatics experts from Computer Science.

Cybersecurity research in the department is addressing fundamental issues in integrity, confidentiality and availability of data/systems resources, and practical issues in network and system security defense. Methodologies are being developed to provide high assurance through development of tractable static analyses that cope with real-world information policies, complementing and leveraging the explicit access controls on which current systems rely. Active research programs are going on in enterprise-network security management and defense, including attack graph-based security analysis, intrusion detection, and security metrics.

The department's software engineering research encompasses measures, specification, testing and analysis of sequential and concurrent software systems. Software measures research applies measurement theory to the development of practical software measures and specification methodologies. Software specification research uses formal approaches for describing the intended behavior of complex systems. Testing and analysis research involves development and evaluation of approaches for validation and verification of software. Research that spans these areas is ongoing and ranges from theoretical developments, through construction of toolsets that enable application of research results, to empirical evaluation of software engineering techniques.

The robotics laboratory supports research into software engineering approaches to building robust autonomous robotics software, including multi-agent solutions. Teams from the lab have placed first, second, and third in the annual AAAI Robotics competitions.

The agent-oriented software engineering research group is developing widely recognized foundations and engineering tools that support construction of systems organized as collections of independent and autonomous "agents", and is demonstrating the effectiveness of these techniques in domains of robotics and sensor networks.

Database research in the department focuses on basic theoretical and practical issues in mainstream database systems, as well as on issues lying at the border of databases and knowledge and data engineering (KDE). Topics include database and knowledge base design, database security and integrity, static and dynamic integrity constraints, extensible database management systems, temporal and active databases, data warehousing, online analytical processing (OLAP), data cleansing, data mining, knowledge discovery in databases (KDD), and information visualization.

The department's artificial intelligence (AI) research focuses on semantic web, data science, knowledge representation for reasoning and planning under uncertainty, machine learning for knowledge discovery and data mining, intelligent information retrieval, web and clickstream mining, expert systems, and intelligent control systems, also known as real-time intelligent systems. Methodologies range over inductive, analytical, and multistrategy learning and include research programs in artificial neural networks, genetic and evolutionary computation, and probabilistic learning and inference. Application areas include decision support; human-computer intelligent interaction (HCII); industrial, commercial and defense automation; autonomous robotics; and multi-agent systems.

Research facilities

The department maintains a large network of servers and workstations connected to Internet and Internet2. The servers include Sun servers running Solaris, Windows based PC servers, and a Beowulf cluster system consisting of 35 nodes totaling 210 processors running Linux. The department also has an 80 processor NCR Teradata database server with 1.6 terabytes of online storage. The workstations include systems running Solaris and PCs running Windows and Linux. Many software packages are available including CASE tools, embedded system and robotics system development environments, and database systems.

Additional campus-wide computer facilities are provided by the university's Computing and Network Services organization and the college of Engineering, including Sun servers and PC based workstations throughout campus.

Admission

Applicants with degrees in other areas must have mathematical maturity as demonstrated by courses in logic or discrete mathematics, plus courses in programming, data structures, and algorithms, and either a course or experience in software engineering.

In addition to the requirements for admission to the M.S. program, an applicant for the Ph.D. program must have a master's degree in computing science or a bachelor's degree plus strong, advanced computing knowledge. Solid preparation in theoretical computer science and advanced knowledge in one or more applications areas (compiling, operating systems, database systems, etc.) are also required.

Accelerated

Accelerated Computer Science (BS)/Computer Science (MS)

The accelerated Accelerated Computer Science (BS)/Computer Science (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Computer Science degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Before acceptance into the accelerated degree program, the student will select a major professor from the Graduate Faculty in Computer Science. The major professor should agree to supervise the student's graduate program and provide a reference letter, including their plan to supervise, in the Graduate School application. The rest of the application process will be the same as for the traditional M.S. degree except completion of the B.S. degree is not required. The following steps are required:

KSU graduate application form completed online before semester of enrollment. In general, applicants are only considered for fall enrollment. Applicants should complete the K-State Graduate School application process. The applicant's statement of academic objectives must be submitted with the application. Three letters of reference and transcript(s) of all undergraduate work must be submitted with the application.

The graduate program will process the application of the student and forward it to the Graduate School, as currently occurs for students holding a B.S. who apply to the M.S. program. Should the student meet the requirements, provisional admission to the M.S. program will be granted, pending the award of the B.S. degree. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student will work closely with the major professor to form a supervisory committee and file a program of study by the end of the first full semester following the student's acceptance into the accelerated degree program, or the second semester of the student's junior year, whichever is later. The undergraduate advisor will advise the student in the academic progress toward the B.S. degree, and the major professor will supervise the student's academic progress and preparation for the M.S. degree capstone (report or thesis). A typical M.S. program of study for students in the accelerated program would be identical to that for students in the traditional M.S. program: a report option requiring 30 hours including 2 credit hours of report and 1 credit hour of seminar or a thesis option requiring 30 hours including 6 credit hours of research. An oral presentation is required for each option and original research is required for the thesis option.

Note that CIS 705 can be substituted for CIS 505 to satisfy the programming language course requirement in the B.S. program. Also, CIS 751 can be substituted for CIS 551 in the B.S. program. Students who take CIS 505 or CIS 551 cannot take CIS 705 or CIS 751, respectively, to meet the M.S. program requirements. The graduate-level courses can be taken as either technical electives or unrestricted electives for the B.S. program.

Course Requirements

Computer Science (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CIS 705 - Programming Languages **Credits: 3**
- CIS 720 - Advanced Operating Systems **Credits: 3**
- CIS 730 - Principles of Artificial Intelligence **Credits: 3**
- CIS 751 - Computer and Information Security **Credits: 3**
- CIS 775 - Analysis of Algorithms **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Computer Science (BS)/Master of Business Administration (MBA)

The accelerated Accelerated Computer Science (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

The student must complete all requirements of the B.S. in computer science and all requirements of the MBA. Included in the B.S. degree program must be six hours of economics. The student may include up to nine hours of graduate credit from the MBA program to satisfy unrestricted electives, upper division electives, and/or tech electives, as appropriate, for the B.S. in computer science.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CIS 731 - Programming Techniques for Data Science and Analytics **Credits: 3**
- CIS 732 - Machine Learning and Pattern Recognition **Credits: 3**
- MIS 665 - Business Analytics and Data Mining **Credits: 3**
- MIS 670 - Social Media Analytics and Web Mining **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.

- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Computer Science (PHD)

The Ph.D. degree in Computer Science is offered through the Computer Science graduate program. Requirements include 90 semester hours of graduate-level credit. All work must be completed within seven years.

General requirements include: Completing the Breadth Requirement and passing the Research Proficiency Exam (Preliminary Examination); successfully presenting a research plan to one's supervisory committee at a research proposal meeting; and completing the research plan, writing a dissertation, and successfully defending the dissertation in an open forum.

Admission Requirements

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

General requirements include:

1. Completing the Breadth Requirement
2. Passing the Research Proficiency Exam (RPE)
3. Passing the Preliminary Examination
4. Completing a Proposal Defense
5. Writing a dissertation and successfully defending the dissertation in an open forum.

Course work requirements include:

- 24 hours of course credit at Kansas State University beyond the master's degree level
- 15 hours must be 800 level or above
- One or more courses in theoretical or fundamental topics
- At least 30 hours of Ph.D. research credits.

Breadth Requirement

The Breadth requirement requires demonstrating proficiency in six areas: Implementation, Languages, Systems, Applied CS, Foundations, and Algorithms.

The Breadth requirement must be completed by the end of the fifth semester. If the student fails to complete the Breadth Requirement within the specified time, the student must leave the Ph.D. program.

The student must receive a B or better in each course used to satisfy the Breadth Requirement. In addition, the overall average of all courses used to satisfy the Breadth Requirement must be at least 3.5.

Courses taken at KSU as part of a B.S. or M.S. degree, or approved courses from institutions with joint PhD program with the CS Department at KSU, can be used to satisfy the breadth requirement.

A single course cannot be used to satisfy the breadth requirement in more than one area.

In extenuating situations, outside experience or courses transferred from other institutions can be proposed to satisfy Breadth Requirements if approved by the Graduate Studies Committee.

Proficiency in Implementation Area

Proficiency in Implementation area can be demonstrated by completing one course from the following group:

- CIS 641 - Software Engineering Design Project **Credits: 3**
- CIS 690 - Implementation Project **Credits: 3**
- CIS 706 - Translator Design I **Credits: 3**
- CIS 722 - Operating System Practices **Credits: 3**
- CIS 736 - Computer Graphics **Credits: 3**
- CIS 801 - Translator Design II **Credits: 3**

Proficiency in Languages Area

Proficiency in Languages area can be demonstrated by completing one course from the following group:

- CIS 705 - Programming Languages **Credits: 3**
- CIS 706 - Translator Design I **Credits: 3**
- CIS 771 - Software Specification **Credits: 3**
- CIS 801 - Translator Design II **Credits: 3**
- CIS 806 - Semantics of Programming Languages **Credits: 3**

Proficiency in Systems Area

Proficiency in Systems area can be demonstrated by completing one course from the following group:

- CIS 720 - Advanced Operating Systems **Credits: 3**
- CIS 721 - Real-Time Systems **Credits: 3**
- CIS 722 - Operating System Practices **Credits: 3**
- CIS 725 - Advanced Computer Networks **Credits: 3**
- CIS 726 - Advanced World Wide Web Technologies **Credits: 3**
- CIS 750 - Advanced Computer Architecture **Credits: 3**
- CIS 751 - Computer and Information Security **Credits: 3**
- CIS 755 - Systems Security **Credits: 3**

Proficiency in Applied CS Area

Proficiency in Applied CS area can be demonstrated by completing one course from the following group:

- CIS 655 - Security and Reliability of Computing Systems **Credits: 3**

- CIS 730 - Principles of Artificial Intelligence **Credits: 3**
- CIS 740 - Software Engineering **Credits: 3**
- CIS 744 - Advanced Software Analysis and Design **Credits: 3**
- CIS 761 - Data Base Management Systems **Credits: 3**

Proficiency in Foundations Area

Proficiency in Foundations area can be demonstrated by completing the following course:

- CIS 770 - Formal Language Theory **Credits: 3**

Proficiency in Algorithms Area

Proficiency in Algorithms area can be demonstrated by completing the following course:

- CIS 775 - Analysis of Algorithms **Credits: 3**

Research Proficiency Exam

Ph.D. students must pass a Research Proficiency Exam (RPE). The RPE is meant to judge the student's ability to conduct research, and is expected to lead the student into PhD research.

The RPE will be one-semester long, and during this semester, the student must make three public presentations and produce a written report. The gap between the presentations must be at least four weeks and the last presentation must be before finals week.

Students must have their Program of Study filed with the Graduate School before requesting to schedule the first presentation.

For the RPE, the student must also form an RPE Committee consisting of three faculty members from the Department of Computer Science. Members of the PhD Supervisory Committee (as listed in the Program of Study form) belonging to the Department of Computer Science must be included in the RPE Committee. The Major Professor cannot be the chair of the RPE committee; instead, the chair must be the one of the other two members who has highest academic rank (if they have the same rank, the one who has been longest at the Department of Computer Science).

The student will start the RPE process by choosing an area of study in consultation with the Major Professor. The first presentation should include a literature survey of the area, an open problem, and a proposed approach. At the end of the first presentation, the RPE Committee will approve the plan or suggest an alternative problem. The second presentation should present the progress made towards addressing this problem. The third presentation must be accompanied by a written report containing literature survey, a description of the problem addressed, the technical approach used to solve the problem, and the results and their interpretation. At the end of the first and second presentations, the student will be provided feedback on his/her progress and expectations for the next presentation. After the final RPE presentation, the student's work will be judged as "pass" or "fail" by the RPE Committee. Positive votes from a majority of the RPE Committee will constitute a "pass".

In case the RPE presentations take place prior to the Preliminary Examination, it shall be the sole responsibility of the PhD student to maintain a record of having completed the RPE. This entails having all members of the RPE committee sign a document stating that the student passed the RPE.

The RPE must be scheduled with the aim of completing it before the end of the fifth semester.

If the RPE is graded as "fail", then the student will have a second attempt, during which the RPE committee may choose to give the student a different problem to work on. The student must pass the second attempt before the end of the semester following the first attempt. (Thus it may happen that a student does not complete the RPE until the end of the sixth semester.) Otherwise, the student must leave the PhD program.

Preliminary Examination

The student must request a Preliminary Examination Ballot from the Graduate School within one semester of completing the RPE and Breadth Requirements, and no later than at the end of the sixth semester. The Preliminary Examination Presentation should include a presentation of the plan for the dissertation research and must be approved by the supervisory committee. The Preliminary Examination Presentation may be completed in conjunction with the final RPE Presentation. Upon passing the Preliminary Examination, the student will be admitted to candidacy for the Ph.D. degree by the Graduate School.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Computer Science (MS)

The M.S. degree in Computer Science requires a minimum of 30 credit hours of graduate level course work. The degree program can take one of three forms: a report option requiring 30 hours including 2 credit hours of report and 1 credit hour of seminar; a thesis option requiring 30 hours including 6 credit hours of research; and a non-thesis/report option requiring 30 hours of computer science classes. An oral presentation is required for each option and original research is required for the thesis option.

Course Requirements

A culminating experience is required. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

An MS candidate must either 1) defend a thesis (6 credit hours), 2) defend a report (3 credit hours), or 3) graduate on coursework only in which case an exit interview is required as the culminating experience.

Required Courses

The student must receive a grade of B or better for all classes assigned by the Graduate Studies Committee and for each course used to satisfy the following requirements.

Course work must include a course from each of the following areas:

Languages:

- CIS 705 - Programming Languages **Credits: 3**
- CIS 706 - Translator Design I **Credits: 3**

- CIS 771 - Software Specification Credits: 3
- CIS 801 - Translator Design II Credits: 3
- CIS 806 - Semantics of Programming Languages Credits: 3

Systems:

- CIS 720 - Advanced Operating Systems Credits: 3
- CIS 721 - Real-Time Systems Credits: 3
- CIS 722 - Operating System Practices Credits: 3
- CIS 725 - Advanced Computer Networks Credits: 3
- CIS 726 - Advanced World Wide Web Technologies Credits: 3
- CIS 750 - Advanced Computer Architecture Credits: 3
- CIS 751 - Computer and Information Security Credits: 3
- CIS 755 - Systems Security Credits: 3

Applied CS:

- CIS 655 - Security and Reliability of Computing Systems Credits: 3
- CIS 730 - Principles of Artificial Intelligence Credits: 3
- CIS 740 - Software Engineering Credits: 3
- CIS 744 - Advanced Software Analysis and Design Credits: 3
- CIS 761 - Data Base Management Systems Credits: 3

Theory:

- CIS 770 - Formal Language Theory Credits: 3
- CIS 775 - Analysis of Algorithms Credits: 3

Implementation:

Every student must successfully complete a significant implementation under the guidance of a faculty member. This will usually be done as a part of CIS 641, CIS 690, CIS 706, CIS 722, CIS 736, CIS 801. The effort must be certified by a faculty member and the student must request this in writing at the beginning of the course.

Specialization:

Any course numbered CIS 800 or higher except seminar, projects, and research courses. No course may be used to satisfy more than one requirement.

Total Hours Required for Master's: 30

Electrical and Computer Engineering

Mike Wiegers Department of Electrical and Computer Engineering

Don Gruenbacher, Head
Andrew Rys, Director of graduate studies

1701D Platt St
3108 Engineering Hall
785-532-5600
Fax: 785-532-7353
grad@ece.ksu.edu
http://www.ece.ksu.edu

Program

The Mike Wiegers Department of Electrical and Computer Engineering offers courses and programs leading to master of science and doctor of philosophy degrees. Several areas of specialization are available at the graduate level. Major areas are bioengineering, communications systems, computer engineering, control systems, electromagnetics, instrumentation, power systems, renewable energy signal processing, and solid-state electronics.

At the master's level there are three options: thesis, report, and course work only. All require a minimum of 30 hours of credit. The Ph.D. program requires 60 hours beyond the master's, including original research of sufficient quality and importance to merit publication in a refereed journal.

For information about the Ph.D. program, see the Engineering section of this catalog. ([Click here](#))

Research facilities

The department is located in the engineering complex. This facility has been designed to provide an excellent academic environment. There are numerous well-equipped instructional and research laboratories including the computer laboratories, signal and image processing laboratory, electronics lab, communication circuits laboratory, bioengineering laboratory, energy systems laboratory, and solid-state electronics laboratory.

Extensive computing resources are available to the department. These cover a wide range including: PCs, workstations, and servers. Access to supercomputers is also available.

Financial support

Research and teaching assistantships are available on a competitive basis. Students on half-time assistantships pay in-state fees. Graduate students have either teaching, research, or both responsibilities.

Career opportunities

Graduate study in electrical engineering will prepare engineers to pursue careers in many diverse, high technology areas. These careers can be in government, industry, or academia. Possible areas of employment are communications systems, medical equipment design, computer design and applications, power generation and distribution, automotive systems, manufacturing systems, and so on. Electricity and electronics are so necessary for our quality of life that it is difficult to find an area in which electrical engineers and computer engineers are not employed.

Doctor of Philosophy

Electrical and Computer Engineering (PHD)

The doctorate program is a research-oriented curriculum and requires 60 hours beyond the master's degree, including original research of sufficient quality and importance to merit publications in refereed journals. Graduates of the program find employment in national laboratories, academic institutions, government facilities and private industries.

Offered through the Electrical and Computer Engineering. Please see the ECE website for detailed information regarding admission.

Admission Requirements

Course Requirements

Credit Hour Requirements

A total of 90 graduate credit hours of work are required beyond the Bachelor's degree. Up to 30 credit hours from an applicable master's degree can be applied towards the 90 credits required for the Ph.D. degree. The Doctoral Program of Study should normally follow these guidelines:

1. A minimum of 30 hours of doctoral research credit.
2. A minimum of 15 hours of graded coursework at the 800 level or above.
3. No 500-level courses in Electrical and Computer Engineering may be taken for credit. For coursework beyond the master's degree, no more than 6 credit hours of 500-level courses outside ECE are permitted. For students who bypass the master's degree, no more than 12 credit hours of 500 level courses outside ECE are permitted.
4. Transfer credits are allowed within the conditions specified by the Graduate Handbook.

Graduate Seminar

All on-campus graduate students are required to attend the departmental graduate seminar and will be required to give a seminar presentation on their thesis or report. Their enrollment in the zero credit hour seminar course, ECE 896, is required each semester.

Preliminary Examination

The preliminary examination must be completed at least 7 months before the final oral examination. Once the supervisory committee and the student decide when the examination is to be taken, the student should notify the Graduate School one month before the scheduled date with a completed Preliminary Examination form.

Final Examination

The request for final examination must be filed in accordance with the requirements of the Graduate School.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Electrical and Computer Engineering (MS)

Offered through the Electrical and Computer Engineering department. Please see the ECE website for detailed information regarding admission.

Course Requirements

All options require at least 18 credit hours on the program of study to be at the 700 level or above. The student, with the concurrence of the major advisor and/or the department head, may select one of the options below leading to the MS degree.

At the option of the major advisor, graduate research assistants may be required to select option (1). For the course work option, identified programs of study for the major areas of specialization should be followed when available.

Graduate Handbook

All students are expected to be familiar with the latest version of the graduate handbook. It covers general requirements, the supervisory committee, the program of study, course requirements, probation and dismissal, residence requirements, thesis and reports, and the final examination. Graduate Handbook is available on the Graduate School web page.

Graduate Seminar

All on-campus graduate students are required to attend the departmental graduate seminar and will be required to give a seminar presentation on their thesis or report. Their enrollment in the zero credit hour seminar course, ECE 896, is required each semester.

Graduate Committee/Program of Study

During the first semester of graduate study the student will choose a major advisor, and then in conjunction with the major advisor, select a graduate committee and develop a tentative plan of study for a graduate program in the ECE Department. The program of study must be completed and forwarded to the Graduate School by the end of the second semester of enrollment.

Required Courses

Two Courses are required from the following list:

- ECE 830 - Advanced Systems Theory **Credits: 3**
- ECE 840 - Computer Engineering Methods for Analysis, Simulation, and Design **Credits: 3**
- ECE 841 - Network Theory **Credits: 3**
- ECE 861 - Applied Probability Theory & Random Processes **Credits: 3**

Thesis Option Courses

6 credit hours of thesis research, ECE 899.

- **ECE 899 - Master's Thesis Credits: 1-18**

For the Thesis Option, exclusive of thesis research, at least 15 hours must be taken in Electrical and Computer Engineering. The remaining graduate courses should be prudently selected by the student in consultation with the student's supervisory committee. A poster that meets department guidelines will also be required.

Report Option Courses

2 credit hours of report research, ECE 898.

- **ECE 898 - Master's Report Credits: 1-18**

For the Report Option, exclusive of report research, at least 15 hours must be taken in Electrical and Computer Engineering. The remaining graduate courses should be prudently selected by the student in consultation with the student's supervisory committee.

Coursework Only Option Courses

A minimum of 12 additional hours of graduate level ECE courses are required for all students including 6 hours of laboratory courses. Students entering from an ABET accredited program may have this requirement waived. The remaining 12 hours may be selected from ECE graduate courses or other supporting areas as determined by the student's supervisory committee.

The coursework only option for this program does not require a culminating experience.

Final Examination

The request for final examination must be filed in accordance with the requirements of the Graduate School.

Total Hours Required for Master's: 30

Industrial and Manufacturing Systems Engineering

Bradley A. Kramer, Head

Jessica L. Heier Stamm, Director of graduate studies

2061 Rathbone Hall

Academic programs

The department consists of 10 graduate faculty members and more than 50 graduate students. The department performs research in manufacturing systems, operations research and human factors (ergonomics). From previous data over 80% of on-campus Ph.D. students receive assistantships.

The Department of Industrial and Manufacturing Systems Engineering offers the following degrees/options at the graduate level:

- Accelerated B.S./M.S. in Industrial Engineering (BS/MSIE)
- M.S. in Industrial Engineering (MSIE)
- M.S. in Operations Research (MSOR)
- Master of Engineering Management (MEM)
- Ph.D. in Industrial Engineering (PhDIE)

Students that complete a master's degree are able to:

- Solve advanced engineering problems using discipline appropriate math, science, computation and analysis skill
- Synthesize and evaluate information
- Demonstrate advanced knowledge in area of specialization
- Recognize and apply state of the art techniques in the field
- Communicate effectively in both written and oral forms

Besides the above skills, students who complete a Ph.D. can also

- Plan and conduct scholarly activities that make original contributions to the knowledge base in the field of study.

The BS/MSIE degree is only open to students that are currently pursuing a BSIE at KSU. Since there is some overlap between undergraduate and graduate study, some graduate courses will satisfy the degree requirements for the undergraduate degree. A maximum of 9 credit hours from the M.S.I.E. degree can be counted toward the B.S.I.E. degree.

The MSIE program can be completed with either a thesis or coursework only option. Both options require the completion of 30 graduate credit hours. The MSIE degree is offered to on-campus and online students.

The MSOR program can be completed with either a thesis or coursework only option. Both options require the completion of 30 graduate credit hours. The MSOR degree is offered to on-campus and to online students.

The MEM degree is a course-work only program that is designed for working professionals. This program requires the completion of 30 graduate credit hours. The degree is offered to online students.

The PhDIE degree requires either 60 hours of graduate credit beyond the M.S. degree or 90 graduate credit hours without an M.S. degree. 9 out of 30 credit hours after M.S. degree will be restricted to pre-specified IMSE courses. A significant original research project documented in the form of an acceptable dissertation is required. The dissertation must be of sufficient quality and importance to merit publication in a refereed journal.

Research emphases

Research in the Department of Industrial and Manufacturing Systems Engineering is conducted in five primary areas.

Ergonomics

Improve how humans work with machines and each other. Develop safe and productive work environments.

Manufacturing systems

Design and improve manufacturing systems with respect to product quality and system productivity.

Operations research

Expand the methodologies available for solving decision problems in engineering, economics, business and social systems. Incorporates applied mathematics and computer technologies into solution methods.

Quality engineering

Control manufacturing cost through manufacturing process improvement. Diagnose quality problems to improve product quality.

Uncertainty representation and reasoning

Improve engineering decision making, which is based on many uncertainties and approximations.

Major research facilities and equipment

The department of engineering has well-equipped laboratories supporting some of its research activities. Additional research is conducted in the field using industrial facilities.

The ergonomics laboratory contains measurement apparatus for assessing stress levels imposed on human workers by various job designs and work environments.

The manufacturing processes laboratory consists of a wide range of manufacturing process equipment that can support research involving basic manufacturing processes. The laboratory includes numerous lathes and milling machines, a foundry with gas-fired and electric induction furnaces, molten salt heat treat facility, gas-flame metal cutting and joining processes, various welding processes, and material properties measurement equipment.

The cyber manufacturing laboratory is a modern, well-equipped computer controlled manufacturing system. Equipment includes 3D printers, computer numerically controlled (CNC) machining centers, robots, programmable logic controllers, a programmable conveyor, and computer workstations for computer aided manufacturing.

The departmental computing laboratories are modern and well equipped. IMSE students have access to these labs 24 hours a day.

Financial support

Financial support for teaching and research assistants is available. Awards are made on a competitive basis. The awarding of financial assistance is separate and distinct from admission to the graduate program. Many students choose to enroll without financial assistance to pursue the various graduate degrees and options in industrial and manufacturing systems engineering.

Accelerated

Accelerated Industrial Engineering (BS)/Industrial Engineering (MS)

The accelerated Accelerated Industrial Engineering (BS)/Industrial Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Industrial Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.

- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

Since there is some overlap between undergraduate and graduate study, some graduate courses will satisfy the degree requirements for the undergraduate degree. A maximum of 9 credit hours from the M.S.I.E. degree can be counted toward the B.S.I.E. degree. Some additional conditions are:

The student must complete all B.S.I.E. undergraduate requirements with the exception that up to 9 credit hours of IMSE 600/700 level classes taken for graduate credit can also count toward undergraduate degree requirements. The student must complete all M.S.I.E. requirements as specified in the Graduate Catalog.

Once an individual is admitted to the accelerated B.S./M.S.I.E. degree program, the student should consult the graduate handbook for policies and procedures for graduate degrees, which include: supervisory committee, final examination, thesis defense, etc. The student's supervisory committee must approve the program of study, which is that student's graduation requirements.

In the event that a student begins this program, but does not choose to finish it, he/she may change up to 9 credit hours of the graduate classes they may have earned to completed the program to undergraduate credit to complete the requirements for the B.S.I.E. degree.

Additional Procedures: For at least one year, the student must be enrolled in IMSE 892 - Graduate Seminar. Each semester a student in this program must enroll in either:

IMSE 892 - Graduate Seminar
or
IMSE 015 - Engineering Assembly

For more information about Program Format and Minimum Requirements (effective Fall 2008).

Course Requirements

Industrial Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- IMSE 641 - Quality Engineering **Credits: 3**
- IMSE 643 - Industrial Simulation **Credits: 3**
- IMSE 685 - Principles of Manufacturing Information Systems **Credits: 3**
- IMSE 710 - Transportation Logistics **Credits: 3**
- IMSE 780 - Methods of Operations Research **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Industrial Engineering (PHD)

Industrial Engineering (PhD)

Admission Requirements

Graduation Requirements

Additional graded courses must be courses that are awarded a letter grade.

Additional credit hours can be graded courses or taken for credit/no credit such as Ph.D. research.

If the Graduate School approves less than 30 hours of credit for a MS, then the remainder of the 30 hours (up to a maximum of 24 hours) must be taken as additional graded courses. These additional hours must be graded courses.

*A student may satisfy a core course requirement by passing an examination. In such a situation, the student may take an additional 3 hours of graduate graded courses in place of a core course.

Actual degree requirements will be summarized on approved Program of Study.

Credits from MS degree other than industrial engineering are determined on a case-by-case basis. If a student receives a 'C' or worse in any core courses, then he/she must retake the course until a satisfactory grade is obtained.

Each semester a student must enroll in IMSE 892 Graduate Seminar (0 credit hours).

The student must have at least 15 hours of 800 or above graded courses and no more than 6 credits may be at the 500 level.

Continuous enrollment required.

Course Requirements (90 credit hours)

With an MS Degree

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Select One Course from 5 of 6 of the Following Core Areas (15 credit hours):

Optimization

- IMSE 780 - Methods of Operations Research Credits: 3
OR
- IMSE 881 - Linear Programming Credits: 3
OR
- IMSE 882 - Network Flows and Graph Theory Credits: 3

Stoch. Proc.

- IMSE 865 - Simulation of Industrial Management Systems Credits: 3
OR
- IMSE 866 - Applied Stochastic Processes Credits: 3
OR
- IMSE 971 - Industrial Queuing Processes Credits: 3

Statistics

- IMSE 841 - Advanced Topics in Quality Engineering Credits: 3
OR
- STAT 713 - Applied Linear Statistical Models Credits: 3
OR
- STAT 720 - Design of Experiments Credits: 3
OR
- STAT 722 - Experimental Design for Product Development and Quality Improvement Credits: 3

Prod. and Inv.

- IMSE 811 - Advanced Production and Inventory Control Credits: 3

Ergo. and Dec. The.

- IMSE 751 - Normative Theory of Decisions and Games Credits: 3
OR
- IMSE 822 - Advanced Engineering Economy Credits: 3
OR
- IMSE 850 - Ergonomics (Human Factors) Engineering Credits: 3

Manufacturing

- IMSE 825 - Tribology in Manufacturing Credits: 3
OR
- IMSE 868 - Manufacturing Processes for Semiconductor Materials and Devices Credits: 3

Maximum Credit for MS (30 credit hours)

Additional Credit Hours (15 credit hours)

Ph.D. Research (30 credit hours)

Without a MS Degree

Select One Course from 5 of 6 of the Following Core Areas* (15 credit hours):

Optimization

- IMSE 780 - Methods of Operations Research **Credits: 3**
OR
- IMSE 881 - Linear Programming **Credits: 3**
OR
- IMSE 882 - Network Flows and Graph Theory **Credits: 3**

Stoch. Proc.

- IMSE 865 - Simulation of Industrial Management Systems **Credits: 3**
OR
- IMSE 866 - Applied Stochastic Processes **Credits: 3**
OR
- IMSE 971 - Industrial Queuing Processes **Credits: 3**

Statistics

- IMSE 841 - Advanced Topics in Quality Engineering **Credits: 3**
OR
- STAT 713 - Applied Linear Statistical Models **Credits: 3**
OR
- STAT 720 - Design of Experiments **Credits: 3**
OR
- STAT 722 - Experimental Design for Product Development and Quality Improvement **Credits: 3**

Prod. and Inv.

- IMSE 811 - Advanced Production and Inventory Control **Credits: 3**

Ergo. and Dec. The.

- IMSE 751 - Normative Theory of Decisions and Games **Credits: 3**
OR
- IMSE 822 - Advanced Engineering Economy **Credits: 3**
OR
- IMSE 850 - Ergonomics (Human Factors) Engineering **Credits: 3**

Manufacturing

- IMSE 825 - Tribology in Manufacturing **Credits: 3**
OR
- IMSE 868 - Manufacturing Processes for Semiconductor Materials and Devices **Credits: 3**

Additional Graded Courses (24 credit hours)

Additional Credit Hours (21 credit hours)

Ph.D. Research (30 credit hours)

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Engineering Management

Master of Engineering Management (MEM)

Career advancement in the field of engineering often requires more than just exemplary technical skills. Employees need advanced training in topics such as project management, resource allocation and quantitative problem-solving. The online Master of Engineering Management teaches you management skills designed specifically for engineers. You will gain the economic, technical and human resource perspectives used to inform the technical managerial decisions you will face in your career.

Designed for working professionals, this online master's degree is offered 100% online.

[Click here to view the Industrial and Manufacturing Systems Engineering graduate page.](#)

Admission Requirements

To pursue the MEM degree, the student must meet the KSU Graduate School admissions requirements, have a B.S. degree in engineering, mathematics, or physical science, and have taken at least one course each in calculus and statistics. Students must have at least three years of full-time industrial (work) experience by the time they complete the program.

Master of Engineering Management is an online program only. This program is designed to be a part-time program and typically requires 2 to 4 years to complete.

Students not meeting the above requirements may be considered if they can demonstrate equivalent evidence of an appropriate background. Contact the Department of Industrial and Manufacturing Systems Engineering to discuss.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses (15 hours)

Select any 5 of the 6.

- IMSE 605 - Advanced Industrial Management Credits: 3

- IMSE 680 - Quantitative Problem Solving Techniques **Credits: 3**
- IMSE 710 - Transportation Logistics **Credits: 3**
- IMSE 806 - Engineering Project Management **Credits: 3**
- IMSE 811 - Advanced Production and Inventory Control **Credits: 3**
- IMSE 822 - Advanced Engineering Economy **Credits: 3**

Electives Courses (15 hours)

Electives are any course not utilized as a core course on the program of study. These may be from IMSE or other departments. For example, courses in psychology, business, and other engineering disciplines may broaden and enhance engineering management skills.

Guidelines and Additional Requirements

* Actual degree requirements will be summarized on an approved plan of study. Some general guidelines include:

- At most 6 hours can be transferred from another school, unless prior approval is given
- No more than 6 hours can be taken from an outside department without prior permission
- Courses in the IMSE department must be above the 600 level
- Courses outside the department must be above the 500 level
- No more than 6 hours can be taken at the 500 level

** Students on-campus are required to enroll in the graduate seminar each semester

** Besides the above academic requirements, a graduating student must have at least 3 years of full-time work experience.

Total Hours Required for Master's: 30

Master of Science

Industrial Engineering (MS)

Industrial engineers use mathematical, scientific, and analytics skills to solve complex business problems in a number of industries. The industrial engineering master's degree program is offered either in-person or online, and there are coursework-only and thesis options.

[Click here to view the Industrial and Manufacturing Systems Engineering graduate page.](#)

Admission Requirements

To pursue the Industrial Engineering M.S. through the Industrial and Manufacturing Systems Engineering graduate program, students must meet the KSU Graduate School admissions requirements, hold a B.S. degree in engineering, mathematics, or physical science and be versed in several of the basic areas of industrial engineering. Non-industrial engineering undergraduates may require 6 semester credit hours of prerequisite courses. GRE scores are required for all students who apply, unless they will have completed an undergraduate degree from an ABET-accredited program.

An entering M.S.I.E. student is expected to have proficiency in computer programming, linear programming and statistics. Students failing to meet these expectations may be required to take some prerequisite courses.

Course Requirements

- Actual degree requirements will be summarized on an approved plan of study. Some general guidelines include:
 - At least 60 percent of classes must be above the 700 level
 - No more than 6 credit hours can be taken outside the IMSE department without prior permission
 - Courses in the IMSE department must be above the 600 level
 - Courses outside the department must be above the 500 level
 - No more than 6 hours can be taken at the 500 level.

****Students on-campus are required to enroll in the graduate seminar each semester**

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

Students are required to take 9-12 hours of core courses. To graduate, a student may receive at most one C in all of the core courses (no D's or F's are allowed). This may require some students to retake core courses.

Option 1 (9 credit hours):

- IMSE 641 - Quality Engineering **Credits: 3**
- IMSE 780 - Methods of Operations Research **Credits: 3**
- IMSE 811 - Advanced Production and Inventory Control **Credits: 3**

Option 2 (12 credit hours):

- IMSE 641 - Quality Engineering **Credits: 3**
- IMSE 811 - Advanced Production and Inventory Control **Credits: 3**
Two of the following courses totaling 6 credit hours:
 - IMSE 710 - Transportation Logistics **Credits: 3**
 - IMSE 751 - Normative Theory of Decisions and Games **Credits: 3**
 - IMSE 752 - Multiple Criteria Decision Analysis **Credits: 3**
 - IMSE 760 - Stochastic Calculus Financial Engineering **Credits: 3**
 - IMSE 810 - Industrial Logistics Engineering **Credits: 3**
 - IMSE 830 - Applied Fuzzy Set Theory **Credits: 3**
 - IMSE 842 - Reliability Theory **Credits: 3**
 - IMSE 865 - Simulation of Industrial Management Systems **Credits: 3**
 - IMSE 866 - Applied Stochastic Processes **Credits: 3**
 - IMSE 881 - Linear Programming **Credits: 3**
 - IMSE 882 - Network Flows and Graph Theory **Credits: 3**
 - IMSE 884 - Integer Programming and Combinatorial Optimization **Credits: 3**
 - IMSE 971 - Industrial Queuing Processes **Credits: 3**
 - IMSE 976 - Scheduling Theory **Credits: 3**
 - IMSE 982 - Nonlinear Programming **Credits: 3**
 - IMSE 991 - Advanced Topics in Decision Theory **Credits: 3**

Elective Courses

- Thesis option: 15 credit hours if Required Courses Option 1; 12 credit hours if Option 2
- Coursework only option: 21 credit hours if Required Courses Option 1; 18 credit hours if Option 2

Thesis Option Courses

- IMSE 899 - Master's Thesis **Credits: 1-18** (6 credit hours)

Total Hours Required for Master's: 30

Operations Research (MS)

Operations research is the discipline focused on using data to make better decisions through the application of descriptive, predictive, and prescriptive analytics tools. The operations research master's degree program is designed to prepare students for impactful roles in every sector. The degree is offered either in-person or online, and there are coursework-only and thesis options.

[Click here to view the Industrial and Manufacturing Systems Engineering graduate page.](#)

Admission Requirements

To pursue the Operations Research M.S. through the Industrial and Manufacturing Systems Engineering graduate program, students must meet the KSU Graduate School admissions requirements, have a baccalaureate degree, and have a strong background in applied mathematics including calculus and linear algebra. The student must also have completed 3 semester credits each in introductory statistics (equivalent to K-State's STAT 510) and introductory operations research (equivalent to K-State's IMSE 560 or IMSE 680)*, and have knowledge of computer programming (equivalent to K-State's CIS 200 or CIS 209). Otherwise, appropriate remedial courses will be required. GRE scores are required for all students who apply, unless they will have completed an undergraduate degree from an ABET-accredited program.

*If an entering student has not taken an introductory operations research course, the student should enroll in IMSE 680 - Quantitative Problem Solving Techniques, to gain this knowledge.

Course Requirements

	Thesis	Course Work
Operations Research Core Courses	9	9
Additional Operations Research Courses	3	6
Electives	12	15
Thesis	6	0
IE Seminar	0	0
TOTAL GRADUATE CREDITS	30	30

Required Courses

Continuous Optimization: 1 course required

- IMSE 881 - Linear Programming **Credits: 3**
OR
- IMSE 982 - Nonlinear Programming **Credits: 3**

Discrete Optimization: 1 course required

- IMSE 882 - Network Flows and Graph Theory **Credits: 3**
OR
- IMSE 884 - Integer Programming and Combinatorial Optimization **Credits: 3**

Stochastic Processes: 1 course required

- IMSE 842 - Reliability Theory **Credits: 3**
OR
- IMSE 865 - Simulation of Industrial Management Systems **Credits: 3**
OR
- IMSE 866 - Applied Stochastic Processes **Credits: 3**

Additional Required Courses

Thesis option: 3 credit hours

Coursework only option: 6 credit hours

- IMSE 643 - Industrial Simulation **Credits: 3**
- IMSE 751 - Normative Theory of Decisions and Games **Credits: 3**
- IMSE 752 - Multiple Criteria Decision Analysis **Credits: 3**
- IMSE 780 - Methods of Operations Research **Credits: 3**
- IMSE 830 - Applied Fuzzy Set Theory **Credits: 3**
- IMSE 976 - Scheduling Theory **Credits: 3**
- IMSE 990 - Advanced Topics in Operations Research **Credits: 1-6**
- IMSE 710 - Transportation Logistics **Credits: 3**
- IMSE 810 - Industrial Logistics Engineering **Credits: 3**
- IMSE 991 - Advanced Topics in Decision Theory **Credits: 3**

Elective Courses

Thesis option: 12 credit hours

Coursework only option: 15 credit hours

Thesis Option Courses

6 credit hours

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Notes:

Actual degree requirements will be summarized on an approved plan of study. Some general guidelines include:

- At least 60 percent of classes must be above 700 level.
- No more than 6 hours can be taken from outside the department without prior permission.
- Courses in IMSE the department must be above the 600 level.
- Courses outside the department must be above the 500 level.
- No more than 6 hours can be taken at the 500 level.
- No course can count as both a core course and an additional operations research course.
- Students on-campus are required to enroll in the graduate seminar each semester.

Total Hours Required for Master's: 30

Mechanical and Nuclear Engineering

Alan Levin Department of Mechanical and Nuclear Engineering

Steve Eckels, Head

Mingjun Wei, Director of graduate studies

785-532-5610

Fax: 532-7057

grad@mne.ksu.edu

<http://www.mne.ksu.edu/graduate>

The department

The Mechanical and Nuclear Engineering Department at Kansas State University offers separate graduate programs in Mechanical Engineering and Nuclear Engineering both leading to M.S. and Ph.D. degrees. Our award-winning faculty are engaged in exciting and cutting-edge research projects in state of the art laboratories and research facilities, while our graduate students are excelling inside and outside of the classroom. Research areas and courses include a broad range of both traditional and emerging fields of Mechanical Engineering and Nuclear Engineering. With over \$5 million in research funding, almost all graduate students in our department receive graduate research assistantships (GRA). Several of our students receive graduate teaching assistantships (GTA) with 50-100 percent tuition waiver to help teach laboratory sections.

Applicants must have a bachelor's degree from an accredited institution. Although students with bachelor's degrees in Mechanical and/or Nuclear Engineering make up the bulk of our graduate student body, the department welcomes applicants from other fields including other engineering disciplines, mathematics, physics and chemistry. International applicants should also include GRE and TOEFL scores. GRE scores should be no less than 400 verbal (146 revised version), 650 quantitative (151 revised version), and 3.0 on analytical writing. TOEFL scores must be above 600 on the written exam or 250 on the computer exam. The IELTS may substitute for the TOEFL. IELTS scores are valid for two years and should be no less than 7.0.

Programs of study are flexible and tailored to the interests, backgrounds and career goals of each student. Courses from outside the department are often added to programs of study to enhance the student's experience. To see when MNE Graduate courses are offered, please view the MNE Graduate Course Rotation Schedule.

Degree options

Prospective students may apply for a graduate degree in either Mechanical Engineering or Nuclear Engineering. We offer the following degrees:

Mechanical Engineering	Nuclear Engineering
Master of Science Degree - The department offers three degree options at the master's level:	Master of Science Degree - The department offers three degree options at the master's level:
Master of Science Degree - Thesis option	Master of Science Degree - Thesis option
Master of Science Degree - Report option	Master of Science Degree - Report option
Master of Science Degree - Coursework option (on-campus and distance)	Master of Science Degree - Coursework option
Doctor of Philosophy Degree	Doctor of Philosophy Degree

Research facilities

In addition to a first-rate curriculum of graduate courses, cutting-edge graduate research projects are supported by state-of-the-art labs and research facilities. Labs and research centers associated with K-State's Mechanical and Nuclear Engineering Department include:

Laboratory facilities

- Applied Computation Laboratory
- Autonomous Vehicle Systems Laboratory
- Composites Laboratory
- Dynamic Systems and Controls Laboratory
- Heat Transfer Laboratory
- Internal Combustion Engines Laboratory
- Laser Diagnostics Laboratory
- Measurements and Instruments Laboratory
- Mechanical Testing and Evaluation Laboratory
- Neutron Activation Analysis Laboratory
- Nonlinear Controls Laboratory
- Radiation Detection Instructional Laboratory
- Radiation Measurement Applications Laboratory
- Refrigeration Laboratory
- Semiconductor Materials Analysis Laboratory

- Tate Neutron Activation Analysis Laboratory
- Wind Tunnel/Fluid Mechanics Laboratory

Research centers

- Environmental Air Quality Program
- Institute for Environmental Research
- National Gas Machinery Laboratory
- Semiconductor Materials and Radiological Technologies Laboratory (S.M.A.R.T.)
- Triga Mark II Nuclear Reactor Facility

Accelerated

Accelerated Mechanical Engineering (BS) / Master of Business Administration (MBA)

The accelerated Accelerated Mechanical Engineering (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- A student must meet with a graduate advisor in the College of Business before beginning the accelerated program.
- To meet prerequisites for MBA courses, the student's Social and Behavioral Science Electives in the Mechanical Engineering (BS) curriculum must be: ECON 110 Principles of Macroeconomics and ECON 120 Principles of Microeconomics.
- The MBA course ECON 815 Economic Analysis for Business will replace IMSE 530 Engineering Economic Analysis in the Mechanical Engineering (BS) curriculum.
- The graded MBA coursework must include: MANGT 710, MANGT 720, MIS 830, MANGT 860, MANGT 880, ACCTG 710, MKTG 705, FINAN 715, 6 credit hours from within the students chosen MBA Concentration Area, and GENBA 890 Business Capstone.

Course Requirements

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ACCTG 710 - Foundations of Accounting **Credits: 3**
- ECON 630 - Introduction to Econometrics **Credits: 3**
- MANGT 710 - Operations and Supply Chain Management **Credits: 3**
- MKTG 705 - Marketing Concepts and Research **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Mechanical Engineering (BS)/Mechanical Engineering (MS)

The accelerated Accelerated Mechanical Engineering (BS)/Mechanical Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Mechanical Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- A student must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- All graduate courses must be C or better.

- A student must submit a program of study that lists the courses required to meet the master's degree requirements. The program of study must be approved by the student's supervisory committee and be submitted to the graduate school before the end of their second semester of graduate study.
- For the MSME, at least 18 hours, of the required minimum of 30 hours, must be at the 700 level and above.
- Once a student applies for this program, they must be continuously enrolled to complete this program. If a student is not enrolled for a fall or spring semester, this student loses the ability to count graduate credit hours toward their undergraduate degree.
- The graded coursework must include at least one 3 credit hour course in engineering mathematics or applied mathematical analysis. Courses that may be used to meet this requirement are: ME 760, ME 860, MATH 632, MATH 713, MATH 740, MATH 745, MATH 855, MATH 856, MATH 864, MATH 865, PHYS 801, PHYS 802.
- The MS candidate must satisfy the 75% attendance requirement (0 credit hour) in at least two semesters of ME 800 Graduate Seminar/Research Paper (refer to ME 800 course requirements).

Course Requirements

Mechanical Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ME 610 - Finite Element Applications in Mechanical Engineering **Credits: 3**
- ME 615 - Applications in Mechatronics **Credits: 3**
- ME 620 - Internal Combustion Engines **Credits: 3**
- ME 656 - Mechanical Vibrations **Credits: 3**
- ME 720 - Intermediate Fluid Mechanics **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Mechanical Engineering (BS)/Nuclear Engineering (MS)

The accelerated Accelerated Mechanical Engineering (BS)/Nuclear Engineering (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Nuclear Engineering degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- A student must complete 30 graduate credit hours with a graduate GPA of at least 3.0.
- All graduate courses must be C or better.
- A student must submit a program of study that lists the courses required to meet the master's degree requirements. The program of study must be approved by the student's supervisory committee and be submitted to the graduate school before the end of their second semester of graduate study.
- For the MSNE, at least 18 hours, of the required minimum of 30 hours, must be at the 700 level and above.
- Once a student applies for this program, they must be continuously enrolled to complete this program. If a student is not enrolled for a fall or spring semester, this student loses the ability to count graduate credit hours toward their undergraduate degree.
- The graded coursework must include at least one 3 credit hour course in engineering mathematics or applied mathematical analysis. Courses that may be used to meet this requirement are: ME 760, ME 860, MATH 632, MATH 713, MATH 740, MATH 745, MATH 855, MATH 856, MATH 864, MATH 865, MATH 866, MATH 867, PHYS 801, PHYS 802.
- A student obtaining the MSNE degree must take the following core courses: NE 612, NE 630, NE 690.
- The MS candidate must satisfy the 75% attendance requirement (0 credit hour) in at least two semesters of ME 800 Graduate Seminar/Research Paper (refer to ME 800 course requirements).

Course Requirements

Nuclear Engineering (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- ME 701 - Development of Computer Applications In Mechanical Engineering **Credits: 3**
- ME 760 - Engineering Analysis I **Credits: 3**
- NE 612 - Principles of Radiation Detection **Credits: 3**
- NE 630 - Nuclear Reactor Theory **Credits: 3**
- NE 690 - Radiation Protection and Shielding **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Mechanical Engineering (PHD)

Mechanical Engineering (PhD)

Admission Requirements

The Ph.D. requires at least three years of full-time study beyond the bachelor's degree, equivalent to at least 90 semester hours, including a dissertation representing at least 30 hours of research credit. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

The Ph.D. is awarded to candidates who have demonstrated unique ability as scholars and researchers as well as proficiency in communication. The degree also certifies that the candidate has displayed familiarity and understanding of the subject matter in the discipline and possesses the ability to make original contributions to knowledge.

Course Requirements

The Doctoral Program of Study must include:

a) a minimum of 15 hours of graded coursework beyond the Master's degree (all 15 hours MUST be at the 800 level or above, in addition to doctoral research credit hours) for candidates entering the Ph.D. program with a Master's degree.

OR

a minimum of 30 hours of graded coursework beyond the Bachelor's degree (including at least 15 hours at the 800 level or above, in addition to doctoral research credit hours) for students who bypass the master's degree.

b) no more than 12 credit hours of 500 level courses are permitted in a doctoral program. No 500-level course taken in the student's department may appear in the program of study.

c) a minimum of 30 hours of doctoral research credit (ME 999). A student may substitute ME 999 for NE 999 with permission of the supervisory committee.

d) the PhD candidate must satisfy the 75% attendance requirement (o credit hour) in at least four semesters of ME 800 Graduate Seminar/Research Paper. (refer to ME 800 course requirements)

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Nuclear Engineering (PHD)

Admission Requirements

The Ph.D. requires at least three years of full-time study beyond the bachelor's degree, equivalent to at least 90 semester hours, including a dissertation representing at least 30 hours of research credit. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

The Ph.D. is awarded to candidates who have demonstrated unique ability as scholars and researchers as well as proficiency in communication. The degree also certifies that the candidate has displayed familiarity and understanding of the subject matter in the discipline and possesses the ability to make original contributions to knowledge.

Degree Requirements

The Doctoral Program of Study must include:

a) a minimum of 15 hours of graded coursework beyond the Master's degree (all 15 hours MUST be at the 800 level or above, in addition to doctoral research credit hours) for candidates entering the Ph.D. program with a Master's degree.

OR

a minimum of 30 hours of graded coursework beyond the bachelor's degree (including at least 15 hours at the 800 level or above, in addition to doctoral research credit hours) for students who bypass the master's degree.

b) no more than 12 credit hours of 500 level courses are permitted in a doctoral program. No 500-level course taken in the student's department may appear in the program of study.

c) a minimum of 30 hours of doctoral research credit (NE 999). A student may substitute NE 999 for ME 999 with permission of the supervisory committee.

d) the PhD candidate must satisfy the 75% attendance requirement (o credit hour) in at least four semesters of ME 800 Graduate Seminar/Research Paper. (refer to ME 800 course requirements)

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Complex Fluid Flows Graduate Certificate

Contact: Mingjun Wei
E-mail: grad@mne.ksu.edu

The Department of Mechanical and Nuclear Engineering offers a graduate certificate in complex fluid flows for students in other disciplines. The intent of this certificate is to conduct research and train graduate students in the general area of modern fluid dynamics. Given the highly complex and difficult problems encountered in this area, this program strives to blend three important branches of research: fundamental physics, experimental verification, and computational fluid dynamics.

Since more and more employment opportunities at the graduate level require interdisciplinary training, the certificate program in complex fluid flows serves to make our graduate students attractive to future employers in industry and academia. Through the interdisciplinary graduate courses, seminars, and innovative research in complex fluid flows, students receive a much broader exposure to all facets of complex fluid flow research than they could receive within a single department.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

General Requirements:

1. Student must complete their MS or Ph.D. degree requirements in Chemical Engineering, Mechanical Engineering, and Nuclear Engineering, or Physics.
2. Complete three semesters of CFF Seminar: PHYS 708 or CHE 708 (one credit hour). The CFF bi-weekly seminar series has brought distinguished speakers from various national and international organizations to the KSU campus.

New Core

Course Options:

3. Complete at least three (MS students) or five (Ph.D. students) of the courses below:
 - CHE 862 - Advanced Transport Phenomena I **Credits: 3**
 - CHE 867 - Advanced Transport Phenomena II **Credits: 3**
 - CHE 910 - Selected Topics in Transport Phenomena **Credits: 3**
 - ME 720 - Intermediate Fluid Mechanics **Credits: 3**
 - ME 831 - Boundary Layer Theory **Credits: 3**
 - PHYS 651 - Introduction to Optics **Credits: 4**
 - PHYS 652 - Applied Optics and Optical Measurement **Credits: 3**

Non-technical course

4. Complete the following non-technical course (2 credit hours):
 - LEAD 212 - Introduction to Leadership Concepts **Credits: 2-3**

Total Hours Required for Graduate Certificate: 11-18

Master of Science

Mechanical Engineering (MS)

The department offers Master of Science degrees in both **mechanical engineering** and **nuclear engineering**. The programs are designed to prepare students for advanced positions in industry, consulting and government, as well as for further graduate studies toward a doctorate degree.

Course Requirements

The department offers three degree options at the master's level:

Thesis Option Courses

The Program of Study should include a minimum of 30 credit hours, with the following additional requirements:

Required Courses

1. The candidate should earn credit for at least 6 credit hours of Master's Thesis Research (ME 899) culminating in a successfully defended thesis. A student may substitute ME 899 for NE 899 with permission of the supervisory committee.
2. At least 18 hours, of the required minimum of 30 hours, should be at the 700 level and above, including ME 800 Graduate Seminar/Research Paper, and the thesis/research and the report/problems hours required by the thesis and report options.
3. The MS candidate must satisfy the 75% attendance requirement for on-campus students in at least two semesters of ME 800 (0 credit hours). Graduate Seminar/Research Paper. Refer to ME 800 course requirements.
4. Courses at the 600-level may be included in the Program of Study, but 500-level courses in the student's major area are expected to have been completed as undergraduate prerequisites to graduate study or as undergraduate deficiency courses assigned upon admission. The use of 500-level supporting courses in master's programs is therefore restricted as follows:
 - (a) No course in the student's major area may be at the 500 level and
 - (b) normally no more than 6 credit hours may be at the 500 level
5. A minimum of 18 credit hours of graded coursework (i.e., courses in which a letter grade is assigned)
6. The graded coursework should include at least one 3 credit hour course in engineering mathematics or applied mathematical analysis. Courses that may be used to meet this requirement are:
 - MATH 632 - Elementary Partial Differential Equations **Credits: 3**
 - MATH 713 - Advanced Applied Matrix Theory **Credits: 3**
 - MATH 740 - Calculus of Variation **Credits: 3**
 - MATH 745 - Ordinary Differential Equations **Credits: 3**
 - MATH 855 - Methods of Applied Mathematics I **Credits: 3**
 - MATH 856 - Methods of Applied Mathematics II **Credits: 3**
 - MATH 864 - Theory of Ordinary Differential Equations I **Credits: 3**
 - MATH 865 - Theory of Ordinary Differential Equations II **Credits: 3**
 - ME 760 - Engineering Analysis I **Credits: 3**
 - ME 860 - Engineering Analysis II **Credits: 3**
 - PHYS 801 - Mathematical Methods of Physics **Credits: 3**
 - PHYS 802 - Computational Methods in Physics **Credits: 4**

Options for Completing 30 Credit Hour Requirement

In addition to the minimum graded coursework requirement (18 credit hours) and the minimum Master's Thesis Research requirement (6 credit hours), the candidate must complete 6 more credit hours to meet the minimum credit requirement of 30 credit hours. This can be done through any combination of the following:

- Up to 2 additional credit hours of Master's Thesis Research (ME 899 or NE 899)
- Up to 3 credit hours of ME 800 Seminar/Research Paper (refer to ME 800 course requirements)
- Up to 3 credit hours of independent study

- Up to 6 credit hours of additional coursework

Report Option Courses

- The Program of Study should include a minimum of 30 credit hours, including 28 credit hours of graded coursework and 2 credit hours of Master's Report. One credit hour of ME800 Seminar/Research Paper (earned by giving a successful seminar presentation) may be included in the 28 credit hours of required coursework.
- In addition, items (2), (3), (4), and (6) from the MS Thesis requirements above apply directly to the MS Report Option Program of Study.
- The MS Report Option must culminate in a successfully defended report.

Coursework Only Option Courses

- The Program of Study should include a total of 30 credit hours of graded coursework.
- Items (2), (4), and (6) from the MS Thesis requirements above apply directly to the MS Course Work Option Program of Study.

The coursework only option for this program does not require a culminating experience.

Note

Students on self-support can choose whatever option they want. Students supported by research projects or the Department should take the thesis option.

Total Hours Required for Master's: 30

Nuclear Engineering (MS)

The department offers Master of Science degrees in both **mechanical engineering** and **nuclear engineering**. The programs are designed to prepare students for advanced positions in industry, consulting and government, as well as for further graduate studies toward a doctorate degree.

Course Requirements

The department offers three degree options at the master's level.

Thesis Option Courses

The Program of Study should include a minimum of 30 credit hours, with the following additional requirements:

Required Courses

1. The candidate should earn credit for at least 6 credit hours of Master's Thesis Research (NE 899) culminating in a successfully defended thesis. A student may substitute NE 899 for ME 899 with permission of the supervisory committee.
2. At least 18 hours, of the required minimum of 30 hours, should be at the 700 level and above, including ME 800 Graduate Seminar/Research Paper, and the thesis/research and the report/problems hours required by the thesis and report options.

3. The MS candidate must satisfy the 75% attendance requirement for on-campus students in at least two semesters of ME 800 (0 credit hours). Graduate Seminar/Research Paper. Refer to ME 800 course requirements.
4. Courses at the 600-level may be included in the Program of Study, but 500-level courses in the student's major area are expected to have been completed as undergraduate prerequisites to graduate study or as undergraduate deficiency courses assigned upon admission. The use of 500-level supporting courses in master's programs is therefore restricted as follows:
 - a. No course in the student's major area may be at the 500 level.
 - b. Normally, no more than 6 credit hours may be at the 500 level.
5. A minimum of 18 credit hours of graded coursework (i.e., courses in which a letter grade is assigned)
6. The graded coursework should include at least one 3 credit hour course in engineering mathematics or applied mathematical analysis. Courses that may be used to meet this requirement are:
 - MATH 632 - Elementary Partial Differential Equations **Credits: 3**
 - MATH 713 - Advanced Applied Matrix Theory **Credits: 3**
 - MATH 740 - Calculus of Variation **Credits: 3**
 - MATH 745 - Ordinary Differential Equations **Credits: 3**
 - MATH 855 - Methods of Applied Mathematics I **Credits: 3**
 - MATH 856 - Methods of Applied Mathematics II **Credits: 3**
 - MATH 864 - Theory of Ordinary Differential Equations I **Credits: 3**
 - MATH 865 - Theory of Ordinary Differential Equations II **Credits: 3**
 - ME 760 - Engineering Analysis I **Credits: 3**
 - ME 860 - Engineering Analysis II **Credits: 3**
 - PHYS 801 - Mathematical Methods of Physics **Credits: 3**
 - PHYS 802 - Computational Methods in Physics **Credits: 4**
7. A student obtaining the master's degree must take the following core courses:
 - NE 612 - Principles of Radiation Detection **Credits: 3**
 - NE 620 - Problems in Nuclear Engineering **Credits: 1-18**
 - NE 630 - Nuclear Reactor Theory **Credits: 3**
 - NE 690 - Radiation Protection and Shielding **Credits: 3**

Options for Completing the 30-hour Requirement

In addition to the minimum graded coursework requirement (18 credit hours) and the minimum Master's Thesis Research requirement (6 credit hours), the candidate must complete 6 more credit hours to meet the minimum credit requirement of 30 credit hours. This can be done through any combination of the following:

- Up to 2 additional credit hours of Master's Thesis Research (NE 899)
- Up to 3 credit hours of ME 800 Seminar /Research Paper (refer to ME 800 course requirements)
- Up to 3 credit hours of independent study
- Up to 6 credit hours of additional coursework

Bettis Reactor Engineer School (BRES) graduates who enter the master's program may transfer up to 4 courses (12 credits) toward fulfillment of degree requirements. The department maintains a list of course equivalencies. Naval Nuclear Power School graduates may be awarded transfer credits for Introduction to Nuclear Engineering (NE 620). Applicants with an undergraduate degree in NE may have this requirement waived.

Report Option Courses

- The Program of Study should include a minimum of 30 credit hours, including 28 credit hours of graded coursework and 2 credit hours of Master's Report. One credit hour of ME800 Seminar /Research Paper (earned by giving a successful seminar presentation) may be included in the 28 credit hours of required coursework.

- In addition, items (2), (3), (4), and (6) from the MS Thesis requirements above apply directly to the MS Report Option Program of Study.
- The MS Report Option must culminate in a successfully defended report.

Coursework Only Option Courses

- The Program of Study should include a total of 30 credit hours of graded coursework.
- Items (2), (4), and (6) from the MS Thesis requirements above apply directly to the MS Course Work Option Program of Study.

The coursework only option for this program does not require a culminating experience.

Note

Students on self-support can choose whatever option they want. Students supported by research projects or the Department should take the thesis option.

In a world focused on things, we focus first on people.

The mission of K-State's College of Health and Human Sciences is to discover, disseminate and apply knowledge to meet basic human needs and improve the human condition. This knowledge advances professions, human services, public policy, business and industry.

Doctor of Philosophy

Health and Human Sciences (PHD)

The College of Health and Human Sciences offers a Doctor of Philosophy degree in Health and Human Sciences with specializations in:

- Couple and Family Therapy
- Hospitality Administration
- Kinesiology

- Prevention Science in HDFS
- Sustainable Fashion Business

A Doctor of Philosophy degree in Food, Nutrition, Dietetics and Health and a Doctor of Philosophy in Personal Financial Planning are also offered within the College of Health and Human Sciences.

Program description

The Department of Hospitality Management offers a master of science degree in hospitality administration and participates in the College of Health and Human Sciences doctor of philosophy program with a specialization in hospitality administration. Graduates are prepared for management and academic careers in hospitality management.

A diverse faculty will teach you how to apply business disciplines, such as human resource management, finance/accounting, strategy, marketing and revenue management-directly to the hospitality industry. Graduate students join the program with diverse academic and work experience backgrounds, such as food service management, hospitality and tourism, hotel and restaurant management, and social sciences.

Graduate faculty and students collaborate to conduct applied research and disseminate findings through scholarly publications and presentations. Flexibility in planning the program of study allows students to meet personal and professional objectives while enhancing knowledge of the discipline. Supportive faculty and peer relationships foster an environment where students may gain the knowledge, skills, and confidence needed for leadership positions in their chosen field.

Graduate assistantships

The department offers graduate teaching and research assistantships.

Students are selected based on academic standing and prerequisite skills required for the assignment. Students on assistantship must take at least 6 credit hours and no more than 12 credit hours per semester and must maintain a 3.0 GPA on all undergraduate and graduate course work. Reappointment is based on maintaining a 3.0 or higher GPA and performance in the position during the previous semester. Students on four-tenths or higher assistantship are assessed fees at the in-state rate in accordance with Graduate School policy.

Objectives

Graduate education in Fashion Studies provides opportunities to advance knowledge in fashion and retailing with an emphasis on environmental, social, and economic sustainability.

Facilities and Equipment

Product Development Laboratories

The apparel product development laboratory includes industrial sewing, pressing, and patternmaking equipment, ergonomic furnishings, and high-tech teaching technologies. Industry standard software and hardware, such as OptiTex and Adobe Suite, are used for product development, patternmaking, and technical specifications.

A GTCO Calcomp RD3 pattern digitizer, wide format plotters, Structure Sensor, Vicon Bonita 10 motion capture system, and Novel pliance X are available for research related to anthropometrics, clothing sizing, and patternmaking. A variety of software, including AnthroScan and Geomagic are used to manipulate scanned data. Plus, a set of Tobii Eye-tracking Glasses Pro 2 and Tobii Data Analyzer software are available for behavioral research.

The natural dye laboratory is equipped for dyeing, printing, and steaming textiles for research and creative inquiry projects. Equipment includes a bullet steamer, and a colorimeter, which is available for colorfastness tests.

Historic Costume and Textile Museum

The Historic Costume and Textile Museum is a notable collection of traditional and artistic artifacts, available for scholarly research. With over 15,000 holdings, the collection includes several Nelly Don dresses, wearable art from Anita Luvera Mayer, American quilts, haute couture, salon shoes, military uniforms, Byzantine-era textiles, Chinese and other ethnic textiles, and clothing and textiles from famous and not-so-famous mid westerners. Beginning in the early 20th century, the collection's holdings are still augmented by friends, faculty, and Kansas State University alumni who have lived and traveled throughout the world.

Admission and application

Application procedures

Applicants follow the Application Process of the Kansas State University Graduate School available at <http://www.k-state.edu/grad/admissions/application-process/>. The Kansas State University Graduate School requires that all application packages be fully complete before review by the graduate faculty in the department.

Applications are reviewed after they are complete in the online application system and the application fee has been paid. Fashion Studies graduate faculty review applications and decide whether to recommend admission at monthly graduate program meetings. It is advised that applicants contact graduate faculty members prior to applying to ensure there is a match between the applicants' research interests and faculty expertise. Once admission is recommended by the program graduate faculty, the Graduate School conducts a final review. In the event the faculty decide against admission, the applicant is notified by letter sent via email.

Assistantships

Financial aid is available through a limited number of teaching and research assistantships. Graduate students selected for an assistantship receive a monthly stipend and may be eligible for a tuition reduction or waiver. Assistantship applications are due January 8 with a decision announced by March 15.

Personal Financial Planning

Personal Financial Planning Program Chair

<https://www.hhs.k-state.edu/pfp/>

Overview

The department of Personal Financial Planning at Kansas State University strives to be globally recognized for its research, education, service, and outreach in financial planning offering emphases in financial counseling and financial therapy. We exist to prepare professionals to transform lives through financial planning.

Accelerated

Accelerated Fashion Studies - Fashion Business (BS)/Fashion Studies (MS)

The accelerated Accelerated Fashion Studies - Fashion Business (BS)/Fashion Studies (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Fashion Studies degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Admission application is completed online and accessed via the following link found on the graduate school website: <https://www.applyweb.com/kstate/>. Once an account is created, the degree program you seek is chosen, follow the instructions to manage the application process. The graduate school website includes step-by-step instructions (<https://www.k-state.edu/grad/admissions/application-process/>).

Application for admission should include the following information:

- A personal statement of objectives providing a summary of academic and/or professional experience, identification specific areas of interest, professional goals, and preferred primary faculty advisor.
- Current resume
- Three letters of recommendation, one of which must be from a current faculty member in Fashion Studies.
- Official transcripts for all college coursework.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- All B.S. undergraduate degree requirements must be completed before M.S. degree will be awarded.
- The student must complete 30 hours of graduate coursework and maintain a graduate GPA of at least 3.0.
- Students will complete either a research project or a work practicum as the required culminating experience.
- At least 18 hours of the graduate program of study must be at the 700 level or above.
- Once admitted to the accelerated degree program, the student is expected to refer to departmental and university graduate handbooks for policies and procedures for graduate degrees.
- The B.S. degree will be awarded following the completion of the undergraduate degree requirements.
- In the event that a student begins this program but does not wish to finish the M.S. in Fashion Studies degree requirements, the student must notify the Dean's Office immediately. A notation on the student's transcript will indicate courses taken at the graduate level were applied to the bachelor's degree.

