Traditional (less than 24)	-	-	92%	96%	79%	92%	96%	78%	90%	99%	80%

All information is Spring data (NSSE administered during spring semesters)

^a Response rate (number of respondents divided by sample size) is adjusted for non-deliverable mailing addresses, students for whom contact information was not available, and other students who were sampled yet unavailable during the survey administration

^b Sampling error is an estimate of the margin by which the *true* score for your institution on a given item could differ from the reported score.

To interpret the sampling error, assume that 60% of your students reply "very often" to a particular item. If the sampling error is +/- 5%, then the true population value is most likely between 55% and 65%

^c Percent of total respondents within each category. These results are *not* weighted

* Option on 2007 NSSE survey
