

Request for Proposals

Kansas NASA EPSCoR Program
Partnership Development Grant (PDG)

Proposal Due: **Noon, Tuesday, August 11, 2026**
Anticipated Grant End Date: **April 30, 2027**

With support from NASA and the Kansas Board of Regents, the Kansas NASA EPSCoR Program (KNEP) is preparing to award three Partnership Development Grants (PDG) to Kansas investigators, under the KNEP Research Infrastructure Development (RID) program.

These grants are intended to facilitate the development of beneficial and promising NASA collaborations.

The PDG recipient is expected to initiate, develop, and formalize a meaningful professional relationship with a NASA researcher. Given this expectation, it is vital that investigators and students travel to a NASA center if selected for an award.

Ideally, the faculty member, student(s), and research host become co-participants in a promising research effort. Indeed, the PDG award should lead to sustained collaborations, joint publications, and, most importantly, future grant proposals.

Award Criteria

PDG awards are competitive, with a strong emphasis on:

- Addressing NASA Mission Directorate and Kansas interests (required)
- Developing new, sustained, and meaningful NASA contacts (required)
- Involving U.S. students, undergraduate and graduate, in the research (required)
- Strengthening collaboration among academia, government agencies, business, and industry
- Exploring new and unique R&D opportunities
- Shared publications and future EPSCoR and non-EPSCoR grant submissions

It is important to note that the NASA EPSCoR program is seeking to align efforts with Mission Directorate (MD) objectives. Additional information on NASA and Kansas objectives and other resources can be found in this document's appendices. Proposers should align their work with KS and NASA MD interests.

Additionally, proposals must detail other important infrastructure development-related components, including:

- Investigator experience and long-term research plans
- Investigator-specific goals, objectives, and priorities
- Measurable, award-related deliverables or metrics
- Detailed budget information; including all costs, matching funds, and any indirect cost waivers

The KNEP PDG program cannot support proposals augmenting existing funded or well-established research projects. NASA specifically states: "*NASA EPSCoR RID elements should not augment existing funded research projects. RID activities should target unique activities that increase jurisdiction competitiveness.*" New and unique activities increasing Kansas' research infrastructure and competitiveness are essential and required.

Funding, Required Match, and Restrictions

KNEP expects to award three PDG grants, of **\$24,995 each**.

- WSU proposers should plan their budget for **\$24,995** in NASA funding and use a reduced indirect cost rate of 8.5%.
- Proposers outside of WSU should plan their budget for **\$23,000**, which considers the WSU indirect cost recovery on the first \$25,000 of the subaward.

The following KNEP PDG program restrictions apply:

- Proposers are required to provide at least **\$2,000 in matching funds** (cash or in-kind) from non-federal sources
- Funds cannot be used for equipment (items under \$5,000 are “supplies”)
- Funds cannot be used for foreign travel
- Funds cannot be used for civil-service personnel labor or travel
- Proposals augmenting existing funded or well-established research projects cannot be supported; new and unique activities are essential and required (as noted in a previous section)
- All NASA funds must be expended within the award period (no-cost extensions are extremely unlikely)

Grant Reporting

Grant recipients must submit a final report, and potentially a progress report, addressing KNEP Research Infrastructure Development (RID) program objectives, including:

- Grant-related publications, presentations, and theses and dissertations
- Additional proposals, submitted or accepted, owing directly to the KNEP award
- Additional funding secured from industry or other sources
- Detailed information on the faculty and students supported (e.g., number of people involved, demographics, funding amounts, activities, performance, student plans, etc.)
- New collaborations formed with NASA and industry
- Impact on Kansas’ economic development
- Other quantifiable items, as defined by individual investigators (in their original proposals)
- An update on short- and long-term research plans
- Patent applications, awards, or technical transfer activities
- Other products (courses developed, websites, software and hardware, models, etc.)

PDG target outcomes, per award, include:

- One or more publications, with NASA or relevant industry co-authors
- One or more EPSCoR or non-EPSCoR grant proposals, as a product of the PDG award
- Significant project involvement by one or more students

Increasing Access to the Results of Scientific Research

In keeping with the NASA Plan for Increasing Access to Results of Scientific Research, new terms and conditions consistent with the Rights in Data clause in the award which make manuscripts and data publicly accessible may be attached to NASA EPSCoR Research awards. All proposals will be required to provide a Data Management Plan (DMP) or an explanation of why one is not necessary given the nature of the work proposed. See Appendix VI for additional information.

Additionally, researchers submitting NASA-funded articles in peer-reviewed journals or papers from conferences now shall make their work accessible to the public through NASA's PubSpace.