Course Requirements

Fashion Studies (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- FASH 600 - Soft Goods Supply Chain Management **Credits: 3**
- IDFS 650 - Resilient Systems for a Sustainable World **Credits: 3**
- IDFS 670 - Problem Solving for a Sustainable World **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Fashion Studies - Fashion Design (BS)/Fashion Studies (MS)

The accelerated Accelerated Fashion Studies - Fashion Design (BS)/Fashion Studies (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Fashion Studies degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Admission application is completed online and accessed via the following link found on the graduate school website: <https://www.applyweb.com/kstateg/>. Once an account is created, the degree program you seek is chosen, follow the instructions to manage the application process. The graduate school website includes step-by-step instructions (<https://www.k-state.edu/grad/admissions/application-process/>).

Application for admission should include the following information:

- A personal statement of objectives providing a summary of academic and/or professional experience, identification specific areas of interest, professional goals, and preferred primary faculty advisor.
- Current resume
- Three letters of recommendation, one of which must be from a current faculty member in Fashion Studies.
- Official transcripts for all college coursework.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- All B.S. undergraduate degree requirements must be completed before M.S. degree will be awarded.
- The student must complete 30 hours of graduate coursework and maintain a graduate GPA of at least 3.0.
- Students will complete either a research project or a work practicum as the required culminating experience.
- At least 18 hours of the graduate program of study must be at the 700 level or above.
- Once admitted to the accelerated degree program, the student is expected to refer to departmental and university graduate handbooks for policies and procedures for graduate degrees.
- The B.S. degree will be awarded following the completion of the undergraduate degree requirements.
- In the event that a student begins this program but does not wish to finish the M.S. in Fashion Studies degree requirements, the student must notify the Dean's Office immediately. A notation on the student's transcript will indicate courses taken at the graduate level were applied to the bachelor's degree.

Course Requirements

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- FASH 600 - Soft Goods Supply Chain Management **Credits: 3**
- IDFS 650 - Resilient Systems for a Sustainable World **Credits: 3**
- IDFS 670 - Problem Solving for a Sustainable World **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Finance (BSBA)/Personal Financial Planning (MS)

The accelerated Accelerated Finance (BSBA)/Personal Financial Planning (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Personal Financial Planning degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

Students are responsible for researching financial aid implications of starting an accelerated degree program.

Course Requirements

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- PFP 764 - Estate Planning for Families **Credits: 3**
- PFP 770 - Applied Behavioral Finance **Credits: 3**
- PFP 782 - Investing for the Family's Future II **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Hospitality Management (BS)/Hospitality Administration (MS)

The accelerated Accelerated Hospitality Management (BS)/Hospitality Administration (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Hospitality Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

Application for admission will be completed online and can be accessed via the following link found on the graduate school website: <http://www.applyweb.com/kstateg/> . Once you create an account, you will be able to choose the degree program you seek and manage the application process. The graduate school website includes step-by-step instructions (<http://www.k-state.edu/grad/admissions/application-process/>).

Application for admission should include the following information:

- Statement of objectives designating desired area of specialization, summarizing academic and/or professional experience, and identifying professional goals.
- Current resume.
- Two letters of recommendation.
 - Follow the steps as you complete the online application. Enter the contact information of each reference online, and the system will request the letters of recommendation. Recommenders will upload their letters directly to your application using the links provided.
 - For the accelerated B.S./M.S. application, one letter of recommendation must be from a faculty member in hospitality management.
- Official transcripts for all college coursework.
 - You must upload an electronic copy (PDF preferred) of transcript(s) from each college or university where you have taken any higher education courses. You may also have previous institutions send official transcripts to the Department of Hospitality Management . Transcripts become part of your records at K-State and cannot be returned.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

- The student must complete 30 (thesis) or 36 (coursework) graduate credit hours with a graduate GPA of at least 3.0.
- Students with the course-only, non-thesis option may also choose graduate certificate programs offered at Kansas State University to develop a specialty area.
- The student must complete all B.S. undergraduate degree requirements.
- At least 18 hours of the program of study should be at the 700 or above level.
- Once an individual is admitted to the accelerated degree program, the student should consult the departmental and university graduate handbooks for policies and procedures for graduate degrees, including: supervisory committee, final examination, thesis defense, etc. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements.
- The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Course Requirements

Hospitality Administration (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- HM 621 - Hospitality Law **Credits: 3**
- HM 650 - Senior Seminar in Hospitality Management **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Personal Financial Planning (BS)/Master of Business Administration (MBA)

The accelerated Accelerated Personal Financial Planning (BS)/Master of Business Administration (MBA) will provide high-performing undergraduates the opportunity to pursue an accelerated Master of Business Administration degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

Students are responsible for researching financial aid implications of starting an accelerated degree program.

Course Requirements

Master of Business Administration (MBA)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- FINAN 623 - Financial Modeling **Credits: 3**
- FINAN 653 - Security and Portfolio Analysis **Credits: 3**
- FINAN 654 - Derivative Securities and Markets **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.

- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Personal Financial Planning (BS)/Personal Financial Planning (MS)

The accelerated Accelerated Personal Financial Planning (BS)/Personal Financial Planning (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Personal Financial Planning degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Personal Financial Planning (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- PFP 768 - Introduction to Financial Therapy **Credits: 3**
- PFP 769 - Money and Relationships **Credits: 3**
- PFP 770 - Applied Behavioral Finance **Credits: 3**
- PFP 771 - Financial Therapy Theory & Research **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Health and Human Sciences - Hospitality Administration (PHD)

Health and Human Sciences with specialization in Hospitality Administration

Admission Requirements

The Ph.D. in Health and Human Sciences with specialization in Hospitality Administration is offered through the Hospitality Management graduate program. A master's degree from an accredited institution is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate. Regular admission requires a grade point average of 3.5 on a 4.0 scale in a master's degree program.

Completion of the following prerequisite coursework is required for regular admission:

- accounting or finance
- management concepts
- marketing
- food service management, event, and/or lodging management

If these prerequisites are not met, the student may be admitted provisionally with the expectation that these deficiencies will be removed within the first two semesters at K-State.

One year of full-time (or 2,000 hours, if not full-time) experience in some aspect of the hospitality industry is required. Management experience is preferred.

Required application materials include:

- Official transcript of all completed academic work
- Recommendation letter: Applicants will be able to designate three individuals for letters of recommendation online. Enter the contact information of each reference online, and the system will request the letters of recommendation. Recommenders will upload their letters directly to your application using the links provided.
- A resume or CV
- Academic Statement of Purpose
- GRE or GMAT scores: All applicants are required to take the Graduate Record Examination (GRE) or the Graduate Management Admission Test (GMAT).
- Affidavit of Financial Support (International student only): This documentation is required in order to issue an I-20 OR DS-2019 and has no bearing on the admission decision
- TOEFL scores (if required per country of admission by the Graduate School): English proficiency test scores are required if English is not your native language (your country of birth).

Test	Minimum Score
IBT TOEFL	79
IELTS Academic Test	6.5
Pearson Test of English (PTE)	58

The Kansas State University Graduate School and Department of Hospitality Management accepts MyBest™ Score for each section of the TOEFL test. An international applicant who has received a degree in the last two years from an accredited college or university in the United States is exempt from this requirement. More information regarding English Proficiency Requirements can be found online: <http://www.k-state.edu/grad/admissions/application-process/international/>

Students desiring to apply for the Ph.D. program submit the above materials online using the link: <https://www.k-state.edu/admissions/apply/graduate/>

Course Requirements

The Ph.D. requires at least 90 semester credit hours beyond the bachelor's degree, including 15 credit hours of dissertation research. The number of hours from a previously completed master's degree which may be counted toward the 90-hour requirement is decided by the student's supervisory committee and the Graduate School. A maximum of 30 hours may be transferred from a completed master's degree. A maximum of nine credit hours can be transferred from graduate work completed after the master's degree at another accredited university. Doctoral students are required to pass both written and oral preliminary examinations prior to admission to candidacy.

Doctor of Philosophy Course Requirements

Hospitality Administration (20 Credit Hours)

- HM 805 - Advanced Foodservice Management **Credits: 3**
OR
- HM 815 - Advanced Lodging Management **Credits: 3**
OR
- HM 825 - Advanced Meetings and Business Event Management **Credits: 3**

- HM 905 - Advanced Hospitality Strategic Management **Credits: 3**
- HM 885 - Seminar in Hospitality Administration **Credits: 1**

- MANGT 720 - Managing Organizational Behavior **Credits: 3**
OR

- HDFS 806 - Statistical Methods in Human Development and Family Science I **Credits: 3**
- HDFS 906 - Statistical Methods in Family Studies and Human Sciences II **Credits: 3**
- EDCEP 817 - Statistical Methods in Education **Credits: 3**

Other Elective Graduate Courses (31 Credit Hours)

Courses must be approved by the student's supervisory committee. Nine hours must be from HM.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Health and Human Sciences - Sustainable Fashion Business (PHD)

The Fashion Studies program participates in the Ph.D. degree program awarded from the College of Health and Human Sciences with a specialization in Sustainable Fashion Business. The degree is designed to enable students to combine knowledge of fashion with an understanding of its application to a broader human perspective. A program of study will be individually planned to capitalize on the interests, goals, and disciplinary backgrounds of the student and faculty. A preliminary written examination and oral defense are required upon completing two-thirds of the program of study. A dissertation and oral defense of the dissertation are required.

Admission Requirements

The PhD requires a minimum of 90 semester credit hours beyond the bachelor's degree – including 60 hours of course work and 30 hours of dissertation research.

A master's degree is a requirement for admission and represents 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Course Requirements (17 Credit Hours)

- EDCI 943 - Principles of College Teaching **Credits: 3**
- FASH 600 - Soft Goods Supply Chain Management **Credits: 3**
- FASH 680 - Sustainable Fashion and Color **Credits: 3**
- FASH 700 - Foundations of Sustainability **Credits: 3**
- FASH 825 - Strategic Planning for Sustainability **Credits: 3**
- FASH 990 - Dissertation Proposal Seminar **Credits: 1**

Research and Statistics (39-42 Credit Hours)

Research Methods

Select one 3 credit hour graduate level research methods course from the options below:

- EDCEP 816 - Research Methods in Education **Credits: 3**
- HDFFS 888 - Research Methods in Human Development and Family Science **Credits: 3**
- SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**

Special note: students conducting qualitative dissertation research will enroll in a minimum of 3 credit hours of qualitative methods. These hours are in addition to the required 3 hours of basic research methods. Course options include:

- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- HDFFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**
- SOCIO 824 - Qualitative Methodology **Credits: 3**

Statistics

Select a minimum of two courses (6 credit hours) of graduate level statistics. Doctoral students may substitute up to 3 credit hours of statistics from a completed master's degree. Course options include:

Educational Counseling

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 819 - Survey Research **Credits: 3**

- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
Applied Human Sciences
- HDFS 806 - Statistical Methods in Human Development and Family Science I **Credits: 3**
- HDFS 906 - Statistical Methods in Family Studies and Human Sciences II **Credits: 3**
Psychology
- PSYCH 802 - Psychological Research Design and Analysis I **Credits: 3**
- PSYCH 805 - Psychological Research Design and Analysis II **Credits: 3**
Sociology
- SOCIO 825 - Quantitative Methods **Credits: 3**
- SOCIO 925 - Specialized Approaches to Sociological Research **Credits: 3**
Statistics
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Dissertation Research

Complete a total of 30 credit hours of dissertation research.

- FASH 999 - Dissertation Research in Fashion Studies **Credits: 1-12**

Other Elective Graduate Courses (2-8 Credit Hours)

Select courses to fulfill remaining credit hours based upon developing an area of expertise in the field. These courses must be approved by the student's supervisory committee.

Substitute Course Policy for Research Methods and Statistics

Ph.D. students in Fashion Studies may not substitute a research methods course taken as part of a master's degree. Ph.D. students may substitute up to 3 credit hours of statistics from the master's degree.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Personal Financial Planning (PHD)

The Personal Financial Planning doctoral program is housed within the College of Health and Human Sciences. The program is designed to provide talented and ambitious students with knowledge, skills, and tools necessary to achieve success as college and university faculty, practitioners of financial planning, and productive citizens of the State of Kansas and the United States. A dedicated commitment to enhancing students' personal development will prepare students to excel academically and professionally, leading ultimately to more rewarding and creative lives.

If students have not taken a graduate-level statistics course in the recent past they may be required to take STAT 703 or another introductory research and statistics course prior to their first session on campus.

Admission Requirements

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Required Courses: 60 credit hours

Grades of B or better are required for PFP 805, PFP 806, HHS 888, PFP 889, PFP 890.

- HHS 888 - Foundations in Research Methodology **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- PFP 771 - Financial Therapy Theory & Research **Credits: 3**
- PFP 805 - Statistical Software Applications in Personal Financial Planning **Credits: 3**
- PFP 806 - Statistical Methods in Personal Financial Planning I **Credits: 3**
- PFP 808 - Research Application in Personal Financial Planning **Credits: 3**
- PFP 825 - Survey of Personal Financial Planning Research and Theory **Credits: 3**
- PFP 889 - Theories and Models in Personal Financial Planning **Credits: 3**
- PFP 890 - Research Methods in Personal Financial Planning II **Credits: 3**
- PFP 894 - Professional Issues in Personal Financial Planning **Credits: 1**
- PFP 900 - Research Seminar **Credits: 1-2**
- PFP 956 - Clinical Research and Applications in Financial Counseling and Planning **Credits: 3**
- PFP 990 - Dissertation Proposal Seminar **Credits: 1**
- PFP 999 - Dissertation Research **Credits: 1-21**

Supporting Courses: 18 credit hours

- PFP 760 - Retirement Planning for Families **Credits: 3**
- PFP 762 - Investing for the Family's Future I **Credits: 3**
- PFP 764 - Estate Planning for Families **Credits: 3**
- PFP 766 - Insurance Planning for Families **Credits: 3**
- PFP 772 - Personal Income Taxation **Credits: 3**
- PFP 836 - Financial Planning Case Studies **Credits: 3**

Elective Courses: minimum 12 credit hours

- PFP 768 - Introduction to Financial Therapy **Credits: 3**
- PFP 769 - Money and Relationships **Credits: 3**
- PFP 770 - Applied Behavioral Finance **Credits: 3**
- PFP 835 - Professional Practice Management in Personal Financial Planning **Credits: 3**
- PFP 860 - Advanced Retirement Planning Issues **Credits: 3**
- PFP 863 - Advanced Personal Income Tax Planning **Credits: 3**
- PFP 864 - Advanced Estate Planning Issues **Credits: 3**
- PFP 909 - Topics in Personal Financial Planning **Credits: 0-3**
- Or other elective as agreed upon by the student's committee

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Hours Required for Doctorate: 90

Dual Degree

Dual Degree: Master of Business Administration and MS in Hospitality Administration

The Dual MBA/MS in Hospitality Administration Degree Program is an academic program that leads to both the MBA degree and the MS degree in Hospitality Administration. The program is designed for students seeking business leadership opportunities in the hospitality industry. The MBA portion is designed to advance the knowledge and practice of business administration. The Hospitality Administration portion is designed to provide industry specific knowledge necessary to succeed in the hospitality industry. Students graduating from the dual degree program will receive two degrees, an MBA and an MS in Hospitality Administration. The program requires the completion of 55 credit hours: 30 credit hours at the MBA program and 25 credit hours at the MS in Hospitality Administration program. The degrees are conferred simultaneously when all requirements for the dual degree program have been met. The assessment of the dual degree program is conducted in each program independently as specified in respective programs.

Application / Admission

Students are required to fulfill the admittance requirements of both degrees to be admitted into this dual degree program. The person seeking admission to the MBA/MS in Hospitality Administration Dual Degree Program must:

1. Complete an application on CollegeNet (<https://www.applyweb.com/kstateg>) using Dual MBA/MS in Hospitality Administration program link. Students desiring to apply only to the MBA or MS in Hospitality Administration should select the specific program NOT the dual degree option in CollegeNet. The link will be assessable from both College of Business and Department of Hospitality Management portals. Application materials include: official transcript of all completed academic work; GMAT scores and TOEFL scores (international students only), if applicable; statement of objectives; resume; and an Affidavit of Financial Support, if applicable. GMAT waiver considered for an applicant who demonstrates a high level of academic performance, analytical skill, and ability for academic success.
2. The graduate admission committee of each program will evaluate the MBA/MS application separately, and only those who are accepted by both programs will be admitted to the Dual MBA/MS program.
3. A student who is initially admitted to either the MBA or MS in Hospitality Administration degree and who later decides to pursue the dual degree must apply for change of degree to the MBA/MS dual degree prior to being awarded the first degree.
4. Students admitted to the MBA/MS joint degree program who later decide they only want to complete one of the degrees must:
 - a. Submit a written notification to both programs.
 - b. Must have their primary program plan changed to reflect the degree to be completed.
 - c. Submit a new program of study for the degree program they will complete to the graduate school for an approval. Students must complete the requirements for the respective program to receive the MBA or MS degree.

Degree Requirements

Prerequisites

Curriculum prerequisite courses (MBA)

- Six hours of economics
- MATH 205 General Calculus and Linear Algebra or evidence of equivalent preparation
- An undergraduate statistics course or equivalent preparation (STAT 703 must be taken in the first year of the program)

Curriculum prerequisite courses (MSHA)

- accounting or finance
- management concepts
- marketing
- foodservice management, event, and/or lodging management

Business Requirement (30 credit hours total)

May waive 6-12 credit hours if "B" or better is achieved in equivalent courses at the discretion of the program director. Typically waivers are only granted for multiple undergraduate courses taken, and only credits from AACSB accredited institutions are accepted.

- ACCTG 710 - Foundations of Accounting **Credits: 3**
 - ECON 815 - Economic Analysis for Business **Credits: 3**
 - MANGT 710 - Operations and Supply Chain Management **Credits: 3**
 - MANGT 720 - Managing Organizational Behavior **Credits: 3**
 - MIS 830 - Business Intelligence and Storytelling in Cloud Environments **Credits: 3**
 - MKTG 705 - Marketing Concepts and Research **Credits: 3**
 - ACCTG 860 - Management Accounting and Business Problem Solving **Credits: 3**
 - MANGT 860 - Managing the Triple Bottom Line Business **Credits: 3**
 - MANGT 880 - Strategic Management **Credits: 3**
- Elective: 3 credit hours, must be an approved graduate elective, such as the following:
- MIS 665 - Business Analytics and Data Mining **Credits: 3**
 - MIS 670 - Social Media Analytics and Web Mining **Credits: 3**
 - MANGT 840 - Advanced Entrepreneurship **Credits: 3**
 - MKTG 844 - Advanced International Marketing **Credits: 3**
 - MKTG 880 - Applied Marketing Analytics **Credits: 3**

Hospitality Administration Requirement (25 hours total)

Required Core (13 credit hours):

- HM 805 - Advanced Foodservice Management **Credits: 3**
Or
 - HM 815 - Advanced Lodging Management **Credits: 3**
Or
 - HM 825 - Advanced Meetings and Business Event Management **Credits: 3**
-
- HM 835 - Survey of Research in Hospitality Management **Credits: 3**
 - HM 885 - Seminar in Hospitality Administration **Credits: 1**

- HM 895 - Financial Management and Cost Controls for the Hospitality Industry **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**

Additional Courses if Completing the Thesis Option (12 hours)

- HM 899 - Research in Hospitality Administration **Credits: 1-18**
- HM 810 - Research Techniques in Hospitality Management **Credits: 3**
- HM elective

Credits / Units: 3

Additional Courses if Completing the Non-Thesis Option (12 hours)

- HM 785 - Practicum in Hospitality Management **Credits: 1-6**
- Additional Graduate Elective

Credits / Units: 9

Six hours must be from HM. Courses must be approved by the student's supervisory committee.

Graduate Certificate

Advanced Financial Planning Graduate Certificate

The Advanced Financial Planning graduate certificate is offered through the Department of Personal Financial Planning. The program is designed to provide practitioners with the CERTIFIED FINANCIAL PLANNER™ certification more advanced financial planning knowledge and technical skills.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Personal Financial Planning at Kansas State University.

Course Requirements

Required Courses

- PFP 835 - Professional Practice Management in Personal Financial Planning **Credits: 3**
- PFP 860 - Advanced Retirement Planning Issues **Credits: 3**
- PFP 863 - Advanced Personal Income Tax Planning **Credits: 3**
- PFP 864 - Advanced Estate Planning Issues **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Financial Therapy Graduate Certificate

Contact: Morgan Graham

E-mail: morgangraham@ksu.edu

The Financial Therapy graduate certificate is offered through the department of Personal Financial Planning. The program is completely online, combining self-study with a mentoring classroom-type experience. Students will develop skills to help clients

improve financial well-being from a holistic perspective where psychological, emotional, relational, and economic aspects of financial health are considered and addressed.

Students without prior personal financial planning coursework or professional experience in financial planning will be required to have completed a Fundamentals in Personal Finance equivalent course that covers basic financial planning concepts. The course can be an undergraduate or graduate course and must have been taken at an accredited university.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Personal Financial Planning at Kansas State University.

Course Requirements

Required Courses

- PFP 768 - Introduction to Financial Therapy **Credits: 3**
- PFP 769 - Money and Relationships **Credits: 3**
- PFP 770 - Applied Behavioral Finance **Credits: 3**
- PFP 771 - Financial Therapy Theory & Research **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Personal Financial Planning Graduate Certificate

Kansas State University's personal financial planning certificate program is a CFP Board-Registered Program. Accurate and timely information in the key area of financial planning will be provided, in addition to meeting the educational requirements to be eligible for the CERTIFIED FINANCIAL PLANNER™ exam.

K-State's certificate in personal financial planning is unlike any other program in the country. The majority of programs registered with CFP Board require in-class attendance or rely on self-study materials. The K-State program offers students an opportunity to combine self-study with a mentoring classroom-type experience. The program is offered fully online or on campus.

The certificate in personal financial planning requires 18 hours of graduate credit. The program consists of six courses. Students have the option of taking these six courses as a stand-alone graduate certificate. All students must be accepted to the K-State Graduate School.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Personal Financial Planning at Kansas State University.

Course Requirements

Required Courses

The Certificate in Personal Financial Planning will consist of 18 credit hours of the following courses:

- PFP 760 - Retirement Planning for Families **Credits: 3**
- PFP 762 - Investing for the Family's Future I **Credits: 3**
- PFP 764 - Estate Planning for Families **Credits: 3**
- PFP 766 - Insurance Planning for Families **Credits: 3**

- PFP 772 - Personal Income Taxation **Credits: 3**
- PFP 836 - Financial Planning Case Studies **Credits: 3**

Total Hours Required for Graduate Certificate: 18

Master of Science

Fashion Studies (MS)

The Fashion Studies program offers a Master of Science degree in Sustainable Fashion Business. This degree is predominantly an on-campus program with opportunity for some online courses. Students are required to complete 24 credit hours of coursework and 6 credit hours of thesis research (30 credit hours total). The sustainable fashion business emphasis is an individualized program of study, capitalizing on the interests and disciplinary background of students and faculty to build the theoretical and methodological skills necessary to solve human ecological problems involving fashion systems.

Graduates are prepared for professional careers within industry, for college instructor positions, and for pursuing a Doctor of Philosophy degree.

Course Requirements

Required Courses

- FASH 600 - Soft Goods Supply Chain Management **Credits: 3**
- FASH 680 - Sustainable Fashion and Color **Credits: 3**
- FASH 700 - Foundations of Sustainability **Credits: 3**
- FASH 825 - Strategic Planning for Sustainability **Credits: 3**
- Select ONE research methods course from the following list:
 - EDCEP 816 - Research Methods in Education **Credits: 3**
 - FASH 850 - Research Methods in Fashion Studies **Credits: 3**
 - HDFS 888 - Research Methods in Human Development and Family Science **Credits: 3**
 - SOCIO 823 - Intermediate Methods of Social Research **Credits: 3**
- Select ONE analytical methods course from the following list:
 - EDCEP 819 - Survey Research **Credits: 3**
 - EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
 - EDLEA 838 - Qualitative Research in Education **Credits: 3**
 - HDFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**
 - HDFS 906 - Statistical Methods in Family Studies and Human Sciences II **Credits: 3**
 - PSYCH 805 - Psychological Research Design and Analysis II **Credits: 3**
 - SOCIO 824 - Qualitative Methodology **Credits: 3**
 - SOCIO 825 - Quantitative Methods **Credits: 3**
 - SOCIO 925 - Specialized Approaches to Sociological Research **Credits: 3**
 - STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
 - STAT 705 - Regression and Analysis of Variance **Credits: 3**

Elective Courses

Select elective courses (5 credit hours) in consultation with advisor.

Thesis Option Courses

Complete 6 credits hours of thesis research:

- FASH 899 - Master's Thesis Research Credits: 1-6

Total Hours Required for Master's: 30

Hospitality Administration (MS)

Whether you want to manage a resort in the mountains, open a restaurant in your hometown or organize events in the city, the online hospitality administration master's program can help prepare you for success. Coursework is designed for a variety of careers in hospitality industry management, which the Bureau of Labor Statistics projects will grow at a higher rate than the national average for all occupation and management occupation jobs.

Admission Requirements

The Hospitality Administration M.S. is offered through the Hospitality Management graduate program. Admission to the program requires a bachelor's degree from an accredited institution. Regular admission requires a grade point average of 3.0 on a 4.0 scale. Completion of the following prerequisite coursework is required for regular admission:

- accounting or finance
- management concepts
- marketing
- foodservice management, event, and/or lodging management

If these prerequisites are not met, the student may be admitted provisionally with the expectation that these deficiencies will be removed within the first two semesters at K-State.

Industry experience in some aspect of hospitality management is preferred. If the student has no industry-related work experience, 1000 hours of such experience must be completed during the degree program.

Application materials required include:

- official transcript of all completed academic work;
- Recommendation letter: Applicants will be able to designate three individuals for letters of recommendation online. Enter the contact information of each reference online, and the system will request the letters of recommendation. Recommenders will upload their letters directly to your application using the links provided.
- A resume of curriculum vitae;
- Statement of purpose;
- Affidavit of financial support (international students only). This documentation is a requirement to issue the I-20 or DS-2019 and has no bearing on the admission decision.
- TOEFL scores (if required per country of admission by the Graduate School): English proficiency test scores are required if English is not your native language (your country of birth).

Test	Minimum Score
IBT TOEFL	79

IELTS Academic Test	6.5
Pearson Test of English (PTE)	58

The Kansas State University Graduate School and Department of Hospitality Management accepts MyBest™ Score for each section of the TOEFL test. An international applicant who has received a degree in the last two years from an accredited college or university in the United States is exempt from this requirement. More information about English Proficiency Requirements can be found online: <http://www.k-state.edu/grad/admissions/application-process/international/>

Application materials are reviewed by graduate faculty and recommendations forwarded to the Graduate School.

Course Requirements

Individual programs of study for the Master of Science degree are planned according to the background and interests of students. Students may choose one of the following plans, with a certificate option, if desired:

30 hours of graduate credit consisting of 24 hours of graduate course work and 6 hours of research for a thesis, or 36 hours of graduate course work and a written comprehensive examination and oral defense.

Students with the course-only, non-thesis option may also choose graduate certificate programs offered at Kansas State University to develop a specialty area.

The coursework only option for this program does not require a culminating experience.

Required Courses

19 credit hours

- HM 805 - Advanced Foodservice Management **Credits: 3**
OR
- HM 815 - Advanced Lodging Management **Credits: 3**
OR
- HM 825 - Advanced Meetings and Business Event Management **Credits: 3**

Courses must be approved by the student's supervisory committee.

Report Option Courses

17 credit hours

Courses must be approved by the student's supervisory committee. Six hours must be from HM.

Total Hours Required for Master's: 30-36

Personal Financial Planning (MS)

Many select the Personal Financial Planning Track to complete the coursework needed to sit for the CERTIFIED FINANCIAL PLANNER™ exam; the Financial Therapy track which provides client centered financial planning skills; or the Advanced Planning track to develop more advanced financial planning skills.

For additional information, please visit the Personal Financial Planning website at: <https://www.hhs.k-state.edu/pfp/>.

Course Requirements

To complete the Master of Science degree the student must complete 30 semester credit hours as per one of the following plans:

- A) Personal Financial Planning (18) + Financial Therapy (12)
- B) Personal Financial Planning (18) + Advanced Financial Planning (12)
- C) Financial Therapy (12) + Advanced Financial Planning (12) + Electives (6)
- D) Personal Financial Planning (18) + Electives (12)

Students entering the program without CFP® certification or a Time Value of Money course will be required to take PFP 624 Fundamentals of Family Financial Planning or an equivalent course as a prerequisite.

The coursework only option for this program does not require a culminating experience.

Personal Financial Planning (18 credit hours)

- PFP 760 - Retirement Planning for Families **Credits: 3**
- PFP 762 - Investing for the Family's Future I **Credits: 3**
- PFP 764 - Estate Planning for Families **Credits: 3**
- PFP 766 - Insurance Planning for Families **Credits: 3**
- PFP 772 - Personal Income Taxation **Credits: 3**
- PFP 836 - Financial Planning Case Studies **Credits: 3**

Financial Therapy (12 credit hours)

- PFP 768 - Introduction to Financial Therapy **Credits: 3**
- PFP 769 - Money and Relationships **Credits: 3**
- PFP 770 - Applied Behavioral Finance **Credits: 3**

- PFP 771 - Financial Therapy Theory & Research **Credits: 3**

Advanced Financial Planning (12 credit hours)

- PFP 835 - Professional Practice Management in Personal Financial Planning **Credits: 3**
- PFP 860 - Advanced Retirement Planning Issues **Credits: 3**
- PFP 863 - Advanced Personal Income Tax Planning **Credits: 3**
- PFP 864 - Advanced Estate Planning Issues **Credits: 3**

Electives (0-12 credit hours)

- PFP 756 - Financial Counseling **Credits: 3**
- PFP 782 - Investing for the Family's Future II **Credits: 3**
- PFP 808 - Research Application in Personal Financial Planning **Credits: 3**
- PFP 836 - Financial Planning Case Studies **Credits: 3**
- CNRES 751 - Interpersonal Conflict Skills and Strategies **Credits: 3**
- LEAD 701 - Foundations of Leadership **Credits: 3**

Total Credit Hours Required for Master's: 30

School of Health Sciences

The School of Health Sciences offers the following Master of Science (MS) programs: Athletic Training, Communication Sciences and Disorders, Food, Nutrition and Health, Kinesiology and Physician Assistant along with a Doctor of Philosophy (PhD) in Food, Nutrition, Dietetics and Health. The school also offer accelerated BS/MS and BS/MPH options that allows high-achieving students to more efficiently obtain their graduate degree.

Accelerated

Accelerated Dietetics (BS)/Food, Nutrition, and Health (MS)

The accelerated Accelerated Dietetics (BS)/Food, Nutrition, and Health (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Food, Nutrition, and Health degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The student will: complete K-State Graduate School application online, and submit application fee following instructions provided; submit a statement of academic objective(s) and preferred primary advisor with the application; submit three letters of recommendation; and submit transcript(s) of all undergraduate work to **Slate**.

Students are responsible for researching financial aid implications of starting an accelerated degree program.

Admission Requirements

The following requirements must be met before an individual can be admitted into the accelerated program:

- Student must be currently seeking a B.S. degree in the department of Food, Nutrition, Dietetics, and Health at K-State. A student who has completed a B.S. degree is not eligible for the accelerated program.
- Student must have completed at least 75 credit hours towards the B.S. degree.
- The student's cumulative undergraduate GPA must be at least 3.25 at the time of application.

Other admission requirements include: copies of transcripts; one professional recommendation, contact information for two additional professional references, and applicant form detailing interest, skills and experiences.

Applications are holistically reviewed to determine recommendations for admission. A faculty member must agree to be an applicant's advisor before a recommendation can be made to the Graduate School that the applicant be admitted. All applications will be considered for institutional or departmental awards and graduate assistantships.

Students are responsible for researching financial aid implications of starting an accelerated degree program.

Prospective students please visit <https://www.hhs.k-state.edu/fndh/graduate/requirements.html>. International students should check the Graduate School requirements for English proficiency at <http://www.k-state.edu/grad/students/international.html>.

Program Specific Admission Requirements

A maximum of 9 graduate credit hours from the Food, Nutrition and Health (MS) degree will satisfy the requirements for the B.S. degree program in the FNDH department. In consultation with their major professor and undergraduate advisor students must enroll in these courses for graduate credit.

Once a student is admitted to the accelerated BS/MS degree program, the student should consult the graduate school handbook for policies and procedures for M.S. degrees, which include supervisory committee, final examination, and thesis defense, etc. The student will work closely with his/her major professor to form a supervisory committee and file a program of study specifying required courses. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements. The undergraduate advisor will continue to advise the student in academic progress toward the B.S. degree, and the major professor will supervise the student's academic progress (including thesis, report or course-work only option) for the M.S. degree.

Admission to the graduate program is provisional until the student completes the B.S. degree requirements.

In the event that a student begins this program, but does not finish the M.S. Food, Nutrition and Health degree requirements, he/she must change the nine credit hours of his/her graduate classes to undergraduate credit to receive the B.S. degree.

Any student who has already graduated with a B.S. in the department of Food, Nutrition, Dietetics and Health at K-State is not eligible for the accelerated B.S./M.S. program. The student must apply for and start in the program before completing the B.S. degree (generally prior to senior year).

Course Requirements

Food, Nutrition and Health (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- **FNDH 600 - Public Health Nutrition Credits: 3**

- FNDH 620 - Nutrient Metabolism **Credits: 3**
- FNDH 631 - Clinical Nutrition I **Credits: 3**
- FNDH 632 - Clinical Nutrition II **Credits: 3**
- FNDH 635 - Sports Nutrition **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Integrative Physiology (BS)/Kinesiology (MS)

The accelerated Accelerated Integrative Physiology (BS)/Kinesiology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Kinesiology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the traditional MS degree except that completion of the BS Integrative Physiology degree is not required. The following requirements must be met before an individual can be admitted into this program:

The student must have completed the Kinesiology undergraduate core (KIN 220, KIN 310, KIN 335, KIN 336, and KIN 345)

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

Since there is some overlap between undergraduate and graduate study, some graduate courses will satisfy the degree requirements of the undergraduate degree. A maximum of 9 graduate credit hours from the MS KIN degree may be counted toward the bachelor's degree in Integrative Physiology. Some additional conditions are:

- The student must complete 30 (thesis) or 36 (coursework) graduate credit hours with a graduate GPA of at least 3.0.

- The student must complete all undergraduate degree requirements with the exception of up to 9 credit hours taken at the 600 or 700 level that satisfy the undergraduate and graduate program requirements.
- At least 18 of the graduate credit hours on the Graduate Program of Study must be in classes at the 700 level or above.
- A student pursuing a thesis format must complete at least 6 credit hours of Master's Thesis (KIN 899).

Once an individual is admitted to the accelerated BS Integrative Physiology/MS KIN degree program, the student should consult the graduate handbook for policies and procedures for graduate degrees, which include: supervisory committee, final examination, thesis defense, etc. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Course Requirements

Kinesiology (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- KIN 701 - Cardiorespiratory Physiology **Credits: 3**
- KIN 703 - Cardiovascular Physiology **Credits: 3**
- KIN 707 - Muscle Physiology **Credits: 3**
- KIN 709 - Environmental Physiology **Credits: 3**
- KIN 711 - Autonomic Neurophysiology **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Kinesiology (BS)/Kinesiology (MS)

The accelerated Accelerated Kinesiology (BS)/Kinesiology (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Kinesiology degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Application Process

The application process is the same as for the traditional M.S. degree except that completion of the B.S. degree is not required. The following requirements must be met before an individual can be admitted into this program:

The student must have completed the Kinesiology undergraduate major lower level core courses (KIN 220, KIN 310, KIN 335, KIN 336, and KIN 345).

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

Since there is some overlap between undergraduate and graduate study, some graduate courses will satisfy the degree requirements of the undergraduate degree. A maximum of 9 graduate credit hours from the M.S. KIN degree may be counted toward the B.S.KIN degree. Some additional conditions are:

- The student must complete 30 (thesis) or 36 (coursework) graduate credit hours with a graduate GPA of at least 3.0.
- The student must complete all B.S. KIN undergraduate degree requirements with the exception of up to 9 credit hours taken at the 600 or 700 level that satisfy the undergraduate and graduate program requirements.
- At least 18 of the graduate credit hours on the Graduate Program of Study must be in classes at the 700 level or above.
- A student pursuing a thesis format must complete at least 6 credit hours of Master's Thesis (KIN 899).

Once an individual is admitted to the accelerated B.S. /M.S. KIN degree program, the student should consult the graduate handbook for policies and procedures for graduate degrees, which include: supervisory committee, final examination, thesis defense, etc. The student's supervisory committee must approve the program of study, which is a statement of the student's graduation requirements. The B.S. degree will be awarded following the completion of the undergraduate degree requirements.

Degree requirements for the M.S. are as described in the Kinesiology (MS) section.

Course Requirements

Kinesiology (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- KIN 625 - Exercise Testing and Prescription **Credits: 3**
- KIN 700 - Interpersonal Aspects of Physical Activity **Credits: 3**
- KIN 703 - Cardiovascular Physiology **Credits: 3**
- KIN 707 - Muscle Physiology **Credits: 3**
- KIN 755 - Individual Physical Activity Promotion **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Nutrition and Health (BS)/Food, Nutrition and Health (MS)

The accelerated Accelerated Nutrition and Health (BS)/Food, Nutrition and Health (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Food, Nutrition and Health degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate electives.

Application Process

The student will: complete K-State Graduate School application online, and submit application fee following instructions provided; submit a statement of academic objective(s) and preferred primary advisor with the application; submit three letters of recommendation; and submit transcript(s) of all undergraduate work to Slate

Students are responsible for researching financial aid implications of starting an accelerated degree program.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.250.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Program Specific Admission Requirements

A maximum of 9 graduate credit hours from the Food, Nutrition and Health (MS) degree will satisfy the requirements for the B.S. degree program in the FNDH department. In consultation with their major professor and undergraduate advisor students must enroll in these courses for graduate credit.

Once a student is admitted to the accelerated BS/MS degree program, the student should consult the graduate school handbook for policies and procedures for M.S. degrees, which include supervisory committee, final examination, and thesis defense, etc. The student will work closely with his/her major professor to form a supervisory committee and file a program of study specifying required courses. Doctor of Philosophy

Food, Nutrition, Dietetics and Health (PHD)

Admission Requirements

Competitive applicants will have a science background appropriate for our degree programs.

Recommendations concerning an applicant's qualifications and admission are made to the Dean of the Graduate School by the department. The final decision regarding admission of an applicant is made by the Dean of the Graduate School.

Admission to graduate study at Kansas State University is granted on three bases: full standing, provisional, or probational.

Admission in full standing requires a minimum grade point average of 3.0 (B average) in the last 60 hours of undergraduate work in an institution whose requirements for the bachelor's degree are equivalent to those of Kansas State University. Applicants with grade point averages below 3.0 may be considered for probational admission provided there is evidence that the applicant has the ability to do satisfactory graduate work. Provisional admission may be granted to applicants who have subject deficiencies in undergraduate preparation as mentioned above or if there is uncertainty in evaluating the transcript.

Other admission requirements include: copies of transcripts; three professional recommendations; and applicant form detailing interest, skills, and experiences.

Applications are holistically reviewed to determine recommendations for admission.

A faculty member must agree to be an applicant's advisor before a recommendation can be made to the Graduate School that the applicant be admitted. All applications will be considered for institutional or departmental awards and graduate assistantships.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

The Ph.D. requires 90 credits post-baccalaureate, including a minimum of 30 credits for the Ph.D. dissertation. No foreign language is required.

Programs of study are developed according to the interests, backgrounds, and career goals of the students. In addition to graduate human nutrition courses, students often include courses from other departments such as animal sciences and industry; grain science and industry; biochemistry; chemistry; anatomy and physiology; kinesiology; psychology; and biology; from the Colleges of Business Administration and Education; and from interdisciplinary international courses.

Required Courses

Department Requirement (11 hours)

- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- FNDH 880 - Professional Communication in FNDH **Credits: 1**
- FNDH 980 - Graduate Seminar in Food, Nutrition, Dietetics and Health **Credits: 1**
- FNDH 995 - Grantsmanship and Publication **Credits: 3**
- OR
- SENS 958 - Critical Experiences in Industry Research **Credits: 3-6**

Area of Specialization

Students can work with distinguished graduate faculty and choose to emphasize their study in a particular area, including:

Public Health Physical Activity

Specialization core (9 hours):

- KIN 797 - Topics in Public Health Physical Activity Behavior **Credits: 3**
- KIN 805 - Physical Activity and Human Behavior **Credits: 3**
- KIN 830 - Advanced Public Health Physical Activity **Credits: 3**
- Six credits must come from additional FNDH course work excluding FNDH 999.
- FNDH, KIN and other graduate level courses as suggested by the supervisory committee.

Public Health Nutrition

Specialization core (9 hours):

- FNDH 844 - Nutritional Epidemiology **Credits: 3**
- Six (6) FNDH credits from the following:
 - FNDH 735 - Advanced Energy Balance **Credits: 3**
 - FNDH 800 - Nutrition Education and Communication **Credits: 3**
 - FNDH 820 - Functional Foods for Chronic Disease Prevention **Credits: 3**
 - SENS 841 - Consumer Research - Fundamentals **Credits: 1**
 - FNDH 911 - Advanced Nutrition Topics: Contemporary Issues **Credits: 1-3**
- FNDH, KIN and other graduate level courses as suggested by the supervisory committee.
- Three credits must come from KIN 600 or above.

Nutritional Sciences

Specialization core (11 hours):

- FNDH 810 - Advanced Macronutrient Metabolism **Credits: 5**
- FNDH 812 - Advanced Micronutrient Metabolism **Credits: 3**
- 3 credit hours of FNDH 700 level or above
- Select from additional graduate level courses in FNDH or other graduate level courses as suggested by the supervisory committee.

Sensory Analysis and Consumer Behavior

Specialization core (10 hours):

- SENS 833 - Descriptive Sensory Analysis: Methods **Credits: 1**
- SENS 843 - Consumer Research - Qualitative **Credits: 1**
- SENS 848 - Consumer Research – Quantitative **Credits: 1**
- SENS 958 - Critical Experiences in Industry Research **Credits: 3-6**

- Select 4-7 additional hours (not including SENS 701 or SENS 841) from the other specialized Descriptive Sensory Analysis and Consumer Behavior courses.

Additional Courses

To fulfill the 30-hour core requirement, the student can select additional graduate level courses in FNDH or other graduate level courses as suggested by the supervisory committee to ensure the minimum course credits are met.

Dissertation (30 hours)

Total Hours Required for Doctorate: 90

Health and Human Sciences - Kinesiology (PHD)

The Department of Kinesiology participates in the Ph.D. program in the College of Health and Human Sciences with a specialization in Kinesiology. Students are prepared to conduct research in exercise physiology or exercise behavioral science.

Admission Requirements

The Ph.D. requires a minimum of 90 semester credit hours beyond the bachelor's degree, including 30 credit hours of dissertation research. The number of hours from a previously completed master's degree which may be counted toward the 90-hour requirement is decided by the student's supervisory committee and is reviewed by the Graduate School. A maximum of 30 hours may be transferred from a completed master's degree. A maximum of 9 credit hours can be transferred from graduate work completed after the master's degree at another accredited university. Doctoral students are required to pass both written and oral preliminary examinations prior to admission to candidacy.

- 90 credit hours minimum
- 30 credit hours minimum of dissertation research
- 15 credit hours minimum at the 800 level or above
- 6 credit hours maximum at the 500 level
- 6 credit hours maximum of independent study
- 30 credit hours maximum from master's degree
- Dissertation: preparing three or more papers for publication in exercise physiology or exercise behavioral science.

Course Requirements

Core Requirements (12 Credit Hours)

- KIN 815 - Research Methods in Kinesiology **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**

Other Coursework in Major Area (18 Credit Hours)

Students develop a plan of study with their major professor and graduate committee to develop an expertise in exercise physiology or exercise behavioral science. Students may select from the list below or other courses to fulfill the requirement.

Exercise Physiology

Choose from the following courses:

- KIN 601 - Cardiorespiratory Physiology Credits: 3
- KIN 603 - Cardiovascular Physiology Credits: 3
- KIN 605 - Topics in the Biological Basis of Kinesiology Credits: 1-3
- KIN 607 - Muscle Physiology Credits: 3
- KIN 609 - Environmental Physiology Credits: 3
- KIN 625 - Exercise Testing and Prescription Credits: 3
- KIN 635 - Nutrition and Exercise Credits: 3
- KIN 650 - Development of Motor Control Credits: 3
- KIN 657 - Integrative Human Pathophysiology Credits: 3
- KIN 800 - Advanced Physiology of Exercise Credits: 3
- KIN 822 - Advanced Muscle Physiology Credits: 3
- KIN 824 - Physiology of Oxygen Transport Credits: 3
- KIN 826 - Advanced Cardiovascular Physiology Credits: 3
- KIN 896 - Independent Study in Kinesiology Credits: 1-4

Exercise Behavioral Science

Choose from the following courses:

- KIN 602 - Social Structural Determinants of Physical Activity Credits: 3
- KIN 606 - Topics in the Behavioral Basis of Kinesiology Credits: 1-3
- KIN 610 - Program Planning and Evaluation Credits: 3
- KIN 612 - Policy, Built Environment and Physical Activity Credits: 3
- KIN 655 - Individual Physical Activity Promotion Credits: 3
- KIN 793 - Internship/Public Health Physical Activity Credits: 1-8
- KIN 797 - Topics in Public Health Physical Activity Behavior Credits: 3
- KIN 805 - Physical Activity and Human Behavior Credits: 3
- KIN 808 - Social Epidemiology of Physical Activity Credits: 3
- KIN 818 - Social and Behavioral Bases of Public Health Credits: 3
- KIN 835 - Group Dynamics and Physical Activity Credits: 3
- KIN 840 - Public Health Practice Credits: 3-6
- KIN 845 - Exercise Adherence Credits: 3
- KIN 855 - Exercise Psychology in Special Populations Credits: 3
- KIN 896 - Independent Study in Kinesiology Credits: 1-4

Dissertation Research (30 Credit Hours)

- KIN 999 - Dissertation Research Credits: 1-15

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Master of Science

Athletic Training (MS)

This curriculum will provide theoretical and clinical application experience in the five professional practice domains of Athletic Training: injury/illness prevention and wellness protection, clinical evaluation and diagnosis, immediate and emergency care, treatment and rehabilitation, and organizational and professional health and well-being.

Graduates will use research, innovative methods, and evidence-based healthcare practices with their clients in secondary schools, colleges and universities, hospitals, clinics, industry, military, and the performing arts.

Admission Requirements

Students entering the Food, Nutrition, Dietetics, and Health graduate program are expected to have a bachelor's degree from an accredited institution. Competitive applicants will have a science background appropriate for our degree programs. Recommendations concerning an applicant's qualifications and admission are made to the dean of the Graduate School by the department. The final decision regarding admission of an applicant is made by the dean of the Graduate School.

Admission to graduate study at Kansas State University is granted on three bases: full standing, provisional, or probational. Admission in full standing requires a minimum grade point average of 3.0 (B average) in the last 60 hours of undergraduate work in an institution whose requirements for the bachelor's degree are equivalent to those of Kansas State University. Applicants with grade point averages below 3.0 may be considered for probational admission provided there is evidence that the applicant has the ability to do satisfactory graduate work. Provisional admission may be granted to applicants who have subject deficiencies in undergraduate preparation as mentioned above or if there is uncertainty in evaluating the transcript.

Other admission requirements include: copies of transcripts; three professional recommendations; and applicant form detailing interest, skills and experiences.

Applications are holistically reviewed to determine recommendations for admission. A faculty member must agree to be an applicant's advisor before a recommendation can be made to the Graduate School that the applicant be admitted. All applications will be considered for institutional or departmental awards and graduate assistantships.

Prospective students please visit <https://www.hhs.k-state.edu/academics/graduate.html>. For international students, please check the Graduate School requirements for English proficiency at <https://www.k-state.edu/grad/students/international.html>.

Special Requirements

Students interested in the Master's of Science in Athletic Training (MSAT) professional graduate program can enter the program in one of the following ways:

1. The 5-year master's program or the post-baccalaureate program. Current Kansas State University students can apply after completion of 90 or more credits from Kansas State University or the transfer equivalent credits that includes all pre-requisite courses listed below.

2. Post-Baccalaureate. Students can apply after graduation, or with verification of graduation, from a baccalaureate degree program from an accredited institution and completion of all pre-requisite courses.

Acceptance into the 5-year Master's program is a selective process and requires a minimum 3.25 GPA, submission of a complete application packet, admission to the graduate school, three letters of recommendation, statement of objectives, copies of transcripts, GRE score to meet the requirements of the Department of Food, Nutrition, Dietetics and Health, verified completion of 25 observation hours under the supervision of a Certified Athletic Trainer, participation in an interview in the Spring of their application year, and verified completion of the prerequisite courses at Kansas State University or the transfer equivalent of the prerequisite courses.

Students accepted into the 5-year MSAT program will be considered graduate students in the fall semester following their acceptance into the MSAT Program. This may impact undergraduate financial aid, tuition assistance and undergraduate scholarships.

The Post-Baccalaureate admission will require a BA or BS from an accredited institution, a minimum 3.0 GPA, submission of a complete application packet, admission to the graduate school, three letters of recommendation, statement of objectives, copies of transcripts, GRE score to meet the requirements of the Department of Food, Nutrition, Dietetics and Health, verified completion of 25 hours of observation of a certified athletic trainer, and verified completion of the pre-requisite courses at Kansas State University or the transfer equivalent of the following prerequisite courses:

Prerequisite Courses:

- PSYCH 110 - General Psychology
- STAT 225 - Introduction to Statistics
- BIOL 198 - Principles of Biology
- FNDH 220 - Care and Prevention of Athletic Injuries
- FNDH 132 - Basic Nutrition
- PHYS 113 - General Physics I with lab
- CHM 210 - Chemistry I with lab
- KIN 330 - Biomechanics
- KIN 335 - Physiology of Exercise
- 8 hours of Human Anatomy and Physiology with lab

Choose one of the following:

- BIOL 441 - Human Body I **Credits: 4** and
- BIOL 442 - Human Body II **Credits: 4**

or

- KIN 360 - Anatomy and Physiology **Credits: 8**

Total hours required: 57-63

Course Requirements

The coursework only option for this program does not require a culminating experience.

Required Courses

- FNDH 709 - Clinical Applications of Human Anatomy **Credits: 3**
- FNDH 710 - Foundations of Patient Management **Credits: 2**
- FNDH 752 - Emergency Management in Athletic Training **Credits: 3**
- FNDH 755 - Clinical Applications of Neurological Function **Credits: 3**
- FNDH 799 - Foundations of Therapeutic Interventions **Credits: 3**
- FNDH 802 - Clinical Therapeutic Interventions I- Functional Therapeutic Interventions **Credits: 3**
- FNDH 803 - Clinical Therapeutic Interventions II- Extremity Interventions **Credits: 3**
- FNDH 804 - Clinical Therapeutic Interventions III- Pharmacology, Nutrition, and Behavior Modification **Credits: 2**
- FNDH 821 - Clinical Evaluation I-Core Evaluation **Credits: 3**
- FNDH 822 - Clinical Evaluation II-Extremities **Credits: 3**
- FNDH 823 - Clinical Evaluation III- General Medical Conditions **Credits: 3**
- FNDH 858 - Durable Medical Equipment and Casting **Credits: 2**
- FNDH 880 - Professional Communication in FNDH **Credits: 1**
- FNDH 883 - Athletic Training Practicum I **Credits: 1**
- FNDH 884 - Athletic Training Practicum II **Credits: 1**
- FNDH 885 - Athletic Training Practicum III **Credits: 1**
- FNDH 886 - Athletic Training Practicum IV **Credits: 1**
- FNDH 887 - Athletic Training Practicum V **Credits: 4**
- FNDH 888 - Athletic Training Practicum VI **Credits: 4**
- FNDH 892 - Population Health in Sports Medicine **Credits: 3**
- FNDH 720 - Administration of Health Care Organizations **Credits: 3**
- FNDH 857 - Administration in Athletic Training **Credits: 3**
- FNDH 897 - Applications in Food, Nutrition, Dietetics and Health **Credits: 1-3**
- FNDH 720 - Administration of Health Care Organizations **Credits: 3**
- FNDH 857 - Administration in Athletic Training **Credits: 3**

Thesis Option Courses

- FNDH 899 - Master's Thesis **Credits: 1-8**
(6 credits required)
Choose one of the following Research Courses:
- FNDH 775 - Research in Health Sciences **Credits: 3**
- HHS 888 - Foundations in Research Methodology **Credits: 3**

Coursework Only Option Courses

- FNDH 889 - Research Experience in Athletic Training **Credits: 1**
- PAS 720 - Evidence Based Medicine **Credits: 1**

Total Hours Required for Master's: 57-63

Communication Sciences and Disorders (MS)

The school of Health Sciences offers a Master of Science degree in Communication Sciences and Disorders. The goal of the CSD program is to educate clinicians who are competent to help children and adults with difficulties in any aspect of oral and written communication or swallowing (i.e., speech-language pathology). The master's degree program is a full-time, two-year program, starting either in the summer, fall, or spring semesters.

The objectives of this professional education program are to:

1. Prepare speech-language pathologists to fill diverse roles in the broad area of speech-language pathology and in a variety of professional environments consistent with evidence-based practice;
2. Provide the student with knowledge about the changing role of the speech-language pathologist within our society and with opportunities to learn how research informs that change;
3. Facilitate an interdisciplinary view of disorders of human communication;
4. Provide speech-language pathologists with the coursework and practicum experiences needed to meet national standards for clinical knowledge and skills and to earn the Certificate of Clinical Competence (CCC) awarded by the American Speech-Language-Hearing Association.

Kansas State University is fully accredited by the North Central Accrediting Association. In addition, the Master of Science (M.S.) education program in Speech-Language Pathology (residential) at Kansas State University is accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology of the American Speech-Language-Hearing Association, 2200 Research Boulevard #310, Rockville, Maryland 20850, 800-498-2071 or 301-296-5700.

Please review the following website to read more specific information about graduate application procedures and forms for communication sciences & disorders: Graduate Program (k-state.edu)

Course Requirements

For the Master of Science degree, the following requirements must be met:

1. Completion of a minimum of 31 graduate credit hours in academic coursework with additional credits from practica and externships.
2. Completion of two unique externships, typically full-day placements extending throughout the semester at an approved off-campus site.
3. Completion of a minimum of 400 total clinical hours (which includes 25 clinical observation hours and 375 direct clinical contact hours).
4. Demonstration of clinical competency as judged by the Program faculty.

Students selecting the non-thesis option must also successfully complete the comprehensive written examination and oral examination if indicated.

Students selecting the thesis option must complete six hours of thesis credit, design, implement, and produce a written thesis on a research topic in accordance with graduate school guidelines and successfully defend the thesis in an oral examination.

The graduate curriculum in Communication Sciences and Disorders prepares students with the basic course requirements for certification as a speech-language pathologist by the American Speech-Language-Hearing Association (ASHA), and prepares students to pass the national examination in speech-language pathology & audiology (NESPA). The pass rate of KSU graduates (first try) is 100% since 2004.

Required Courses

50 credit hours

- CSD 705 - Practicum in Speech-Language Pathology **Credits: 1-3**
- CSD 706 - Practicum in Audiology **Credits: 1-3**
- CSD 725 - Augmentative and Alternative Communication **Credits: 2**
- CSD 741 - Stuttering **Credits: 3**
- CSD 742 - Language Assessment and Intervention II **Credits: 3**
- CSD 743 - Communication Impairments in Autism Spectrum Disorders **Credits: 2**
- CSD 745 - Motor Speech Disorders **Credits: 3**
- CSD 748 - Cleft Palate **Credits: 1**
- CSD 750 - Voice Disorders **Credits: 3**
- CSD 780 - Instrumental Measurement for Clinical Application **Credits: 2**
- CSD 841 - Acquired Language and Cognitive Disorders **Credits: 4**
- CSD 844 - Dysphagia **Credits: 4**
- CSD 847 - Externship in Speech-Language Pathology **Credits: 3-12**
- CSD 851 - Professional Issues in Speech-Language Pathology **Credits: 3**

Thesis Option Course

6 credit hours

- CSD 899 - MS Research in Communication Sciences and Disorders **Credits: 1-8**

Coursework Only Option Course

1 credit hour

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

- CSD 701 - Research Experience in Communication Sciences and Disorders **Credits: 1**

Notes

Please review the following website to read more specific information about graduate application procedures and forms for communication sciences& disorders: Graduate Program (k-state. edu)

Students interested in this option with questions about the curriculum or admission should contact:

Dr. Jeridy Oetken or Dr. Jane Garcia

Communication Sciences & Disorders
139 Campus Creek Complex
1405 Campus Creek Road
Kansas State University
Manhattan, KS 66506

Information concerning academic grievances and grievances against faculty can be found online at: Graduate Student Rights and Grievances Procedures (k-state.edu)

Program complaints or grievances can be forwarded to the Council on Academic Accreditation (CAA) through the American Speech-Language-Hearing Association. Details are available online at: Complaints (asha.org)

K-State notice of nondiscrimination policy can be accessed at: Notice of Nondiscrimination (k-state.edu)

Total Hours Required for Master's: 51-56

Dietetics (MS)

The Department of Food, Nutrition, Dietetics and Health (FNDH) offers an online Master of Science degree in Dietetics for registered dietitians (RDs). This program is offered through the Innovative Digital Education Alliance (IDEA). IDEA is a consortium of universities that collaborate to offer online graduate programs. The online Master of Science in Dietetics through the IDEA is offered by the following universities:

- Kansas State University
- The University of Kansas Medical Center
- Iowa State University
- Colorado State University
- The University of Nebraska, Lincoln
- North Dakota State University
- Oklahoma State University

Upon request, the student's graduate committee will evaluate whether graduate practicum credit earned prior to application will count toward the student's current degree plan. It is the responsibility of the student to provide requested and appropriate documentation to facilitate evaluation.

Admission Requirements

Application for admission should include the following information:

- The applicant must hold the credential of Registered Dietitian (RD) through the Commission on Dietetic Registration of the Academy of Nutrition and Dietetics. Individuals who hold credentials offered by the following foreign regulatory boards are also eligible to apply:
 - Dietitians of Canada (DC)
 - Dutch Association of Dietitians/Ministry of Welfare, Public Health and Culture (NVD)
 - Philippine Professional Regulation Commission (PRC)
 - Irish Nutrition and Dietetic Institute (INDI)
 - Health Professions Council (HCPC) United Kingdom

A copy of the applicant's CDR registration card or other official documentation of registration status must be submitted with the application.

Or, if the applicant does not hold the credential of Registered Dietitian (RD), the applicant must provide their verification statement issued by a program accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND).

- The applicant must submit official transcripts for all college coursework. A minimum undergraduate grade point average of 3.0 (or alternately, a GPA of 3.0 on the last 60 hours of coursework in the undergraduate degree) is required for admission to this program.

- The applicant must submit three professional recommendations. Individuals writing the references must be able to attest to the applicant's academic abilities and professional leadership potential.
- A completed applicant form detailing interest, skills, and experiences.

Students pursuing the thesis option must conduct research compatible with on-going research in FNDH.

Admission Deadlines

Deadline for applications is October 1 for spring semester admission or March 1 for summer or fall semester admission.

Course Requirements

Required Courses

(9 Credit Hours)

- FNDH 775 - Research in Health Sciences **Credits: 3**
or *equivalent
- FNDH 891 - Environmental Scanning and Analysis of Current Issues in Dietetics **Credits: 3**
- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
OR
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
or *equivalent

*Equivalent courses must be approved by the supervisory committee.

Elective Courses

(21 credit hours)

Additional FNDH courses (minimum 21 credits), or equivalent courses approved by the supervisory committee, at the graduate level are required. The major professor and the supervisory committee will work with the student to select courses that will meet the requirements and support the graduate student's professional development.

Thesis/Non-Thesis

(6 credit hours)

Students may elect to complete a thesis (6 credit hours of FNDH 899 Research in FNDH) OR they may elect the non-thesis option and take 6 additional credit hours from program electives.

Students completing a thesis will be required to put together a written document under the direction of their major professor and supervisory committee followed by an oral examination with their supervisory committee with an emphasis on the written document. The thesis topic must be compatible with on-going research in FNDH. Students will present a formal seminar of their research findings followed by an oral examination with their supervisory committee.

Non-thesis students may take 6 additional credit hours from program electives, OR pursue 3 additional credits from program electives plus a 3-hour dietetics practice/work-related project (FNDH 780 Problems in Food, Nutrition, Dietetics and Health) under the direction of their major professor and supervisory committee. The student will complete a written document, present a seminar about the topic followed by an oral examination with their supervisory committee with an emphasis on the written document.

Of the required 36 credit hours for the Master of Science Dietetics degree, at least 18 hours should be at the 700 level and above, including the thesis/research and the report/problems hours required by the thesis and report options.

Students admitted to any graduate program at Kansas State University may also elect to pursue a Graduate Certificate in one of the graduate certificate programs offered. Students must apply for admission to a graduate certificate program. Graduate students working toward advanced degrees may use any or all of the certificate courses in a program of study with the approval of the student's supervisory committee.

Total Hours Required for Master's: 36

Food, Nutrition and Health (MS)

The **Master's of Science program in Food, Nutrition and Health** prepares graduates to pursue a wide variety of health-related careers.

Students who have completed a Bachelor of Science in Dietetics and wish to receive Registered Dietitian Nutritionist (RDN) credentials can apply to the **Master's of Science Food, Nutrition and Health with concentration in Dietetic Internship (MSDI)**.

Prospective students please visit <https://www.hhs.k-state.edu/fndh/academics/graduate/nutrition-dietetics-sensory-sciences/>

The Master's of Science in Food, Nutrition and Health requires a minimum of 30 credits. Three options are available: 1) thesis; 2) report; 3) coursework-only no culminating experience.

Course Requirements

Of the minimum 30 credit hours required for the master's program of study, at least 18 hours should be at the 700 level and above.

Required Courses

At least 6 credits of FNDH courses.

Thesis Option Courses

- FNDH 880 - Professional Communication in FNDH **Credits: 1**
- FNDH 899 - Master's Thesis **Credits: 1-8**
6 credit hours required
Select one of the following:
- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Report Option Courses

- FNDH 880 - Professional Communication in FNDH **Credits: 1**
- FNDH 898 - Master's Report **Credits: 0-18**
2 credit hours required
Select one of the following:

- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Coursework Only Option Courses

- FNDH 897 - Applications in Food, Nutrition, Dietetics and Health **Credits: 1-3**
Select one of the following:
- FNDH 775 - Research in Health Sciences **Credits: 3**
- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Total Hours Required for Master's: 30

Food, Nutrition, and Health (MS) with Dietetic Internship

Contact:

Brian Lindshield - blindsh@ksu.edu, 785-532-5508

Kelly Whitehair - stirtz@ksu.edu

The Dietetic Internship pathway to the Master of Science in Food, Nutrition and Health (MSDI) provides supervised practice experience in conjunction with the M.S. degree to enable baccalaureate degree graduates of Didactic Programs in Dietetics (DPDs) the opportunity to fulfill the experiential requirements to sit for the Registration Examination for Dietitians.

The Kansas State MSDI can admit up to 15 students annually. The 12-month program consists of three full-time semesters (summer, fall, and spring) in which academic coursework and supervised practice are completed in unison. At times students will be expected to be in supervised practice sites four days per week, while enrolled in additional graduate courses.

For additional details please visit <https://www.hhs.k-state.edu/fndh/academics/graduate/nutrition-dietetics-sensory-sciences/dietetic-internship.html>

The Dietetic Internship is accredited by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics, 120 South Riverside Plaza, Suite 2190, Chicago, IL 60606-6995, 312-899-0400, <https://www.eatrightpro.org/acend>

Course Requirements

Required Courses

Of the minimum 30 graduate credit hours required for the master's program of study, at least 18 hours should be at the 700 level and above.

- FNDH 760 - Applied Dietetics **Credits: 1-6**
- **Credits: 6 required**
- FNDH 775 - Research in Health Sciences **Credits: 3**
- FNDH 860 - Dietetics Practicum **Credits: 1-6**
- **Credits: 6 required**
- FNDH 897 - Applications in Food, Nutrition, Dietetics and Health **Credits: 1-3**

Elective Courses

Complete a total of 12-14 credits of courses; at least 6 credits of FNDH courses.

Total Hours Required for Master's: 30

Kinesiology (MS)

The Department of Kinesiology offers a master of science degree. Students may emphasize exercise physiology/pathophysiology, or exercise behavioral science.

Admission Requirements

Students entering the Kinesiology graduate program must satisfy a minimum number of undergraduate competencies. These competencies are often satisfied with an undergraduate degree in kinesiology. Students without an undergraduate degree in kinesiology may be required to complete additional undergraduate coursework. Application procedures require (1) a completed graduate application form, (2) transcripts from all universities and colleges attended, (3) three letters of reference, and (4) a statement outlining professional goals and areas of special interest. Application for admission to the program in the fall semester should be made in the preceding late fall or early winter. Applications are also accepted for the spring semester.

Course Requirements

The M.S. degree in kinesiology requires a minimum of 30 hours for students completing a master's thesis option and 36 hours for students completing a course work option. The specific program of study, designed by the student and supervisory committee, is tailored to meet the individual needs and interests of the student. A maximum of 12 hours of supporting work in other departments may be applied toward the degree. All students are expected to demonstrate a depth and breadth of understanding of kinesiology in a written and/or oral final evaluation.

Required Courses

- KIN 815 - Research Methods in Kinesiology **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**

Thesis Option Courses

Complete a total of 18 hours from Kinesiology courses 600 and above; and approved courses outside the department.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Thesis

6 hours required

Coursework Only Option Courses

Complete a total of 30 hours from Kinesiology courses 600 and above; and approved courses outside the department.

Total Hours Required for Master's: 30-36

Physician Assistant (MS)

Overview of the MSPAS Program

Kansas State University physician assistant program leads to a Master of Science in Physician Assistant Studies (MSPAS) degree. The program follows the traditional medical model of training. It provides an in-depth analysis of disease processes, diagnosis, and treatment, preparing students to serve as primary health care providers who practice medicine with physician supervision.

The 27-month physician assistant program will admit 44 students annually and prepares graduates to provide medical care as part of an interprofessional health care team. The curriculum consists of three semesters of classroom training (didactic) and four semesters of clinical rotations (clinical). All students enter as a single cohort in the spring semester, complete seven continuous full-time semesters, and graduate in May with a Master of Science in Physician Assistant Studies (MSPAS) degree.

Degree Requirements

The MSPAS requires 112 graduate credit hours, 66 from didactic, and 46 from the clinical year. The program does not offer advanced placement. No credit is granted for prior work experience in the healthcare field. Furthermore, no transfer credits are accepted. The following list is the core requirements of the program.

Course Requirements

* Course varies, and may occur in any clinical year semester

Didactic to Clinical Phase. The Progression, Promotion and Professionalism (PPP) committee will recommend promotion from didactic to the clinical phase based on the following requirements:

- Earned a cumulative GPA of 3.0 or greater, with a "C" or better in each course.
- Demonstrated adherence to the University and Program policies, Guidelines for Ethical Conduct for the PA Profession and K-State Student Code of Conduct policy.*
- Participated in all program required events (unless otherwise excused by the appropriate director).
- Completed HIPAA and blood borne pathogen training.
- Provided documentation of health insurance.
- Met all the qualifications for credentialing in the clinical phase to include all required immunizations, TB skin test, passed urine drug screen, passed criminal background/sex offender check, BLS, and ACLS certification.
- Signed the Health Information Release form, allowing the K-State Physician Assistant Program to maintain and release the following information to clinical rotation sites: immunizations, TB screening status, background check, and BLS/ACLS certification.

