

PLU Invited Speaker

Innovations at Intersections

Dr. Mike Tarselli

Society for Laboratory Automation and Screening (SLAS)
(www.slas.org)
Scientific Director

Abstract

In the Information Age, scientists have broken down traditional boundaries between disciplines: biologists build virtual assay models, chemists design cells, and engineers automate laboratories. This talk will focus on how cross-domain insights and collaboration have helped open new areas, such as bioengineering, improved screening technologies, and machine-learnable data. Attendees will also hear about a wealth of educational events and coursework to help scientists interested in these types of interface careers

Following seminar, PLU will be hosting a Career Development event in CBC 209 from 230-330. This session will be an opportunity for Dr. Tarselli to answer questions from graduate students and post-docs regarding industrial jobs in the chemistry field. Snacks and drinks will be provided.
