plaudits

Stone named Pickett chair

David Stone, professor of history, has been awarded the Richard A. and Greta Bauer Pickett Chair for Exceptional Faculty at K-State.

The Richard A. and Greta Bauer Pickett Chair is one of five chairs endowed by Frank and Elizabeth Burke. It has been put at the disposal of the university president, provost and dean of the College of Arts and Sciences, who awarded it to the department of history and the Military History Institute

Stone teaches courses on the history of Russia and the Soviet Union, India and South Asia, and Western civilization. This semester he is teaching the first part of the Russian survey course, an introductory course for graduate students, and the final project course for master's students in K-State's security studies program.

Stone said serving as the Pickett Chair will not only allow him to continue his teaching and research, but also help the history department expand its growing military history program.

Aaronomy protessors named Fellows

Kassim Al-Khatib and Alan Schlegel, professors of agronomy were recently named Fellows of the American Society of Agronomy at the 2008 American Society of Agronomy annual meeting in Hous-

Al-Khatib focuses on plant-environment-herbicides interactions and herbicide-resistant plants. He is also the president of Council of Agricultural Science and Technology and is associate editor for the International Journal of Agronomy. He and a colleague have recently introduced an herbicide-resistant sorghum technology, which will be commercialized in the near future.

Schlegel, an agronomist at K-State's Southwest Research-Extension Center, focuses on nutrient and water management in dryland and limited irrigated cropping systems. He is also currently serving as associate editor for Soil Science Society of America Journal

The American Society of Agronomy has been naming outstanding members as Fellows since 1924. Members of the Society nominate worthy colleagues based on their professional achievements and meritorious service. Only .3 percent of the Society's active and emeritus members may be elected Fellow.

oh, by the way

Reminder: flu shots still available

K-State's Lafene Health Center has three flu shot clinics remaining on Nov. 6, 13 and 20. The vaccine is available for students, faculty and staff, as well as th0eir spouses and children 18 years or older.

To get the vaccine, check in at Lafene's front entrance on the above clinic dates. Vaccines are available on a walk-in basis. As with all vaccines administered through Lafene, there is a required 20-minute wait following the vaccine injection. The cost of the vaccine is \$14 for students and \$19 for faculty, staff and their family members. For students, the vaccine also is available weekdays from 8:30-11:30 a.m. and 1-4 p.m. by appointment at Lafene Health Center.

Grant to boost online degree programs

Nearly \$200,000 has been awarded through the Division of Continuing Education for the development of 26 distance education programs and courses from six K-State colleges. The funds will be used to develop several new online graduate degrees, including horticulture therapy and criminology and justice studies, as well as an online bachelor's degree in family studies and human development. A new certificate in turf grass management will be developed with the funding, along with programs in grain science and industry for professionals in the grain storage, handling and processing industries.

Funding also was awarded for the development of several single courses that will enhance current programs and professional needs, including Environmental Communications, New Media Technology, Introduction to GIS, Structural Analysis, Personal Finances for College Students, The Army Family: From Challenge to Resilience. Organizational Conflict and Aviation Weather. A complete listing of funded grant proposals for the 2008-2009 academic year is available at http://www.dce.k-state.edu/faculty/grants

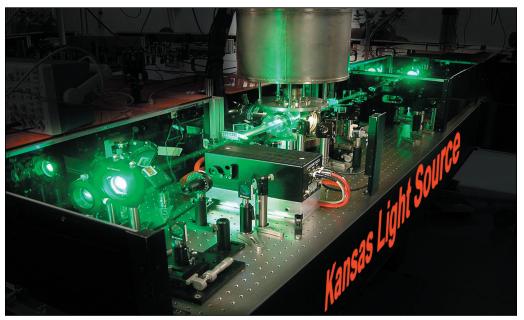

New open access journal available

New Prairie Press, an open journal imprint founded and supported by K-State Libraries, has its first open access journal available, The Baltic International Yearbook of Cognition, Logic and Communication. It is edited by Sandra LaPointe, assistant professor of philosophy at K-State, and a colleague at the Center for Cognitive Sciences and Semantics at the University of Latvia. Open access journals are freely available to readers everywhere without restriction. K-State Libraries began New Prairie Press to support the move toward a publishing model where access is not restricted by ability to pay. In addition to The Baltic Yearbook, other titles are currently under development. New Prairie Press can be accessed at http:// newprairiepress.org/ and the Baltic Yearbook is available at http:// thebalticyearbook.org/

Media development center can help faculty, staff

The media development center has purchased new equipment to better serve K-State students and faculty/staff. That equipment includes: several new cameras, terabyte-sized hard drives for video editing, equipment for a high-definition editing suite, a Pro Tools sound-recording suite in the sound booth, with a Mac Pro, a Roland Fatom X6 series keyboard, and a Digidesign Digi 003 Pro Tools

The center's student coordinators also are gearing up to teach classes on how to make podcasts, and use software including Dreamweaver MX, iMovie HD, Final Cut Pro, and After Effects. All dates and times will be posted at http://www.k-state.edu/infotech/mdc

K-State's J.R. Macdonald Laboratory is becoming so well known for ultrafast laser science, that the demand for laser time has outstripped its resources. Officials are in the process of acquiring a new laser to boost the lab's research capabilities. (Photo courtesy of the J.R. Macdonald Laboratory.)

Lighting the way

Physics lab is on the cutting edge of ultrafast laser research

For decades, the J.R. Macdonald Laboratory at K-State has been known worldwide as a center for atomic collision physics using particle accelerators. Now, researchers at the lab are working toward making it known for ultrafast laser science.

The Macdonald Lab is the main part of the K-State atomic, molecular and optical physics program, which has ranked in the top 20 in the nation out of all such university programs, according to U.S. News and World Report. In recent years the lab has shifted its research focus to ultrafast laser science. This change in emphasis was marked with the installation of the Kansas Light Source, an zhak said. "Rather, we are inintense ultrafast laser, a few years

"There are advantages to both ultrafast laser research and accelerator research," said Itzik Ben-Itzhak, Macdonald Lab director and K-State professor of physics. "The laser gives you the ability i.e. instrumental capabilities, and

to control a reaction occurring immediately interrogating matter within a molecule and not just to with them. observe that phenomenon. Just imagine what opportunities such control could lead to in molecular brings in \$2.5 million from the engineering."

The basic physics research nually. at the Macdonald Lab could one day enable researchers to tailor molecules to improve health care, sor; Lew Cocke, distinguished energy and security. Ben-Itzhak said that the Macdonald Lab's work to investigate these fundamental processes and find out the optimal laser characteristics professor; Igor Litvinyuk, assissuch as intensity, pulse duration and spectrum — is the first professor. Research faculty in-

step down a long road. "We're not trying to be solely a laser technology lab," Ben-Itterested in studying laser-matter interactions on the atomic and molecular scale. However, in order to be in the forefront of this rapidly evolving field, we have Brian Washburn, assistant profesto have the right balance between sor. developing our laser technology,