Clinical to Graduation. The PPP committee will recommend promotion from the clinical phase of training to graduation based on the following requirements:

- Received a "B" or better in every clinical course, and the Summative*.
- Completed all 112 credit hours with a cumulative GPA of 3.0 or greater.
- Demonstrated adherence to K-State University and PA program policies, the Guidelines for Ethical Conduct for the PA Profession and K-State Student Code of Conduct policy.*

- Participated in program-required events.
- Met all K-State graduation requirements.
- Successfully completed the Summative course (PAS 895), by meeting all academic and professional standards.
- Met the K-State PA program Technical Standards.
- *In the event that the student fails a rotation, he/she will be allowed to progress to the Summative (PAS 895), but must return the following semester to retake the failed rotation, resulting in a delay in graduation. Maximum rotation retakes are set at two.

Notes:

1. Students will refer to the Physician Assistant website at <https://www.hhs.k-state.edu/pa/>, or the Didactic and Clinical Manuals for more details on program policies and procedures.
2. The ability to meet the academic and technical standards for physician assistant students is required <https://www.hhs.k-state.edu/pa/admission/>.
3. Refer to the PA program's website for further information <https://www.hhs.k-state.edu/pa/>.
4. PA program semesters do not follow the standard KSU schedule.

The coursework only option for this program does not require a culminating experience.

Didactic Courses (66 Credits)

Spring 1st Year (22)

- PAS 700 - Applied Anatomy and Physiology I **Credits: 4**
- PAS 710 - PA Profession **Credits: 1**
- PAS 720 - Evidence Based Medicine **Credits: 1**
- PAS 740 - Clinical Procedures I **Credits: 2**
- PAS 750 - Physical Diagnosis I **Credits: 2**
- PAS 760 - Diagnostics I - Laboratory **Credits: 2**
- PAS 770 - Applied Pathophysiology I **Credits: 2**
- PAS 780 - Clinical Medicine I **Credits: 6**
- PAS 790 - Pharmacology I **Credits: 2**

Summer 1 (23)

- PAS 711 - Applied Anatomy and Physiology II **Credits: 4**
- PAS 721 - Medical Genetics **Credits: 1**
- PAS 731 - Clinical Pediatrics **Credits: 2**
- PAS 741 - Clinical Procedures II **Credits: 2**
- PAS 751 - Physical Diagnosis II **Credits: 2**
- PAS 761 - Diagnostics II - EKG **Credits: 2**
- PAS 771 - Applied Pathophysiology II **Credits: 2**
- PAS 781 - Clinical Medicine II **Credits: 6**
- PAS 791 - Pharmacology II **Credits: 2**

Fall 1 (21)

- PAS 722 - Clinical Geriatrics **Credits: 2**
- PAS 732 - Psychiatry & Behavioral Medicine **Credits: 2**

- PAS 742 - Clinical Procedures III **Credits: 2**
- PAS 752 - Physical Diagnosis III **Credits: 2**
- PAS 762 - Diagnostics III- Radiology **Credits: 2**
- PAS 772 - Applied Pathophysiology III **Credits: 2**
- PAS 782 - Clinical Medicine III **Credits: 7**
- PAS 792 - Pharmacology III **Credits: 2**

Clinical Courses (46 Credits)

CLINICAL ROTATIONS

Spring 2nd Year (12)

- PAS 800 - Family Medicine I - SCPE **Credits: 4**
- PAS 810 - Family Medicine II - SCPE **Credits: 4**
- PAS 820 - Internal Medicine - SCPE **Credits: 4**

Summer 2 (12)

- * PAS 830 - Emergency Medicine - SCPE **Credits: 4**
- * PAS 840 - Pediatric Medicine - SCPE **Credits: 4**
- * PAS 850 - Surgery - SCPE **Credits: 4**

Fall 2 (12)

- * PAS 860 - Behavioral Medicine - SCPE **Credits: 4**
- * PAS 870 - Women's Health - SCPE **Credits: 4**
- * PAS 890 - Geriatric Medicine - SCPE **Credits: 4**

Spring 3rd Year (10)

- * PAS 891 - Orthopedics - SCPE **Credits: 4**
- PAS 892 - Elective Experience I **Credits: 4**
- PAS 895 - Summative **Credits: 2**

Total Hours Required for Master's: 112

School of Human Sciences

Mindy Markham, School Director

301 Justin Hall
 785-532-5510
 Fax: 785-532-5505
humansci@k-state.edu

<https://www.hhs.k-state.edu/human-sciences/>

Overview

The School of Human Sciences is a multidisciplinary unit that provides graduate training for M.S. and Ph.D. students. The professional specializations are addressed to broad issues concerning individuals and families, and the courses are taught by a faculty of educators, prevention scientists, health specialists, gerontologists, and couple and family therapists.

Extensive research and professional practice opportunities are provided through The Family Center and Center for Child Development. Opportunities are also available through the university-wide Center on Aging and various community programs.

The school offers graduate work toward M.S. and Ph.D. degrees in a broad range of the human sciences and human services. The M.S. degree in human development and family science includes specializations in couple and family therapy, early childhood education, family and community services, and prevention science. The school also offers an M.S. in gerontology. The school offers the following specializations leading to the Ph.D. degree in health and human sciences: couple and family therapy and prevention science in HDFS. Also available in the department are certificates in conflict resolution, gerontology, and human services administration.

Online programs

The school collaborates with the Innovative Digital Education Alliance (IDEA) Innovative Digital Education Alliance (IDEA) to offer the M.S. degree in human development and family science with a specialization in family and community services. The inter-institutional M.S. programs draw upon the expertise of graduate faculty from six universities. The program is taught fully online. Students enrolled in the program through Kansas State University will receive their degrees from Kansas State University.

Additionally, the M.S. degree in human development and family science with a specialization in early childhood education, the M.S. in gerontology, and the graduate certificates in conflict resolution, gerontology, and human services administration are all offered as online only programs.

Accelerated

Accelerated Human Development and Family Science (BS)/Human Development and Family Science - Prevention Science (MS)

The accelerated Accelerated Human Development and Family Science (BS)/Human Development and Family Science - Prevention Science (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Human Development and Family Science - Prevention Science degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Human Development and Family Science - Prevention Science (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- CNRES 750 - Crises Across the Lifespan **Credits: 3**
- HDFS 752 - Social Justice Approach to Prevention in HDFS **Credits: 3**
- HDFS 770 - Development and Implementation of Prevention Science Programs **Credits: 3**
- HDFS 852 - Theories of Human Development and Family Science **Credits: 3**
- HDFS 860 - Family Policy **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Doctor of Philosophy

Health and Human Sciences - Couple and Family Therapy (PHD)

The School of Human Sciences participates in the Ph.D. degree program awarded from the College of Health and Human Sciences with a specialization in Couple and Family Therapy. The mission of our CFT doctoral program is to educate and mentor family scientist-practitioners with the most advanced, cutting edge research training, for the purpose of developing scholars prepared to make significant contributions in academic and clinical settings. Our goal is to develop distinguished scholars who are highly sought after due to their demonstrated competency as world-class researchers, excellent clinicians, clinical supervisors, and educators. Students pursue programs of study that include course work in human development, family studies, couple and family therapy, statistics, and research methods. The Ph.D. specialization in couple and family therapy is accredited by the Commission on Accreditation for Marriage and Family Therapy Education (COAMFTE).

Students interested in this option with questions about program requirements or curriculum should contact:

Dr. Glade Topham
Doctoral Program Admissions Chair
Couple and Family Therapy
Department of Applied Human Services
139 Campus Creek Complex
Kansas State University
Manhattan, KS 66506

(785) 532-6245
gtopham@ksu.edu

Students interested in this option with questions about admission should contact:

CFT Graduate Program Admissions Coordinator
Department of Applied Human Services
301C Justin Hall
Kansas State University
Manhattan, KS 66506
ljrausch@ksu.edu

Admission Requirements

This curriculum for the Ph.D. in CFT follows COAMFTE guidelines. It assumes students have completed the requirements for the COAMFTE Master's-Level Standard Curriculum. Where that is not the case, students must complete the equivalent of any deficiencies. Most students complete the program in four years. Students have seven years to complete the program. A minimum of 90 credits is required. Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

No GRE requirement for admission.

Course Requirements

Assessment and Treatment in Couple and Family Therapy (3 hours)

- CFT 970 - Specialization and Leadership Credits: 3

Family Studies and Human Services (3 hours)

- HDFS 950 - Theory Construction in Human Development and Family Science Credits: 3

Supervision of CFT (12-18 hours)

- CFT 984 - Supervision of Couple and Family Therapy Credits: 3
- CFT 986 - Practicum in Supervision in Couple and Family Therapy Credits: 1-3
(9-15 hours required)

Research Methods (28 hours)

- CFT 910 - Topics in Couple and Family Therapy Credits: 1-3
(3 hours required)
- CFT 983 - Advanced Family Research Methods Credits: 3
- HDFS 809 - Qualitative Research Methods in Human Development and Family Science Credits: 3
- HDFS 906 - Statistical Methods in Family Studies and Human Sciences II Credits: 3

Supervised Clinical Practice (3-9 hours)

- CFT 985 - PhD Practicum in Couple and Family Therapy **Credits: 1-3**
(3 hours minimum)

Additional Learning (9 hours)

- Electives **Credits: 9**
- Take additional electives hours as needed to reach the required 90 credit minimum.

End-of-Program Requirements

- Accumulate 1000 approved clinical hours (including approved transfer hours)
 - Successfully defend your dissertation proposal seminar, write the dissertation, and successfully complete your oral defense of the dissertation
- AND**
- Successfully complete required CFT portfolio with at least two publications
- OR**
- Successfully complete the required CFT portfolio with less than two publications and complete written preliminary examinations and, if necessary, successfully defend them in the oral preliminary examination

Program Total Credits: 60

Master's degree Transfer Credits: 30

**Students who hold a master's degree may request transfer of up to 30 credit hours of that degree toward a Doctoral Degree*

Total Credit Hours Required for Doctorate: 90

Health and Human Sciences - Prevention Science in Human Development and Family Science (PHD)

The School of Human Sciences participates in the Ph.D. degree program awarded from the College of Health and Human Sciences with a specialization in Prevention Science in HDFS. The PhD program in Prevention Science in HDFS provides students with the skills to teach, conduct research, and practice in the field. Graduates will be prepared to conduct high-impact research addressing issues and needs relevant to individual, family and relationship health and well-being across the life course. Such research findings inform public policy, program development, and build the evidence base.

Admission Requirements

Course Requirements

Requirements: A minimum of 90 credit hours is required.

Required Courses: (24 credits)

- HDFS 752 - Social Justice Approach to Prevention in HDFS **Credits: 3**

- HDFS 770 - Development and Implementation of Prevention Science Programs **Credits: 3**
- HDFS 787 - Resilience in Families **Credits: 3**
- HDFS 852 - Theories of Human Development and Family Science **Credits: 3**
- HDFS 860 - Family Policy **Credits: 3**
- HDFS 893 - Evaluation of Prevention Science Programs **Credits: 3**
- HDFS 950 - Theory Construction in Human Development and Family Science **Credits: 3**
- HHS 995 - Grant Writing and Management **Credits: 3**

Statistics and Research Methods:

Statistics: 9 credits

One of the Following:

- HDFS 806 - Statistical Methods in Human Development and Family Science I **Credits: 3**
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**

And one of the following:

- HDFS 906 - Statistical Methods in Family Studies and Human Sciences II **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

And one of the following:

- CFT 910 - Topics in Couple and Family Therapy **Credits: 1-3**
- STAT 730 - Multivariate Statistical Methods **Credits: 3**

Research Methods: 9 credits

- CFT 983 - Advanced Family Research Methods **Credits: 3**
- HDFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**
- HHS 888 - Foundations in Research Methodology **Credits: 3**

Professional Development: Minimum 14 credits

- CFT 970 - Specialization and Leadership **Credits: 3**
- EDCI 943 - Principles of College Teaching **Credits: 3**
- HDFS 981 - Applied Practicum in HDFS **Credits: 1-3** (Can be repeated for elective credit)
- HDFS 982 - College Teaching Practicum in HDFS **Credits: 1-3** (Can be repeated for elective credit)
- HDFS 983 - Research Practicum in HDFS **Credits: 1-3** (Can be repeated for elective credit)

Electives: 15 credits

These 15 credits of electives should be based on student's professional goals and must be approved by the student's supervisory committee.

Doctoral Research: 19 credits

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Conflict Resolution Graduate Certificate

Contact: Brett Mallon

E-mail: bmallon@ksu.edu

Home Page: <https://online.k-state.edu/programs/certificates/graduate-certificates/conflict-resolution.html>

Offered through the School of Human Sciences, the Graduate Certificate in Conflict Resolution provides students with the fundamentals of conflict resolution and practice. It is intended to meet the needs of those individuals who seek introductory graduate training in conflict resolution. It may also be appropriate for professionals who have already earned a graduate degree in their professional field, but who would benefit from academic study of applications of conflict analysis and resolution in their current profession.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Human Development and Family Science – Prevention Science at Kansas State University.

Course Requirements

Required Courses

To complete the Conflict Resolution Graduate Certificate Program you must complete four, three-credit-hour courses.

- CNRES 751 - Interpersonal Conflict Skills and Strategies **Credits: 3**
- CNRES 752 - Culture and Conflict **Credits: 3**
- CNRES 753 - Violence Prevention and Intervention **Credits: 3**
- CNRES 754 - Organizational Conflict **Credits: 3**
- CNRES 755 - Family Mediation **Credits: 3**
- CNRES 758 - Applied Alternative Dispute Resolution **Credits: 3**
- CNRES 759 - Foundations of Trauma and Traumatic Stress **Credits: 3**
- CNRES 761 - International Conflict & Trauma **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Gerontology Graduate Certificate

The 15-credit hour online Graduate Certificate in Gerontology is a flexible and customizable curriculum designed to provide students with the cutting-edge gerontological skills needed to enhance their degree or propel advancement in their field. Innovative courses taught by a diverse faculty engage students in a variety of topics such as health and well-being, advocacy, emerging critical issues, and community-based interventions.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Gerontology at Kansas State University.

Course Requirements

The graduate certificate program consists of 15-credit hours of coursework, including core courses (6 credit hours) and electives (9 credit hours).

Required Courses

6 credit hours

- GERON 772 - Adult Development and Aging **Credits: 3**
- GERON 775 - Advanced Diversity in the Aging Experience **Credits: 3**

Elective Courses

Students may choose from any of the following elective courses and/or take courses from outside of this list based upon their professional goals. Electives outside of this list must be approved by the gerontology graduate program director. Only up to 3-credit hours of practicum experience may be included in the certificate program. 9 credit hours

- GERON 605 - Practicum in Gerontology **Credits: 1-3**
- GERON 610 - Seminar in Long-Term Care Administration **Credits: 3**
- GERON 620 - Independent Study in Gerontology **Credits: 1-3**
- GERON 625 - Advanced Physical Health & Well-Being of Older Adults **Credits: 3**
- GERON 630 - Advanced Mental Health & Aging **Credits: 3**
- GERON 725 - Advanced Topics in Gerontology **Credits: 1-3**
- GERON 730 - Advanced Sexuality & Aging **Credits: 3**
- GERON 740 - Advanced Creativity & Aging **Credits: 3**
- GERON 774 - Advanced Environments & Aging **Credits: 3**
- GERON 776 - Advanced Program Design, Implementation, & Evaluation in Gerontology **Credits: 3**
- GERON 777 - Advanced Policy & Advocacy in Gerontology **Credits: 3**
- GERON 778 - Advanced Aging Family Dynamics & Caregiving **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Human Services Administration Graduate Certificate

Contact: Alisha Hardman

E-mail: ahardman@k-state.edu

Home Page: <https://online.k-state.edu/programs/certificates/graduate-certificates/human-services-administration.html>

Offered through the School of Human Sciences, the Graduate Certificate in Human Services Administration provides students the skills and competencies needed to develop, implement, evaluate, and administer programs designed to enhance family and relationship health and well-being within non-profit or public settings. It is intended to meet the needs of individuals who seek introductory graduate training as well as those who have already earned a graduate degree, but who would benefit from academic study of human services administration in their current profession.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Human Development and Family Science – Prevention Science or Master of Human Development and Family Science – Family and Community Services at Kansas State University

Course Requirements

Required Courses

- HDFS 801 - Grant Development and Management **Credits: 3**
- HDFS 860 - Family Policy **Credits: 3**
- HDFS 770 - Development and Implementation of Prevention Science Programs **Credits: 3**
OR
- HDFS 719 - Program Administration and Management **Credits: 3**
- HDFS 893 - Evaluation of Prevention Science Programs **Credits: 3**
OR
- HDFS 714 - Program Design, Evaluation, and Implementation **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Youth Development Professional Graduate Certificate

(available through distance education only)

Contact: Elaine Johannes
E-mail: ejohanne@ksu.edu

Offered through the School of Human Sciences graduate program, the objective of the youth development professional certificate is to train graduates to understand and apply conceptual approaches to youth development, to display an understanding of the development and impact of local, regional, state, federal, and global policies on youth as well as to recognize the impact of family and cultural influences on positive youth outcomes.

The certificate requires 12 credit hours chosen from a list of approved courses in addition to a one-hour foundations course.

The program is a collaborative, multi-institution effort with course work delivered online. Faculty from a partnership of seven land-grant universities share knowledge and expertise in youth development. All institutions are members of the Innovative Digital Education Alliance (IDEA) and have a history of success in online education.

Course Requirements:

- HDFS 711 - Foundations of Youth Development **Credits: 1**

Choose four of the following five courses (12 credits):

- HDFS 712 - Community Youth Development **Credits: 3**
- HDFS 713 - Adolescents and Their Families: Implications for Youth Professionals **Credits: 3**
- HDFS 717 - Youth Policy **Credits: 3**
- HDFS 720 - Youth Development **Credits: 3**
- HDFS 722 - Youth and Cultural Contexts **Credits: 3**

Master of Science

Gerontology (MS)

The online Master of Science in Gerontology prepares graduates to become practitioners, advocates, leaders, and changemakers in the field of aging. Innovative courses taught by a diverse faculty engage students in a variety of topics such as health and well-being, advocacy, emerging critical issues, and community-based interventions. This flexible and customizable curriculum is designed to meet the needs of students seeking professional preparation for career development or advancement in their field.

Course Requirements

The program requires 30 credit hours of coursework. Students will choose one of the following plans:

- A) Gerontology (15) + Electives (15)
- B) Gerontology (15) + Long-Term Care Administration (6) + Electives (9)

Most students who successfully complete the Long-Term Care Administration track will be eligible to sit for their specific state's administrator licensing exam.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

15 credit hours

- GERON 772 - Adult Development and Aging **Credits: 3**
- GERON 775 - Advanced Diversity in the Aging Experience **Credits: 3**
- GERON 777 - Advanced Policy & Advocacy in Gerontology **Credits: 3**
- GERON 799 - Professional Application in Gerontology **Credits: 1-3**
Select one of the following. 3 hours required. May take within the required hours or within the electives. No dual use of the hours as both a required and elective course. Course must be designated as required or elective.
- GERON 605 - Practicum in Gerontology **Credits: 1-3**
- GERON 620 - Independent Study in Gerontology **Credits: 1-3**

Long-Term Care Administration

6 credit hours

- GERON 610 - Seminar in Long-Term Care Administration **Credits: 3**
- GERON 615 - Long-Term Care Administration Internship **Credits: 1-9**

Elective Courses

9-15 credit hours

Students may choose from any of the following courses and/or choose electives outside of this list based upon their professional goals. Electives outside of this list must be approved by the student's master's committee.

- GERON 605 - Practicum in Gerontology **Credits: 1-3**

- GERON 610 - Seminar in Long-Term Care Administration Credits: 3
- GERON 620 - Independent Study in Gerontology Credits: 1-3
- GERON 625 - Advanced Physical Health & Well-Being of Older Adults Credits: 3
- GERON 630 - Advanced Mental Health & Aging Credits: 3
- GERON 711 - Advanced Death and Dying Credits: 3
- GERON 715 - Aging Veterans Credits: 3
- GERON 725 - Advanced Topics in Gerontology Credits: 1-3
- GERON 730 - Advanced Sexuality & Aging Credits: 3
- GERON 740 - Advanced Creativity & Aging Credits: 3
- GERON 774 - Advanced Environments & Aging Credits: 3
- GERON 776 - Advanced Program Design, Implementation, & Evaluation in Gerontology Credits: 3
- GERON 778 - Advanced Aging Family Dynamics & Caregiving Credits: 3

Total Hours Required for Master's: 30

Human Development and Family Science (MS)

The School of Human Sciences offers a Master of Science degree in Human Development and Family Science with specializations in couple and family therapy, early childhood education, prevention science, and family and community services.

Requirements - at least 30 credits are required to complete the Master's degree.

Human Development and Family Science - Couple and Family Therapy (MS)

The School of Human Sciences offers a Master of Science degree in Human Development and Family Science with a specialization in couple and family therapy. The couple and family therapy M.S. specialization prepares professionals to conduct and evaluate therapy with couple and family groups. Students pursue programs of study that include course work in human development, family studies, couple and family therapy, and research methods. The M.S. specialization in couple and family therapy is accredited by the Commission on Accreditation for Marriage and Family Therapy Education.

Students interested in this option with questions about program requirements or curriculum should contact:

Dr. Glade Topham
 Master's Program Admissions Chair
 Couple and Family Therapy
 Department of Applied Human Sciences
 139 Campus Creek Complex
 Kansas State University
 Manhattan, KS 66506
 (785) 532-6245
gtopham@ksu.edu

Students interested in this option with questions about admissions should contact:

CFT Graduate Program Admissions Coordinator
 Department of Applied Human Sciences
 301C Justin Hall
 Kansas State University
 Manhattan, KS 66506
ljrausch@ksu.edu

Admission Requirements

Course Requirements

The M.S. degree in Couple and Family Therapy requires 60 semester hours of graduate work. Most students complete the program in three years. Students have up to five years to complete the program.

The coursework only option for this program does not require a culminating experience.

Required Courses

- Theoretical Foundations of Couple and Family Therapy
 - CFT 853 - Family Systems in Cultural Context **Credits: 3**
 - CFT 864 - Clinical Theory and Practice A **Credits: 3**
 - CFT 867 - Pre-Practicum in Couple and Family Therapy **Credits: 3**
 - CFT 896 - Clinical Theory and Practice B **Credits: 3**
- Assessment and Treatment in Couple and Family Therapy
 - CFT 869 - Systematic Treatment of Trauma Violence and Substance Abuse **Credits: 3**
 - CFT 870 - Couples and Sex Therapy **Credits: 3**
 - CFT 872 - Family Therapy **Credits: 3**
 - CFT 879 - Systemic Assessment and Treatment of Psychopathology **Credits: 3**
 - CFT 886 - Clinical Intervention with Parents and Children **Credits: 3**
- Family Studies and Human Services
 - CFT 824 - Parent-Child Interaction: Theory and Research **Credits: 3**
 - CFT 865 - Human Sexuality **Credits: 3**
- Ethics and Professional Studies
 - CFT 878 - Professional Studies in Family Therapy **Credits: 3**
- Research Methodology
 - HDFS 888 - Research Methods in Human Development and Family Science **Credits: 3**
- Choose one of the following courses:**
 - HDFS 806 - Statistical Methods in Human Development and Family Science I **Credits: 3**
 - HDFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**
 - HDFS 893 - Evaluation of Prevention Science Programs **Credits: 3**
- Supervised Clinical Practice
 - A minimum of 12 credit hours of Practica (CFT 885); must accumulate 500 client contact hours and 100 hours of supervision.
 - CFT 885 - Practicum in Couple and Family Therapy **Credits: 1-3**

Elective Courses

Students who choose to complete the clinical project (See below) are required to complete 3 elective credit hours.

Thesis Option Courses

1. Pass a comprehensive written examination on couple and family therapy
2. Complete, with committee approval, a thesis (requiring 6 hours of CFT 899)
3. Pass an oral examination with emphasis on the written document

- CFT 899 - MS Research in Couple and Family Therapy Credits: 1-6 (6)

Clinical Project Option

1. Pass a comprehensive written examination on couple and family therapy
 2. Complete, with committee approval, a Clinical Project (requiring 3 hours of CFT 889 plus 3 elective credit hours)
 3. Pass an oral examination with emphasis on the written document
- CFT 889 - Clinical Project Credits: 1-3 (3)

Total Hours Required for Master's: 60

Human Development and Family Science - Early Childhood Education (MS)

The School of Human Sciences offers a Master of Science degree in Human Development and Family Science with a specialization in early childhood education. The M.S. program in early childhood education prepares individuals to be master teachers, directors of early childhood programs, and leaders in the development of childcare policy.

Students interested in this option with questions about program requirements or curriculum should contact:

Dr. Mary DeLuccie
Program Chair
Early Childhood Education

Department of Applied Human Sciences
303 Justin Hall
Kansas State University
Manhattan, KS 66506
deluccie@ksu.edu

Admission Requirements

The candidate must select his/her major professor and one other member of his/her committee from the Early Childhood Education area. The committee will be responsible for the development of a course of study with the candidate and for approving a choice of practicum and the preparation of the written report.

The academic performance of the student in the Early Childhood Education specialization will be reviewed by the student's committee after he/she has completed at least twelve (12) hours of graduate study.

Students considering the thesis option should enroll in additional research and/or statistics courses in consultation with their major professor.

Course Requirements

To complete the program, the master's candidate must have:

1. Thirty (30) graduate hours of coursework approved by their committee.
2. Experience working with children. The candidate can fulfill this requirement with coursework in one of the following:
 - Practicum in Early Childhood Education (ECED 883). Enrollment for 3 credits is required.
 - Practicum in Parent Education (ECED 884). Enrollment for 3 credits is required.
 - Practicum in Human Development Research (LSHD 892). Enrollment for 3 credits is required.

- Research in FSHS (Thesis or Report or Article) (ECED 899). Enrollment for 2 credits (Report or Article) for 6 credits (Thesis) is required.
- 3. A comprehensive examination *or* a written document which may take one of three forms:
 - a. Thesis - an empirical study with a comprehensive review of the literature and conforming to specifications set by the university. Enrollment in ECED 899 for 6 credits is required.
 - b. An article prepared for submission to a scholarly journal (research or expository). Enrollment in ECED 899 for 2 credits is required.
 - c. Report, e.g., curriculum teacher guide, survey, parent handbook, assessment instruments. Enrollment in ECED 899 for 2 credits is required.
- 4. The candidate must have an oral defense of the document or of the comprehensive examination.

Required Courses

- ECED 810 - Child Development **Credits: 3**
- ECED 815 - Infant Behavior and Development **Credits: 3**
- ECED 820 - Theories of Human Development **Credits: 3**
- ECED 830 - Advanced Program Development **Credits: 3**
- HDFS 850 - Family Science **Credits: 3**
- or
- HDFS 852 - Theories of Human Development and Family Science **Credits: 3**
- or
- HDFS 670 - Working with Parents **Credits: 3**
- HDFS 888 - Research Methods in Human Development and Family Science **Credits: 3**
- or
- EDCEP 816 - Research Methods in Education **Credits: 3**

Elective Courses

- ECED 710 - Child Care: Components and Issues **Credits: 3**
- ECED 728 - Assessment of Young Children **Credits: 3**
- ECED 730 - Early Childhood Program Administration **Credits: 3**
- ECED 740 - Play Facilitation **Credits: 3**
- ECED 883 - Practicum in Early Childhood Education **Credits: 1-18**
- ECED 884 - Practicum in Parent Education **Credits: 1-18**
- HDFS 899 - MS Research in Human Development and Family Science **Credits: 1-8**
- HDFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**

Thesis Option Courses

Thesis - an empirical study with a comprehensive review of the literature and conforming to specifications set by the university. Enrollment in ECED 899 for 6 credits is required.

- ECED 899 - MS Research in Early Childhood Education **Credits: 1-6 (6)**

Report Option Courses

- 1. An article prepared for submission to a scholarly journal (research or expository). Enrollment in ECED 899 for 2 credits is required.

2. Report, e.g., curriculum teacher guide, survey, parent handbook, assessment instruments. Enrollment in ECED 899 for 2 credits is required.
- ECED 899 - MS Research in Early Childhood Education **Credits: 1-6 (2)**

Total Hours Required for Master's: 30

Human Development and Family Science - Family and Community Services (MS)

The Family and Community Services Master's degree program, is offered as an inter-institutional online program sponsored by the Innovative Digital Education Alliance (IDEA). This program equips professionals to help families and communities thrive in today's world. This degree prepares students to manage programs and deliver quality services, as well as understand family and community dynamics and human development across the lifespan.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

30 credit hours

The following courses are required for all Family and Community Services Students at all GPIDEA Campuses:

- CNRES 750 - Crises Across the Lifespan **Credits: 3**
- HDFS 714 - Program Design, Evaluation, and Implementation **Credits: 3**
- HDFS 719 - Program Administration and Management **Credits: 3**
- HDFS 784 - Foundations and Principles of Family and Community Services **Credits: 3**
- HDFS 785 - Family Dynamics **Credits: 3**
- HDFS 786 - Lifespan Development **Credits: 3**
- HDFS 787 - Resilience in Families **Credits: 3**
- HDFS 791 - Parenting Education **Credits: 3**
- HDFS 825 - Family Resource Management **Credits: 3**
- HDFS 862 - Interpersonal Relationships **Credits: 3**

Elective Courses

Select one course

- CNRES 759 - Foundations of Trauma and Traumatic Stress **Credits: 3**
- HDFS 700 - Problems in Human Development and Family Science **Credits: 1-6**
- HDFS 708 - Topics in Human Development and Family Science **Credits: 2-3**
- HDFS 724 - Working with Military Families **Credits: 3**
- HDFS 770 - Development and Implementation of Prevention Science Programs **Credits: 3**
- HDFS 899 - MS Research in Human Development and Family Science **Credits: 1-8**

Capstone Courses

Select one

- HDFFS 881 - Capstone in Human Development and Family Science **Credits:** 1-6
- PFP 675 - Field Study in Family Economics **Credits:** 1-3

Practica

Practica not required, but the courses below will support capstone experiences as determined by the student and committee.

- HDFFS 700 - Problems in Human Development and Family Science **Credits:** 1-6
- HDFFS 708 - Topics in Human Development and Family Science **Credits:** 2-3
- HDFFS 881 - Capstone in Human Development and Family Science **Credits:** 1-6
- PFP 675 - Field Study in Family Economics **Credits:** 1-3

Total Hours Required for Master's: 36

Human Development and Family Science - Prevention Science (MS)

The School of Human Sciences offers a Master of Science degree in Human Development and Family Science with a specialization in Prevention Science. The M.S. program in Prevention Science trains students in applying research-based knowledge to the development, implementation, evaluation, and administration of prevention programs designed to promote individual, family, and relationship health and well-being across the life course. Students who choose the thesis option will also develop research skills to investigate phenomena within the field of human development and family science.

Requirements - at least 30 credits are required to complete the Master's degree in Prevention Science.

Admission Requirements

Students interested in this option with questions about admissions should contact:

Alisha Hardman, Ph.D.

Associate Professor & Graduate Program Coordinator

Human Development & Family Science

College of Health and Human Sciences

Kansas State University

316 Justin Hall

Manhattan, KS 66506

ahardman@k-state.edu

Course Requirements

Required Courses

- HDFFS 752 - Social Justice Approach to Prevention in HDFFS **Credits: 3**
OR
- CNRES 752 - Culture and Conflict **Credits: 3** (if on the Conflict Resolution track)
- HDFFS 770 - Development and Implementation of Prevention Science Programs **Credits: 3**
- HDFFS 787 - Resilience in Families **Credits: 3**
- HDFFS 800 - Introduction to Human Development and Family Science Graduate Program **Credits: 0**
- HDFFS 852 - Theories of Human Development and Family Science **Credits: 3**
- HDFFS 893 - Evaluation of Prevention Science Programs **Credits: 3**
- HHS 888 - Foundations in Research Methodology **Credits: 3**

Thesis Option Courses

12 credit hours

One of the following:

- EDCEP 817 - Statistical Methods in Education **Credits: 3**
 - HDFFS 806 - Statistical Methods in Human Development and Family Science I **Credits: 3**
 - HDFFS 809 - Qualitative Research Methods in Human Development and Family Science **Credits: 3**
 - STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
- AND**
- HDFFS 899 - MS Research in Human Development and Family Science **Credits: 1-8** (6 hours required)
 - Elective **Credits: 3**

Coursework Only Option Courses

12 credit hours

The coursework only option for this program does not require a culminating experience.

Program Administration and Policy Track

- HDFFS 801 - Grant Development and Management **Credits: 3**
- HDFFS 860 - Family Policy **Credits: 3**
- HDFFS 881 - Capstone in Human Development and Family Science **Credits: 1-6** (3 hours required)
- Elective **Credits: 3**

Conflict Resolution Track

- CNRES 751 - Interpersonal Conflict Skills and Strategies **Credits: 3**
- CNRES 753 - Violence Prevention and Intervention **Credits: 3**
- CNRES 755 - Family Mediation **Credits: 3**
- HDFFS 881 - Capstone in Human Development and Family Science **Credits: 1-6** (3 hours required)

Trauma Studies Track

- CNRES 750 - Crises Across the Lifespan **Credits: 3**
- CNRES 753 - Violence Prevention and Intervention **Credits: 3**
- CNRES 759 - Foundations of Trauma and Traumatic Stress **Credits: 3**
- HDFS 881 - Capstone in Human Development and Family Science **Credits: 1-6** (3 hours required)

Total Hours Required for Master's: 30

Human Development and Family Science - Youth Development (MS)

The School of Human Sciences offers a Master of Science degree in Human Development and Family Science with a specialization in youth development. The collaborative, multi-institutional master's degree program in Youth Development draws on the expertise of graduate faculty and graduate courses from six land-grant universities. Faculty at these institutions share knowledge and expertise in youth development, delivering most instruction over the internet. All institutions are members of the Innovative Digital Education Alliance (IDEA) and have a history of success in distance education.

Students interested in this option with questions about program requirements or curriculum should contact:

Elaine Johannes, PhD

Human Development and Family Science

College of Health and Human Sciences

318 Justin Hall

Kansas State University

Manhattan, KS 66506

ejohanne@ksu.edu

Course Requirements

The graduate program consists of 36 credit hours, including 10 required courses equaling 28 credit hours and 8 elective hours. The courses are offered on a rotating basis, with all courses offered at least once every other year (i.e., fall, spring, and summer).

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses

Core courses offered within the program include nine courses (3 credit hours each) and a professional development seminar (1 credit hour):

- HDFS 711 - Foundations of Youth Development **Credits: 1**
- HDFS 712 - Community Youth Development **Credits: 3**
- HDFS 713 - Adolescents and Their Families: Implications for Youth Professionals **Credits: 3**
- HDFS 716 - Topics in Contemporary Youth Issues **Credits: 1-3**
- HDFS 717 - Youth Policy **Credits: 3**
- HDFS 718 - Youth Professionals as Consumers of Research **Credits: 3**
- HDFS 719 - Program Administration and Management **Credits: 3**
- HDFS 720 - Youth Development **Credits: 3**
- HDFS 722 - Youth and Cultural Contexts **Credits: 3**

Elective Courses

8 credit hours

The eight elective hours will consist of a practicum (1-3 credits), independent study (1-3 credits), or coursework. Practicum and independent study project hours will be coordinated with the major professor.

Total Hours Required for Master's: 36

College of Technology and Aviation (Salina Campus)

Mission Statement

Kansas State University Salina's mission is to advance innovation and foster talent development in aerospace and technology.

Vision Statement

Kansas State University Salina will lead the nation as a next-generation land-grant university - setting the standard as the most technically progressive institution for developing talent in the aerospace and technology industries and inspiring the learning, creativity, discovery and engagement that positively impacts society and transforms lives in Kansas and around the world.

Accelerated

Accelerated Aeronautical Technology - Professional Pilot (BS)/Aeronautics (MS)

The accelerated Accelerated Aeronautical Technology - Professional Pilot (BS)/Aeronautics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Aeronautics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

**Admission Requirements for an ADP*

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Aeronautics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 707 - Research Methods **Credits: 3**
- COT 701 - Advanced Technical Communication **Credits: 3**

Graduation Requirements

**The Graduation Requirements below must be listed in the ADP Curriculum proposal*

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Graduate Certificate

Aerospace Certification Graduate Certificate

The Graduate Certificate in Aerospace Certification (GCAC) is designed to provide post-baccalaureate students employed in the aviation/aerospace industry, the requisite knowledge required to fulfill various professional roles within companies and organizations that span the industry. These include Aerospace Original Equipment Manufacturers (OEMs otherwise known as Tier I suppliers), Aerospace industry Tier II and Tier III suppliers, Aircraft Maintenance Repair and Overhaul Facilities (MROs), and other organizations. This certificate will provide these professionals a basic and intermediate level of understanding of the FAA's product certification processes and continued airworthiness certification process along with supplemental certification processes and other regulatory requirements associated with bringing products to market in this industry. This knowledge is increasingly important as the industry moves to integrate novel technologies into the National Airspace System (NAS) such as Advanced Air Mobility (AAM) given the rapid rate of retirement of professionals with this level of knowledge.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Aeronautics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Aerospace Cyber Operations Graduate Certificate

The graduate certificate program in UAS- Information Assurance is designed to provide both working professionals and graduate students a strong educational foundation and career potential in an increasingly important industry to both civilian and military organizations all over the United States. The market for Information Assurance jobs remains bright. The primary emphasis of the graduate certificate program is to prepare the workforce to understand the protection of UASs from cyber-attacks by negligent and hostile means and teaching Information Assurance risk assessment principles to practitioners involved with UAS operations on land, sea, air, or satellite platforms.

The program will be offered via K-State Online or face-to-face at K-State Polytechnic in eight-week segments in fall, spring, and summer semesters to meet the needs of both on-campus and off-campus learners. Courses are delivered using a course management system to provide an interactive, web-based classroom to students. Thus, the delivery of the certificate provides for occupational work demands and schedules. The Graduate Certificate in UAS – Information Assurance may be completed in one year. Two courses each in the fall and spring semesters and one course in the summer semester.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Course Requirements

Required Courses

- CYBR 680 - Cyber Systems and Risk Analysis **Credits: 3**
- CYBR 682 - Open Source Cyber Surveillance **Credits: 3**
- CYBR 684 - Advanced Topics in Cyber Data Fusion **Credits: 3**
- CYBR 686 - Risk Management for Cyber Operations **Credits: 3**
- CYBR 688 - Sense and Avoid Technologies in Aerospace Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Aerospace Safety Graduate Certificate

The Graduate Certificate in Aerospace (GCA) is designed to provide post-baccalaureate students employed in the aviation/aerospace industry, the requisite knowledge required to fulfill an organizational safety role for their employer in fulfillment of the recent FAA move to implement SMS (Safety Management Systems) system-wide in an effort to increase system safety levels. This knowledge is increasingly important as the industry moves to integrate novel technologies into the National Airspace System (NAS) such as Advanced Air Mobility (AAM).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Aeronautics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**
- COT 701 - Advanced Technical Communication **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Aeronautics (MS)

The Master of Science in Aviation degree is a 30 credit with 2-option degree that is designed to meet emerging needs of the aviation/aerospace industry. Further, each option has either a research thesis track for those who desire to continue their education to the Ph.D. or a non-thesis option for those who do not plan on continuing their education beyond the master's degree. The M.S. in Aeronautics is also designed to accommodate either the working professional or the traditional academic student with both distance and hybrid instruction models. In either option, students will learn both from experienced professors as well as from experienced industry professionals.

The Leadership/Policy option is aimed at those who wish to continue their professional education with an ultimate career objective of an executive leadership position in the aviation/aerospace sector. Within this option, students will examine and understand current industry issues from a strategic perspective with a focus on how to make the industry more resilient in an era of constrained resources and changing national priorities.

The Aerospace Certification option is designed for those who desire advancement in, or desire to enter the workforce in, either the aerospace manufacturing or continued airworthiness sectors. Students will experience in-depth study in the areas of airworthiness certification, production certification, lean six sigma, project management, safety management and others. This program will meet and exceed emerging industry standards for education and training in airworthiness certification.

Admission Requirements

As specified in the Graduate Handbook. Students with undergraduate backgrounds other than aviation or engineering will be admitted conditionally at the discretion of the admissions committee.

A 3.0 undergraduate G.P.A. on a 4.0 scale during the last 60 hours of coursework is required for admission.

Other material required for admission: Official undergraduate transcripts, 2 letters of recommendation and a letter expressing personal goals in the completion of this program.

Graduation Requirements

30 credit hours.

Course Requirements

The program of study for the MSA program requires 30 total credits to include the following:

Required courses for both options: 6 credit hours

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 707 - Research Methods **Credits: 3**

Aerospace Certification Option: 15 credit hours

- AVT 703 - Project Management for Aerospace Professionals **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**
- Technical Elective **Credits: 3**

Aerospace Leadership/Policy Option: 15 credit hours

- COT 704 - Managerial Finances, Metrics, and Analytics **Credits: 3**
- AVT 751 - Aerospace Policy **Credits: 3**
- AVT 771 - Leadership in the Aerospace Sector **Credits: 3**
- Technical Elective **Credits: 3**
- Technical Elective **Credits: 3**
- Technical Elective **Credits: 3**

Technical Electives

- AVT 703 - Project Management for Aerospace Professionals **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 751 - Aerospace Policy **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- AVT 799 - Advanced Topics in Aeronautics **Credits: 3**
- COT 704 - Managerial Finances, Metrics, and Analytics **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**

Research: 3 credit hours

At least 3 credits from:

- AVT 838 - MSA Thesis **Credits: 1-6**
OR
- AVT 836 - Master of Science in Aeronautics Capstone Project **Credits: 3** (non-thesis students)*

*Non-thesis students will need to enroll in one additional elective to reach 30 total hours.

No more than 9 credits of 600 level courses can be taken. Other technical courses may be substituted upon approval.
(15 credits)

Total Hours Required for Master's: 30

Aviation Maintenance

AVM 101 - Introduction to Aircraft Materials and Tooling Standards

Credits 2

Skills and techniques essential to understanding aircraft material properties and fabrication techniques. Emphasizes knowledge and practical experiences involving: shop safety, organization and human factors associated with shop practices, basic aircraft structural materials and hardware familiarization, fluid lines and fittings, hand tool selection and use, and aviation-specific dimensional inspection tools and techniques, aircraft hardware identification and applications, cleaning and corrosion control, aircraft metal selection an applications, and aircraft material inspection fundamentals.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVM 102 - Aviation Regulations, Compliance and Operations

Credits 2

A review of the role and organizational structure of the Federal Aviation Administration (FAA) as it relates to the certification and continued airworthiness of aircraft and its operation in general, business, and commercial aviation environments. Emphasis on the privileges and limitations of certificated personnel who maintain aircraft systems in the context of the FAA regulations. Includes practical applications of aircraft weight and balance, effective completion of maintenance record entries, accurate use of graphs and charts to determine critical performance values, and the servicing, starting, ground operations, and security of aircraft. Students demonstrate the ability to read, comprehend, and apply information contained in FAA and manufacturers' aircraft maintenance specifications, data sheets, manuals, publications, and related Federal Aviation Regulations, Airworthiness Directives, and Advisory material.

Note

Two hours lecture

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

K-State 8

Empirical and Quantitative Reasoning

AVM 103 - Intro to Aircraft Materials and Tooling Standards Laboratory

Credits 1

A laboratory course to supplement the material of AVM 101.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: AVM 101

Typically Offered

Fall, Summer

AVM 111 - Basic Aircraft Electricity**Credits 4**

A basic concept of DC/AC circuits, with basic laws relating to the following: measuring voltage, current, resistance, continuity and leakage; relationship of voltage, current and resistance in electrical circuits; reading and interpretation of electrical circuit diagrams; electrical devices and inspection and servicing of batteries. Introduction to digital numbering systems and digital logic functions.

Note

Three hours lecture and two hour lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 112 - Aircraft Welding**Credits 2**

Theory and skill development in aircraft welding processes. Exercises in gas welding processes as applied to ferrous and nonferrous materials. Oxygen/acetylene, inert gas, and resistance welding processes are to be studied.

Note

One hour recitation and three hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Natural and Physical Sciences

AVM 121 - Aircraft Drawings**Credits 2**

Students learn how to read, understand, and interpret aircraft drawings commonly found in the aviation maintenance industry. Recognition and identification of drawing lines and symbols, and the meaning of these is covered.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Aesthetic Interpretation

K-State 8 Tag 2

Empirical and Quantitative Reasoning

AVM 131 - Aircraft Standards**Credits 4**

A survey of the organization of the Federal Aviation Administration. Emphasis will be placed on regulations, standards, specifications, procedures and the practice of using charts, graphs and drawings. Also included are the introduction to air transport maintenance procedures, weight and balance procedures, aircraft ground operations and the introduction to flight training to include several flights.

Note

Flight lab fees required.

Two hours lecture and six hours of lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVM 132 - Aircraft Fluid Power**Credits 3**

A study of basic fluid mechanics as it applies to practical applications in aircraft systems. Compressible and incompressible fluid systems will be studied.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 141 - Aircraft Science**Credits 3**

This is a study of basic physics as required by aircraft technicians and defined by FAR 147. Use and understand the principles of simple machines, sound, fluid, and heat dynamics, basic aerodynamics, aircraft structures, and theory of flight.

Note

Three hours recitation and two hours of lab per week.

Repeat for Credit

N

Requisites

Corequisite: Math 100

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 142 - Airframe Systems**Credits 4**

A study of the airframe systems and components to include: pressurization, heating and cooling, and structural device.

Note

Two hours lecture and six hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 151 - Aviation Maintenance Fundamentals**Credits 3**

This course is designed to permit the student to learn and practice those skills and techniques essential to the career development of the aviation maintenance technician. The subjects included are: shop safety, aircraft general familiarization, fluid lines and fittings, hand tools and measuring devices, aircraft hardware, cleaning and corrosion control, aircraft metals, inspection fundamentals, ground operation and servicing, and support equipment.

Note

One hour recitation and six hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVM 152 - Airframe Structures and Repair**Credits 5**

A study of materials commonly used in airframe structures and the associated study of making structural repairs according to recommended procedures. Skills in sheet metal are stressed.

Note

Three hours recitation and six hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 162 - Airframe Electrical Systems**Credits 4**

An advanced study of DC/AC circuits law relating to circuit analysis and a detailed study of measuring instruments. Advanced study of relays, switches, alternators, and other devices encountered in circuit analysis, troubleshooting, and repair. Theory of operation and fault isolation on solid-state devices in aircraft circuitry. Inspection of aircraft electrical systems, including wire inspections and the types of repairs allowed, using appropriate technical manuals.

Note

Two hours lecture and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 111 or ECET 100.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 201 - Aircraft Metallic Primary Structures

Credits 3

A study of aircraft metal primary structures and materials commonly used in the design and construction of airframes including fuselages, wings, and control surfaces. Students gain theoretical knowledge and practical experience associated with the structural properties of materials used in the manufacturing process as well as the methods used to fabricate and repair those structures. Students practice structural metal repairs according to FAA approved data and manufacturer's recommended procedures. Skills in aluminum sheet metal fabrication and repairs are stressed.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 101 and AVM 103 or MET 121.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 203 - Aircraft Environmental and Fire Protection Systems

Credits 2

An in-depth study in small and large air vehicle environmental and fire detection and extinguishing systems. Emphasis on cabin pressurization and temperature climate control, supplemental oxygen, airframe and propulsion fire detection and extinguishing systems, crew visibility enhancement, and air toxicity detection. Students gain extensive practical experiences related to system design, operation, inspection, maintenance methodology, and fault analysis for both airframe and powerplant systems using manufacturer's technical instructions.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 204 - Aircraft Environmental and Fire Protection Systems Laboratory

Credits 1

A laboratory course to supplement the material of AVM 203.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: AVM 203

Typically Offered

Spring

AVM 205 - Aircraft Landing Gear and Fluid Power Systems

Credits 3

A study of the design and application of compressible and incompressible fluid power systems used in both simple and complex aircraft flight control, auxiliary, emergency, and landing gear systems. Emphasis on landing gear and deceleration systems to include components, structures, operation, and fault analysis of shock struts, position and warning, single and multiple disk brakes, anti-skid, wheel assemblies, retraction and extension systems and methods of emergency landing gear extension. Topics include landing gear door operation and sequencing. Students practice inspection, servicing, repair and troubleshooting of key fluid power and landing gear systems necessary to ensure continued airworthiness of these systems.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 207 - Aircraft Electrical Systems

Credits 3

A review and advanced study of DC/AC circuits, and laws relating to circuit analysis and a detailed study of measuring instruments applied to aircraft. Study of relays, switches, alternators, and other devices encountered in circuit analysis, troubleshooting, and repair. Theory of operation and fault isolation on solid-state devices in aircraft circuitry. Inspection of aircraft electrical systems, including wire inspections and the types of repairs allowed using appropriate technical manuals. A study of battery, magneto high and low tension ignition systems, including turbine igniters. Also a study of powerplant starting and charging systems and related components. Emphasis on effective fault diagnostics, repair, and timing of aircraft ignition systems.

Note

Two hours of lecture and 4 hours of lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 100 or AVM 111.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 214 - Introduction to Aircraft Propulsion Theory, Design and Systems

Credits 3

A broad introductory study in the theory of operation of heat engines utilizing principles of the Otto and Brayton cycles found in aircraft reciprocating and gas turbine powerplants. Students gain a solid understanding of the basic principles of the construction, design, lubrication, cooling, and exhaust systems, including maintenance practices of reciprocating and gas turbine powerplants installed in aircraft. Thrust reverser operation of gas turbine engines is also included. The course has a practical component that includes the inspection, fault analysis, servicing and repair of key engines systems covered in the course.

Note

Three hours lecture and three hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 216 - Aircraft Propulsion Drive Systems**Credits 3**

A detailed study of aircraft propulsion drive systems that convert engine power to thrust necessary for sustained flight. Drive systems include propellers, and rotor-blades found on small, medium, and large fixed, and rotary-wing aircraft. Emphasis on fixed and controllable-pitch propellers applications as well as rotor-blades, and rotor-hubs assemblies found on helicopters. Topics include theory of operation, dynamic and static balancing, vibration analysis, design characteristics, materials, and maintenance practices. Students practice inspection, servicing, balance, maintenance and repair of propeller and rotor systems.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

AVM 231 - Aircraft Finish and Fabrication**Credits 3**

This course is designed to acquaint the student with the wood and fabric coverings and procedures used on aircraft, and methods used in preparation for and application of paint finishes to aircraft surfaces.

Note

One hour recitation and six hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 241 - Navigational Aids and Communication Systems**Credits 3**

A survey study of the aids to navigation and communications used in light and intermediate class aircraft. Operation and installation of the various types of equipment will be stressed.

Note

Two hour lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 111 or ECET 100.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 261 - Aircraft Inspection and Assembly**Credits 5**

A study of assembly and manufacturing procedures and inspection of aircraft components. This course also covers in detail annual and 100-hour inspections.

Note

Three hours recitation and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 121, 131.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVM 301 - Advanced Reciprocating Powerplant Technology**Credits 3**

A study in the theory, operation, construction, design, and maintenance of reciprocating powerplants installed in aircraft. Topics include the principles of the Otto cycle, reciprocating powerplant systems, and emerging trends in the design and application of reciprocating engines, including aviation diesel engines. Practical experiences include engine removal, installation, and troubleshooting to an airworthy standard, with an emphasis on disassembly and inspection of modern reciprocating engines found in single and twin-engine aircraft using visual, dimensional, and non-destructive techniques.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

None

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 303 - Introduction to Aircraft Composite Structures**Credits 3**

Introduces composite materials used in the design and production of legacy and modern aircraft. Topics include material characteristics, fabrication, and inspection; repair of non-metallic primary and secondary structures and materials using manufacturers' instructions. Materials include fabric, wood, fiberglass, plastics, honeycomb, and others. Students practice the selection, installation, application of protective coatings, and removal of special fasteners used in these structures. Laboratory exercises emphasize the fabrication and inspection of modern composite structures.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 304 - Aircraft Fuel Management and Metering Systems**Credits 3**

A comprehensive study of airframe and propulsion engine fuel systems associated with fuel storage, management, transfer and metering as applied to both reciprocating and turbine powered aircraft. Lecture topics include systems operation, maintenance methods, procedures and safety precautions associated with aircraft fueling and defueling for over-the-wing and pressure fueling systems. Fuel quantity, pressure and temperature indicating and warning systems, fuel dump, and detail reciprocating and turbine engine fuel metering systems including carburetor overhaul, electronic engine fuel controls (EEC and FADEC) are covered. Students practice the inspection, check, service, troubleshooting and repair of the various fuel systems found on board the aircraft to a level that assures continued airworthiness and safety.

Note

Two hours lecture and four hours of lab a week.

Repeat for Credit

N

Requisites

None

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 305 - Aircraft Avionics and Instrument Systems**Credits 3**

A study of flight instrument systems and navigation/communication electronic aids installed on aircraft. The course includes both lecture and practical applications of these systems to include operation, inspection, fault analysis and repair. The student will be exposed to mechanical and electronic airframe and powerplant indication equipment including flight instrument systems for heading, speed, altitude, temperature, pressure, RPM, and position indicating. The course includes flight management systems, and GPWS, TAWS, laser gyro and advanced Comm/Nav applications. Emphasis will be placed on NAV/COMM systems found in modern aircraft and associated antenna applications and installation methods. Pitot/Static instruments and systems are also discussed. Students practice inspection, service, fault analysis, installation and repair of these systems

Note

Three hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: ECET 100 or AVM 111.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 306 - Rotary and Fixed Wing Aircraft Design and Assembly**Credits 3**

A detailed study of the purpose of fixed-wing and rotary-wing aircraft designs and aerodynamic characteristics, their construction methods and assembly procedures. The course provides an insight critical maintenance tasks performed that impact the safe operation of the aircraft as well as exposure to the manufacture and assembly of aircraft. Students practice the rigging, assembly, jacking, weighing, and balancing of aircraft and flight control surfaces according to manufacturer's technical manuals; and making accurate record entries for tasks performed in accordance with FARs.

Note

Two hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 101, AVM 121 or MET 111.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVM 312 - Aircraft Propellers**Credits 2**

A study of the use, maintenance, and inspection of propellers and their related control systems.

Note

One hour recitation and three hours lab a week.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

AVM 321 - Powerplant Fundamentals**Credits 4**

A study of the principles of operation, design features, and operating characteristics of reciprocating aircraft engines. Includes overhaul inspection procedures on current horizontal opposed and radial engines.

Note

Three hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 131.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

AVM 322 - Powerplant Operation and Troubleshooting

Credits 3

Experience in installation, operation, and removal of aircraft engines. Engine analysis and diagnosis of malfunctions, including methods of remedy, are performed on airworthy engines.

Note

Two hours recitation and four hours lab a week.

Repeat for Credit

N

Requisites

Corequisites: AVM 402 and AVM 301,

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 332 - Gas Turbine Powerplant

Credits 5

Advanced study of the fundamentals of gas turbine powerplants including operation, studies of supporting systems and inspection methods are fundamental to this course.

Note

Two hours recitation and nine hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 321.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 342 - Powerplant Induction and Fuel Systems**Credits 4**

A study of aircraft induction and fuel metering systems including fuels, carburetors, fuel injection systems, superchargers, and other induction system components used to ensure a dependable and accurate fuel supply at any flight configuration and attitude.

Note

Two hours recitation and six hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: AVM 321.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 351 - Powerplant Ignition and Electrical Systems**Credits 3**

A study of battery, magneto high and low tension ignition systems, including turbine igniters for today's aircraft. Also a study of powerplant starting and charging systems and related components. Emphasis will be placed on troubleshooting, repair, and timing of aircraft ignition systems.

Note

Two hours recitation and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 111.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 352 - Powerplant Overhaul

Credits 3

Practical experience in overhauling reciprocating engines. Engines are assembled and operationally checked in lab.

Note

One hour lecture and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 321.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 370 - Advanced Aircraft Avionics and Instrument Systems**Credits 3**

Advanced study of flight instrument systems and navigation/communication electronic aids installed on large Corporate and Transport Category aircraft. The course includes both lecture and practical applications of these systems to include operation, inspection, fault analysis and repair. The course includes flight management systems, and GPWS, TAWS, laser gyro and advanced Comm/Nav applications.

Note

Two hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 305.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVM 390 - Problems in Aviation**Credits 1-18**

Provides the student the opportunity for advanced study in a specific topic area or to apply aviation education to the improvement of skills previously learned.

Note

Topics are selected jointly by the student and the instructor.

Repeat for Credit

Y

Requisites

Prerequisite: Consent of instructor.

Typically Offered

Fall, Spring, Summer

AVM 401 - Aircraft Airworthiness, Conformity, and Quality Assurance

Credits 3

A capstone course requiring students to tie all previous coursework associated with airframe and powerplant systems maintenance and operations together to perform an effective and safe inspection of the entire aircraft in compliance with manufacturer's recommendations and FAR requirements. This course emphasizes practical experiences necessary to inspect the aircraft for continued airworthiness. Aircraft is weighed and conformity inspections are performed. All work and inspection status is recorded and documented using approved maintenance entries. Part 145 operational requirements are included in the course experience and work team scheduling and coordination is emphasized.

Note

Three hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and instructor consent.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVM 402 - Gas Turbine Powerplant Technology

Credits 3

A study in the theory, operation, construction, design, and maintenance of gas turbine powerplants installed in aircraft. Topics include jet propulsion history and development, the Brayton cycle, turbine engine systems, thrust reverser operations, and emerging trends in the design and application of gas turbine engines. Practical experiences include engine removal, installation, engine test cell operations, and troubleshooting to an airworthy standard with an emphasis on disassembly and inspection of small turboprop/turboshaft engines commonly found on turbine twin-engine aircraft and helicopters.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

None

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVM 403 - Advanced Aircraft Avionics and Instrument Systems

Credits 2

Advanced study of flight instrument systems and navigation/communication electronic aids installed on large Corporate and Transport Category aircraft. The course includes both lecture and practical applications of these systems to include operation, inspection, fault analysis and repair. The course includes flight management systems, and GPWS, TAWS, laser gyro and advanced Comm/Nav applications.

Note

Two hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 305.

Typically Offered

Fall

K-State 8

Natural and Physical Sciences

AVM 497 - Aviation Maintenance Capstone

Credits 3

A capstone course designed to help prepare the students for industry-required credentials. It will be comprehensive in nature to the rest of the curriculum. Subjects will be incorporated from the rest of the applicable curriculum and the ACS standards. Students shall research and present a topic as determined by the instructor.

Note

Two hours lecture, three hours lab a week

Repeat for Credit

N

Requisites

Corequisite: AVM 301 and AVM 402

Typically Offered
Fall, Spring, Summer

Aviation Maintenance Prep

AMP 101 - Introduction to Aviation Regulations and Aircraft Drawings

Credits 3

A review of the role and organizational structure of the Federal Aviation Administration (FAA) as it relates to the certification and continued airworthiness of aircraft and its operation in general, business, and commercial aviation environments. Emphasis on the privileges and limitations of certificated personnel who maintain aircraft systems in the context of the FAA regulations. Includes concepts of weight and balance, logbook entries, and accurate use of graphs and charts. Students demonstrate the ability to read and comprehend information contained in FAA and manufacturers' aircraft maintenance specifications, data sheets, manuals, publications, and related Federal Aviation Regulations, Airworthiness Directives, and Advisory material. Students learn how to read, understand, and interpret aircraft drawings commonly found in the aviation maintenance industry.

Repeat for Credit
N

Typically Offered
Fall or Spring

AMP 102 - Aviation Math and Physics

Credits 3

This is a study of basic math and physics as required by aircraft technicians and defined by FAR 147. Use and understand the principles of simple machines, sound, fluid, and heat dynamics, basic aerodynamics, aircraft structures, and theory of flight. Apply, calculate, and solve basic math functions, ratios and proportions, and algebraic equations that are relevant to aviation. Students will also learn the concepts involved in weighing and balancing an aircraft.

Repeat for Credit
N

Typically Offered
Fall or Spring

AMP 103 - Concepts of Aircraft Materials and Tooling Standards

Credits 3

The concepts essential to understanding aircraft material properties and fabrication techniques are taught. Emphasizes knowledge: shop safety, organization and human factors associated with shop practices, basic aircraft structural materials and hardware familiarization, fluid lines and fittings, hand tool selection and use, and aviation-specific dimensional inspection tools and techniques, aircraft hardware identification and applications, cleaning and corrosion control, aircraft metal selection and applications, and aircraft material inspection fundamentals.

Repeat for Credit

N

Typically Offered

Fall or Spring

AMP 104 - Basic Aircraft Electricity and Ground Operations**Credits 3**

A basic concept of DC/AC circuits, with basic laws relating to the following: measuring voltage, current, resistance, continuity and leakage; relationship of voltage, current and resistance in electrical circuits; reading and interpretation of electrical circuit diagrams; electrical devices and inspection and servicing of batteries. Introduction to digital numbering systems and digital logic functions. Also included are the introduction to air transport maintenance procedures, aircraft ground operations, and knowledge of aircraft batteries.

Repeat for Credit

N

Typically Offered

Fall or Spring

AMP 105 - Application of General Aviation Maintenance Concepts**Credits 2**

This laboratory course provides hands-on experience with fundamental aviation maintenance tasks aligned with concepts from AMP 101–104. Students will gain practical skills in weighing aircraft, taking critical measurements, performing non-destructive testing, moving and securing aircraft, and executing basic ground operations. Additional training includes aircraft servicing, fueling, ground running, shop safety procedures and processes, flight line safety, and other general aviation-related tasks.

Repeat for Credit

N

Typically Offered

Fall or Spring

Aviation Maintenance Review**AVMR 220 - Aviation Maintenance Review/General****Credits 4**

The general review course is designed for those individuals who have met the Federal Aviation Administration's eligibility requirements under FAR 65.77. The review conforms to the three levels of training set forth by the FAA. Three hours rec. and three hours lab a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

AVMR 230 - Aviation Maintenance Review/Airframe**Credits 4**

The airframe review course is designed for those individuals who have met the Federal Aviation Administration's eligibility requirements under FAR 65.77. The review conforms to the three levels of training set forth by the FAA.

Repeat for Credit

N

Typically Offered

Fall, Spring

AVMR 250 - Aviation Maintenance Review/Powerplant**Credits 4**

The powerplant review course is designed for those individuals who have met the Federal Aviation Administration's eligibility requirements under FAR 65.77. The review conforms to the three levels of training set forth by the FAA.

Repeat for Credit

N

Typically Offered

Fall, Spring

Aviation Technology**AVT 100 - Introduction to Aviation****Credits 3**

This course examines the history of aviation and a look at the future. Students discuss the attributes of an aviation professional, careers, career planning, and pilot certification. Students consider historical events and their relationship to current aviation aspects. The interdependency and synergy in the development of military aircraft, the space program, as well as the growth of commercial and general aviation is discussed. Students use the Internet for various research projects concerning the past, present, and future of aviation.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Historical Perspectives

K-State 8 Tag 2

Human Diversity within the U.S.

AVT 120 - Aeronautical Programs Flight Familiarization

Credits 1

An introduction to the fundamentals of flight in various types and categories of aircraft. A familiarization of piloting skills and knowledge, a demonstration of aircraft capabilities, and the National Airspace System.

Note

Four hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 111.

Typically Offered

Fall, Spring, Summer

AVT 240 - Introduction to Air Traffic Control

Credits 3

An introductory air traffic control (ATC) course that focuses on Terminal, Enroute, and FSS ATC procedures. The course examines the role of an air traffic controller at the various operational positions throughout the ATC system. The course gives an overview of the current U.S. National Airspace System as it relates to ATC procedures. In addition, the course looks at the use of future technologies and how they enhance the ATC system. Off-campus trips contribute to experiential learning.

Note

Two hours lecture and two hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVT 242 - Aviation Meteorology

Credits 3

Basic aviation-related meteorology concepts through the study of atmospheric elements and how they generally affect the weather: introduction to the subject, water in the atmosphere, variables which cause local weather changes, specific aviation-associated hazards, understanding meteorological reports and forecasts, meteorological techniques used in predicting weather patterns.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Natural and Physical Sciences

AVT 243 - Aircraft Electrical, Navigational, and Communication Systems**Credits 3**

Provides students the basic knowledge of aircraft electrical systems, including navigation, communications, instruments, and power systems.

Repeat for Credit

N

Requisites

Prerequisite: AVM 111.

Typically Offered

Other

K-State 8

Empirical and Quantitative Reasoning

AVT 250 - Safety and Security of Airport Ground Operations**Credits 3**

This course discusses general aviation airport ground operations, particularly from the mechanic, pilot, and ramp worker perspective. Focus will be on increasing awareness of airport operations. Attention will be given to improving airport safety by creating an enhanced awareness of rules, policies, procedures, and potential hazards that affect all individuals working in and around the airport ground operations environment. Some topics included are: aircraft marshalling procedures, airfield security issues, ground vehicle operations, and security and accident/incident response reporting.

Repeat for Credit

N

Typically Offered

Spring

K-State 8

Historical Perspectives

K-State 8 Tag 2

Human Diversity within the U.S.

AVT 315 - Advanced Avionics

Credits 3

This course covers the latest developments and trends in navigation and communication systems. Topics include Future Aviation Navigation Systems (FANS), fiber optics, enhanced vision, ADS-B, the FAA's NextGen, as well as other advancements in avionics.

Note

Three hours lecture a week.

Repeat for Credit

N

Requisites

Corequisite: AVM 241 or AVM 242.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVT 316 - AET and FCC Training**Credits 1**

This course is a self-paced lab that allows students to study for their Aviation Electronics Technician certificate and their Federal Communication Commission license in Elements 1, 3 and 8.

Note

Two hours lab a week.

This is a credit/no-credit course and will not affect the student's GPA.

Repeat for Credit

N

Typically Offered

Fall, Spring

AVT 317 - Composites I**Credits 3**

Introduction to composite materials used in a broad range of industries with an emphasis on aero structure. Topics include defining a composite, understanding the materials, safety aspects, and shop layouts that are used to produce composite parts. An overview of the construction methods, understanding how to inspect components for damage, and procedures to perform the actual repair used in industry today. Students develop an understanding of how to design/source industrial composite fasteners and install into the composite structure and the science of coatings for the protection of both the composite materials as well as metallic components adjacent to composites. The labs support the lectures with projects designed to give the student hands on application.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVT 318 - Composites I Laboratory**Credits 2**

An optional laboratory course introducing the use of equipment and materials utilized in the advanced composites industry.

Note

Four hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: AVT 317.

Typically Offered

Fall

AVT 327 - Avionics Repair**Credits 3**

An in depth overview of aircraft wiring. Procedures in terminating, repairing, testing and troubleshooting of aircraft wiring, as well as aging wiring inspections.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVT 330 - Avionics Troubleshooting**Credits 4**

An in-depth troubleshooting project, requiring critical thinking to analyze the problem and provide the correct repairs.

Note

One hour lecture and six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVT 327.

Typically Offered

Spring-Even Years

AVT 340 - Human Factors in Aviation**Credits 3**

Explores the physical environment and physiology limitations imposed on the aviation professional. Health, fatigue, human behavior and errors, communication, team building, leadership, situation awareness, crew resource management, judgment, and aeronautical decision making are studied to achieve safe and efficient operation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111 or AVT 100, or junior standing.

