  How many of **your chunks** are focused on them?

- Decide **which chunks** you want to spend more time on

Vocabulary: Grammaticalized Chunks

First, the process of recycling causes more pollution in and of itself. The trucks that carry the **recycled** materials are burning more **fossil fuels**, and the factories that process the **recycled products** are **contaminating** *the air*. Paper recycling causes **toxic chemicals** from print and dyes to **leach** into the land and ultimately into the water supply. In addition, a type of "**cross-contamination**" can occur when **recycling** steel or aluminum products, where the **toxics** that were held in the original material get **recycled** into the new material and cause further damage. An additional problem occurs when **recycling** products such as glass because the process of **recycling** the glass is worse for the environment than the original process for creating new glass.
