*Youth, Agriculture, and Education:
Unlocking the Potential for Rural Development*

While the world is experiencing a significant increase in the youth population, particularly in rural areas, these

populations have statistically shown a decreased interest in the field of agriculture. While the youth demographic offers promise for rural development, young people face formidable challenges, such as unemployment, poverty, and a lack of skills

and competencies. Thus, it is crucial to address how agriculture can benefit the youth and vice versa, making it a high-priority social development concern. Use the button below to read the full story of how our Pathways of Scaling Agricultural Innovations for Sustainable Intensification in the Polders of Coastal Bangladesh team is proposing we fix this problem.

***Monthly Spotlight:
Celebrating International Food Safety***

How do you get high-quality peanuts grown in Haiti, for use by Haitian food processors? You collaborate! Specifically, the USAID-funded program Haiti Agricultural University Partnership: Center for Mitigation, Adaptation, and Resilience to Climate-Change in Haiti (CEMARCH) developed peanut production training through a collaboration between the Haitian universities Campus Henry Christophe de l'université d'État d'Haïti à Limonade, Université Chrétienne du Nord d'Haïti, and their non-profit partner Meds and Food for Kids. Click the button below to read the full story!