Typically Offered

Fall, Spring

K-State 8

Natural and Physical Sciences

K-State 8 Tag 2

Social Sciences

AVT 360 - Airport Law**Credits 3**

A study of how the U.S. regulatory and legal systems work in relation to airport management. This course emphasizes contract law related to the Federal Aviation Administration Airport covenants and restrictions, Federal Aviation Regulation compliance and airport operator liability.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

AVT 361 - Airport Environmental Studies

Credits 3

Introduction to responsibilities, liabilities and public relations when dealing with environmental issues in day-to-day airport operations. Includes strategies for addressing airport and aircraft noise, wildlife hazard mitigation, compatible land use, wetlands, historical properties and impacts of construction. Federal regulations and enforcement are studied with emphasis on the Clean Water Act, Clean Air Act, Resource Conservation and Recovery Act, Pollution Prevention ACT, and National Historic Preservation Act as they apply to airports.

Repeat for Credit

N

Requisites

Prerequisite: MATH 100 and ENGL 200

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

AVT 380 - Airport Operations

Credits 3

A study of the daily operations of an airfield in compliance with regulatory agencies, understanding the role of liaison to airport staff regarding operations, development of department budgets, knowledge of effective supervisory practices and principles, ability to plan and carry out airport operations and development programs under airport management matrix.

Note

Three hours lecture and three hour lab per week.

Repeat for Credit

N

Requisites

Prerequisite: ENGL 200

Typically Offered

Spring

AVT 386 - Aerodynamics

Credits 3

This course covers incompressible flow theory and wing theory as well as calculations of stall speed, drag, and basic performance criteria. This course also examines configuration changes, high and low speed conditions, and special flight operations. Stability and control, weight and balance, and operational data are also examined. Aerodynamic performance of aircraft powered by reciprocating, turboprop, and jet turbine engines are considered. The student will be introduced to aircraft design and high-speed aerodynamics.

Repeat for Credit

N

Requisites

Prerequisite: MATH 100; and PPIL 111 or AVM 141.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

AVT 389 - Problems in Aviation

Credits 1-18

Provides the student an opportunity to apply their aviation education to the improvement of skills previously learned as designated by the instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

AVT 400 - Composites II

Credits 3

Continued study of the mechanical properties of several composite materials along with strengths and limitations. Topics include gelcoats for tooling and part production, layup of semi complex composite parts using wet layup and vacuum bagging techniques, simple mold development, construction, and repair. Additionally, students are introduced to compression composite molding compounds and tooling required for production, and composite facility layout and outfitting. The lab will support the lectures with projects designed to give the student the hands on application.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 303 or AVT 317.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

AVT 405 - Introduction to Non-destructive Testing

Credits 2

Introduction to non-destructive testing (NDT) and inspection methods commonly used to detect material anomalies in diverse industries. NDT methods used in aviation/mechanical structures and components is emphasized. Students gain practice using Visual, x-ray (radiographic, magnetic particle, ultra-sound, eddy current and dye penetrant), NDT methods and techniques on test samples. Serviceability of the components is determined using approved manufacturers service limits.

Note

Two hours lecture and three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: MET 121, or MET 231 and MET 245.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

AVT 410 - Aviation Maintenance Management**Credits 3**

Provides students with an understanding of general aviation and commercial aviation maintenance programs. Includes regulations, maintenance levels, technical publications, quality assurance, inspections, human factors, and unions. It also provides an understanding of the difficulties in managing a line operation. Case studies of maintenance scenarios are used.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Global Issues and Perspectives

AVT 417 - Composites III**Credits 3**

Continued study of the highly complex composite parts and associated molding technologies used to produce these parts. Topics include the construction of resin infusion parts and mold construction, reusable vacuum bagging materials, application of preimpregnated materials and tooling designed to withstand oven cure cycles, discussion of advanced materials and techniques new to the industry. The lab will support the lectures with projects designed to give the student the hands on application in a relative environment.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: AVT 400.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

AVT 420 - Aviation Accident Investigation**Credits 3**

This course is designed to provide a general understanding of the methods and procedures used in aviation accident investigation. Students in this course will learn methods used to gather and analyze facts of accidents as well as determine probable cause and contributing factors. Procedures and techniques used to determine accident causes will also be analyzed. Historical accident reports from National Transportation Safety Board (NTSB) and other organizations will be examined.

Repeat for Credit

N

Requisites

Corequisite: AVT 340 and junior standing.

Typically Offered

Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

AVT 429 - Avionics Maintenance**Credits 3**

Provides the basic knowledge to repair and install pitot-static systems. Practical experience in troubleshooting and using maintenance test equipment.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 305.

Typically Offered

Fall-Odd Years

K-State 8

Empirical and Quantitative Reasoning

AVT 430 - Advanced Avionics Installation

Credits 3

Provides practical knowledge of avionics suite installation, to include Garmin. Students will gain additional experience in operational checks, troubleshooting and software loading on the Garmin G1000/900X. This course is an individual semester long project.

Note

One hour lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVT 327.

Typically Offered

Spring-Odd Years

K-State 8

Empirical and Quantitative Reasoning

AVT 435 - Air Transportation

Credits 3

This interactive course examines the development of the United States air transportation system, current issues, and the competitive strategies of past and present airline executives; examines the many attributes of starting and operating a successful airline in a competitive market; and explores the role of airport operations and the commercial and corporate aircraft that challenge the air transportation system.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Summer

AVT 440 - Air Carrier Operations

Credits 3

A study of Federal Aviation Regulations that influence air carrier and commercial operators. Students will gain an appreciation of the variety of regulatory issues involved in air carrier operations such as certification, training, and operational safety and security requirements. Students will also gather the background information necessary to correlate and apply relevant regulations to daily

aviation operations. The course focuses on FAR Part 61, 91, 119, 121, and 135.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111 or AVT 100, and junior standing.

Typically Offered

Spring

AVT 442 - Advanced Air Traffic Control

Credits 3

An in-depth study of tower, TRACON, and enroute procedures. Also examines the FAA's future air navigation system concept.

Repeat for Credit

N

Requisites

Prerequisite: AVT 240, PPIL 112.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

AVT 445 - Aviation Law

Credits 3

A study of how the U.S. regulatory and legal systems work in relation to aviation activities. It is designed to help those in the aviation industry understand their rights, liabilities, and responsibilities and avoid common legal pitfalls. Emphasis will also be placed on aircraft ownership, registration, and insurance.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

AVT 446 - Corporate and Business Aviation Management

Credits 3

A study of the history of corporate and business aviation, the regulation of the industry, and the operation and management of corporate and business flight departments. Students will receive an overview of the social, economic, and political effects of business aviation. Aircraft selection and utilization, maintenance responsibilities, fiscal considerations, fractional ownership, and passenger and crew safety and security measures will also be studied.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Spring

AVT 448 - Aviation Legislation

Credits 3

Students are required to take part in the University Aviation Association's Annual Seminar on Establishing Aviation Policy during the first full week of January in Washington, D.C. Students prepare for the seminar with required reading assignments.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

AVT 450 - Aviation Safety Management

Credits 3

A course designed to assist the student to develop an attitude and philosophy for accident prevention. The course includes ideal and practical, personal and organizational safety procedures and goals; safety philosophies; aircraft accident reports; human factors; principles of accident investigation; accident prevention program and accident statistics; current events; NTSB special studies. The safety program is analyzed from the theoretical and philosophic points of view. A safety program is developed with an examination of safety concepts, the human elements of accidents, managing a safety office in an organization, and current events.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing.

Typically Offered

Fall

K-State 8

Empirical and Quantitative Reasoning

AVT 451 - System Safety**Credits 3**

This course is designed to provide an understanding of the system safety discipline. Students will learn how the system safety process is used in accident prevention and examine its role in management. Students will also examine various aircraft systems for overall safety of operation.

Repeat for Credit

N

Requisites

Prerequisite: AVT 450.

Typically Offered

Spring-Odd Years

K-State 8

Empirical and Quantitative Reasoning

AVT 455 - Current Trends and Issues in Aviation**Credits 3**

This course explores current trends and issues in the aviation industry. Emphasis is placed on discussing current issues that are impacting the world aviation marketplace. Students will address these issues and trends from the standpoint of application to their career, relevance to the economic viability of the industry, and the impact such trends place on aircraft operators and manufacturers.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing.

Typically Offered

Spring

K-State 8

Global Issues and Perspectives

AVT 461 - Airport Management**Credits 3**

An in depth study of both landside and airside airport business management, utilizing the American Association of Airport Executives' Body of Knowledge modules. Includes a study of the role of the airport in community development.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: Junior standing

Typically Offered

Fall

AVT 462 - Airport Planning**Credits 4**

A study of airport planning and practices to understand FAR Regulation part 139 airport design standard as well as a study of both landside and airside planning issues utilizing the American Association of Airport Executive's Body of Knowledge modules.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: AVT 461.

Typically Offered

Fall

AVT 464 - Airport Certified Manager**Credits 1**

The study and preparation for various forms of certification within the AAAE realm including the opportunity to study and take the Airport Certified Employee (ACE) exams and the Certified Member (CM) exam.

Note

One hour lab a week.

Repeat for Credit

N

Requisites

Prerequisite: AVT 250, AVT 360, AVT 462.

Typically Offered

Spring

AVT 480 - Airport Global Networks**Credits 3**

An introduction to the economic, political, and civic challenges that impact the profitability of airports worldwide and the steps

being taken by the airport industry and international governing bodies to address them.

Repeat for Credit

N

Requisites

Prerequisite: AVT 380, Junior Standing, and ENGL 302

Typically Offered

Spring

K-State 8

Global Issues and Perspectives

AVT 482 - Aviation Ethics and Leadership

Credits 3

Students acquire an understanding of core leadership values demanded by the aviation industry, understand leadership challenges facing the aviation industry, and identify personal leadership styles and their most effective implementation within industry.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

AVT 485 - Helicopter Maintenance

Credits 3

An advanced study of the major components of rotary-winged aircraft to include airframe, rotor, transmission and engine components of turbine and reciprocating engine helicopters. Also includes a detailed study and validation of all Federal Aviation Administration required documentation related to maintenance, historical records, and inspection of components.

Note

Two hours lecture and 4 hours lab per week.

Repeat for Credit

N

Requisites

Prerequisite: AVM 111, 121, 131, 141, 151 or consent of instructor.

Typically Offered

Summer

K-State 8

Ethical Reasoning and Responsibility

AVT 497 - Senior Capstone

Credits 3

This culminating experience is a sustained occasion when students will put into independent practice the intellectual, creative, and expressive skills/knowledge they have cultivated in their undergraduate curriculum. In this course students integrate discipline-specific knowledge in addition to communication and inquiry methods to solve problems and communicate mastery of their respective area of interest.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and instructor consent.

Typically Offered

Fall, Spring

AVT 498 - Research Project

Credits 1-9

Research, scholarly and creative activities in the aviation field. Working with faculty on a current research project.

Note

The specific course content varies in accordance with current projects.

Repeat for Credit

N

Requisites

Prerequisite: Junior or senior standing.

Typically Offered

Fall, Spring, Summer

AVT 560 - Airport Design

Credits 4

Student teams with faculty and industry advisors prepare to enter their work in the Airport Cooperative Research Program's (ACRP) national design competition for universities addressing issues relating to airports and the National Airspace System. The competition focuses on design solutions in the following broad areas: Airport Operation and Maintenance, Runway Safety/Runway Incursions/Runway Excursions, Airport Environmental Interactions, and Airport Management and Planning.

Repeat for Credit

N

Requisites

Prerequisite: AVT 360, AVT 361, and AVT 462.

Typically Offered

Spring

AVT 611 - Aircraft Regulation and Certification

Credits 3

Provides an overview of the FAA certification process relating how the certification process contributes to a safe National Airspace System. Application of relevant Federal Aviation Regulations. Covers both aircraft type and production certification to include airframe, engine, and component certification. Covers the history of aviation regulation and corresponding relationship to aerospace safety.

Repeat for Credit

N

Typically Offered

Fall

AVT 703 - Project Management for Aerospace Professionals

Credits 3

This course focuses on applied project management, methodology, tools, and techniques. Topics include career aspects of project management; business factors affecting the project; project organization, planning, execution, and communications; the project life cycle; risk analysis; and best practices in project management. Course will include specific applications in the aviation/aerospace sector.

Repeat for Credit

N

Typically Offered

Fall

AVT 707 - Research Methods

Credits 3

Provides students with the skills necessary to perform graduate-level research in the field of technology. Course focuses primarily on quantitative research; however, qualitative and mixed-method research methods are also covered. Statistical Research Software applications are also included.

Repeat for Credit

N

Typically Offered

On sufficient demand

AVT 722 - Aircraft Type Certification

Credits 3

A detailed examination of the type certification process leading to the issuance of a type certificate, and changes to a type certificate through an amended type certificate, supplemental type certificate, or amended supplemental type certificate. Covers FAA and international certification standards and regulating bodies as well as relevant performance standards to include role of FAA Advisory Circulars, DO 160, 178, and 254, SAE, ASTM, and other industry standards in the certification process. Presents

the continuing airworthiness process, including the issuance of airworthiness directives, and the relationship of manufacturer service bulletins, and service letters. Brief discussion on type validation process. Discuss the importance of developing processes to manage all of the data associated with the certification process.

Repeat for Credit

N

Requisites

Prerequisite: AVT 611

Typically Offered

Fall, Spring, Summer

AVT 734 - Advanced Aircraft Certification

Credits 3

A detailed examination of the process to determine applicable regulations for changed aeronautical products, certification project planning elements not covered by AVT 722, application of selected means and methods of compliance, delegation systems, and certification validation processes for export of aeronautical products.

Note

Name was changed to Advanced Aircraft Certification. <https://kstate.curriculog.com/proposal:7708/form>

Repeat for Credit

N

Requisites

Prerequisite: AVT 722

Typically Offered

Fall, Spring, Summer

AVT 744 - Aviation Human Factors Analysis and Design

Credits 3

An in-depth exploration of the history of air safety as related to human error and how system safety has been greatly enhanced by the incorporation of the fundamentals of human factors in design. Students will understand and articulate the major advances in Human Factors research over the past 40 years and identify knowledge gaps yet to be filled.

Repeat for Credit

N

Requisites

Prerequisite: AVT 611.

Typically Offered

On sufficient demand

AVT 751 - Aerospace Policy

Credits 3

Students will understand State and Federal legislative processes and appreciate how ideas become law. This course will specifically include a study of the concepts of advocacy, building coalitions, caucuses, theories of statutory interpretation, and drafting legislation. Where possible the course will include meeting with legislators. Students will also understand how to attain, track, and influence Federal legislation affecting the aviation/aerospace industry.

Repeat for Credit

N

Typically Offered

On sufficient demand

AVT 771 - Leadership in the Aerospace Sector**Credits 3**

An exploration of the theories of leadership and critical issues facing aerospace sector leadership in the coming decades. Concepts of resilience, contingencies, communication, collaboration, ethics, strategic planning, failure/recovery, and cultural transformation will be explored. At the end of this course students will understand and appreciate the differences between effective and ineffective leaders.

Repeat for Credit

N

Typically Offered

On sufficient demand

AVT 790 - Aerospace Topics**Credits 3**

Variable content as determined by the instructor to address emerging issues and challenges related to the aviation industry and aerospace safety.

Repeat for Credit

Y

Typically Offered

On sufficient demand

AVT 799 - Advanced Topics in Aeronautics**Credits 3**

Advanced topics in Master of Science in Aeronautics.

Repeat for Credit

Y

Requisites

Prerequisite: Instructor consent.

Typically Offered
On sufficient demand

AVT 836 - Master of Science in Aeronautics Capstone Project

Credits 3

An applied project focused on either aircraft certification or aerospace leadership/policy. This course is designed to improve the demonstration of professional knowledge in the student's technical discipline.

Repeat for Credit
N

Requisites
Prerequisite: AVT 611, AVT 707, COT 701, and advisor permission

Typically Offered
Spring

AVT 838 - MSA Thesis

Credits 1-6

Required research for M.S.A. thesis option students.

Repeat for Credit
Y

Requisites
Prerequisites: AVT 611, AVT 707

Typically Offered
On sufficient demand

AVT 841 - Aerospace Safety Management Systems (SMS)

Credits 3

An in-depth analysis of aviation safety across all elements of the industry from manufacturing to training, to airports. The student will understand the impacts and challenges of balancing operational efficiencies with the maximization of organizational safety. Safety Management Systems (SMS) concepts will be explored, and students will have the opportunity to design a sample SMS program.

Repeat for Credit
N

Typically Offered
Fall, Spring, Summer

Professional Aviation

PAV 101 - Private Pilot

Credits 5

Awards academic credit for the Federal Aviation Administration Private Pilot certificate.

Note

This may be used as a substitute for PPIL 111 and 113 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 102 - Instrument Pilot**Credits 4**

This course is offered to give academic credit for the Federal Aviation Administration Instrument Pilot rating.

Note

This may be used as a substitute for PPIL 112 and 114 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 201 - Commercial Pilot**Credits 7**

This course is offered to give academic credit for the Federal Aviation Administration Commercial Pilot certificate.

Note

This may be used as a substitute for PPIL 211, 212, and 213 for the purpose of awarding academic credit for ratings earned elsewhere. This course may not be used to fulfill the requirements for Reduced ATP as outlined in the FAA-KSU LOA

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 202 - Additional Aircraft Category, Class, and/or Type Rating**Credits 1-5**

This course is offered to give academic credit for the Federal Aviation Administration additional aircraft category, class and/or type ratings. Credit will be given for one type rating only.

Note

This may not be used as a substitute for PPIL 262 and PPIL 263 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 217 - Airframe A**Credits 9**

This course is offered to give partial academic credit for the Federal Aviation Administration Airframe certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 318

Typically Offered

Fall, Spring, Summer

PAV 227 - Powerplant A**Credits 9**

This course is offered to give partial academic credit for the Federal Aviation Administration Powerplant certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 328

Typically Offered

Fall, Spring, Summer

PAV 301 - Instructor Pilot**Credits 8**

This course is offered to give academic credit for the Federal Aviation Administration Flight Instructor certificate.

Note

This may not be used as a substitute for PPIL 310, PPIL 311, PPIL 312 or PPIL 314 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 302 - Airline Transport Pilot**Credits 2**

This course is offered to give academic credit for the Federal Aviation Administration Airline Transport Pilot certificate.

Note

This may not be used as a substitute for PPIL 385 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 318 - Airframe B**Credits 6**

This course is offered to give partial academic credit for the Federal Aviation Administration Airframe certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 217

Typically Offered

Fall, Spring, Summer

PAV 328 - Powerplant B**Credits 6**

This course is offered to give partial academic credit for the Federal Aviation Administration Powerplant certificate.

Note

This may not be used as a substitute for AVM courses in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Requisites

Corequisite: PAV 227

Typically Offered

Fall, Spring, Summer

PAV 401 - Additional Flight Instructor Ratings**Credits 1-4**

This course is offered to give academic credit for the Federal Aviation Administration Instrument Flight Instructor certificate.

Note

This may not be used as a substitute for PPIL 482, PPIL 483, PPIL 492, or PPIL 493 in any program. Since the Professional Aviation degree option is specifically designed as a degree completion option for students that have significant aviation experience, credit will not be allowed for certificates or ratings earned after being accepted in the BATN-PA degree option.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PAV 497 - Senior Capstone**Credits 3**

This is a culminating experience for the Professional Aviation option. Students will integrate the intellectual, creative, and expressive skills/knowledge they have cultivated in their undergraduate curriculum. Additionally, students will combine discipline-specific knowledge with communication and inquiry methods to solve problems and communicate mastery of their respective area of interest.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing and instructor consent.

Typically Offered

Fall, Spring

Professional Pilot**PPIL 101 - FAA Pilot Certificate Validation****Credits 1-4**

Flight and knowledge validation of FAA pilot certificates.

Repeat for Credit

N

Requisites

Prerequisite: Instructor permission.

Typically Offered

Fall, Spring, Summer

PPIL 108 - Private Pilot Flight Lab Solo**Credits 0.5**

This course provides students with basic flight knowledge and fundamentals for solo flight as outlined by the Federal Aviation Administration (FAA). The successful completion of this course is the solo stage check.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 111

Typically Offered

Fall, Spring, Summer

PPIL 110 - Private Pilot Flight Lab Certification**Credits 0.5**

A continuation of PPIL 108 after solo flight and stage check. Upon completion of the course, students will meet the requirements for the FAA Private Pilot Certificate.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 108

Corequisite: PPIL 111

Typically Offered

Fall, Spring, Summer

PPIL 111 - Private Pilot**Credits 4**

The subject areas necessary for completion and passing of the FAA Private Pilot Knowledge Test are presented.

Note

Four hours recitation a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 112 - Professional Instrument Pilot**Credits 3**

A study of the procedures, regulations, and techniques required to safely fly in instrument meteorological conditions within our national airspace system. The course will prepare the student to pass the FAA Instrument Airplane Knowledge Test.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111

Corequisite: MATH 100.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 113 - Private Pilot Flight Lab

Credits 1

An introduction of the fundamentals of flight. Solo flights to include all flight operations and maneuvers necessary for meeting the aeronautical experience for the FAA Private Pilot Certificate.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 111.

Typically Offered

Fall, Spring, Summer

PPIL 114 - Professional Instrument Pilot Flight Lab

Credits 1

Instructional flight training necessary to maneuver the aircraft safely in actual or simulated instrument meteorological conditions within the national airspace system.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 111, PPIL 113. Corequisite: PPIL 112.

Typically Offered

Fall, Spring, Summer

PPIL 196 - VFR Pilot Proficiency Lab

Credits 1

Instruction and flight training necessary to safely operate an aircraft to meet the Federal Aviation Regulations. This course provides the student the opportunity to review and demonstrate proficiency to satisfactorily meet the FAA regulations for the current ratings held.

Note: Successful completion will result in a flight review required by FAR 61.56.

Note

Please add to description: Successful completion will result in a flight review required by FAR 61.56.

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PPIL 197 - IFR Pilot Proficiency Lab**Credits 1**

Instruction, simulator, and flight training necessary to safely operate an aircraft, to meet and maintain the Federal Aviation Regulations currency requirement of Instrument Competency, and maintain instrument currency and proficiency.

Note: Successful completion will result in an Instrument Proficiency Check (IPC) required by FAR 61.57d.

Note

Catalog change only

Repeat for Credit

N

Typically Offered

Fall, Spring, Summer

PPIL 210 - Aviation Safety**Credits 3**

This course provides an introduction to the field of aviation safety with an emphasis on promoting a safety culture. Various safety programs and their relevance in the field of aviation are discussed. Students will examine numerous accident reports and discuss safety issues facing the aviation industry today.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PPIL 211 - Professional Commercial Pilot**Credits 3**

The subject areas necessary for passing the FAA Commercial Pilot Knowledge Test.

Note

Three hours recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 112, PPIL 114.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 212 - Professional Commercial Pilot Flight Lab I**Credits 2**

Instructional cross country flight training necessary to maneuver the aircraft safely in actual or simulated instrument meteorological conditions within the national airspace system.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 112, PPIL 114. Corequisite: PPIL 211.

Typically Offered

Fall, Spring, Summer

PPIL 213 - Professional Commercial Pilot Flight Lab II**Credits 2**

An introduction to complex airplane operations and a review of those operations required of a commercial pilot. The completion of this course readies the student to take the commercial FAA Practical test.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 212.

Typically Offered

Fall, Spring, Summer

PPIL 214 - Extended Cross Country**Credits 1**

A characteristic of aviation is that aircraft can cover a large geographic area. Aircraft operations in other geographic areas may differ greatly from a student's training base. The experience of long-range navigation can be a great learning experience as well

as a confidence booster. Selection of a destination that allows the student to increase their knowledge of aviation also aids in producing a more well-rounded, responsible professional.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Other

PPIL 215 - Mountain Flying

Credits 1

A characteristic of aviation is that aircraft can cover a large geographic area. Aircraft operations in mountainous areas may differ greatly from a student's training. The experience of reduced aircraft performance caused by high-density altitudes can be a great training into operations with aircraft exhibiting marginal performance. Learning of weather patterns, hypoxia, and survival allows the student to increase their knowledge of aviation and also aids in producing a more well-rounded, responsible professional.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 114 and instructor consent.

Typically Offered

On sufficient demand

PPIL 216 - Altitude Chamber

Credits 1

This course offers a 1-day aviation physiology course for civil aviation pilots through the CAMI's Aeromedical Education Division in Oklahoma City, OK. In addition to the basic academic contents, this course offers practical demonstrations of rapid decompression and hypoxia in a hypobaric chamber, as well as a practical demonstration of spatial disorientation. Upon completion of the course students will receive a certificate noting that they have completed the FAA's Physiological Training course. The FFA requires a current Aviation Medical Certificate.

Repeat for Credit

N

Typically Offered

Fall, Spring

PPIL 217 - Glider Towing

Credits 1

Instruction and flight training necessary to obtain a logbook endorsement in the techniques and procedures for the safe towing of gliders.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Fall

PPIL 219 - Single Engine Seaplane Transition**Credits 1**

Instruction and flight training necessary to add the seaplane rating to the commercial pilot certificate. Course requires a one-week trip to a specified contract training location.

Note

One hour lecture a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213.

Typically Offered

Spring

PPIL 221 - Preventive Maintenance**Credits 2**

This course will give the student hands-on experience with the maintenance tasks allowed under FAR 43 entitled preventive maintenance.

Note

One hour lecture and two hours lab a week.

Repeat for Credit

N

Typically Offered

Fall, Spring

K-State 8

Ethical Reasoning and Responsibility

PPIL 230 - Private Pilot Glider Transition**Credits 1**

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of glider aircraft that will lead to an Private Pilot Glider certificate. This course provides students the opportunity to enhance and

develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 231 - Commercial Pilot Glider Transition

Credits 1

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of glider aircraft that will lead to a commercial pilot glider certificate. This course provides students the opportunity to enhance and develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213 and PPIL 230.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 262 - Multi-Engine Ground School

Credits 1

Ground instruction covering multi-engine aircraft to develop the aeronautical knowledge to meet the ground school requirements for a multi-engine land class rating.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211.

Typically Offered

Fall, Spring, Summer

PPIL 263 - Multi-Engine Flight Lab

Credits 1

Flight instruction and experience in a multi-engine aircraft to develop the aeronautical skills to meet the requirements to add a multi-engine land class rating to the student's existing pilot certificate.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Corequisite: PPIL 262.

Typically Offered

Fall, Spring, Summer

K-State 8

Natural and Physical Sciences

PPIL 290 - Multi-Engine Crew Coordination**Credits 1**

Instruction, simulator and flight training necessary to operate a multi-engine aircraft as a member of a crew. Enhances multi-engine, instrument and cross country skills.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211, PPIL 263.

Typically Offered

Other

PPIL 295 - Tailwheel Transition**Credits 1**

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of conventional-gear (tailwheel) aircraft that will lead to an endorsement allowing the student to act as pilot-in-command. This course provides students the opportunity to enhance and develop their skills in this segment of aviation.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 113.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 296 - Complex/High Performance Transition**Credits 1**

Instruction and flight training in the design, performance, operating characteristics, and flight proficiency for the safe operation of complex/high performance aircraft that will lead to endorsements allowing the student to act as pilot-in-command. This course provides students the opportunity to enhance and develop their skills.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211

Typically Offered

Fall, Spring, Summer

PPIL 310 - Fundamentals of Instruction/Advanced Ground Instructor Ground School**Credits 3**

This course will prepare the student for the Federal Aviation Administration (FAA) Fundamentals of Instruction (FOI) and Advanced Ground Instructor (AGI) Knowledge Tests.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211

Typically Offered

Fall, Spring

PPIL 311 - Certificated Flight Instructor-Airplane Ground School**Credits 3**

Instruction techniques, practices, and procedures necessary to provide skill in organizing and presenting lessons. This course will prepare the student for the FAA Certificated Flight Instructor-Airplane practical test and the Flight Instructor Airplane (FIA) Knowledge Test.

Repeat for Credit

N

Requisites

Co-requisite: PPIL 213 and PPIL 310

Typically Offered

Fall, Spring

PPIL 312 - Certified Flight Instructor Ground School

Credits 6

Instruction techniques, practices, and procedures necessary to provide skill in organizing and presenting lessons. This course will prepare the student for the FAA Certified Instructor Knowledge Test.

Note

Six hours recitation a week.

Repeat for Credit

N

Requisites

Co-requisite: PPIL 213.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Ethical Reasoning and Responsibility

PPIL 314 - Certified Flight Instructor Flight Lab

Credits 2

The needed flight skills and proper display of teaching ability will be emphasized. The demonstration of flight maneuvers with recognition of common errors in students performing the demonstrated maneuvers is stressed.

Note

Six hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213. Concurrent enrollment: PPIL 311 or PPIL 312.

Typically Offered

Fall, Spring, Summer

PPIL 325 - Advanced Aircraft Systems

Credits 3

Electrical, environmental, hydraulic, fuel, ignition, and lubrication systems, including theory of operation and calculations. Principles, systems, analysis, operation, and limitations of advanced electronic navigation, flight director, and automatic flight control systems, including Inertial Navigation Systems and GPS.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 211.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PPIL 379 - Turbine Transition**Credits 3**

To provide required knowledge to meet FAA requirements to operate as second-in-command in KSU transportation aircraft. Covers systems performance and emergency procedures for turbine aircraft. In conjunction with simulator training, students will be qualified to operate as co-pilots on university transportation trips.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 213.

Typically Offered

Fall, Spring

K-State 8

Empirical and Quantitative Reasoning

K-State 8 Tag 2

Natural and Physical Sciences

PPIL 385 - Airline Transport Pilot Rating**Credits 2**

Provides the student with the aeronautical knowledge necessary to prepare for the FAA Airline Transport Pilot Knowledge Test. The demonstration of flight maneuvers, with recognition of proper control of emergencies in compliance of the Airline Transport Pilot Practical Test Standards will be stressed.

Note

One hour lecture and three hours lab a week.

Repeat for Credit

N

Typically Offered

Other

PPIL 387 - Crew Resource Management I

Credits 3

This course involves using all available resources for a safe and efficient flight. Aircraft crew performance is reviewed to include the background and philosophy of Crew Resource Management (CRM) communication, decision behavior, team building, workload management, and situational awareness. Students accomplish two flight scenarios using modern advanced jet aircraft training device.

Note

Two hours lecture and four hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 262, PPIL 325.

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Human Diversity within the U.S.

PPIL 389 - Problems in Aviation**Credits 1-18**

To provide the student an opportunity to apply aviation education to the improvement of skills previously learned as designated by the instructor.

Repeat for Credit

Y

Typically Offered

Fall, Spring, Summer

PPIL 396 - Introduction to Upset Training and Recovery**Credits 1**

Instruction and flight training necessary to develop an understanding and flight proficiency in basic upset flight attitudes. This course provides the student the opportunity to develop a better understanding of aircraft and safety of flight in other than normal flight attitudes.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 114.

Typically Offered

Other

K-State 8

Natural and Physical Sciences

PPIL 416 - Crew Resource Management II**Credits 3**

Utilizing a modern advanced jet aircraft training device, special emphasis is placed on systems knowledge, Flight Management Systems (FMS) programming, flight profiles and cockpit flows. Students fly Line Orientated Flight Training (LOFT) missions and self-critique their performance.

Note

One hour lecture and five hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 387 and AVT 340.

Typically Offered

Spring

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Social Sciences

PPIL 482 - Certified Instrument Flight Instructor Ground School**Credits 1**

Instrument instruction techniques, practices, and procedures necessary to provide skills in organizing and presenting lessons in instrument flying procedures. This course will prepare the student for the FAA Certified Instrument Flight Instructor knowledge test.

Note

One hour recitation per week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 311 or PPIL 312.

Typically Offered

Fall, Spring, Summer

K-State 8

Ethical Reasoning and Responsibility

PPIL 483 - Certified Instrument Flight Instructor Lab

Credits 1

Instrument instruction techniques, practices, and procedures necessary to provide skills in organizing and presenting lessons in instrument flying procedures. This course will prepare the student for the FAA Certified Instrument Flight Instructor practical test.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 314. Prerequisite or corequisite: PPIL 482.

Typically Offered

Fall, Spring, Summer

PPIL 492 - Certified Multi-Engine Flight Instructor Ground School**Credits 1**

Provides the student with the aeronautical knowledge necessary to meet the requirements for the addition of an airplane, multi-engine rating to the flight instructor certificate.

Note

One hour recitation a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 311 or PPIL 312, PPIL 314.

Typically Offered

Fall, Spring

PPIL 493 - Certified Multi-Engine Flight Instructor Lab**Credits 1**

Provides the student with the aeronautical skills and experience necessary to meet the requirements for the addition of an airplane, multi-engine rating to the flight instructor certificate.

Note

Three hours lab a week.

Repeat for Credit

N

Requisites

Prerequisite: PPIL 314. Prerequisite or corequisite: PPIL 492.

Typically Offered
Fall, Spring, Summer

Unmanned Aircraft Systems

UAS 114 - Remote Pilot Certification for UAS

Credits 2

This course helps prepare students to become an FAA-Certified UAS Pilot. This course covers all knowledge topics important for a commercial UAS pilot. Once complete, the student takes the FAA's Remote Pilot in Command knowledge test.

Repeat for Credit
N

Typically Offered
Fall, Spring

UAS 115 - Introduction to Multi-Rotor Flight Lab

Credits 1

Basic through advanced flight training on multi-rotor uncrewed aircraft. This course establishes the foundation of manual flight, basic automation and features. Proficiency is built through standardized maneuvers to meet practical test standards.

Note
For portions of the course, students are required to travel to an area designated for flight operations.

Repeat for Credit
N

Requisites
Corequisite: UAS 114 or proof of a valid RPIC

Typically Offered
Fall, Spring

UAS 270 - Introduction to UAS

Credits 3

Introduction to the history of UAS and survey of current UAS platforms, terminology, challenges to airspace integration and operational theory.

Repeat for Credit
N

Typically Offered
Fall, Spring

K-State 8
Ethical Reasoning and Responsibility

K-State 8 Tag 2
Historical Perspectives

UAS 272 - UAS Safety Fundamentals

Credits 3

Introduction to aviation safety, with an emphasis on best practices for safe operation of unmanned aircraft systems. Topics include safety/risk assessments, human factors, crew resource management, aeronautical decision-making, risk management, and safety assurance.

Repeat for Credit
N

Typically Offered
Fall, Spring

UAS 275 - Small UAS Maintenance I

Credits 3

This course provides students with the knowledge and skill necessary to repair and maintain both fixed- and rotary-wing aircraft during field operations and to ensure continued airworthiness throughout the service life of the aircraft. Instruction emphasizes safe practices, provide an introduction to basic shop tools and machinery used in maintaining sUAS, and develop fundamental skills in platform fabrication and the troubleshooting/repair of the circuits, subsystems and components typically found on sUAS aircraft.

Note
Studio format incorporating lecture and lab elements.

Repeat for Credit
N

Typically Offered
Spring

UAS 280 - Multi-Rotor Construction Lab

Credits 2

This course focuses on the construction of a multi-rotor UAS. This includes gaining an understanding of individual components within the system and integrating the components into a fully functional system. Students will also test and tune the UAS once assembled.

Repeat for Credit
N

Typically Offered
Fall, Spring

UAS 285 - Small Unmanned Aircraft Maintenance II

Credits 3

This course provides students with advanced knowledge and a high level of skill in the maintenance and repair of both fixed- and rotary-wing unmanned aircraft and associated systems. The concept of continued airworthiness is emphasized. Topics include advanced techniques in the fabrication and repair of small unmanned aircraft systems and airframes, maintenance of ground support systems and principles of electronic and integrated circuit maintenance, troubleshooting and repair.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 275.

Typically Offered

Fall

UAS 300 - UAS Powerplant Fundamentals**Credits 3**

A study of the principles of operation, design features, and operating characteristics of various powerplants used in UAS. Includes inspection procedures and operational theory of current electric, piston, hybrid, and turbine propulsion systems.

Note

Two hours lecture and three hours lab per week.

Repeat for Credit

N

Typically Offered

Fall

K-State 8

Ethical Reasoning and Responsibility

K-State 8 Tag 2

Natural and Physical Sciences

UAS 312 - UAS Flight Instructor Ground School**Credits 3**

Intended to prepare the student for the role of UAS flight instructor. Focuses on the fundamentals of flight instruction. Lecture topics cover the techniques and the procedures necessary to generate, organize and present lessons in instructional environment while building necessary skills and emphasizing aspects of instruction necessary to ensure student competencies in the areas of UAS field and flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 114 &UAS 115.

Corequisite: UAS 314.

Typically Offered

Fall

UAS 314 - Multi-rotor Instructor Flight Lab

Credits 1

This course refines advanced multi-rotor skills and provides the practical experience necessary to produce competent multi-rotor flight instructors.

Note

Two hours of lab per week. For portions of the course, students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115

Corequisite: UAS 312 and proof of a valid Remote Pilot in Command (RPIC)

Typically Offered

Fall

UAS 353 - Command and Control Links and Circuitry

Credits 3

This course provides a detailed examination of the theory and design of UAS command and control (2C) systems and applies this knowledge to develop a thorough understanding of the principles used in the design, maintenance and repair of 2C circuits and subsystem components. Topics include design choices in component selection, circuit and overall system design concepts and troubleshooting.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 275 or consent of instructor.

Typically Offered

Fall

UAS 357 - Introduction to UAS Fixed-Wing Flight Lab

Credits 2

Provides an introduction to the use of an external pilot (EP) console to control fixed-wing UAS. In the event of a lost communications link, avionics or autopilot failure or other emergency, the external pilot is critical to human-in-the-loop

operation of the UAS in effecting a successful recovery of the aircraft. This course develops the skills necessary to ensure students are capable of conducting safe EP operation of fixed-wing UAS during adverse flight conditions.

Note

Four hours of lab per week. Students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 314.

Typically Offered

Spring

UAS 367 - Introduction to UAS Automated Fixed-Wing Flight Lab

Credits 3

This course focuses on developing the pilot's ability to control the UAS via a computer ground control station in the crew role of air vehicle operator (AVO). Students will become proficient in conducting site surveys, building UAS flight plans, contingency planning, emergency procedures, crew resource management, and developing mission briefings. Students will also learn methods for effectively instructing fixed-wing flight operations by developing lesson plans and conducting instructional flights.

Note

Six hours of lab per week plus individual simulator work. Students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 357 and UAS 312.

Typically Offered

Spring

UAS 373 - Small Unmanned Aircraft Design and Construction for Non-Aviators

Credits 3

Topics include: Unmanned Aircraft System platform, payload and component design and interfacing, system and vehicle maintenance, and systems integration. Intended for non-pilot majors and those without the FAA certifications and ratings required for UAS 370.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Corequisite: UAS 270.

Typically Offered

Fall

UAS 374 - Processing Remotely Sensed Data**Credits 3**

Students are introduced to basic theory, history, and practical applications of remote sensing technology, with an emphasis on high spatial resolution multispectral aerial imagery collected using UAS. Other topics include geographic information systems, aerial image interpretation, sensor resolution, orthomosaicing, georegistration, vegetation indices, and image classification.

Repeat for Credit

N

Typically Offered

Fall

UAS 387 - UAS Safety Applications**Credits 2**

This course provides students with the knowledge needed to best prepare for and conduct advanced UAS operations while staying safe. This course will cover Crew Resource Management, Human Factors, Safety Risk Mitigation strategies, and case study investigations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115.

Typically Offered

Fall

UAS 417 - Fixed-wing Instructor Flight Lab**Credits 2**

This is the culminating course intended to prepare students for roles as fixed-wing unmanned aircraft flight instructors. This course furthers develop and refine the flying skills necessary to assume control of the aircraft during adverse circumstances or unusual aircraft attitudes induced by a less experienced pilot. The fixed-wing instructor-in-training is required to demonstrate, in practice, the skills and knowledge obtained in earlier courses covering crew resource management and flight instruction as well as achievement of a high level of piloting skills. Upon successful completion of this course, the student is qualified as a K-State instructor on fixed-wing platforms and as pilot-in-command/operator-in-command during research missions authorized by the unmanned aircraft systems program.

Note

Four hours of lab per week.

Repeat for Credit

N

Requisites

Prerequisite: UAS 367.

Typically Offered

Spring

UAS 461 - Autonomous Flight Simulation Lab**Credits 1**

This course provides the student with simulation on high-end, sophisticated, proprietary autopilot systems in preparation for field operations flying aircraft equipped with similar autopilot/avionics packages.

Note

To hours of lab per week.

Repeat for Credit

N

Requisites

Prerequisite: UAS 370.

Corequisite: UAS 465.

Typically Offered

Spring

UAS 463 - Introduction to Autopilots and Mission Planning for Non-Aviators**Credits 3**

Focus is on mission planning and operations within the context of the simulated environment. Students are introduced to commercial, open source and/or proprietary autopilots and are required to complete simulated training missions with the ultimate goal of demonstrating skills competency and knowledge acquisition through evaluations of proficiency (e.g., through "check-outs" or "check-rides"). Students integrate autopilots into selected fixed-wing platforms. Intended for non-UAS majors and those without the FAA certifications and ratings required for UAS 370, UAS 461 and UAS 465.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 373.

Typically Offered

Spring

UAS 465 - Fixed-Wing Construction Lab and Autopilot Integration**Credits 3**

In this course, students will build a fixed-wing UAS. After completing the build and conducting a successful flight, students will

integrate an autopilot into their platform. Using open source ground station software and commercial-off-the-shelf (COTS), open source autopilot firmware and hardware, students learn techniques for integrating autopilots into their selected fixed-wing platform and for exploring precision autonomous flight in preparation for conducting field operations to acquire remotely sensed data.

Repeat for Credit

N

Requisites

Prerequisite: UAS 280

Typically Offered

Spring

UAS 467 - Small Unmanned Aircraft Systems Payloads

Credits 3

Course content covers various types of sUAS sensor packages and appropriate applications, preparing the student to properly select sensors based on mission profile, data needs and mission objectives. Students develop, design and construct a payload for integration into previously constructed aircraft in preparation for conducting missions to obtain data for post-flight processing.

Note

Studio format incorporating lecture and lab elements.

Repeat for Credit

N

Requisites

Prerequisite: UAS 465.

Typically Offered

Fall

UAS 470 - Flight and Field Operations

Credits 3

Emphasis is on advanced unmanned aircraft systems operations in the live flight environment with a focus on safety and crew resource management. Emphasis is on experiential learning. Students are required to travel to an area designated for flight operations.

Note

Studio format incorporating predominantly lab components with less emphasis on lecture.

Repeat for Credit

N

Requisites

Prerequisite: UAS 461 and UAS 465.

Typically Offered

Fall

UAS 471 - Advanced Fixed-Wing Operations Flight Lab

Credits 2

This course provides students with training on a high-end sophisticated, proprietary autopilot system. Course delivery will focus on safety and crew resource management. Emphasis is on experiential learning.

Note

3 hours of lab per week. Students are required to travel to an area designated for flight operations.

Repeat for Credit

N

Requisites

Prerequisite: UAS 357.

Typically Offered

Fall

UAS 475 - Data Acquisition and Post-processing

Credits 3

Students build upon the basic image processing skills gained in the previous course, expanding their knowledge of common aerial image data processing tasks using industry-standard software packages. Aerial data collection methodologies are introduced, including consideration of aerial mission flight parameters.

Repeat for Credit

N

Requisites

Prerequisite: UAS 115 and UAS 374.

Typically Offered

Spring

UAS 476 - Low Altitude Remote Sensing Project Development

Credits 3

Students gain practical experience collecting and processing their own high resolution aerial datasets using multirotor and/or fixed-wing UAS, and are instructed in proven workflows for successful commercial UAS mapping operations. The topic of payload selection and integration will enable a project to collect data for subsequent processing.

Repeat for Credit

N

Requisites

Prerequisite: UAS 475

Typically Offered

Fall

UAS 477 - Fundamentals of Thermography

Credits 3

Students learn the process of acquiring and interpreting radiometrically calibrated thermal imagery, including real-time analysis and ortho mosaicking. Specific topics include history of thermal sensors, best practices for calibration and mission planning, and imagery post-processing methods, analysis, and deliverables. This course will prepare students to enroll in a Level 1 Thermography Certification course.

Note

Elective option for Aeronautical Technology BS–Unmanned Aircraft Systems Option
Course within the UAS Data Analytics Certificate

Repeat for Credit

N

Requisites

Prerequisite: UAS 374

Typically Offered

Fall, Spring

UAS 478 - Fundamentals of LIDAR

Credits 3

Students learn how Light Detection and Ranging (LiDAR) systems are used in an sUAS setting and demonstrate their ability to collect, process, and analyze LiDAR data in various class, group, and individual projects. Specific topics include sUAS LiDAR integration, Global Positioning Systems (GPS), mission planning, post-processing methods and software, and final product deliverables.

Note

Elective option for Aeronautical Technology BS–Unmanned Aircraft Systems Option
Course within the UAS Data Analytics Certificate

Repeat for Credit

N

Requisites

Prerequisite: UAS 374

Typically Offered

Fall, Spring

UAS 480 - UAS Senior Design Project I

Credits 1

Culminating experience is a sustained occasion when students will put into independent practice the intellectual, creative, and expressive skills/knowledge they have cultivated in their undergraduate curriculum. In this course students integrate discipline-specific knowledge in addition to communication and inquiry methods to solve problems and communicate mastery of their respective area of interest.

Repeat for Credit

N

Requisites

Prerequisite: Senior standing.

Typically Offered

Fall

UAS 481 - UAS Senior Design Project II**Credits 2**

A continuation of UAS 480. Includes the implementation, testing, and delivery of the project initiated in UAS 480 UAS Senior Design I. Significant milestones are the completion of checkpoints outlined in the project proposal prepared in UAS 480 along with implementation, final report and final presentation.

Repeat for Credit

N

Requisites

Prerequisite: UAS 480

Typically Offered

Spring

Accelerated**Accelerated Applied Business and Technology - Applied Business (BS)/Integrated Systems Design and Dynamics (MS)**

The accelerated Applied Business and Technology - Applied Business (BS)/Integrated Systems Design and Dynamics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Integrated Systems Design and Dynamics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Integrated Systems Design and Dynamics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- COT 706 - Informatics and Technology Management **Credits: 3**
- COT 715 - Systems Project Management **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Applied Business and Technology - Technology Management (BS)/Integrated Systems Design and Dynamics (MS)

The accelerated Applied Business and Technology - Technology Management (BS)/Integrated Systems Design and Dynamics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Integrated Systems Design and Dynamics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.

- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Integrated Systems Design and Dynamics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- COT 706 - Informatics and Technology Management **Credits: 3**
- COT 715 - Systems Project Management **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**

Graduation Requirements

Integrated Systems Design and Dynamics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- MLAS 650 - Autonomous Systems Architecture Studio **Credits: 3**
- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Graduate Certificate

Advanced Air Mobility Systems Graduate Certificate

The next milestone in the ongoing evolution of the aerospace sector will be the introduction of disruptive automated and autonomous technologies in crewed and uncrewed air traffic management systems, including innovative, sustainable, and intelligent aerial platforms to carry people and commodities. The Graduate Certificate in Advanced Air Mobility Systems is created to give students the knowledge and abilities they need to pursue a rewarding career in the emerging advanced air mobility (AAM) industry. Students will learn novel automated and intelligent autonomous solutions that will enable a safe, efficient, and integrated airspace where uncrewed aerial systems can fly alongside crewed aircraft.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AAM 601 - Introduction to Advanced Air Mobility Systems **Credits: 1**
- AAM 605 - System Architectures in Advanced Air Mobility Systems **Credits: 2**
- AAM 732 - Aerospace Communication Systems **Credits: 3**
- AAM 762 - Guidance and Navigation Systems **Credits: 3**
- AAM 801 - Electromagnetic Threats and Mitigation Design for Advanced Air Mobility Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Cyber Human Systems Graduate Certificate

Cyber Human Systems integrate knowledge from a broad range of cybernetic sciences to design new computing systems to amplify humans' diverse physical and cognitive capabilities to accomplish individual and collective goals; assess the benefits, effects, and risks of computing systems; or understand how human, technical and contextual aspects of systems interact to shape those effects. The Graduate Certificate in Cyber Human Systems will allow students to understand and navigate advanced human-centered cybernetic and immersive systems. The Certificate will prepare students for cyber human systems thinking, emerging immersive technologies, cyber human systems project management, and advanced prototyping of interactive immersive environments.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- CYBR 780 - Design and Operations for Cyber Human Systems **Credits: 3**
- CYBR 782 - Social Computing Dynamics and Cyber Human Systems **Credits: 3**
- CYBR 783 - Interaction Design for Extended Reality Environments **Credits: 3**
- CYBR 801 - Prototyping for Advanced Immersive Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Machine Learning and Autonomous Systems Graduate Certificate

The Machine Learning and Autonomous Systems Graduate Certificate provides students with a comprehensive, advanced hands-on education focused on the design, development and deployment of machine learning and artificial intelligence frameworks within autonomous systems. Students will learn how to create autonomous systems that are cognitively-enabled using modern probabilistic programming languages. Students will be immersed in the fundamental theories of machine learning and the application of those theories leading to the operationalization of an autonomous systems framework.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student must:

- have a bachelor's degree or equivalent
- not be on probation
- have a cumulative grade point average (GPA) of 3.0 or higher
- meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee
- be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- MLAS 650 - Autonomous Systems Architecture Studio **Credits: 3**
- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**
- MLAS 800 - Integrated Machine Learning and Autonomous Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Space Systems and Operations Graduate Certificate

The Graduate Certificate in Space Systems and Operations will allow students to understand space systems design and dynamics, operations, materials, and manufacturing in space environments. The Graduate Certificate will allow students to understand space operations in contested and open environments, vulnerabilities and threats to space systems, the physics and chemistry of the space environment including materials, modeling and simulation, manufacturing (on Earth and in space), and orbital mechanics, communications and spacecraft to support space missions in the civil and commercial space sectors. Additionally, this degree fully stacks into Salina's current Master of Science in Integrated Systems Design & Dynamics (ISDD).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- SSO 739 - Space Systems Design and Dynamics **Credits: 3**
- SSO 740 - Space Systems Modeling, Simulation, and Control **Credits: 3**
- SSO 742 - Manufacturing and Materials in Space and on Earth **Credits: 3**
- SSO 801 - Space Operations and Environment **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Spatial Computing Graduate Certificate

Systems theory, systems design, computer systems, machine learning, cybernetic systems, augmented reality, and virtual reality provide the foundation for the burgeoning field of Spatial Computing. In spatial computing, digital information is integrated seamlessly into the user's perception of the real world, enhancing their understanding and interaction with their environment. The ability to simulate, and operationally bind, the system dynamics of genuine systems using mathematical models or smaller-scale physical replicas allows researchers to explore system behavior in a detailed manner that is frequently either impractical or unsafe in the real world. Additionally, this graduate certificate fully stacks into K-State Salina's current Integrated Systems Design and Dynamics (MS).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

- A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.
- While not required, incoming students should have a computing principles background (at least 2 credit hours of computer programming at the undergrad level is helpful). Students who do not have an undergraduate course in computing principles are advised to take the following courses:
 - CMST 190 – Information Engineering for Data Science (1 credit hour)
 - CMST 290 – Scientific Programming for Machine Learning (1 credit hour)

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- CYBR 790 - Spatial Computing for Virtual Environments **Credits: 3**
- CYBR 793 - Computer Geometry for Modeling **Credits: 3**
- CYBR 795 - Machine Learning for Simulations **Credits: 3**
- CYBR 801 - Prototyping for Advanced Immersive Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Integrated Systems Design and Dynamics (MS)

The Integrated Systems Design and Dynamics graduate degree provides students with a senior level systems-based STEM education. Using technical cybernetics, the graduate degree is focused on the planning, architecture, design, and development of highly integrated machine learning systems, autonomous systems, aerospace systems, space systems, cybernetic systems, cyber and cyber-physical systems. Students will learn how to design and develop technologically complex systems using various integrative modeling and simulation techniques. Students will be immersed in the system dynamics discipline leading to the application of this framework towards the operationalization of complex technological systems across multiple domains.

Admission Requirements

Bachelor's degree with a 3.0 minimum GPA in the final two years or approximately the last 60 credit hours of undergraduate work. No GRE, or GMAT required.

Graduation Requirements

To be awarded a master's degree, the student (a) must have a bachelor's degree or equivalent, (b) must not be on academic probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Core Courses (14 credit hours)

- CYBR 601 - Introduction to Cybernetic Modeling and Simulation **Credits: 3**
- CYBR 603 - Integrated Systems Architecture **Credits: 3**
- CYBR 707 - Research Methods, Design, and Analysis **Credits: 5**
- CYBR 708 - Cybernetic Systems Design and Dynamics **Credits: 3**

Elective Courses (12 credit hours)

Pick a concentration.

Aerospace Systems

- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- COT 741 - Aerospace Manufacturing and Materials **Credits: 3**

Machine Learning & Autonomous Systems

- MLAS 650 - Autonomous Systems Architecture Studio **Credits: 3**
- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**
- MLAS 800 - Integrated Machine Learning and Autonomous Systems **Credits: 3**

Aerospace Materials

- COT 741 - Aerospace Manufacturing and Materials **Credits: 3**
- SSO 735 - Electron Microscopy of Aerospace Materials **Credits: 3**
- SSO 736 - Aerospace Metallurgy and Ceramics **Credits: 3**
- SSO 738 - Advanced Composite Materials **Credits: 3**

Aerospace Cyber Defense

- CYBR 682 - Open Source Cyber Surveillance **Credits: 3**
- CYBR 684 - Advanced Topics in Cyber Data Fusion **Credits: 3**
- CYBR 751 - Cyber Defense Methods **Credits: 3**
- CYBR 760 - Aerospace Cybersecurity Studio **Credits: 3**

Systems Management

- COT 706 - Informatics and Technology Management **Credits: 3**
- COT 715 - Systems Project Management **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**
- CYBR 710 - Advanced Data Analytics for Cybernetic Systems **Credits: 3**

Systems Generalist

Student can also customize their elective selections. Pick four 600+ level COT, CYBR, MLAS, or SSO prefixed courses; or 500+ level IMSE courses. **Credits: 12**

Research Course, Thesis (6 credit hours)

3x2 Format

- COT 839 - Integrated Systems Thesis **Credits: 2**
- COT 839 - Integrated Systems Thesis - 2
- COT 839 - Integrated Systems Thesis - 2

Note: Once started, thesis courses must be taken in a connected semester sequence until completion.

Total Graduation Hours Required: 32

Accelerated

Accelerated Aeronautical Technology - Professional Pilot (BS)/Aeronautics (MS)

The accelerated Accelerated Aeronautical Technology - Professional Pilot (BS)/Aeronautics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Aeronautics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

**Admission Requirements for an ADP*

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Aeronautics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 707 - Research Methods **Credits: 3**
- COT 701 - Advanced Technical Communication **Credits: 3**

Graduation Requirements

**The Graduation Requirements below must be listed in the ADP Curriculum proposal*

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Graduate Certificate

Aerospace Certification Graduate Certificate

The Graduate Certificate in Aerospace Certification (GCAC) is designed to provide post-baccalaureate students employed in the aviation/aerospace industry, the requisite knowledge required to fulfill various professional roles within companies and organizations that span the industry. These include Aerospace Original Equipment Manufacturers (OEMs otherwise known as Tier I suppliers), Aerospace industry Tier II and Tier III suppliers, Aircraft Maintenance Repair and Overhaul Facilities (MROs), and other organizations. This certificate will provide these professionals a basic and intermediate level of understanding of the

FAA's product certification processes and continued airworthiness certification process along with supplemental certification processes and other regulatory requirements associated with bringing products to market in this industry. This knowledge is increasingly important as the industry moves to integrate novel technologies into the National Airspace System (NAS) such as Advanced Air Mobility (AAM) given the rapid rate of retirement of professionals with this level of knowledge.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Aeronautics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Aerospace Cyber Operations Graduate Certificate

The graduate certificate program in UAS- Information Assurance is designed to provide both working professionals and graduate students a strong educational foundation and career potential in an increasingly important industry to both civilian and military organizations all over the United States. The market for Information Assurance jobs remains bright. The primary emphasis of the graduate certificate program is to prepare the workforce to understand the protection of UASs from cyber-attacks by negligent and hostile means and teaching Information Assurance risk assessment principles to practitioners involved with UAS operations on land, sea, air, or satellite platforms.

The program will be offered via K-State Online or face-to-face at K-State Polytechnic in eight-week segments in fall, spring, and summer semesters to meet the needs of both on-campus and off-campus learners. Courses are delivered using a course management system to provide an interactive, web-based classroom to students. Thus, the delivery of the certificate provides for occupational work demands and schedules. The Graduate Certificate in UAS – Information Assurance may be completed in one year. Two courses each in the fall and spring semesters and one course in the summer semester.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Course Requirements

Required Courses

- CYBR 680 - Cyber Systems and Risk Analysis **Credits: 3**
- CYBR 682 - Open Source Cyber Surveillance **Credits: 3**
- CYBR 684 - Advanced Topics in Cyber Data Fusion **Credits: 3**
- CYBR 686 - Risk Management for Cyber Operations **Credits: 3**
- CYBR 688 - Sense and Avoid Technologies in Aerospace Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Aerospace Safety Graduate Certificate

The Graduate Certificate in Aerospace (GCA) is designed to provide post-baccalaureate students employed in the aviation/aerospace industry, the requisite knowledge required to fulfill an organizational safety role for their employer in fulfillment of the recent FAA move to implement SMS (Safety Management Systems) system-wide in an effort to increase system safety levels. This knowledge is increasingly important as the industry moves to integrate novel technologies into the National Airspace System (NAS) such as Advanced Air Mobility (AAM).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Aeronautics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**
- COT 701 - Advanced Technical Communication **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Aeronautics (MS)

The Master of Science in Aviation degree is a 30 credit with 2-option degree that is designed to meet emerging needs of the aviation/aerospace industry. Further, each option has either a research thesis track for those who desire to continue their education to the Ph.D. or a non-thesis option for those who do not plan on continuing their education beyond the master's degree. The M.S. in Aeronautics is also designed to accommodate either the working professional or the traditional academic student with both distance and hybrid instruction models. In either option, students will learn both from experienced professors as well as from experienced industry professionals.

The Leadership/Policy option is aimed at those who wish to continue their professional education with an ultimate career objective of an executive leadership position in the aviation/aerospace sector. Within this option, students will examine and understand current industry issues from a strategic perspective with a focus on how to make the industry more resilient in an era of constrained resources and changing national priorities.

The Aerospace Certification option is designed for those who desire advancement in, or desire to enter the workforce in, either the aerospace manufacturing or continued airworthiness sectors. Students will experience in-depth study in the areas of airworthiness certification, production certification, lean six sigma, project management, safety management and others. This program will meet and exceed emerging industry standards for education and training in airworthiness certification.

Admission Requirements

As specified in the Graduate Handbook. Students with undergraduate backgrounds other than aviation or engineering will be admitted conditionally at the discretion of the admissions committee.

A 3.0 undergraduate G.P.A. on a 4.0 scale during the last 60 hours of coursework is required for admission.

Other material required for admission: Official undergraduate transcripts, 2 letters of recommendation and a letter expressing personal goals in the completion of this program.

Graduation Requirements

30 credit hours.

Course Requirements

The program of study for the MSA program requires 30 total credits to include the following:

Required courses for both options: 6 credit hours

- AVT 611 - Aircraft Regulation and Certification **Credits: 3**
- AVT 707 - Research Methods **Credits: 3**

Aerospace Certification Option: 15 credit hours

- AVT 703 - Project Management for Aerospace Professionals **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**

- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 841 - Aerospace Safety Management Systems (SMS) **Credits: 3**
- Technical Elective **Credits: 3**

Aerospace Leadership/Policy Option: 15 credit hours

- COT 704 - Managerial Finances, Metrics, and Analytics **Credits: 3**
- AVT 751 - Aerospace Policy **Credits: 3**
- AVT 771 - Leadership in the Aerospace Sector **Credits: 3**
- Technical Elective **Credits: 3**
- Technical Elective **Credits: 3**
- Technical Elective **Credits: 3**

Technical Electives

- AVT 703 - Project Management for Aerospace Professionals **Credits: 3**
- AVT 722 - Aircraft Type Certification **Credits: 3**
- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 751 - Aerospace Policy **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- AVT 799 - Advanced Topics in Aeronautics **Credits: 3**
- COT 704 - Managerial Finances, Metrics, and Analytics **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**

Research: 3 credit hours

At least 3 credits from:

- AVT 838 - MSA Thesis **Credits: 1-6**
- OR
- AVT 836 - Master of Science in Aeronautics Capstone Project **Credits: 3** (non-thesis students)*

*Non-thesis students will need to enroll in one additional elective to reach 30 total hours.

No more than 9 credits of 600 level courses can be taken. Other technical courses may be substituted upon approval.
(15 credits)

Total Hours Required for Master's: 30

Accelerated

Accelerated Applied Business and Technology - Applied Business (BS)/Integrated Systems Design and Dynamics (MS)

The accelerated Applied Business and Technology - Applied Business (BS)/Integrated Systems Design and Dynamics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Integrated Systems Design and Dynamics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.
- A student who has completed all coursework for the bachelor's degree is not eligible for the accelerated program.

Course Requirements

Integrated Systems Design and Dynamics (MS)

Overlapping Courses

Students may select up to 9 credits from the list of courses below to satisfy the requirements for both their undergraduate and graduate degrees. These courses should be listed at the 600-700 level.

- COT 706 - Informatics and Technology Management **Credits: 3**
- COT 715 - Systems Project Management **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.

- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Accelerated Applied Business and Technology - Technology Management (BS)/Integrated Systems Design and Dynamics (MS)

The accelerated Applied Business and Technology - Technology Management (BS)/Integrated Systems Design and Dynamics (MS) will provide high-performing undergraduates the opportunity to pursue an accelerated MS/Master of Science in Integrated Systems Design and Dynamics degree with early admission to the graduate program as well as the ability to count nine credit hours of coursework in their graduate program toward their undergraduate degree.

Admission Requirements

Undergraduate students applying for the accelerated program are required to have completed a minimum of 75 credit hours towards their bachelor degree. The following requirements must be met for admission into the accelerated program:

- The student must be seeking the bachelor's degree.
- The student must have completed a minimum of 75 credit hours toward the bachelor degree at the time of application for admission to the accelerated program.
- The student's cumulative undergraduate GPA must be at least 3.000.
- The student must meet all other Graduate School admission criteria as outlined in the Graduate School Handbook and any graduate program specific requirements.

- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**

Graduation Requirements

- After completion of all undergraduate program requirements, including the up to nine (9) overlapping graduate credit hours that are counted toward the bachelor's degree, the student must apply to be awarded the bachelor's degree.
- After receiving the bachelor degree, the student is eligible to be fully admitted into the master program portion of the accelerated bachelor-master program.
- To complete the second part of the accelerated program, the student must complete all master program requirements with a graduate cumulative GPA of at least 3.000.

Graduate Certificate

Advanced Air Mobility Systems Graduate Certificate

The next milestone in the ongoing evolution of the aerospace sector will be the introduction of disruptive automated and autonomous technologies in crewed and uncrewed air traffic management systems, including innovative, sustainable, and intelligent aerial platforms to carry people and commodities. The Graduate Certificate in Advanced Air Mobility Systems is created to give students the knowledge and abilities they need to pursue a rewarding career in the emerging advanced air mobility (AAM) industry. Students will learn novel automated and intelligent autonomous solutions that will enable a safe, efficient, and integrated airspace where uncrewed aerial systems can fly alongside crewed aircraft.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- AAM 601 - Introduction to Advanced Air Mobility Systems **Credits: 1**
- AAM 605 - System Architectures in Advanced Air Mobility Systems **Credits: 2**
- AAM 732 - Aerospace Communication Systems **Credits: 3**
- AAM 762 - Guidance and Navigation Systems **Credits: 3**
- AAM 801 - Electromagnetic Threats and Mitigation Design for Advanced Air Mobility Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Cyber Human Systems Graduate Certificate

Cyber Human Systems integrate knowledge from a broad range of cybernetic sciences to design new computing systems to amplify humans' diverse physical and cognitive capabilities to accomplish individual and collective goals; assess the benefits, effects, and risks of computing systems; or understand how human, technical and contextual aspects of systems interact to shape those effects. The Graduate Certificate in Cyber Human Systems will allow students to understand and navigate advanced human-centered cybernetic and immersive systems. The Certificate will prepare students for cyber human systems thinking, emerging immersive technologies, cyber human systems project management, and advanced prototyping of interactive immersive environments.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- CYBR 780 - Design and Operations for Cyber Human Systems **Credits: 3**
- CYBR 782 - Social Computing Dynamics and Cyber Human Systems **Credits: 3**
- CYBR 783 - Interaction Design for Extended Reality Environments **Credits: 3**
- CYBR 801 - Prototyping for Advanced Immersive Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Machine Learning and Autonomous Systems Graduate Certificate

The Machine Learning and Autonomous Systems Graduate Certificate provides students with a comprehensive, advanced hands-on education focused on the design, development and deployment of machine learning and artificial intelligence frameworks within autonomous systems. Students will learn how to create autonomous systems that are cognitively-enabled using modern probabilistic programming languages. Students will be immersed in the fundamental theories of machine learning and the application of those theories leading to the operationalization of an autonomous systems framework.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student must:

- a. have a bachelor's degree or equivalent
- b. not be on probation

- c. have a cumulative grade point average (GPA) of 3.0 or higher
- d. meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee
- e. be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- MLAS 650 - Autonomous Systems Architecture Studio **Credits: 3**
- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**
- MLAS 800 - Integrated Machine Learning and Autonomous Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Space Systems and Operations Graduate Certificate

The Graduate Certificate in Space Systems and Operations will allow students to understand space systems design and dynamics, operations, materials, and manufacturing in space environments. The Graduate Certificate will allow students to understand space operations in contested and open environments, vulnerabilities and threats to space systems, the physics and chemistry of the space environment including materials, modeling and simulation, manufacturing (on Earth and in space), and orbital mechanics, communications and spacecraft to support space missions in the civil and commercial space sectors. Additionally, this degree fully stacks into Salina's current Master of Science in Integrated Systems Design & Dynamics (ISDD).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- SSO 739 - Space Systems Design and Dynamics **Credits: 3**
- SSO 740 - Space Systems Modeling, Simulation, and Control **Credits: 3**

- SSO 742 - Manufacturing and Materials in Space and on Earth **Credits: 3**
- SSO 801 - Space Operations and Environment **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Spatial Computing Graduate Certificate

Systems theory, systems design, computer systems, machine learning, cybernetic systems, augmented reality, and virtual reality provide the foundation for the burgeoning field of Spatial Computing. In spatial computing, digital information is integrated seamlessly into the user's perception of the real world, enhancing their understanding and interaction with their environment. The ability to simulate, and operationally bind, the system dynamics of genuine systems using mathematical models or smaller-scale physical replicas allows researchers to explore system behavior in a detailed manner that is frequently either impractical or unsafe in the real world. Additionally, this graduate certificate fully stacks into K-State Salina's current Integrated Systems Design and Dynamics (MS).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Integrated Systems Design & Dynamics at Kansas State University.

