The importance of comparative psychology

Monday, October 2nd, 3:30 p.m.

Bluemont Hall, Room 498

Abstract: Comparative psychology is on the decline in the United States and elsewhere. The purpose of this talk is to stimulate interest in comparative psychology by highlighting some of the advantages that comparative psychology offers both students and researchers. The time is right to start a new golden age in comparative psychology. Examples are presented on how comparative psychology can benefit research on agrochemicals, alcoholism, and basic similarities and differences in the behavior of organisms.
