The Burden of Diabetes in Kansas

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 34 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Kansas.

Kansas's diabetes epidemic:

- Approximately 255,215 people in Kansas, or 11.4% of the adult population, have diagnosed diabetes.
- An additional 66,000 people in Kansas have diabetes but don't know it, greatly increasing their health risk.
- blindness—and death. There are **782,000 people in Kansas**, 35.3% of the adult population, who have prediabetes with blood glucose levels that are higher than normal but not yet high enough to be diagnosed as diabetes.

Every year an estimated 20,271 people in Kansas are diagnosed with diabetes.

Diabetes is expensive:

People with diabetes have medical expenses approximately 2.3 times higher than those who do not have diabetes.

- Total direct medical expenses for diagnosed diabetes in Kansas were estimated at \$1.7 billion in 2017.
- In addition, another \$693 million was spent on indirect costs from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2021, the National Institute of Diabetes and **Digestive and Kidney Diseases** at the National Institutes of Health invested \$9,713,290 in diabetes-related research projects in Kansas.

The **Division of Diabetes Translation** at the CDC provided \$914,485 in diabetes prevention and educational grants in Kansas in 2018.

Diagnosed diabetes costs an

each year.

estimated \$2.4 billion in Kansas

The serious complications include

heart disease, stroke, amputation,

end-stage kidney disease,