Admission Requirements

- A bachelor's degree, official transcripts for all undergraduate coursework (minimum 3.0 GPA required), official transcripts for all graduate coursework (if applicable), and a curriculum vitae. While not required, two letters of recommendation and highlighted industry experience can be used to improve an individual's application. GRE is not required.
- While not required, incoming students should have a computing principles background (at least 2 credit hours of computer programming at the undergrad level is helpful). Students who do not have an undergraduate course in computing principles are advised to take the following courses:
 - CMST 190 – Information Engineering for Data Science (1 credit hour)
 - CMST 290 – Scientific Programming for Machine Learning (1 credit hour)

Graduation Requirements

The student (a) must have a bachelor's degree or equivalent, (b) must not be on probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Required Courses

- CYBR 790 - Spatial Computing for Virtual Environments **Credits: 3**
- CYBR 793 - Computer Geometry for Modeling **Credits: 3**
- CYBR 795 - Machine Learning for Simulations **Credits: 3**
- CYBR 801 - Prototyping for Advanced Immersive Systems **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Master of Science

Integrated Systems Design and Dynamics (MS)

The Integrated Systems Design and Dynamics graduate degree provides students with a senior level systems-based STEM education. Using technical cybernetics, the graduate degree is focused on the planning, architecture, design, and development of highly integrated machine learning systems, autonomous systems, aerospace systems, space systems, cybernetic systems, cyber and cyber-physical systems. Students will learn how to design and develop technologically complex systems using various integrative modeling and simulation techniques. Students will be immersed in the system dynamics discipline leading to the application of this framework towards the operationalization of complex technological systems across multiple domains.

Admission Requirements

Bachelor's degree with a 3.0 minimum GPA in the final two years or approximately the last 60 credit hours of undergraduate work. No GRE, or GMAT required.

Graduation Requirements

To be awarded a master's degree, the student (a) must have a bachelor's degree or equivalent, (b) must not be on academic probation, (c) must have a cumulative grade point average (GPA) of 3.0 or higher, (d) must meet all the requirements of the Graduate School, the student's academic program area, and the student's supervisory committee, and (e) must be enrolled during the semester in which the degree requirements are completed.

Course Requirements

Core Courses (14 credit hours)

- CYBR 601 - Introduction to Cybernetic Modeling and Simulation **Credits: 3**
- CYBR 603 - Integrated Systems Architecture **Credits: 3**
- CYBR 707 - Research Methods, Design, and Analysis **Credits: 5**
- CYBR 708 - Cybernetic Systems Design and Dynamics **Credits: 3**

Elective Courses (12 credit hours)

Pick a concentration.

Aerospace Systems

- AVT 734 - Advanced Aircraft Certification **Credits: 3**
- AVT 744 - Aviation Human Factors Analysis and Design **Credits: 3**
- AVT 790 - Aerospace Topics **Credits: 3**
- COT 741 - Aerospace Manufacturing and Materials **Credits: 3**

Machine Learning & Autonomous Systems

- MLAS 650 - Autonomous Systems Architecture Studio **Credits: 3**

- MLAS 700 - Advanced Cybernetic Systems Development **Credits: 3**
- MLAS 750 - Autonomous Networking within Cyber-Physical Systems **Credits: 3**
- MLAS 800 - Integrated Machine Learning and Autonomous Systems **Credits: 3**

Aerospace Materials

- COT 741 - Aerospace Manufacturing and Materials **Credits: 3**
- SSO 735 - Electron Microscopy of Aerospace Materials **Credits: 3**
- SSO 736 - Aerospace Metallurgy and Ceramics **Credits: 3**
- SSO 738 - Advanced Composite Materials **Credits: 3**

Aerospace Cyber Defense

- CYBR 682 - Open Source Cyber Surveillance **Credits: 3**
- CYBR 684 - Advanced Topics in Cyber Data Fusion **Credits: 3**
- CYBR 751 - Cyber Defense Methods **Credits: 3**
- CYBR 760 - Aerospace Cybersecurity Studio **Credits: 3**

Systems Management

- COT 706 - Informatics and Technology Management **Credits: 3**
- COT 715 - Systems Project Management **Credits: 3**
- COT 720 - Application of Lean Six Sigma Methods **Credits: 3**
- CYBR 710 - Advanced Data Analytics for Cybernetic Systems **Credits: 3**

Systems Generalist

Student can also customize their elective selections. Pick four 600+ level COT, CYBR, MLAS, or SSO prefixed courses; or 500+ level IMSE courses. **Credits: 12**

Research Course, Thesis (6 credit hours)

3x2 Format

- COT 839 - Integrated Systems Thesis **Credits: 2**
- COT 839 - Integrated Systems Thesis - 2
- COT 839 - Integrated Systems Thesis - 2

Note: Once started, thesis courses must be taken in a connected semester sequence until completion.

Total Graduation Hours Required: 32

Veterinary Medical Library

The College of Veterinary Medicine has a well-equipped library that is a part of the Kansas State University libraries system. The general collection of books and journals encompasses veterinary medicine, basic biomedical sciences, and selected works in clinical medicine. The VM Library subscribes to approximately 875 journals and endeavors to subscribe to all English language veterinary medical titles. This is supplemented with core titles from human medicine, and selected subject areas representing faculty research interests, expertise, and teaching requirements.

Anatomy and Physiology

The mission of the Department of Anatomy and Physiology encompasses instruction, research and continuing education in the disciplines of gross and microscopic anatomy, cell and systemic physiology, pharmacology and neuroscience, all of which are central to the education of veterinarians for Kansas, to the education and training of graduate students for biomedical careers in teaching, research, and industry, and to the fulfillment of the University's mission to conduct basic and applied research important for the diagnosis and control of animal and human disease. The department has a fundamental role in acquiring new knowledge to further our understanding of animal and human physiology and pathophysiology. To maximize resources and foster collaborative interactions, the department has established four research focus groups: Cardiovascular and Pulmonary physiology, Immunophysiology, Neuroscience, and Pharmacology. In most cases, faculty have research interests that fall under more than one group. Research programs in these groups investigate their respective topics through integrating studies at the isolated tissue or cellular level to whole organ or animal function. Programmatic strengths of these groups include an actively shared system of well-equipped laboratories and excellent support personnel, mutually supportive technical and conceptual expertise, and interrelated but diverse extramural funding sources.

Career options available with an advanced degree in anatomy or physiology include academic positions in various animal and human health science-related institutions such as Colleges of Veterinary Medicine and Schools of Medicine and Dentistry, as well as positions in industry and agribusiness. For information on graduate work, courses, and faculty, please see Anatomy and Physiology.

Clinical Science

Quality graduate education is a priority for the Department of Clinical Sciences. Strong basic and applied research programs enhance the teaching and service commitments. Most of the Clinical Sciences faculty dedicate significant time and effort to research initiatives. Research collaboration is readily available to Clinical Sciences faculty, both within the College (Departments of Anatomy and Physiology and Pathobiology) as well as throughout the University. Traditional research partners have been the Departments of Animal Science and Industries, Biochemistry, Dairy Sciences, Meat Sciences and the Center for Basic Cancer Research in the Division of Biology. These alliances provide a broad range of expertise that can be drawn on to answer basic and applied research questions.

Clinical Sciences is one of the disciplinary foci of the Masters of Veterinary Biomedical Sciences Degree. Many graduate students seeking a Masters with a focus in clinical sciences are also enrolled in clinical residency training programs or a dual

degree (DVM-MS) program. Doctoral training opportunities are available to Clinical Sciences faculty and their candidates contingent upon faculty membership in, and collaborative relationships with, the graduate faculties of the Pathobiology, Anatomy and Physiology, and Animal Science and Industries programs.

For more information on graduate work, courses, and faculty, see Clinical Sciences.

Pathobiology

The Department of Diagnostic Medicine/Pathobiology includes faculty involved in the study of the epidemiology, diagnosis, pathogenesis, and prevention/control of infectious and parasitic diseases of animals and humans. In addition, the Department has faculty with expertise in topics related to food safety and security, public health and zoonosis. Opportunities exist for advanced graduate work after the Master's degree include the Doctor of Philosophy degree in the areas of bacterial and viral pathogenesis, clinical and anatomic pathology, epidemiology, immunology, parasitology, toxicology, and food safety and security.

The Pathobiology graduate program of the Department is a multi-disciplinary program. It is sufficiently diverse to provide the critical mass and cross-disciplinary interactions necessary to offer high quality graduate training, yet focused enough to avoid dilution of resources and conflicts with other graduate program. The scope and flexibility of the graduate program is a notable strength. The diversity of academic programs and broad expertise of the faculty provide opportunities for cross-disciplinary interaction. As such supervisory committees for the graduate students can custom design graduate training programs which address the interests of individual students. Collectively, the faculty in the Pathobiology Graduate Program has a history of successful extramural funding from both federal and industry sources to support graduate training programs and produce research which results in scientific publications of high quality. Many of our graduates have become successful researchers in academia, pharmaceutical and biological industries, private veterinary practice, federal agencies and diagnostic labs. The graduates have also been highly competitive for high quality postdoctoral research positions which allow them to continue their research training.

The Diagnostic Laboratory, housed in the Department, was established in 1961 and is fully accredited by the American Association of Veterinary Diagnostic Laboratory Diagnosticians. The laboratory has more than 50 employees who provide services to the veterinary teaching hospital, veterinary profession and animal industries of Kansas and surrounding states. The Diagnostic Laboratory is internationally recognized for its diagnostic capabilities for many important diseases of food and companion animals. Laboratories and support staff address all aspects of diagnosis from necropsy and histopathology, clinical pathology, serology, toxicology and infectious agents detection. Annual submissions to the laboratory exceed 100,000. Residency training in anatomic and clinical pathologist is fully integrated into the service activities of the laboratory. The Department houses the internationally recognized rabies laboratory that provides rabies diagnostic services for both humans and animals. The laboratory also provides information regarding disease occurrence for public health agencies, Federal and State regulatory officials, and the animal industry.

For information on graduate work, courses, and faculty, please see Diagnostic Medicine/Pathobiology.

Admission

Enrollment in the College of Veterinary Medicine is limited to qualified students who have completed the minimum 64 required hours of pre-professional courses (see pre-professional requirements at <https://www.vet.k-state.edu/admissions/requirements/>). To be eligible for consideration to the professional program leading to a Doctor of Veterinary Medicine, a student must first complete the pre-professional requirements with a minimum 2.800 average GPA (on an A = 4 point basis) in an accredited college or university, and a minimum 2.800 average GPA in the last 45 semester hours of undergraduate work.

Personal interviews are required of all students admitted. Selection is based upon academic achievement and professional potential as determined by the interview with the Admissions Committee. Applicants are evaluated on such items as motivation, maturity, communication skills, experience with and knowledge of animals, and experience with and knowledge of veterinary medicine. Therefore, all students interested in applying to the College of Veterinary Medicine are encouraged to have adequate animal exposure and to have work experience related to veterinary medicine to demonstrate to the Admissions Committee an understanding of the profession. Because veterinary medicine is so diverse, it is advisable to become acquainted with several areas of practice as well as with veterinarians in industry, public health and research.

Applicants must apply through VMCAS <http://www.aavmc.org> and also **must** complete the KSU supplemental application. Additional application details are available at <https://www.vet.k-state.edu/admissions/apply/>.

KSU supplemental applications must be completed online, printed and mailed along with a nonrefundable \$50 processing fee. Applicants must request all transcripts and GRE scores be sent to: Admissions, College of Veterinary Medicine, 101 Trotter Hall, Manhattan, KS 66506. A complete application consists of the VMCAS application, KSU supplemental application, transcripts from all Colleges/Universities attended, and a non-refundable application fee made payable to College of Veterinary Medicine by October 1.

All inquiries can be addressed to the following address:

Fees for veterinary medical students

College of Veterinary Medicine fees are higher than undergraduate fees. Since these are determined annually, contact the Office of the Associate Dean for current fees.

Course Requirements

Year 1 Fall: 20 credit hours

- VAP 805 - Cell Physiology **Credits: 3**
- VAP 806 - Gross Anatomy I **Credits: 6**
- VAP 807 - Veterinary Systems 1 **Credits: 6**
- VAP 808 - Introduction to Veterinary Medicine and Biomedical Research: Concepts and Values **Credits: 1**
- VAP 835 - Animal Care and Welfare **Credits: 1**
- VCS 809 - Veterinary Clinical and Professional Skills I **Credits: 1**
- VDMP 800 - Veterinary Career Development **Credits: 0**
- Electives **Credits: 2**

Year 1 Spring: 20 credit hours

- VAP 816 - Gross Anatomy II **Credits: 5**
- VAP 817 - Veterinary Systems 2 **Credits: 4**
- VCS 816 - Veterinary Clinical Skills and Professional Skills II **Credits: 1**
- VDMP 811 - Clinical Pathology I **Credits: 2**
- VDMP 814 - Veterinary Bacteriology & Mycology **Credits: 3**
- VDMP 817 - Principles of Veterinary Immunology **Credits: 3**
- VDMP 818 - Veterinary Epidemiology **Credits: 2**
- Electives **Credits: 1**

Year 2 Fall: 21 credit hours

- VAP 844 - Veterinary Pharmacology I **Credits: 4**
- VCS 839 - Veterinary Clinical and Professional Skills III **Credits: 1**
- VDMP 831 - Veterinary Virology **Credits: 3**
- VDMP 832 - General Pathology **Credits: 4**
- VDMP 834 - Veterinary Parasitology **Credits: 4**
- VDMP 835 - Clinical Pathology II **Credits: 3**
- Electives **Credits: 2**

Year 2 Spring: 21 credit hours

- VAP 846 - Veterinary Pharmacology II **Credits: 2**
- VCS 843 - Introduction to Veterinary Surgery **Credits: 2**
- VCS 844 - Medicine I **Credits: 4**
- VCS 845 - Radiology **Credits: 3**
- VCS 846 - Veterinary Clinical and Professional IV **Credits: 1**

- VDMP 841 - Veterinary Public Health **Credits: 2**
- VDMP 857 - Systemic Pathology **Credits: 5**
- Electives **Credits: 2**

Year 3 Fall: 21 credit hours

- VCS 861 - Food Animal Medicine **Credits: 4**
- VCS 862 - Theriogenology **Credits: 3**
- VCS 863 - Veterinary Surgery I **Credits: 3**
- VCS 864 - Applied Clinical Skills and Surgical Laboratories **Credits: 3**
- VCS 865 - Exotic Pet Medicine **Credits: 2**
- VCS 867 - Medicine II **Credits: 4**
- Electives **Credits: 2**

Year 3 Spring: 20 credit hours

- VAP 871 - Toxicology **Credits: 3**
- VCS 874 - Ethics and Jurisprudence **Credits: 1**
- VCS 877 - Clinical Nutrition **Credits: 2**
- VCS 876 - Applied Large Animal Clinical Skills **Credits: 1**
- VCS 878 - Veterinary Surgery II **Credits: 3**
- VCS 879 - Veterinary Surgery II Laboratory **Credits: 1**
- VCS 880 - Veterinary Business and Professional Development **Credits: 1**
- VCS 881 - Clinical Pharmacology **Credits: 2**
- VCS 882 - Equine Medicine **Credits: 3**
- Electives **Credits: 3**

Year 4 Summer, Fall, Spring: 45 credit hours

- VCS 900 - Veterinary Radiology and Diagnostic Imaging **Credits: 3**
- VCS 904 - Clinical Anesthesia **Credits: 3**
- VCS 906 - Ophthalmology **Credits: 2**
- VCS 910 - Livestock Local Practice **Credits: 2**
- VCS 912 - Livestock Medicine and Surgery **Credits: 2**
- Must take 4 credit hours of equine courses:
- VCS 920 - Equine Medicine **Credits: 2**
- VCS 922 - Equine Surgery **Credits: 2**
- VCS 924 - Equine Field Service **Credits: 2**
- VCS 930 - Small Animal Internal Medicine **Credits: 3**
- VCS 932 - Small Animal General Medicine **Credits: 3**
- VCS 934 - Clinical Small Animal Soft Tissue Surgery **Credits: 3**
- VCS 936 - Clinical Small Animal Orthopedic Surgery **Credits: 3**
- VCS 938 - General Dentistry **Credits: 1**
- VCS 940 - Small Animal Emergency Rotation **Credits: 2**
- VDMP 902 - Diagnostic Medicine **Credits: 2**
- Rotational electives **Credits: 11**

Total: 169 credit hours

Graduate Certificate

Stem Cell Biotechnology Graduate Certificate

Contact: Duane Davis
Email: davis@ksu.edu

The certificate is offered through the College of Veterinary Medicine. The overarching purpose of the certificate program is to add value to other degrees in the biological and life sciences, specifically including animal sciences, veterinary medicine, biology and biochemistry.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

Students with graduate standing and a 3.0 GPA in a field in the biological sciences or with a cumulative GPA of 3.0 or higher in the DVM curriculum are eligible to enroll. Exceptions are possible upon approval by the coordinator in consultation with the faculty.

Fifteen hours are required. The core courses are designed to ensure a benchmark level of knowledge about stem cell biotechnology.

Elective courses are intended to allow for: (1) specific advancement toward research competence in the field or (2) commercialization of stem cell and related technology.

Courses in the certificate may be included in graduate programs upon approval of the student's major professor and advisory committee. Inclusion of courses from other institutions and programs may be substituted for credit in the certificate in stem cell biotechnology with the approval of the program director in consultation with associated faculty.

Course Requirements

Required Courses

- AP 711 - Stem Cells and Comparative Biomedicine **Credits: 2**
- AP 850 - Stem Cell Techniques **Credits: 2**
- ASI 802 - Gametes, Embryos, and Stem Cells in Farm Animals **Credits: 2**
- ASI 902 - Topics in Animal Science **Credits: 1-6**
-May be taken either two or three times.

Elective Courses

Any three of the remaining courses qualify for the remaining credit hour requirements.

- AP 995 - Problems in Physiology **Credits: 1-18**
- ASI 600 - Applied Animal Biotechnology **Credits: 3**

- ASI 961 - Graduate Problem in Animal Sciences and Industry Credits: 1-18
- BIOL 510 - Developmental Biology Credits: 3
- BIOL 670 - Immunology Credits: 3
- BIOL 671 - Immunology Lab Credits: 2
- BIOL 705 - Eukaryotic Genetics Credits: 3
- BIOL 707 - Advanced Cell Biology Credits: 3
- BIOL 886 - Confocal, Fluorescence and Light Microscopy Credits: 3
- DMP 817 - Principles of Veterinary Immunology Credits: 3
- DMP 850 - Immunology of Domestic Animals Credits: 3
- DMP 878 - Applications of Flow Cytometry Credits: 1-3
- GRAD 820 - Leadership Practicum Credits: 3
- MANGT 845 - Technology Entrepreneurship and Strategy Credits: 3
- PLPTH 610 - Biotechnology Credits: 3

Total Hours Required for Graduate Certificate: 15

Anatomy and Physiology

Johann Coetzee, Head

Peying Fong, Director of graduate studies

228 Coles Hall

785-532-5666

ap@vet.ksu.edu

<http://www.vet.ksu.edu/academics/anatomy-physiology/index.html>

Program of study

The Department of Anatomy and Physiology offers opportunities for graduate studies leading to both M. S. (Veterinary Biomedical Science) and Ph.D. degrees. Cell and systemic physiology, immunophysiology, neuroscience, and pharmacology are the major themes of research of the department. Specific areas of interest include comparative exercise physiology, food animal immunophysiology, molecular biology of membranes, molecular genetics and gene mapping and expression, neural control of cardiovascular function, ion channel structure and function, and transport processes and pathophysiology of microcirculation. Faculty from other departments comprise a strong ancillary support group. Career options available with an advanced degree in anatomy or physiology include academic positions in various animal and human health science-related institutions such as Colleges of Veterinary Medicine and Schools of Medicine and Dentistry, as well as positions in industry and agribusiness.

Admissions

To be admitted with full standing, the applicant must have an average of B or better in the junior and senior years, a bachelor's or veterinary medical degree from an approved institution, and adequate undergraduate preparation in the proposed field.

For the Ph.D. degree, 90 semester hours of graduate study beyond the bachelor's degree are required, including at least 30 hours of research. For DVM candidates, if 12 hours of dual credit has not been applied to the master of science degree, it may be applied toward the Ph.D.

Application procedure

See Veterinary Medicine in this catalog for additional information. Applications are considered on a rolling basis. Teaching and research assistantships are awarded on the basis of merit and availability, using many of the same criteria used for admission decisions. Interested students are encouraged to peruse the departmental website <http://www.vet.ksu.edu/depts/ap>. All students offered admission are considered for financial support.

Additional Programs of Interest

Stem Cell Biotechnology Graduate Certificate

The overarching purpose of the certificate program is to add value to other degrees in the biological and life sciences, specifically including animal sciences, veterinary medicine, biology and biochemistry. For additional information, please see the Stem Cell Biotechnology Graduate Certificate catalog page.

Veterinary Biomedical Science

The Masters of Veterinary Biomedical Science Degree is a College of Veterinary Medicine -based program leading to an MS degree. Graduate study may be inter-disciplinary or focused in one of the three participating disciplines: Anatomy & Physiology; Clinical Sciences; Pathobiology. Each student's program will be designed by his/her supervisory committee to support the student's thesis project, educational and career goals. For additional information, please see the Veterinary Biomedical Science catalog page.

Doctor of Philosophy

Physiology (PHD)

The Department of Anatomy and Physiology offers opportunities for studies leading to a Doctor of Philosophy degree. Cell and systemic physiology, immunophysiology, neuroscience, and pharmacology are the major themes of research of the department. Their specific areas of interest include: biomedical applications for nanomedicine and drug delivery, comparative exercise physiology, food animal immunophysiology, molecular biology of membranes, molecular genetics and gene mapping and expression, neural control of cardiovascular function, ion channel structure and function, transport processes and pathophysiology of microcirculation.

Admission Requirements

Course Requirements

- Minimum 3 years, 2 semesters/years
- Equivalent of 90 semester hours
- Dissertation representing minimum 30 hours research (AP 999 - Research in Physiology)

Students with a BS Degree

At least 90 semester hours of credits including a minimum of 15 hours of formal course work (800-level or higher) and 30 hours of research credits for the dissertation, a preliminary examination, research, a written dissertation, and a satisfactory defense of the dissertation at the final oral examination.

Students with a MS Degree

A maximum of 30 hours from a master's degree can count toward the 90 credits required for the doctoral degree, if the supervisory committee decides that the course work is relevant to the doctoral program. The additional 60 credits must include a minimum of 15 hours of formal course work (800-level or higher) and 30 hours of research credits for the dissertation (AP 999 - Research in Physiology), a preliminary examination, research, a written dissertation, and a satisfactory defense of the dissertation at the final oral examination.

Students with a DVM Degree or in a Dual DVM/PhD Degree Program

At least 90 semester hours of credits including a minimum of 15 hours of formal course work (800-level or higher) and 30 hours of research credits for the dissertation (AP 999 - Research in Physiology), a preliminary examination, research, a written dissertation, and a satisfactory defense of the dissertation at the final oral examination. Students who hold professional doctorate degree (DVM, MD, etc.) degree or enrolled in a dual DVM/PhD program may transfer a maximum of 30 graduate credit hours from a professional doctorate degree toward the doctorate program of study. For students who do not have a bachelor's degree or not yet earned a bachelor's degree and are enrolled in the dual degree (DVM/PhD) program, the doctoral degree shall be awarded concurrently with the DVM or after the completion of the DVM degree.

Required Courses: 11+ credit hours

- **AP 803 - Seminar Credits: 1**
One hour each semester, 3 credit hours
- **AP 896 - Introduction to Responsible Conduct of Biomedical Research Credits: 2**
One statistics course, choose one:
- **STAT 701 - Fundamental Methods of Biostatistics Credits: 3**
- **STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3**
At least 3 hours of graduate physiology courses, examples:
- **AP 737 - Introduction to Cell Physiology Credits: 2**
- **AP 743 - Systems Physiology Credits: 4**
- **AP 805 - Cell Physiology Credits: 3**
- **AP 807 - Integrated Physiological Systems 1 Credits: 5-6**
- **AP 817 - Integrated Physiological Systems 2 Credits: 3-4**

Tracked Courses: 6-15 credit hours

All Ph. D. students are required to complete one of the following tracks:

Anatomy Track (11 hours)

- a. AP806 – Gross Anatomy I, 6 hours
- b. AP816 – Gross Anatomy II, 5 hours

Physiology Track (11 hours)

- a. AP805 -- Cell Physiology, 3 hours
- b. AP807 -- Systems I, 5 hours

c. AP817 -- Systems II, 3 hours

Pharmacology Track (6 hours)

a. AP844 – Pharmacology I, 4 hours

b. AP846 – Pharmacology II, 2 hours

Toxicology Track (15 hours)

a. BIOCH755 – Biochemistry I, 3 hours

b. BIOCH765 – Biochemistry II, 3 hours

c. AP845 – Toxicology, 2 hours

d. AP802 – Advanced Toxicology, 3 hours

e. AP830 – Toxins in the Biological System, 2 hours

f. AP831 – Current Topics in Toxicology, 2 hours

Animal Welfare Track (9 hours)

a. AP835 – Animal Care and Welfare, 1 hour

b. AP855 – Observing and Analyzing Animal Behavior, 1 hour

c. AP897 – Problems in Animal Welfare, 1 hour

d. DMP815 – Multidisciplinary Thought and Presentation, 3 hours

e. CS830 – Design and Interpretation of Clinical Trials, 3 hours

Anatomy Track (11 hours)

- AP 806 - Gross Anatomy I **Credits: 6**
- AP 816 - Gross Anatomy II **Credits: 5**

Physiology Track (11 hours)

- AP 805 - Cell Physiology **Credits: 3**
- AP 807 - Integrated Physiological Systems 1 **Credits: 5-6**
- AP 817 - Integrated Physiological Systems 2 **Credits: 3-4**

Pharmacology Track (6 hours)

- AP 844 - Pharmacology I **Credits: 4**
- AP 846 - Pharmacology II **Credits: 2**

Toxicology Track (15 hours)

- BIOCH 755 - Biochemistry I **Credits: 3**
- BIOCH 765 - Biochemistry II **Credits: 3**
- AP 830 - Toxins in the Biological System **Credits: 2**
- AP 831 - Current Topics in Toxicology **Credits: 2**
- AP 871 - Toxicology **Credits: 3**

Advanced Toxicology **Credits / Units: 3**

Animal Welfare Track (9 hours)

- AP 835 - Animal Care and Welfare Credits: 1
- AP 855 - Observing and Analyzing Animal Behavior Credits: 1
- AP 897 - Problems in Animal Welfare Credits: 1
- CS 830 - Design and Interpretation of Clinical Trials Credits: 3
- DMP 815 - Multidisciplinary Thought and Presentation Credits: 3

Elective Courses: 13-16 credit hours

As appropriate; consult with major professor and Supervisory Committee.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Clinical Sciences

<https://www.vet.k-state.edu/academics/clinical-sciences/>

About the department

The Department of Clinical Sciences offers a graduate program leading to the Master of Science (Veterinary Biomedical Science) degree. Graduate work in clinical sciences may be pursued in several fields of specialization including agricultural practice, anesthesiology, equine medicine and surgery, oncology, exotic and wildlife medicine, ophthalmology, radiology, small animal medicine, small animal surgery, and theriogenology. The department, along with the Veterinary Health Center at Kansas State University, has modern facilities and equipment for both basic and applied studies.

The primary goal of graduate study programs in clinical medicine is to prepare students for careers in teaching and research in a clinical specialty area. After completing graduate work, the student will be better prepared to conduct research both independently and as a team member. Adequate training in planning research projects and writing research proposals will give the student the ability to function with teams of scientists from the biomedical field. The student's experience in clinical teaching and literature study will form the basis for development of future teaching programs within his or her discipline.

A residency program designed to prepare and qualify a veterinarian for specialty boards recognized by the AVMA is usually combined with the graduate program. While a graduate program can be accomplished in a shorter period of time, the duration of combined programs is usually three years. This reflects the minimum time required to satisfy the objectives of each program. Details of an individual residency program can be obtained from the Director of the Veterinary Health Center at Kansas State University. An individually tailored graduate program concurrent with professional veterinary school or for non-DVM applicants can be arranged on an individual basis.

Admission Requirements

In order to be considered for admission, the applicant must FIRST identify, contact, and be accepted by a graduate faculty member within Clinical Sciences. Once the student has been accepted by a graduate faculty mentor, the student should submit the application online.

Admission will follow deadlines set forth by the Kansas State University Graduate School.

Continued Enrollment Requirements

Applicants for graduate study must have a minimum grade average of B. Applicants currently enrolled in the professional veterinary curriculum or those holding a baccalaureate degree will be considered on an individual basis.

A student who has less than a B average, based on individual merit, may be admitted on probationary status. Full standing is attained automatically upon completion of at least 9 hours of course work for graduate credit with grade of B or better and upon the removal of any deficiency which was specified at the time of admission. International students must have a health certificate and an acceptable score on the Test of English as a Foreign Language (TOEFL) or the International English Language Testing System (IELTS).

A graduate student may be denied continued enrollment in the university for any of the following reasons:

1. Failure of a student on probation as a condition of admission to achieve a minimum cumulative GPA of 3.0 in the first 9 credit hours of graduate level coursework.
2. Failure of a student placed on probation for deficient grades to achieve a cumulative GPA of at least 3.0 within 2 semesters for full-time students and within 12 credit hours for part-time students.
3. Failure to meet published departmental or University requirements.
4. Failure to maintain satisfactory progress toward a graduate degree.
5. Failure in the final degree examination(s).
6. Failure to acquire mastery for the methodology and content in a field sufficient to complete a successful thesis or dissertation.
7. Qualifying for placement on probation a second time, except when the first period of probation is a condition of admission or when the second period is a condition of reinstatement.
8. A recommendation for suspension or expulsion by the Honor Council.

Veterinary Medicine Certificate

Equine Veterinary Practice DVM Certificate

The Equine Veterinary Practice Certificate (EVPC) program is designed for current Doctor of Veterinary Medicine (DVM) students. The objectives of the EVPC are to prepare DVM students with the necessary skills to become proficient equine practitioners. This will be accomplished by incorporating skills in varied areas including equine general and preventative medicine, internal medicine, reproduction, surgery, lameness evaluation, practice experience and client communication. Through exposure to these diverse experiences, students will have the opportunity to learn and actively engage with equine-related matters, thereby increasing their self-confidence and knowledge in this field. This program is designed to enhance technical and procedural skills, knowledge base, practical business and personal life management, and client communication skills, ultimately providing veterinary graduates with a comprehensive foundation for a successful career in equine veterinary practice that begins the day they graduate.

Admission Requirements

Must be admitted to the DVM program at Kansas State University

Graduation Requirements

1. The certificate program will require that students complete 12 credits. All courses are elective courses within the DVM curriculum
2. Procedure log: Complete a list of required and optional skills and procedures (50 total outlined in Appendix 1) to master in preclinical years and fourth year. Performing clinical skills is an imperative and large component of the overall program, and students in the EVPC should be able to demonstrate competency in performing a large variety of core clinical skills to faculty instructors or externship/mentorship DVM mentors. The purpose of a procedure log is to ensure graduates are ready to perform general skills in practice competently and proficiently either with or without supervision.
- 3.3. College-wide seminar presentation during VCS 923 Advance Equine Studies: Students will present a 15 minute seminar on a pre-approved topic with their CVM faculty advisor. Options for topics include a case and/or disease discussion, in-depth "how to" perform procedures or skills and the application of these skills, practice tips learned and how they will apply those tips, business principles and plan, or others. The goal of this seminar presentation requirement is for students to research a particular area of equine veterinary practice as well as practice their communication skills. This type of communication skill will be useful in equine veterinary practice for not only communicating with veterinary colleagues but also for client education seminars.
4. Client education materials: Create an e-newsletter targeted towards horse owners and clients focusing on topics related to general and preventative medicine, internal medicine, surgery or lameness, theriogenology, or other relevant areas. The purpose of this requirement is to ensure that graduates are able to communicate with clients and horse owners in a clear manner using lay terminology. This will also provide graduates with a start to their client education materials portfolio.
5. Organized veterinary medicine: Be a member of at least one of the listed equine veterinary professional or student associations. The purpose of this requirement is to be involved in organized veterinary medicine and gain networking skills. It will also provide students with avenues for future continuing education and life-long learning skills as well as resources for maintaining health and self-care while staying involved and satisfied in a long-term career in equine veterinary practice.

American Association of Equine Practitioners (AAEP)

Student Chapter of the American Association of Equine Practitioners (SCAAEP)

KSU Guiding Wildcats into Future Equine Vets (FEV)

Starting Gate with Dr. Amy Grice

Kansas Equine Practitioners group

Required Courses (7 credit hours)

Course	Year(s) Offered
VCS 892 - Pre-Clinical Mentorships – Exotic Animal/Zoological Medicine Emphasis Credits: 1	1st/2nd/3rd
VCS 921 - Clinical Equine Theriogenology Credits: 2	4th
VCS 923 - Advanced Equine Studies Credits: 4	4th

Elective Courses (5 credit hours)

Course	Year(s) Offered
VCS 891 - Learning Curve of Equine Practice Credits: 1	1 st , 2 nd , 3 rd
VCS 891 - Topics Equine Podiatry Credits: 1	3 rd
VCS 892 - Equine Lameness Credits: 1	3 rd
VCS 891 - Equine Medicine Elective Credits: 1	3 rd
VCS 901 - Externship-Dodge City Rodeo Credits: 1	4 th
VCS 901 - Externship-Equine Emphasis Credits: 1	4 th
VCS 901 - Supplemental Equine Studies Credits: 2	4 th
VCS 925 - Supplemental Equine Studies Credits: 2	4 th

Total Credits Required: 14

Exotic Animal/Zoological Medicine DVM Certificate

The Exotic Animal/Zoological Medicine Veterinary Certificate (EAZMVC) program is for current Doctor of Veterinary Medicine (DVM) students at the College of Veterinary Medicine, Kansas State University. The goal of the EAZMVC is to prepare DVM students for long term success in the field of exotic animal and zoological (which, for this document, includes wildlife) medicine by incorporating skills of varied areas that include: captive management/husbandry, physical examination, ability to obtain detailed patient histories, manual and chemical restraint, knowledge of a broad-range of diagnostic procedures, understanding basic disease processes, veterinary care/animal health, preventive medicine, and the ability to adapt a student's knowledge and experience to a broad-range of species. Achieving this goal will result in a veterinary graduate with a well-rounded foundation for a career in exotic animal and zoological medicine.

Students interested in participating/enrolling in the EAZMVC program should submit a plan (preferably during the first year) to the EAZMVC faculty committee. The plan should be based on the guidelines outlined in this catalog entry.

Required Courses (8 credit hours + 1 zero credit enrollment)

All courses in the EAZMVC program are elective courses within the DVM curriculum. Students in the EAZMVC must take 8 credit hours in the required elective courses (outlined below) and 6 credit hours in select elective courses (outlined below), and must obtain 50 points (pt) in the list of other training opportunities (outlined below).

Course	Year(s) Offered
VCS 892 - Pre-Clinical Mentorships – Exotic Animal/Zoological Medicine Emphasis Credits: 1	1st/2nd/3rd
VCS 891 J - Topics in Advanced Zoological/Wildlife Medicine Credits: 1	3rd
VCS 891 O - Topics in Advanced Exotic Pet Medicine	3rd

Course	Year(s) Offered
VCS 905 - Exotic Animal, Wildlife, and Zoo Animal Medicine Clinical Rotation* Credits: 3	4th
VCS 901 - Externships – Exotic Animal/Zoological Medicine Emphasis Credits: 2	4th
VCS 901 - Externship/Programmed Study** Credits: 0	4th

* Because VCS 905 is considered a required course for students enrolled in the EAZMVC program, this course, when ranking, does not count as one of the 4th-year elective choices.

** Students must enroll in the zero (0) credit option of VCS 901 during the 4th-year as verification that the 50 points of training opportunities have been completed and recognized.

Elective Courses (6 credit hours)

Course	Year(s) Offered
VAP 891 - Special Interest Anatomy Credits: 1 (Note: topic must be related to our specialty)	1st, 2nd
VCS 760 - Topics in Global Veterinary Medicine Credits: 1	1st, 2nd
VDMP 804 - Ecotoxicology Credits: 1	2nd
VDMP 891 - Laboratory Animal Science Credits: 2	2nd, 3rd
VDMP 891 C - Backyard Chicken Diseases Credits: 1	3rd
VCS 901 - Externships – Exotic Animal/Zoological Medicine Emphasis* Credits: 1-4	4th
VCS 903 - Laboratory Animal Medicine Clinical Rotation Credits: 2 (Note: only 2 students are on at one time; only 5-7 blocks are offered; VDMP 891 is a prerequisite)	4th

These are in addition to the credit hours listed under "required courses."

Special Requirements

Students in the EAZMVC program will also have to complete a number of other training opportunities; ideally, these will align with their specific areas of interest in exotic animal/zoological medicine; 50 points (pt) required. Once 50 points have been awarded, the student will be enrolled in VCS 901 (Clinical Externship and/or Programmed Study) for 0 credit status (no financial cost).

- Actively participate as an officer or by attending 75% of the meetings in the KSU Exotic Animal Medicine Club (EAMC) (5 pt)
- Actively participate as an officer or by attending 75% of the meetings in the KSU Avian Medicine Club (5 pt)
- Actively participate in the KSU EAMC's Herpetarium, as manager, co-manager, or by providing animal care at least 15 times (5 pt)
- Pre-clinical mentorships or externships at other approved exotic, wildlife, and zoo facilities (5 pt/week); include VCS 892 Pre-Clinical Mentorships and VCS 901 Externships
- Taking any credit hours over 6 from the above "available elective courses" list (10 pt/credit hour)

- Safe Capture Certification Course (2-day course) (10 pt)
- International Wildlife Rehabilitation Council (IWRC) Basic Wildlife Rehabilitation (2-day course) (10 pt)
- Participate in other approved training programs, including the following (20 pt each):
 - MarVet (Marine Veterinary Medicine and Conservation): www.marvet.org
 - SeaVet (Aquatic Animal Health; University of Florida): <http://conference.ifas.ufl.edu/seavet/>
 - Aquamed (sponsored by the Gulf States Consortium of Colleges of Veterinary Medicine; Louisiana State University): <http://www.vetmed.lsu.edu/aquamed.htm>
 - Aquavet (Cornell University): <http://www.vet.cornell.edu/aquavet/>
 - Wildlife Vets (Nelspruit, South Africa): <http://www.wildlifevets.net/>
 - African Conservation Experience: <https://www.conservationafrica.net/>
 - Envirovet: <http://vetmed.illinois.edu/envirovet/>
 - Certification of Aquatic Veterinary Medicine (CERTAQV), through the World Aquatic Veterinary Medicine Association (WAVMA)
 - Introduction to Conservation and Wildlife Veterinary Medicine Online Certificate Program (Purdue University College of Veterinary Medicine): <https://vet.purdue.edu/global/wildlife-certificate.php>
 - Conservation Medicine and Diseases of Amphibian and Reptiles at Southwest Research Station
- Attend professional meetings: local (day-long; 5 pt), national or international (10 pt)
- Propose and complete an approved Capstone project/report as agreed upon in advance by the student and mentor (10 pt)
- Assist in research studies as agreed upon in advance by the student and mentor (5 pt)
- Experience in writing scientific papers for publication as an author or co-author (10 pt)
- Propose and complete an approved problems course (ie, pathology rounds as they pertain to our specialty) (10 pt)
- Completion of select webinars or courses online (1 pt/contact hour): numerous available, including WAVMA (WebCEPD program), Oxbow Animal Health Vet Connect, LafeberVet, etc.; student must take post-webinar test to get credit (R.A.C.E.); some may have student fees
- Progress towards (or completion of) an MPH, MS, or PhD in a field related to exotic pet/wildlife or zoological medicine (TBA)
- Join one or more professional organizations as an individual student member: American Association of Zoo Veterinarians (AAZV), Association of Avian Veterinarians (AAV), Association of Reptile and Amphibian Veterinarians (ARAV), Association of Exotic Mammal Veterinarians (AEMV), Wildlife Disease Association (WDA), International Association for Aquatic Animal Medicine (IAAAM) (5 pt)
- Other training experiences may be proposed by the student to the EAZMVC Committee

Total Credits Required: 14

Food Animal Veterinary DVM Certificate

The goal of the Food Animal Veterinary Certificate (FAVC) program is to prepare graduates for long-term success in food animal veterinary practice by incorporating skills in varied areas including animal health, production medicine, practice management, and client communications. Achieving this goal will result in a veterinary workforce capable of meeting the needs of livestock producers in a sustainable practice environment.

Required Core Courses

Coursework for completion of the certificate program is divided into two sections: core and elective courses. All coursework in the FAVC program are elective courses available within the DVM curriculum. Students in the DVM program must take 12 pre-clinical elective credits and 11 clinical elective credits as part of the degree requirements.

The core courses (4 credits) provide foundational knowledge and skills which must be acquired by all FAVC students. Students

may select elective coursework (10 credits) to align with their specific areas of interest in food animal medicine. The combination of core and elective coursework results in 14 required credit hours for FAVC completion. The clinical elective coursework may include a relevant course at another academic institution with an accredited DVM program as approved by the FAVC faculty committee.

Third Year

Fourth Year

- VCS 901 - Clinical Externship and/or Programmed Study **Credits: 0-6**
- VCS 917 - Advanced Rural Food Animal Business Management **Credits: 1**

Elective Courses

Pre-clinical Courses (at least 4 credit hours):

- VCS 891 - CS Veterinary Medicine Elective **Credits: .5-3**
- DMP 816 - Trade and Agricultural Health **Credits: 2**
- DMP 888 - Globalization, Cooperation, & the Food Trade **Credits: 1**

Clinical (4th Year) (at least 6 credit hours):

- VCS 901 - Clinical Externship and/or Programmed Study **Credits: 0-6**
- VCS 913 - Advanced Feedlot Production Management **Credits: 2**
- VCS 915 - Advanced Cow-Calf Production Management **Credits: 1**
- VCS 917 - Advanced Rural Food Animal Business Management **Credits: 1**
- VCS 919 - Food Animal Bull Reproduction **Credits: 2**
- VDMP 911 - Dairy Production Medicine **Credits: 3**
- Relevant course at another academic institution

Required Core Experiences

Member of at least one national veterinary professional association (e.g. AABP, AVC, AASRP, AASV).

Complete required procedure log (Appendix 1).

Complete required number of procedures from elective procedure log (Appendix 2).

Documented proficiency at core clinical skills during DVM core coursework:

- CS 748 Food Animal Local Practice
- CS 749 Food Animal Medicine and Surgery
- DMP 785 Diagnostic Medicine

College-wide seminar presentation of accumulated experiences and selected case management.

- scheduled in conjunction with CS 774 Rural Business Management

Shelter Medicine DVM Certificate

The goal of the Shelter Medicine Veterinary Certificate is to prepare Doctorate of Veterinary Medicine students for long term success in the field of shelter medicine by incorporating skills of varied areas that include but are not limited to shelter animal care and behavior, high-quality high-volume sterilization surgery and shelter management consultation. Achieving this goal will result in a veterinary graduate with a well-rounded foundation for a career in Shelter Medicine.

Graduation Requirements

Students in the DVM program must take 4 pre-clinical elective credits and 5 clinical elective credits as part of the certificate requirements. Students may take the remaining 6 credits required for the program in either pre-clinical or clinical elective credits.

Core (mandatory) courses (9 credits) provide comprehensive foundational knowledge and skills, which are required for all SMVC students. Students may select the additional coursework (6 credits) to align with their specific areas of interest in shelter medicine. The elective clinical coursework includes a required (2 credit) externship at a shelter approved by the SMVC faculty committee. This externship must focus on shelter medicine, population management and/or forensics, not on surgery. The time that the student spends on surgery during this externship must be 20% or below. Students must also have completed the Fear Free® Shelter Program during their time at K-State.

Documented proficiency of core clinical skills during DVM coursework (minimum grade 3.0: expected proficiency) for any clinical courses counting towards SMVC.

Mandatory Courses (4 credits pre-clinical and 5 credits clinical)

- VCS 891 - CS Veterinary Medicine Elective **Credits:** .5-3 Section A
- VCS 891 - CS Veterinary Medicine Elective **Credits:** 0.5-3 Section C
- VCS 892 - CS Veterinary Medicine Elective Cr/NC **Credits:** .5-3 Section G
- VAP 891 - A&P Veterinary Medicine Elective Graded **Credits:** .5-3 Section B
- VCS 937 - Shelter Medicine **Credits:** 2
- VCS 946 - Shelter Operations Consultation **Credits:** 1
- VCS 901 - Clinical Externship and/or Programmed Study **Credits:** 0-6

Optional Courses (must take at least 6 credits from the list below)

- VCS 891 - CS Veterinary Medicine Elective **Credits:** .5-3 Section T
- VCS 892 - CS Veterinary Medicine Elective Cr/NC **Credits:** .5-3 Section B
- VCS 891 - CS Veterinary Medicine Elective **Credits:** 0.5-3 Section K
- VCS 945 - Supplemental Dentistry for Small Animals **Credits:** 1
- VCS 942 - Advanced Surgical Experience **Credits:** 2
- VCS 901 - Clinical Externship and/or Programmed Study **Credits:** 0-6

Veterinary Medicine Sustainability DVM Certificate

The goal of the Veterinary Medicine Sustainability Certificate program is to prepare graduates to develop sustainable clinical practices, promote sustainability among their clientele, and engage the public in the area of sustainable animal health. A sustainable veterinarian promotes continuing animal health and food production through profitable and resource-efficient practices that create satisfying lives for veterinarians, staff and clients. Completion of the program will provide graduates with the knowledge necessary to enhance the sustainability of practices, clients, and companies with which they work.

Admission Requirements

Must be admitted to the DVM program at Kansas State University.

Required Courses (6 credit hours)

Course	Year(s) Offered
VCS 822 - Introduction to Sustainable Beef Systems Credits: 1 OR VCS 892 - Concepts in Sustainable Small Animal Practice Credits: 1	
VCS 832 - Antimicrobial Resistance in Bacteria: A One Health perspective Credits: 1	
VCS 891 - Business Principles for Veterinary Practice Credits: 1	
VCS 901 - Externship with emphasis in Veterinary Practice Sustainability Credits: 3	

Total Credits Required: 14

Elective Courses (8 credit hours)

Course	Year(s) Offered
VCS 820 - Topics in Global Veterinary Medicine Credits: 1	
VCS 840 - Communication with the Agricultural Worker Credits: 1	
VCS 891 - Applied Small Animal Behavior Credits: 1	
VCS 892 - Pre-Clinical Veterinary Sustainability Mentorship Credits: 1-3	
VCS 917 - Advanced Rural Food Animal Business Management Credits: 1	
VDMP 816 - Trade and Agricultural Health Credits: 2	
VDMP 888- Globalization & the Food Trade Credits: 1	
VDMP 891 - Ecotoxicology Credits: 1	
VDMP 891 - International Animal & Zoonotic Disease Credits: 1	

Diagnostic Medicine/Pathobiology

Derek Mosier, Head
T.G. Nagaraja, Director of graduate studies

305 Coles Hall
785-532-1214
tnagaraj@vet.ksu.edu

Program description

The Pathobiology Graduate Program of the College of Veterinary Medicine offers graduate programs leading to M.S., (Veterinary Biomedical Science), Ph.D. (Pathobiology), and combined D.V.M./M.S., or D.V.M./Ph.D. degrees. Degree candidates may specialize in research areas represented by the expertise of the members of the Graduate Group. Requirements for the Ph.D. degree include full-time study equivalent to at least 90 semester hours [60 for individuals with a D.V.M. and/or MS degree] including at least 30 hours of research credit for the dissertation and generally 30-39 hours of formal course work, a preliminary examination, research, a written dissertation, and a satisfactory defense of the dissertation at the final oral examination. The Ph.D. degree normally requires at least three years of full-time study. Students who hold a master's degree may request transfer of up to 30 hours of that degree toward a Ph.D. Demonstration of proficiency in foreign languages is not required. The University operates on a semester basis plus an eight-week summer session.

See Veterinary Medicine for additional information.

Program requirements

Minimum entrance requirements, include a B average in the junior and senior undergraduate years for applicants not holding a D.V.M./V.M.D. degree. All applicants are required to take General GRE and submit the scores with the application. International students must demonstrate proficiency in English by earning a satisfactory score on the TOEFL and must provide health and financial certificates. Candidates for admission to the Graduate School must be approved by the Pathobiology Graduate Program. Most incoming students have a degree in veterinary medicine, but some have degrees in animal science, microbiology, biology, biochemistry/pharmacology, genetics, or food science. The most important considerations for applicants are documented academic achievement and an interest in continued study and research in Pathobiology. Sufficient training in biology and a strong background in biochemistry are important requirements. Students seeking admission are encouraged to have the completed application submitted before the preceding semester. International students seeking admission for summer (June) or fall semester (August) should submit the application before January 1 and if seeking admission for the spring (January) semester should submit the application before August 1.

Financial support

Research Assistantships, which are entirely funded through grants received by the major professors, are available for qualified candidates on a competitive basis. Prospective students are encouraged to apply for federally sponsored fellowships and traineeships from agencies such as the USDA, NASA, NDEA, NIH, and NSF.

Research facility

The College of Veterinary Medicine is comprised of three major buildings: Coles Hall, Trotter Hall, and Mosier Hall. These buildings encompass approximately 468,838 total square feet and provide space for outstanding instructional, research, clinical, and diagnostic activities. Three departments, Anatomy and Physiology, Clinical Sciences, and Diagnostic Medicine/Pathobiology, the Veterinary Health Center and the Kansas State Veterinary Diagnostic Laboratory are in the college. In addition to numerous research laboratories within the departments, the college has several Core Laboratories, including the Analytical Chemistry Core, Biomedical Core, Flow Cytometry Laboratory, Confocal Microscopy Facility, Molecular and Cellular Biology Facility, Nanotechnology Core, and the Next-Gen Sequencing

Doctor of Philosophy

Pathobiology (PHD)

The Pathobiology Graduate Program is an interdepartmental and interdisciplinary program with a mission to provide a broad based graduate education to students seeking a PhD degree in the areas of infectious and non-infectious diseases of animals, food safety, security, and policy, and production animal medicine and management. The research activities of the graduate faculty, primarily in the Departments of Diagnostic Medicine/Pathobiology and Clinical Sciences are in specialized areas of Infectious Diseases, including Zoonotic Diseases and Transboundary Diseases, Bacteriology, Epidemiology, Immunology, Parasitology, Pharmacology, Virology, Companion Animal Health, Comparative Biomedical Sciences, Food Animal Health and Management, Food Safety and Security, and Translational Medicine. The program is also served by faculty from other departments or units at K-State, which include Anatomy and Physiology, Animal Sciences, Biochemistry and Molecular Biophysics, Biology, Biosecurity Research Institute, Entomology, and the Olathe campus. The faculty in the Pathobiology Program have national and international reputations in areas of transboundary diseases, swine viral diseases, bacterial diseases, vaccine development, vector-borne diseases, parasitic diseases, epidemiology, and food safety and security.

The research activities and discovery strengths of the faculty in the program are organized and focused in Centers and Institutes, which include the Beef Cattle Institute (BCI), Center of Excellence for Emerging and Zoonotic Animal Diseases (CEEZAD), Center for Emerging and Zoonotic Infectious Diseases (CEZID), Center of Excellence for Translational and Comparative Oncology Research (CETCOR). In addition, graduate students in the program have opportunities to work with scientists in the federal research institutes, such as the Arthropod-Borne Animal Disease Research Unit (ABADRU), a United States Department of Agriculture (USDA) institute in Manhattan, KS to study vector borne diseases and the National Bio and Agro-Defense Facility), formerly Plum Island Animal Disease Center, a USDA laboratory to study transboundary diseases.

The graduate faculty in the program have established programmatic requirements, within the overall policies of the Graduate School, for admission, supervision, and completion of the degree and provide both the course instruction and the research training essential to complete the PhD degree. The graduate training is provided in a vibrant multidisciplinary environment, exposing students to a variety of disciplines and research areas. The program offers opportunities for DVM students to concurrently work on a dual degree program (DVM/PhD).

Admission Requirements

The Pathobiology Graduate Program in the College of Veterinary Medicine has the following requirements:

1. A cumulative grade point average of 3.0/4.0 in the baccalaureate degree, DVM/VMD or in the M.S degree. In special circumstances, students with a 2.8 or 2.9/4.0 will be considered for a probationary admission. A majority of the admitted students have a degree in Veterinary Medicine, but DVM is not a requirement.
2. Applicants are required to take the General Graduate Record Examination (GRE) and submit the scores with the application.
3. International students from countries where English is not the native language must provide English language proficiency test scores, such as the Test of English as a Foreign Language (TOEFL), International English Language Testing System (IELTS), or Pearson Test of English (PTE).
4. Sufficient training and background in biology, molecular biology, and biochemistry are important requirements.

In order to be considered for admission, the applicant must FIRST identify, contact, and be accepted by a graduate faculty member in the Pathobiology Graduate Program.

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Core Course Requirements

- AP 896 - Introduction to Responsible Conduct of Biomedical Research **Credits: 2**
- DMP 970 - Pathobiology Seminar (PhD) **Credits: 1**
- Graduate Seminar **Credits: 1**
- Graduate Seminar **Credits: 1**

Students with a BS Degree

At least 90 semester hours of credits, including a minimum of 15 hours of formal course work (800-level or higher), and 30 hours of research credits (DMP 999 - Ph.D. Research in Pathobiology) for the dissertation, successful completion of a preliminary examination and approval of candidacy for the doctoral degree, completion of the research requirements and a written dissertation, and a satisfactory defense of the dissertation at the final oral examination.

Students with a MS Degree

Students already holding an applicable master's degree upon admission can count 30 credits toward the 90 credits required for the doctorate. In addition, at least 60 semester hours of credits, including a minimum of 15 hours of formal course work (800-level or higher), and 30 hours of research credits for the dissertation (DMP 999 - Ph.D. Research in Pathobiology); successful completion of a preliminary examination and approval of candidacy for the doctoral degree; completion of the research requirements and a written dissertation; and a satisfactory defense of the dissertation at the final oral examination.

Students with a DVM Degree or in a Dual DVM/PhD Degree Program

At least 90 semester hours of credits, including a minimum of 15 hours of formal course work (800-level or higher), and 30 hours of research credits for the dissertation (DMP 999 - PhD Research in Pathobiology), successful completion of a preliminary examination and approval of candidacy for the doctoral degree, completion of the research requirements and a written dissertation, and a satisfactory defense of the dissertation at the final oral examination. Students who hold a professional doctorate degree (DVM, MD, etc.) degree or enrolled in a dual DVM/PhD program may transfer a maximum of 30 graduate credit hours from a professional doctorate degree toward the PhD program of study. For students who do not have a bachelor's degree or not yet earned a bachelor's degree and are enrolled in the dual degree (DVM/PhD) program, the doctoral degree shall be awarded concurrently with the DVM or after the completion of the DVM degree.

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Agricultural Biosecurity Research Graduate Certificate

Contact: Dana Vanlandingham

Email: dlvanlan@k-state.edu

The 12-credit hour Agricultural Biosecurity Research Graduate Certificate is designed to foster the development of research scientists to safely plan and execute research in a variety of biosafety level environments (BSL-3, BSL-3 Ag, and BSL-4). This interdisciplinary certificate will instill common biosafety, containment, and regulatory compliance knowledge and skills that are required to work in high and maximum containment research facilities. The certificate will also provide a deeper understanding of the agents and toxins which are frequently studied in these facilities.

The Agricultural Biosecurity Research Graduate Certificate is offered through the College of Veterinary Medicine to non-degree and degree seeking graduate and Doctor of Veterinary Medicine (DVM) students who plan to work in high and maximum containment facilities. Students will develop an appreciation, and necessary skills, for the exacting performance standards required in these complex and demanding work environments.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

- DMP 690 - Essential Practices for BSL-3 Research Settings **Credits: 1**
- DMP 691 - Introduction to High Containment Laboratory Topics and Techniques **Credits: 3**
- DMP 813 - Select Agent Studies **Credits: 3**
- DMP 846 - Foundations of Biosecurity **Credits: 3**

Elective Courses

- DMP 770 - Emerging Diseases **Credits: 3**
- DMP 855 - Disease Detection, Surveillance and Risk Assessment **Credits: 3**
- DMP 871 - Molecular Diagnostics of Infectious Diseases **Credits: 3**
- DMP 893 - Principles of Biosafety and Biocontainment **Credits: 2**
- FDSCI 730 - A Multidisciplinary Overview of Food Safety and Security **Credits: 2**
- FDSCI 731 - Food Protection and Defense--Essential Concepts **Credits: 2**

Please note that other classes may be approved by the program director and associated faculty.

Total Hours Required for Graduate Certificate: 12

Public Health Core Concepts Graduate Certificate

Contact: Ellyn Mulcahy
E-mail: emulcahy@ksu.edu

The certificate program in Public Health Core Concepts is designed to give individuals, both working professionals and graduate students on campus with no formal public health education, a strong foundation of knowledge in the five core concept areas in public health: biostatistics, epidemiology, environmental health sciences, health services administration, and social and behavioral sciences. The courses required for the certificate are the same ones required in the core concept areas for the Master of Public Health (MPH) degree program currently offered at Kansas State University. These five areas meet the Council of Education for Public Health (CEPH) program accreditation standards. The following are the basic or core competencies in each of the five discipline areas:

- Biostatistics: collection, storage, retrieval, analysis, and interpretation of health data; design and analysis of health-related surveys and experiments; and concepts and practice of statistical data analysis.
- Epidemiology: distributions and determinants of disease, disabilities, and death in human populations; the characteristics and dynamics of human populations; and the natural history of disease and the biologic basis of health.
- Environmental Health Sciences: environmental factors including, biological, physical, and chemical factors that affect the health of a community.
- Health Services Administration: planning, organization, administration, management, evaluation, and policy analysis of health programs.
- Social and Behavioral Sciences: concepts and methods of social and behavioral sciences relevant to the identification and the solution of public health problems.

The Director of the Master of Public Health degree program serves as the administrator of the Graduate Certificate in Public Health Core Concepts.

Send all documentation to:

Dr. Ellyn R. Mulcahy

Director, Master of Public Health Program

103 Trotter Hall

Kansas State University

Manhattan, KS 66506

More information about the MPH Program can be found at: <http://www.k-state.edu/mphealth/>.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Public Health at Kansas State University.

Admission Requirements

To apply for admission to the certificate program:

- Students must have completed an undergraduate degree and be making satisfactory progress in or completed a graduate degree as documented by an official transcript or other appropriate documentation
- Students must be concurrently enrolled in a graduate program at K-State OR be admitted in the graduate program as a non-degree student
- Students must submit a narrative letter that describes their interest and experience in public health and objectives for completing the certificate
- Students must submit a letter of recommendation from their major professor or employer (if already completed graduate degree)

After review of the application documents by the Director of the Master of Public Health Program, the Director may:

1. Admit the student to the certificate program
2. Conditionally admit the student to the certificate program and indicate which pre-requisite courses must be completed prior to enrollment in some or all of the certificate program courses
3. Reject the student for the certificate program

If at a later time the student applies to the MPH Program at Kansas State University and is admitted, the full fifteen hours in the graduate certificate may be applied to the MPH degree.

Graduate students working toward advanced degrees may use any or all of the certificate courses in a program of study with the approval of the student's supervisory committee. All students are required to complete a Graduate Completion Form, found on the Graduate School list of forms. Completed forms should be signed by the Program Director. The Program Office will verify grades achieved prior to the expected date of graduation.

Special Requirements

All courses applied toward the certificate must be completed with a grade point average of 3.0 or higher.

Course Requirements

Required Courses

Coursework can be taken in a distance learning format or in the traditional on-campus classroom setting. The certificate program in public health core concept requires a total of 15 credit hours taken from the following five courses:

- MPH 701 - Fundamental Methods of Biostatistics **Credits: 3**
- MPH 720 - Administration of Health Care Organizations **Credits: 3**
- MPH 754 - Introduction to Epidemiology **Credits: 3**
- MPH 802 - Environmental Health **Credits: 3**
- MPH 818 - Social and Behavioral Bases of Public Health **Credits: 3**

Total Hours Required for Graduate Certificate: 15

Master of Public Health

Master of Public Health (MPH)

The Master of Public Health (MPH) degree is a 42 credit hour program designed to provide graduate-level education for individuals currently employed or anticipating a career in the field of public health. Each student in this program will complete 15 credit hours of the core curriculum, covering courses in each of the five broad aspects of public health:

- Epidemiology
- Environmental Health Sciences
- Biostatistics
- Health Service Administration
- Social and Behavioral Sciences

Course Requirements

A total of 42 semester hours is required to complete this degree offered through the Public Health graduate program. The program is a professional degree that requires a core of public health courses (15 credit hours), a field experience or master's thesis (6 credit hours), and an area of emphasis determined by the student's program committee (21 credit hours). An area of emphasis may be selected from food safety and biosecurity, infectious diseases/zoonoses, public health human nutrition, or public health physical activity.

Required Courses (15 credit hours)

- MPH 701 - Fundamental Methods of Biostatistics **Credits: 3**
- MPH 720 - Administration of Health Care Organizations **Credits: 3**
- MPH 754 - Introduction to Epidemiology **Credits: 3**
- MPH 802 - Environmental Health **Credits: 3**
- MPH 818 - Social and Behavioral Bases of Public Health **Credits: 3**

Area of emphasis (21 credit hours)

Select from one of these four areas. The 21 credit hours required for each emphasis area are listed below.

- Food Safety and Biosecurity
- Infectious Diseases and Zoonoses
- Public Health Nutrition
- Public Health Physical Activity

Food Safety and Biosecurity

Required courses (10 credit hours):

- FDSCI 730 - A Multidisciplinary Overview of Food Safety and Security **Credits: 2**
- FDSCI 731 - Food Protection and Defense--Essential Concepts **Credits: 2**
- DMP 815 - Multidisciplinary Thought and Presentation **Credits: 3**
- DMP 816 - Trade and Agricultural Health **Credits: 2**
- DMP 888 - Globalization, Cooperation, & the Food Trade **Credits: 1**

Select any remaining credits needed for the degree from the list below:

- AAI 801 - Interdisciplinary Process **Credits: 3**
- DMP 710 - Introduction to One Health **Credits: 2**
- DMP 844 - Global Health Issues **Credits: 3**
- DMP 880 - Problems in Pathobiology (MS) **Credits: 1-6**
- DMP 855 - Disease Detection, Surveillance and Risk Assessment **Credits: 3**
- DMP 888 - Globalization, Cooperation, & the Food Trade **Credits: 1**
- FDSCI 600 - Food Microbiology **Credits: 2**
- FDSCI 601 - Food Microbiology Lab **Credits: 2**
- FDSCI 690 - Principles of HACCP and Preventive Controls for Human Food **Credits: 3**
- FDSCI 695 - Quality Assurance of Food Products **Credits: 3**
- FDSCI 750 - Food Toxicants **Credits: 2**
- FDSCI 751 - Food Laws and the Regulatory Process **Credits: 2**
- FDSCI 791 - Advanced Application of HACCP Principles **Credits: 3**
- FDSCI 820 - Advanced Food Microbiology & Biotechnology **Credits: 2**
- MC 750 - Strategic Health Communication **Credits: 3**
- MC 760 - Issues, Risk, and Reputation **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

Plus any graduate course approved by the supervisory committee and the program director.

Infectious Diseases and Zoonoses

In addition to the core courses (15 credit hours) and field experience (6 hours) or thesis research and field experience (9 hours), students must complete credit hours from the Infectious Diseases and Zoonoses emphasis area as outlined below to fulfill the 42 credit hour requirement for the MPH degree. Substitutions may be approved by the major professor, supervisory committee, and the MPH Program director.

Required courses (11 or 12 credit hours):

- BIOL 530 - Pathogenic Microbiology Credits: 3
OR
- VDMP 814 - Veterinary Bacteriology & Mycology Credits: 3 (or DMP 814 Lecture only Credits: 3)
- DMP 817 - Principles of Veterinary Immunology Credits: 3
- DMP 710 - Introduction to One Health Credits: 2
- DMP 815 - Multidisciplinary Thought and Presentation Credits: 3

Select any remaining credits needed for the degree from the list below:

- AAI 801 - Interdisciplinary Process Credits: 3
- ASI 540 - Principles of Animal Disease Control Credits: 3
- BIOL 529 - Ecology Credits: 3
- BIOL 545 - Human Parasitology Credits: 3
- BIOL 546 - Human Parasitology Laboratory Credits: 1
- BIOL 604 - Biology of the Fungi Credits: 3
- BIOL 670 - Immunology Credits: 3
- BIOL 671 - Immunology Lab Credits: 2
- BIOL 675 - Genetics of Microorganisms Credits: 3
- BIOL 687 - Microbial Ecology Credits: 3
- BIOL 730 - General Virology Credits: 3
- DMP 834 - Veterinary Parasitology Credits: 4
- DMP 770 - Emerging Diseases Credits: 3
- AP 871 - Toxicology Credits: 3
- DMP 816 - Trade and Agricultural Health Credits: 2
- DMP 830 - Quantitative Analysis in Veterinary Medicine Credits: 3
- DMP 844 - Global Health Issues Credits: 3
- DMP 850 - Immunology of Domestic Animals Credits: 3
- DMP 854 - Intermediate Epidemiology Credits: 3
- DMP 855 - Disease Detection, Surveillance and Risk Assessment Credits: 3
- DMP 860 - Bacterial Pathogenesis and Host Response Credits: 3
- DMP 871 - Molecular Diagnostics of Infectious Diseases Credits: 3
- DMP 880 - Problems in Pathobiology (MS) Credits: 1-6
- DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
- DMP 954 - Advanced Epidemiology Credits: 4
- ENTOM 849 - Arthropod Vectors of Human Pathogens Credits: 3
- FDSCI 690 - Principles of HACCP and Preventive Controls for Human Food Credits: 3
- FDSCI 730 - A Multidisciplinary Overview of Food Safety and Security Credits: 2
- FDSCI 731 - Food Protection and Defense--Essential Concepts Credits: 2
- GEOG 508 - Geographic Information Systems I Credits: 4
- GEOG 608 - Geographic Information Systems II Credits: 3
- MC 750 - Strategic Health Communication Credits: 3
- MC 760 - Issues, Risk, and Reputation Credits: 3
- STAT 705 - Regression and Analysis of Variance Credits: 3
- STAT 716 - Nonparametric Statistics Credits: 3

- STAT 717 - Categorical Data Analysis **Credits: 3**
- STAT 720 - Design of Experiments **Credits: 3**
- STAT 730 - Multivariate Statistical Methods **Credits: 3**

Plus any graduate course approved by the supervisory committee and the program director.

Public Health Nutrition

In addition to the core courses (15 credit hours) and field experience (6 hours) or thesis research and field experience (9 hours), students must complete credit hours from the Public Health Nutrition emphasis area as outlined below to fulfill the 42 credit hour requirement for the MPH degree. Substitutions may be approved by the major professor, supervisory committee, and the MPH Program director.