PubSpace provides free access to NASA-funded and archived scientific publications. Research papers will be available within one year of publication to download and read.

Special Note:

Investigators must ensure the proposed work is accurately planned and completed by the noted KNEP grant end date. Requests for no-cost extensions (NCEs) will be reviewed with increased scrutiny.

Proposal Submission:

There is an 8-page limit for all PDG proposal content, with the exception of the biographical sketches and current and pending support documents. Biographical sketches and current and pending support documents should be included for all investigators, and these sections may exceed the 8-page limit. Use one-inch margins, a 12-pt times new roman font, and single-spaced text. A specific proposal format or style (e.g., NSF) is not expected or required. Proposers simply need to effectively address the expectations outlined in this RFP.

The proposal budget must identify the distribution of available KNEP and matching funds.

Proposals must include the signature of the submitting Organization's Authorizing Official.

Submit a single proposal document in PDF format (less than 2-MB in size) to Linda Kliment, Linda.Kliment@wichita.edu, and NASA in Kansas, NASAINKansas@wichita.edu, by noon on the noted date which is included in the header on page 1.

Contact Linda Kliment (Linda.Kliment@wichita.edu or 316-978-6354) with any RFP-related questions.

Availability of Funds and Period of Performance:

KNEP's ability to make awards is contingent upon the availability of NASA and Kansas Board of Regents appropriated funds from which payment can be made. The award period of performance is approximately 8 months.

Restrictions:

There are special restrictions on NASA regarding the People's Republic of China. In accordance with section 526 of Public Law 117-103 and all subsequent appropriations acts, NASA is prohibited from funding any work that involves the bilateral participation, collaboration, or coordination with China or any Chinese-owned company or entity, at the prime recipient level or at any subrecipient level, whether funded or performed under a no-exchange-of-funds basis. Accordingly, proposals shall not include bilateral participation, collaboration, or coordination with China or any Chinese-owned company or entity, whether funded or performed under a no exchange-of-funds basis. Proposals involving bilateral participation, collaboration, or coordination in any way with China or any Chinese-owned company, whether funded or performed under a no exchange-of-funds basis, will be ineligible for award.

Appendices

PDG awards are designed to help researchers develop relationships with NASA Mission Directorates and Field Centers, and possibly industry, as appropriate. The efforts must also address areas of Kansas and NASA interest.

The following material outlines Kansas and NASA strategic interests. Additional NASA specific resources and contact information are also included.

Appendix I

Kansas Strategic Interests

State science and technology strategic interests are outlined in a strategic planning document entitled *Kansas Science and Technology Plan*.

An approach to meeting Kansas' strategic objectives is outlined in this document using the goals listed as follows:

- *“Elevate the role of science and technology in improving the lives of Kansans and their communities.”*
- *“Stimulate discovery and innovation through education, partnerships, and infrastructure investments that build on current areas of strength and nurture emerging areas of opportunity.”*
- *“Grow the economy by applying new technologies and expanding access to information technology, resulting in vibrant economic development that brings tangible benefits to the citizens of Kansas and attracts new business to the state”*
- *“Translate research results to address societal challenges by encouraging the fabrication of patentable technologies through support from entrepreneurial incentives and university-entrepreneur-stakeholder communication and knowledge-sharing networks that encourage better-informed partnerships and policies.”*

Kansas' relevant areas of strength and focus include:

- One Health: Intersection of human, animal, and environmental health
- Aviation and transportation
- Agriculture and bioscience
- Advanced manufacturing and polymer science
- Energy and environment
- Security

The creation of new multidisciplinary groups, industrial collaborations, partnerships, and an appropriately educated workforce leading to new products, jobs, and industry in Kansas is highly desirable.

Appendix II

NASA Strategic Goals

KNEP focuses its program and project elements on NASA's interests. From the Kansas perspective, as outlined in previous sections, the following specific "NASA Strategic Plan" goals and objectives are significant:

- Strategic Goal 1 - *"Expand human knowledge through new scientific discoveries."*
 - Objective 1.1: *"Understand the Earth system and its climate."*
 - Objective 1.2: *"Understand the Sun, solar system, and universe."*
 - Objective 1.3: *"Ensure NASA's science data are accessible to all and produce practical benefits to society."*
- Strategic Goal 2 - *"Extend human presence to the Moon and on towards Mars sustainable long-term exploration, development, and utilization."*
 - Objective 2.1: *"Explore the surface of the Moon and deep space."*
 - Objective 2.2: *"Develop a human spaceflight economy enabled by a commercial market."*
 - Objective 2.3: *"Develop capabilities and perform research to safeguard explorers."*
 - Objective 2.4: *"Enhance space access and services."*
- Strategic Goal 3 - *"Catalyze economic growth and drive innovation to address national challenges."*
 - Objective 3.1: *"Innovate and advance transformational space technologies."*
 - Objective 3.2: *"Drive efficient and sustainable aviation."*
- Strategic Goal 4 - *"Enhance capabilities and operations to catalyze current and future mission success."*
 - Objective 4.1: *"Attract and develop a talented workforce."*
 - Objective 4.2: *"Transform mission support capabilities for the next era of aerospace."*
 - Objective 4.3: *"Build the next generation of explorers."*

Specific state interests intersect strongly with those of NASA. Logically, it is within these common areas that Kansas is positioned to do well. KNEP is eager to grow research infrastructure to assist NASA and Kansas in meeting its goals.

Appendix V

Sub Appendix D: Definitions

- Center – The nine NASA Centers located throughout the United States, plus NASA’s Jet Propulsion Laboratory (JPL), which is NASA’s only Federally-Funded Research and Development Center. Only for the purposes of collaboration in NASA EPSCoR, JPL is in the same category as NASA Centers.
- Cooperative Agreement – A legal instrument similar to a grant in that the recipient carries out a public purpose with the exception that NASA and the recipient are each expected to have substantial technical interaction with each other for the performance of the project. NASA’s cooperative agreements are managed pursuant to the policies set forth in 2 CFR 200, 2 CFR 1800, and the *NASA Grant and Cooperative Agreement Manual*. NASA awards both grants and cooperative agreements.
- Jurisdiction – States or Commonwealths eligible to submit proposals in response to this Notice of Funding Opportunity (NOFO).
- Mission Directorate – NASA is broken down into Mission Directorates.
- NASA Research Contact – The NASA Research Contact is the primary NASA point of contact during the proposal writing stage for the proposed research area. If the proposer has contacted and received permission from a NASA scientific or technical person, that individual may be listed in the proposal as the NASA Research Contact. Otherwise, the NASA Research Contact is the Chief Center Technologist at the Center, or the NASA Mission Directorate contact at NASA Headquarters.
- Partnership – A reciprocal and voluntary relationship between the project personnel and NASA, industry, or other entities, to cooperatively achieve the goals of the proposed research.
- Research Area – One of the areas of research interest for the NASA Mission Directorate(s).
- STEM – Science, Technology, Engineering, and Mathematics

Appendix VI

Data Management Plan - Increasing Access to the Results of Scientific Research

In keeping with *NASA Public Access Plan; Increasing Access to the Results of Scientific Research*, new terms and conditions consistent with the Rights in Data clause in the award which make manuscripts and data publicly accessible may be attached to NASA EPSCoR Research awards. All proposals will be required to provide a Data Management Plan (DMP) or an explanation of why one is not necessary given the nature of the work proposed. *The DMP will be submitted by responding to the NSPIRES cover page question about the DMP (limited to 4000 characters).* Any research project in which a DMP is not necessary shall provide an explanation in the DMP block. Example explanations:

- *This is a development effort for flight technology that will not generate any data that we can release, so a DMP is not applicable.*
- *The data that we will generate will be ITAR.*
- *Or, simply explain why the proposed project is not going to generate data.*

The type of proposal that requires a DMP is described in the *NASA Public Access Plan; Increasing Access to the Results of Scientific Research*. The DMP shall contain the following elements, as appropriate to the project:

- The types of data to be produced during the project.
- The standards to be used for data and metadata format and content.
- Policies for accessing and sharing the data, including provisions for appropriate protection of privacy, confidentiality, security, intellectual property, and other rights or requirements.
- The policies and provisions for re-use, re-distribution, and the production of derivatives.
- Plans for providing access to the data used in any Federally funded scientific/research publication.
- Plans for archiving and preserving if the data, as appropriate (use of existing databases or public repositories will be strongly encouraged), including how long the data will be preserved.
- Plans for making publicly available appropriate metadata describing the data and data formats.
- Plans for ensuring that the DMP and metadata are in machine readable formats.

Proposers that include a plan to archive data shall allocate suitable time for this task. Unless otherwise stated, this requirement supersedes the data sharing plan mentioned in the *NASA Guidebook for Proposers*. In addition, researchers submitting NASA-funded articles in peer-reviewed journals or papers from conferences now shall make their work accessible to the public through NASA's PubSpace. PubSpace provides free access to NASA-funded and archived scientific publications. Research papers will be available within one year of publication to download and read.
