

KANSAS STATE UNIVERSITY

Division of Biology Presents:

The Power of Friends in Competitive and Cooperative Systems

Monday, March 21, 2022 • 3:30 PM • Zoom

Roslyn Dakin

Assistant Professor
Department of Biology
Carleton University

From dodging collisions to choosing your friends, behavior provides a means for animals to respond to diverse challenges. In my group, we study the dynamics of behavior with the goal of understanding how behaviors work and how they have evolved. In this talk, I will present our work looking at social behavior in two systems: first, winter bird communities visiting backyard feeders, and second, a population of wire-tailed manakins, a neotropical bird species that (like us) cooperates to attain status.

If you would like to visit with Dr. Roslyn Dakin, please contact Dr. Alice Boyle at aboyle@ksu.edu.