Required courses (10 credit hours):

- FNDH 600 - Public Health Nutrition **Credits: 3**
- FNDH 820 - Functional Foods for Chronic Disease Prevention **Credits: 3**
- FNDH 844 - Nutritional Epidemiology **Credits: 3**
- FNDH 880 - Professional Communication in FNDH **Credits: 1**

Select any remaining credits needed for the degree from the list list below:

- AAI 801 - Interdisciplinary Process **Credits: 3**
- FNDH 620 - Nutrient Metabolism **Credits: 3**
- FNDH 631 - Clinical Nutrition I **Credits: 3**
- FNDH 632 - Clinical Nutrition II **Credits: 3**
- FNDH 635 - Sports Nutrition **Credits: 3**
- FNDH 700 - Global Health and Nutrition **Credits: 3**
- FNDH 718 - Physical Health and Aging **Credits: 3**
- FNDH 726 - Nutrition and Wellness **Credits: 3**
- FNDH 735 - Advanced Energy Balance **Credits: 3**
- FNDH 780 - Problems in Food, Nutrition, Dietetics and Health **Credits: 1-6**
- FNDH 782 - Topics in Food Nutrition, Dietetics and Health **Credits: 1-6**
- FNDH 800 - Nutrition Education and Communication **Credits: 3**
- FNDH 810 - Advanced Macronutrient Metabolism **Credits: 5**
- FNDH 812 - Advanced Micronutrient Metabolism **Credits: 3**
- SENS 841 - Consumer Research - Fundamentals **Credits: 1**
- FNDH 862 - Maternal and Child Nutrition **Credits: 3**
- FNDH 891 - Environmental Scanning and Analysis of Current Issues in Dietetics **Credits: 3**
- KIN 610 - Program Planning and Evaluation **Credits: 3**
- KIN 805 - Physical Activity and Human Behavior **Credits: 3**
- MC 750 - Strategic Health Communication **Credits: 3**
- MC 760 - Issues, Risk, and Reputation **Credits: 3**
- PSYCH 518 - Introduction to Health Psychology **Credits: 3**
- SOCIO 541 - Wealth, Power, and Privilege **Credits: 3**
- SOCIO 570 - Race and Ethnic Relations in the USA **Credits: 3**
- STAT 705 - Regression and Analysis of Variance **Credits: 3**

- STAT 710 - Sample Survey Methods Credits: 3
- STAT 713 - Applied Linear Statistical Models Credits: 3
- STAT 716 - Nonparametric Statistics Credits: 3
- STAT 717 - Categorical Data Analysis Credits: 3
- STAT 720 - Design of Experiments Credits: 3
- STAT 725 - Introduction to the SAS Computing Credits: 1
- STAT 730 - Multivariate Statistical Methods Credits: 3

Plus any graduate course approved by the supervisory committee and the program director.

Public Health Physical Activity

Required courses (10 credit hours):

- KIN 610 - Program Planning and Evaluation Credits: 3
- KIN 612 - Policy, Built Environment and Physical Activity Credits: 3
- KIN 805 - Physical Activity and Human Behavior Credits: 3
- KIN 890 - Graduate Seminar in Kinesiology Credits: 1

Select any remaining credits needed for the degree from the list below:

- AAI 801 - Interdisciplinary Process Credits: 3
- CDPLN 712 - Sustainable Communities Credits: 3
- CDPLN 715 - Principles and Strategies of Community Change Credits: 3
- CNRES 751 - Interpersonal Conflict Skills and Strategies Credits: 3
- DMP 710 - Introduction to One Health Credits: 2
- FNDH 600 - Public Health Nutrition Credits: 3
- FNDH 844 - Nutritional Epidemiology Credits: 3
- GERON 773 - Physical Health and Nutrition in Aging Credits: 3
- HDFS 806 - Statistical Methods in Human Development and Family Science I Credits: 3
- HDFS 809 - Qualitative Research Methods in Human Development and Family Science Credits: 3
- HDFS 893 - Evaluation of Prevention Science Programs Credits: 3
- KIN 600 - Interpersonal Aspects of Physical Activity Credits: 3
- KIN 601 - Cardiorespiratory Physiology Credits: 3
- KIN 602 - Social Structural Determinants of Physical Activity Credits: 3
- KIN 606 - Topics in the Behavioral Basis of Kinesiology Credits: 1-3
- KIN 616 - Obesity and Physical Activity: Behavioral, Environment, and Policy Influences Credits: 3
- KIN 625 - Exercise Testing and Prescription Credits: 3
- KIN 655 - Individual Physical Activity Promotion Credits: 3
- KIN 815 - Research Methods in Kinesiology Credits: 3
- KIN 851 - Topics in the Physiological Basis of Kinesiology Credits: 1-3
- KIN 852 - Topics in the Behavioral Basis of Kinesiology Credits: 1-3
- KIN 896 - Independent Study in Kinesiology Credits: 1-4
- MC 750 - Strategic Health Communication Credits: 3
- SOCIO 541 - Wealth, Power, and Privilege Credits: 3
- SOCIO 880 - Social Movements Credits: 3

Plus any graduate course approved by the supervisory committee and the program director.

Required "Public Health Practice" (3, 4 or 6 hours)

Field experience (6 hours); OR a combined field experience (4 hours) and master's report (2 hours); OR a combined master's thesis (6 hours) and field experience (3 hours)

- MPH 840 – Public Health Field Experience credits (3, 4 or 6 hours)
- DMP 898, FDSCI 898, FNDH 898, or KIN 898 – Master's Report credits (var.) plus MPH 840 for 4 hrs
- DMP 899, FDSCI 899, FNDH 899, or KIN 899 – Master's Thesis credits (var.) plus MPH 840 for 3 hrs

Total Hours Required for Master's: 42

Master of Science

Veterinary Biomedical Science (MS)

The Veterinary Biomedical Sciences (VBS) program in the College of Veterinary Medicine is designed to train graduate students through excellence in teaching and innovative basic, applied, and clinical research that improves animal and human health. The program offers opportunities for DVM students to concurrently work on a dual degree program (DVM/MS) to gain research experience to enhance their career opportunities and to meet the demands of internships and residencies. The graduate faculty members in the program have established programmatic requirements, guided by the policies of the Graduate School, for admission, supervision, and completion of the MS degree.

Areas of Emphasis

The VBS program has three areas of emphasis or subdisciplines, Anatomy and Physiology, Clinical Sciences, and Pathobiology, which are under the supervision of the graduate faculty in the Departments of Anatomy and Physiology, Clinical Sciences, and Diagnostic Medicine/Pathobiology, respectively. The research activities of the graduate faculty are in specialized areas of Infectious and noninfectious diseases, including Zoonotic Diseases and Transboundary Diseases, metabolic diseases, Anatomy, Bacteriology, Epidemiology, Immunology, Parasitology, Pharmacology, Anatomic and Clinical Pathology, Nanotechnology, Physiological Sciences, Clinical Sciences, Companion Animal Health, Comparative Biomedical Sciences, Cancer Biology and Treatment, Food Animal Health and Management, Food Safety and Security, Stem Cell Biology, and Translational Medicine. The research activities and discovery strengths of the faculty in the program are organized and focused in Centers and Institutes, which include the Beef Cattle Institute, Center of Epithelial Research, Center of Excellence for Emerging and Zoonotic Animal Diseases (CEEZAD), Center of Excellence for Translational and Comparative Oncology Research (CETCOR), Center for Outcomes Research and Education (CORE), Midwest Institute for Comparative Stem Cell Biology and the U.S.-China Center for Animal Health. In addition, graduate students in the program have opportunities to work with scientists in the federal research institutes, such as the Arthropod-Borne Animal Disease Research Unit (ABADRU), a United States Department of Agriculture (USDA) institute in Manhattan, KS to study vector borne diseases and the National Bio and Agro-Defense Facility), formerly Plum Island Animal Disease Center, a USDA laboratory to study transboundary diseases.

Admission Requirements

The Pathobiology Graduate Program in the College of Veterinary Medicine has the following requirements for admission:

1. A cumulative grade point average of 3.0/4.0 in the baccalaureate degree or DVM/VMD degree. In special circumstances, students with a 2.8 or 2.9/4.0 will be considered for a probationary admission. A majority of the admitted students have a degree in Veterinary Medicine, but DVM is not a requirement.
2. A General Graduate Record Examination (GRE) score is not required, but applicants are encouraged to take the examination and submit the scores with the application.
3. International students from countries where English is not the native language must provide English language proficiency test scores, such as the Test of English as a Foreign Language (TOEFL), International English Language Testing System (IELTS), or Pearson Test of English (PTE).
4. The most important considerations for admission are that applicants have documented academic achievement and an interest in an advanced study and research in the fields of Veterinary Biomedical Sciences.

In order to be considered for admission in the VBS program, applicants should contact individual graduate faculty in the program to identify research interests and research program. **A willingness to accept the applicant as a graduate student by a faculty is a requirement for approval of the application for admission by the Executive Committee of the Graduate Program.** The major professor will provide guidance and mentorship, and in most cases, a Graduate Research Assistantship (GRA). If the professor does not have funding available to offer a GRA, the applicant could still choose to work under that professor if the student has alternate funding sources available (scholarships, fellowships, personal funds, etc.). An applicant that is not able to identify a major professor can still submit an application.

Course Requirements

A minimum of 30 semester hours of credit is required for completion of the Veterinary Biomedical Sciences MS Degree.

Regular MS Students:

Students with a bachelor's degree must complete a minimum of 30 semester hours of credit.

Dual-Degree DVM/MS Students:

Students with a bachelor's degree who are concurrently pursuing the DVM degree at Kansas State University may apply up to 12 credit hours of relevant courses in the DVM curriculum toward both the DVM degree and the MS degree provided that the grades in these courses are consistent with Graduate School requirements. The specific courses from the veterinary medicine degree transcript for which credits are being claimed must be listed on the program of study under the transfer credit(s) section.

Post DVM Students:

Students with a DVM degree may apply up to 12 hours of credit from the veterinary medicine degree transcript toward the 30 semester hours of credit required for the MS degree. There is no need list specific courses, instead, in the transfer credit section, the university that granted the DVM degree and the year the degree was awarded should be listed.

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Areas of Emphasis

Anatomy and Physiology

The Anatomy and Physiology Area of Emphasis is administered by the Graduate Faculty and Ancillary Graduate Faculty in the Department of Anatomy and Physiology. The Anatomy and Physiology Department offers two M.S. options: a research-based M.S. and a coursework based M.S.

Research Option

The primary goal of the Research Option in this Area of Emphasis is to prepare students for academic positions in various health science-related institutions such as Colleges of Veterinary Medicine and Schools of Medicine and Dentistry, as well as positions in industry and agribusiness. Major research themes include epithelial physiology, stem cell biology and cancer, cardiopulmonary physiology, immunophysiology, neuroscience and pharmacology. These themes encompass the topics of cell signaling, epithelial cell solute transport, comparative exercise physiology, food animal immunophysiology, molecular biology of membranes, mechanisms of stress phenomena, molecular genetics and gene mapping, neural control of cardiovascular function, and pathophysiology of microcirculation. Research laboratories are equipped with state-of-the-art facilities, equipment, and instruments that support the many excellent opportunities for basic and applied research. Adjunct faculty members from other departments comprise a strong ancillary support group.

Course Requirements:

The student will present two seminars in addition to her or his oral final defense/examination to graduate.

Additional courses according to the needs of the student, and the recommendations of the major professor and the student's supervisory committee,

- **AP 803 - Seminar Credits: 1** (one credit per semester)

One Year MS Program (non-thesis and non-report option)

The primary goal of coursework-based MS degree in the Anatomy and Physiology is to prepare students for successful entry into medical professional degree programs such as D.V.M., M.D., D.O., D.D.S., etc.

Course Requirements:

The following courses are required:

Summer Semester (9 credits)

- **AP 737 - Introduction to Cell Physiology Credits: 2**
- **AP 838 - Anatomy 1 Credits: 3**
- **AP 740 - Study Methods and Career Preparation for Health Professional Students Credits: 1**
- **AP 641 - Histology for Health Professions Credits: 3**

Fall Semester (7 credits)

- **AP 842 - Anatomy 2 Credits: 3**
- **AP 743 - Systems Physiology Credits: 4**
- **Electives Credits: 3-4**

Spring Semester (8 credits)

- **AP 600 - Introduction to Pharmacology for Health Professionals Credits: 3**
- **AP 803 - Seminar Credits: 1** (Section B)
- **AP 839 - Biomedical Methods Laboratory Credits: 3**
- **AP 894 - Comparative Embryology Credits: 1**
- **Electives Credits: 2-3**

Other Electives

In addition, other electives can be selected in consultation with the student's major professor and supervisory committee. Examples of appropriate elective courses include:

AP – any graduate course 700+ CS – any graduate course 700+ DMP – any graduate course 700+ ASI – any course 700+ BIOCH (Biochemistry) – any course 700+ BIOL (Biology) – any from the following:

- **BIOL 670 - Immunology Credits: 3**
- **BIOL 675 - Genetics of Microorganisms Credits: 3**

- BIOL 705 - Eukaryotic Genetics **Credits: 3**
- BIOL 707 - Advanced Cell Biology **Credits: 3**
- BIOL 730 - General Virology **Credits: 3**
- BIOL 808 - Mechanisms of Gene Regulation **Credits: 3**
- BIOL 830 - Advanced Virology **Credits: 3**
- BIOL 835 - Cellular and Molecular Parasitology **Credits: 3**
- BIOL 840 - Molecular and Cellular Immunology **Credits: 3**
- BIOL 855 - Molecular Biology of Cellular Membranes **Credits: 3**
- BIOL 860 - Modern Molecular Approaches **Credits: 3**

Culminating Experience Requirement:

In addition to the required coursework, students in the one-year master's program must complete a culminating experience for the master's degree. Students will consult with their major professor and supervisory committee to determine what the culminating experience will be. The culminating experience may or may not be taken for credit. Students can enroll in AP 898 - Master's Report (2 credits) if desired to reflect their work on this experience as elective credits.

Clinical Sciences

The Clinical Sciences Area of Emphasis is administered by the Graduate Faculty in the Department of Clinical Sciences.

The primary goal of graduate study in the Clinical Sciences Area of Emphasis is to prepare students for careers in teaching, research, or service in a clinical specialty area or research and development program. Training in planning research projects and writing research proposals provide students the ability to function with teams of scientists from the fields of biomedical and clinical sciences. The student's experience in teaching and literature study will form the basis for development of future teaching and research programs within his or her discipline. After completing graduate work the student will be better prepared to conduct research both independently and as a team member. In addition to the MS in clinical specialty fields (small animal, equine and large animal), students can earn MS degree in Production Animal Medicine. The department, along with the Veterinary Health Center and the Beef Cattle Institute at Kansas State University, has modern facilities and equipment for both basic and applied studies.

The Clinical Sciences area of emphasis for the Veterinary Biomedical Science master's program can include full time graduate students, dual DVM/MS degree students, or concurrent clinical residency-MS program.

Course Requirements:

Statistics (3 credits)

- STAT 701 - Fundamental Methods of Biostatistics **Credits: 3**
or
 - STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
 - **Seminar (1 credit)**
 - CS 829 - Applied Production Medicine **Credits: 1**
or
 - CS 859 - Clinical Sciences Seminar **Credits: 1**
or
- Any other course as approved by the student's supervisory committee

Off Campus Research:

In selected cases a student may conduct extensive research and training off campus. These activities must be approved by the student's supervisory committee in advance.

Pathobiology

The Pathobiology Area of Emphasis is administered by the Graduate Faculty and Ancillary/Adjunct Graduate Faculty in the Department of Diagnostic Medicine/Pathobiology.

The primary goal of graduate study in the Pathobiology Area of Emphasis is to prepare students for careers in teaching, research, or service related to animal production or animal health in academic institutions, industries, or in state and federal agencies. The MS program in the Pathobiology subdiscipline is managed by faculty involved in epidemiology, immunology, diagnosis, pathogenesis, and prevention/control of infectious, metabolic, and parasitic diseases of animals and humans, food safety and security, public health and zoonosis, and clinical and anatomic pathology. The Pathobiology graduate program is sufficiently diverse to provide the critical mass and cross-disciplinary interactions necessary to offer high quality graduate training, yet focused to avoid dilution of resources and conflicts with other graduate programs. The scope and flexibility of the graduate program are notable strengths. Research laboratories are equipped with state-of-the-art facilities, equipment, and instruments to provide excellent opportunities for basic and applied research. The Veterinary Diagnostic Laboratory (VDL), housed in the department, is fully accredited by the American Association of Veterinary Diagnostic Laboratory Diagnosticians. The VDL is internationally recognized for its diagnostic capabilities for many important diseases of food and companion animals. Laboratories and support staff address all aspects of diagnosis from necropsy and histopathology, clinical pathology, serology, toxicology and detection of infectious agents.

Course Requirements:

2 credits.

- **DMP 870 - Pathobiology Seminar (MS) Credits: 1** (one credit per semester)
One of the seminar courses, with the permission of the student's supervisory committee, could be taken from a different program or department.
Additional courses according to the needs of the student, the recommendations of the major professor and the student's supervisory committee.

Thesis Option Courses

As part of the degree program requirements, the student will complete a minimum of 6 and a maximum of 12 credit hours of research and will write and defend a thesis as the culminating experience for the degree.

Report Option Courses

As part of the degree program requirements, the student will complete 2 credit hours of master's report. A master's report is generally shorter than a thesis, and could include the results of a more limited original investigation. Alternatively, the report may be a review of the state of a particular scholarly or scientific problem, and in the case of clinical sciences or pathobiology disciplines it may include a case report. The student will write and submit the report as the culminating experience for the degree.

Coursework Only Option Courses

The student's degree program will consist of course work only, but could include evidence of scholarly efforts, such as term papers, as determined by the committee. An oral examination to assess the student's competency in the courses listed in the program of study will serve as the culminating experience. The coursework only option is not available in the Clinical Sciences

Area of Emphasis. Students also have the option of an accelerated, non-thesis, curriculum-only MS program that can be completed in one year.

Total Hours Required for Master's: 30

Graduate School

Claudia Petrescu, Vice Provost for Graduate Education and Dean of the Graduate School

Graduate School mission

The Graduate School provides strategic leadership and vision to advance graduate education in directions consistent with university goals and priorities and the evolving role of graduate education in the 21st century. It formulates and implements a comprehensive and visionary strategy for graduate education that engages prospective and current graduate students from Kansas, alumni and community partners. It works collaboratively with academic units and other K-State partners to grow and develop innovative graduate programs and world class graduate education at K-State. In its pursuit of excellence, the Graduate School celebrates the diverse perspectives our students and faculty bring to the educational programs that serve the needs of individuals, families and society; and research that confronts some of the world's most pressing problems.

Graduate Certificate

Biobased Products and Bioenergy Graduate Certificate

Contact: Placidus Amama

Email: pamama@ksu.edu

This certificate is offered through the Graduate School, currently through the collaboration of the Departments of Agronomy, Biological and Agricultural Engineering, Chemical Engineering, and Grain Science and Industry. Chemical feedstocks, materials, and fuels derived from biomass have received increasing emphasis nationally and are seen as being very desirable from a number of standpoints. Private industry now actively recruits individuals with specific training in bioprocessing and biobased materials. With the interest in green chemistry and in sustainability increasing along with the escalation of crude oil prices during 2008, emphasis on the utilization of biomass for energy and materials can only continue to increase. This rapidly expanding industry has a growing need for a trained workforce. This Graduate Certificate Program is designed to identify students' focus in their graduate training as well as provide post-baccalaureate educational opportunities for industry practitioners for whom a full graduate degree program is not appropriate at that point in their career. Students can develop a truly interdisciplinary background in a specific area, and yet the certificate will permit any given individual to tailor their program of study to their specific interests.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Course Requirements

Required Courses

The graduate certificate program proposed will consist of a minimum of fifteen (15) credit hours of coursework selected from a series of courses approved by the Biobased Products and Bioenergy Certificate Committee (BPBCC). Each student will be required to complete at least one of the courses below, each of which includes content from more than one of the designated subject areas. In the case of students pursuing a graduate degree, the course cannot be selected from a student's primary academic department.

- AGRON 630 - Crop Improvement and Biotechnology **Credits: 3**
- AGRON 640 - Cropping Systems **Credits: 3**
- GRSC 825 - Novel Uses of Biopolymers **Credits: 2**
- CHE 715 - Biochemical Engineering **Credits: 3**
- BAE 545 - Biological Process Engineering **Credits: 3**
- GRSC 745 - Fundamentals of Bioprocessing **Credits: 3**

Each student must complete a variable (2-3) credit hour special topics course in which the student completes a "capstone" experience as a member of a multidisciplinary team. Each team will select their project from an approved list of interdisciplinary topics and will be mentored by a faculty member. Students will enroll in one of the courses below to meet this requirement.

- AGRON 600 - Problems in Agronomy **Credits: 1-18**
- BAE 620 - Topics in Biological Systems Engineering **Credits: 1-18**
- BAE 820 - Topics in Biological & Agricultural Engineering **Credits: 1-18**
- CHE 802 - Selected Topics in Materials Science **Credits: 1-18**
- CHE 805 - Selected Topics in Biochemical Engineering **Credits: 3**
- GRSC 910 - Topics in Grain Science **Credits: 1-18**

Associated Courses

The remaining coursework is to be selected from at least three of the following four subject areas: plant science, plant/crop production, processing, and utilization. Courses must be taken from a minimum of three different academic departments. The primary required course chosen by the student (AGRON 630, AGRON 640, GRSC 825, CHE 715, BAE 545, or GRSC 745) counts towards the subject area and academic department requirements.

Students will submit a proposed list of courses to be used in meeting the requirements for the certificate of graduate studies to the coordinator of the biobased products and bioenergy certificate program with the program of study being formally approved by the BPBCC.

- AGRON 550 - Forage Management and Utilization **Credits: 3**
- AGRON 610 - Biotechnology **Credits: 3**
- AGRON 630 - Crop Improvement and Biotechnology **Credits: 3**
- AGRON 640 - Cropping Systems **Credits: 3**
- AGRON 655 - Site Specific Agriculture **Credits: 3**
- AGRON 746 - Environmental Soil Physics **Credits: 3**
- AGRON 680 - Plant Genetics **Credits: 3**
- AGRON 840 - Crop Physiology **Credits: 3**
- BIOL 500 - Plant Physiology **Credits: 3**
- BIOL 676 - Molecular Genetics Laboratory **Credits: 3**
- PLPTH 610 - Biotechnology **Credits: 3**
- BIOCH 766 - Recombinant DNA Laboratory I **Credits: 1**
- BIOCH 767 - Recombinant DNA Laboratory II **Credits: 1**

- PLPTH 880 - Plant Molecular Biology Credits: 3
- BIOCH 775 - Molecular Biophysics Credits: 3
- BIOCH 755 - Biochemistry I Credits: 3
- BIOCH 765 - Biochemistry II Credits: 3
- CHM 820 - Materials Chemistry Credits: 3
- BAE 545 - Biological Process Engineering Credits: 3
- BAE 650 - Energy and Biofuel Engineering Credits: 3
- BAE 740 - Biomaterials Processing Credits: 3
- GRSC 602 - Cereal Science Credits: 3
- GRSC 620 - Extrusion Processing in the Food and Feed Industries Credits: 4
- GRSC 740 - Biomaterials Processing Credits: 3
- GRSC 825 - Novel Uses of Biopolymers Credits: 2
- GRSC 830 - Physical Properties of Cereal Polymers Credits: 3
- GRSC 901 - Starch Chemistry and Technology Credits: 3
- CHE 626 - Bioseparations Credits: 3
- CHE 656 - Polymer Science and Engineering Credits: 3
- CHE 682 - Surface Phenomena Credits: 3
- CHE 715 - Biochemical Engineering Credits: 3

Total Hours Required for Graduate Certificate: 15

School of Applied and Interdisciplinary Studies (Olathe Campus)

Ben Wolfe, Dean & CEO

Michael Banks, Interim Associate Dean of Academic Affairs, Head

Rebekkah Stuteville, Assistant Dean & PSM Program Director

Graduate Faculty:

A. Paige Adams, Ph.D., Cornell University
 Manreet Singh Bhullar, Ph.D., Iowa State University
 Royce Ann Collins, Ph.D., Kansas State University
 Judy Favor, Ph.D., University of Texas
 Majid Jaber-Douraki, Ph.D., University of Laval
 Tricia Jenkins, Ph.D., Kansas State University
 Haley Larson, Ph.D., University of Minnesota – Twin Cities
 Londa Nwadike, Ph.D., University of Iowa
 Eleni Pliakoni, Ph.D., University of Thessaly
 Douglas Shane, Ph.D., Kansas State University
 Rebekkah Stuteville, Ph.D., University of Missouri – Kansas City
 Martin Talavera, Ph.D., Kansas State University

The School of Applied and Interdisciplinary Studies advances Kansas State University Olathe's mission to be the model and leader of adaptable, interdisciplinary and innovative education, research and public/private engagement in the Kansas City area, bridging the University with global and local communities, government and industry partners. The School offers academic programs and applied research that address industry demand in the food, animal health and related sectors. The interdisciplinary studies approach to critical thinking allows students to gain a more comprehensive understanding of complex issues and an enhanced ability to address broad and multi-faceted challenges. The School provides students with a high degree of flexibility in designing their educational and research plans, which increase the technical and professional skills needed for career advancement.

Programs

Applied Biosciences (MS)

Location(s): Olathe Campus, Olathe Online

Offered by the K-State School of Applied and Interdisciplinary Studies (Olathe Campus), this 30-credit hour program combines education in animal health and food safety and security with leadership and management skills. The program is ideal for students seeking to build the STEM and professional expertise needed for career advancement. All students take professional skills courses, a statistics course, and STEM courses in the animal health track, food safety and security, or industry analytics track. Students must select the track they wish to pursue at the time of admission. All students must also complete two capstone courses.

After completion of the program, graduates will be able to:

- 1) Demonstrate advanced knowledge of one or more relevant STEM fields,
- 2) Demonstrate oral and written communication skills in a professional STEM environment,
- 3) Effectively analyze quantitative data for use across multiple science disciplines, and
- 4) Synthesize information from multiple disciplines to accurately identify problems and develop innovative solutions.

Courses are offered online, face-to-face, and in combination. This program is recognized as a Professional Science Master's (PSM) program, approved by the National PSM Office.

Course Requirements

A culminating experience is required for this option. The graduate student works with the major professor and the supervisory committee to determine the parameters of the culminating experience.

Required Courses: 6 credit hours

AAI 801 - Interdisciplinary Process Credits: 3

AAI 858 - Capstone Experience I Credits: 1

AAI 859 - Capstone Experience II Credits: 2

Professional Skills: 9 credit hours

Professional Skills Electives – 9 credits selected from the following courses (or other graduate professional skills courses as approved by the student's supervisory committee):

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6

AAI 797 - U.S. Animal Politics and Policymaking Credits: 2
 AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
 AAI 842 - Strategies in the Stewardship of Licensed Pharmaceuticals and Biologics in Animal Health Credits: 1
 AAI 843 - Regulatory Development of Animal Pharmaceuticals - FDA Credits: 2
 AAI 844 - Regulatory Development of Animal Pesticides - EPA Credits: 2
 AAI 845 - Regulatory Development of Animal Biologics and Diagnostics - USDA Credits: 2
 AAI 846 - Special Topics: Regulatory Affairs in Animal Health Credits: 1
 AAI 860 - Introduction to Systems and Data in Animal Health Credits: 2
 AAI 861 - Research Strategies to Drive Development of Animal Health Products Credits: 2
 AAI 863 - Special Topics: Data Analytics and Insights in Animal Health Credits: 1
 AAI 870 - Seminar in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 880 - Problems in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 895 - Advanced Topics in Applied and Interdisciplinary Studies Credits: 5-6
 AAI 899 - Research in Applied and Interdisciplinary Studies Credits: 1-6
 ACCTG 710 - Foundations of Accounting Credits: 3
 AGECE 710 - Comparative Food and Agriculture Systems Credits: 3
 AGECE 750 - Agricultural Economics and Agribusiness Problems Credits: 1-18
 COT 703 - Project Management for Professionals Credits: 3
 COT 704 - Managerial Finances, Metrics, and Analytics Credits: 3
 COT 706 - Informatics and Technology Management Credits: 3
 DMP 815 - Multidisciplinary Thought and Presentation Credits: 3
 DMP 816 - Trade and Agricultural Health Credits: 2
 DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
 EDACE 832 - Interpersonal and Intrapersonal Dynamics in Adult Learning and Leadership Credits: 3
 EDACE 834 - Leading Adults in a Globalized and Diverse World Credits: 3
 EDACE 835 - Developing Teams and Adult Leaders Credits: 3
 EDACE 836 - Group Dynamics in Adult Learning and Leadership Credits: 3
 EDACE 886 - Seminars in Adult Learning and Leadership Credits: 1-18
 MANGT 710 - Operations and Supply Chain Management Credits: 3
 MANGT 880 - Strategic Management Credits: 3
 POLSC 708 - Public Personnel Administration Credits: 3
 POLSC 710 - Policy Analysis and Evaluation Credits: 3
 POLSC 735 - Public Organization Theory Credits: 3
 POLSC 737 - Public Budgeting Credits: 3
 STEM: 15 credit hours

Statistics Electives: 3 credit hours

Statistics Electives – 3 credits selected from the following courses (or another graduate statistics course as approved by the student's supervisory committee):

STAT 701 - Fundamental Methods of Biostatistics Credits: 3
 STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3
 STAT 705 - Regression and Analysis of Variance Credits: 3
 STAT 713 - Applied Linear Statistical Models Credits: 3
 STAT 720 - Design of Experiments Credits: 3

Students choose the remaining 12 credit hours of STEM electives from their chosen track:

Animal Health Track

The courses in the animal health track provide students with knowledge of diseases that affect animals, as well as the interconnections among animals, humans, and the environment. When paired with the professional skills courses, students will be prepared to lead and manage in commercial, governmental, or nonprofit organizations related to the animal health industry.

Animal Health Track - STEM Electives: 12 credit hours

STEM Electives – 12 credits selected from the following courses (or graduate STEM courses within the disciplines indicated below, as approved by the student's supervisory committee):

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6
 AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
 AAI 841 - Strategies in Pre-Clinical and Clinical Research for Regulatory Affairs in Animal Science Credits: 2
 AAI 843 - Regulatory Development of Animal Pharmaceuticals - FDA Credits: 2
 AAI 844 - Regulatory Development of Animal Pesticides - EPA Credits: 2
 AAI 845 - Regulatory Development of Animal Biologicals and Diagnostics - USDA Credits: 2
 AAI 852 - Vaccinology Credits: 3
 AAI 870 - Seminar in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 880 - Problems in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 895 - Advanced Topics in Applied and Interdisciplinary Studies Credits: 5-6
 AAI 899 - Research in Applied and Interdisciplinary Studies Credits: 1-6
 AP 788 - Basic and Applied Pharmacokinetics Credits: 3
 AP 873 - Physiologically Based Pharmacokinetic Modeling Credits: 4
 AP 896 - Introduction to Responsible Conduct of Biomedical Research Credits: 2
 ASI 671 - Meat Selection and Utilization Credits: 2
 ASI 675 - Monogastric Nutrition Credits: 1
 ASI 678 - Equine Nutrition Credits: 1
 ASI 776 - Meat Industry Technology Credits: 3
 BAE 815 - Graduate Seminar 1: Literature Review Credits: 1
 BAE 820 - Topics in Biological & Agricultural Engineering Credits: 1-18
 DMP 710 - Introduction to One Health Credits: 2
 DMP 754 - Introduction to Epidemiology Credits: 3
 DMP 770 - Emerging Diseases Credits: 3
 DMP 802 - Environmental Health Credits: 3
 DMP 814 - Veterinary Bacteriology & Mycology Lecture Credits: 3
 DMP 844 - Global Health Issues Credits: 3
 DMP 846 - Foundations of Biosecurity Credits: 3
 DMP 850 - Immunology of Domestic Animals Credits: 3
 DMP 852 - Vaccinology Credits: 3
 DMP 870 - Pathobiology Seminar (MS) Credits: 1
 DMP 880 - Problems in Pathobiology (MS) Credits: 1-6
 DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
 DMP 893 - Principles of Biosafety and Biocontainment Credits: 2
 DMP 895 - Topics in Pathobiology (MS) Credits: 0-18
 GRSC 645 - Pet Food Processing Credits: 3
 MPH 818 - Social and Behavioral Bases of Public Health Credits: 3
 Complimentary STEM Courses - a maximum of 6 credit hours
 (as part of the 12 STEM electives) can be selected from the following courses:

IMSE 605 - Advanced Industrial Management Credits: 3
 IMSE 802 - Advanced Topics in Industrial Engineering Credits: 1-18
 IMSE 806 - Engineering Project Management Credits: 3
 IMSE 991 - Advanced Topics in Decision Theory Credits: 3

Food and Security Track

The courses in the food safety and security track provide students with knowledge and skills in the areas of food science, food safety, horticulture, nutrition, and consumer science. When paired with the professional skills courses, students will be prepared to lead and manage in commercial, governmental, or nonprofit organizations related to the food industry.

Food Safety and Security Track - STEM Electives: 12 credit hours

STEM Electives – 12 credits selected from the following courses (or graduate STEM courses within the disciplines indicated below, as approved by the student's supervisory committee):

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6

AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
 AAI 870 - Seminar in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 880 - Problems in Applied and Interdisciplinary Studies Credits: 1-6
 AAI 895 - Advanced Topics in Applied and Interdisciplinary Studies Credits: 5-6
 AAI 899 - Research in Applied and Interdisciplinary Studies Credits: 1-6
 ASI 671 - Meat Selection and Utilization Credits: 2
 ASI 776 - Meat Industry Technology Credits: 3
 BAE 815 - Graduate Seminar 1: Literature Review Credits: 1
 BAE 820 - Topics in Biological & Agricultural Engineering Credits: 1-18
 DMP 710 - Introduction to One Health Credits: 2
 DMP 754 - Introduction to Epidemiology Credits: 3
 DMP 802 - Environmental Health Credits: 3
 DMP 844 - Global Health Issues Credits: 3
 DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
 FDSCI 600 - Food Microbiology Credits: 2
 FDSCI 601 - Food Microbiology Lab Credits: 2
 FDSCI 630 - Food Science Problems Credits: 0-6
 FDSCI 690 - Principles of HACCP and Preventive Controls for Human Food Credits: 3
 FDSCI 695 - Quality Assurance of Food Products Credits: 3
 FDSCI 961 - Graduate Problem in Food Science Credits: 1-6
 FNDH 700 - Global Health and Nutrition Credits: 3
 SENS 701 - Sensory Analysis Credits: 3
 SENS 841 - Consumer Research - Fundamentals Credits: 1
 SENS 843 - Consumer Research - Qualitative Credits: 1
 FNDH 844 - Nutritional Epidemiology Credits: 3
 SENS 846 - Consumer Research – International and Special Populations Credits: 1
 SENS 848 - Consumer Research – Quantitative Credits: 1
 SENS 881 - Seminar in Sensory Analysis and Consumer Behavior Credits: 1
 HORT 725 - Postharvest Technology and Physiology of Horticultural Crops Credits: 3
 HORT 780 - Health-Promoting Phytochemicals: Fruits and Vegetables Credits: 2
 HORT 790 - Sustainable Agriculture Credits: 2
 HORT 791 - Urban Agriculture Credits: 2
 HORT 793 - Farm to Fork Produce Safety Credits: 2
 HORT 794 - Urban Food Systems Credits: 2
 HORT 795 - Urban Agriculture Study Tour Credits: 1
 MPH 818 - Social and Behavioral Bases of Public Health Credits: 3

Complimentary STEM Courses - a maximum of 6 credit hours

(as part of the 12 STEM electives) can be selected from the following courses:

IMSE 605 - Advanced Industrial Management Credits: 3
 IMSE 802 - Advanced Topics in Industrial Engineering Credits: 1-18
 IMSE 806 - Engineering Project Management Credits: 3
 IMSE 991 - Advanced Topics in Decision Theory Credits: 3

Industry Analytics Track

Courses in the Industry Analytics track focus on the application of data analytics across key sectors, including animal health, sensory, and food within the applied biosciences. While many programs offer data analytics broadly, this track is tailored specifically to applied biosciences.

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6
 AAI 852 - Vaccinology Credits: 3
 AAI 860 - Introduction to Systems and Data in Animal Health Credits: 2
 AAI 862 - Applied Analytics in Animal Health Credits: 3

AAI 863 - Special Topics: Data Analytics and Insights in Animal Health Credits: 1
AAI 864 - Introduction to Computing for Animal Health Credits: 3
AAI 865 - Assessing Effectiveness of Animal Therapeutics and Vaccines Credits: 1
AAI 867 - Zoonotic Pathogens in the Food Chain Credits: 2
ASI 650 - Identification and Data Management of Food Animals Credits: 2
DMP 710 - Introduction to One Health Credits: 2
DMP 754 - Introduction to Epidemiology Credits: 3
DMP 852 - Vaccinology Credits: 3
SENS 843 - Consumer Research - Qualitative Credits: 1
SENS 833 - Descriptive Sensory Analysis: Methods Credits: 1
SENS 848 - Consumer Research – Quantitative Credits: 1
SENS 851 - Sensory Analysis Applications of Statistics Credits: 2

Total Hours Required for Master's: 30

Professional Interdisciplinary Sciences Graduate Certificate

Location(s): Olathe Campus, Olathe Online

Offered by the School of Applied and Interdisciplinary Studies (Olathe Campus), this 12-credit program delivers scientific and technical skills in food, animal health, and related areas. After completion of the program, students will be able to 1) demonstrate ability to use information, concepts, analytical approaches, and critical thinking skills to transform ideas or solutions into entirely new forms, and 2) demonstrate the ability to perform in one or more disciplines. Students will take a foundation course in Interdisciplinary Process and courses in at least two disciplines. The Interdisciplinary Process course integrates methods and analytical frameworks to enable students to gain a more comprehensive understanding of complex issues and enhanced ability to address broad and multi-faceted challenges. Courses are offered online, face-to-face, and in combination.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Applied Biosciences at Kansas State University.

Course Requirements

Required Courses

AAI 801 - Interdisciplinary Process Credits: 3

Elective Courses

9 credits from at least two disciplines, determined by the course prefix. Elective courses can be included up to 3 credits per course selected from the following courses (or equivalent courses as approved by the student's supervisory committee for PSM students, or as approved by the PSM Program Director for certificate-only students):

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6
AAI 797 - U.S. Animal Politics and Policymaking Credits: 2
AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
AAI 841 - Strategies in Pre-Clinical and Clinical Research for Regulatory Affairs in Animal Science Credits: 2
AAI 842 - Strategies in the Stewardship of Licensed Pharmaceuticals and Biologics in Animal Health Credits: 1
AAI 843 - Regulatory Development of Animal Pharmaceuticals - FDA Credits: 2
AAI 844 - Regulatory Development of Animal Pesticides - EPA Credits: 2
AAI 845 - Regulatory Development of Animal Biologics and Diagnostics - USDA Credits: 2
AAI 846 - Special Topics: Regulatory Affairs in Animal Health Credits: 1
AAI 852 - Vaccinology Credits: 3
AAI 858 - Capstone Experience I Credits: 1
AAI 859 - Capstone Experience II Credits: 2
AAI 870 - Seminar in Applied and Interdisciplinary Studies Credits: 1-6
AAI 880 - Problems in Applied and Interdisciplinary Studies Credits: 1-6
AAI 895 - Advanced Topics in Applied and Interdisciplinary Studies Credits: 5-6
AAI 899 - Research in Applied and Interdisciplinary Studies Credits: 1-6
ACCTG 710 - Foundations of Accounting Credits: 3
AGEC 710 - Comparative Food and Agriculture Systems Credits: 3

AGEC 750 - Agricultural Economics and Agribusiness Problems Credits: 1-18
AP 788 - Basic and Applied Pharmacokinetics Credits: 3
AP 873 - Physiologically Based Pharmacokinetic Modeling Credits: 4
AP 896 - Introduction to Responsible Conduct of Biomedical Research Credits: 2
ASI 671 - Meat Selection and Utilization Credits: 2
ASI 675 - Monogastric Nutrition Credits: 1
ASI 678 - Equine Nutrition Credits: 1
ASI 776 - Meat Industry Technology Credits: 3
BAE 815 - Graduate Seminar 1: Literature Review Credits: 1
BAE 820 - Topics in Biological & Agricultural Engineering Credits: 1-18
COT 703 - Project Management for Professionals Credits: 3
COT 704 - Managerial Finances, Metrics, and Analytics Credits: 3
COT 706 - Informatics and Technology Management Credits: 3
DMP 710 - Introduction to One Health Credits: 2
DMP 754 - Introduction to Epidemiology Credits: 3
DMP 770 - Emerging Diseases Credits: 3
DMP 802 - Environmental Health Credits: 3
DMP 814 - Veterinary Bacteriology & Mycology Lecture Credits: 3
DMP 815 - Multidisciplinary Thought and Presentation Credits: 3
DMP 816 - Trade and Agricultural Health Credits: 2
DMP 844 - Global Health Issues Credits: 3
DMP 846 - Foundations of Biosecurity Credits: 3
DMP 850 - Immunology of Domestic Animals Credits: 3
DMP 852 - Vaccinology Credits: 3
DMP 870 - Pathobiology Seminar (MS) Credits: 1
DMP 880 - Problems in Pathobiology (MS) Credits: 1-6
DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
DMP 893 - Principles of Biosafety and Biocontainment Credits: 2
DMP 895 - Topics in Pathobiology (MS) Credits: 0-18

Total Hours Required for Graduate Certificate: 12

Professional Skills for STEM Practitioners Graduate Certificate

Location(s): Olathe Campus, Olathe Online

Offered by the School of Applied and Interdisciplinary Studies (Olathe Campus), this 15-credit program provides the management, communication and critical thinking skills necessary for professionals in leadership roles in science, technology, engineering and mathematics fields. After completion of the program, students will be able to 1) understand the basics of project or program management, 2) demonstrate appropriate oral and written communication skills in a professional environment, and 3) synthesize professional skills in order to accurately implement innovative solutions. Students will take 12 credits of interdisciplinary professional skills courses and three credits of capstone experience courses, (Professional Science Master's degree-seeking students) or a Topics in Applied and Interdisciplinary Studies course (PSSP certificate-seeking students), which will provide opportunities to apply and integrate knowledge and methods to solve problems. Courses are offered online, face-to-face, and in combination.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Applied Biosciences at Kansas State University.

Course Requirements

Required Courses

AAI 858 - Capstone Experience I Credits: 1
AND

AAI 859 - Capstone Experience II Credits: 2
OR

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6

Note: Only students in the Professional Science Master's program may enroll in AAI 858 and AAI 859 since both courses require a supervisory committee. Students may not use AAI 795 to fulfill the Professional Science Master's capstone requirement.

Elective Courses

12 credits of electives selected from the following courses (or equivalent courses as approved by the student's supervisory committee for PSM students or as approved by the PSM Program Director for certificate-only students):

AAI 795 - Topics in Applied and Interdisciplinary Studies Credits: .5-6
AAI 797 - U.S. Animal Politics and Policymaking Credits: 2
AAI 801 - Interdisciplinary Process Credits: 3
AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
AAI 842 - Strategies in the Stewardship of Licensed Pharmaceuticals and Biologics in Animal Health Credits: 1
AAI 843 - Regulatory Development of Animal Pharmaceuticals - FDA Credits: 2
AAI 844 - Regulatory Development of Animal Pesticides - EPA Credits: 2

AAI 845 - Regulatory Development of Animal Biologicals and Diagnostics - USDA Credits: 2
AAI 846 - Special Topics: Regulatory Affairs in Animal Health Credits: 1
AAI 870 - Seminar in Applied and Interdisciplinary Studies Credits: 1-6
AAI 880 - Problems in Applied and Interdisciplinary Studies Credits: 1-6
AAI 895 - Advanced Topics in Applied and Interdisciplinary Studies Credits: 5-6
ACCTG 710 - Foundations of Accounting Credits: 3
AGEC 710 - Comparative Food and Agriculture Systems Credits: 3
AGEC 750 - Agricultural Economics and Agribusiness Problems Credits: 1-18
COT 703 - Project Management for Professionals Credits: 3
COT 704 - Managerial Finances, Metrics, and Analytics Credits: 3
COT 706 - Informatics and Technology Management Credits: 3
DMP 815 - Multidisciplinary Thought and Presentation Credits: 3
DMP 816 - Trade and Agricultural Health Credits: 2
DMP 888 - Globalization, Cooperation, & the Food Trade Credits: 1
EDACE 832 - Interpersonal and Intrapersonal Dynamics in Adult Learning and Leadership Credits: 3
EDACE 834 - Leading Adults in a Globalized and Diverse World Credits: 3
EDACE 835 - Developing Teams and Adult Leaders Credits: 3
EDACE 836 - Group Dynamics in Adult Learning and Leadership Credits: 3
EDACE 886 - Seminars in Adult Learning and Leadership Credits: 1-18
MANGT 710 - Operations and Supply Chain Management Credits: 3
MANGT 880 - Strategic Management Credits: 3
POLSC 708 - Public Personnel Administration Credits: 3
POLSC 710 - Policy Analysis and Evaluation Credits: 3
POLSC 735 - Public Organization Theory Credits: 3
POLSC 737 - Public Budgeting Credits: 3

Total Hours Required for Graduate Certificate: 15

Regulatory Affairs in Animal Health Graduate Certificate

Location(s): Olathe Online

Regulatory Affairs requires a specialized skill set, which combines the knowledge of animal science and veterinary medicine, with skill in navigating governmental processes and regulations.

Students in the Graduate Certificate in Regulatory Affairs in Animal Health will be able to 1) Demonstrate comprehensive understanding of the regulatory process and strategy for products approved by the FDA/EPA/USDA, 2) Identify the extent to which clinical research protocols establish the efficacy and safety of products compliant with regulatory guidelines for product development, and 3) Synthesize regulatory requirements with effective business practices while operating in a compliant manner. This certificate is offered by the School of Applied and Interdisciplinary Studies (Olathe Campus).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Applied Biosciences at Kansas State University.

Course Requirements

Required Courses

AAI 840 - Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry Credits: 2
AAI 841 - Strategies in Pre-Clinical and Clinical Research for Regulatory Affairs in Animal Science Credits: 2
AAI 842 - Strategies in the Stewardship of Licensed Pharmaceuticals and Biologics in Animal Health Credits: 1
AAI 843 - Regulatory Development of Animal Pharmaceuticals - FDA Credits: 2
AAI 844 - Regulatory Development of Animal Pesticides - EPA Credits: 2
AAI 845 - Regulatory Development of Animal Biologicals and Diagnostics - USDA Credits: 2
AAI 846 - Special Topics: Regulatory Affairs in Animal Health Credits: 1
STAT 703 - Introduction to Statistical Methods for the Sciences Credits: 3

The courses for the certificate can be applied to other Master's programs such as the Professional Science Master's degree or the M.S. in Veterinary Biomedical Science, after a student is accepted to the Master's program.

Total Hours Required for Graduate Certificate: 15

Courses

- AAI 795 Topics in Applied and Interdisciplinary Studies
- AAI 797 U.S. Animal Politics and Policymaking
- AAI 801 Interdisciplinary Process
- AAI 840 Regulatory Aspects of Drug and Vaccine Development in the Animal Health Industry
- AAI 841 Strategies in Pre-Clinical and Clinical Research for Regulatory Affairs in Animal Science
- AAI 842 Strategies in the Stewardship of Licensed Pharmaceuticals and Biologics in Animal Health
- AAI 843 Regulatory Development of Animal Pharmaceuticals - FDA
- AAI 844 Regulatory Development of Animal Pesticides - EPA
- AAI 845 Regulatory Development of Animal Biologicals and Diagnostics - USDA
- AAI 846 Special Topics: Regulatory Affairs in Animal Health
- AAI 852 Vaccinology
- AAI 858 Capstone Experience I
- AAI 859 Capstone Experience II
- AAI 860 Introduction to Systems and Data in Animal Health
- AAI 861 Research Strategies to Drive Development of Animal Health Products
- AAI 862 Applied Analytics in Animal Health
- AAI 864 Introduction to Computing for Animal Health
- AAI 870 Seminar in Applied and Interdisciplinary Studies
- AAI 880 Problems in Applied and Interdisciplinary Studies
- AAI 895 Advanced Topics in Applied and Interdisciplinary Studies
- AAI 899 Research in Applied and Interdisciplinary Studies

Mary Lynn and Warren Staley School of Leadership

Mary Tolar, Dean

257 Leadership Studies Building
785-532-6085
Fax: 785-532-6542
E-mail: leadership@k-state.edu
www.k-state.edu/leadership/

Since its inception in 1997, the Staley School of Leadership strives to fulfill each part of its mission statement: developing knowledgeable, ethical, caring, inclusive leaders for a diverse and changing world. We invite all to become a part of the Leadership Studies community and together we will continue to discover ways to learn about and engage fully in the mission of our program.

The School of Leadership continues to develop and grow. Grounded by its progressive spirit, commitment to collaboration, and devotion to a student-centered learning community, the School is building critical infrastructure to advance our programs and contribute to the discipline. By understanding, honoring, and preserving what works well, the School is creating a future for

Leadership Studies that values its legacy as a necessary component of successful innovation. As we continue to engage students in the central questions of purpose and values, highlight the need for ethical leaders at all levels, share a desire for all of us to commit to a lifetime of service and civic engagement, and open students to the need to continually learn and affirm different people and cultures--we are extending our legacy to the future.

A minor in Leadership Studies complements an academic major by combining theory and practice with an emphasis on personal leadership development. In addition to the minor, we have a certificate in nonprofit leadership. The Nonprofit Leadership Certificate will develop an individual's leadership capacity to better work, serve, and lead in nonprofit organizations. Drawing from leadership development theory and best practices, graduates will gain tangible skills in understanding the nonprofit sector and the unique considerations of leading within it.

The secondary major in Global Food Systems Leadership is intended for students who want to study and exercise leadership on the grand challenges of feeding a growing world population through a systems thinking approach. An interdisciplinary team from Kansas State University created the program with the goal of helping students enhance their preparation for a diverse range of careers that require integrated knowledge of the global food system and the leadership capacity to skillfully intervene to change the system for the common good.

The Leadership Communication doctoral program started in fall of 2018. The Leadership Communication program is an interdisciplinary research degree. This Doctor of Philosophy degree is rooted in leadership practices and communication processes that can be used to make progress on the most difficult challenges of our times. Through the study and practice of leading change students will produce original research that is grounded in community-engaged scholarship.

Our Programs-Service and Civic Engagement

The Staley School of Leadership is also focused on students' service and civic engagement and offers various programs for students (and faculty) to enhance social responsibility, citizenship, and awareness of community needs to improve the quality of life--on campus, in the community, and across the world.

Doctor of Philosophy

Leadership Communication (PHD)

Contacts: Mary Tolar and Andrew Wefald
Email: leadership@k-state.edu
Phone: 785-532-6085

K-State's Leadership Communication doctoral program is an interdisciplinary research degree grounded in community-engaged scholarship. Here's what awaits you:

Challenging Coursework: Through coursework you will explore theories and methods of leadership, communication, and engagement to form new lenses to see and solve problems. You'll develop your methodological skill to conduct forms of engaged research.

Tailored Path: You will customize a plan of study relevant to your own pace, place, and purpose.

Research that Makes a Difference: Through your research you will help make progress on issues you and your communities care about.

A major cornerstone of K-State's Leadership Communication Ph.D. program is a community-engaged approach to teaching, learning, and research. Doctoral students study and practice the art of leading change to produce original research that is grounded in this approach.

Admission Requirements:

A minimum of 90 credit hours are required for the doctor of philosophy degree. Students already holding an applicable master's degree, or who have completed other post-baccalaureate work upon admission, can count 30 credits toward the 90 credits required for the doctorate.

Course Requirements

Required Courses: 18 credit hours

- LEAD 814 - Graduate Studies in Leadership Communication **Credits: 3** Crosslisted: COMM 814 / AGCOM 814
- LEAD 815 - Seminar in Leadership Communication **Credits: 1** Crosslisted: COMM 815 / AGCOM 815
This seminar is offered each semester. Students must enroll for a minimum of 3 credit hours over 3 semesters.
- LEAD 820 - Contemporary Perspectives on Leadership Theory and Practice **Credits: 3**
- LEAD 845 - Approaches to Public/Community Engagement **Credits: 3** Crosslisted: COMM 845 / AGCOM 845
- COMM 916 - Communication Theories and Engagement **Credits: 3** Crosslisted: AGCOM 916
- LEAD 945 - Social Science Research for Public Problem Solving **Credits: 3** Crosslisted: COMM 945 / AGCOM 945

Research Methodologies: Minimum of 12 credit hours

- COMM 821 - Experimental Research in Communication Studies **Credits: 3**
- COMM 822 - Field Research in Communication Studies **Credits: 3**
- EDCEP 817 - Statistical Methods in Education **Credits: 3**
- EDCEP 917 - Experimental Design in Educational Research **Credits: 3**
- EDLEA 838 - Qualitative Research in Education **Credits: 3**
- EDLEA 938 - Advanced Data Analysis in Qualitative Methods **Credits: 3**

- EDLEA 948 - Data Representation and Writing in Qualitative Research **Credits: 3**
- EDLEA 848 - Understanding Theoretical Frameworks **Credits: 3**
- EDLEA 928 - Organizational Leadership in Education **Credits: 3**
- EDLEA 958 - Case Study in Qualitative Research **Credits: 3**
- EDLEA 968 - Discourse Analysis **Credits: 3**
- EDLEA 978 - Qualitative Data Management and Analysis Using Nvivo **Credits: 3**
- EDLEA 988 - Differentiated Research **Credits: 3**
- GEOG 801 - Seminar in Qualitative and Mixed Methods Research **Credits: 3**
- PLAN 803 - Community Research Methods **Credits: 3**
- POLSC 900 - Advanced Research Methods I **Credits: 3**
- POLSC 901 - Advanced Research Methods II **Credits: 3**
- PSYCH 802 - Psychological Research Design and Analysis I **Credits: 3**
- PSYCH 805 - Psychological Research Design and Analysis II **Credits: 3**
- SOCIO 824 - Qualitative Methodology **Credits: 3**
- SOCIO 825 - Quantitative Methods **Credits: 3**
- SOCIO 822 - Introduction to Methods of Social Analysis **Credits: 3**

Additional Requirements:

Beyond the core and methods courses, students must complete an additional 30 credit hours. A minimum of 15 credit hours must be from dissertation research hours. The remaining 15 credit hours may come from either elective coursework or more dissertation research hours.

Dissertation Research: 15-30 credit hours

Completion of a dissertation which examines a topic congruent with the program of study using a systematic methodology consistent with accepted research paradigms; the dissertation must be successfully defended in a public, oral defense.

- LEAD 999 - Research in Leadership Communication **Credits: 1-15**
Crosslisted: COMM 999 / AGCOM 999

Electives: 0-15 credit hours

Students will work with their committees to select 0-15 credit hours of elective courses appropriate for their programs of study. Example courses include:

- COMM 790 - Deliberation & Dialogue Theory **Credits: 3**
- COMM 831 - Deliberation & Dialogue Process Models **Credits: 3**
- COMM 832 - Dialogue, Deliberation, and Public Engagement: Core Skills and Strategies **Credits: 3**
- COMM 833 - Dialogue, Deliberation, and Public Engagement: Capstone Experience **Credits: 3**
- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDACE 817 - Reflective Practice in Social Justice Education **Credits: 3**

Program Total Credits: 60

Master's degree Transfer Credits: 30

Total Hours Required for Doctorate: 90

Graduate Certificate

Leading Change Graduate Certificate

Contact: Dr. Kerry Priest
Phone: 785-532-6085
E-mail: kerry@ksu.edu
www.k-state.edu/leadership/

Through the Leading Change Graduate Certificate, you will engage in leadership learning and development needed for social innovation and systems change. You will develop the capacity to navigate increasingly complex environments and challenges and gain transformative skills to exercise leadership in your personal, professional, and civic life. The coursework will prepare you to lead change across teams, organizations, and society. Regardless of profession, discipline, or industry, you will build confidence in your ability to create change and inspire diverse groups of people to work together for a more prosperous future for all.

This certificate may connect with one or more master degree programs. At the recommendation of the academic program, students may apply credits earned through this graduate certificate completion towards a graduate program at Kansas State University, provided that all Graduate School policies are fulfilled.

Admission Requirements

- All students are required to meet the general university admission requirements.
- Exceptions granted for 2.8 GPA on probationary status.

Graduation Requirements

The minimum grade requirements for certificate programs are the same as those for graduate degrees. For graduate credit, the grade in a course must be C or higher. To remain in good standing, a student must maintain a cumulative GPA of 3.0 or higher.

Course Requirements

Required Courses

9 credit hours

- LEAD 750 - Leading Change Credits: 3
- LEAD 755 - Systems Leadership Credits: 3
- LEAD 701 - Foundations of Leadership Credits: 3

Elective Courses

Elective coursework is included from across profession, discipline, or industry, to support the interdisciplinary work of change processes. 3 credit hours

- CDPLN 700 - Foundations of Community Development Credits: 3

- CDPLN 705 - Organizing for Community Change **Credits: 3**
- CNRES 754 - Organizational Conflict **Credits: 3**
- EDACE 816 - Foundations of Social Justice Education: Research, Theory, and Practice **Credits: 3**
- EDACE 832 - Interpersonal and Intrapersonal Dynamics in Adult Learning and Leadership **Credits: 3**
- EDACE 836 - Group Dynamics in Adult Learning and Leadership **Credits: 3**
- HDFS 714 - Program Design, Evaluation, and Implementation **Credits: 3**
- HDFS 719 - Program Administration and Management **Credits: 3**
- LEAD 700 - Nonprofit Leadership Concepts **Credits: 3**
- LEAD 708 - Facilitating Leadership in Complex Adaptive Systems **Credits: 3**
- LEAD 720 - Leadership Coaching **Credits: 0-3**
- LEAD 845 - Approaches to Public/Community Engagement **Credits: 3**
- MANGT 720 - Managing Organizational Behavior **Credits: 3**
- MANGT 840 - Advanced Entrepreneurship **Credits: 3**
- MANGT 860 - Managing the Triple Bottom Line Business **Credits: 3**
- POLSC 708 - Public Personnel Administration **Credits: 3**
- POLSC 735 - Public Organization Theory **Credits: 3**

Total Hours Required for Graduate Certificate: 12

Nonprofit Leadership Graduate Certificate

Contact: Dr. Chance Lee
 Email: chance@ksu.edu
 Phone: 785-532-6085
www.k-state.edu/leadership/

The Nonprofit Leadership Graduate Certificate builds student capacity to exercise leadership within the unique context of a nonprofit organization. Students will gain skills in leading change and teams in mission-driven organizations, raising funds, navigating board relationships, championing a cause, and engaging volunteers.

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Public Administration at Kansas State University.

Admission Requirements

Bachelor's degree with a 3.0 minimum GPA in the final two years or approximately the last 60 credit hours. Exceptions granted for 2.8 GPA on probationary status. This admission requirement is in line with the requirements for the MPA program.

Graduation Requirements

Current graduate students will complete the core curriculum and elective requirements, outlined above. Upon completion, students will complete the Graduate Certificate Completion form from the Graduate School.

Students only seeking the Nonprofit Leadership Certificate will complete the application process, outlined by the graduate school. Approvals will be administered by the Nonprofit Leadership Program Director at the Staley School.

Course Requirements

Required Courses

12 credit hours

- LEAD 700 - Nonprofit Leadership Concepts Credits: 3
- LEAD 701 - Foundations of Leadership Credits: 3
- POLSC 736 - Strategic Management of Public and Nonprofit Organizations Credits: 3
- POLSC 740 - Nonprofit Financial Management Credits: 3

Elective Courses

3 credit hours

- CDPLN 633 - Grantwriting Credits: 3
- CDPLN 700 - Foundations of Community Development Credits: 3
- CDPLN 705 - Organizing for Community Change Credits: 3
- CDPLN 713 - Nonprofit Management Credits: 3
- ENTRP 825 - Strategic Innovation Credits: 3
- LEAD 845 - Approaches to Public/Community Engagement Credits: 3
- HDFS 714 - Program Design, Evaluation, and Implementation Credits: 3
- HDFS 719 - Program Administration and Management Credits: 3
- HDFS 801 - Grant Development and Management Credits: 3
- HDFS 893 - Evaluation of Prevention Science Programs Credits: 3
- MANGT 860 - Managing the Triple Bottom Line Business Credits: 3
- POLSC 702 - Public Administration and Society Credits: 3
- POLSC 708 - Public Personnel Administration Credits: 3
- POLSC 737 - Public Budgeting Credits: 3
- POLSC 738 - Public Finance Credits: 3
- POLSC 739 - Intergovernmental Relations Credits: 3

Total Hours Required for Graduate Certificate: 15

Biochemistry and Molecular Biophysics is an interdepartmental graduate program with faculty participants from many academic departments of the University.

Overview

Biochemistry and Molecular Biophysics explores the molecular basis of life processes. It examines structure, function, assembly, and dynamic changes of macromolecules and the chemistry and dynamics of small molecules. Through use of recombinant DNA technology and new instrumentation, a revolution is underway in our understanding of the ways that plants and animals regulate metabolic processes and express genetic information. Researchers at Kansas State University are in the forefront of that revolution. The study of biochemistry at Kansas State University is conducted under a versatile arrangement through which faculty of the Department of Biochemistry and Molecular Biophysics and faculty in other departments cooperate in a graduate biochemistry program. Both fundamental questions about living processes and applications to living systems are supported in this interdisciplinary program.

Degree programs

The biochemistry and molecular biophysics program seeks excellence in teaching and research through a program tailored to the development of the individual student. The core curriculum is broad and students are expected to specialize through appropriate choice of advanced courses from the many offerings taught by faculty in their areas of research expertise. A strong seminar program involves presentations by eminent visiting scholars from around the world and by the faculty of many departments on campus. A graduate student seminar program provides further opportunity for acquiring insights into new developments in the field.

The Graduate Biochemistry and Molecular Biophysics Group administers granting of M.S., B.S./M.S., and Ph.D. degrees in biochemistry whether the research is conducted within the Department of Biochemistry or in other cooperating departments. The program of study is flexible, accommodating students with a wide range of backgrounds, including genetics, microbiology, physics, and medicine as well as the traditional chemistry, biochemistry, and biology degrees. Students are admitted to either the M.S. or the Ph.D. program based on qualifications, which include undergraduate and graduate performance, letters of recommendation, and program of study deficiencies.

In biochemistry and molecular biophysics, both the Ph.D. and the M.S. degrees are considered research degrees. Thus, in addition to specific course requirements, there is a requirement for writing a thesis based on independent and original research conducted in the laboratory of one of the participating faculty members.

Students in either the M.S. or Ph.D. degree program take the two-semester, comprehensive, core biochemistry courses Biochemistry I and II and a one-semester course in molecular biophysics. All students are expected to attend the weekly graduate student seminar and individual research group meetings.

Financial support of graduate students

Within the Department of Biochemistry and Molecular Biophysics, support for graduate teaching assistants is through the College of Arts and Sciences. Graduate research assistants are supported through the Agricultural Experiment Station and by research grants. Usually a student is admitted to the graduate program in biochemistry and molecular biophysics only if university funds are available for salary support or if the student has another source of support such as a government (U.S. or other) fellowship. U.S. citizens with a strong undergraduate record can apply for NSF predoctoral fellowships. Some supplements to teaching and research support are available on a competitive basis from the Graduate School for outstanding U.S. students.

Incoming students receive half of their support in the form of teaching assistantships (requiring six contact hours per week) and half in the form of a research assistantship. After the first year, the teaching assistantship may be replaced by extramural support. This is expected for Ph.D. candidates beyond their third year of study.

Graduate students in the B.S./M.S. dual degree program will not be expected to teach and will not be supported by departmental teaching or research assistantships. They are eligible for support as research assistants in laboratories of individual faculty members.

Student fees

For graduate teaching assistants and graduate research assistants, student fees are assessed at the in-state level. Students receiving such support are required to enroll in 6 credit hours each semester. A waiver of half the tuition costs is provided to those supported as combined graduate teaching/research assistants.

Research environment and facilities

More than two dozen faculty members are formally associated with the Graduate Biochemistry and Molecular Biophysics Group. Many others with interests in biochemistry and molecular biology are collaborative investigators and participants on graduate student supervisory committees. The research environment in biochemistry is exciting and vigorous because of these diverse but interacting programs. Our graduates compete favorably with those from the world's best programs because they are well trained in biochemical literature and research techniques. Members of the group currently receive more than \$3 million per year in outside research funds. These funds support technicians, postdoctoral fellows, and some graduate research assistants at later stages of their career. They also allow purchase of up-to-date research equipment and supplies.

The Department of Biochemistry and Molecular Biophysics has 14 large research suites. Ten are located in Chalmers Hall. That building also houses the department's teaching laboratories. The other research suites are located in Burt Hall. The department is well equipped for advanced research in a wide range of areas. NMR studies are conducted within the NMR Facility using Varian 500 MHz Unity Plus NMR with triple channel detection, pulsefield gradient, and high stability temperature control and waveform generation. Other biophysical studies are conducted with conventional and magnetic circular dichroism, fluorescence spectroscopy with fluorescence polarization capability and UV-Visible differential scanning spectroscopy. A new analytical ultracentrifuge (Beckman XL-I), micro calorimeters (MicroCal VP-DSC and isothermal titration calorimeter), and a surface plasmon resonance instrument (Biacore 3000) enhance studies of macromolecule interactions and folding properties.

The department has equipment and technical capability for gene cloning (supported by polymerase chain reaction capabilities) and all varieties of electrophoresis experiments. For preparative procedures the department has multiple ultracentrifuges, high performance liquid chromatographs, and facilities for both anaerobic enzyme preparations and large scale preparations of subcellular organelles. The department has several cold rooms, animal cell culture facilities, instrument rooms, and dark rooms. Facilities are available for housing animals and growing plants year-round. Analytical instruments include scintillation counters, gamma counters and scanning spectrophotometers.

The university Biotechnology Core Facility is housed within the Department of Biochemistry and Molecular Biophysics and provides both instruments and expertise for mass spectrometry of biopolymers, oligonucleotide synthesis, peptide synthesis and gas-phase peptide sequencing. High resolution purification of peptides and synthesis of peptides containing non-natural amino acids are areas of special interest. The mass spec capabilities include high throughput screening of peptides.

Additional facilities are also available on campus: DNA sequencing, fluorescence-activated cell sorting, electron microscopy (transmission and scanning), quasi-elastic light scattering, GLC-mass spectrometry, emission spectrometry, Fourier-transform infrared spectrometry, atomic absorption and stopped flow kinetics. High resolution GLC-mass spec is used for lipidomics studies. Parallel computing, mini super-computers, and ethernet and internet networks are available throughout the campus.

Job opportunities

Biochemistry and molecular biology are growth areas in the economy of the 21st century. Graduate training in biochemistry and molecular biophysics provides a strong base for varied academic and technological careers. Our Ph. D. and postdoctoral graduates find positions not only in departments of biochemistry, biophysics, and molecular biology, but also in biology, chemistry, pharmacology, nutrition and medicine. Doctoral graduates find positions requiring independent work in a wide range of industries including biotechnology, chemistry, pharmacology, medicine, and food technology. M.S. graduates occupy skilled

technical positions in industry, government and academic research laboratories. Many also continue for the Ph.D. at this or other institutions.

Data Analytics and Insights in Animal Health

Data Analytics and Insights in Animal Health Graduate Certificate

Data analytics in the animal health industry requires a specialized skill set, which combines the knowledge of animal science and data analytics, with skill in applying the data to impactful decision making. Students in the Data Analytics and Insights in Animal Health Graduate Certificate will be able to:

1. Exhibit broad comprehension of animal health
2. Demonstrate in depth understanding of programming and data management tools
3. Apply appropriate mathematical methodologies to animal systems
4. Implement strategic use of data analytics for business applications, including animal health research and commercial insights

The courses for the certificate can be applied to other Master's programs such as the M.S. in Applied Biosciences or the M.S. in Veterinary Biomedical Science, after a student is accepted to the Master's program.

