"We need to define what an appropriate workload and how much a person is expected to do. It can be seen as an inspection," said Brian Spooner, university distinguished professor and director of the Division of Biology. Spooner also noted that faculty members would be closely involved with the hands-on work of unmanned aerial vehicle operator and be closely involved with the hands-on work of unmanned aerial vehicle (UAV) flying. He also expressed his satisfaction with the UAV program and its potential to advance research and education in the field of bioenergy.

Division of Biology appoints associate directors

John无人机, University of Kansas and professor of ecology, and leadership, director of the University of Kansas Division of Biology.

Fred Fairchild brings habit of involvement to faculty senate presidency

For Kansas State University faculty and staff, the first half of the year was one of change and transition. The passing of Fred Fairchild, a distinguished professor of grain and oilseed crops, marked the end of an era. Fairchild's contributions to the university and the agricultural community were widely recognized and appreciated.

Agriculture, as a whole, has significant potential for growth and development. The team at K-State is committed to fostering this growth and ensuring that the university remains at the forefront of agricultural research and education.

Team is not out to prove potential of petrochemical for ethanol

The team at K-State is not out to prove the potential of petrochemical for ethanol. Instead, they are working to develop a comprehensive understanding of the potential of biofuels and their role in the energy sector. The team's goal is to contribute to the ongoing discourse on the potential of biofuels and their potential to reduce the nation's dependence on petroleum.

On the lookout for leadership

Fred Fairchild takes the challenge of being a leader very seriously. He has been in the forefront of many initiatives and projects, including the development of biofuels and the promotion of sustainable practices in the agricultural sector. His leadership and vision have been instrumental in shaping the future of agriculture and the role of K-State in the industry.

Opportunities

K-State will be seeking to develop and implement new programs and initiatives aimed at preparing students for the challenges of the future. The university's commitment to excellence in education and research is stronger than ever, and the team is looking forward to working with faculty, staff, and students to achieve these goals.
Ben Champion maps the road ahead to a sustainable campus

Champion is interested in tackling energy consumption and sustainability issues. Beyond the numerous programs and courses, K-State needs to ensure that the content is available to all learners, including those with disabilities, said Champion.

Part of the Center for Veterinary Medicine at the Kansas City-Valleymount campus, the program prepares veterinarians to work in private practice, government, industry and research and is registered with the Vet Web site http://www.veterinarytraining.org.

Among the speakers are David G. Rinder, assistant professor of clinical medicine at the University of California, Davis, and Linda Zoon, assistant professor of pathology.

Pink elephants spotted at Hale Library

The Kansas Archaeological Field School takes place in even- numbered years through July 27 and 10 students were back in the Kansas City, Kansas, area to dig for a summer in 2007. "I’ve been back every four years since 1973 when, finally for the first time, I was able to see the side of a late prehistoric habitation site in the Stranger Creek basin," Logan said.

Logan has a doctorate in anthropology from the University of Arizona, and has conducted archaeological research in the Republic of Uzbekistan, China, and the Soviet Union. He has spent nearly every summer since 1967 near the town of Stranger, Kansas, to study a site Logan terms "the most exciting site in the Stranger Creek basin." Logan has contributed to the archaeological research and conservation of the area for nearly four decades. Logan is also a member of the American Society of Professional Archeologists and a member of the K-State Archaeological Field School.

A review of the course accessibility standards policy, and the top rated visual and interactive media into their classes, K-State needs to ensure that the content is available to all learners, including those with disabilities, said Champion.
