

Environmental problems that are global in scope, such as climate change or oceanic pollution, are some of the most pressing issues facing the world today. Yet, countries often fall short in their efforts to coordinate policies internationally and make meaningful progress in protecting the environment, despite the unified recommendations of scientists.

In this course, we examine the domestic and international politics of the global environment.

**SPRING 2026**

**DR. ANDREW LONG**

# POLSC 330: Global Environmental Politics

Tuesday and Thursday  
2:30 - 3:45 PM

This course is part of the Society and Environment track!