This certificate is housed in the School of Applied and Interdisciplinary Studies. Students interested in this program should contact Dr. Paige Adams (apadams@ksu.edu) or Dr. Douglas Shane (ddshane@ksu.edu).

After earning the graduate certificate, students may apply credits earned through the graduate certificate completion towards a Master of Applied Biosciences at Kansas State University.

Admission Requirements

- A bachelor's degree from a college or university accredited by a regional or national institutional accrediting agency recognized by the U.S. Department of Education.
- Undergraduate preparation in the proposed major field equivalent to that acquired by a graduate of Kansas State University, or evidence of an appropriate background for undertaking an advanced degree program, and
- Cumulative grade point average (GPA) of 3.0 or higher on a 4.0 scale or GPA of 3.0 in the last 60 hours of coursework.

Course Requirements

Required Courses

- AAI 860 - Introduction to Systems and Data in Animal Health **Credits: 2**
- AAI 861 - Research Strategies to Drive Development of Animal Health Products **Credits: 2**
- AAI 862 - Applied Analytics in Animal Health **Credits: 3**
- AAI 863 - Special Topics: Data Analytics and Insights in Animal Health **Credits: 1**

Electives Courses

Choose 7 credit hours from the following courses:

Animal Health-related:

- AAI 795 - Topics in Applied and Interdisciplinary Studies **Credits: .5-6 ***
- AAI 852 - Vaccinology **Credits: 3**

- AAI 865 - Assessing Effectiveness of Animal Therapeutics and Vaccines **Credits: 1**
- AAI 867 - Zoonotic Pathogens in the Food Chain **Credits: 2**
- DMP 710 - Introduction to One Health **Credits: 2**
- DMP 754 - Introduction to Epidemiology **Credits: 3**
 * Can also be applied as a math-related elective
 Math-related:
 - AAI 864 - Introduction to Computing for Animal Health **Credits: 3**
 - MATH 896 - Topics in Mathematics **Credits: .5-18**
 - MKTG 880 - Applied Marketing Analytics **Credits: 3**
 - STAT 703 - Introduction to Statistical Methods for the Sciences **Credits: 3**
 - STAT 705 - Regression and Analysis of Variance **Credits: 3**

Total Hours Required for Graduate Certificate: 15

The Graduate Certificate in Data Analytics and Insights in Animal Health curriculum is 15 credit hours, which is comparable to other graduate certificates at Kansas State University. Students in the program will be closely advised on the appropriate selection of elective courses, depending on the educational background and professional experience of the student. All of the AAI courses proposed for the certificate can be applied to the Applied Biosciences Master's degree, after a student is accepted to the Master's program, upon approval of the student's supervisory committee. A separate Curriculum proposal will be submitted to formally add the courses to the Applied Biosciences Master's degree. It is anticipated that the courses from the certificate will fulfill the STEM and/or Professional Skills requirements. All the courses in the Graduate Certificate in Data Analytics and Insights in Animal Health can also be applied to the M. S. in Veterinary Biomedical Science.

Environmental Design and Planning

Anne Beamish, Director of Graduate Studies

2132 Regnier Hall
 785-532-5950
 Fax: 785-532-1086
phdinfo@ksu.edu
<http://apdesign.k-state.edu/>
<https://apdesign.k-state.edu/academics/degrees-and-programs/phd-program/>

Overview

Since the founding of the College in 1963, the faculty has based their relationships on the mutually held realization that the practice of any one of the design professions benefits from the interaction of their varied approaches to (re)shaping the built environment. The interdisciplinary doctoral program takes advantage of the diverse but interrelated nature of the college's design and planning disciplines. The Ph.D. program represents the comprehensive nature of our professional community and reflects how our faculty and the profession interact in practice.

The Environmental Design and Planning Ph.D. at the College of Architecture, Planning and Design is an interdisciplinary research-based degree program, with the aim of contributing to a more livable and ecologically-sustainable society. Our doctoral students are members of the College at-large, rather than a particular department, allowing students to draw from the sizeable and wide-ranging knowledge of faculty from the university and all three of our departments:

- Architecture,
- Interior Architecture and Industrial Design, and
- Landscape Architecture and Regional & Community Planning.

This program is designed to prepare graduates to teach at the graduate level and/or conduct research. In addition to teaching, our graduates also are well-equipped to undertake research to inform design and/or planning for governmental, environmental, and planning agencies; developers; professional design firms; and international corporations that focus on environmental stewardship.

Areas of Emphasis

Our Ph.D. students undertake a wide range of research, but most topics are in one of the following interconnected areas:

- **Design** emphasizes the role of the designed environment in contributing to human well-being and provides opportunities, through practice and research, to explore issues that include pedagogy, neuroscience, perception, sustainability, history, and theory.
- **Planning** considers the theory and methods of public decision-making and the development of models and tools to understand and improve decision-making processes, both public and private.
- **Sustainability** explores ways by which the design and planning professions can better provide for the environmental and resource needs of people without sacrificing the ability of future generations to meet their needs.
- **Place Making** explores the importance of place in human life and considers ways by which design and policy might help to create robust, engaging, and supportive human environments.

Admission procedures

Previous Degrees. Applicants are normally expected to have earned a master's degree in the design or planning fields, but applicants with a master's degree in other fields may also be considered on a case-by-case basis.

Major Professor/Advisor. One member of the core Ph.D. faculty must accept mentorship responsibility for any student prior to their admittance to the doctoral program. Applicants are strongly encouraged to be in contact with Ph.D. faculty members with whom they share interests, and if possible, obtain a commitment from a faculty member to support their application.

Application Review Committee. Even with faculty commitment, the application must be reviewed and approved by the PhD committee before an offer of acceptance can be made.

Application Requirements

- K-State Graduate School application
- **3.0 grade point average** (on a 4.0 scale) in all higher education to-date.
- **Transcripts:** Include transcripts from any institution of higher education you have attended.
- **Statement of intent:** Statement of intent should be one to two pages and should include the prospective student's background, research interests, objectives, and reason for applying to the program.
- **Research Proposal:** This is a short (approximately 5 page) proposal that outlines the student's intended research. The proposal should be in standard form (i.e. Introduction (problem, importance, goals, research question); Background (literature review); Research Design (methodology and methods). The research will likely change after completing the coursework and consulting with the major professor, but the proposal will help us better understand the student's interests.

- **Evidence of Past Research:** The "portfolio" should include the prospective student's work, whether design projects, research projects, samples of written work, or other examples of creative and/or research efforts. **We are particularly interested in seeing evidence of previous research and published scholarly writing.**
- **Letters of recommendation:** Three letters of recommendation are required. At least two should be from academic references.
- **GRE score report:** Ph.D. applicants should have attained a score of 300 or better on the combined verbal and quantitative components of the GRE. Analytical writing should be 4.0 or above.
- **TOEFL/IELTS report (international students):** Prospective international students are required to have attained a minimal TOEFL score of 100, or a minimal IELTS score of 7.0. We accept TOEFL iBT's new set of scores called MyBest scores.
- **Financial statement** (international students)
- **Application fee** (Domestic \$90 and International \$100)

PhD requirements

The PhD program requires four years of full-time on-campus study.

All doctoral students with a previous master's degree are required to take a minimum total of 60 credit hours — a minimum of 30 credit hours of coursework in addition to 30 credit hours of doctoral research. The coursework must include: 2 mandatory ENVD courses (ENVD900 and 901), 2 research tool courses, 2 cross-disciplinary elective seminars, 1 APDesign seminar, 1 course outside of APDesign, and 6 credit hours of independent study or other coursework. All courses must be selected in consultation with the student's major professor (committee chair).

In addition to the coursework and doctoral research, students will submit an approved dissertation proposal, complete a written and oral preliminary exam, submit an approved dissertation, and complete an oral dissertation defense.

Dissertation Research Proposal. The student will complete a written document about their proposed research and present their proposal to the committee. The student's doctoral committee will then have the opportunity to discuss and provide written feedback. The committee must approve the proposal.

Preliminary examination. Students who have filed their program of study with the Graduate School and have completed at least 21 of the 30 hours of coursework with a grade point average of 3.0 or better, and who have an approved dissertation proposal are eligible to take the preliminary examination. The preliminary examination consists of both a written and oral exam. The purpose of the preliminary examination is to test the student's breadth and depth of knowledge in the proposed field of specialization, as well as the student's ability to explore problems on the boundaries of knowledge. Satisfactory performance in the examination is an indication that the student is prepared to perform independent work toward the doctoral degree. After passing the preliminary exam, the student advances to candidacy and becomes a doctoral candidate.

Writing the Dissertation. The PhD student will complete 30 credit hours of ENVD 999 (Dissertation Research). The dissertation will be a cohesive, original, and an independent contribution to scholarship. The research is to be performed under the guidance of the major professor and the supervisory committee and must be acceptable to them. The dissertation must follow guidelines outlined by the Graduate School.

Dissertation Defense. A final oral examination in defense of the dissertation will be conducted and evaluated by the doctoral committee. Two weeks prior to the dissertation defense the written dissertation will be available for review by the doctoral committee, other faculty, and graduate students. Other faculty and students are encouraged to attend the defense.

Food Science

216 Call Hall
785-532-4057
Fax: 785-532-5861
foodsci@k-state.edu
<http://www.foodsci.k-state.edu>

The Food Science interdepartmental graduate program is part of the Food Science Institute and includes graduate faculty housed in five colleges and eleven departments.

Institute Director:

Jeanette Thurston

Director of graduate studies:

J. Scott Smith

About the Program

The food science graduate program involves the interrelationships of about 46 professionals from 11 departments. Faculty from five colleges (agriculture, arts and sciences, engineering, human ecology, and veterinary medicine) have participated in the interdisciplinary food science masters and doctoral programs since 1965. Graduate faculty are located in the Departments of Agricultural Economics, Animal Sciences and Industry, Biochemistry; Biological and Agricultural Engineering; Chemical Engineering; Communications and Agricultural Education, Entomology, Diagnostic Medicine/Pathobiology; Geography, Grain Science and Industry; Hospitality Management; and Food, Nutrition, Dietetics, and Health.

Graduate students conduct their research in one of the participating departments. The food science faculty are involved in research on the chemical, microbiological, sensory, and nutritional aspects, functional characteristics, and processing of foods. Faculty with expertise in chemical analysis, instrumental analysis, sensory analysis, systems analysis, biochemistry, dietetics, statistics, microbiology, thermodynamics, rheology, biochemical engineering, and food engineering participate in the food science program.

Research facilities related to animal products include complete dairy and red-meat processing facilities, well-equipped research laboratories for red meat, poultry and dairy research, food chemistry, and food microbiology research laboratories. Research facilities for cereals include a complete pilot plant for milling grain into flour, complete baking research facilities, laboratory for extrusion research, well-equipped laboratories for cereal chemistry, a specialized cereal science library, and other supporting facilities. The flavor and sensory evaluation laboratories and instrumentation for physical, histological, and biochemical analysis of food products are also available. Laboratory facilities for food engineering research include ultrafiltration cells, instrumental fermenters, gas and liquid chromatography, an elemental analyzer, and an environmental chamber with temperature and humidity control. Facilities and instrumentation for food safety studies are available.

Graduate study in food science provides training for a number of varied academic and technical careers. Food processing is a leading industry in the United States so the need for food scientists is growing.

Admission

The application should be submitted by December 15 for Fall admission and June 15 for Spring admission for international students and February 1st for Fall admission and September 15th for Spring admission for domestic students. For those applying

to the online program application should be submitted by April 15 for Fall admission and September 15 for Spring admission, and preferably earlier to ensure availability of a major professor. Admission is highly competitive and not all applicants are admitted. All prospective students must submit the following online: application form, application fee, statement of objectives, official transcripts, three letters of recommendation, and GRE scores. Seniors and master's students may submit a current transcript and, if admitted, will receive provisional acceptance pending submission of an official transcript showing completion of a bachelor's degree, or M. S. degree for doctoral applicants. It is imperative that the statement of objectives contain a specific area of study within food science, i.e., food chemistry, food microbiology, cereals, red meat, or sensory analysis, so that the application may be directed to the appropriate faculty. Terms such as food processing and food technology are too general and may result in rejection because of lack of specificity.

International students must submit a TOEFL score of at least 550 (paper), 79 (IBT), 6.5 (IELTS) or 58 for Pearson Test of English (PTE) or have received a degree in the last two years from a United States college or university. In addition, an affidavit of the financial form must be completed and signed by a sponsor and a financial institution to show evidence of support for the entire program of study.

All applications will be reviewed by three appropriate members of the food science graduate admission committee. A faculty member must be willing to act as a major advisor prior to submission of credentials to the graduate school.

Research and teaching assistantships administered by the individual departments are available on a limited basis. Those receiving assistantships pay in-state fees. Members of the food science program obtain funds from the Agricultural and Engineering Experiment Stations and outside research funds that help sponsor some graduate research assistants. Currently, research stipends are competitive but may vary by department.

General requirements for entering graduate study in food science are: (1) calculus; (2) statistics; (3) biochemistry; (4) organic chemistry; (5) a course in physics; (6) an introductory course in microbiology; and (7) a course in botany, zoology, or biology. The student's supervisory committee will resolve course deficiencies. Certain programs within Food Science may require additional courses.

When the student's committee believes it is necessary, the student will be required to take additional undergraduate courses to prepare more completely for the individual program.

Candidates for degrees are expected to select courses that provide adequate coverage in several food areas, with primary emphasis in one or more areas.

The M.S./Ph.D. program of study shall be expected to include courses in biochemistry, statistics, food microbiology, food chemistry, and food processing/food engineering. No more than 6 credit hours at the 500 level will be accepted. One credit of food science seminar for the M.S. degree and 2 credits of food science seminar for the Ph.D. degree shall be included. There is no foreign language requirement.

Course requirements will be evaluated by the student's supervisory committee. The chairman of the food science graduate program must approve members of the student's advisory committee and the program of study.

Genetics

Chris Toomajian, Director of graduate studies

4024 Throckmorton Hall

785-532-6176

Fax: 785-532-5692

genetics@ksu.edu

<http://www.ksre.ksu.edu/genetics/>

Genetics is an interdepartmental graduate program with faculty participants from many academic departments of the University.

Program overview

The Genetics Graduate Program is sponsored by several departments to offer specialized education in genetics to students in multidisciplines. Graduate work leading to M.S. and Ph.D. degrees in Genetics is administered by the faculty of participating departments. These departments are Agronomy; Animal Science and Industry; Biochemistry; Entomology; Horticulture, Forestry, and Recreation Resources; Plant Pathology; Veterinary Medicine; and the Division of Biology. The genetics program consists of 35 graduate faculty members and about 20 graduate students, in addition to visiting scientists, and postdoctoral fellows. All faculty members direct active research projects, and there is a high degree of interaction and cooperation among researchers in various areas of genetics.

Graduate students are expected to start research in their first year and will receive individual attention and guidance. The objective is to produce graduates with a broad training in genetics, who are able to conduct independent research programs that are creative and productive. The curriculum is broad, including plant, animal, physiological, molecular, microbial, fungal, yeast, population, quantitative and behavioral genetics, as well as cytogenetics, genetic engineering, and biotechnology in general. Students are expected to specialize in one of four areas of genetics for their advanced study: Molecular Cellular and Developmental Genetics; Genetics of Plant-Microbe Interactions; Arthropod Genetics; or Quantitative Genetics.

Original research is a requirement for study in the Genetics Graduate Program. The small size of the research labs, typically three to six students per lab, makes for close interaction within the group. Students are also encouraged to interact with other faculty and students in the program and in the member departments.

Admission

Incoming students generally have degrees in some area of biology. However, the overwhelming considerations are an intensive interest in genetics, and minimum prerequisites for admission into our programs. Application procedures require:

1. A completed application form
2. A statement of professional goals and objectives
3. Transcripts from all colleges and universities attended
4. Three letters of recommendation

Additional Graduate School regulations apply to applicants from outside of the United States. Foreign students are expected to have a TOEFL score of 600 or better; the GRE is desired but not required. Outof- state tuition is waived for students who are awarded graduate research or teaching assistantships.

Students who consider pursuing graduate careers at Kansas State University are encouraged to visit the university in order to meet with members of faculty and with other students and to form their own impression of the general atmosphere and of the many research possibilities. If that is not possible, students are encouraged to browse the research programs of specific Genetics Faculty (<http://www.ksre.ksu.edu/genetics/>). Research programs that interest prospective students should be listed when applying for admission to the program.

Leadership Communication

Kerry Priest, Director

207 Leadership Studies

785-532-6085

kerryp@ksu.edu

<http://www.k-state.edu/lead-comm/>

Leadership Communication is an interdisciplinary graduate program that is managed with these units: Communications and Agricultural Education Department, Communication Studies, and the Mary Lynn and Warren Staley School of Leadership.

Program Overview

The Leadership Communication doctoral program is an interdisciplinary research degree grounded in community-engaged scholarship. This degree is rooted in the theories and methods of leadership, communication, and other areas of inquiry related to collaborative change. Through the study and practice of leading change, students will produce original research that contributes to making progress on the most difficult challenges of our times.

Admissions

Our students bring a variety of academic backgrounds, professional experience, and civic interests to this program. Strong candidates for this doctoral program are committed to:

- Engaging with others to leverage diverse perspectives
- Developing capacities to conduct original research, convene stakeholders, and facilitate change processes
- Enhancing careers with foundations, NGOs, corporations, educational institutions, and governmental agencies

Application procedures require:

1. A completed application form
2. Transcripts from all colleges and universities attended
3. Three letters of recommendation
4. Two writing samples

Additional Graduate School regulations apply to applicants from outside of the United States.

Public Health

Ellyn Mulcahy, Director of graduate studies

103 Trotter Hall
785-532-2042
mphealth@ksu.edu
<http://www.k-state.edu/mphealth/>

About the program

Public health is an interdepartmental graduate professional program with faculty participants from many academic departments of the university. The 42 semester hour program is designed to provide graduate-level education for individuals currently employed or anticipating a career in the field of public health. The purpose of public health is to address the physical, mental, social and environmental concerns of communities and populations. Its focus is on prevention of injury and disease in populations while they are still healthy, rather than treating individual patients after they become sick. The field of public health involves programs, strategies, and interventions designed to protect and improve community health through health education, promotion, research, and disease prevention. The final outcome of all public health efforts is to improve the quality of life in communities as well as targeted populations. The MPH program includes the five core areas within the field of public health: environmental health, behavioral sciences/health education, epidemiology, biostatistics, and health services administration. In addition to the five core areas, a student can select an area of emphasis in food safety and biosecurity, infectious diseases/zoonoses, public health nutrition, or public health physical activity.

Application and admission requirements

The Kansas State University Graduate School oversees admissions for the Master of Public Health (MPH) degree and the Graduate Certificate in Public Health Core Concepts. To be eligible for admission to a graduate program, an applicant must have completed an undergraduate degree. Prospective students may apply for the degree and/or the certificate by following the application procedures under each heading.

- Application procedures for MPH Degree
- Application procedures for Graduate Certificate in Public Health Core Concepts

K-State Research and Extension

J. Ernie Minton, Director, K-State Research and Extension and Dean College of Agriculture
Martin Draper, Associate Dean for Research and Graduate Programs
Gregg Hadley, Associate Director for Extension

113 Waters Hall
785-532-6147
www.ksre.k-state.edu

K-State Research and Extension is dedicated to a safe, sustainable, and competitive food and fiber system and to strong, healthy communities, families, and youth through integrated research, analysis, and education.

K-State Research and Extension provides practical, research-based information and educational programs to address critical issues facing individuals, families, agricultural producers, business operators, and communities.

K-State Research and Extension is organized into the following core mission themes; agricultural industry competitiveness; food, nutrition, health, and safety; natural resources and environmental management; youth, family and community development.

One K-State Research and Extension partner, the Kansas Agricultural Experiment Station (KAES), conducts original research both on and off campus. Twenty-four departments in five colleges are involved. K-State Research and Extension is also strongly allied with the Graduate School in training graduate students; interested graduate students are encouraged to seek research assistantships. Many undergraduate students work for K-State Research and Extension, which greatly adds to the classroom experience. Off-campus research is centered at two research-extension centers, two research centers, and 10 experiment fields in various parts of the state.

The other K-State Research and Extension partner, the Cooperative Extension Service, provides an important learning bridge between the university and the people of the state. It applies scientific knowledge, principles, and practices to the grassroots problems of Kansans. At the same time, this unique information delivery system brings back requests for new knowledge to the research staff at the university.

The Cooperative Extension Service staffs four area offices (two operate as part of a Research/Extension Center) and helps maintain local extension offices, staffed by off-campus K-State faculty members, in all 105 Kansas counties.

Extension agents are responsible for conducting educational programs in the core mission themes. The agents serve as a local source of information regarding programs of many states and federal agencies, and then help people apply this information to their specific situation.

Information is published in scientific journals; in station bulletins, extension bulletins, national and international conferences; and in popular journals and news releases to the press and radio and television stations. Requests for station publications should be sent to the Distribution Center, Umberger Hall.

Agricultural Experiment Station

Western Kansas Agricultural Research

Centers: Colby-Garden City-Hays

Robert L. Gillen, Head and Professor

Agricultural Research Center-Hays

Professors: Martin, Seifers, and Stahlman

Associate Professors: Harmony and Kofoed

Assistant Professors: Jaeger and Michaud

Investigations are primarily related to plant and animal systems specific to western Kansas, where rainfall is limited. They include beef grazing, feeding, and breeding studies; crop improvement, with special emphasis on wheat and sorghum; soil management; weed control; plant disease; and insect management.

Northwest Research-Extension Center-Colby

Professor: Lamm; **Associate Professor:** Aiken

Major areas of research are crop improvement; soil management; irrigation; weed control; and horticulture.

Southwest Research-Extension Center-Garden City and Tribune

Professors: Klocke and Schlegel

Associate Professors: Buschman and Currie

Current investigations involve irrigation research; dryland soil and crop management; crop improvement; weed control; insect and other pest control in crops; soil management; and environmental management for livestock operations.

Southeast Research-Extension Center

J.D. McNutt, Head

Professors: Moyer and Sweeney; **Associate Professor:** Kelley; **Assistant Professor:** Long

Research focuses on soil and water conservation; crop improvement; weed control; beef cattle grazing investigations; and forages.

Experiment fields

The Kansas Agricultural Experiment Station includes 11 experiment fields: North Central Kansas (Belleville), Irrigation (Scandia), Sandyland (St. John), South Central Kansas (Hutchinson), Harvey County (Hesston), East Center (Ottawa), and Kansas River Valley Irrigation (Rossville and Silver Lake).

Experimental work is devoted to horticultural and forest crops at three fields: John Pair Horticultural Research Center (Wichita), Pecan Experiment Field (Chetopa), and East Central Horticulture Field (Olathe).

Affiliated agencies

Kansas Water Resources Research Institute

Cooperating with the Water Resources Institute, University of Kansas

The Kansas Water Resources Research Institute conducts basic and applied research on water use and to train scientists in water resources. Representatives of K-State and the University of Kansas participate in institute policy making and research. Research is focused on finding the most effective ways of conserving, using, and distributing available water.

Food Science Institute

Jeanette Thurston, Director

The Food Science Institute facilitates training of undergraduate and graduate students; basic and applied research initiatives; and technical and scientific information transfer to academia consumers, food industry, and governmental agencies. More than 40 faculty are members of the food science graduate faculty. Faculty are located in the Departments of Agronomy; Animal Sciences

and Industry; Biochemistry; Chemical Engineering; Communications; Diagnostic Medicine/ Pathobiology; Entomology; Grain Science and Industry; Hotel, Restaurant, Institution Management and Dietetics; Human Nutrition; and Journalism and Mass Communications.

Center for Applied Statistics

George A. Milliken, Director

The Center for Applied Statistics provides consulting services for scientists associated with the Agricultural Experiment Station.

Kansas Center for Agricultural Resources and the Environment

Dan Devlin, Director

The Kansas Center for Agricultural Resources and the Environment (KCARE) is an interdisciplinary research and education unit of K-State Research and Extension whose purpose is to provide focus on environmental issues related to agriculture. The center works with faculty from academic departments to provide coordination and support for research and educational activities in natural resources and environmental management. The center also works to garner financial support for programs and serves as a single point of contact for agencies and organizations outside K-State who have interest in natural resource and environmental issues.

Kansas Center for Sustainable Agriculture and Alternative Crops

KCSAAC is an interdisciplinary center that supports family farms in Kansas through research, education, and outreach programs focusing on production, storage, processing, and marketing technologies that boost small farm profitability, protect natural resources, and enhance rural communities. Examples of activities include evaluating production and marketing of new crops for Kansas, providing educational programs on value-added processing and niche marketing, and providing educational programs on whole farm planning and environmental assessment. KCSAAC was created by the 2000 Kansas Legislature out of concern for the survival of family farms.

Plant Biotechnology Center

John Leslie, Director

The Plant Biotechnology Center links scientists in several colleges and departments who use molecular biology and cell and tissue culture to modify the plant genome. The center's mission is to use biotechnology to add quality and value to Kansas products.

The major emphasis is to develop systems, approaches, linkages, and a knowledge base to apply biotechnology to plant improvement. The goals are to enhance yield and product quality for traditional uses and to explore value-added uses for novel markets.

Projects include activities that are immediately important to Kansas agriculture and that have a high probability of success in a relatively short period of time. They also include a component of basic research that will reach application at a later time. An important consideration is work on Kansas plants and plant products that could be designed to better meet the demands of national and international markets.

Extension Agriculture and Natural Resources

Faculty in the Colleges of Agriculture and Engineering conduct educational programs and provide technical assistance through the county extension network to citizens throughout the state.

Interdisciplinary educational programs are conducted in water quality; natural resource use and conservation; community and economic development; value-added processing and production; food, feed, forage; animal production and utilization; and farm business and financial management.

Agricultural Economics

David Lambert, Head
Glynn Tonsor, State Leader

Farm management

The extension educational program in farm management is divided into two areas: Kansas Farm Management Association programs and area and state farm management programs.

In the Kansas Farm Management Association program, the 23 farm management agricultural economists conduct an intensive educational program with approximately 3,000 Kansas farm families in the six farm management associations.

The extension farm management program is conducted by state specialists and area economists. It is done with in-depth educational programs in cooperation with the county extension agents. The area specialists conduct in-depth workshops in farm business management with farm families, provide a nearby reference resource for agents, and develop educational materials for agent use.

Agricultural policy

The public affairs extension educational program provides educational information on policy issues of current interest. Problems are analyzed, alternatives and consequences examined, and the people are challenged to reach decisions.

The economic information program provides current data on factors affecting farming, business and industrial operations, labor supply and demand, and family living costs.

Extension marketing

The main projects of marketing include marketing information, agribusiness, and commodity marketing activities. News releases, monthly teleconferences, publications directed to the general public, and special information directed toward specific agricultural audiences are used to disseminate information.

Extension economic development

Extension economic development assists communities and businesses in development efforts. News releases, publications, and seminars are offered.

Extension local government

The extension local government programs provide direct educational assistance in the areas of structure, management, finance, and policy. The Office of Local Government serves as the primary unit providing outreach programming in this area.

Extension Agronomy

William Schapaugh, Interim Head

Extension agronomy conducts a statewide educational program in agricultural crop production and natural resource conservation. The program is focused on conservation and protection of natural resources through education and technology transfer that results in improved, stable crop production efficiency. The breadth of the program is in understanding the dynamics of crops, weeds, soils, and water on crop and grazing lands, management, and production.

Extension Animal Sciences and Industry

Michael Day, Head
Joel DeRouchey, State Leader

Extension specialists in animal sciences and industry provide leadership for state programs in beef cattle, dairy cattle, horses, poultry, sheep, swine, meats, dairy products, value-added food products, food safety, and wildlife damage control.

Extension Biological and Agricultural Engineering

Joseph P. Harner, Department Head and State Leader

Professors: Harner, Murphy, and Rogers; **Associate Professor:** Taylor; **Assistant Professor:** Wolf; **Emeriti Professor:** Clark, Jepsen, Koelliker, Powell, and Wendling.

Extension agricultural engineering conducts an educational program which relates to engineering principles to agricultural concerns including water management, water quality, waste management, crop and grain management systems, food processing, ag safety, pesticide application equipment, and livestock production facilities.

Community Vitality

Associate Specialist: Menon, Steen, Daniels, Rice; **Emeritus Associate Specialist:** McAdoo.

The Kansas PRIDE Community Improvement Program is a cooperative effort between government, education, and private industry to develop an organizational and leadership structure for community-wide volunteer action. The Kansas PRIDE program is jointly administered by the Kansas State University Cooperative Extension Service and the Kansas Department of Commerce and Housing.

Extension Entomology

Brian McCormack, Interim Head

Extension entomology is concerned with integrated insect and mite management or control for Kansas citizens. Pilot pest management projects are used to introduce and validate integrated approaches to managing pest populations.

Extension Grain Science and Industry

Gordon Smith, Head

Educational efforts target all sectors of the grain industry and include people involved with wheat breeding, production, grain handling, merchandising, processing, baking, feed manufacturing, and regulatory compliance. Two thrusts of this program include grain utilization and processing quality; and flour mill, feed mill, and grain elevator management. Subjects include wheat quality as it relates to milling and baking properties, commercial and on-farm grain storage and quality maintenance techniques, on-farm feed manufacturing, commercial feed processing, grain industry safety and regulatory compliance, plant sanitation, food safety, and grain grading.

Extension Horticulture, Forestry, and Recreation Resources

Steven Keeley, Interim Head

Jason Griffin, State Leader

Programs in extension horticulture and landscaping serve persons interested in fruits, nuts, vegetables, flowers, turf, shrubs, ornamental and shade trees, and forest and riparian management.

Extension Plant Pathology

Meghan Kennelly, Interim Head

Douglas J. Jardine, State Leader

Plant pathology extension specialists provide information about the occurrence and nature of plant diseases and the economic means for their control.

Youth, Family, and Community Development

Community Development

VACANT, Extension PRIDE Program Coordinator

Associate Specialists: Rice; **Emeritus Professor:** Frazier; **Emeritus Associate Specialist:** McAdoo.

An educated and knowledgeable citizenry is the foundation of our state's economic productivity, democratic charter and social system.

K-State programs inform and help people through research and extension build strong, healthy communities.

4-H Youth Development

Professor: Weber; **Associate Professor:** Potter, Jepsen, Sea, Van Horn; **Associate Specialist:** Wiebers; **Extension Associate:** Hecht; **Emeriti: Professors:** Apel, Bates, Busset, Eyestone, and Redman; **Emeriti Associate Professors:** Borst and Salmon.

The 4-H youth development program is a community of young people across Kansas who are learning leadership, citizenship and life skills. Utilizing a variety of delivery methods and trained volunteers, young people ages 7-19 are involved in hands-on learning experiences. Program priorities include science and technology, healthy lifestyles, and youth citizenship.

Family and Consumer Sciences

Family Studies and Human Services

Sonya Lutter, Head

Assistant Professor: Johannes; **Emeritus Professor:** Bradshaw.

Extension programs address a wide range of issues that help strengthen families and youth across Kansas. Programs teach families about financial planning, parenting, family communication, health, and aging issues.

Food, Nutrition, Dietetics, and Health

Mark Haub, Head

Tanda Kidd, Extension State Leader

Professor: Medeiros; **Associate Professor:** Higgins; and **Assistant Professor:** Kidd.

Healthy eating and physical activity education across the lifespan is available through local extension offices in Kansas. Human nutrition faculty lead programming for nutrition for pregnancy, infants, children and youth, adults, and seniors. All of these include programming for limited resource families and individuals.

Services and Facilities

Communications

Jason Ellis, Head

In addition to its teaching and research program, the Department of Communications provides comprehensive communications and computer-based technology support and consultation for all offices, departments, and centers in K-State Research and Extension and the College of Agriculture.

Our faculty have professional experience in editing and producing publications, creating graphic design, writing news releases, producing radio and television news and features, managing information systems, training to enhance communication and technology software skills, and duplicating and distributing educational materials.

Extension Field Operations

James L. Lindquist, Associate Director

Professor Emeriti: Cox and Van Meter; **Associate Professor Emeriti:** Albright and McReynolds.

The Extension Field Operations office provides leadership as a resource and support to the area director team. It provides leadership for organizational guidelines, policy and centralized functions in support of out-state local operations, and professional development of effective boards and councils.

Northeast Regional Office

Chris Onstad, Regional

Professor: Duncan; **Instructors:** Andres, Boyer, Flaming-Jackson, Graber, and Mack; **Instructor Emeriti:** Christian and Domsch.

Northwest Research-Extension Center

Aliesa Woods, Regional Director

Associate Professors: Barker, Johnson, O'Brien, and Olson; **Instructors:** Falk; **Assistant Professor Emeriti:** Mikesell and Overley; **Director Emeritus:** White.

Southeast Research-Extension Center

J. D. McNutt, Director

Professor: Price; **Instructor:** Hinshaw; **Assistant Professor:** Shoup; **Professor Emeriti:** Brazle, Kilgore, Lippert, Robbins, and Westmeyer; **Associate Professor Emeritus:** Appleby; **Instructor Emeriti:** George and Stephens.

Southwest Research-Extension Center

Mary Sullivan, Director

Professor: Sloderbeck; **Assistant Professors:** Martin and Waggoner; **Instructors:** Dumler and Sollock; **Professor Emeriti:** Mann, Hartman, and Young; **Instructor Emeriti:** Frisbie.

Local Extension Offices

There are extension offices in each of the 105 counties.

Research Facilities and Centers

Special Research Guidelines

James Guikema, Associate Vice President for Research
Office of Research and Sponsored Programs
102 Fairchild Hall
785-532-6195
785-532-2983 Fax
E-mail: research@k-state.edu
www.ksu.edu/research

Special research guidelines are in place for scholarly activities that fall into a variety of categories. These include work involving human subjects, which must be reviewed by a human safety oversight committee, and research involving animals, which must be reviewed by the Institutional Animal Care and Use Committee. Research that is focused on infectious diseases and hazardous chemicals, or which uses recombinant DNA technology, must be reviewed by a biosafety oversight committee. Research involving artifacts that may be of Native American origin are subject to special federal guidelines. Guidelines for all of these activities, and suggestions regarding the appropriate oversight committees, are found in the Office of Research Compliance.

The purpose of a university is to develop and transmit knowledge. Consistent with this purpose, Kansas State University is committed to making ideas and research results available to all who might wish to use them. Therefore, by University policy, classified research may not be carried out under University auspices by any faculty member, staff, or student. Classified research is broadly defined as research in which the purpose, the investigators, the research procedures, or the results are kept secret for an indefinite period of time, and with the control of their release or publication resting in an agency other than the University.

Below is a partial list of research facilities and centers at Kansas State University. For a more complete listing contact Research and Sponsored Programs at 785-532-6195 or website www.ksu.edu/research.

Advanced Manufacturing Institute

510 McCall Road
Manhattan, KS 66502-5034
785-532-7044
785-532-7031 Fax
E-mail: ami@ksu.edu
www.amiksu.org

The Advanced Manufacturing Institute contributes to the economic development in Kansas by helping manufacturers become familiar with and adopt advanced technologies. Through research, technology transfer, and technical assistance AMI helps small and medium-sized manufacturing companies become more competitive nationally and internationally. AMI's interdisciplinary research teams consisting of faculty from various university departments develop technologies vital to manufacturing enterprises.

Clients working with AMI benefit by taking advantage of AMI's professional staff and facilities as well as Kansas State University's faculty expertise and resources to assist them in their manufacturing research and development activities. AMI is a KTEC-funded Center of Excellence. AMI also presents seminars and workshops focusing on advanced technology.

AMI is now a Certified Education Center for the Fabricators & Manufacturers Association, International (FMA). This alliance provides work force training to the metal forming and fabricating industry.

As a Certified Education Center, AMI and FMA can offer industry partners: Customized training programs, training and technical conferences, greater access to advanced technology, programs with equipment demonstrations and hands-on activities, an organized network of renowned experts, expanded offering of FMA benefits and services.

Beach Museum of Art

Lorne E. Render, Director

Marianna Kistler Beach Museum of Art

701 Beach Lane

Manhattan, KS 66506

785-532-7718

785-532-7498 Fax

E-mail: beachart@ksu.edu

<http://www.k-state.edu/bma/>

The Marianna Kistler Beach Museum of Art opened in October 1996. The 26,000 square-foot, award-winning building was designed by Moore/Andersson Architects of Austin, Texas. It was built with private funds, led by the gift of Ross and Marianna Beach of Hays, Kansas. It houses K-State's art collection, which was established in 1928 by Professor John Helm with the purchase of two large oil paintings by the Kansas artist Birger Sandzen. Since that time, the collection has grown to include approximately 4,300 works of art. From the collection's inception, the focus has been on 20th century American art, with a special emphasis on the works of Kansas and regional artists and the works of American printmakers. These features of the collection promise to make the Museum the premier center for the study and appreciation of regional painting and printmaking. Special collections includes works by John Steuart Curry, the photographs of Gordon Parks, the Konza Prairie works of Patricia DuBose Duncan, and prints issued by the Associated American Artists print club.

The 9,000 square-foot gallery area of the Museum features five exhibition spaces for displaying the permanent collection and traveling exhibitions. The Crosby Kemper Educational center houses the 120-seat UMB Theatre and the LouAnn McKinnon Dunn Activity Center. A variety of educational programming is available to the University, public schools, and Manhattan community. The Theatre may be used for lectures, films, seminars and receptions. The Activity Room has been designed for art workshops, family activities, artist demonstrations and small group meetings. A Works Examination Studio allows scholars and visitors to view works of art not on exhibition. Additional resources include artists files, catalogue files, photographic files of the collection, and a lending resource library for teachers. Visit the Museum's web page at www.ksu.edu/bma for more information and to view archived exhibitions.

Museum Hours Tuesday - Friday, 10 a.m.-5:00 p.m.

Saturday - Sunday, 1 p.m.-5:00 p.m.

Closed on Mondays and Holidays

Open on selected Thursdays for public programs.

Phone: (785) 532-7718

Admission is free.

Complimentary parking adjacent to the Museum.

Biology Research Microscopy and Image Processing Facility

Kansas State University Microscopy Facility

Dan Boyle, Director

Division of Biology

6 Ackert Hall

785-532-0134

785-532-6653 Fax

E-mail: dboyle@ksu.edu

The Biology Microscopy and Image Processing Facility, located in the basement of Ackert Hall, is a fee-for-service facility available to Kansas State University faculty, staff and students, and individuals from state and outside institutions. This modern facility is fully equipped to meet your research microscopy and imaging needs. Individual or small group training and familiarization with equipment and techniques used by electron and confocal microscopist are provided by this facility. Clients can be trained to use equipment at this facility by themselves or request assistance from facility staff members.

Biosecurity Research Institute (BRI)

Dr. Ron Trewyn, Vice President for Research
Dr. Beth Montelone, Interim Research Program Director
Scott Rusk, Director Pat Roberts Hall
1041 Pat Roberts Hall
785-532-1333
www.bri-k-state.edu/

The Biosecurity Research Institute located in Pat Roberts Hall provides unique biocontainment space for research on food crop, food animal and food safety diseases. Active research will address agriculture and public health issues. In addition to the research missions, Pat Roberts Hall also houses training and education space that provides for hands-on laboratory biosafety training and biocontainment operations training, as well as, educational programs for scientific information exchange and conference capabilities.

Center for BioServe Space Technologies

230 Ackert Hall
785-532-6705
Fax: 785-532-6707
E-mail: bioserv@k-state.edu
<http://www.colorado.edu/engineering/BioServe/>

The Division of Biology, in cooperation with Aerospace Engineering Sciences at the University of Colorado, has been selected by the National Aeronautics and Space Administration to lead BioServe Space Technologies, a NASA Center for the Commercial Development of Space. The division activities are focused on the life science application of the center, which adds a vast new dimension to the scientific education of future generations of students. This space training and research program gives biologists, students training in the animal and plant sciences, engineers and others an awareness of opportunities in space sciences that will intellectually involve them in space missions of the future. Initial research projects are directed towards an understanding of many biological processes in microgravity. Projects also are focused on the application of the space environment in areas of significant market value, such as biotechnology and bioengineered pharmaceuticals, synthetic organ products and high efficiency agriproducts and agrigenetic materials. Faculty scientists and students participating in BioServe Space Technologies have an opportunity to conduct important research by NASA's reduced gravity program on the KC-135 aircraft, as well as on sounding rockets and space shuttles.

Biotechnology Core Facility

Dr. John M. Tomich, Director
Burt Hall, Rooms 201, 207, 211, and 216
785-532-5956
Fax: 785-532-6297
E-mail: jtomich@k-state.edu
<http://www.k-state.edu/bchem/biotech/>

The Biotechnology Core Laboratory was established to provide a number of centralized services to researchers at KSU and elsewhere. Significant university support from the deans of the College of Agriculture and the Graduate School has enabled us to offer a number of services at very competitive rates. Our services include: DNA/RNA oligonucleotide synthesis, peptide/protein synthesis, amino acid analysis, peptide/protein sequencing, peptide mapping, and MALDI-TOF mass spectrometry.

Center for Basic Cancer Research

Terry C. Johnson Center for Basic Cancer Research
Dr. Rob Denell, Director
1 Chalmers Hall
785-532-6705

Fax: 785-532-6707
E-mail: rdenell@ksu.edu
www.ksu.edu/cancer.center

The Center for Basic Cancer Research sponsors numerous educational and research programs related to cancer studies at KSU. The center developed a cancer research award program designed specifically for undergraduate students. Funded entirely by private and corporate gifts, these research awards are given to deserving undergraduate students on a competitive basis. An integral part of the cancer center is the Anti-Cancer Drug Laboratory where studies are conducted on the cellular and molecular events associated with tumor promoters which, unfortunately, enhance cancer growth. Support is provided for graduate student and faculty travel, summer stipends, laboratory equipment and supplies. These programs are interdisciplinary in nature and include faculty scientists in biology, biochemistry, chemistry, psychology, laboratory medicine, pathobiology, family services, foods and nutrition, and plant pathology. The unique administrative structure and the quality of the faculty scientists have made this multidisciplinary program both powerful and successful.

Center for Gravitational Studies in Cellular and Developmental Biology

^
TO

E-mail: nasaepscor@ksu.edu
<http://www.k-state.edu/epscor/>

The Division of Biology is the home of the Center for Gravitational Studies in Cellular and Developmental Biology. This center has been funded as a NASA Specialized Center for Research and Training in Gravitational Biology, as the Gravity as a Determinant in Cellular and Developmental Biology NASA-EPSCoR Program, and by individual NASA grants to Center investigators. Research in this center is focused on the potential role of gravity on cell and developmental biology of both plant and animal systems. Investigations are based both on basic sciences and applications for long-term space travel. This center has a major emphasis on graduate and post-graduate training, offering a unique opportunity for student preparation in space life sciences.

COBRE in Epithelial Function in Health and Disease

Dr. Daniel C. Marcus, Program Director
124 Coles Hall
785-532-4864
Fax: 785-532-4557
E-mail: marcus@ksu.edu
www.vet.ksu.edu/depts/ap/COBRE/

The College of Veterinary Medicine (CVM) at Kansas State University hosts the COBRE for epithelial function. This multi-year National Institute of Health (NIH) award provides the resources needed to enhance the epithelial research programs of junior basic scientists and clinician scientists at Kansas institutions. The ultimate goal of the COBRE is to assist the junior investigators in their development, and to help them become NIH-funded investigators as rapidly as possible. The COBRE includes seven teams of junior investigators and mentors in the KSU CVM, along with collaborating departments at KSU and the University of Kansas Medical Center. As junior investigators graduate from the program and are successful at obtaining NIH funding, other junior investigator/mentor teams will be actively sought and brought into the COBRE. COBRE programs center on epithelial cell physiology or pathophysiology and provide a strong foundation for translational research. To ensure programmatic success, three core facilities are being established for the center: 1) a state-of-the-art confocal microscope facility; 2) a gene array analysis station; and 3) an epithelial electrophysiology facility.

Dow Multicultural Resource Center

Rhondalyn Peairs, Director
Hale Library, Room 302
785-532-7430

E-mail: downmrc@gw.ksu.edu
<http://www.lib.ksu.edu/depts/downmrc/index.html>

The Dow Chemical Multicultural Resource Center (DOWMRC) provides research and instructional services in support of K-State's American ethnic studies program. Research emphasis is placed on the following ethnic groups: African Americans, Hispanic Americans, Native Americans, and Asian Americans.

DOWMRC features a reference collection of encyclopedias, dictionaries, and indexes related to various American ethnic groups; magazines and periodicals; and multicultural and international newspapers. Visitors can view displays showcasing the University's unique multicultural activities and programs.

Electronics Design Laboratory

Tim, J. Sobering, Director
124 Burt Hall
785-532-7826
Fax: 785-532-2092
E-mail: edl@ksu.edu
www.ksu.edu/ksuedl

The Electronics Design Laboratory (EDL) provides full-time engineering support, electronics design and software development for research and teaching at Kansas State University through the design and manufacture of advanced instrumentation, data acquisition systems, sensors, and other high-end electronics. Established in 1996, EDL eases researchers' access to advanced electronics, assists with integrating electronics technology into research and teaching programs, and aids in electronics technology transfer to users by providing ongoing technical support. EDL works in cooperation with many diverse academic departments, allowing a symbiotic approach to problem solving.

By delegating technical electronics issues to EDL, investigators free themselves to focus more fully on core research objectives.

EDL is headed by an experienced electrical engineer, who supervises a full-time technical staff and a number of graduate and undergraduate interns. More information on EDL capabilities and services can be obtained at our web site.

Food Safety and Security

216 Call Hall
785-532-1234
Fax: 785-532-5861
E-mail: fss@k-state.edu
<http://fss.k-state.edu>

The U.S. and international food system is so complex that any effort to understand its multiple dimensions must draw on multiple academic disciplines. By integrating insights from multiple disciplines, researchers can better describe problems and prescribe solutions in this system. K-State's Food Safety and Security program pursues excellence in such interdisciplinary scholarship. By highlighting research from the fields of microbiology, sociology, economics, et cetera--indeed, the list does and should go on--universities can paint truer pictures of today's food safety and food security problems and solutions. In 2001, K-State formed the Food Science Institute to facilitate initiatives across five colleges and 11 departments. Food Safety and Security is one of the major program areas of the Food Science Institute. Owing to the Institute's unique interdepartmental and interdisciplinary mission, the Food Safety and Security program has thrived in this environment.

Food Science Institute

Dr. Curtis Kastner, Director
216 Call Hall
785-532-4057
Fax: 785-532-5861
E-mail: foodsci@ksu.edu

www.foodsci.k-state.edu

The Food Science Institute (FSI) was established in 2001 to integrate the wide range of expertise in Food Science at K-State. Approximately 40 faculty in more than a dozen disciplines are collectively involved in facilitating undergraduate and graduate academic programs and providing research and technical assistance for the food industries.

State-of-the-art laboratories and pilot plants are available to fulfill research, teaching, and extension missions that address food-related issues. Facilities include bakery, milling, dairy, meat, poultry, egg, thermal, extrusion, fermentation, sensory analysis, and value-added processing/evaluation capabilities. Interaction with other existing institutes, centers, and programs expands the base of expertise needed to address food-related issues.

Frontier Program

Dr. Justin Kastner, Assistant Professor, Food Safety and Security
Co-Coordinator of Frontier
Department of Diagnostic Medicine/Pathobiology
310 Coles Hall
785-532-4820
Fax: 785-532-4851
E-mail: jkastner@k-state.edu
www.frontier.k-state.edu

Frontier is an interdisciplinary program for the historical studies of border security, food security, and trade policy, which Dr. Justin Kastner coordinates in partnership with Dr. Jason Ackleson of New Mexico State University. Frontier undergraduate and graduate students blend academic perspectives from history, food security and trade policy, and international relations to study border and trade issues arising at the frontier.

Geographic Information Systems Spatial Analysis Laboratory (GISSAL)

Shawn Hutchinson, Director
164A Seaton Hall
785-532-5685
Fax: 785-532-7310
E-mail: gissal@ksu.edu
<http://www.k-state.edu/geography/research/gissal.htm>

The Geographic Information System Spatial Analysis Laboratory (GISSAL) at Kansas State University is a multidisciplinary center supporting spatial research, education, and outreach activities at Kansas State University. Established in August 1990 and recognized as a National Center of Digitizing Excellence by the USDA Natural Resource Conservation Service, GISSAL combines faculty expertise and trained graduate and undergraduate student technicians with advanced geospatial technology and sophisticated spatial analysis capabilities.

GISSAL offers a modern computing infrastructure, access to state-of-the-art data visualization tools, and the most powerful GIS, satellite remote sensing, CAD, digital mapping, database, and statistical analysis software packages. Contract services include GIS database design and construction, digital cartographic support and production (including web-servable interactive maps), and customized GIS workshops and software training.

Hazardous Substance Research, Center for

Dr. Larry E. Erickson, Center Director
104 Ward Hall
785-532-6519
Fax: 785-532-5985

E-mail: chsr@k-state.edu
www.engg.ksu.edu/HSRC

Kansas State University leads the consortium comprising the Great Plains/Rocky Mountain Hazardous Substance Research Center which serves Environmental Protection Agency (EPA) Regions 7 and 8. Other member universities are Colorado State, Haskell Indian Nations, Lincoln, Montana State, South Dakota State, and Utah State Universities, along with the Universities of Iowa, Missouri, Montana, Nebraska, Northern Iowa, Utah, and Wyoming. The center was established in 1989 to conduct research pertaining to identification, treatment, and reduction of hazardous substances resulting from agriculture, forestry, mining, mineral processing, and other activities of local interest. In 1994, efforts of principal investigators were broadened to include programs for minority academic institutions, technical outreach services for communities, and research and re-education for displaced military and Department of Defense personnel.

The center has undertaken research in the following areas: studies of soil and water contamination by heavy metals and mining wastes; research on soil and groundwater contamination from a variety of sources; development of biodegradation and immobilization technology; development of simplified and inexpensive methods for analyzing contaminated soil; hazardous waste minimization; and determination of safe concentration levels of hazardous substances in soil and water.

Diversity of interests in EPA Regions 7 and 8 and the large geographic area represented are further reflected in the training and technology transfer program the center currently supports. Issues of the center newsletter HazTech Transfer have been widely disseminated across the nation; an information clearinghouse at Kansas State University Hale Library has been established and contains over 1,000 publications, including center-funded theses, dissertations, reports, and videos; the center has held annual conferences on hazardous waste research since 1986 with more than 70 papers presented at each conference; and general public environmental information activities are ongoing. Many center publications, including proceedings of the 1995-1999 conferences, are now available on our web site at <http://www.engg.ksu.edu/HSRC>.

Huck Boyd National Center for Community Media

Gloria Freeland, Director
105 Kedzie Hall
785-532-0721
Fax: 785-532-5484
E-mail: huckboyd@ksu.edu
huckboyd.jmc.ksu.edu

The Huck Boyd National Center for Community Media was founded in 1990 to serve and strengthen the local newspapers, radio stations, cable systems, and other media that play a key role in the survival and revitalization of America's small towns. The center's mission is to assist in sustaining and enhancing the positive qualities of life characteristic of small communities in America through strengthening community media.

Kansas Center for Agricultural Resources and the Environment (KCARE)

Bill Hargrove, Director
15 Waters Hall
785-532-6147
Fax: 785-532-6563
E-mail: kcare@ksu.edu
www.oznet.ksu.edu/kcare

KCARE provides research and educational programs that help Kansans balance "utilization" and "protection" of natural resources today and into the future. The health and prosperity of future generations depends on a mutually beneficial relationship between agriculture, natural resources, the environment and consumers. The Kansas Center for Agricultural Resources and the Environment was established to coordinate and enhance research, extension, and teaching activities pertaining to environmental issues related to agriculture.

KCARE's roles are to foster interdisciplinary team approaches to solve environmental problems related to agriculture; serve as a liaison for state and federal agencies, non-government organizations and private groups outside K-State; communicate the relationship of agriculture and the environment to producers and the public; and develop financial resources for interdisciplinary research, extension and communications activities at the Center.

Center for Engagement and Community Development

Dr. David E. Procter, Director
202 Ahearn
785-532-6868
Fax: 785-532-6808
E-mail: cecd@k-stat.edu
www.k-state.edu/cecd/

The Center for Engagement and Community Development (CEDC) will extend and expand K-State's historic mission of engagement and outreach. CEDC is a place where university faculty and community leaders can come together to address community challenges, meet community needs, and realize community dreams through effective scholarship-based engagement. In this process, we plan to help make Kansas State University one of the truly premiere land-grant universities.

Kansas Center for Sustainable Agriculture and Alternative Crops (KCSAAC)

Jana Beckman, Coordinator
Kansas Center for Sustainable Agriculture and Alternative Crops
c/o HFRR
3029 Throckmorton
785-532-1440
Fax: 785-532-5780
E-mail: kcsaac@oznet.ksu.edu
www.oznet.ksu.edu/kcsaac

KCSAAC was created in 2000 by the Kansas Legislature to facilitate research, education, and outreach related to sustainable agriculture. The future of agriculture must balance agricultural production, use of natural resources, profitability, the environment and the needs of consumers.

KCSAAC's role is to work with university faculty, government agencies and other agricultural groups to educate family farmers on environmental stewardship, boosting family farm profitability, building community support for agriculture, and enhancing rural communities.

Educational Communication Center

Doug VonFeldt, Interim Director
128 Dole Hall
785-532-7041
Fax: 785-532-7355
E-mail: ecc@ksu.edu
www.ksu.edu/ecc

The Educational Communications Center (ECC) in Dole Hall was established in 1986, the facilities and equipment were made possible through a grant from the U.S. Department of Education. The mission and purpose of the ECC is to develop and enrich human resources within the state by providing access for residents of Kansas, the nation and the world to educational opportunity at all levels through the appropriate utilization of technology.

Dole Hall, is a 32,000 square foot production and distribution facility with three production studios, control rooms and satellite uplink, educational development laboratory, editing suites, multimedia lab, graphic design studio, offices, conference rooms and

a Channel 49 ABC News Bureau. A large garage houses a mobile satellite uplink unit and a video production truck to provide services from any location. Other tenants in Dole Hall include offices and student facilities for the A.Q. Miller School of Journalism, Kansas Regents Network (Telenet), Kansas audio and videoconferencing network, and the Department of Communications Extension Television.

Information about the ECC's services and staff along with pictures of the facilities can be seen on the ECC website at www.k-state.edu/ecc.

Kansas Water Resources Research Institute (KWRRI)

The Kansas Water Resources Research Institute is part of a national network of research institutes in every state and trust territory of the U.S. established by law in the Water Resources Research Act of 1964. The network is funded by a combination of federal funds through the U.S. Geological Survey and non-federal funds from state and other sources. The mission of KWRRI is to develop and support research on the high priority water resources problems of the state, to foster the dissemination and application of research results, and to facilitate effective communication amongst water resources professions in Kansas. The mission is accomplished through: 1) Supporting research through a competitive grants program that encourages interdisciplinary approaches, interagency collaboration, scientific innovation, cost-effectiveness, relevance to present and future water resource issues/problems as identified in the State Water Plan, and dissemination and interpretation of results to appropriate audiences; 2) Fostering dissemination and application of results through conferences, briefings, white papers, and/or newsletters; and 3) Facilitating communication through an electronic network. KWRRI currently is administratively under the Kansas Center for Agricultural Resources and the Environment (KCARE) at Kansas State University.

Konza Prairie Biological Station (KPBS)

Dr. Eva Horne, Interim Director

Division of Biology

232 Ackert Hall

785-587-0441

Fax: 785-532-6653

E-mail: konza@ksu.edu

www.ksu.edu/konza

Konza Prairie Biological Station (KPBS) is a 8,600 acre tallgrass prairie preserve owned by The Nature Conservancy and Kansas State University and operated as a field research station by the K-State Division of Biology. The station is dedicated to a three-fold mission of long-term ecological research, education, and conservation. It is a unique outdoor laboratory that provides opportunities for the study of tallgrass prairie ecosystems and for basic biological research on a wide range of organisms and processes. The station is open to scientists and students from throughout the world. It also serves as a "benchmark" for comparisons with areas that have been affected by human activities, and as an environmental education facility for students and the public. KPBS is a member of the Organization of Biological Field Stations and the Association of Ecosystem Research Centers, and is a National Science Foundation Long-Term Ecological Research (LTER) site.

Libraries

Dr. Lori Goetsch, Dean of Libraries

Hale Library

785-532-7400

Fax: 785-532-7415

E-mail: library@gw.ksu.edu

www.lib.ksu.edu

Kansas State University Libraries provides support for the educational, research, extension and public service objectives of K-State. Staff acquires and maintains the libraries' electronic and print collection needed for the University to achieve its objectives.

K-State Libraries consists of four libraries: Hale Library, known historically as Farrell Library, Weigel Library of Architecture, Planning and Design (Seaton Hall), Fiedler Engineering Library (Fiedler Hall), Math/Physics Library (Cardwell Hall), and Veterinary Medicine Library (Trotter Hall). K-State Salina Library is a cooperating library that shares integrated electronic access systems and databases.

Reference staff provides assistance in helping patrons access materials or information needed. Staff help initiate literature searches and assist with electronic resources. Librarians, in addition to their reference staff duties, serve as subject specialists. Subject librarians, who are knowledgeable of the resources in a specific subject matter, assist patrons with their particular information needs. Subject librarians are available for one-on-one consultations or for groups and classes.

K-State Libraries offers state-of-the-art electronic data information retrieval systems for the catalog and databases unique for K-State's diverse academic areas. The libraries' web site provides information about its collections and services. An extensive section is devoted to electronic information available to K-State and around the world. Remote access to the libraries' electronic resources are available to K-State students.

The Information Commons is located in Hale Library, the main library. InfoCommons consists of more than 200 computers located on all four floors. The most attractive feature of InfoCommons is that it brings together electronic, print and microform resources. Also, InfoCommons is consistent among all student computing facilities supported by CNS. In addition, InfoCommons has technical assistance on hand to answer questions regarding the computers and application software. Another exciting feature of InfoCommons is the laptop computers available for check out.

Other areas in Hale Library providing information or access services include circulation, interlibrary services, government documents, microforms, science library, and reserves. The Anita C. Lehner 24-hour study area is available on the first floor. Most services available at Hale Library are also available at the branch libraries.

Award-winning Hale Library is impressive with its seven-arch loggia entrance, six and seven-story towers topped with decorative finials. Oak hardwood floors and brass handrails adorn the interior finishes. The carved and etched limestone facings, sculpted metal banisters and door ornamentations depict native Kansas plants, trees, shrubs and wildlife. The largest academic building on campus with nearly 400,000 square feet, centrally located on K-State's Manhattan campus, Hale Library is the academic heart of Kansas State University.

Nuclear Reactor

Dr. Mike Whaley, Nuclear Reactor Manager
112 Ward Hall
785-532-6657
E-mail: whaley@mne.ksu.edu
www.mne.ksu.edu/research/centers/reactor

The University operates a TRIGA Mark II nuclear reactor and related laboratories. Inherently safe by design, the reactor normally operates at 250 kW, but can be pulsed to peak power levels of 250 MW. Researchers throughout the world use the reactor for neutron activation analysis, neutron radiography, fission track studies, neutron spectroscopy, and isotope geochronology. The reactor is also used for student education and public demonstrations.

Particle Accelerators: James R. Macdonald Laboratory

Dr. Itzik Ben-Itzhak, Director
116 Cardwell Hall
785-532-6782
Fax: 785-532-6806
E-mail: jrmlab@phys.ksu.edu
<http://jrm.phys.k-state.edu/>

Kansas State University operates a national user facility, the James R. Macdonald Laboratory, which is supported by the U. S. Department of Energy. The laboratory has ion sources and particle accelerators that provide highly stripped heavy ions over an energy range of a few eV to the order of 100 MeV. This facility is dedicated to the investigation of the interactions of highly

charged heavy ions with atoms, ions, molecules, and surfaces. The equipment available to researchers includes a 7MV tandem Van de Graaff accelerator, a superconducting LINAC (booster/decelerator), an ion source for the production of highly charged low velocity heavy ions (CRYEBIS), a crossed beam ion-ion collisions facility, and five independent multiparameter data acquisition/analysis systems. The laboratory provides high-level technical support to aid users in the design, construction, and implementation of experimental projects. The laboratory is unique in its ability to provide long term access to state-of-the-art complex experimental apparatus related to ion collision studies.

Pollution Prevention Institute

Nancy Larson, Director
133 Willard Hall
785-532-6501
1-800-578-8898 (toll free)
Fax: 785-532-6952
E-mail: sbeap@ksu.edu
www.engg.ksu.edu/enggext/ppi

This institute provides free, confidential technical assistance and training in source reduction and other environmentally sound practices to businesses, regulatory agencies, technical assistance groups, and private citizens throughout the Midwest. The institute also serves as a meeting ground for faculty involved in pollution and other related activities.

Sensory Analysis Center

Dr. Delores H. Chambers, Co-director
Dr. Edgar Chambers IV, Co-director
145A Justin Hall
785-532-0166
Fax: 785-532-0176
E-mail: eciv@ksu.edu and delores@ksu.edu
www.sensoryanalysis.com

The Sensory Analysis Center, a part of the College of Human Ecology, is one of the outstanding providers of sensory services in the nation. The Center assists in teaching sensory analysis by providing students with opportunities to gain practical experiences and it provides outstanding research capabilities for university researchers and consumer products industries. Clients of the Center have included researchers on campus from numerous departments, Kansas businesses, and national and international corporations. The Center provides two major types of analyses: 1) descriptive analysis that defines the characteristics of a product or service and the amount or intensity of that characteristics, and 2) consumer evaluation that provides information on benefits, liking, or acceptance or helps to determine what consumers understand about the product, service, or information.

Technology and Aviation

Dr. Dennis K. Kuhlman, Dean
2310 Centennial Road
Salina, KS 67401-8196
785-826-2601
Fax: 785-826-2998
E-mail: dkuhlman@sal.k-state.edu
www.sal.k-state.edu

The College of Technology and Aviation, located at the Salina campus, provides a comprehensive array of associate and baccalaureate degree programs in engineering technology, aviation, and technology management. Many of the engineering technology programs are TAC of ABET accredited, while the aviation programs maintain FAA certification and accreditation by the Aviation Accreditation Board International. The college also engages in cooperative scholarship and creative endeavors with regional and national industry partners.

University Transportation Center

Dr. Brian Coon, Director
2118 Fiedler Hall
785-532-1573
Fax: 785-532-7717
E-mail: bcoon@ksu.edu
www.transport.ksu.edu

The University Transportation Center coordinates faculty, industry and governmental agencies in multidisciplinary research efforts focusing on the Center's Theme: The Sustainability and Safety of Rural Transportation Systems and Infrastructure. As rural populations throughout the United States are decreasing as well as becoming more elderly, the status of rural transportation systems becomes increasingly critical--both from a sustainability perspective as well as that of safety. The Center focuses on improving the quality of life of rural America through increased infrastructure life and economy, improved safety and EMS response times, improved driver training and testing, as well as bringing a holistic, multi-disciplinary perspective to transportation research. Transportation Engineering: transportation planning, transportation systems, analysis and simulation, geometric design of highways, highway safety, pavements and highway materials, and rural transportation policy. Psychology: driver behavior, driver education and testing.

International Programs

Fax: 785-532-6550
E-mail: oip@k-state.edu
www.k-state.edu/oip

The mission of the Office of International Programs is to lead the internationalization of Kansas State University by supporting and collaborating with faculty, students, and scholars in international education and research worldwide.

Building upon several decades of international involvement, K-State provides a range of programs that link the campus with other parts of the world. Many of these are coordinated through individual departments or colleges; others serve the whole university.

The Office of International Programs supervises the Education Abroad Program, the English Language Program, the International Student and Scholar Services unit, and provides a range of services and support to faculty and students.

Education Abroad Program

Katelin Christianer-Donkers, Director
Brent Holliday, Assistant Director
304 Fairchild Hall
785-532-5990
www.k-state.edu/abroad/

Education Abroad is the first stop for students planning to study, volunteer, intern, or research abroad. We offer a variety of academic programs that prepare students for success in an increasing global society. Programs range from short term faculty-led and group programs to individual summer, semester, and academic year opportunities. Programs are available in Africa, Asia, Australia, Europe, North America, and South America. With over one hundred programs worldwide, students are able to find a program that matches their needs and interests. Exchange programs involve reciprocal partnerships with universities abroad that

allow students to attend partner universities while paying K-State, in-state tuition and study abroad fees to K-State. Additional program options are available through direct enrollment and affiliated program providers. Faculty-led programs are study abroad courses taught internationally by K-State faculty and are coordinated by Education Abroad in cooperation with the academic departments.

Federal Financial Aid and most scholarships can be used towards study abroad. Education Abroad encourages students to apply for local and national study abroad scholarships in addition to the scholarships available through the Study Abroad Office. Select scholarships for foreign study are listed below:

Education Abroad Scholarships

Scholarships available through the *Office of International Programs/Study Abroad* include:

- Goss Discovery Scholarship
- Megan E. Taylor Czech Republic Student Award
- Duane and Shirley Acker International Scholar Award
- The Catherine Joyce Memorial Scholarship
- Doris Hays Fenton Memorial Scholarship
- The Heather Stewart Memorial Scholarship
- Mary Lynn Manning Study Abroad Scholarship
- Rodolfo J. Montes de Oca/Costa Rica Small Town International Scholarship
- The Vernon Larson Study Scholarship
- Veronica Bonebrake International Scholarship

Scholarships available through *other offices* include:

College of Agriculture International Study Scholarship

117 Waters Hall

College of Business Administration - Larry and Patricia Kendall Study Abroad Scholarship

1001 College of Business Building

College of Human Ecology International Study/Service Scholarships

119 Justin Hall

Blue Key

103 Leadership Studies

Department of Modern Languages Scholarships (language majors only)

104 Eisenhower Hall

Gilman, Boren, Fulbright, and Critical Languages Scholarship

Beth Powers

215 Fairchild Hall

International Student and Scholar Services (ISSS)

Stacey Bailey, Director
Bogi Davies, Associate Director
2012 Tunstall Cir., Building 7, Manhattan, KS 66502
785-532-6448
Fax: 785-532-6607
E-mail: iss@k-state.edu
www.k-state.edu/iss

The staff at International Student and Scholar Services (ISSS) provide vital services for K-State's around 2,500 international students, scholars, and their families. This includes advice on U.S. immigration regulations, support during their stay in the U.S., third-party sponsored student support, and cultural programs. The staff assists them with visa and passport issues, work authorization, entry and exit documentation, certification of status forms, housing, programming and personal concerns. ISSS also offers assistance to faculty and departments wanting to bring international scholars to the United States. Additionally, the staff serves the entire campus as a resource on international student and scholar issues. The office operates under the Office of International Programs and works with all facets of the University to implement and support both the goals of each student and scholar and the goals of the University in international education. Staff members provide leadership and support for a variety of programs that promote global awareness and understanding.

Admission Information for Graduate International Students

College of Arts and Sciences

Robert Clark, Director International and Area Studies
014A Eisenhower Hall
785-532-1988
Fax: 785-532-7004
E-mail: ias@k-state.edu
www.k-state.edu/ias

The College of Arts and Sciences offers two international, interdisciplinary secondary majors and two minors to undergraduates in any college: International Studies secondary major and Latin American Studies secondary major, East Asian Studies minor and African Studies minor. For more information, reference to these programs select either or find them listed in Colleges and Departments.

College of Business Administration

Student Services
107 Calvin Hall
785-532-6180
Fax: 785-532-7809
E-mail: cbastusv@k-state.edu
www.cba.k-state.edu

The College of Business Administration offers several opportunities to its students to learn about global business issues and practices as they prepare to meet the future challenges in the global marketplace. In addition to study abroad programs and faculty-led trips abroad, business students can earn a Certificate in International Business offered by the College of Business Administration or earn a secondary major in International Studies offered by the College of Arts and Sciences. Scholarships are often available for business students who travel internationally to study topics related to their major.

International Service Teams

Kaitlin Long, Program Coordinator and Instructor
1300 Mid-Campus Drive N
Manhattan, KS 66502
785-532-6085
Fax: 785-532-6896
E-mail: KaitlinL@k-state.edu
<http://www.k-state.edu/leadership/programs/serviceteams/internationalteams/>

Since 1989, K-State has supported interdisciplinary teams of undergraduate students in service-learning experiences abroad. These teams work alongside community partners on locally organized and run community initiatives. The International Service Teams, a program of the Staley School of Leadership Studies, currently partners with community organizations in South Africa, the Dominican Republic, Kenya, Paraguay, and The Gambia. Participants apply and are selected in the fall semester prior to the summer experience; they enroll in a spring semester preparatory course before departing for an eight to ten week engaged service-learning experience during the summer. Students work with local community partners and are involved with ongoing reflection during their time abroad. Upon return to Kansas State, they participate in a reflection course to process their learning experience and plan for future action.

Services for Students

Academic Achievement Center

101 Holton Hall
785-532-6492
www.k-state.edu/aac

The Academic Achievement Center serves as the free academic support package for all K-State learners. We ensure that all learners have the opportunity for academic success by providing guidance through the learning process. Academic Coaching, Tutoring, and Success Tools are available both in-person and virtually.

Academic Coaching

Academic coaching is designed to support students in developing the skills and strategies necessary to achieve their academic and personal goals. Our Academic Coaches guide students to create and achieve an academic success plan that focuses on what they want to achieve. Any student can schedule an appointment or drop-in to meet with an Academic Coach.

Tutoring Services

Peer tutors facilitate the learning process through the development of a student's ability to learn by asking engaging questions, providing challenge alongside support, and teaching students the skills they need to succeed. We focus on the success of the learning process as a whole not just the end result. Tutoring Services offers two types of support. **Content Tutoring** is peer

assistance in a specific course you're enrolled in while **Study Skills Tutoring** develops key skills and strategies to be successful in college. Both **Content** and **Study Skills** are available via drop-in and appointment.

Success Tools

Success Tools are available for students to independently explore different strategies to improve time management, study skills, note-taking, and more. Success tools are available in-person and downloadable on the AAC website.

Career Center

Kerri Day Keller, Executive Director
148 Berney Family Welcome Center
705 N. Martin Luther King Jr Drive
785-532-6506
E-mail: careercenter@k-state.edu
www.k-state.edu/careercenter/

The Career Center facilitates the career readiness of students throughout the K-State community. The Career Center offers job search training, career advising, employer connections, and a staff dedicated to assisting students in the career development process. Gain an advantage by attending K-State career fairs, interviewing on-campus with employers or enrolling in credit-based courses for internship experiences.

Stop by the Career Center to:

- Schedule an appointment for personalized job search assistance.
- Shop our Career Closet and prepare for interviews.
- Drop in to get a resume critique or ask a quick question.
- Find job listings online (part-time, internship/co-op, and full-time).

See additional in person and online materials such as salary information, graduate school information, and other career advisor recommended resources.

Handshake is a free service for students to search for jobs and internships, make their resume visible to employers, learn about interview opportunities and find employer contact information to enhance their professional network.

Alcohol and Other Drug Education Service

Lafene Counseling and Psychological Services
785-532-6927
Fax: 785-532-3932
E-mail: counsel@k-state.edu
Web page: <https://www.k-state.edu/lafene/services/alcohol-education/>

The Alcohol and Other Drug Education (AODE) Service offers timely and accurate information on the physical effects and social issues related to alcohol and other drug use and abuse. Campus services provided include alcohol/drug information; basic assessment and intervention assistance; individual counseling for alcohol and other drug issues; professional referral resources, and educational presentations.

Cats' Cupboard

Shelly Williams, Morrison Family Director

1021 Denison
785-532-0367
www.k-state.edu/cats-cupboard

Cats' Cupboard – The Kansas State Food Pantry provides direct access to a variety of perishable and non-perishable foods, hygiene products, and gently used kitchen supplies. Located at 1021 Denison in a newly renovated facility that opened in Fall 2023. Open Monday through Thursday 10am-6pm and Friday 10am-2pm. Active K-Staters (full/part-time students, staff/faculty, and visiting scholars) are welcome to shop. Take what you need, give what you are able, and be mindful of your fellow Wildcat!

Center for Advocacy, Response, and Education (CARE)

206 Holton Hall
785-532-6444
Fax: 785-532-6457
E-mail: ksucare@k-state.edu
www.k-state.edu/care

The Center for Advocacy, Response and Education (CARE) is a safe space for any member of the K-State community who has been affected by dating, domestic, and sexual violence, stalking or harassment to receive confidential services. CARE collaborates across identities and sheds light on the realities of psychological emotional, financial, physical and sexual forms of violence. CARE challenges the campus community to join us in advocating for positive social change while addressing the influences and social patterns that lead to interpersonal violence and other forms of oppression.

Cooperative Houses

Smurthwaite Leadership/Scholarship House

1500 North Manhattan Avenue
Manhattan, KS 66502-4695
785-532-6453
E-mail: housing@k-state.edu
www.housing.k-state.edu

The Smurthwaite Leadership/Scholarship House is a unique cooperative living option for women interested in a focused leadership experience. Smurthwaite is located on the east side of campus and houses approximately 46 women. This vibrant community emphasizes academics, leadership, campus involvement and community service – the four pillars of Smurthwaite.

Smurthwaite residents pay a lower rate for room and board while assisting with the day-to-day operation of the house, such as front desk duty. Residents are required to maintain a 3.0 cumulative GPA, be involved in on-campus clubs, participate in philanthropy and volunteer activities, and attend Smurthwaite-sponsored programs and house meetings.

Those who wish to live in Smurthwaite complete the Residence Hall Contract. On the contract the student can indicate their interest in living in Smurthwaite and also complete the Smurthwaite Interest form available in the contract confirmation email. Students invited to live in Smurthwaite will complete a contract addendum prior to move in.

Lafene Counseling and Psychological Services (CAPS)

1105 Sunset, Rm. 101
Phone: 785-532-6927
Fax: 785-532-3932
E-mail: counsel@k-state.edu
www.k-state.edu/counseling

OFFICE HOURS: Throughout the academic year, CAPS is open Monday through Friday from 8:00 am to 5:00 pm. During all academic breaks, including summer, CAPS is open Monday through Friday from 8:00 am to 12:00 pm and 1:00 pm to 5:00 pm.

WHAT WE DO:

Kansas State University Counseling and Psychological Services (CAPS), in support of the overall mission of the University, provides high-quality professional services to help all students meet their full potential – personally, academically, and socially. Within an accepting, sustaining, and compassionate setting, CAPS provides professional resources to attend to our students' psychological needs by promoting wellbeing, alleviating concerns, facilitating problem resolution, and enhancing their success. We see students with a wide range of concerns from difficulty adjusting to college to more serious mental health issues. When students' needs are beyond the scope of our services, we offer options in the community.

As professional staff, we value our campus community and empower students to improve their mental health. We are committed to ethical and competent treatment consistent with our training, experience, and K-State's mission as a land-grant university. Our services are available to all enrolled students who have paid the student services fee included in their tuition bill.

While appropriately protecting confidentiality, we work collaboratively with other entities, both on and off campus, to foster a safe and healthy environment. During critical events, we are ready to offer timely response to campus through consultation, outreach, and follow-up to reduce trauma and promote resolution.

Confidentiality means that your contact with this office is not part of your academic records, and clinical information will not be disclosed to any other office or individual unless you have given us written permission, or there is a legal mandate, to do so. CAPS staff is exempt from Title IX and therefore, they do not report crimes that include sexual violence (including rape, sexual assault, and sexual harassment) to university officials.

OUR STANDARDS: CAPS staff, including those in the APA-accredited Internship in Health Service Psychology, adhere to the appropriate ethical code for our respective professions, such as the American Psychological Association, American Associate for Marriage and Family Therapy, American Counseling Association, and licensing/legal standards for our professions.

FEES: CAPS is funded in part by the student service fees. Students receive free services for therapy, while a nominal fee is charged for additional services such as ADHD assessments. Contact our office by phone for more details.

Student Belonging

Mirta Chavez, Assistant Vice President
785-532-6276
E-mail: mirta@ksu.edu
<https://www.k-state.edu/academic-success-student-affairs/about/belonging/>

Fostering mutual understanding among all students, faculty, and staff helps create a campus atmosphere where every student feels they belong. Meet new people and celebrate your unique identity. Attend events and gain access to resources designed to help you thrive.

As part of the Division of Academic Success and Student Affairs (DASSA), we work to provide an impactful and holistic K-State experience by closely aligning student life resources with academic support programs and services. Student Belonging partners across all sectors of the university to foster an atmosphere in which all students are supported, celebrated, and included.

Student Engagement & Belonging

Morris Family Multicultural Student Center

785-532-6284

Morris Family Multicultural Student Center (k-state.edu)

The Morris Family Multicultural Student Center is your hub for intercultural learning and collaborative initiatives. The Center is open to all. Located immediately east of the K-State Student Union, the Center offers an opportunity for people of all cultures, backgrounds, and identities to explore their cultural origins, engage in meaningful cross-cultural interactions and broaden perspectives. The Center enriches our learning environment and fosters a supportive, welcoming atmosphere that promotes student academic success and personal empowerment, and contributes to the overall culture of K-State and Manhattan communities.

Spectrum Center

Mariya Vaughan, Interim Coordinator

207 Holton Hall

785-532-5352

E-mail: spectrum@k-state.edu

K-State's Spectrum Center

The Center provides support, workshops, scholarships, events, and representation of the LGBTQ campus community to engage in multiple platforms to advance learning around intersectional identities through educational presentations, student supports, and committee representation. The Center provides support to students and their organizations, such as the Sexuality and Gender Alliance (SAGA), Gender Collective, and STEM at K-State.

Educational Supportive Services Manhattan and Student Support Services Salina

Eric Thompson, Director

103 Holton Hall

785-532-5642

Fax: 785-532-6457

E-mail: ess@k-state.edu

www.k-state.edu/ess

Income limited students and first-generation college students are assisted in setting and attaining realistic educational goals and are provided information about graduate-level educational opportunities. Students admitted and enrolled at K-State are offered educational supportive services including study skills and academic enrichment program courses, academic pre-advising, individualized tutorial assistance, and a variety of referral services. Both programs are funded through a federal TRIO grant.

Graduate Student Council

Graduate Student Council (GSC) is the student organization representing graduate students from all academic disciplines at Kansas State University. Any organization with graduate student membership is invited to participate in the council and council activities are open to all graduate students.

GSC is a highly active student governing board for graduate students. GSC provides students with professional development, networking and leadership opportunities. GSC awards students travel grants to present their research and scholarly work at professional meetings and to attend conferences. Students participate in a variety of networking events sponsored by GSC and other graduate student organizations.

- The council meets on the first Monday of every month.
- The Graduate Student Council is funded mainly the Student Governing Association from the Graduate Student Activity Fee. Access the GSC constitution (PDF).
- You must register your organization each year to remain active with the Graduate Student Council.

Leadership Opportunities

There are various ways to get involved with Graduate Student Council. Every council member is encouraged to serve on a committee, including the Allocations Committee, GRA/GTA/GA Affairs Committee, International Affairs Committee, Research Forum Planning Committee, and Ice Cream Social Planning Committee. Members also publicize GSC events and help maintain the website. Council officers are elected during the spring semester. Officers include the president, president-elect, secretary, and treasurer. All graduate students are encouraged to participate in the council activities. Membership in the standing committees are open to all graduate students.

Professional Development

GSC strives to provide informational meetings, workshops and forums that enhance the professional development of graduate students. The council promotes interdisciplinary activities to enrich graduate students' education beyond their own disciplines. The council also sends out information on various seminars held across campus every week to the Council members, to be shared with their graduate student groups.

If you have any questions, contact the GSC officers: egsc@k-state.edu.

Housing and Dining Services

Derek Jackson, Associate Vice President for Community, Dir. of Housing and Dining Services

104 Pittman Building

1531 Mid Campus Dr. North

1-888-568-5027 (toll free)

785-532-6453

Fax: 785-532-6855

E-mail: housing@k-state.edu

www.housing.k-state.edu

The university requires all incoming Manhattan campus first-year K-State students to live on campus during their first two semesters. As part of a residential community, students have a sense of belonging and an avenue for involvement, as well as many opportunities for interaction with other students and university staff. Furthermore, the opportunity to participate in organized social, athletic, and educational events contributes to overall academic success.

More than 5,000 students call our campus home. With ten residence halls, one leadership/scholarship house for women, a house for honors students and a large apartment community to choose from, Housing and Dining Services has something for everyone.

Residence Halls

K-State residence halls have a long-standing tradition of providing a living and learning environment that encourages personal growth and academic success. It is for this reason that residence hall living is required for a student's first year and recommended for a student's second year at K-State, and that many upper-division students decide to remain in the halls.

In this ideal transition from home to school, students benefit from direct access to helpful staff, dining service, tutoring programs, technical support, on-site laundry facilities, leadership opportunities and more. They're close to classes, and living among fellow students provides many opportunities to develop lifelong friendships.

A student can submit a Housing Information Request form in mid-September. This form notifies Housing and Dining Services that this student would like to receive more information about the upcoming contract process. In early December the student will be able to complete the Residence Hall Contract and submit a contract payment which includes a \$30 non-refundable processing fee and a \$200 initial contract payment. The cost of the contract is determined annually, and following an initial payment, the remaining balance due will be billed to the student's KSIS account.

Jardine Apartments

Jardine apartments provides on-campus apartment living for students who are upper division, graduate, nontraditional, married (with or without children) or single parents.

This unique apartment community offers a wide variety of floor plans to choose from. Different price points include options in modern, highly renovated, renovated and traditional apartments. Also in Jardine is the Hybrid Option, which allows students to rent space at Jardine by the bedroom. Activities help residents get involved and stay connected, and a trained professional staff, including a 24-hour maintenance crew, is available to assist residents. Residents have the benefit of an on-site sports grill, coffee shop, and laundry facilities.

Housing and Dining Services begins accepting applications for Jardine apartments in mid-September. The student will indicate on the application the preferred apartment types and whether roommate(s) or family members will also reside in the apartment and submit the \$30 non-refundable processing fee.

Apartment selections for the fall semester typically begin the first week of March. Applicants will be notified by email prior to March when their specific apartment selection time will begin. Applicants can log in to the Resident Portal and view all of the currently available apartments and select the apartment of their choice.

To secure the apartment, the student must complete the Jardine Agreement and submit a \$400 deposit payment.

Smurthwaite Leadership/Scholarship House

The Smurthwaite Leadership/Scholarship House is a unique cooperative living option for women interested in a focused leadership experience. Smurthwaite is located on the east side of campus and houses 46 women. This vibrant community emphasizes academics, leadership, service, friendship and equity — the five pillars of Smurthwaite.

Smurthwaite residents pay a lower rate for room and board while assisting with the day-to-day operation of the house, such as front desk phone duty. Residents are required to maintain a 3.0 cumulative GPA, be involved in on-campus clubs, participate in philanthropy and volunteer activities, and attend Smurthwaite-sponsored programs and house meetings.

Those who wish to live in Smurthwaite complete the Residence Hall Contract. On the contract the student can indicate their interest in living in Smurthwaite and complete the Smurthwaite Interest form available in the contract confirmation email. Students invited to live in Smurthwaite will complete a contract addendum prior to move in.

Academic Initiatives

On-campus living environments offer individualized academic support to residents through trained staff, programming and faculty involvement. Computer stations, study spaces, workshops and more help improve academic skills and make the residence halls a great environment for learning and academic success.

Residential CAT Communities

Residential Connecting Across-Topics (CAT) Communities are a set of learning communities specifically created for first-year students. A group of 22 students with similar interests take classes, live, eat and study together in the residence halls. The communities offer mentoring from a professor and an advanced undergraduate Residential Learning Assistant who also lives with the students. This is a great way for students to make connections and quickly become an active part of life on campus.

Leadership and Involvement Opportunities

Hall Governing Boards, the Jardine Residents' Council, and floor governments plan and implement intramural events; community service projects; educational, cultural and social programs and more. Judicial boards provide an opportunity for students to address one another regarding policy violations that impact the community. The Kansas State University Association of Residence Halls plans hall-related events and works closely with hall representatives to develop and implement policies that promote respect and acceptance among all residence hall students. The Little Apple Chapter of the National Residence Hall Honorary recognizes the top 1 percent of residents who have contributed outstanding service and leadership in the residence halls while demonstrating academic excellence.

International Student and Scholar Services (ISSS)

Dr. Sara Thurston, Director
104 International Student Center
785-532-6448
Fax: 785-532-6607
E-mail: iss@k-state.edu
www.k-state.edu/iss

The staff at International Student and Scholar Services (ISSS) provide vital services for K-State's around 2,500 international students, scholars, and their families. This includes advice on U.S. immigration regulations, support during their stay in the U.S., and cultural programs. The staff assists them with visa and passport issues, work authorization, entry and exit documentation, certification of status forms, housing, programming and personal concerns. ISSS also offers assistance to faculty and departments wanting to bring international scholars to the United States. Additionally, the staff serves the entire campus as a resource on international student and scholar issues. The office operates under the Office of International Programs and works with all facets of the University to implement and support both the goals of each student and scholar and the goals of the University in international education. Staff members provide leadership and support for a variety of programs that promote global awareness and understanding.

ISSS is housed in the International Student Center which is composed of three building that have been completely funded by private gifts to K-State. The Taiwan Wing houses most of the staff. The Korean Room houses the director's office and office meeting space. The Center provides a comfortable relaxed atmosphere where people can meet or attend various programs. It includes a multipurpose meeting room, kitchen, reading lounge, and small classroom. Rental of the facilities is available.

Kirmser Language Center (KLC)

01 Eisenhower Hall
785-532-6760

Making learning enjoyable...if you are a faculty, or a student enrolled in a language course, come on in! You are invited to the Kirmser Language Center. We will provide you audio, video, and computer multimedia services for both undergraduate and graduate level courses within the Department of Modern Languages. The KLC currently serves about 1,250 students each semester, and offers a variety of resources. The Kirmser Language Center is the location for students to have their language skills tested prior to enrolling in most language courses.

K-State Student Union

Erik Kahl, Executive Director
K-State Student Union

union.k-state.edu

Union Mission Statement: **The K-State Student Union**

To serve all, especially students, with facilities that provide services, programs, leadership experiences and educational opportunities which foster a sense of well-being, belonging and community.

Since opening its doors in 1956, the Union has been the host to the campus and the community. The Union plays an integral role in the educational mission of the university and its diverse programs and services are supported by student fees and generated revenue. The Union is the exciting hub of campus life and provides a gathering place and a common ground for students, faculty, staff, alumni, university departments and the greater Manhattan area. All revenues generated at the Union assist in funding programs, opportunities and services for the campus community.

BOOK A SPACE

No matter what type of event you are planning – from a small executive retreat to a large annual convention to a storybook wedding reception – the Union has a perfect space for you. With approved caterers, cutting-edge technology and a variety of event spaces, we can accommodate any and all types of professional and personal events. Rooms are offered at a discount to students, faculty, staff and registered student organizations.

FOOD AND FUN

Foodies and students alike will be able to enjoy a diverse mix of delicious cuisines ranging from burgers and barbecue to salads and wraps. With national chains like Subway, Chick-fil-A and Panda Express as well as local favorites such as Radina's Coffeehouse, you'll find what you crave at the Union's many restaurants and cafes. The Wildcat Value Meal program highlights a \$7 specialty meal at a variety of Union restaurants.

The Union proudly participates in the Dining Dollars program, a flexible dining option for students, faculty and staff. Dining Dollars can be purchased as a standalone plan or as an optional add-on to a meal plan, adding additional options to the on-campus dining experience.

- Chick-fil-A

Known for its original chicken sandwich and waffle fries, Chick-fil-A's menu of fresh, handcrafted food includes breakfast and lunch/dinner options.

- Fast Track

Fast Track is the quick and flavorful option for campus patrons. Offering a variety of classic American foods, including K-State's own Weber Hall beef burgers, brick oven fired pizza along with BBQ smoked in-house daily and freshly made salads.

- **Hunt Brothers Pizza**

Located on the lower level of the Union, Hunt Brothers® Pizza brings America's #1 made-to-order and by-the-slice **pizza** to campus and offers 10 toppings to choose from for no extra charge. That's 1,024 topping combinations at one price!

- **Panda Express**

Panda Express is best-known for its wide variety of original recipes including its Original Orange Chicken™, SweetFire Chicken Breast®, award-winning Honey Walnut Shrimp and Shanghai Angus Steak

- **Qdoba Mexican Eats**

Satisfy your cravings with tasty Mexican food like our burritos, 3-cheese nachos, and more! At QDOBA, our food philosophy lies in crafting thoughtful flavor combinations that will satisfy your biggest cravings and leave you counting down the days until you're back for more.

- **Radina's Coffeehouse and Roastery**

Radina's Coffeehouse & Roastery is dedicated to providing fresh, handcrafted coffee roasted to its peak flavor. With four locations on the K-State campus, Radina's serves high-quality and individually unique coffees from around the world. Known for its in-house, specialty roasted drinks, Radina's has many options to satisfy the choosiest coffee connoisseur.

- **Subway**

Subway is your go-to spot for a menu of fresh, nutritious sandwiches in a casual atmosphere. Subway also offers a variety of options for all of your group gatherings, including party platters, party subs and bag lunches.

- **Union Station by JP's**

Through a partnership with K-State Housing and Dining Services, Union Station by JP's brings the campus and the Manhattan community together around a table filled with excellent food. A K-State original modeled after JP's in the Jardine Complex, Union Station menu items are locally sourced when possible, including Weber Hall meats .

The Cats' Den Convenience Store is the best place to pick up a drink or a tasty snack between classes. ReFresh-ReThink-ReFuel at the Cats' Den alternative snack area featuring gluten-free, vegan, organic, natural and energy/power options. We stock a variety of soft drinks, juices, energy drinks, snacks and sandwiches, as well as our freshly popped popcorn.

Not in the building? The Union provides options around campus with additional Radina's Coffeehouse and Roastery locations in the Engineering Complex and the College of Business Administration building. Whatever your palette craves, the Union has the fix.

Wabash Cannon Bowl, the Union Bowling Center, located on the Union's lower level, is the best place for relaxing on campus. Whether it's something fun to do between classes or an evening with friends, the Wabash Cannon Bowl is the place to be. The center is equipped with 16 bowling lanes, billiard tables, two air hockey tables, a video arcade, and a reservable party room. Student bowling leagues are always very popular, and billiard leagues are also available. The recreation center is also available for group gatherings.

Esports has found a home in the Union. Located in the Union Bowling Center, the arena is outfitted with state of the art equipment including two Nintendo Switches. Esports is open seven days per week. The K-State Esports Club is a student organization dedicated to fostering a community of individuals passionate about playing video games at all levels. The club welcomes those who play competitive game as well as students interested in other events and activities.

SHOPPING AND SERVICES

The official K-State Campus Store is located on the Union's ground floor, is not only the most convenient place to get your textbooks but also has a great selection of K-State merchandise and apparel. Textbook options ranging from new to used, rental to digital are designed for student savings. The official K-State booklist is available online at kstatecampusstore.com. Textbook

information (including ISBN, author, title, publisher and copyright data) is available at courses.k-state.edu. When viewing a course, click on the textbook icon for textbook details. For more information, contact 785-532-6583.

Cat Tech, the Union computer store, is a full-line computer store and an Apple authorized educational reseller. Students can receive discounts on Apple computers, Microsoft and Adobe products, as well as other academic software. Cat Tech carries an extensive inventory and variety of computer supplies, including MacBooks, the complete line of Apple iPads, and a large selection of Apple accessories. Online shopping is offered 24/7 at kstatecampusstore.com. Stop by the location on the Union's ground floor or give us a call at 785-532-7319.

All students, faculty and staff can get their official university ID card, the Wildcat Card, at the ID Center, located on the ground floor of the Union. Wildcat Cards can be used as a photo ID, access/entry card, library card, and Cat Cash on-campus debit account. Cat Cash is ideal for anyone who carries a Wildcat ID and spends time on campus. The ID Center can assist with card replacements, Cat Cash deposits and Union gift card purchases. If you have any questions, contact 785-532-6399 or wildcatcard@k-state.edu.

GET INVOLVED

Student Programs and Involvement

Sara Heiman, Director
Student Programs and Involvement
K-State Student Union
785-532-6541
E-mail: studentinvolvement@k-state.edu
<https://www.k-state.edu/student-involvement>

Student Programs and Involvement provides opportunities for students to get connected, engaged, and involved at K-State. The office oversees student organization recognition for the University, and provides leadership development trainings and resources for group officers and advisors. SPI also manages K-State's student involvement platform, OrgCentral, as well as the co-curricular engagement program, Cat Trax. SPI coordinates Week of Welcome, an event series that takes place every fall and spring semester, and SafeRide operated by Lyft(R). SPI supports the voice of the student body, Student Governing Association, and campus activities through the sponsorship of Union Program Council.

Student Organizations

More than 400 organizations are available to students, faculty members, staff, and community members.

Any organization desiring to become a recognized organization must register with Student Programs and Involvement. Registered groups have the opportunity to request funds from SGA, hold fund-raising activities on campus, and schedule rooms and tables in the K-State Student Union as well as most campus facilities. Recognized student organizations may also post notices in university buildings and on campus bulletin boards.

OrgCentral

<https://orgcentral.k-state.edu>

OrgCentral is K-State's online student organization management and student engagement platform. Students can explore upcoming events, engage in student organizations, and connect with other students using the platform. All registered student organizations have a group page in the system to manage their organizational operations. All currently enrolled students and university employees have an account created automatically and can use their eID and password by clicking the "school login" button on the site.

Cat Trax

orgcentral.k-state.edu/cattrax

Cat Trax serves as a guide to help students transition to campus, connect with resources, build social capital, and develop career readiness competencies and skills. Cat Trax identifies experiences every K-State student should have and organizes these experiences into a checklist. Students earn rewards for completing checklist items. Students can explore their Cat Trax checklist in OrgCentral.

SafeRide

Email: saferride@k-state.edu

SafeRide operated by Lyft provides all students on the Manhattan campus free or discounted rides within the city limits during the eligible time windows utilizing the Lyft app. SafeRide is a program funded by students for students through the Student Services Fee as a program that meets immediate student needs and safety concerns.

Week of Welcome

Email: wow@k-state.edu

Week of Welcome is an event series that takes place during the first week of class in the fall and spring semesters. Week of Welcome programs and activities ease the transition into the academic term by helping students establish connections with their peers, familiarize themselves with campus, and explore involvement opportunities and important resources for their success.

Lafene Health Center

Kara Fiske, Executive Director, Student Health and Counseling and Psychological Services

1105 Sunset Avenue

Manhattan, KS 66502-3761

785-532-6544

Fax: 855-673-4137

E-mail: lafene@k-state.edu

www.k-state.edu/lafene

Lafene Health Center is an outpatient health care facility designed to meet the healthcare needs of Kansas State University students and the campus community. The health center is fully accredited by the Accreditation Association for Ambulatory Health Care (AAAHC). Enrolled students who have paid their student services fee are eligible for care. Non-student spouses, university conference participants, and other campus visitors may receive care with prior approval of Lafene Health Center Administration. Non-student patients will be required to pay non-student rates for services received.

Lafene Health Center provides, through a full complement of medical and other professional personnel, a range of services that include special clinics for sports-related injuries, gender care, allergies and immunizations, dermatology, as well as a clinic for general care. Services in health and well-being education, massage therapy, nutrition, physical therapy, pharmacy, laboratory, and x-ray are also available at reduced rates for eligible students.

The Health Center is staffed by health care professionals and support personnel in various areas. When necessary, students may be referred to external specialists for care at their own expense.

Insurance

It is strongly recommended that all students at K-State carry health insurance, either through a parents' plan at home or an employer's health plan or through student health insurance plans available from the Kansas Board of Regents (KBOR). It is required for International Students to carry health insurance specifically designed for International Students. The KBOR student insurance plan covers most services provided at Lafene Health Center and covers a wide variety of healthcare services outside of Kansas State University. The KBOR webpage can provide up to date details about the insurance plans offered to Kansas State University students.

Lafene Health Center's MyLafene Patient Portal

All incoming K-State students must check out the MyLafene patient portal. Have health insurance information ready to upload along with your immunization records. The portal allows students to make appointments, upload information to meet State of Kansas and University requirements, and communicate with Lafene providers. Lafene's webpage contains a wealth of information that can assist students with their health and well-being needs during their time at K-State.

Tuberculosis Screening

International students from countries with a high incidence of tuberculosis and domestic students who have spent more than three months in a country are required by state law to be screened and potentially tested for tuberculosis prior to enrolling at K-State. Screening and testing can be completed through Lafene Health Center or another healthcare provider outside of Kansas State University. Proof of testing and the results are required if not completed at Lafene Health Center.

Incoming Students Residing in University-owned Housing

Kansas Statute and the State of Kansas Board of Regents policy requires all incoming students residing in university-owned housing to be vaccinated against meningitis or sign a document waiving the vaccination. The vaccine can be obtained by appointment at Lafene Health Center or the student's private physician. Meningococcal Vaccine Documentation Forms are available through the Lafene Health Center website and by using the MyLafene patient portal.

McNair Scholars Program

Vacant, Director
101 Holton Hall
785-532-6137
E-mail: mcnair@k-state.edu
www.k-state.edu/mcnair

The McNair Scholars Program, named for the African American astronaut who died in the 1986 space shuttle explosion, encourages and prepares academically promising students to pursue doctoral degrees. McNair Scholars are from income-limited and first-generation college educated backgrounds or are from minority groups who are underrepresented in graduate study.

Staff will assist McNair Scholars in selecting an appropriate graduate school for their career goals, in preparing for the Graduate Record Examination, and in applying for graduate admittance and financial assistance. Each year McNair Scholars will be matched with a faculty mentor and will work on research projects for which they will receive a stipend. The McNair Scholars Program is funded through a federal TRIO grant.

Morrison Family Center for Student Well-being

Chris Bowman, Director
K-State Student Union, Rm 217
918 N MLK Jr. Dr.

785-532-6595

E-mail: wildcatwellbeing@k-state.edu

<https://www.k-state.edu/center-for-wellbeing/>

The Morrison Family Center for Student Well-being is an office at K-State committed to fostering the physical, social, and emotional well-being of students through education, outreach, and support. The Morrison Family Center for Student Well-being uses evidence-based strategies and best practices to develop campus-wide programs that inspire our communities in health promotion, prevention, and well-being. The well-being center uses their expertise and knowledge to create relevant, holistic, and lasting well-being strategies to create **WellCATS for Life**. Visit our website for more information and a complete list of our well-being programs and offerings.

New Student Services

Executive Director

Berney Family Welcome Center

705 N. 17th Street

785-532-6318

Fax: 785-532-3696

E-mail: nss@k-state.edu

www.k-state.edu/nss

New Student Services works with prospective and new students and their families. Admissions representatives meet with high school students during school visits, college fairs, and special events. Transfer staff visit Kansas community colleges and help transfer students successfully make the transition to K-State.

New Student Services coordinates campus visits, orientation and enrollment, Wildcat Warm-up, StrengthsQuest™ Initiative, Blue Key Honor Society, Welcome Center Ambassadors and the Presidential Lecture Series. The department collaborates with many campus programs and departments to provide services to prospective, new and current undergraduate students.

Military-Affiliated Resource Center and Non-Traditional Student Services

Amanda Etter, Director

Military Affiliated Resource Center

2nd Floor Student Union

Room 217

785-395-8387

Non-Traditional Student Services

Student Support and Accountability

785-532-6432

E-Mail: kstatenontrad@k-state.edu

www.k-state.edu/nontrad/veteran/

Non-Traditional & Veteran Student Services assists undergraduate and graduate students who meet one or more of the following criteria:

- 25 years of age or older
- Married
- Parent

- Veteran
- Returning to school after an absence of 3 or more years

Non-Traditional & Veteran Student Services provides assistance and advocacy for students before, during, and after their admission to K-State. Staff members assist students in obtaining information and/or providing referrals in many areas, including: admission, scholarships, childcare, housing, tutoring, refresher and study skills courses, student health insurance, campus activities and community programs, non-traditional student networking opportunities, and many other student questions/concerns.

Off-Campus Housing Support

The Off-Campus Housing Support is located at Student Support and Accountability, 201 Holton Hall, 785-532-6432. The coordinator of off-campus housing support students resolve issues or answers questions regarding landlord problems or rental contracts. Students can also find information about rental units, with information on cost, size, restrictions, etc., and other housing options.

Fraternity and Sorority Life

Dee Hawks, Director, Fraternity & Sorority Life
 004 K-State Student Union
 785-532-5546
 E-mail: greeklife@k-state.edu
<https://www.k-state.edu/fraternity-sorority/>

K-State is home to more than 3,500 fraternity and sorority members. The Fraternity and Sorority Life office supports the Interfraternity Council and the Panhellenic Council community. The communities consist of 35 chapters, 30 of whom own and control their own residential facility. The average Panhellenic sorority size is 125, and the average IFC fraternity size is 70.

Panhellenic sororities select a majority of their members during Fall Formal Recruitment which happens the week prior to the start of the fall semester. Women who wish to participate in the Formal Recruitment process must register on the Fraternity and Sorority Life website and pay a participation fee by no later than August 1. Throughout the year, individuals may have additional informal opportunities to join chapters through the continuous open bidding process. These opportunities can vary widely. You can learn more about informal joining opportunities on this website. For Panhellenic members, most new members live in a residence hall during their first year membership and may move into the sorority house their second year of membership. Live in requirements can vary by chapter and can be discussed during any recruitment conversation.

Interfraternity Council fraternities select new members through an informal, chapter-driven process. This process mainly occurs beginning in the late fall and continues throughout the spring and into the summer. Most new members live in their fraternity house during the first year of membership if the chapter owns a property. Men may fill out an interest form on the website and find contact information for chapter recruitment chairs.

Complete information regarding fraternities and sororities including costs, how to register, recruitment dates and methods, the recruitment week schedule for sororities, and a list of K-State fraternity and sorority chapters can also be found on the Fraternity and Sorority Life page.

Information about NPHC fraternities and sororities and other national organizations that select new members via the intake process can also be found on the Multicultural Greek Orgs page, housed within Student Belonging.

Office of Nationally Competitive Scholarships

Jim Hohenbary, Director
 215 Fairchild Hall

785-532-3422

E-mail: jimlth@k-state.edu

<https://www.k-state.edu/leadership/scholardevelopmentandundergraduateresearch/scholardevelopment/national-scholarships/>

The Office of Nationally Competitive Scholarships assists K-State students as they compete for nationally competitive awards such as the Rhodes, Marshall, Truman, Goldwater, Udall, and Fulbright.

The office helps students identify awards that might suit their accomplishments and goals, advises students as they prepare their applications, and manages the campus selection process for scholarships and fellowships that require applicants to be nominated by their university.

A strong academic record and active résumé are essential for applications. Students interested in competing for major awards are encouraged to consult with the office as early as possible in their college career.

The office website provides a much larger listing of national and international scholarships and fellowships. Note that the office primarily advises students regarding major award competitions that are external to the university. Students seeking information about K-State scholarships should consult the Office of Student Financial Assistance and their academic departments.

Student Support & Accountability

Andy Thompson, Assistant Vice President and Senior Associate Dean

Allison Coleman, Assistant Dean and Director of Conduct

Laurel Moody, Senior Assistant Dean

Janelle Rieger, Assistant Dean

201 Holton Hall

785-532-6432

Fax: 785-532-5307

E-mail: stulife@k-state.edu

<https://www.k-state.edu/student-support/>

The mission of the Student Support & Accountability Office is to enhance the K-State student experience and promote student success in the classroom and in life. The Office of Student Support & Accountability helps when problems arise, working with students and with other campus services to find the most appropriate and effective solutions. The Office of Student Support & Accountability also serves as one of the approved offices for students to receive excused absences through the approve policy. The Office of Student Support & Accountability is also a resource for parents who may have concerns or questions. The Office of Student Support & Accountability administers the judicial programs for non-academic misconduct and works closely with the student judicial system.

Powercat Financial

Kate Mielitz, Executive Director

302 K-State Student Union, Third Floor

785-532-2889

E-mail: powercatfinancial@k-state.edu

www.k-state.edu/powercatfinancial

Powercat Financial assists students with financial decisions including budgeting, saving, student loan repayment, and understanding credit. The center is free to K-State students and uses a peer mentor program where students studying in a finance related curriculum provide one-on-one peer financial counseling and education to fellow students. In addition to individual confidential counseling, the center provides free workshops to campus groups and organizations about various financial topics. The goal of Powercat Financial is to improve the financial literacy and success of all K-State students. Visit the Powercat

Financial website to schedule an appointment, to request a financial workshop presentation, or to learn more about financial issues.

Recreational Services

Clint Hafliger, Director

Chester E. Peters Recreation Complex

1831 Olympic Drive

785-532-6980

Fax: 785-532-4983

E-mail: recservices@k-state.edu

www.recservices.k-state.edu

Recreational Services oversees the programming and administration of intramurals, fitness/wellness programs, climbing wall, K-State challenge course, and free time use of the Peters Recreation Complex, outdoor recreation area and the K-State natatorium.

Chester E. Peters Recreation Complex

fully accessible and includes:

- 8 racquetball courts
- five performance zones
- two squash courts
- two wallyball courts
- three gyms that include:
 - 13 basketball courts
 - 15 volleyball courts
 - 5 badminton courts
 - 2 pickleball courts
- multi-activity court (MAC) gym provides for indoor soccer, in-line hockey, basketball, volleyball and tennis
- three weight rooms
- two cardio areas
- combatives room
- four group fitness and studios
- one multipurpose room
- private personal training studio
- 40-ft climbing wall and bouldering rock
- Quik Cats Cliffside snack/juice bar
- game lounge offering video game stations, pool tables, foosball and electronic darts
- two indoor tracks
- table tennis area
- locker rooms with saunas
- southside parking lot exclusively for students
- pickleball courts

Outdoor Recreation Area

- lighted playfields for football, soccer, softball, ultimate
- four sand volleyball courts

- six tennis courts
- three basketball courts
- two 3-wall handball/racquetball courts
- running/walking trails

Outdoor Rental Center

offers equipment rentals to the K-State community during spring, summer and fall seasons

- camping equipment
- canoes, kayaks, and stand-up paddle boards
- tents and sleeping bags
- hammocks

Intramural Sports

scheduled competitive activities offering

- team, individual, and meet sports for students, faculty, and staff
- over 50 different intramural activities for men, women, and co-rec competition

Fitness Services

programming designed to promote health and wellness

- group fitness sessions offering a wide variety of formats such as cardio, yoga, and cycling
- personal trainers providing fitness assessments, and exercise program planning
- educational outreach presentations/workshops

Climbing/bouldering Area

providing a variety of ever changing climbing routes ranging from beginner to advanced

- 40-ft rock wall with 11 top ropes
- 12-ft freestanding boulder

K-State Challenge Course

team building, experiential activities available by reservation to K-State students and organizations, as well as the Manhattan community offering:

- low elements consisting of ropes, wires, poles and other wooden objects
- high elements using ropes and belay systems providing activities 30-40 feet in the air

Student Employment

Positions for sports officials, building supervisors, weight room supervisors, climbing wall instructors, group fitness leaders, personal trainers, facilitators, maintenance, and office assistants.

Additional information and a complete schedule of hours and events is available on the Recreational Services home page.

Student Access Center

Jason Maseberg Tomlinson, Director

202 Holton Hall

785-532-6441

Fax: 785-532-6457

VP: 785-370-0431

E-mail: accesscenter@k-state.edu

www.k-state.edu/accesscenter/

Student Access Center appreciates disability as an integral part of the K-State experience. We are dedicated to providing equal educational opportunity and access to students by providing a broad range of services to meet the needs of students with disabilities.

Students may require accommodations in areas such as attention, autism, learning, mobility, medical, psychological, and sensory. Services provided may include adaptive technology, alternative text, note-taking, sign-language interpreters, residential life, and test-taking. Literacy software, called Read and Write Gold, is available to all students and includes features such as text-to-speech, scanning, and a read-aloud dictionary.

Through collaboration and support of the entire campus community, the Access Center promotes disability pride, program accessibility, and universal design principles so that everyone has full access to university life.

Union Program Council

Union Program Council (UPC), K-State's premier student-led event planning organization, provides entertainment to the K-State community and an opportunity for students to gain leadership skills. UPC plans more than 100 programs each year for students by students. UPC's student volunteers determine the big campus entertainment act for the year, plan social events to build community, choose the art exhibited in the William T. Kemper Art Gallery, expose you to different cultures with their multicultural programming and organize a substance-free **After Hours** event Friday nights during the semester.

All students are encouraged to get involved with UPC. Students who want to get involved should contact **UPC** on the web, by phone 785-532-6571, or follow them on Instagram.

The Union is also the home of many student offices: the Student Governing Association (SGA), Student Programs and Involvement (SPI), Fraternity and Sorority Life Office (FSL), Military Affiliated Resource Center (MARC), Union Program Council (UPC), Union Governing Board (UGB), and the campus radio station, Wildcat 91.9.

Student Government

E-mail: sga@k-state.edu

www.k-state.edu/sga

The purpose of the Student Governing Association is to help students voice concerns, suggestions, or grievances. Every student is a member of SGA and is represented by student senators from their college, and by the student body president and vice president. The student senators, student body president, and vice president are elected by the K-State student body.

SGA is divided into three branches: legislative, judicial, and executive. Student Senate makes up the legislative branch. It is composed of standing committees including funding allocations committees; student services fee; and senate operations.

The judicial branch is composed of the judicial council, student review board, student tribunal, and the parking citations appeals board.

The student body president, vice president, and cabinet make up the executive branch. The president has the responsibility to promote the general welfare of the students and acts as the official voice of the student body to the faculty, administration, and public.

Upward Bound Program

Upward Bound at K-State Salina Campus

Upward Bound K-State Salina Campus
2310 Centennial Road
785-826-2640
www.salina.k-state.edu/upwardbound

Upward Bound is a federally funded campus-based TRIO program designed to assist low income and underrepresented students with college potential who need additional academic preparation, advisement, and encouragement to succeed in high school and later, in college. The Upward Bound program participants are involved in the program from the time they are selected for participation until they graduate from high school. The program offers a six-week summer residential component and academic advising sessions during the academic year.

The mission of the Upward Bound program at K-State Salina is to promote enrollment and persistence in post-secondary education for program participants and their families by providing academic, social and emotional support. The Salina Upward Bound program serves students from Ell-Saline, Clay Center, Lincoln, and Newton high schools.

Support Services

Early Childhood Laboratory

1701 N. Manhattan Avenue
785-532-2226
Fax: 785-532-3537
E-mail: stonehouse@k-state.edu
<https://www.hhs.k-state.edu/stonehouse/lab/>

The Early Childhood Laboratory, located at the Hoeftin Stone House Early Childhood Education Center, houses a part-day preschool classroom and is sponsored by the School of Family Studies. The Early Childhood Laboratory is licensed by the state and is accredited by the National Academy of Early Childhood Programs. The children enrolled in the program range in age from three to five years. Children who are eligible by age to enter kindergarten are not eligible for enrollment in the program. The group is balanced by age and sex of the children. Within these guidelines, children are accepted by date of application. The total group size is 15 children. The half-day preschool sessions are operated Monday through Thursday, 8:30 - 11:30 a.m.

K-State Family Center

139 Campus Creek Complex
785-532-6984
Fax: 785-532-6523
E-mail: family@k-state.edu
www.ks.k-state.edu/familycenter

The K-State Family Center is the marriage and family therapy clinic housed in the Campus Creek Complex. The Center provides applied educational training to students while offering counseling, family-related educational programs, consultation and mediation services for Manhattan and the surrounding communities. MFT faculty, doctoral and masters interns staff the Family Center providing individual, couple, family and group therapy for a range of mental health and family related issues. The Center uses a sliding fee scale making services affordable for all economic ranges. Appointments are available Monday through Thursday from 8am-9pm and on Fridays from 8am-5pm. The Family Center is also home to the state sponsored home-based family therapy training project providing training on home-based family therapy for clinicians throughout the state of Kansas. This training is sponsored through a contract with KDAD's.

Hoeflin Stone House Early Childhood Education Center

1701 N. Manhattan Ave
785-532-3537
E-mail: stonehouse@k-state.edu
www.ks.k-state.edu/stonehouse

The Hoeflin Stone House Early Childhood Education Center is located on the north side of campus at 1701 North Manhattan Avenue. The two-story house and architect-designed playgrounds support the development of young children from six weeks to 5 years of age. Children who are eligible by age to enter kindergarten are not eligible for the program. Eight children are enrolled in the infant room. The toddler group accommodates 10 children. Thirty children are enrolled in the preschool group. The groups are balanced by sex and age of the children. Priority is given to children whose parents work full time. Within these guidelines, children are accepted by date of application. The center is available only for full-day enrollments, five days a week. The hours are 7:30 a.m. to 5:30 p.m., and the center is open for most of the year, with the exception of university holidays, three weeks in August, and two weeks at the end of December. The Hoeflin Stone House Early Childhood Education Center is licensed by the state and is accredited by the National Academy of Early Childhood Programs.

Other Research Facilities and Equipment

A variety of specialized facilities is maintained to support research and scholarly work in the humanities, natural sciences, applied sciences, social sciences, and professional areas. Although an exhaustive listing is prohibitive, the following list represents a selection of supporting resources:

- Aquatic and terrestrial research laboratories
- Arp electronic music synthesizer
- Audiovisual materials center
- Center for Excellence in Computer-Controlled Automation
- Center for Extended Services and Studies

- Computer-Aided Design Laboratories
- Consortium for Political Research data banks
- Controlled environment test facility
- Editorial offices of major journals
- Experimental animal facilities
- Financial Therapy Clinic
- Fourier transform spectroscopic laboratory
- Glassblowing and instrument shops
- Greenhouses
- Heliodon and wind tunnel
- Herbarium and monographic library
- Insect reference collection
- Interior architectural shops
- Marriage and Family Therapy Clinic
- Near infrared protein laboratory
- Nuclear magnetic resonance spectrometers
- Physiology of exercise laboratory
- Plant disease diagnostic laboratory
- Population and demographic laboratory
- Recording Raman spectrometer
- Scanning electron microscope
- Soil testing laboratory
- Speech and Hearing Center
- Statistical laboratory
- Textile chemistry laboratory
- Textile conservation laboratory
- Transmission electron microscope
- Veterinary diagnostic laboratory
- Weather data laboratory
- Wind and soil erosion laboratory
- X-ray diffractometers

OZ, modern architectural trends.Environmental and Architectural Phenomenology Newsletter, information and features on environmental design as place making.

College of Education Educational Considerations, timely papers on educational issues at all levels. Media Adult Learning, research, reviews, papers.

College of Engineering Kansas State Engineer, technical and nontechnical articles on engineering developments. Research Activities, biennial report on research in the College of Engineering.

College of Veterinary Medicine Veterinary and Human Toxicology, toxicology, research, reviews, and field observation.

Continuing Education National Issues in Higher Education, proceedings of annual meetings on educational issues. IDEA Papers, series on college teaching, from the Center for Faculty Evaluation and Development.

Cooperative Agricultural Extension Numerous publications about research, in varied formats for various audiences.

Department of English Literary Magazine Review, reviews of literary magazines and commentary on the international noncommercial literary magazine scene. Touchstone, student literary magazine. The Spenser Newsletter, the official publication of the Spenser Society.

Department of History Journal of the West, history and culture of the U.S. West.

Department of Modern Languages Studies in Twentieth Century Literature, literary theory and practical criticism of 20th-century literature in French, German, Russian, and Spanish (with University of Nebraska, Lincoln).

Libraries Bibliography Series, each bibliography on a different topic.

University Press of Kansas

Charles Myers, Director
2502 Westbrooke Circle
Lawrence, Kansas 66045-4444
785-864-4154
785-864-4586 Fax
E-mail: upress@ku.edu
www.kansaspress.ku.edu

Kansas State University, in association with the other five Regents universities, operates and supports the University Press of Kansas for the purpose of publishing scholarly and regional books on a nonprofit basis. K-State joined the consortium in 1967 when the press was officially reorganized by the Kansas Board of Regents. Until mid-1982, the operation was known as the Regents Press of Kansas.

The University Press of Kansas is the first American university press to operate as a statewide consortium under the specific sponsorship of all the state's universities. A member of the Association of American University Presses since its founding in 1946, the press has published over 1400 titles, with more than 975 currently in print. Its ongoing American Presidency Series, with 35 titles issued to date, has been praised as one of the most interesting and rewarding historical series in this country.

The press is governed by a board of trustees, who are the chief academic officers of the sponsoring institutions and who appoint two members and two alternates from each faculty to serve on the advisory editorial committee.

Graduate School Admission

- Admission Categories
- Admission Procedures
- Entrance Requirements
- Graduate Assistants
- Graduate Study by Seniors and Undergrad Special Students
- Graduate Work by Faculty and Staff
- Registration and Enrollment
- Standardized Tests

Auxiliary Services and Facilities

Note: All addresses are in Manhattan, unless otherwise noted.

Office of Institutional Equity

103 Edwards Hall
785-532-6220
E-mail: equity@k-state.edu
www.k-state.edu/oie

The Office of Institutional Equity is available to students on matters of equal opportunity in admissions, access to University sponsored programs and activities, and employment due to race, color, ethnic or national origin, sex, sexual violence, sexual orientation, gender identity, religion, age, ancestry, disability, military status, veteran status, dating or domestic violence, or stalking. Students with concerns about any of the basis listed above may contact the office. The Office of Institutional Equity also includes the University's Title IX Coordinator and investigation team. These individuals are available to assist in coordinating support and services to students in need of assistance after experiencing any form of discrimination, harassment, sexual violence, stalking, or relationship violence.

Alumni Association

Amy Button Renz, President and CEO
K-State Alumni Association
1720 Alumni Center
785-532-6260 or 1-800-600-2586
E-mail: alumni@k-state.com
www.k-state.com

The K-State Alumni Association is a 41,000-member, nonprofit organization whose mission is to lead and inspire lifelong involvement that will benefit Kansas State University and all members of our Wildcats Community. This is accomplished through student recruitment programs, quality publications and communications, constituent events, affinity programs and maintenance of records on more than 320,000 alumni and friends.

Child Care

K-State Center for Child Development

Debra Ring, Director
1 East Jardine Drive
785-532-3700
E-mail: childcare@k-state.edu
www.k-state.edu/ksucdc

The K-State Center for Child Development is a Student Life department serving the child care and early childhood education needs of K-State students, faculty, staff and the community. It is fully licensed by the Kansas Department of Health and Environment and is a nationally accredited program through NAFYC. It is professionally staffed and uses a nationally acclaimed curriculum. The Center also partners with Army Childcare in Your Neighborhood to offer subsidies to military families. The Center provides a variety of subsidies to make childcare affordable to all families. The Center offers full-day high quality and educational programs for infants through school age (6 weeks through 5th grade). The Center is open year-round offering care Monday through Friday from 7 a.m. to 5:30 p.m.

School of Family Studies and Human Services

Dr. Dorothy Bagwell Durband, School Director
Dr. Mary DeLuccie, Administrator of Early Childhood Programs
303 Justin Hall
785-532-5510
Fax: 785-532-5505
E-mail: fshs@k-state.edu
www.he.k-state.edu/fshs

The School operates six early childhood classrooms for children aged 6 weeks through five years at The Stone House Ruth Hoeflin Early Childhood Education Center and C.Q. and Georgia Chandler III Institute for Child and Family Studies on N. Manhattan Avenue. The site serves as a teacher training facility for students enrolled in the pre-service early childhood education program. Enrollment in the program is open to members of the K-State and Manhattan communities. The facility is licensed by the state of Kansas and accredited by the National Association for the Education of Young Children. The learning environments and planned experiences are designed to foster children's cognitive, language, social, emotional, and physical growth and development. Enrollment application forms are available online.

Four of the classrooms provide year-round, full-day care and education for the children ranging in age from 6 weeks through five years of age. Priority in enrollment is given to children of parents working full-time. Two classrooms, The Early Childhood Laboratory, host an interagency program with USD 383. The classrooms integrate children identified by USD 383 who have delays and/or disabilities with non-handicapped children. Forty-eight children, ranging in age from 3 to 5 years, are enrolled in this part-year, part-day preschool program.

K-State Family Center

Nancy T. O'Conner, Director Marriage and Family Therapy Clinic
139 Campus Creek Complex
785-532-6984
Fax: 785-532-6523
E-mail: family@k-state.edu
www.he.k-state.edu/familycenter

The K-State Family Center provides applied educational training to students while offering counseling, family-related educational programs, consultation, and mediation services to Manhattan and the state. On-site services include individual,

couple, family and group therapy, and parent education. Outreach programs include contracts with Junction City Smart Start program providing home-based family play therapy, parent education and staff consultation. State sponsored home-based family therapy training is also provided for clinicians throughout the state through contracts with SRS and KHS.

Communications and Marketing

Jeffery B. Morris, Vice President for Communications and Marketing
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: jbmorris@k-state.edu

The Division of Communications and Marketing has a mission to fully integrate our university image and message delivery; to increase the impact and efficiency of institutional and marketing objectives; and to unify the brand voice in order to continue K-State on the path to an improved state, national, and international reputation. The division is charged with creating and leading a comprehensive communications and integrated marketing program that emphasizes Kansas State University's unique brand and enhances the visibility of the university.

Marketing Services

Ashley N. Martin, Director
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: ashley07@k-state.edu
www.k-state.edu/marketing

The University Marketing provides all administrative units, academic colleges and departments, and university-sponsored organizations and initiatives with direct access to integrated marketing expertise, free of charge. The marketing team consults on and develops marketing strategies that are both university-wide and unit-specific, and we specialize in creative copy writing that is tailored to your marketing needs. Our team of client managers serves as your first point of contact to access all of the free creative services the division offers. The marketing staff coordinates with the division's graphic designers, Web services, video and engineering services, news and communications services, photographers, and social media staff to create and deliver your message.

News and Communications Services

Cindy Hollingsworth, Director
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: cholling@k-state.edu
media@k-state.edu
socialmedia@k-state.edu
www.k-state.edu/media

News and Communications Services coordinates public information about K-State faculty, staff and student activities and events. It is the official outlet for print and broadcast news materials relating to K-State policies and administration and is one of three university units sanctioned to distribute news. The unit administers the general university social media accounts and offers editing and writing assistance to university colleges, departments and units. Additionally, News and Communications Services

produces and distributes video news releases and distributes the official daily newsletters, *K-State Today*, for faculty and staff, and *K-State Today Student Edition*. The unit also works in conjunction with the Vice President for Research to publish the university's flagship research magazine, *Seek*.

Photographic Services

Tommy Theis, Photographic Services Manager
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: photo@k-state.edu
www.k-state.edu/photo

Photographic Services offers location and studio photography. We offer walk-in portrait days twice monthly.

Design Services

Ben Cleveland, Creative Director
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: abclevel@k-state.edu
<http://www.k-state.edu/design>

Design Services is responsible for designing and coordinating production for print and Web projects used in the advancement of Kansas State University.

Video and Engineering Services

Robert F. Nelson, Executive Director
128 Dole Hall
785-532-2535
Fax: 785-532-7355
E-mail: ves@k-state.edu
www.k-state.edu/video

Video and Engineering Services offer a full-service production facility with skilled broadcast and production professionals ready to assist you with studio, remote, or other video production needs. Facilities include a professional broadcast studio, remote production truck and digital satellite uplink vehicle. Producers, directors, and engineers will work with you to turn your idea into a product you'll be proud to share. From pre-production to post-production, Video and Engineering Services is your "one-stop shop" for audio and video production for all of your marketing and professional needs.

Web Services

Neil Erdwien, Director
128 Dole Hall
785-532-2535
Fax: 785-532-7355
Email: webservices@k-state.edu
www.k-state.edu/webservices

Web services promotes a consistent, positive image of K-State by managing the university's Web presence and overseeing K-State's content management system. Services include Web design, information architecture, multimedia content, user experience research and email marketing.

Division of Information Technology

IT Help Desk
Kansas State University
Hale Library
2nd Floor
117 Mid-Campus Dr. North
Manhattan, KS 66506

785-532-7722
800-865-6143
helpdesk@k-state.edu
www.k-state.edu/its

The university provides technology resources and facilities for student, faculty, and staff use. K-State's high-speed data network allows access from residence halls, the K-State Student Union, Hale Library, university computing labs, centrally scheduled classrooms, and locations equipped with wireless access points.

To learn about information technology at K-State, visit the [Welcome to Information Technology at K-State website](#).

For questions or assistance with any information technology resources, contact the IT Help Desk:

- Email: helpdesk@k-state.edu
- Phone: 785-532-7722
- Website: IT Help Desk

Responsible use of the university's technology resources is expected of everyone and use of K-State's systems constitutes agreement to abide by all relevant policies. Unauthorized or inappropriate use may limit or revoke use privileges and administrative, civil, or criminal penalties. For more information, visit the [Information Technology Usage Policy](#).

eIDs and passwords

All K-State students and employees are required to have an eID (electronic identifier). Your eID is your K-State user name and becomes part of your K-State email, is used to enroll in classes, access Canvas, and KSIS, view online paychecks, and much more.

With your eID, you can also manage your eProfile to change your password, sign up for K-State Alerts emergency messages and phone calls, and more.

Your eID's security is your responsibility. Keep your eID password private. K-State policy prohibits using someone else's eID or sharing passwords. Your eID password does not expire. You do not need to change your password unless the password becomes compromised. Visit the [K-State eID and password page](#).

K-State will never ask for your password in an email. Delete any email that asks for your password.

Email

K-State provides email service to all students and employees. Your official, primary K-State email address has two forms: eid@k-state.edu and eid@ksu.edu. The university sends official correspondence to K-Staters via their primary email address with the full expectation that communications will be received and read in a timely manner.

For information about the central email services offered at K-State, visit the Office 365 website.

Microsoft Office software

Office 365 is free for all K-Staters and includes desktop and mobile app versions of the Microsoft Office Suite and can be installed on up to five PCs or Macs, five tablets, and five phones. For help and support with Office 365, visit the Office 365 Help and Support website.

Antivirus and security

K-Staters connecting their computers to the Kansas State University network can use the approved antivirus software of their choice or choose from the recommended software listed on the K-State Antivirus Software website.

Emergency notices (K-State Alerts)

K-State Alerts is Kansas State University's emergency notification system that gives campus authorities the ability to communicate emergency information quickly to the university community. To sign up, visit eid.k-state.edu.

Computing

Windows and Mac computer stations are available in Hale Library (Windows on 1st and 2nd floors, Macs on 2nd floor) and the K-State Student Union. There are two lab computers in the Cardwell Math/Physics Library. One of the computers is located in the corridor (Cardwell 105C). Mac computers in Hale Library include Adobe Creative Cloud. Computer labs provide free access to electronic information resources and software programs, including email, internet access, word processing, spreadsheets, databases, statistical analysis, and programming languages.

To locate public computers and to print on campus and learn more, visit the University Computing Labs website.

Media Studio

The Media Studio is located on the first floor of the Sunderland Foundation Innovation Lab in Hale Library. To learn more, visit the Media Studio website.

Equipment checkout

Equipment available for checkout varies. For up-to-date information, do one of the following:

- Call: 785-532-4918
- Email: itcheckout@k-state.edu
- Visit the website: Equipment Checkout

Connecting to K-State (wireless and direct network)

The wireless networks include KSU Wireless, KSU Guest, and KSU Housing (for individuals living in the residence halls and Jardine Apartments). Eduroam also is available. For more information, visit the Wireless Networks website.

There are two ways to connect to the campus data network and then to the internet:

1. **Direct network connection, using a hard-wired line and an Ethernet card.** K-State buildings are directly connected to the internet.
2. **Wireless network connection.** K-State's wireless computer network allows laptops and other mobile computing devices to link to the internet without being physically tied to an Ethernet connection line.

A current K-State eID and password are required to configure your device and access the secure wireless network. For more information, visit the Wireless Connect web page.

Information resources

Information resources include:

- KSIS (the student information system)
- Canvas (learning management system)
- K-State Libraries' catalog system
- K-State Research Exchange (K-REx) institutional repository
- Software
- and more.

For links to the many IT resources, visit the IT Services website.

Electronic Theses, Dissertations, and Reports

Graduate students are required to submit an electronic version of their thesis, dissertation, or report. Information on formatting, templates, help and support and more are available from the ETDR website.

Chief Information Officer and Vice President

Gary Pratt, Chief Information Officer

116 Unger Complex

2323 Anderson Ave.

785-532-6520

E-mail: its@k-state.edu

https://catalog.k-state.edu/content.php?catoid=44&navoid=8020#info_tech_services

KSU Foundation

Greg Willems, President and CEO

1800 Kimball Avenue, Suite 200

785-532-6266

E-mail: foundation@found.k-state.edu

www.found.k-state.edu

The KSU Foundation was established in 1944 as the official fundraising arm of Kansas State University. It is a separate, independent organization chartered by the state of Kansas as a 501(c)(3) nonprofit educational corporation. Gifts to the foundation are tax-deductible to the full extent of the law.

Foundation staff members work in close partnership with university administrators, deans and faculty to secure charitable contributions from individuals, corporations and foundations to support identified priorities for the university. Gifts received through the foundation fund undergraduate and graduate student scholarships, establish faculty chairs and professorships, provide departmental support, and enhance the campus infrastructure.

A volunteer board of trustees governs the foundation. A 15-member board of directors meets quarterly and is authorized to act on the trustees' behalf.

K-State Speech and Hearing Center

Robert Garcia, Program Director
Melanie Hilgers, Director of Clinical Services
139 Campus Creek Complex
785-532-6879
E-mail: mhilgers@k-state.edu
www.he.k-state.edu/speech/

The K-State Speech and Hearing Center provides evaluation, intervention, and consultation services to individuals with articulation, fluency, voice, language and swallowing, or hearing impairments. These clinical services are available to university students, children, and adults of the surrounding communities. The center provides educational and clinical experiences for students preparing for careers in speech-language pathology and audiology.

Libraries

K-State Libraries
Lori Goetsch, Dean of Libraries
Hale Library
785-532-3014
E-mail: library@k-state.edu
www.lib.k-state.edu

On May 22, 2018, a fire in Hale Library resulted in significant smoke and water damage. While the building will be closed for the 2018-2019 school year, library and IT services are available, including Ask a Librarian and the IT Help Desk, which is located in the Student Union. Online resources such as databases, ebooks, and journals are available, but most physical collections that were in Hale during the fire will not be accessible during the 2018-2019 school year. Students should request books and articles that are no longer available from K-State using the Library's free inter-library loan service. They will work to get these items from other libraries for you. Alternate computer, printing, and study locations have also been identified. For more information about the fire and alternate study locations, visit the Hale Library Recovery website at www.k-state.edu/hale.

K-State Libraries manifests the land-grant values and rich history of Kansas State University. We elevate academic success as an integral partner in research, learning, and discovery. We advocate for our campus and our community, connect their imaginations to information, and number their successes among our own.

All of the K-State Libraries venues offer areas for individual and group study and often include technology-enabled meeting rooms. Inside Hale Library, the Great Room anchors the third floor Quiet Zone for focused individual work, while the area around Library Help on the second floor is a hub of activity for group projects and study.

When classes are in session, Hale Library is open 24 hours a day, 5 days a week, plus weekend hours. This ensures that whenever students need a place to study, the Libraries can be a first option. Additionally, the Anita C. Lehner 24 Hour Study Area inside Hale Library is open 365 days a year for study space or computer use.

The Libraries employ approximately 100 staff full-time, including faculty librarians, unclassified professionals, and classified professionals. The part-time student staff numbers approximately 60.

Collectively the Libraries maintain three million volumes to support the diverse academic, instructional, and research activities of Kansas State University. Technology allows students and faculty to be outside the library building, off campus, and even out of the country and still have the ability to access online databases, journals, and books. Personal research assistance is available from anywhere through the Libraries' website and services like Ask a Librarian that include chat, text message, and email options. We've been answering your questions since 1863 and finding new ways to do so every day.

In addition to Hale Library, there are five specialized branch libraries: Fiedler Engineering Library, Math/Physics Library, K-State Polytechnic Campus Library, Veterinary Medical Library, and Paul Weigel Library of Architecture, Planning and Design.

K-State Libraries: Elevating Academic Success!

Police Department

108 Edwards Hall
785-532-6412
E-mail: police@k-state.edu
www.k-state.edu/police

LiveSafe

The Kansas State University Police Department helps preserve a safe campus environment where diverse social, cultural and academic values are allowed to develop and prosper.

The department has 23 police officers serving the campus community. Patrols operate 24 hours a day, seven days a week, 365 days a year through the campus, KSU Foundation property, parking lots, residence halls, Jardine apartments and athletic complex grounds.

University police officers derive their authority from KSA 76-726 and are fully commissioned law enforcement officers vested with full police/law enforcement authority with arrest powers. Officers are state-certified and receive their basic law enforcement training from the Kansas Law Enforcement Training Academy. Officers receive a minimum of 40 hours of in-service training each year to maintain their state certification.

24 hour services include Multi-Media Messaging (similar to Text to 9-1-1) through LiveSafe, K-State Alerts, and Wildcat Walk (escort across campus). Additional services provided upon request include ALICE training, Community Safety Talks, and Emergency Operations Planning. Fingerprinting is offered during limited hours.

Postal Service

Contract Post Office

113 Dykstra Hall

785-532-6306 (messages only, clerk will return call)

www.k-state.edu/facilities/operations/cms/ContactractPostOffice.html

Central Mail Services

109 Dykstra Hall

785-532-7751 (distribution of all interdepartmental mail and metering of departmental outgoing mail)

E-mail: centralmailservices@k-state.edu

www.k-state.edu/facilities/operations/cms/

All mail for students must be addressed to their off-campus Manhattan address or residence hall/Greek address. Postage should be applied to this mail, and it should be sent through the United States Postal Service.

Manhattan Post Office personnel deliver U.S. mail directly to university buildings and residence halls and pick up outgoing U.S. mail from various locations on the campus.

The Contract Post Office sells stamps, and other postal supplies; weighs, insures, and registers mail; and receives outgoing U.S. mail.

Collegian Media Group

Stephen Wolgast, Director

103 Kedzie Hall

785-370-6355

E-mail: swolgast@collegianmedia.com

www.kstatecollegian.com

K-State students of all majors produce the *Kansas State Collegian* daily newspaper and *Royal Purple* yearbook the nation's most honored tandem of collegiate publications.

Student journalists produce and select all content in the *Collegian* and *Royal Purple*. Their experience as reporters, photojournalists, designers, graphics journalists, illustrators, copy editors, and editors launches them into internships and careers across the nation. A student staff also sells thousands of dollars in advertising to help underwrite the publications.

Collegian Media Group is an independent local agency that publishes the newspaper, yearbook, and Manhappenin' magazine. Its board of directors hires editors in chief and supervises finances, but content decisions rest with the student staffs of the publications. The newspaper advisor also teaches in the A.Q. Miller School of Journalism and Mass Communications.

Royal Purple staffs are hired annually. *Collegian* staffs are hired by semester. Staff applications are available in 103 Kedzie Hall, with applications due in early November and early March for subsequent semesters.

University Press of Kansas
